BEFORE THE PUBLIC UTILITIES COMMISSION OF THE

STATE OF CALIFORNIA

In the Matter of the Application of SOUTHERN CALIFORNIA EDISON COMPANY (U 338-E) for a Certificate of Public Convenience and Necessity for the Coolwater-Lugo Transmission Project	)))))	A.13-08-XXX

APPLICATION OF SOUTHERN CALIFORNIA EDISON COMPANY (U 338-E) FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY TO CONSTRUCT THE COOLWATER-LUGO TRANSMISSION PROJECT

Pursuant to Sections 1001, 1003.5, and 1004 et seq. of the California Public Utilities Code, the California Environmental Quality Act ("CEQA") (Public Resources Code § 21000 *et seq*.), the California Public Utilities Commission's ("Commission") General Order 131-D ("G.O. 131-D"), and the Commission's Rules of Practice and Procedure, Southern California Edison Company ("SCE") requests a Certificate of Public Convenience and Necessity ("CPCN") to permit SCE to construct the Coolwater-Lugo Transmission Project ("Coolwater-Lugo").

I.

INTRODUCTION

SCE is proposing to construct Coolwater-Lugo to provide additional capacity needed in the Kramer Junction and Lucerne Valley areas of San Bernardino County to alleviate an existing bottleneck in order to facilitate interconnection of current and future renewable generation projects. Currently, the transmission corridor south of the existing Kramer Substation, referred to as the Kramer-Lugo transmission corridor, does not have enough capacity to accommodate

interconnection of current and future renewable generation projects. This corridor consists of two 220 kilovolt ("kV") and two 115 kV transmission lines with limited transfer capability due to existing facility limitations. Specifically, the Kramer-Lugo No. 1 and No. 2 220 kV transmission lines are currently at thermal capacity under peak system conditions and cannot be upgraded and thus have become a transmission bottleneck.

The proposed Coolwater-Lugo would provide transmission upgrades and substation facilities that would facilitate the delivery of the power produced in these areas to utility load centers. The purposes of the proposed Coolwater-Lugo, planned to be operational by 2018, are (1) to provide additional transmission capacity to help alleviate the 220 kV transmission bottleneck between the existing Kramer and Lugo Substations, (2) to facilitate the interconnection of renewable generation projects, to accommodate future load serving in the Town of Apple Valley, and (3) to facilitate additional system reliability. Coolwater-Lugo will facilitate delivery of power from the new planned generation resources located in the Barstow, Inyokern, Kramer, Lucerne Valley/future Jasper Substation, Apple Valley, and Owens Valley areas. The Coolwater-Lugo transmission line was identified as needed in interconnection studies performed by California Independent System Operator ("CAISO") and SCE. The minimum build out of Desert View is required to facilitate construction of the proposed Coolwater-Lugo line, and full build-out would be dependent of future CAISO approval.

The major components of these facilities are summarized below with complete descriptions provided in Chapter 3 of the PEA:

Substations

- Reconfigure Coolwater 220 kV Switchyard;
- Terminate new Coolwater-Desert View 220 kV Transmission Line at the Coolwater and Desert View 220 kV buses;
- Install new relay buildings and necessary equipment to support the Special Protection System ("SPS") at Coolwater 220 kV Switchyard;
- Expand the Lugo 500 kV Switchrack to the south five positions;

- Relocate two existing 500 kV transmission line terminations at Lugo Substation;
- Terminate new Desert View-Lugo 500 kV transmission line construction, initially energized at 220 kV at the Desert View and Lugo 220 kV buses;
- Install one additional 500/220 kV transformer bank at Lugo Substation;
- Construct new relay building and install bank protection relays at Lugo Substation;
- Install new protection, control, and SPS at Lugo Substation; and
- License proposed Desert View 500/220/115/12 kV Substation ("Desert View Substation") and initially construct the facilities necessary to loop the Coolwater-Lugo 220 kV Transmission Line and consolidate the Lugo- Pisgah No.1 and No.2 220 kV Transmission lines into Desert View Substation.

Transmission and Telecommunication

- Remove approximately 29.1 miles of the existing Lugo-Pisgah No.1 220 kV; Transmission Line from Lugo Substation northeast to approximately the intersection of Haynes Road and State Route 247 ("SR-247");
- Remove approximately 16.0 miles of the existing Lugo-Pisgah No.2 220 kV;
- Transmission Line from Lugo Substation northeast to proposed Desert View Substation and terminate the remaining portion of this line into the proposed Desert View Substation;
- Construct 16.6 miles of 500 kV single-circuit transmission line (initially energized at 220 kV) from Lugo Substation to the proposed Desert View Substation and 13.6 miles of 220 kV double-circuit transmission line in existing ROW from proposed Desert View Substation to approximately the intersection of Haynes Road and SR-247;
- Construct approximately 34.0 miles of 220 kV double-circuit transmission line from Coolwater 220 kV Switchyard south to the existing Lugo-Pisgah transmission corridor, located approximately near the intersection of Haynes Road and SR-247;
- Install a new 150-foot tall microwave tower and foundation at the existing Coolwater 220 kV Switchyard;

- Install lightwave transponder equipment or optical amplifier and channel bank equipment at Coolwater Switchyard, Lugo Substation, and the proposed Desert View Substation;
- Install approximately 11.0 miles of Fiber-Optic Cable from existing Apple Valley Substation to the proposed Desert View Substation; and
- Install approximately 29.0 miles of Fiber-Optic Cable from existing Pisgah Substation near Newberry Springs to the existing Gale Substation near Daggett.

Please refer to Chapter 1.0 of the Proponent's Environmental Assessment ("PEA") for the purpose and need of Coolwater-Lugo, Chapter 2.0 of the PEA for a description of the project alternatives, and Chapter 3.0 for a detailed project description.

II.

ELIGIBILITY FOR 399.2.5 RECOVERY

Similar to previous Commission decisions, specifically, decisions in D.07-03-012, D.07-03-045, and D.09-12-044, SCE requests that the Commission explicitly establish that, pursuant to Pub. Util. Code § 399.2.5, SCE is eligible to recover through Commission-jurisdictional rates all prudently incurred costs associated with the Coolwater-Lugo incurred by SCE that the FERC does not allow SCE to recover in general transmission rates.[1]

III.

PROJECT COST INFORMATION

Coolwater-Lugo (whose scope represents the majority of what was formerly referred to as the South of Kramer Project) is required to facilitate the interconnection of up to 1,000 MW of new generation in the Kramer Junction and Lucerne Valley area of San Bernardino County by increasing transmission capacity between existing Lugo Substation and Coolwater Switchyard.

---

[1] Specifically, SCE's Transmission Revenue Requirement (TRR) and CAISO's Transmission Access Charge (TAC).

For Coolwater-Lugo, SCE investigated various alternatives to increase this transmission capacity.

As discussed in the PEA, Chapter 2, there are two alternative transmission line paths. The first alternative is based on different corridor options in the north end of the project out of Coolwater Switchyard and the south end of the project out of Lugo Substation. The second alternative is the same as the first except in the vicinity of the Marine Corps Logistics Base Barstow in the north end of the project. PEA Figure 2.1-C depicts the proposed and two alternative routes. To accommodate this new transmission capacity, SCE would also construct a new Desert View Substation (initially constructed as a switchyard) at a minimum build-out and modify existing Coolwater Switchyard and existing Lugo Substation, and construct the necessary telecommunications facilities to support the project.

In compliance with Public Utilities Code § 1005.5(a),[2] SCE developed estimated costs for alternative solutions identified for Coolwater-Lugo. For each solution, SCE estimated the costs for the project's direct costs and contingency. The following describes the estimated costs for Coolwater-Lugo broken down by cost type, followed by a discussion about the alternative solutions and SCE's proposed solution. All costs are provided in 2013 constant dollars, unless otherwise noted. As shown in Appendix H, the total estimated direct costs for the variations of the proposed solution presented in this testimony range from $755 million to $1,047 million in 2013 constant dollars.

Consistent with SCE's request in A.09-05-027 (Eldorado-Ivanpah Transmission Project), and the resulting Commission decision (D.10-12-052), SCE proposes the use of deflation factors to convert actual expenditures in future years to their equivalent value in 2013 dollars. SCE

---

[2] Pub. Util. Code § 1005.5(a) provides that: "Whenever the commission issues to an electrical . . . corporation a certificate authorizing the new construction of any addition to or extension of the corporation's plant estimated to cost greater than fifty million dollars ($50,000,000), the commission shall specify in the certificate a maximum cost determined to be reasonable and prudent for the facility."

believes the deflation factors should be calculated using an index such as the Handy-Whitman Index of Public Utility Construction Costs and considering other factors that have significant influences on the cost of the project.

A. Estimated Direct Costs of Coolwater-Lugo

Estimated direct costs include costs for preliminary and final engineering, construction, labor, materials, real estate, telecommunications and project support based on preliminary scopes of work for the different project components.

The primary components of Coolwater-Lugo include:

- **Transmission Lines**: Removal of approximately 45 miles of the existing Lugo-Pisgah No.1 and No. 2 220 kV transmission lines between the existing Lugo Substation and the intersection of Haynes Road and SR-247; installation of approximately 48 miles of 220 kV double circuit transmission lines between the existing Coolwater Switchyard and proposed Desert View Substation; and installation of approximately 17 miles of a 500 kV single circuit transmission line (initially energized at 220 kV) between the proposed Desert View Substation and existing Lugo Substation.
- **Substation**s: Installation of the new Desert View Substation with minimum build out; modifications to the Lugo Substation, including adding a third transformer bank; and modification of the Coolwater Switchyard.
- **Environmental:** Compliance with environmental mitigation, monitoring and restoration requirements.
- **Other:** Complete preliminary engineering and licensing; acquisition of the necessary real estate rights for the project; communication systems upgrades for grid operations; and distribution upgrades.

The scope of work for these components is discussed in greater detail in the PEA, Chapter 3, Project Description. The estimated costs were developed based on SCE's extensive and recent experience in estimating and constructing similar recent projects. SCE's estimated

direct costs include labor, materials, equipment, and real estate. Labor costs include field personnel and project support costs. Field personnel costs are based on assumptions for the make up of various crews required to safely and effectively construct the project's components. Project support costs represent resources required to support the construction activities, including but not limited to project management, project controls, environmental monitoring, and permitting. Material and equipment costs include but are not limited to estimates for steel, concrete, transformers, insulators, transmission and distribution conductors, and Optical Ground Wire ("OPGW"). Estimated real estate costs are also included for expected right of ways required from private and public lands. Estimates of the expected direct costs by the primary components and, where applicable, alternatives are listed in Appendix H.

B. <u>SCE's Contingency Estimate</u>

Cost estimates for a project of this magnitude are subject to multiple uncertainties, especially where, as here with Coolwater-Lugo, the estimates are based on preliminary scopes of work. As such, it is reasonable, prudent, and consistent with industry practice to assume a level of contingency to help mitigate the risks and uncertainties given this early stage of project development.

"Contingency" is defined by the Association for the Advancement of Cost Engineering ("AACE")[3] as "specific provision for unforeseeable elements of cost within the defined project scope." Similarly, Electric Power Research Institute ("EPRI") defines contingency as a reasonable necessity to address scope uncertainty. In addition to AACE's and EPRI's standards, SCE's contingency standards are based on the professional judgment and experience of SCE's engineering and construction professionals. Based on SCE's experience, it is appropriate to apply a 35% contingency for a project at this stage. This level contingency does not necessarily

---

[3] Formerly known as the American Association of Cost Engineers (also abbreviated as "AACE"); see AACE's *Project and Cost Engineers' Handbook*.

mean that SCE will spend this full amount, but it reflects that it is a reasonable estimate of what the maximum cost is forecast to be at the current conceptual level of design and planning.

For Coolwater-Lugo, SCE's cost estimate includes contingency assumption of 35% based on the conceptual scope of work and schedule for the project. SCE's contingency attempts to account for uncertainties related to the following:

- Unforeseeable elements of cost within the defined project scope;
- Material quantity variances within the defined scope;
- Minor material cost uncertainties;
- Labor hour variances within the defined scope;
- Minor labor cost uncertainties;
- Minor fluctuations in currency exchange rates;
- Reasonable outage scheduling risk; and
- Reasonable impacts from delays or constraints during nesting bird season.

Contingency estimates cannot reasonably provide for the following:

- Major project scope changes, for example, the Commission directs SCE to, among other things, (1) build a different transmission line route, (2) use a different transmission technology, (3) use different substation technologies; and/or (4) to use a different substation site;
- Major schedule changes;
- Major price increases for material and labor;
- Regulatory approval delays;
- Subsurface conditions that are significantly different from presently available information;
- Unforeseeable environmental conditions and/or mitigation requirements, including significant bird nesting related delays;

- More restrictive condemnation requirements that prevent or significantly limit SCE's ability to acquire properties needed for new transmission line right-of-way;
- Intervenor and/or property owner legal challenges leading to project delay;
- Unavailability of skilled labor due to nationwide and worldwide demand, and/or strikes;
- Unavailability of materials and/or equipment due to nationwide and worldwide demand, late delivery or faulty materials;
- Contractor nonperformance; and
- *Force majeure* events, property or casualty losses.

Including contingency in any finding of maximum prudent costs would be consistent with Commission precendent based on all prior CPCN's granted to Edison. Excluding contingency would not only contradict recent precendent and industry best practices, but it would be unrealistic to assume that there will not be variances in material quantities or labor hour estimates once the project engineering is finalized, future market pricing at the time of expenditures are known, and the environmental requirements are determined.

C. Summary of Estimated Costs for Coolwater-Lugo and Alternatives

The costs associated with the proposed and alternative project scopes of work are broken down in the project cost table, Appendix H. The left side of the table lists the potential scope elements grouped by the following categories: licensing, substation, transmission lines rated 200 kV or greater, transmission lines rated below 200 kV, distribution line work, telecommunication elements, real estate, and environmental work. The estimated costs are provided next to each element. The alternatives considered for Coolwater-Lugo are primarily based on the alternative routes for the transmission lines rated 200 kV or greater. Each alternative is based on a combination of twelve distinct line segments. SCE has developed three alternatives based on these segments: the Proposed Project, Alternative Project with Segment 9,

and Alternative Project with Segment 10. Between these alternatives, the scope of the other elements varies in order to accommodate the different routes.

As noted in the Attachment H, the first build out of Desert View Substation can vary between the alternatives and within each alternative. For the Proposed Project, "Minimum" includes switchrack with limited fencing and limited civil work, and "Initial" includes a switchrack with grading of the entire site and wall enclosure around the entire site. For both Alternative with Segment 9 and Alternative with Segment 10, "Minimum" includes dead-end rack with limited fencing and limited civil work, and "Initial" includes dead-end rack with grading of the entire site and wall enclosure around the entire site. "Full" refers to full build out of the Desert View Substation including all necessary equipment for the proposed and alternate projects.

The direct cost estimates are represented in 2013 constant dollars, as reflected in Attachment H. Including a contingency level consistent with SCE's recent CPCN applications and what a reasonable contingency would be for a project at the conceptual stage of engineering, the total project direct costs are estimated to vary between $755 million to $1,047 million in 2013 constant dollars for the Proposed Coolwater-Lugo.

There are two methods by which SCE can recover financing costs: (1) Allowance for Funds Used During Construction ("AFUDC"), and (2) Construction Work in Progress ("CWIP") in SCE's rate base. FERC has authorized CWIP, which is applicable to the qualified elements of scope contained in SCE's petition.[4] Consistent with past CPCNs, the financing costs during the project development and execution are not included in a CPCN finding of maximum prudent cost. However, SCE is providing an estimate of the financing costs during the project development and execution. For the proposed Minimum scope that does not include contingency, the estimated financing costs during project development and execution are estimated to be $134 million in nominal dollars. This is based on the cost estimate in Appendix

---

[4] *See* 134 FERC ¶61,181 in Docket EL11-10-000, issued March 11, 2011.

H and uses conceptual schedule assumptions. Actual financing costs may vary and will be based on actual spend and schedule and use of contingency.

Similarly, the operating and maintenance ("O&M") costs for the associated assets are not included in a CPCN maximum prudent cost finding. Coolwater-Lugo is expected to have assets in service for decades. Currently, there are many uncertainties concerning the final scope of Coolwater-Lugo and, therefore, the scope of future O&M for a major project like Coolwater-Lugo. Not only would the final scope impact what needs to be operated and maintained for decades, but the related requirements and field methods are expected to evolve over time. Ultimately, SCE will seek recovery for the O&M costs in a rate case proceeding. SCE is providing an estimate of annual operating and maintenance costs to be approximately $14 million in 2013 constant dollars. This is based on a simplified system average calculations consistent with SCE's Formula Transmission Rate Informational Filing contained in FERC Docket No. ER-11-3697, dated September 14, 2012. SCE expects future actual operating and maintenance costs to vary from this amount and vary from year to year given that the project useful life spans over decades.

IV.

PUBLIC UTILITIES CODE §1005 AND ADJUSTMENT OF THE MAXIMUM REASONABLE AND PRUDENT COST ESTIMATE

In D.07-01-040, the Commission recognized that the FERC will ultimately decide how much of the costs the utility may reflect in transmission rates.[5] However, SCE recognizes that the Commission believes it is obligated by Public Utilities Code § 1005.5(a) to specify "a

---

[5] D.07-01-040 ("DPV2") *mimeo*., p. 45. ("While FERC will ultimately decide how much of the costs for this project SCE may recoup in transmission rates, we have jurisdiction pursuant to Pub. Util. Code § 1005.5(a) and the responsibility to specify in the CPCN a "maximum cost determined to be reasonable and prudent for the DPV2 project.").

maximum cost determined to be reasonable and prudent for the facility."[6] The Commission has recognized that the costs submitted in a CPCN application are based on conceptual or preliminary design estimates, and that after the CPCN is granted, the cost estimates will be adjusted based on the route selected by the Commission, the final engineering design, final environmental mitigation requirements, and many other factors.

