COMPETING ENTITIES FOR THE WEST OF DEVERS UPGRADE PROJECT

COMPETING ENTITIES FOR THE WEST OF DEVERS UPGRADE PROJECT

The proposed West of Devers Upgrade Project lies entirely within the boundaries of SCE's existing service territory. Additionally, the West of Devers Upgrade Project proposes to increase the power transfer capability west of Devers Substation by upgrading SCE's existing 220 kV transmission lines between SCE's Devers, El Casco, Vista, and San Bernardino substations. As such, the West of Devers Upgrade Project will not compete with any other utility, corporation or person. To SCE's knowledge, there are no competing projects that serve the same need.
