**OPINION ADOPTING RULES TO GOVERN THE RECEIPT AND  
USE OF PROPOSITION 50 GRANT FUNDS RECEIVED BY  
ALL CLASSES OF REGULATED WATER UTILITIES**

**1. Summary**

This decision adopts rules that shall govern the accounting and ratemaking treatment for grant funds received by all classes of regulated water utilities through the passage of Proposition 50 - The Water Security, Clean Drinking Water, Coastal and Beach Protection Act of 2002 (Proposition 50). This is the first time that California's investor-owned water utilities have been eligible for public grant funds. Receipt of these funds by Commission-regulated water utilities will allow the utilities and their customers to benefit by providing cost-free funds for needed investments in water supply, treatment, and security. Under Proposition 50, regulated water utilities can apply to the California Department of Health Services (DHS) and the California Department of Water Resources (DWR) for approximately \$430 million in grants.

Pursuant to Article XII, Section 6 of the California Constitution, the Public Utilities Code, and our own rules and regulations, the Commission prescribes all accounting and ratemaking practices for investor-owned water utilities.<sup>1</sup> The rules we adopt here are designed to preserve the public interest integrity of Proposition 50 grant funds by ensuring that investor-owned water utilities and their shareholders will not be able to profit in any way through the receipt of

---

<sup>1</sup> Specific Public Utilities Code Sections applicable to this proceeding are: Section 451, which requires the Commission to set just and reasonable rates for utilities; Section 770(b) which requires that the Commission set standards consistent with those of DHS; Section 790, which provides for the disposition of net proceeds from the sale of utility property; and Section 851, which requires Commission authorization for the encumbrance or disposition of utility property.

public funds. Our rules meet the objective we set in this rulemaking, that “Utilities should not receive a windfall nor should shareholders benefit from grant-funded facilities even if, years later, the utility itself or the individual, grant-funded facility is subsequently leased or sold.” (R.04-09-002, page 2.)

## **2. Background - Procedural History**

On September 2, 2004, the Commission issued this order instituting rulemaking (OIR) and directed that it be mailed to all investor-owned water and sewer service utilities under its jurisdiction, as well as DHS, the Commission’s Office of Ratepayer Advocates (ORA), and the California Water Association (CWA). Attached to the OIR were DHS’s Draft “General and Specific Criteria for Proposition 50 Funding” and its “Grant Opportunities for Small Water Systems”, as well as the Commission’s questions for respondent utilities and proposed rules to govern the proceeds for any government grant funds received by investor-owned utilities.

The OIR required all Class A and Class B water utilities (utilities with over 2,000 service connections) and ORA to respond to the questions and proposed rules by October 4, 2004. At the request of Park Water Company (Park), the Commission’s Executive Director granted an extension of time until October 18, 2004 to file opening comments. Parties filing opening comments are CWA (which represents many of the regulated water utilities in California), Park, Del Oro Water Co., Inc. (Del Oro), and Fruitridge Vista Water Company (Fruitridge).

At the request of ORA and CWA, the assigned Administrative Law Judge (ALJ), by ruling dated October 26, 2004, granted two rounds of reply comments, due on November 1, 2004, and November 12, 2004. Parties filing the first round of reply comments are ORA and Southern California Water (SoCalWater). Parties filing the second round of reply comments are CWA and Park.

Pursuant to Rule 6(a)(3) of the Commission's Rules of Practice and Procedure, the Assigned Commissioner's Scoping Memo and Ruling (March 21, 2005) determined the category of this proceeding to be "quasi-legislative" as the term is defined in Rule 5(d), narrowed the scope of the issues to focus solely on Proposition 50 grants to investor-owned water utilities, determined that hearings are not needed, and set a procedural schedule. In addition, the Assigned Commissioner ruled that all water utilities, including Classes A, B, C, and D, that had applied to the DHS for Proposition 50 grant funds were required to provide the information requested in Appendix A of the Scoping Memo by April 22, 2005. Responses were received from all Class A water utilities, while only a few Class B, C, and D water utilities that had applied for Proposition 50 funds responded; the Director of the Commission's Water Division mailed a letter to those utilities that had not responded on May 3, 2005, requesting compliance with the Scoping Memo ruling by May 16, 2005.