Public Utilities Code § 1005.5(b) specifically allows the utility applicant to seek to increase the maximum cost that the Commission finds is reasonable and prudent, after the decision granting the CPCN has been issued, if the utility determines that the cost, in fact, has increased.[7] The Commission should address an appropriate request for an increase in the cost finding pursuant to Public Utilities Code § 1005.5(b). Any future adjustments would be based on changes in cost estimates, once SCE completes final, detailed design-based construction estimates, necessary to reflect:

1. Adjustments in project costs because of any unanticipated delays in starting the project or inflation;
2. Adjustments in project costs as a result of final design criteria;
3. Additional project costs resulting from the adopted mitigation measures (and mitigation monitoring program); and

---

[6] Pub. Util. Code § 1005.5(a) provides that: "Whenever the commission issues to an electrical . . . corporation a certificate authorizing the new construction of any addition to or extension of the corporation's plant estimated to cost greater than fifty million dollars ($50,000,000), the commission shall specify in the certificate a maximum cost determined to be reasonable and prudent for the facility."

[7] As set forth in Pub. Util. Code § 1005.5(b): "After the certificate has been issued, the corporation may apply to the commission for an increase in the maximum cost specified in the certificate. The Commission may authorize an increase in the specified maximum cost, if it finds and determines that the cost has in fact increased and that the present or future public convenience and necessity require construction of the project at the increased cost; otherwise, it shall deny the application." (Pub. Util. Code § 1005.5(b).).

4. Events related to equipment and raw materials, for example, the price of steel, concrete, other raw materials, and equipment that, in fact, increase the cost of the project.

For all the above reasons, SCE suggests that the Commission should adopt a maximum reasonable and prudent cost estimate based on the numbers and scope presented in this filing and authorize SCE to seek adjustments to the estimate through the advice letter process if the cost increases in the future.

V.

PROCEEDING CATEGORY, NEED FOR HEARINGS, AND SCHEDULE

In compliance with Rule 2.1(c) of the Commission's Rules of Practice and Procedure (California Code of Regulations Title 20), SCE is required to state in this Application "the proposed category for the proceeding, the need for hearing, the issues to be considered, and a proposed schedule." SCE proposes to categorize this Application as a ratesetting proceeding. SCE anticipates that hearings will be necessary. This proceeding involves the Commission's (i) environmental review of the Coolwater-Lugo in compliance with CEQA and the Commission's G.O. 131-D; and (ii) issuance of a CPCN authorizing SCE to construct the Coolwater-Lugo.

SCE suggests the following proposed schedule for this Application. The schedule assumes the Commission will approve the Environmental Impact Report at a Commission Meeting following shortly after the expiration of the one-year period following the Commission's acceptance of a complete application as required by Public Resources Code § 21100.2.

VI.

DEPOSIT FOR COSTS

Pursuant to Rule 2.5 of the Commission's Rules of Practice and Procedure, SCE sent the filing fee of $75.00 to the Commission's Docket Office on August 28, 2013. Additionally, SCE has complied with Rule 2.5 by sending a deposit in the amount of $153,157 to the Commission's Energy Division on August 28, 2013, to be applied to the costs of the Commission to prepare an environmental impact report for this project. The remaining deposits will be sent to the Commission according to the schedule, which is set forth in Rule 2.5(c).

VII.

LOCATION OF ITEMS REQUIRED BY PUBLIC UTILITIES CODE SECTION 1003, COMMISSION'S RULES, AND GENERAL ORDER 131-D

The Public Utilities Code, the Commission's Rules of Practice and Procedure, and the Commission's General Orders require various items of information to be submitted with CPCN applications. The table below lists the items, the authority which dictates the submittal, and references where the information is included in SCE's filing.

CPCN APPLICATION FILING REQUIREMENTS			
Requirement	**Authority**	**Appendix**	**PEA**
A detailed description of the proposed project	G.O. 131-D, IX.A.1.a; Rule 3.1(a); Public Utilities Code 1003(a)		3.0
A project map	G.O. 131-D, IX.A.1.b; Rule 3.1(c)		Figure 3.1-B
A purpose and need statement	G.O. 131-D, IX.A.1.c; Rule 3.1(c)		1.0
Project Implementation Plan	Public Utilities Code 1003(b)	Appendix A Project Plan	
Design, Construction Management and Cost Control Plan	Public Utilities Code 1003(e)	Appendix A Project Plan	
A detailed statement of the estimated cost	G.O. 131-D, IX.A.1.d; Rule 3.1(f); Public Utilities Code 1003(c)	Appendix H	
Route selection including comparison with alternative routes	G.O. 131-D, IX.A.1.e		2.0
A project schedule showing the program of right-of-way acquisition and construction	G.O. 131-D, IX.A.1.f	Appendix A Project Plan	
Governmental Agency Consultations	G.O. 131-D, IX.A.1.g		Appendix K
PEA	G.O. 131-D, IX.A.1.h		Submitted with Application
EMF Field Study	G.O. 131-D, Section X.A	Appendix B	
Notice of Application	G.O. 131-D, XI.A	Appendix C	
Articles of Incorporation (Rule 2.3)	CPUC Information and Criteria List Appendix B, 2.2; Rule 2.2, Public Utilities Code 1004	Appendix D	
Financial Statement (Rule 2.3); Statements and/or exhibits showing financial ability of applicant to render service; Annual Report and/or Proxy Statement	CPUC Information and Criteria List Appendix B, 2.3; Rule 3.1(g) and (1); Rule 2.3	Appendix E	
Names/addresses of all utilities,	Rule 3.1(b)	Appendix F	

CPCN APPLICATION FILING REQUIREMENTS			
Requirement	**Authority**	**Appendix**	**PEA**
corporations, persons, or entities with which the proposed construction is likely to compete, and names of cities and counties within which service will be rendered			
List identifying the permits required	Rule 3.1(d)		Appendix L
Annual revenue requirement	Rule 3.1(h); Public Utilities Code 1003(d)	Appendix G	

VIII.

CONCLUSION

SCE respectfully requests the Commission issue a CPCN for the Coolwater-Lugo Transmission Project.

Respectfully submitted,

Appendix A

PROJECT PLAN

COOLWATER-LUGO TRANSMISSION PROJECT

APPENDIX A
COOLWATER-LUGO TRANSMISSION PROJECT PLAN

1.0 INTRODUCTION

This document is a part of Southern California Edison's Coolwater-Lugo Transmission Project ("Coolwater-Lugo") application for a Certificate of Public Convenience and Necessity ("CPCN") to the California Public Utilities Commission ("CPUC"). This document either includes materials required by California Public Utilities ("PU") Code Section 1003 or indicates by references to where they can be found in the Coolwater-Lugo CPCN Application, Proponent's Environmental Assessment ("PEA"), or elsewhere.

2.0 PROJECT SCOPE

The scope of the Coolwater-Lugo, including the preliminary engineering and design information required by PU Code Section 1003 (a), may be found in the Chapter 3.0 of the Coolwater-Lugo PEA.

3.0 OBJECTIVES AND GOALS

The objectives of the Coolwater-Lugo may be found in Section 1.3 of the Coolwater-Lugo PEA. During the Coolwater-Lugo execution (final engineering, procurement, and construction) phase, SCE goals include:

- Completing Coolwater-Lugo engineering, procurement, and construction activities by the scheduled operating date;
- Ensuring sufficient resources are planned and available to perform work;
- Managing project budget and providing cost control and oversight;
- Complying with applicable design, construction, and safety standards;

4.0 PROJECT IMPLEMENTATION PLAN

4.1 Introduction

The Coolwater-Lugo will be managed on a Project Management matrix basis. Given the large project scope, cost, long material lead time, and the extended construction period, procurement of major long-lead time materials must be authorized to begin prior to regulatory approval. Extensive support will be required at the start of final engineering and will continue through the end of the project. Construction cannot begin until after regulatory approval. Any required permits identified in the regulatory approval process, must also be obtained before construction can begin in the affected areas.

4.2 Project Management Team

The Project Manager has the overall responsibility and commensurate authority for successful completion of the project. Responsibilities include: planning, obtaining regulatory approvals, cost, scheduling, execution (final engineering, procurement, and construction), and the overall quality of the project. Project work will be conducted using a matrix based Project Management model. All personnel assigned to the project functionally report to the Project Manager.

During the life of the project, the Project Management Team ("PMT") will consist of a number of specialized teams and support personnel with special areas of expertise. Because of the changing nature of project needs as it progresses through the development, regulatory approval, and construction phases, the PMT will also change to meet the project needs.

The PMT is responsible for the successful implementation of the Coolwater-Lugo. It is responsible for tracking costs, scope changes, schedules, and construction performance. The PMT will have regular meetings to discuss project status, review performance, and identify any special needs or significant concerns.

4.3 Project Construction Management Plan

The complexities of the Coolwater-Lugo may necessitate the use of alternative construction management approaches. The construction management option to be selected will be based on SCE's need to optimize its use of limited "in-house" resources and expertise in the most effective manner. The major construction management approaches under consideration are:

1. SCE performs engineering, design, and manages construction using SCE and contractor labor; or,
2. SCE develops "Engineering, Procurement, and Construction (EPC)" specifications which are the basis for selecting and managing an EPC contractor to perform engineering, design, and construction.

SCE construction management personnel and the PMT will review SCE and contractor costs and progress on a regular basis. Table A-1, "Project Schedule", identifies the preliminary design, construction, completion, and operational dates for each of the major project components.

5.0 Cost Estimate

The cost estimate required by PU Code Section 1003 (c) may be found in Section III Project Cost Information of the CPCN Application.

6.0 Cost Control Plan

The Coolwater-Lugo will have a project cost control plan. Depending upon which resource(s) is(are) utilized to perform final engineering, procurement, and construction activities on this project. A schedule of values consistent with the Work Breakdown Structure ("WBS") will serve as the basis for progress payments made to the contractor, or the measure of performance for SCE construction crews. If utilized, the contractor shall submit for SCE's review and approval its payment request, together with all required supporting documentation, for all work performed in the subject period.

The contract price may only be changed by a Field Change Order or by a Trend approved by the Project Manager. The value of any work covered by a Field Change Order will be determined by one of the following methods:

- Where the work involved is covered by unit prices contained in the Contract Documents- apply the unit prices to the quantities of the items.
- By a mutually agreed lump sum itemized and supported by substantiating data.
- Actual Cost of the Work plus a Contractor's fee.

I. EXECUTIVE SUMMARY

This document is Southern California Edison Company's ("SCE") Field Management Plan ("FMP") for the Coolwater-Lugo Transmission Project ("Proposed Project"). The Proposed Project includes the following major electrical elements:

- Construction of a new 500/220/115/12 kilovolt ("kV") substation ("Proposed Desert View Substation") west of Lucerne Valley and southeast of the Town of Apple Valley. The substation would be an unstaffed, automated substation, initially functioning as a switching station, with a potential capacity of 4,000 MVA at full build out;

- Installation of a 220 kV transmission line ("T/L") approximately 34.0 miles long, and of double-circuit construction in new right-of way ("ROW") located between the existing Coolwater Generating Station 220 kV Switchyard ("Coolwater Switchyard") and the location of the future Jasper Substation[1], southwest of the intersection of Haynes Road and State Route 247 ("SR-247");

- Installation of a 220 kV T/L approximately 13.6 miles long, and of double-circuit construction in existing SCE transmission ROW, located from southwest of the intersection of Haynes Road and SR-247 to the Proposed Desert View Substation;

- Installation of a 500 kV T/L, initially energized at 220 kV, approximately 16.6 miles long, and of single-circuit construction in existing ROW, from the Proposed Desert View Substation to the existing Lugo Substation;

- Installation of a temporary T/L ("shoo-fly") approximately 4.3 miles long needed for construction of the Proposed 500 kV T/L segment. The shoo-fly would be located in existing SCE ROW west of the Mojave River between the Proposed Desert View Substation and existing Lugo Substation;

- Removal of approximately 29.1 miles of the existing Lugo-Pisgah No.1 220 kV T/L between existing Lugo Substation and a location southwest of the intersection of Haynes Road and SR-247;

- Removal of approximately 16.0 miles of the existing Lugo-Pisgah No. 2 220 kV T/L between existing Lugo Substation and Proposed Desert View Substation;

- Termination of the remaining portions of the existing Lugo-Pisgah No. 1 and No. 2 220 kV lines into the Proposed Desert View Substation;

- Relocation of existing subtransmission lines, distribution, and telecommunication facilities, as needed, to accommodate construction of the Proposed Project, meet the

[1] The future Jasper Substation would be triggered by a generation interconnection project and would be processed under a separate Permit to Construct.

California Public Utilities Commission ("CPUC") General Order ("G.O.") 95 clearance standards, and facilitate safer construction and operation of the existing, as well as new electrical utility infrastructure;

- Other major components associated with the Proposed Project include modifications and new equipment installation at existing SCE substations, and removal and relocation of underground utilities.

The project description is based on planning level assumptions. Exact details would be determined following completion of final engineering, identification of field conditions, availability of labor, material, and equipment, and compliance with applicable environmental and permitting requirements.

SCE provides this FMP in order to inform the public, the CPUC, and other interested parties of its evaluation of "no-cost and low-cost" magnetic field reduction design options for the Proposed Project, and SCE's proposed plan to apply these design options to the Proposed Project. This FMP has been prepared in accordance with CPUC Decision No. 93-11-013 and Decision No. 06-01-042 relating to extremely low frequency ("ELF")[2] electric and magnetic fields ("EMF"). This FMP also provides background on the current status of scientific research related to possible health effects of EMF, and a description of the CPUC's EMF policy.

The "no-cost and low-cost" magnetic field reduction design options that are recommended to be incorporated into the design of the Proposed Project include a combination of the following measures:

- Utilize taller structures where the proposed line runs adjacent to populated areas.
- Utilize increased ground clearance where the proposed line runs adjacent to populated areas.
- Utilize double-circuit construction that reduces spacing between circuits as compared with single-circuit construction.
- Arrange conductors of proposed T/L for magnetic field reduction.
- Place new substation electrical equipment (such as transformers, capacitors, and switchracks) away from the substation property lines.
- Locate new substations close to existing power lines to the extent possible.

The "no-cost and low-cost" magnetic field reduction design options that SCE considered for the Proposed Project are summarized in Table 1. For the purpose of evaluating "no-cost and low-cost" magnetic field reduction design options, the evaluation of magnetic fields associated with the Proposed Project has been divided into various Project Segment routes that contain

[2] The extremely low frequency is defined as the frequency range from 3 Hz to 3,000 Hz.

similar magnetic field models. Therefore, in some cases, portions of Project Segments have been grouped with other Project Segments for evaluation purposes.

SCE's plan for applying the above "no-cost and low-cost" magnetic field reduction design options for the Proposed Project is consistent with CPUC's EMF policy and with the direction of leading national and international health agencies. Furthermore, the plan complies with SCE's EMF Design Guidelines[3], and with applicable national and state safety standards for new electrical facilities.

[3] EMF Design Guidelines, July 2006.

Table 1. Summary of "No-cost and Low-cost" Magnetic Field Reduction Design Options						
Area No.	**Location**[4]	**Adjacent Land Use**[5]	**MF Reduction Design Options Considered**	**Estimated Cost to Adopt**	**Design Option(s) to be Adopted? (Yes/No)**	**Reason(s) if not adopted**
Proposed Desert View Substation	Near the intersection of Desert View Road and Laguna Seca Drive in unincorporated San Bernardino County	6	• Place new electrical equipment (such as transformers, capacitor banks, and switchracks) away from substation property lines. • Locate new substation close to existing power lines to the extent possible.	• No-Cost • No-Cost	• Yes • Yes	
Existing Coolwater Switchyard	Near National Trails Hwy in Daggett	3,5,6	• None[6]	• N/A	• N/A	
Proposed Jasper Substation[7] **(Separate Project)**	Near the intersection of Haynes Road and SR-247	6	• None[8]	• N/A	• N/A	
Existing Lugo Substation	Near the intersection of Fuentes Avenue and Mirasol Ct. in unincorporated San Bernardino County (near Hesperia)	2,5,6	• Place new electrical equipment (such as transformers, capacitor banks, and switchracks) away from substation property lines.	• No-Cost	• Yes	

4 This column shows the major cross streets, existing transmission & subtransmission lines, or substation name as reference points.

5 Land usage codes are as follows: **1)** schools, licensed day-cares, and hospitals, **2)** residential, **3)** commercial/industrial, **4)** recreational, **5)** agricultural, and **6)** undeveloped land.

6 Due to the limited scope of work in this area from an EMF perspective, there are no significant opportunities for magnetic field reductions.

7 The future Jasper Substation would be triggered by a generation interconnection project and would be processed under a separate Permit to Construct.

8 Due to the limited scope of work in this area from an EMF perspective, there are no significant opportunities for magnetic field reductions.

