**NOTICE OF EX PARTE COMMUNICATION OF
SOUTHERN CALIFORNIA EDISON COMPANY (U 338-E)**

Pursuant to Rule 8.3 of the Commission’s Rules of Practice and Procedure, Southern California Edison Company (SCE) hereby gives notice of the following *ex parte* communication in the above-referenced proceeding.

On Tuesday, June 22, 2010, at approximately 11:00 a.m., at the California Public Utilities Commission’s office, Carl Silsbee (Manager of Resource Policy) and Deana Ng (Senior Attorney) met with Energy Division Staff, Robert Strauss, Nathaniel Skinner, Rebecca Lee, Lily Chow, Jennifer Kalafur and Jack Mulligan (Legal Division), to seek an understanding of Energy Division’s expectations regarding the role and responsibilities of the IOUs in developing system resource plans and coordinating this activity with Energy Division Staff. Karl Meusen, Advisor to Commission President Peevey attended the initial portion of this meeting, in which SCE sought clarification of Energy Division Staff’s preferred approach to modeling, integration of other ongoing work (including various California Independent System Operator studies and activities associated with once-through-cooling policy), and coordination with the Energy Division’s LTPP consultant. The communication was both oral and in writing. SCE provided an excerpt from a June 21, 2010 Pacific Gas and Electric Company filing (attached), which describes the resource planning process in six steps. SCE used this document to guide the

discussion and request clarifications. The meeting, which was initiated by SCE, lasted about one hour, of which Mr. Meeusen was present for approximately the first fifteen minutes.

To receive a copy of this *ex parte* notice, please contact Melissa Schary at (626) 302-6509 [e-mail address: Melissa.Schary@sce.com]

Respectfully submitted,

PG&E Proposed System Planning Analysis Steps

PG&E proposes the Commission use the following steps to answer the needed questions in this proceeding:

Step 1 Develop a set of system-wide resource plans. The resource plans will be evaluated across a number of scenarios or states of the world, and sensitivities. For example, a resource plan may include a 33% RPS blend of different renewable technologies, and have additional operationally flexible resources to meet preset reliability and operating flexibility requirements. Scenarios define the assumptions for customer load growth, electricity natural gas, and CO₂ prices, resource technology costs, etc.

Step 2 Determine the physical system need for resources in each resource plan under different scenarios and sensitivities. System need is the amount and operating characteristics of resources, whether supply or demand-side resources, needed to make the particular resource plan operationally feasible, and meet minimum reliability and environmental requirements.

Step 3 Calculate cost, risk, and environmental metrics for each resource plan under different scenarios and sensitivities.

Step 4 Compare the system need under different resource plans, and select the amount of need to be authorized for procurement in this proceeding based on the resource plan or plans that perform best across all scenarios and sensitivities considering their respective metrics.

Step 5 Determine the system need and type of resources utilities should be authorized to procure in this proceeding.

Step 6 Determine the allocation of system need, and associated costs and benefits, among bundled and DA/CCA customers.