### **3. Eligibility for Proposition 50 Grant Funds**

Proposition 50, which included additions to the Water Code - Division 26.5, was passed by California voters in the November 2002 General Election.<sup>2</sup> The bond measure allows the state to sell \$3.46 billion in general obligation bonds for various water-related projects.<sup>3</sup>

---

<sup>2</sup> Subsequently, Assembly Bill 1747 (chaptered August 2003), Senate Bill (SB) 278 (chaptered September 2003), and SB 1049 (chaptered October 2003) clarified certain sections of Division 26.5 of the Water Code (regarding requirements, guidelines, and applicable projects) and sections of the Government Code, the Fish and Game Code, and the Public Resources Code.

<sup>3</sup> These projects include specific CALFED Bay-Delta Program projects, including urban and agricultural water use efficiency programs. In Southern California, the bond funds will contribute to projects that promote alternatives for Colorado River water use, since California must cut its use of Colorado River water. Funds will allow for the

*Footnote continued on next page*

With the passage of Proposition 50, investor-owned water utilities are now eligible for public grants. Previously, water quality bond measures specifically denied investor-owned water utilities from grant eligibility. Proposition 50 is silent on this issue. DHS is the primary agency in administering Proposition 50 grant funds for investor-owned utilities.<sup>4</sup> In its draft evaluation criteria, DHS takes the position that Proposition 50 funds should be available to all water systems, including investor-owned. This position is consistent with appellate court decisions holding that, while our state Constitution precludes the Legislature from making a gift of public funds to a private person or corporate entity (Section 6 of Article XVI of the California Constitution), as long as the funds are expended for a public purpose and the benefits accrue to the public, the allocation of public funds to private entities is not an unlawful gift.<sup>5</sup>

During the 2004 legislative session, legislation was proposed to prohibit DHS from awarding Proposition 50 grant funds to investor-owned water

---

purchasing, protecting, and restoring of wetlands near urban areas. Grants are provided for water management and quality improvement programs along with funding for the development of river parkways. State security funding for local and regional water systems is added to this bond measure along with grants for desalinization and drinking water disinfection.

<sup>4</sup> DHS has sole responsibility to administer the allocation of Proposition 50 grant funds that private water utilities are eligible for – Water Security (Chapter 3) and Safe Drinking Water (Chapter 4); DHS and DWR have joint responsibility to administer Contaminant and Salt Removal Technologies (Chapter 6).

DWR and the State Water Resources Control Board (SWRCB) jointly administer Chapter 8 of Proposition 50 which addresses Integrated Regional Water Management. Private water utilities are not eligible for these grant funds as the lead agency of the project, but are eligible in a subsidiary position.

<sup>5</sup> See Opinion of Attorney General No. 97-401; 80 Ops.Cal.Atty.Gen. 56, *Paramount Unified School Dist. v. Teachers Assn. of Paramount* (1994) 26 Cal.App.4<sup>th</sup> 1371, and *County of Sonoma v. State Bd. Of Equalization* (1987) 195 Cal.App.3d 982.

utilities. The concern expressed by legislators was that private water utilities not earn a return or profit in any way from Proposition 50 grant-funded investment. The Commission has provided assurances that this would not occur. In issuing this OIR, the Commission stated its objective was to adopt rules that would ensure that “Utilities should not receive a windfall nor should shareholders benefit from grant-funded facilities even if, years later, the utility itself or the individual, grant-funded facility is subsequently leased or sold.” (R.04-09-002, page 2.)

Of the current requests for Proposition 50 grant funds from investor-owned water utilities, Class A water utilities account for 83% of the total dollars requested, Class B account for 6%, Class C account for 4%, and Class D account for 7%. A summary of the Proposition 50 grant programs open to investor-owned water utilities, which total approximately \$430 million, is attached at Appendix B. DHS is processing the first round of Proposition 50 grant fund applications and is currently scheduled to begin receiving the second round of applications in October 2005.

#### **4. Proposition 50 Accounting and Ratemaking Rules**

The Scoping Memo sets the following objectives for this rulemaking:

- adopt policies, practices, rules, and procedures that govern the application, usage, ratemaking, retirement, and sale of Proposition 50 grant-funded utility plant;
- limit rules adopted in this proceeding to Proposition 50 government-financed grants;<sup>6</sup> and

---

<sup>6</sup> A separate proceeding, R.04-09-003, addresses for all Commission-regulated utilities the issue of gain on sale of utility plant from all financing sources other than Proposition 50 grants.