Table 1. Summary of "No-cost and Low-cost" Magnetic Field Reduction Design Options (Cont.)						
Area No.	**Location**	**Adjacent Land Use**	**MF Reduction Design Options Considered**	**Estimated Cost to Adopt**	**Design Option(s) to be Adopted? (Yes/No)**	**Reason(s) if not adopted**
Segment 12 Existing Coolwater-Segs2-Tortilla 115 kV Subtransmission Line and proposed Coolwater-Desert View 220 kV T/L	From existing Coolwater Switchyard up to just south of I-40	2,3,5,6	• Arrange conductors of proposed T/L for magnetic field reduction. • Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction.	• Low-Cost • No-Cost	• Yes • Yes[9]	
Segments 1, 2, and 3 Existing LADWP Lines and proposed Coolwater-Desert View 220 kV T/L in Segment 1 and only proposed Coolwater-Desert View 220 kV T/L in Segments 2 & 3	From end of Segment 12 up to northwest of the intersection of SR-247 and Haynes Road	2,3,5,6	• Maintain conductor phase arrangement from Segment 12. • Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction.	• No-Cost • No-Cost	• Yes • Yes[10]	
Segment 5 – Model 1 Existing Eldorado-Lugo 500 kV T/L, existing Lugo-Mohave 500 kV T/L, proposed Coolwater-Desert View 220 kV T/L, and proposed Desert View-Pisgah No. 1 220 kV T/L[11]	From end of Segment 3 up to the intersection of Canyon View Road and Hwy 18	2,5,6	• Arrange conductors of proposed T/Ls for magnetic field reduction. • Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction.	• Low-Cost[12] • No-Cost	• Yes • Yes[13]	

[9] This option was included in the preliminary design and continues to be included in the design of the Project.
[10] *Ibid.*
[11] The proposed Desert View-Pisgah No. 1 220 kV T/L would be a modified portion of the existing Lugo-Pisgah No. 1 220 kV T/L.
[12] This option is considered a low-cost measure in this segment because of the costs associated with transposing the conductors to the recommended phasing arrangement for magnetic field reduction.
[13] This option was included in the preliminary design and continues to be included in the design of the Project.

Table 1. Summary of "No-cost and Low-cost" Magnetic Field Reduction Design Options (Cont.)						
Area No.	**Location**	**Adjacent Land Use**	**MF Reduction Design Options Considered**	**Estimated Cost to Adopt**	**Design Option(s) to be Adopted? (Yes/No)**	**Reason(s) if not adopted**
Segment 5 – Model 2 and Segment 5A Proposed Coolwater-Desert View 220 kV T/L, Proposed Desert View-Pisgah No. 1 220 kV T/L, and proposed Desert View-Pisgah No. 2 220 kV T/L[14]	From the intersection of Canyon View Road and Hwy 18 up to the proposed Desert View Substation	2,5,6	• Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction. • Utilize taller structures where the proposed line runs adjacent to populated areas **OR** • Utilize increased ground clearance for proposed T/Ls and utilize taller structures where the proposed line runs adjacent to populated areas.	• No-Cost • Low-Cost • Low-Cost	• Yes[15] • Yes[16] • Yes[17]	
Segment 7 – Model 1 Proposed Desert View-Lugo 220 kV T/L	From the proposed Desert View Substation up to the intersection of Maple Avenue and Farmington Street	2, 3, 6	• Utilize taller structures where the proposed line runs adjacent to populated areas **OR** • Utilize increased ground clearance for proposed T/Ls and utilize taller structures where the proposed line runs adjacent to populated areas.	• Low-Cost • Low-Cost	• Yes[18] • Yes[19]	

[14] The proposed Desert View-Pisgah No. 2 220 kV T/L would be a modified portion of the existing Lugo-Pisgah No. 2 220 kV T/L.
[15] This option was included in the preliminary design and continues to be included in the design of the Project.
[16] The final Engineering design would include either one of the design options listed for this area as both options yield similar magnetic field reductions.
[17] *Ibid.*
[18] *Ibid.*
[19] *Ibid.*

Table 1. Summary of "No-cost and Low-cost" Magnetic Field Reduction Design Options (Cont.)						
Area No.	**Location**	**Adjacent Land Use**	**MF Reduction Design Options Considered**	**Estimated Cost to Adopt**	**Design Option(s) to be Adopted? (Yes/No)**	**Reason(s) if not adopted**
Segment 7 – Model 2 Proposed Desert View-Lugo 220 kV T/L, existing Lugo-Victor No. 1 220 kV T/L, existing Lugo-Victor No. 2 220 kV T/L, existing Kramer-Lugo No. 1 220 kV T/L, existing Kramer-Lugo No. 2 220 kV T/L, and the existing Lugo-Victorville 500 kV T/L	From the intersection of Maple Avenue and Farmington Street to the existing Lugo Substation	2, 6	• Arrange conductors of proposed T/L for magnetic field reduction. • Utilize taller structures where the proposed line runs adjacent to populated areas.	• No-Cost[20] • Low-Cost	• Yes • Yes	

[20] This option is considered a no-cost measure because the required phase arrangement can be obtained at the T/L terminations at the Lugo Substation and the proposed Desert View Substation.

II. BACKGROUND REGARDING EMF AND PUBLIC HEALTH RESEARCH ON EMF

There are many sources of power frequency[21] electric and magnetic fields, including internal household and building wiring, electrical appliances, and electric power transmission and distribution lines. There have been numerous scientific studies about the potential health effects of EMF. After many years of research, the scientific community has been unable to determine if exposures to EMF cause health hazards. State and federal public health regulatory agencies have determined that setting numeric exposure limits is not appropriate.[22]

Many of the questions about possible connections between EMF exposures and specific diseases have been successfully resolved due to an aggressive international research program. However, potentially important public health questions remain about whether there is a link between EMF exposures and certain diseases, including childhood leukemia and a variety of adult diseases (e.g., adult cancers and miscarriages). As a result, some health authorities have identified magnetic field exposures as a possible human carcinogen. As summarized in greater detail below, these conclusions are consistent with the following published reports: the National Institute of Environmental Health Sciences ("NIEHS") 1999[23], the National Radiation Protection Board ("NRPB") 2001[24], the International Commission on non-Ionizing Radiation Protection ("ICNIRP") 2001, the California Department of Health Services ("CDHS") 2002[25], the International Agency for Research on Cancer ("IARC") 2002[26] and the World Health Organization ("WHO") 2007[27] .

The federal government conducted EMF research as a part of a $45-million research program managed by the NIEHS. This program, known as the EMF RAPID (Research and Public Information Dissemination), submitted its final report to the U.S. Congress on June 15, 1999. The report concluded that:

- "The scientific evidence suggesting that ELF-EMF exposures pose any health risk is weak."[28]
- "The NIEHS concludes that ELF-EMF exposure cannot be recognized as entirely safe because of weak scientific evidence that exposure may pose a leukemia hazard."[29]

27 WHO, Environmental Health Criteria 238, EXTREMELY LOW FREQUENCY FIELDS, 2007.

28 National Institute of Environmental Health Sciences, NIEHS Report on Health Effects from Exposures to Power-Frequency Electric and Magnetic Fields, p. ii, NIH Publication No. 99-4493, 1999.

- "The NIEHS suggests that the level and strength of evidence supporting ELF-EMF exposure as a human health hazard are insufficient to warrant aggressive regulatory actions; thus, we do not recommend actions such as stringent standards on electric appliances and a national program to bury all transmission and distribution lines. Instead, the evidence suggests passive measures such as a continued emphasis on educating both the public and the regulated community on means aimed at reducing exposures. NIEHS suggests that the power industry continue its current practice of siting power lines to reduce exposures and continue to explore ways to reduce the creation of magnetic fields around transmission and distribution lines without creating new hazards."[30]

In 2001, Britain's NRPB arrived at a similar conclusion:

> "After a wide-ranging and thorough review of scientific research, an independent Advisory Group to the Board of NRPB has concluded that the power frequency electromagnetic fields that exist in the vast majority of homes are not a cause of cancer in general. However, some epidemiological studies do indicate a possible small risk of childhood leukemia associated with exposures to unusually high levels of power frequency magnetic fields."[31]

In 2002, three scientists for CDHS concluded:

> "To one degree or another, all three of the [CDHS] scientists are inclined to believe that EMFs can cause some degree of increased risk of childhood leukemia, adult brain cancer, Lou Gehrig's disease, and miscarriage.
>
> They [CDHS] strongly believe that EMFs do not increase the risk of birth defects, or low birth weight.
>
> They [CDHS] strongly believe that EMFs are not universal carcinogens, since there are a number of cancer types that are not associated with EMF exposure.
>
> To one degree or another they [CDHS] are inclined to believe that EMFs do not cause an increased risk of breast cancer, heart disease, Alzheimer's disease, depression, or symptoms attributed by some to a sensitivity to EMFs. However, all three scientists had judgments that were "close to the dividing line between believing and not believing" that EMFs cause some degree of increased risk of suicide. For adult leukemia, two of the scientists are 'close to the dividing line

between believing or not believing' and one was 'prone to believe' that EMFs cause some degree of increased risk."[32]

Also in 2002, the World Health Organization's ("WHO") IARC concluded:

> "ELF magnetic fields are possibly carcinogenic to humans"[33], based on consistent statistical associations of high-level residential magnetic fields with a doubling of risk of childhood leukemia...Children who are exposed to residential ELF magnetic fields less than 0.4 microTesla (4.0 milliGauss) have no increased risk for leukemia…. In contrast, "no consistent relationship has been seen in studies of childhood brain tumors or cancers at other sites and residential ELF electric and magnetic fields."[34]

In June of 2007, the WHO issued a report on their multi-year investigation of EMF and the possible health effects. After reviewing scientific data from numerous EMF and human health studies, they concluded:

> "Scientific evidence suggesting that everyday, chronic low-intensity (above 0.3-0.4 μT [3-4 mG]) power-frequency magnetic field exposure poses a health risk is based on epidemiological studies demonstrating a consistent pattern of increased risk for childhood leukaemia."[35]
>
> "In addition, virtually all of the laboratory evidence and the mechanistic evidence fail to support a relationship between low-level ELF magnetic fields and changes in biological function or disease status. Thus, on balance, the evidence is not strong enough to be considered causal, but sufficiently strong to remain a concern."[36]
>
> "A number of other diseases have been investigated for possible association with ELF magnetic field exposure. These include cancers in both children and adults, depression, suicide, reproductive dysfunction, developmental disorders, immunological modifications and neurological disease. The scientific evidence supporting a linkage between ELF magnetic fields and any of these diseases is much weaker than for childhood leukemia and in some cases (for example, for cardiovascular disease or breast cancer) the evidence is sufficient to give confidence that magnetic fields do not cause the disease"[37]
>
> "Furthermore, given both the weakness of the evidence for a link between exposure to ELF magnetic fields and childhood leukemia, and the limited impact

on public health if there is a link, the benefits of exposure reduction on health are unclear. Thus the costs of precautionary measures should be very low."[38]

III. APPLICATION OF THE CPUC'S "NO-COST AND LOW-COST" EMF POLICY TO THIS PROJECT

Recognizing the scientific uncertainty over the connection between EMF exposures and health effects, the CPUC adopted a policy that addresses public concern over EMF with a combination of education, information, and precaution-based approaches. Specifically, Decision 93-11-013 established a precautionary based "no-cost and low-cost" EMF policy for California's regulated electric utilities based on recognition that scientific research had not demonstrated that exposures to EMF cause health hazards and that it was inappropriate to set numeric standards that would limit exposure.

In 2006, the CPUC completed its review and update of its EMF Policy in Decision 06-01-042. This decision reaffirmed the finding that state and federal public health regulatory agencies have not established a direct link between exposure to EMF and human health effects,[39] and the policy direction that (1) use of numeric exposure limits was not appropriate in setting utility design guidelines to address EMF,[40] and (2) existing "no-cost and low-cost" precautionary-based EMF policy should be continued for proposed electrical facilities. The decision also reaffirmed that EMF concerns brought up during Certificate of Public Convenience and Necessity ("CPCN") and Permit to Construct ("PTC") proceedings for electric and transmission and substation facilities should be limited to the utility's compliance with the CPUC's "no-cost and low-cost" policies.[41]

The decision directed regulated utilities to hold a workshop to develop standard approaches for EMF Design Guidelines and such a workshop was held on February 21, 2006. Consistent design guidelines have been developed that describe the routine magnetic field reduction measures that regulated California electric utilities consider for new and upgraded transmission line and transmission substation projects. SCE filed its revised EMF Design Guidelines with the CPUC on July 26, 2006.

"No-cost and low-cost" measures to reduce magnetic fields would be implemented for this Project in accordance with SCE's EMF Design Guidelines. In summary, the process of

[38] *Ibid*., p. 13.

[39] CPUC Decision 06-01-042, Conclusion of Law No. 5, mimeo. p. 19 ("As discussed in the rulemaking, a direct link between exposure to EMF and human health effects has yet to be proven despite numerous studies including a study ordered by this Commission and conducted by DHS.").

[40] CPUC Decision 06-01-042, mimeo. p. 17 - 18 ("Furthermore, we do not request that utilities include non-routine mitigation measures, or other mitigation measures that are based on numeric values of EMF exposure, in revised design guidelines or apply mitigation measures to reconfigurations or relocations of less than 2,000 feet, the distance under which exemptions apply under GO 131-D. Non-routine mitigation measures should only be considered under unique circumstances.").

[41] CPUC Decision 06-01-042, Conclusion of Law No. 2, ("EMF concerns in future CPCN and PTC proceedings for electric and transmission and substation facilities should be limited to the utility's compliance with the Commission's low-cost/no-cost policies.").

evaluating "no-cost and low-cost" magnetic field reduction measures and prioritizing within and between land usage classes considers the following:

1. SCE's priority in the design of any electrical facility is public and employee safety. Without exception, design and construction of an electric power system must comply with all applicable federal, state, and local regulations, applicable safety codes, and each electric utility's construction standards. Furthermore, transmission and subtransmission lines and substations must be constructed so that they can operate reliably at their design capacity. Their design must be compatible with other facilities in the area and the cost to operate and maintain the facilities must be reasonable.

2. As a supplement to Step 1, SCE follows the CPUC's direction to undertake "no-cost and low-cost" magnetic field reduction measures for new and upgraded electrical facilities. Any proposed "no-cost and low-cost" magnetic field measures, must, however, meet the requirements described in Step 1 above. The CPUC defines "no-cost and low-cost" measures as follows:

   - Low-cost measures, in aggregate, should:
     - Cost in the range of 4 percent of the total project cost.
     - Result in magnetic field reductions of "15% or greater at the utility R-O-W [right-of-way]…"[42]

   The CPUC Decision stated,

   > "We direct the utilities to use 4 percent as a benchmark in developing their EMF mitigation guidelines. We will not establish 4 percent as an absolute cap at this time because we do not want to arbitrarily eliminate a potential measure that might be available but costs more than the 4 percent figure. Conversely, the utilities are encouraged to use effective measures that cost less than 4 percent."[43]

3. The CPUC provided further policy direction in Decision 06-01-042, stating that, "[a]lthough equal mitigation for an entire class is a desirable goal, we will not limit the spending of EMF mitigation to zero on the basis that not all class members can benefit."[44] While Decision 06-01-042 directs the utilities to favor schools, day-care facilities and hospitals over residential areas when applying low-cost magnetic field reduction measures, prioritization within a class can be difficult on a project case-by-case basis because schools, day-care facilities, and hospitals are often integrated into residential areas, and many licensed day-care facilities are housed in private homes, and can be easily moved from one location to another. Therefore, it may be practical for public schools, licensed day-care centers, hospitals, and residential land uses to be grouped together to receive

[42] CPUC Decision 06-01-042, p. 10.
[43] CPUC Decision 93-11-013, § 3.3.2, p.10.
[44] CPUC Decision 06-01-042, p. 10.

> highest prioritization for low-cost magnetic field reduction measures. Commercial and industrial areas may be grouped as a second priority group, followed by recreational and agricultural areas as the third group. Low-cost magnetic field reduction measures will not be considered for undeveloped land, such as open space, state and national parks, and Bureau of Land Management and U.S. Forest Service lands. When spending for low-cost measures would otherwise disallow equitable magnetic field reduction for all areas within a single land-use class, prioritization can be achieved by considering location and/or density of permanently occupied structures on lands adjacent to the projects, as appropriate.

This FMP contains descriptions of various magnetic field models and the calculated results of magnetic field levels based on those models. These calculated results are provided only for purposes of identifying the relative differences in magnetic field levels among various transmission or subtransmission line design alternatives under a specific set of modeling assumptions and determining whether particular design alternatives can achieve magnetic field level reductions of 15 percent or more. The calculated results are not intended to be predictors of the actual magnetic field levels at any given time or at any specific location if and when the Project is constructed. This is because magnetic field levels depend upon a variety of variables, including load growth, customer electricity usage, and other factors beyond SCE's control. The CPUC affirmed this in D. 06-01-042 stating:

> "Our [CPUC] review of the modeling methodology provided in the utility [EMF] design guidelines indicates that it accomplishes its purpose, which is to measure the relative differences between alternative mitigation measures. Thus, the modeling indicates relative differences in magnetic field reductions between different transmission line construction methods, but does not measure actual environmental magnetic fields."[45]

[45] CPUC Decision 06-01-042, p. 11.

IV. PROJECT DESCRIPTION

This document is Southern California Edison Company's ("SCE") Field Management Plan ("FMP") for the Coolwater-Lugo Transmission Project ("Proposed Project"). The Proposed Project includes the following elements:

- Construction of a new 500/220/115/12 kilovolt ("kV") substation ("Proposed Desert View Substation") west of Lucerne Valley and southeast of the Town of Apple Valley. The substation would be an unstaffed, automated substation, initially functioning as a switching station, with a potential capacity of 4,000 MVA at full build out;

- Installation of a 220 kV transmission line ("T/L") approximately 34.0 miles long, and of double-circuit construction in new right-of way ("ROW") located between the existing Coolwater Generating Station 220 kV Switchyard ("Coolwater Switchyard") and the location of the future Jasper Substation[46], southwest of the intersection of Haynes Road and State Route 247 ("SR-247");

- Installation of a 220 kV T/L approximately 13.6 miles long, and of double-circuit construction in existing SCE transmission ROW, located from southwest of the intersection of Haynes Road and SR-247 to the Proposed Desert View Substation;

- Installation of a 500 kV T/L, initially energized at 220 kV, approximately 16.6 miles long, and of single-circuit construction in existing ROW, from the Proposed Desert View Substation to the existing Lugo Substation;

- Installation of a temporary T/L ("shoo-fly") approximately 4.3 miles long needed for construction of the Proposed 500 kV T/L segment. The shoo-fly would be located in existing SCE ROW west of the Mojave River between the Proposed Desert View Substation and existing Lugo Substation;

- Removal of approximately 29.1 miles of the existing Lugo-Pisgah No.1 220 kV T/L between existing Lugo Substation and a location southwest of the intersection of Haynes Road and SR-247;

- Removal of approximately 16.0 miles of the existing Lugo-Pisgah No. 2 220 kV T/L between existing Lugo Substation and Proposed Desert View Substation;

- Termination of the remaining portions of the existing Lugo-Pisgah No. 1 and No. 2 220 kV lines into the Proposed Desert View Substation;

- Relocation of existing subtransmission lines, distribution, and telecommunication facilities, as needed, to accommodate construction of the Proposed Project, meet CPUC General Order ("G.O.") 95 clearance standards, and facilitate safer construction and operation of the existing, as well as new electrical utility infrastructure;

[46] The future Jasper Substation would be triggered by a generation interconnection project and would be processed under a separate Permit to Construct.

- Other major components associated with the Proposed Project include modifications and new equipment installation at existing SCE substations, and removal and relocation of underground utilities.

The Proposed Project includes the following major components:

- Substations

- Transmission Lines

Substations

Proposed Desert View Substation

The Proposed Desert View Substation (also referred to as "Proposed Substation") includes two construction scenarios, referred to as initial build out and full build out. Initial build out is anticipated to commence in 2016 in conjunction with construction and installation of other project components including transmission, telecommunication, and distribution. Full build out is anticipated to commence in the future, dependent upon the timing of area load growth, reliability needs and generation interconnection requests. Components proposed to occur during the full build out scenario could occur over time; however, for purposes of analyzing impacts associated with the full build out of Proposed Desert View Substation, SCE has assumed a worst case impact scenario where all of Proposed Desert View Substation is built out at one time. The following components related only to the EMF Substation Checklist (Table 2), would be installed during the initial and full build out scenarios (additional details contained in the Proposed Project's PEA):

- Switchracks (12 kV, 115 kV, 220 kV and 500 kV)
- Transformers (500/220 kV, 220/115 kV, 115/12 kV)
- Capacitor Banks

Coolwater Switchyard

Modifications:

- Reconfigure the existing 220 kV line terminations at the existing Coolwater Switchyard to accommodate the new 220 kV T/L to the Proposed Desert View Substation;
- Equip a 220 kV position with circuit breakers and disconnect switches and terminate a new Coolwater-Desert View 220 kV T/L; and,
- Relocate existing fiber-optic cables.

Lugo Substation

Modifications:

- The following modification would be completed at the Lugo Substation 500 kV bus:
  - Extend the bus and reconfigure the existing 500 kV line terminations to accommodate a new Desert View-Lugo 220 kV-operated (500 kV-constructed) T/L and new Lugo No.3AA 500/220 kV transformer bank;
  - Equip a position with circuit breakers and disconnect switches for the new Lugo No. 3AA 500/220 kV transformer bank

- The following modification would be completed at the Lugo Substation 220 kV bus:
  - Extend the bus and reconfigure the existing 220 kV line terminations to accommodate a new Desert View-Lugo 220 kV-operated (500 kV-constructed) T/L and new Lugo No.3AA 500/220 kV transformer bank;
  - Equip a 220 kV position with circuit breakers and disconnect switches, and install a new Lugo No. 3AA 500/220 kV transformer bank;
  - Equip a 220 kV position with circuit breakers and disconnect switches, and terminate a new Desert View-Lugo 220 kV-operated (500 kV-constructed) T/L

Future Jasper Substation

The future Jasper Substation would be triggered by a generation interconnection project and would be processed under a separate Permit to Construct. The future Jasper Substation is assumed to be constructed after the Coolwater-Lugo Transmission Project, and under that assumption, the modifications described below would not be required. If the future Jasper Substation was operational prior to construction of the Proposed Project, the following modifications would be completed at Jasper Substation:

Modifications:

- Equip a 220 kV position with circuit breakers and disconnect switches, and terminate a new Coolwater-Jasper No.1 220 kV transmission line

Transmission Lines

The Proposed Project would include the following 500 kV T/L elements: one segment of single-circuit and double-circuit 500 kV construction (Segment 7) initially energized at 220 kV. New lattice steel towers ("LSTs") as well as H-Frame (two-pole); single-circuit, and double-circuit (single-pole) TSPs would be installed to accommodate the new T/L segment, predominately located within existing ROW and some new ROW. Construction would also include removal of existing towers on the Lugo-Pisgah No. 1 and 2 220 kV lines between existing Lugo Substation and Proposed Desert View Substation.

Proposed T/L Segment 7 would originate at the Proposed Desert View Substation and would extend southwest in the existing SCE transmission corridor to the existing Lugo Substation. Segment 7 would also include one smaller sub-segment, into the southwest side of the Proposed Desert View Substation from the existing Lugo-Pisgah No. 1 and No. 2 line ROW, approximately 0.6 mile, which would be removed after build out of the 500 kV portion of Desert View Substation. Segment 7, including the sub-segment, would be approximately 16.6 miles in length and would be predominately located in the existing Lugo-Pisgah No. 1 and No. 2 line ROW.

The Proposed 500 kV T/L Route (Segment 7) would consist of galvanized structures, with a dulled finish, that would support a single-circuit T/L. Each phase of the circuit would consist of a two-conductor bundle of 2156 kcmil ACSR non-specular conductors. The bundled conductors would be arranged in a horizontal configuration. Optical Ground Wire ("OPGW") and potentially Overhead Ground Wire ("OHGW") would be installed on top of the structures to provide protection and to support telecommunication.

The Proposed Project would also include the following 220 kV T/L elements: six segments of double-circuit 220 kV construction (Segments 1, 2, 3, 5, 5A, and 12). New LSTs as well as TSP H-Frames (two-pole), single-circuit, and double-circuit (single-pole and three-pole) TSPs would be installed to accommodate the new 220 kV T/L segments, located within a combination of new and existing ROW. Construction would also include removal of existing towers on the Lugo-Pisgah No. 1 line between the area southwest of the intersection of Haynes Road and SR-247, and Proposed Desert View Substation. Additionally, construction would include double-circuit structures from the intersection of Haynes Road and SR-247 west to Proposed Desert View Substation.

Proposed T/L Segment 12 would connect to the existing Coolwater Switchyard. Segment 12 would exit the west side of the Coolwater Switchyard and then extend south crossing a Burlington Northern Santa Fe ("BNSF") railroad track, National Trails Highway, Needles Freeway ("I-40") and continuing south of I-40. Segment 12 would be approximately 1.4 miles in length, within new ROW.

Proposed T/L Segment 1 would originate just south of I-40 and continue south to the north-easterly corner of the intersection of Power Line Road and Camp Rock Road. Segment 1 would parallel the Los Angeles Department of Water and Power ("LADWP") transmission corridor in a southwesterly direction. For purposes of this analysis, SCE is proposing Segment 1 would cross under the LADWP corridor northeast of the intersection of the corridor and Camp Rock Road and then would follow the south side of the corridor, crossing SR-247 and continuing to a point just west of Stoddard Wells Road[47]. Segment 1 would be approximately 17.0 miles in length, within new ROW.

Proposed T/L Segment 2 would originate at the intersection of the LADWP transmission corridor and Stoddard Wells Road and would extend south paralleling Stoddard Wells Road until

[47] The specific crossing location under the LADWP corridor is subject to final engineering and the outcome of consultation with LADWP.

it intersects with Lucerne Valley Cutoff Road. From this point, Segment 2 would extend southeast paralleling the Lucerne Valley Cutoff Road to a point just west of the intersection of Lucerne Valley Cutoff Road and SR-247. Segment 2 would be approximately 11.7 miles in length, within new ROW.

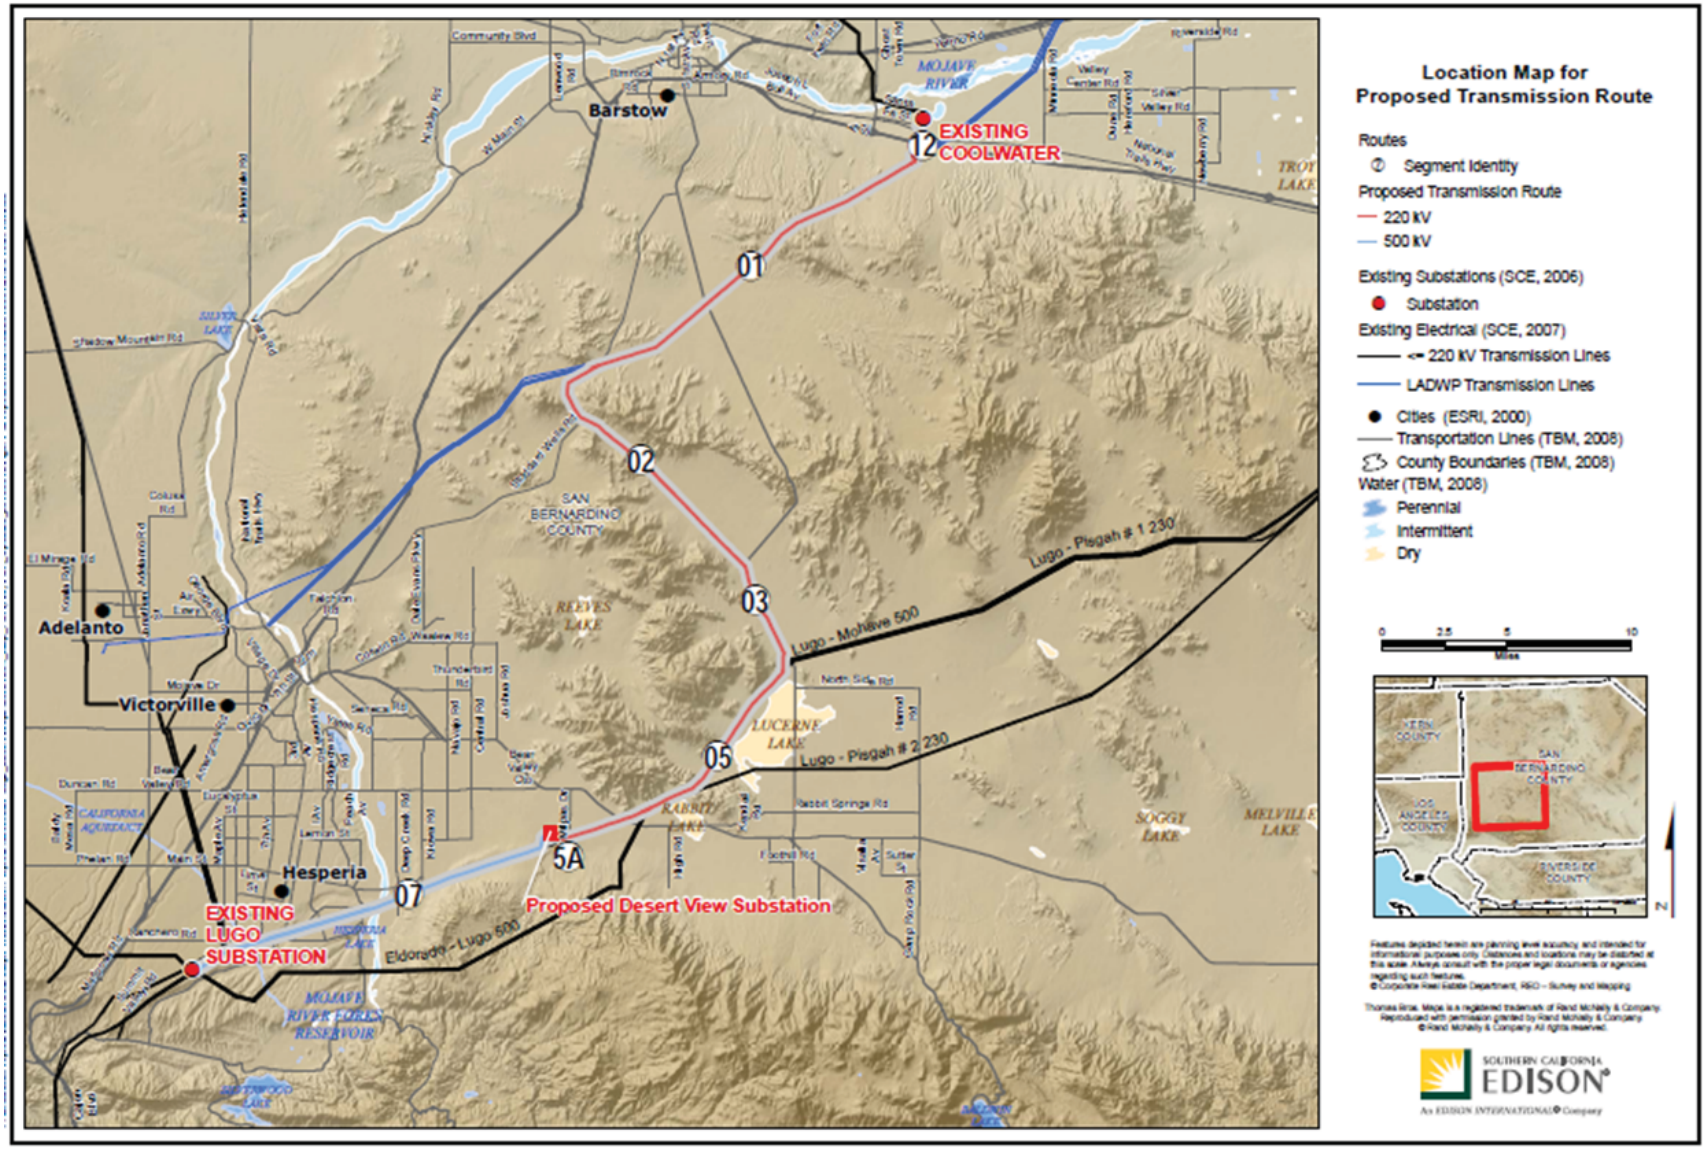
Proposed T/L Segment 3 would originate at the intersection of Lucerne Valley Cutoff Road and SR-247 and would extend generally south southeast paralleling the west side of SR-247 and would terminate northwest of the intersection of SR-247 and Haynes Roads (approximate location of future Jasper Substation). Segment 3 would be approximately 3.9 miles in length, within new ROW.

Proposed T/L Segment 5 would originate just northwest of the intersection of Haynes Road and SR-247 and would extend generally south in new ROW until crossing under existing SCE T/Ls and then would head southwest in the existing SCE transmission corridor, where it would replace a portion of the existing Lugo-Pisgah No. 1 line. Within the existing corridor, Segment 5 would cross State Route 18 ("SR-18") near Bernard Road and would continue southwest to a point just west of the intersection of Desert View Road and Milpas Drive. Segment 5 would be approximately 12.9 miles in length, predominately located within existing ROW.

Proposed T/L Segment 5A would originate just west of the intersection of Desert View Road and Milpas Drive and would extend generally northwest to terminate in the east side of the Proposed Desert View Substation. Segment 5A would be approximately 0.7 mile in length. The proposed segment would be within new ROW.

The Proposed 220 kV Transmission Segments would consist of galvanized structures, with a dulled finish, that would support a double-circuit T/L. Each phase of the circuit would consist of a two-conductor bundle of 1590 kcmil ACSR non-specular conductors. The bundled conductors would be arranged in a horizontal configuration. OPGW and potentially OHGW would be installed on top of the structures to provide protection and to support telecommunication.

Figure 1. Coolwater-Lugo Transmission Project Proposed Route



V. EVALUATION OF "NO-COST AND LOW-COST" MAGNETIC FIELD REDUCTION DESIGN OPTIONS

Please note that the following magnetic field models and the calculated results of magnetic field levels are intended only for purposes of identifying the relative differences in magnetic field levels among various T/L and subtransmission line design alternatives under a specific set of modeling assumptions (see §VII-Appendix A for more detailed information about the calculation assumptions and loading conditions) and determining whether particular design alternatives can achieve magnetic field level reductions of 15 percent or more. The calculated results are not intended to be predictors of the actual magnetic field levels at any given time or at any specific location when the Proposed Project is constructed.

For the purpose of evaluating "no-cost and low-cost" magnetic field reduction design options, the evaluation of magnetic fields associated with the Proposed Project is divided into two parts:

- Part 1 - Proposed Substation Work
- Part 2 - Proposed Transmission Lines Work

Part 1 - Proposed Substation Work

Generally, magnetic field values along the substation perimeter are low compared to the substation interior because of the distance from the perimeter to the energized equipment. Normally, the highest magnetic field values around the perimeter of a substation result from overhead power lines and underground duct banks entering and leaving the substation, and are not caused by substation equipment. Therefore, the magnetic field reduction design options generally applicable to a substation project are as follows:

- Site selection for a new substation;
- Setback of substation structures and major substation equipment (such as bus, transformers, and underground cable duct banks, etc.) from perimeter;
- Field reduction for T/Ls and subtransmission lines entering and exiting the substation.

The Substation Checklist, as shown in Table 2, is used for evaluating the no-cost and low-cost design options considered for Substations, the design options adopted, and reasons that certain design options were not adopted if applicable.

Desert View Substation

The Proposed Desert View Substation (also referred to as "Proposed Substation") includes two construction scenarios, referred to as initial build out and full build out. The following components related only to the EMF Substation Checklist (Table 2), would be installed during the initial and full build out scenarios (additional details contained in the Proposed Project's PEA):

- Switchracks (12 kV, 115kV, 220 kV and 500 kV)
- Transformers (500/220 kV, 220/115 kV, 115/12 kV)
- Capacitor Banks

No.	Table 2. Substation Checklist for Examining No-cost and Low-cost Magnetic Field Reduction Design Options for the Proposed Desert View Substation	Measures to be Adopted? (Yes/No)	Reason(s) if not Adopted
1	Are the proposed transformers > **15 feet** for 115 kV and > **50 feet** for 220 /500 kV from the substation property line?	Yes	-
2	Are switch-racks, capacitor banks & bus > **8 feet** for 115 kV and > **40 feet** for 220/500 kV from substation property line?	Yes	-
3	Are distribution (rated below 50 kV) underground cable duct banks > 12 feet from side property line?	N/A	-
4	Are transfer & operating buses configured with the transfer bus facing the nearest property/fence line?	N/A	-
5	Locate new substations close to existing power lines to the extent practical.	Yes	-

Coolwater Switchyard

The work proposed for the Coolwater Switchyard would be limited in scope from an EMF reduction perspective. There are no significant opportunities for magnetic field reductions (based on a review of the EMF Substation Checklist shown above) and therefore the Coolwater Switchyard is not evaluated further.

Lugo Substation

The following modifications related only to the EMF Substation Checklist (Table 3), would be completed as part of the Proposed Project (additional details contained in the Project's PEA):

For the Lugo Substation 500 kV Bus:

- Extend the bus and reconfigure the existing 500 kV line terminations to accommodate a new Desert View-Lugo 220 kV-operated (500 kV-constructed) T/L and new Lugo No.3AA 500/220 kV transformer bank;
- Equip a position with circuit breakers and disconnect switches for the new Lugo No. 3AA 500/220 kV transformer bank

For the Lugo Substation 220 kV Bus:

- Extend the bus and reconfigure the existing 220 kV line terminations to accommodate a new Desert View-Lugo 220 kV-operated (500 kV-constructed) T/L and new Lugo No.3AA 500/220 kV transformer bank
- Equip a 220 kV position with circuit breakers and disconnect switches, and install a new Lugo No. 3AA 500/220 kV transformer bank
- Equip a 220 kV position with circuit breakers and disconnect switches, and terminate a new Desert View-Lugo 220 kV-operated (500 kV-constructed) T/L

No.	Table 3. Substation Checklist for Examining No-cost and Low-cost Magnetic Field Reduction Design Options for the Lugo Substation	Measures to be Adopted? (Yes/No)	Reason(s) if not Adopted
1	Are the proposed transformers > **50 feet** for 220 /500 kV from the substation property line?	Yes	-
2	Are switch-racks, capacitor banks & bus > **40 feet** for 220/500 kV from substation property line?	Yes	-
3	Are distribution (rated below 50 kV) underground cable duct banks > 12 feet from side property line?	N/A	-
4	Are transfer & operating buses configured with the transfer bus facing the nearest property/fence line?	N/A	-
5	Locate new substations close to existing power lines to the extent practical.	N/A	-

Future Jasper Substation

If Jasper Substation were constructed prior to the Proposed Project, the necessary Jasper Substation modifications to connect the Proposed Project would be limited in scope from an EMF reduction perspective. There are no significant opportunities for magnetic field reductions (based on a review of the EMF Substation Checklist shown above) and therefore the future Jasper Substation is not evaluated further.

Part 2 - Proposed Transmission Lines Work

For the purpose of evaluating "no-cost and low-cost" magnetic field reduction design options, the evaluation of magnetic fields associated with the Proposed Project has been divided into various Project Segment routes that contain similar magnetic field models. Therefore, in some cases, portions of Project Segments have been grouped with other Project Segments for the purpose of this evaluation.

Project Segment 12:

This segment would consist of two SCE circuits (the existing Coolwater-Segs2-Tortilla 115 kV Subtransmission Line and the proposed Coolwater-Desert View 220 kV T/L) within the existing and Proposed Project ROW. The Coolwater-Desert View 220 kV T/L would be in a split phase configuration on the proposed double circuit 220 kV structures. The typical design is shown in Figure 2.

For EMF analysis, calculated field levels were evaluated at the edges of an approximately 200-foot wide ROW. Presently, there are no schools adjacent to Segment 12 of the proposed 220 kV T/L route. The proposed route for Segment 12 is adjacent to residential (sparsely populated), industrial, agricultural, and undeveloped land.

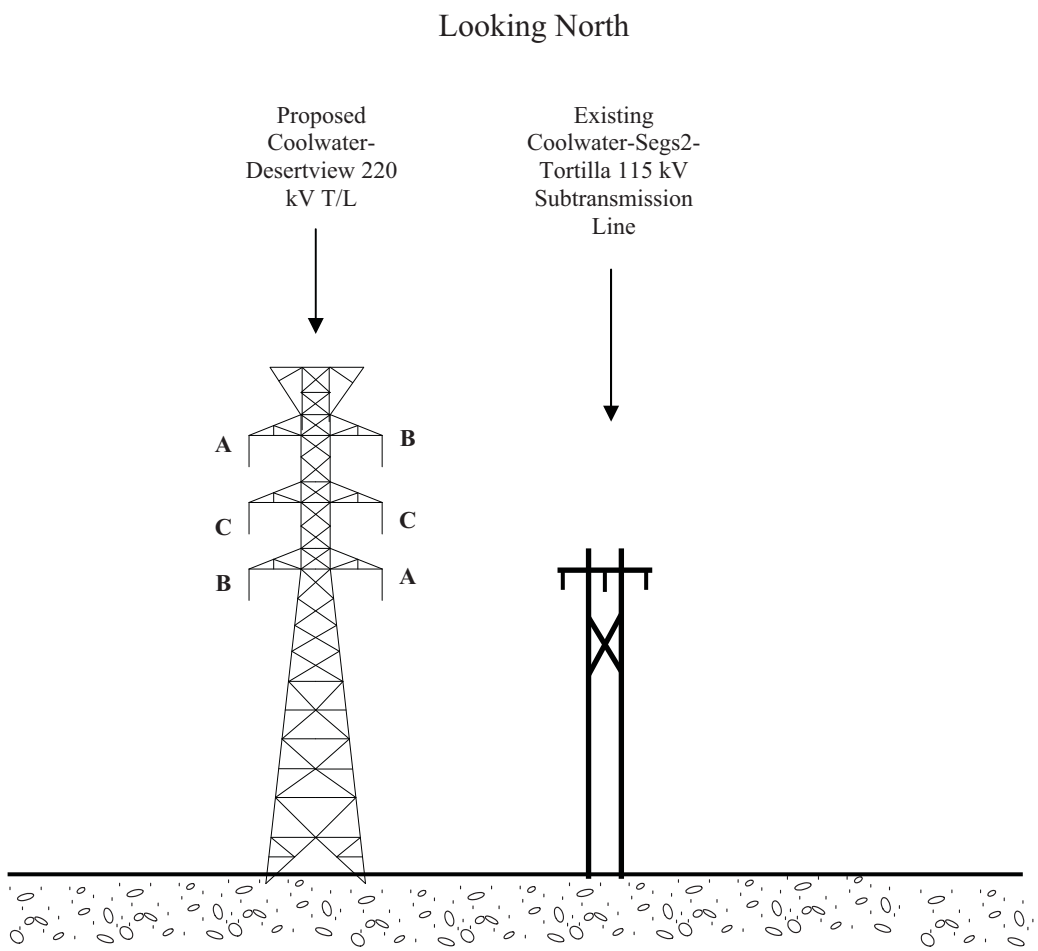
No-Cost Field Reduction Measures: The following no-cost field reduction measure is included in the proposed design for this segment:

1. Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction.

Low-Cost Field Reduction Options: The following low-cost field reduction option is considered for the proposed design for this segment:

1. Arrange conductors of proposed T/L for magnetic field reduction as shown below.
   - Coolwater-Desert View 220 kV T/L (reference Figure 2):
     - **A-C-B** (top to bottom phase arrangement) for circuit furthest from the Coolwater-Segs2-Tortilla 115 kV Subtransmission Line
     - **B-C-A** (top to bottom phase arrangement) for circuit closest to the Coolwater-Segs2-Tortilla 115 kV Subtransmission Line

Figure 2. Typical 220 kV T/L Structure Design: Segment 12[48]



Magnetic Field Calculations: Figure 3 and Table 4 show the calculated magnetic field levels for the proposed design. The models for the proposed design without reduction measures were calculated using the standard phasing convention of "A-B-C" top-to-bottom conductor arrangement for the proposed new T/L.

[48] Figure is not to scale.

Figure 3. Calculated Magnetic Field Levels[49] for Segment 12 Proposed 220 kV T/L (Looking North)

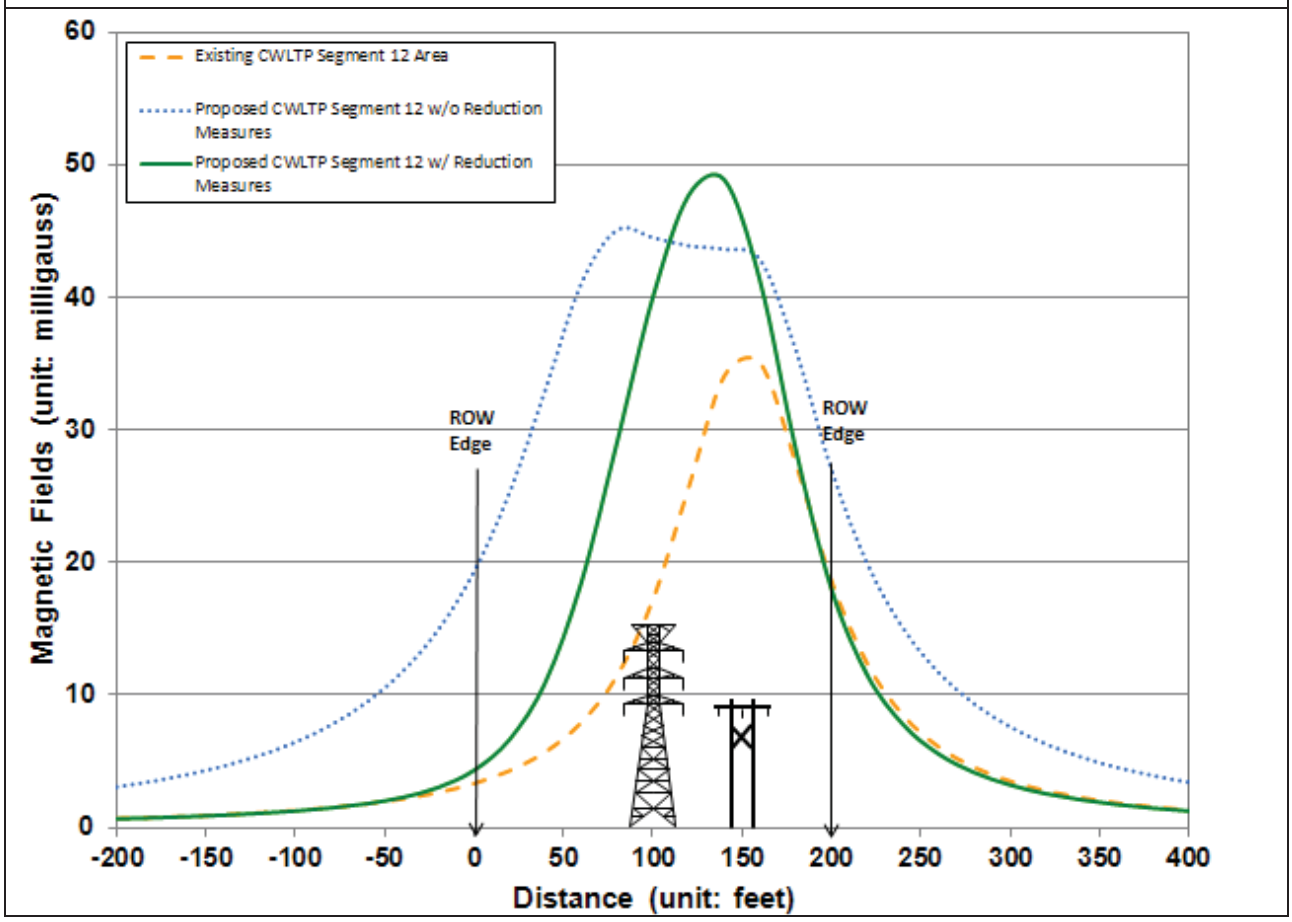


Table 4. Calculated Magnetic Field Levels[50] for Segment 12

Design Options	Left edge of ROW (mG)	% Reduction	Right edge of ROW (mG)	% Reduction
Existing CWLTP Segment 12 Area	3.3	-	18.6	-
Proposed CWLTP Segment 12 w/o Reduction Measures	19.3	-	27.0	-
Proposed CWLTP Segment 12 w/ Reduction Measures	4.3	77.7	18.0	33.3

[49] This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

[50] This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

Recommendations for Segment 12: *The proposed design includes the no-cost magnetic field reduction measure of utilizing double-circuit construction that reduces spacing between circuits as compared with single-circuit construction. The low-cost magnetic field reduction option that is recommended to be included in the project design is arranging conductors of proposed T/L for magnetic field reduction. The low-cost field reduction measure results in calculated field reductions greater than 15% at the edge of ROW near populated areas.*

Project Segments 1, 2, and 3:

This portion of the evaluation includes Segments 1, 2, and 3. Segment 1 would consist of five circuits (existing four LADWP circuits and the proposed Coolwater-Desert View 220 kV T/L). Segment 2 and 3 would consist of one circuit (the proposed Coolwater-Desert View 220 kV T/L in a split phase configuration). Since the magnetic fields produced by the proposed Coolwater-Desert View 220 kV T/L would decrease to ambient levels where there would be populated areas in Segment 1 and since the dominant source of the magnetic fields in the populated areas in Segment 1 would be due to the LADWP circuits, the configuration in Segments 2 and 3 (without LADWP circuits) is evaluated. The typical design is shown in Figure 4.

For EMF analysis, calculated field levels were evaluated at the edges of an approximately 200-foot wide ROW. Presently, there are no schools adjacent to Segments 1, 2, and 3 of the proposed 220 kV T/L route. The proposed route for Segments 1, 2, and 3 is adjacent to residential (sparsely populated), commercial, agricultural and undeveloped land.

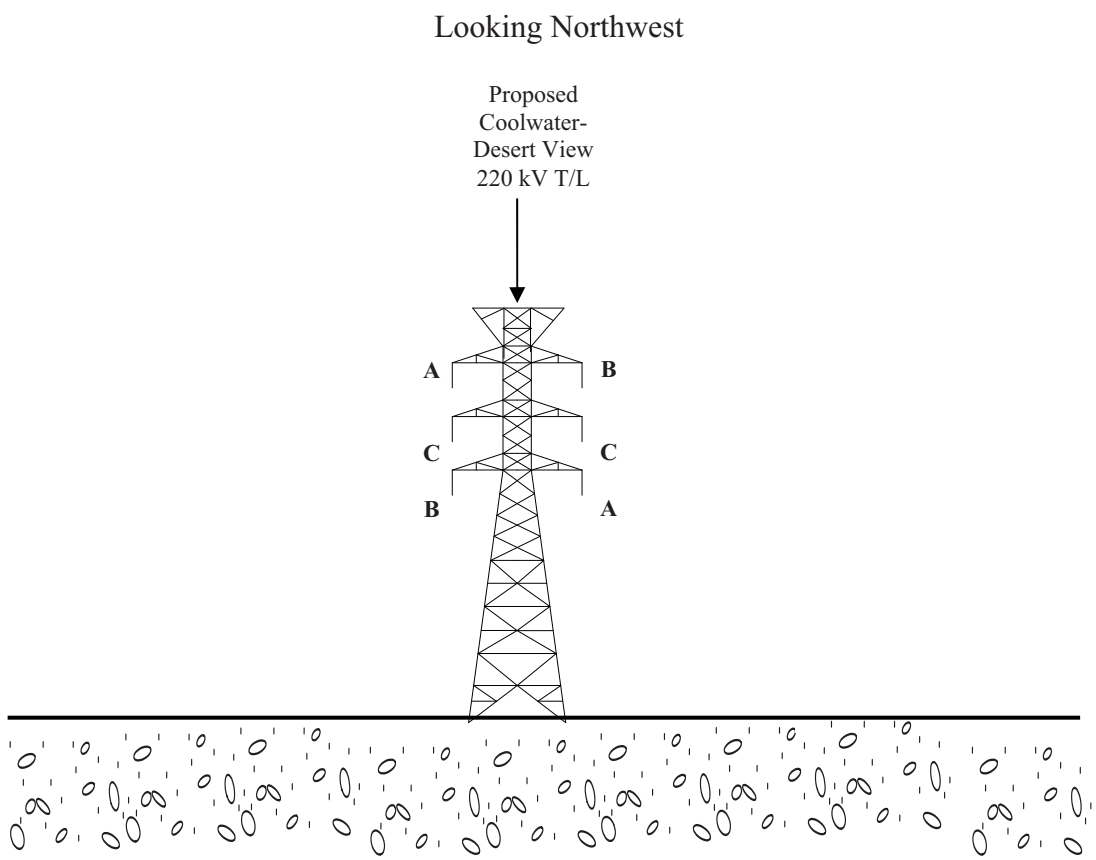
No-Cost Field Reduction Measures: The following no-cost field reduction measures are considered for the proposed design for this segment:

1. Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction.

2. Maintain conductor phase arrangement from Segment 12.

Low-Cost Field Reduction Options: The above listed no-cost field reduction measures are considered for these segments. No low-cost reduction options were considered.

Figure 4. Typical 220 kV T/L Design: Segments 1, 2, and 3[51]



Magnetic Field Calculations: Figure 5 and Table 5 show the calculated magnetic field levels for the proposed design. The models for the proposed design without reduction measures were calculated using the standard phasing convention of "A-B-C" top-to-bottom conductor arrangement for the proposed new T/L.

[51] Figure is not to scale.

Figure 5. Calculated Magnetic Field Levels[52] for Segments 1,2, and 3 Proposed 220 kV T/L (Looking Northwest)

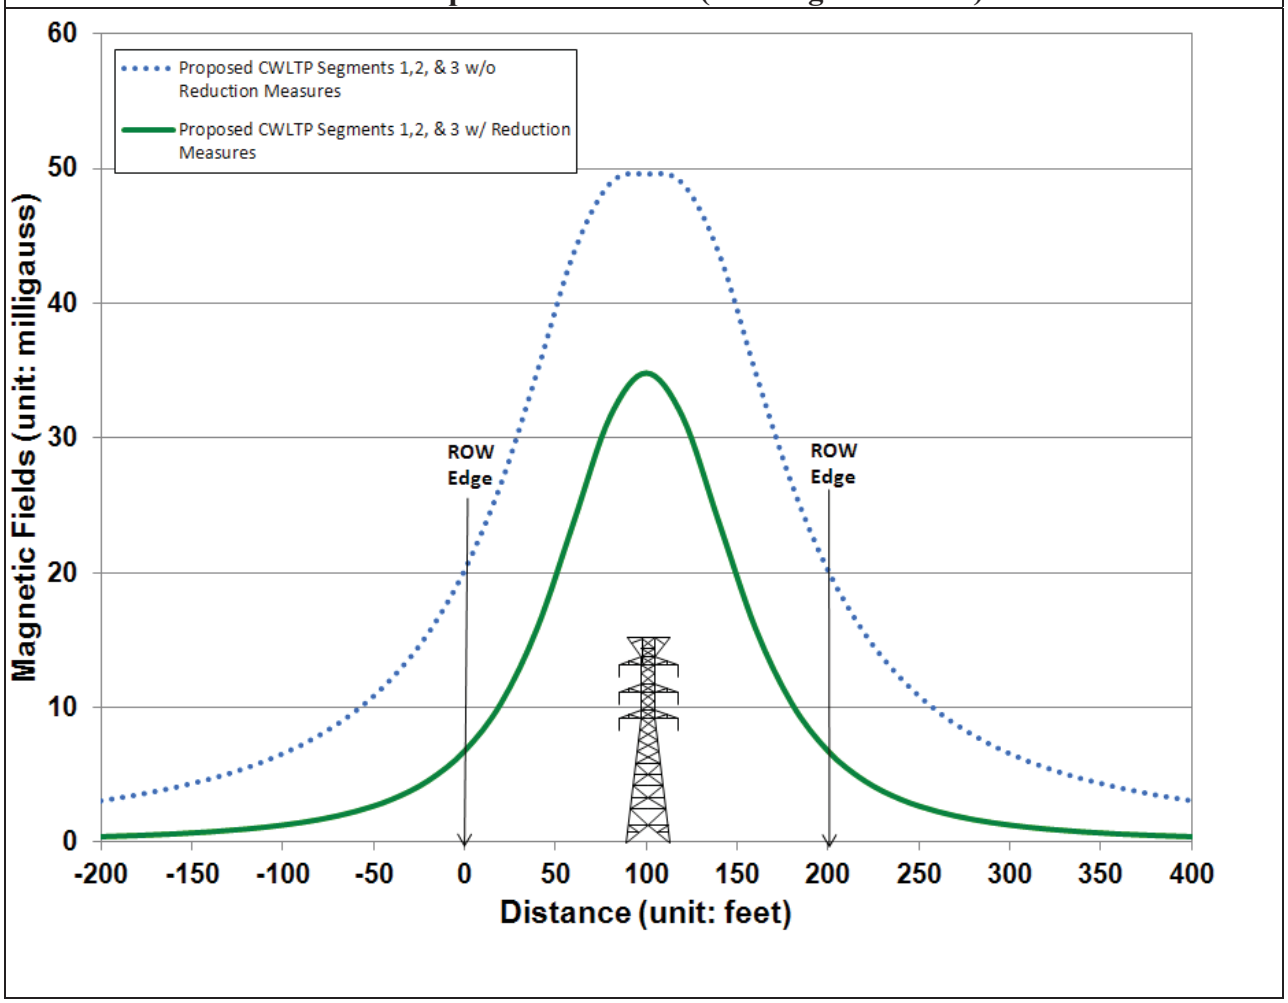


Table 5. Calculated Magnetic Field Levels[53] for Segments 1,2, and 3

Design Options	Left edge of ROW (mG)	% Reduction	Right edge of ROW (mG)	% Reduction
Proposed CWLTP Segments 1,2, & 3 w/o Reduction Measures	20.2	-	20.2	-
Proposed CWLTP Segments 1,2, & 3 w/ Reduction Measures	6.8	66.3	6.8	66.3

[52] This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

[53] This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

Recommendations for Segments 1, 2, and 3: *The proposed design includes the no-cost magnetic field reduction measure of utilizing double-circuit construction that reduces spacing between circuits as compared with single-circuit construction. The no-cost magnetic field reduction measure that is recommended to be included in the project design is maintaining the conductor phase arranging from Segment 12 of the proposed T/L for magnetic field reduction.*

Segment 5 – Model 1

This portion of the evaluation would consist of a portion of the route within Segment 5 (referred to as Segment 5 – Model 1). Segment 5 – Model 1 would consist of four circuits (the existing Eldorado-Lugo 500 kV T/L, the existing Lugo-Mohave 500 kV T/L, the proposed Desert View-Pisgah No. 1 220 kV T/L, and the proposed Coolwater-Desert View 220 kV T/L) within the existing and the Proposed Project ROW. The typical design is shown in Figure 6.

For EMF analysis, calculated field levels were evaluated at the edges of an approximately 525-foot wide ROW (combined existing and proposed ROW). Presently, there are no schools adjacent to Segment 5 – Model 1 of the proposed 220 kV T/L route. The proposed route for Segment 5 – Model 1 is adjacent to scarce residential, agricultural, and undeveloped land.

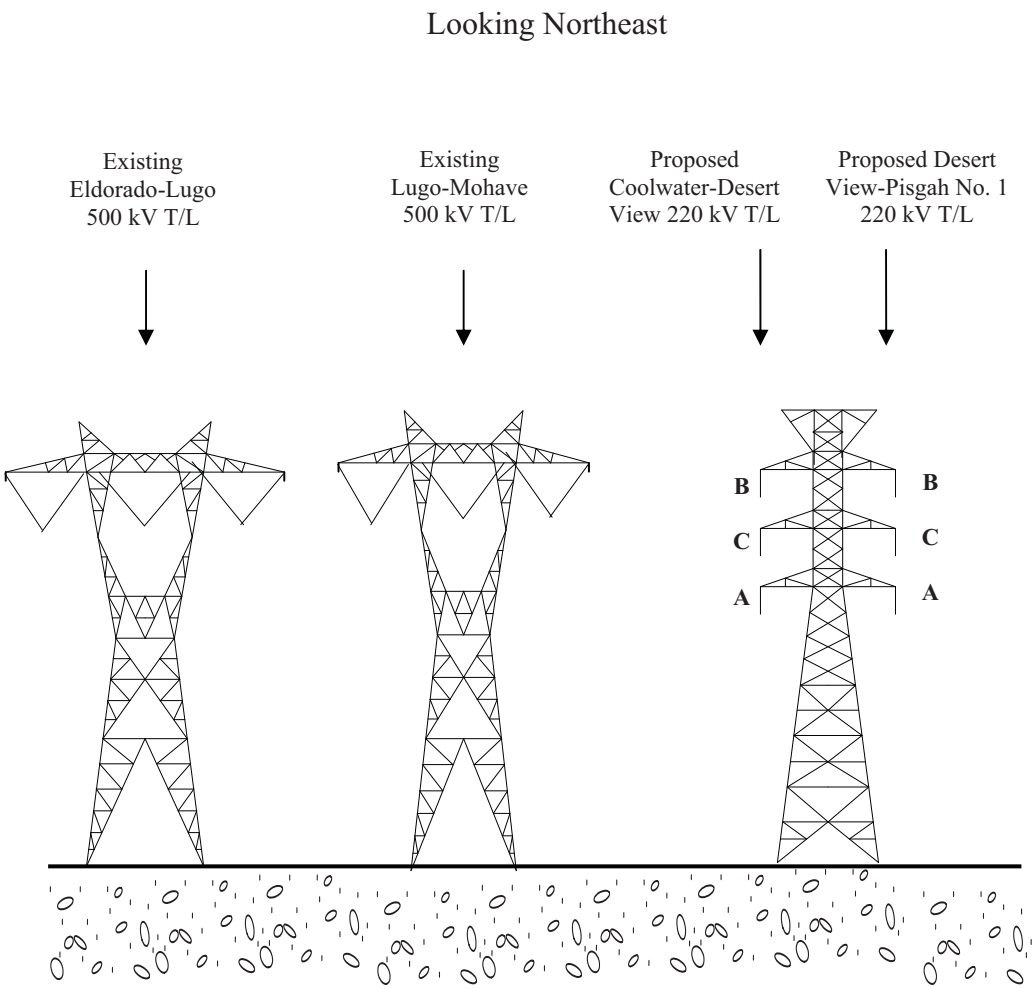
No-Cost Field Reduction Measures: The following no-cost field reduction measure is included in the proposed design for Segment 5 – Model 1:

1. Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction.

Low-Cost Field Reduction Options: The following low-cost field reduction options are considered for the proposed design for this segment for the spans near the crossing of Waverly Avenue and Cove Road:

1. Arrange conductors of proposed T/Ls for magnetic field reduction as shown below:
    a. Coolwater-Desert View 220 kV T/L: **B-C-A** (top to bottom phase arrangement).
    b. Desert View-Pisgah No. 1 220 kV T/L: **B-C-A** (top to bottom phase arrangement).

Figure 6. Typical 220 kV T/L Design: Segment 5 - Model 1[54]



Magnetic Field Calculations: Figure 7 and Table 6 show the calculated magnetic field levels for the proposed design. The models for the proposed design without reduction measures were calculated using the standard phasing convention of "A-B-C" top-to-bottom conductor arrangement for the proposed new T/Ls.

[54] Figure is not to scale.

Table 6. Calculated Magnetic Field Levels[56] for Segment 5 – Model 1

Design Options	Left edge of ROW (mG)	% Reduction	Right edge of ROW (mG)	% Reduction
Existing CWLTP Segment 5 Area	52.0	-	4.7	-
Proposed CWLTP Segment 5 w/o Reduction Measures	52.7	-	16.1	-
Proposed CWLTP Segment 5 w/ Reduction Measures	51.6	2.1	10.3	36.0

[55] This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

[56] This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

Recommendations for Segment 5 – Model 1: *The proposed design includes the no-cost magnetic field reduction measure of utilizing double-circuit construction that reduces spacing between circuits as compared with single-circuit construction. The low-cost magnetic field reduction option that is recommended to be included in the project design is arranging conductors of proposed T/L for magnetic field reduction. The low-cost field reduction measure results in calculated field reductions greater than 15% at the edge of ROW near populated areas.*

Segment 5 – Model 2 and Segment 5a

This portion of the evaluation would consist of the remaining portion of the route within Segment 5 (referred to as Segment 5 – Model 2) and Segment 5a. The evaluation would consist of three circuits (the proposed Desert View-Pisgah No. 1 220 kV T/L, the proposed Desert View-Pisgah No. 2 220 kV T/L, and the proposed Coolwater-Desert View 220 kV T/L) within the existing and Proposed Project ROW. The typical design is shown in Figure 8.

For EMF analysis, calculated field levels were evaluated at the edges of an approximately 400-foot wide ROW (combined existing and proposed ROW). Presently, there are no schools adjacent to the evaluated Segment 5 – Model 2 and Segment 5a of the proposed 220 kV T/L route. The proposed route for Segment 5 – Model 2 and Segment 5a is adjacent to scarce residential, agricultural, and undeveloped land.

No-Cost Field Reduction Measures: The following no-cost field reduction measure is included in the proposed design for Segment 5 – Model 2 and Segment 5a:

1. Utilize double-circuit construction that reduces spacing between conductors as compared with single-circuit construction.

Low-Cost Field Reduction Options: The following low-cost field reduction options are considered for the proposed design for Segment 5 – Model 2 and Segment 5a towers located by the intersection of Soledad Drive and Estrella Avenue:

1. Utilize taller structure heights where the proposed line runs adjacent to populated areas as follows:

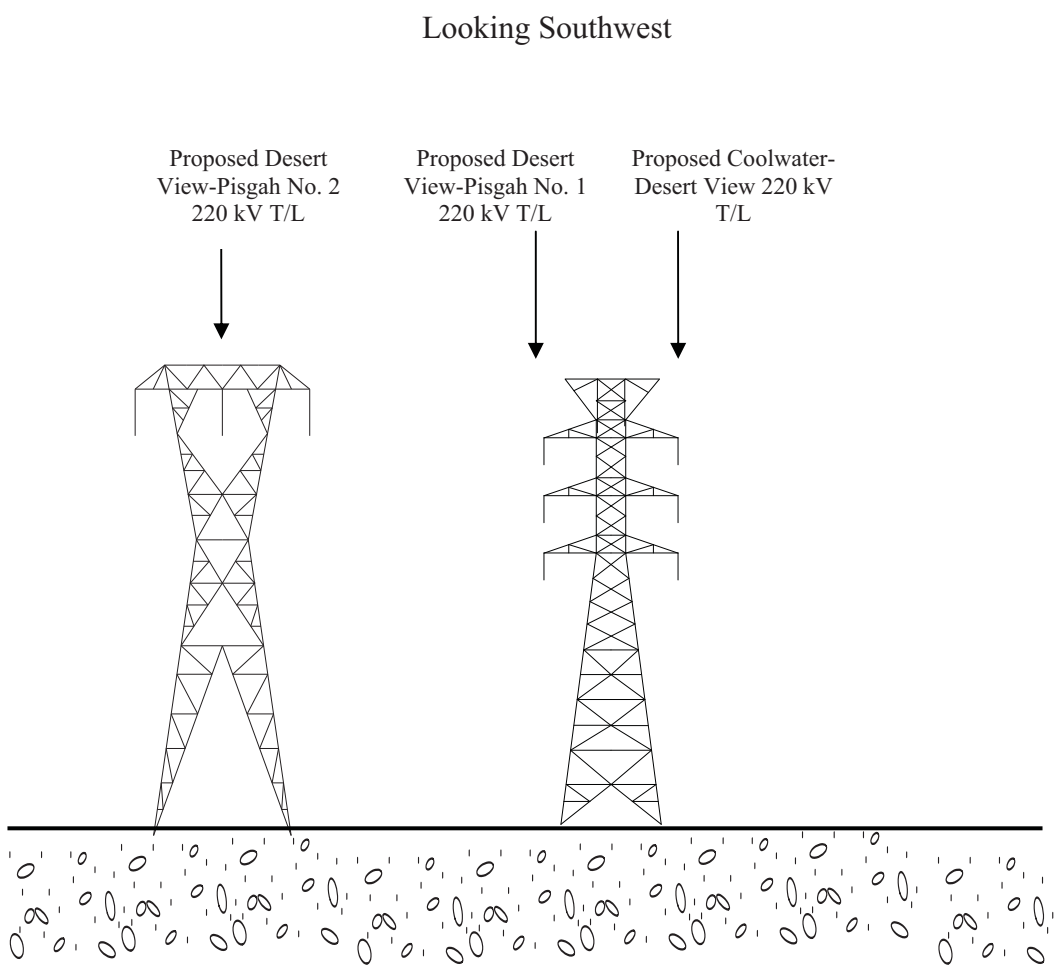
    a. Structure heights of at least 190’.

OR

2. Utilize taller structure heights and utilize increased ground clearance where the proposed lines run adjacent to populated areas as follows:

    a. Structure heights of at least 170’ and designed to have a ground clearance of at least 45’.

Figure 8. Typical 220 kV T/L Design: Segment 5 – Model 2 and Segment 5a[57]



Magnetic Field Calculations: Figure 9 and Table 7 show the calculated magnetic field levels for the proposed design. The models for the proposed design without reduction measures were calculated using the preliminary engineering design of a minimum proposed tower height of approximately 150 feet and MGC of 35 feet.

[57] Figure is not to scale.

Figure 9. Calculated Magnetic Field Levels[58] for Segment 5 – Model 2 and Segment 5a - Proposed 220 kV T/L (Looking Southwest)

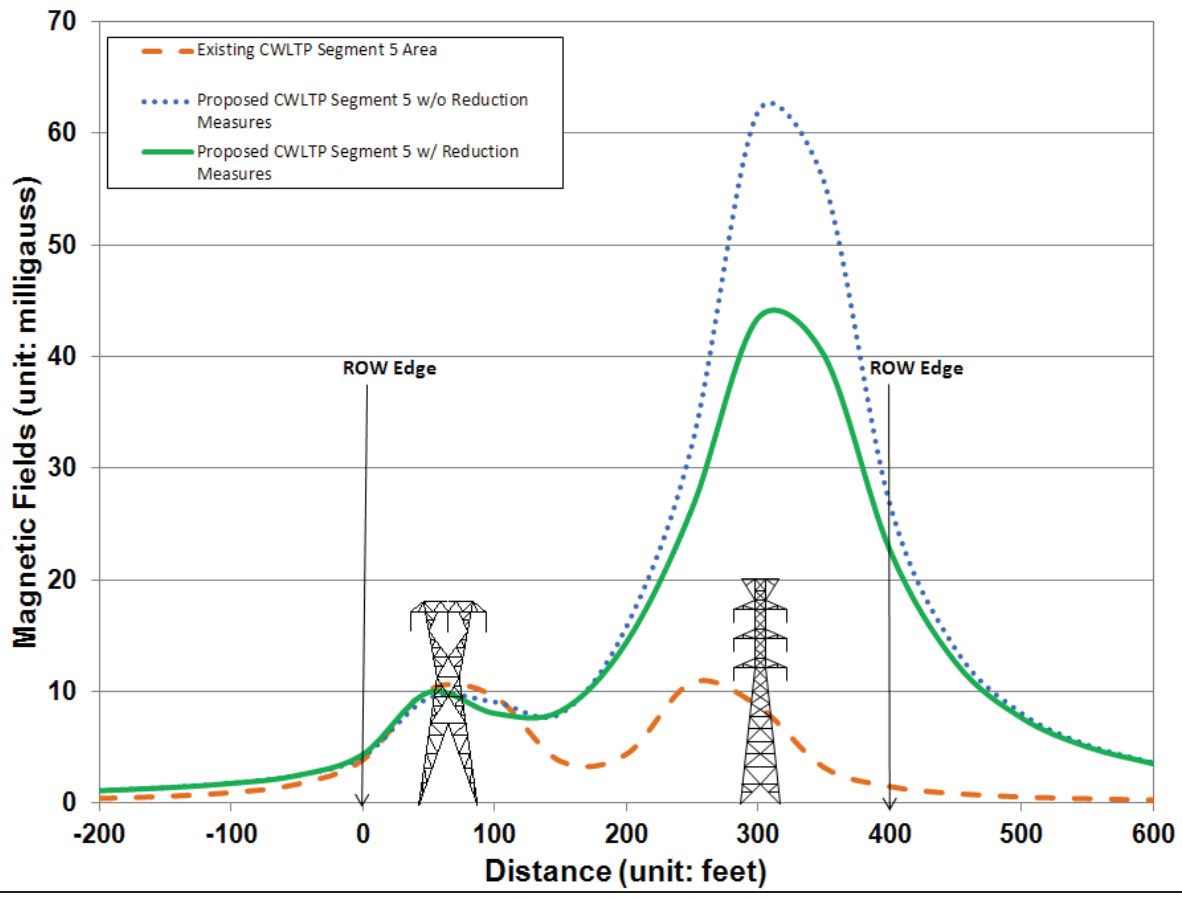


Table 7. Calculated Magnetic Field Levels[59] for Segment 5 – Model 2 and Segment 5a

Design Options	Left edge of ROW (mG)	% Reduction	Right edge of ROW (mG)	% Reduction
Existing CWLTP Segment 5 Area	3.9	-	1.5	-
Proposed CWLTP Segment 5 w/o Reduction Measures	4.2	-	26.8	-
Proposed CWLTP Segment 5 w/ Reduction Measures	4.4	Less than 15% Increase	22.7	15.3

58 This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

59 This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

Recommendations for Segment 5 – Model 2 and Segment 5a: *The proposed design includes the no-cost magnetic field reduction measure of utilizing double-circuit construction that reduces spacing between circuits as compared with single-circuit construction. The low-cost magnetic field reduction options that are recommended to be included in the project design are utilizing taller structures and increased ground clearance for the proposed T/L or utilizing taller structures for the proposed T/L. The low-cost field reduction measures result in calculated field reductions greater than 15% at the edge of ROW near populated areas.*

Segment 7 – Model 1

This portion of the evaluation would consist of a portion of the route within Segment 7 (referred to as Segment 7 – Model 1). Segment 7 – Model 1 would consist of one circuit (the proposed Desert View-Lugo 220 kV T/L) within the existing SCE ROW. The typical design is shown in Figure 10.

For EMF analysis, calculated field levels were evaluated at the edges of an approximately 200-foot wide ROW. Presently, there are no schools adjacent to Segment 7 – Model 1 of the proposed 220 kV T/L route (nearest schools are over 500 feet away from the proposed T/L route). The proposed route for Segment 7 – Model 1 is adjacent to residential, commercial, and undeveloped land.

No-Cost Field Reduction Measures: No "no-cost" reduction measures are included in the design of the project.

Low-Cost Field Reduction Options: The following low-cost field reduction options are considered for all the proposed Segment 7 – Model 1 towers located within 200 feet of residential properties from Desert View Substation (following the proposed project route) up to the crossing of Maple Avenue (near Lugo Substation)[60]:

1. Utilize taller structure heights where the proposed line runs adjacent to populated areas as follows:

    a. Structure heights of at least 150'.

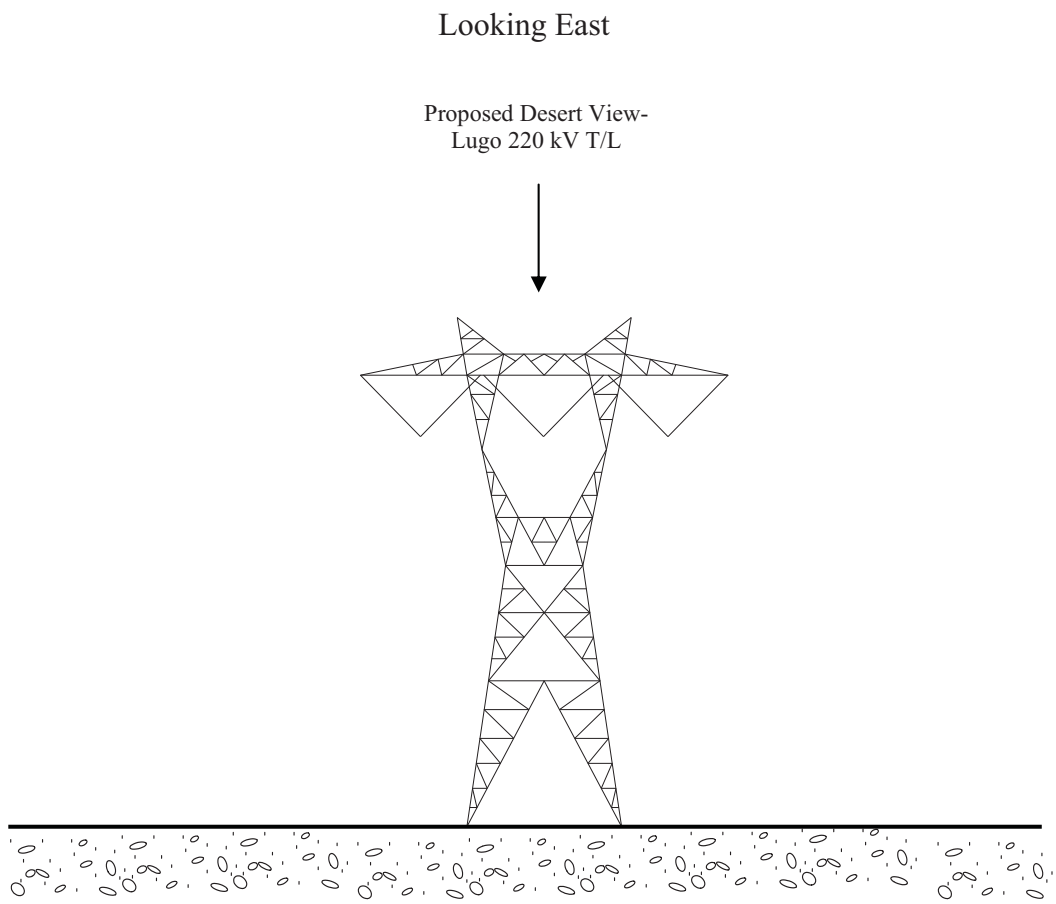
OR

2. Utilize taller structure heights and utilize increased ground clearance where the proposed line runs adjacent to populated areas as follows:

    a. Structure heights of at least 130' and designed to have a ground clearance of at least 50'.

[60] FAA requirements must be adhered for the design of the portions of Segment 7 near Hesperia Airport.

Figure 10. Typical 220 kV T/L Design: Segment 7 – Model 1[61]



Magnetic Field Calculations: Figure 11 and Table 8 show the calculated magnetic field levels for the proposed design. The models for the proposed design without reduction measures were calculated using the preliminary engineering design of a minimum proposed tower height of approximately 110 feet and MGC of 40 feet.

[61] Figure is not to scale.

Figure 11. Calculated Magnetic Field Levels[62] for Segment 7 – Model 1 Proposed 220 kV T/L (Looking East)

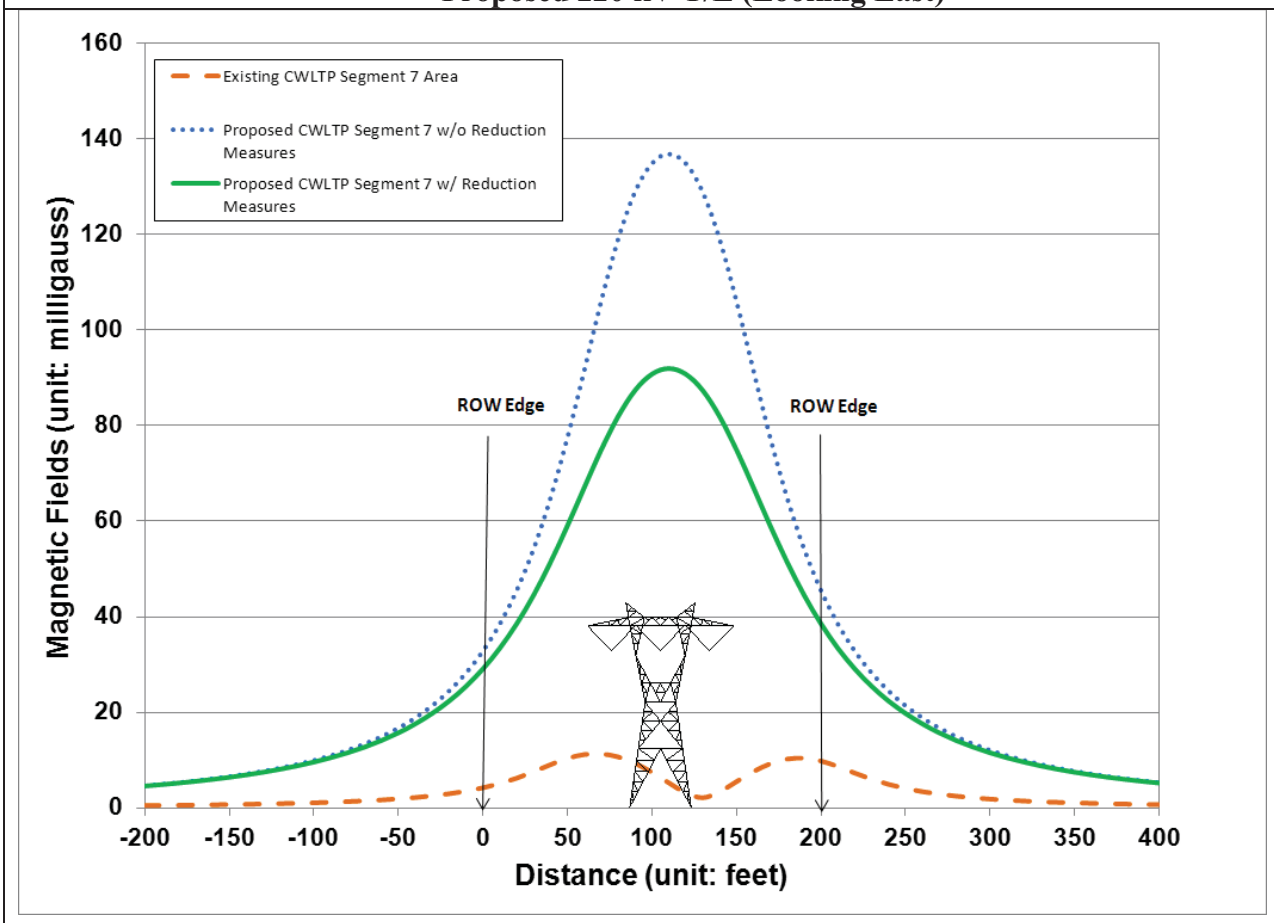


Table 8. Calculated Magnetic Field Levels[63] for Segment 7 – Model 1

Design Options	Left edge of ROW (mG)	% Reduction	Right edge of ROW (mG)	% Reduction
Existing CWLTP Segment 7 Area	4.2	-	9.8	-
Proposed CWLTP Segment 7 w/o Reduction Measures	32.8	-	45.5	-
Proposed CWLTP Segment 7 w/ Reduction Measures	29.1	11.3	38.5	15.4

62 This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

63 This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

Recommendations for Segment 7 – Model 1: *The low-cost magnetic field reduction options that are recommended to be included in the project design are taller structures and increased ground clearance for the proposed T/L or taller structures for proposed T/L. The low-cost field reduction measures result in calculated field reductions greater than 15% at the edge of ROW near populated areas.*

Segment 7 – Model 2

This portion of the evaluation consists of the remaining portion of the route within Segment 7 (referred to as Segment 7 – Model 2). This portion of the evaluation would consist of six SCE circuits (the existing Lugo-Victor No. 1 220 kV T/L, the existing Lugo-Victor No. 2 220 kV T/L, the existing Kramer-Lugo No. 1 220 kV T/L, the existing Kramer-Lugo No. 2 220 kV T/L, the existing Lugo-Victorville 500 kV T/L, and the proposed Desert View-Lugo 220 kV T/L) within the SCE ROW. The typical design is shown in Figure 12.

For EMF analysis, calculated field levels were evaluated at the edges of an approximately 700-foot wide ROW (combined ROW width). Presently, there are no schools adjacent to Segment 7 – Model 2 of the proposed 220 kV T/L route. The proposed route for Segment 7 – Model 2 is adjacent to residential and undeveloped land.

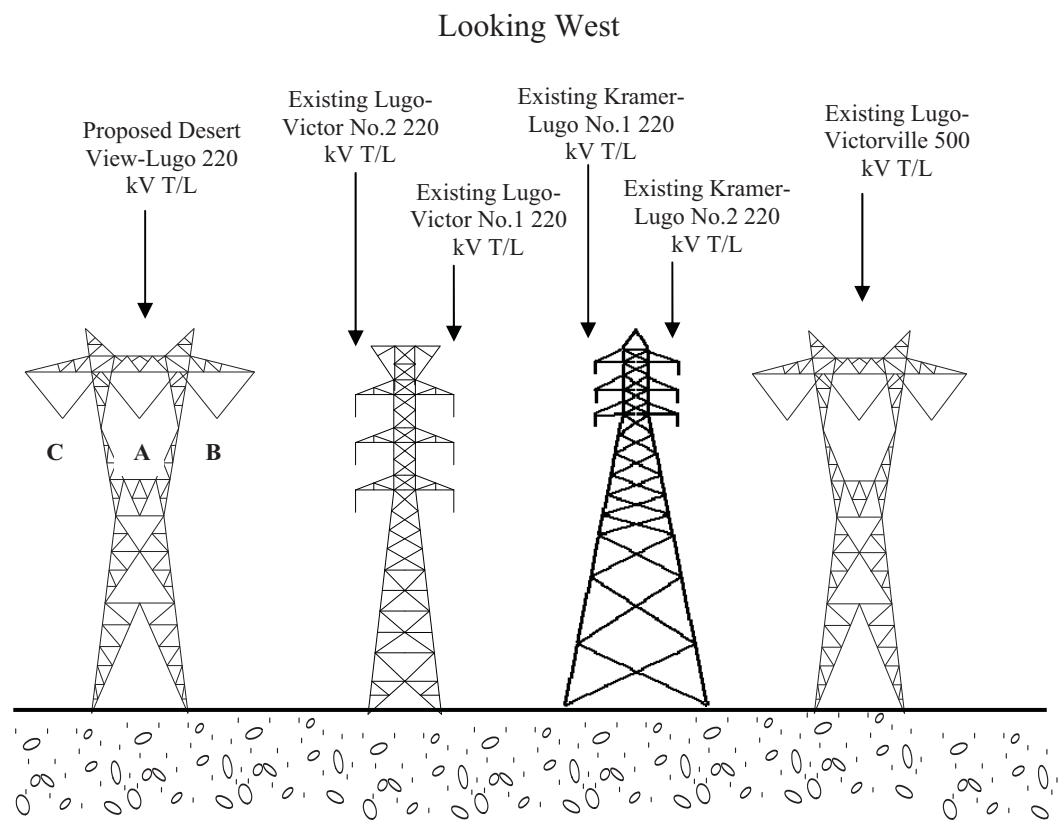
No-Cost Field Reduction Measures: The following no-cost field reduction measure is considered for the proposed design for Segment 7 – Model 2:

1. Arrange conductors of proposed T/L for magnetic field reduction as shown below. This is considered a no-cost measure as the recommended phase arrangement can be obtained at T/L terminations at the Lugo Substation and the proposed Desert View Substation.
    a. Desert View-Lugo 220 kV T/L: **C-A-B** (left to right phase arrangement – looking "West").

Low-Cost Field Reduction Options: The following low-cost field reduction option is considered for the proposed design for Segment 7 – Model 2:

1. Utilize taller structure heights where the proposed line runs adjacent to populated areas as follows:
    a. Structure heights of at least 135' for Segment 7 proposed towers located between the crossings of Maple Avenue and Farmington Street up to Lugo Substation of the Proposed Project route.

Figure 12. Typical 220 kV T/L Design: Segment 7 – Model 2[64]



Magnetic Field Calculations: Figure 11 and Table 9 show the calculated magnetic field levels for the proposed design. The models for the proposed design without reduction measures were calculated using the preliminary engineering design of a minimum proposed tower height of approximately 110 feet and MGC of 40 feet, and using the standard phasing convention of "A-B-C" left-to-right (looking west) conductor arrangement for the proposed new T/L.

[64] Figure is not to scale.

Table 9. Calculated Magnetic Field Levels[66] for Segment 7 – Model 2

Design Options	Left edge of ROW (mG)	% Reduction	Right edge of ROW (mG)	% Reduction
Existing CWLTP Segment 7 Area	9.2	-	49.8	-
Proposed CWLTP Segment 7 w/o Reduction Measures	38.8	-	46.7	-
Proposed CWLTP Segment 7 w/ Reduction Measures	32.8	15.5	46.6	0.2

[65] This figure shows calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

[66] This table lists calculated magnetic field levels for design comparison only and is not meant to predict actual magnetic field levels.

Recommendations for Segment 7 – Model 2: *The no-cost and low-cost magnetic field reduction measures that are recommended to be included in the project design are taller structures and arranging phase conductors of proposed T/L for magnetic field reduction. The no-cost and low-cost field reduction measures result in calculated field reductions greater than 15% at the edge of ROW near populated areas.*

VI. FINAL RECOMMENDATIONS FOR IMPLEMENTING "NO-COST AND LOW-COST" MAGNETIC FIELD REDUCTION DESIGN OPTIONS

In accordance with the "EMF Design Guidelines", filed with the CPUC in compliance with CPUC Decisions 93-11-013 and 06-01-042, SCE would implement the following "no-cost and low-cost" magnetic field reduction design options for the Proposed Project:

Part 1: Proposed Substation Work

Proposed Desert View Substation:

- Place new substation electrical equipment (such as transformers, capacitor banks, and switchracks) away from substation property lines.
- Locate new substation close to existing power lines to the extent possible.

Existing Lugo Substation:

- Place new substation electrical equipment (such as transformers, capacitor banks, and switchracks) away from substation property lines.

Part 2: Proposed Transmission Lines Work

Segment 12
For the proposed Coolwater-Desert View 220 kV T/L:

- Utilize double-circuit construction that reduces spacing between conductors as opposed to single-circuit construction.
- Arrange conductors of proposed T/L for magnetic field reduction as shown below (reference Figure 2):
  - **A-C-B** (top to bottom phase arrangement) for circuit furthest from the Coolwater-Segs2-Tortilla 115 kV Subtransmission Line.
  - **B-C-A** (top to bottom phase arrangement) for circuit closest to the Coolwater-Segs2-Tortilla 115 kV Subtransmission Line.

Segments 1, 2, and 3
For the proposed Coolwater-Desert View 220 kV T/L:

- Utilize double-circuit construction that reduces spacing between conductors as opposed to single-circuit construction.
- Maintain conductor phase arrangement from Segment 12.

Segment 5 – Model 1
For the proposed Coolwater-Desert View 220 kV T/L and the proposed Desert View-Pisgah No. 1 T/L (reference Figure 6):

- Utilize double-circuit construction that reduces spacing between conductors as opposed to single-circuit construction.
- Arrange conductors of T/Ls for magnetic field reduction for the spans near the crossing of Waverly Avenue and Cove Road as follows:
  - Coolwater-Desert View 220 kV T/L: **B-C-A** (top to bottom phase arrangement).
  - Desert View-Pisgah No. 1 220 kV T/L: **B-C-A** (top to bottom phase arrangement).

Segment 5 – Model 2 and Segment 5a
For the proposed Coolwater-Desert View 220 kV T/L and the proposed Desert View-Pisgah No. 1 T/L:

- Utilize double-circuit construction that reduces spacing between conductors as opposed to single-circuit construction.
- Utilize taller structure heights where the proposed lines run adjacent to populated areas for Segment 5 proposed towers located by the intersection of Soledad Drive and Estrella Avenue:
  - Structure heights of at least 190’.

OR

- Utilize taller structure heights and utilize increased ground clearance where the proposed lines run adjacent to populated areas for Segment 5 proposed towers located by the intersection of Soledad Drive and Estrella Avenue:
  - Structure heights of at least 170’ and designed to have a ground clearance of at least 45’.

Segment 7 – Model 1
For the proposed Desert View-Lugo 220 kV T/L:

- Utilize taller structure heights where the proposed line runs adjacent to populated areas for all the Segment 7 proposed towers located within 200 feet of residential properties from Desert View Substation (following the Proposed Project route) up to the crossing of Maple Avenue (near Lugo Substation):
    - Structure heights of at least 150'.

OR

- Utilize taller structure heights and utilize increased ground clearance where the proposed line runs adjacent to populated areas for all the Segment 7 proposed towers located within 200 feet of residential properties from Desert View Substation (following the proposed project route) up to the crossing of Maple Avenue (near Lugo Substation):
    - Structure heights of at least 130' and designed to have a ground clearance of at least 50'.

Segment 7 – Model 2
For the proposed Desert View-Lugo 220 kV T/L (reference Figure 12):

- Utilize taller structure heights where the proposed line runs adjacent to populated areas as follows:
    - Structure heights of at least 135' for the Segment 7 proposed towers located between the crossings of Maple Avenue and Farmington Street up to Lugo Substation of the proposed project route.

- Arrange conductors of proposed T/L for magnetic field reduction as shown below.
    - Desert View-Lugo 220 kV T/L: **C-A-B** (left to right phase arrangement – looking "West").

The recommended "no-cost and low-cost" magnetic field reduction design measures listed above are based upon preliminary engineering design. If the preliminary engineering design is significantly modified (in the context of evaluating and implementing CPUC's "no-cost and low-cost" EMF Policy), then an Addendum to the FMP or a revised FMP will be prepared.

SCE's plan for applying the above "no-cost and low-cost" magnetic field reduction design options uniformly for the Project is consistent with the CPUC's EMF Decisions No. 93-11-013 and No. 06-01-042. Furthermore, the recommendations above meet the CPUC approved EMF Design Guidelines as well as all applicable national and state safety standards for new electrical facilities.

VII. APPENDIX A: TWO-DIMENSIONAL MODEL ASSUMPTIONS AND YEAR 2018 FORECASTED LOADING CONDITIONS

Magnetic Field Model Assumptions:

SCE uses a computer program titled "MFields"[67] to model the magnetic field characteristics of various transmission and subtransmission designs options. All magnetic field models and the calculated results of magnetic field levels presented in this document are intended only for purposes of identifying the relative differences in magnetic field levels among various transmission line and subtransmission line design alternatives under a specific set of modeling assumptions and determining whether particular design alternatives can achieve magnetic field level reductions of 15 percent or more. The calculated results are not intended to be predictors of the actual magnetic field levels at any given time or at any specific location if and when the Project is constructed.

Typical two-dimensional magnetic field modeling assumptions include:

- All T/Ls and subtransmission lines were modeled using forecasted peak loads (see Tables 10 and 11).
- All conductors were assumed to be straight and infinitely long.
- Average conductor heights accounted for line sag used in the calculation for the T/L and subtransmission line designs.
- Magnetic field strength was calculated at a height of three feet above ground.
- Resultant magnetic field values were presented in this FMP.
- All line currents were assumed to be balanced (i.e. neutral or ground currents are not considered).
- Terrain was assumed to be flat.
- Project dominant power flow directions were used.

67 SCE, MFields for Excel, Version 2.0, 2007.

Table 10. Year 2018 Forecasted Loading Conditions for Proposed Project (After Project Completion)		
Line Name	**Current (Amps)**	**Power Flow Direction**
Coolwater-Desert View 220 kV (new line)	1273.7	From Coolwater to Desert View
Desert View-Lugo 220 kV (new line)	1243.8	From Desert View to Lugo
Eldorado-Lugo 500 kV	1457.3	From Eldorado to Lugo
Lugo-Mohave 500 kV	631.7	From Mohave to Lugo
Lugo-Victorville 500 kV	786.0	From Victorville to Lugo
Kramer-Lugo No. 1 220 kV	1221.7	From Kramer to Lugo
Kramer-Lugo No. 2 220 kV	1221.7	From Kramer to Lugo
Desert View-Pisgah No. 1 220 kV (former Lugo-Pisgah No. 1 220 kV)	73.1	From Desert View to Pisgah
Desert View-Pisgah No. 2 220 kV (former Lugo-Pisgah No. 2 220 kV)	65.6	From Desert View to Pisgah
Lugo-Victor No. 1 220 kV	1204.9	From Victor to Lugo
Lugo-Victor No. 2 220 kV	1204.9	From Victor to Lugo
Coolwater-Segs2-Tortilla 115 kV	605.5	From Coolwater/Segs2 to Tortilla

Table 11. Year 2018 Forecasted Loading Conditions (Before Project Completion)		
Line Name	**Current (Amps)**	**Power Flow Direction**
Eldorado-Lugo 500 kV	1450.7	From Eldorado to Lugo
Lugo-Mohave 500 kV	626.9	From Mohave to Lugo
Lugo-Victorville 500 kV	829.5	From Victorville to Lugo
Lugo-Pisgah No. 1 220 kV	95.3	From Pisgah to Lugo
Lugo-Pisgah No. 2 220 kV	94.9	From Pisgah to Lugo
Kramer-Lugo No. 1 220 kV	1232.4	From Kramer to Lugo
Kramer-Lugo No. 2 220 kV	1232.4	From Kramer to Lugo
Lugo-Victor No. 1 220 kV	1167.5	From Victor to Lugo
Lugo-Victor No. 2 220 kV	1167.5	From Victor to Lugo
Coolwater-Segs2-Tortilla 115 kV	613.0	From Coolwater/Segs2 to Tortilla

Notes:

1. Forecasted loading data is based upon scenarios representing load forecasts for 2018. The forecasting data is subject to change depending upon availability of generations, load increase, changes in load demand, and by many other factors.

Appendix C

NOTICE OF APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY FOR COOLWATER LUGO TRANSMISSION PROJECT

NOTICE OF APPLICATION FOR A
CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

COOLWATER-LUGO TRANSMISSION PROJECT
Filing Date: August 28, 2013

Proposed Project: Southern California Edison Company (SCE) has filed an application with the California Public Utilities Commission (CPUC) to construct the Coolwater-Lugo Transmission Project (Proposed Project). (A.13-08-xxx)

Project Description: The Barstow, Inyokern, Kramer, Lucerne Valley, and Owens Valley areas have been identified to be rich solar and wind resource areas in the State of California. One of the major existing bottlenecks that would preclude the transfer of energy produced from renewable resources accumulating at Kramer Substation, located in Kramer Junction, to Lugo Substation, located in Hesperia, is referred to as the Kramer-Lugo transmission corridor. The purpose of the Proposed Project is to provide additional transmission capacity needed in the Kramer Junction and Lucerne Valley areas to support large-scale renewable generation development, system reliability, future load serving in the Town of Apple Valley, and increased electrical demand.

The Proposed Project includes the following elements (please refer to the enclosed map below):

- Construction of a new 500/220/115/12 kilovolt ("kV") substation ("Proposed Desert View Substation") west of Lucerne Valley and southeast of the Town of Apple Valley adjacent to SCE's existing transmission right-of-way.
- Construction of a 220 kV transmission line approximately 34 miles long in new right-of way ("ROW") located between the existing Coolwater Generating Station 220 kV Switchyard ("Coolwater Switchyard") and the location of the future Jasper Substation , southwest of the intersection of Haynes Road and State Route 247.
- Replacement of a 220 kV transmission line with a higher capacity 220 kV transmission line, approximately 13.6 miles long, in existing SCE transmission ROW located from southwest of the intersection of Haynes Road and SR-247 to the Proposed Desert View Substation.
- Replacement of two 220 kV transmission lines with a 500 kV transmission line, initially energized at 220 kV, approximately 16.6 miles long, from the Proposed Desert View Substation to the existing Lugo Substation.
- Construction of new telecommunication facilities to connect the Proposed Desert View Substation to existing Apple Valley Substation in Apple Valley. Portions of this cable would be strung on existing overhead poles, and on new overhead structures and newly constructed underground conduit system(s). This route would be approximately 11 miles in length.
- Construction of new telecommunication facilities to connect the existing Gale Substation near Daggett to existing Pisgah Substation approximately 40 miles east of Daggett. This route would be constructed on existing overhead pole, and portions would be constructed in newly constructed underground conduit systems. This route would be approximately 29 miles in length.

Construction is scheduled to begin in the 1st quarter of 2016, and the Proposed Project is planned to be operational by April 2018.

Electric and Magnetic Fields (EMF) Compliance: The CPUC requires utilities to employ "no-cost" and "low-cost" measures to reduce public exposure to magnetic fields. In accordance with "EMF Design Guidelines" (Decisions 93-11-013 and 06-01-042.), the Proposed Project would implement a combination of the following measures:

1. Place new substation electrical equipment (such as transformers, capacitors, and switchracks) away from the substation property lines.
2. Utilize taller structures.
3. Utilize increased ground clearance.
4. Utilize double-circuit construction that reduces spacing between circuits as compared with single-circuit construction.
5. Arrange conductors of proposed power line(s) for magnetic field reduction.
6. Locate new substation close to existing power lines to the extent possible.

Environmental Review: SCE has prepared a Proponent's Environmental Assessment (PEA) of potential environmental impacts created by the construction and operation of the Proposed Project. The PEA concludes that with the implementation of Applicant-Proposed Measures (APMs), the majority of the potential significant environmental effects associated with the Proposed Project would be reduced to less than significant levels. However, impacts to Air Quality and Aesthetics are expected to be significant and unavoidable.

Pursuant to the California Environmental Quality Act (CEQA), the CPUC's Energy Division will conduct an independent review of the proposed project's environmental impacts. Depending on the results of its review, the Energy Division will issue a Negative Declaration that the proposed project will not result in any significant environmental impacts, or an environmental impact report (EIR) identifying the significant environmental impacts and mitigation measures and alternatives to avoid or reduce them.

Public Participation:

- The public may participate in the environmental review by submitting comments on the Notice of Intent to Approve a Negative Declaration, or on the Notice of Preparation of EIR and draft EIR, and by participating in any scoping meetings or public meetings that may be conducted. For information on the environmental review, contact the CPUC's Energy division at enviroteam@cpuc.ca.gov or (415)703-2126.

- Persons wishing to present testimony in evidentiary hearings and/or legal briefing on all other issues, including project need and cost, EMF compliance; and, if one is prepared, whether the EIR complies with CEQA, require party status. Persons may obtain party status by filing a protest to the application by **September 27, 2013,** in compliance with Rule 2.6, or by making a motion for party status at any time in compliance with Rule 1.4, of the CPUC's Rules of Practice and Procedure (posted at www.cpuc.ca.gov).

- The public may communicate their views regarding the application by writing to the CPUC at 505 Van Ness Avenue, San Francisco, CA 94102, or by emailing the Public Advisor at public.advisor@cpuc.ca.gov. In addition, the CPUC may, at its discretion, hold a public participation hearing in order to take oral public comment.

Document Subscription Service: The CPUC's free online subscription service sends subscribers an email notification when any document meeting their subscription criteria is published on the CPUC's website, such as documents filed in a CPUC proceeding (e.g., notices of hearings, rulings, briefs and decisions). To sign up to receive notification of documents filed in this proceeding (or other CPUC matters), visit www.cpuc.ca.gov/subscription.

Contacts: For assistance from the CPUC, please contact the Public Advisor in San Francisco at (415)703-2074 (public.advisor@cpuc.ca.gov) or in Los Angeles at (213)567-7055 (Public.Advisor.LA@cpuc.ca.gov).

To review a copy of SCE's application, or to request further information about the proposed project, please contact:

Other expenses	(21)
INCOME BEFORE INCOME TAX	229
INCOME TAX EXPENSE	13
NET INCOME	216
Less: Dividends on preferred and preference stock	51
NET INCOME AVAILABLE FOR COMMON STOCK	$ 165

Appendix F

COMPETING ENTITIES FOR COOLWATER-LUGO TRANSMISSION PROJECT

APPENDIX F

COMPETING ENTITIES FOR COOLWATER-LUGO TRANSMISSION PROJECT

The proposed Coolwater-Lugo Transmission Project lies entirely within the boundaries of SCE's existing service territory, and, as such, it will not compete with any other utility, corporation or person.

Nevertheless, SCE notes that Critical Path Transmission, LLC and High Desert Power Authority have been unsuccessfully attempting to have various AV Clearview Transmission proposals approved in the California Independent System Operator (CAISO) annual transmission process. SCE has reviewed and rejected a more recent AV Clearview Transmission Proposal[1] as an alternative to the Coolwater-Lugo Transmission Project for not meeting the Project Objectives of the Coolwater-Lugo Transmission Project.

Critical Path Transmission, LLC
9400 Lurline Avenue
Chatsworth, CA 91311

Jason Caudle, Deputy City Manager
High Desert Power Authority
44933 N. Fern Avenue
Lancaster CA 93534

[1] This AV Clearview Transmission Proposal had also been rejected in CAISO's Board Approved 2012-2013 Transmission Plan.

Citizens or some of the citizens of the following counties and municipal corporations will or may be affected by the changes in rates proposed herein.

*SCE provides electric service to a small number of customer accounts in Tuolumne County and is not subject to franchise requirements.

Appendix G

ANNUAL REVENUE REQUIREMENT

COOLWATER-LUGO TRANSMISSION PROJECT

APPENDIX G
ANNUAL REVENUE REQUIREMENT

Most of the facilities that comprise the project are electric transmission facilities, the reasonableness of costs and the associated ratemaking are under the exclusive jurisdiction of FERC.

If FERC determines that there are facilities the costs of which are ineligible for recovery in FERC-jurisdictional rates, SCE will seek recovery under Public Utilities Code § 399.2.5(b)(4). The revenue requirement of such costs, if any, is not presently known.