- ensure that utilities do not receive a windfall or shareholders benefit from grant-funded facilities even if, years later, the utility itself or the individual, grant-funded facility is subsequently leased or sold.

In the following sections, we adopt rules that meet all of these objectives. In adopting these rules, we use the ratemaking term “plant” rather than the OIR’s term “facilities”.

#### **4.1 Recording Proposition 50 Grant-funded Plant**

DHS criteria and guidelines require matching funds for Proposition 50 grants that are not for disadvantaged communities or small water systems. A utility must apply to the Commission, either in a general rate case or by separate filing, for authority to collect from its customers for the non-Proposition 50 investment and for approval of the financing it proposes. The non-Proposition 50 funded portion of a construction project shall be recorded in accordance with USOA Account 100-1 – Utility Plant in Service.<sup>7</sup> This non-Proposition 50 funded portion, if determined to be reasonable by this Commission, shall earn a return and be eligible for a gain on its sale.

The parties that address this issue (CWA, ORA, and Park) all agree that grant-funded plant should be accounted for in the same manner as Contributions in Aid of Construction (CIAC), but as a distinct account and record; ORA and Park specify that the distinct account should not be a sub-account in CIAC. We agree with ORA and Park that CIAC differs in one significant aspect from Proposition 50 projects: CIAC is used to fund a utility plant project in its

---

<sup>7</sup> USOA Account 100-1 – Utility Plant in Service (Class A), Utility Plant Instruction 3.A. “All amounts included in the accounts for tangible utility plant consisting of plant acquired as an operating unit or system shall be stated in accordance with the

*Footnote continued on next page*

entirety, while Proposition 50 projects can be jointly funded by grant funds and utility matching funds. The utility must separately track Proposition 50 grant funds because of their unique characteristics and the unique rules we adopt here. This approach will also ensure that the grants are separately reported in audited financial statements and reports filed with the Commission. Further, there is a need for a clear audit trail between the utilities' fixed asset accounting system and the general ledger; utilities shall modify, as necessary, their work order tracking systems so that grant-funded projects can be reviewed and audited.

We shall adopt Park's recommendation to establish a new account, Account 266, and ORA's recommendation to title this account "Publicly Funded Grant Plant," and limit Account 266's use to government grants. In establishing this account, we generally follow the existing format for Account 265 as it pertains to ratemaking and accounting. Contributions are not included in the determination of rate base; therefore, by using the existing accounting rules for CIAC, this Commission ensures that no return shall be earned by a water utility on Proposition 50 plant.

When Proposition 50 grant funds are initially received from the funding agency, the utility must place these funds in a separate, interest-bearing bank account that is restricted to Proposition 50 grant funds only. Any interest earned shall be treated in the same manner as the grant funds. On the books of the utility, it shall record the Proposition 50 grant funds as a Debit to Account 120 - Cash<sup>8</sup> and a Credit to Account 266-00 - Contributions - Proposition 50 Grant-funded Plant. When the authorized plant (authorized by the DHS or funding

---

provisions of Utility Plant Instruction 4-B. All other tangible utility plant shall be included in the accounts at the cost incurred by the utility."

<sup>8</sup> USOA for Class B, C, and D Water Utilities - Account 131-Cash.

agency) has been constructed, a second set of entries shall be recorded as a Debit to Account 100 – Utility Plant<sup>9</sup> and a Credit to Account 120 – Cash for the Proposition 50 grant fund amount plus accrued interest.<sup>10</sup>

#### **4.2 Operating Expenses, Administrative and General Expenses, and Taxes**

Operating expenses, administrative and general expenses, and taxes associated with Proposition 50 grant-funded plant, but not funded with Proposition 50 funds, shall be allowed in the determination of rates charged by the utility, if determined to be reasonable by this Commission. These expenses are allowed ratemaking recovery because they are not funded with government funded contributions and are necessary to the maintenance of the plant that has been constructed. The reasonableness of these expenses shall be reviewed in the normal course of the general rate case process. Any indirect benefits resulting from Proposition 50 grant-funded plant, such as reductions in operating expenses resulting from infrastructure improvements, should be projected as

---

<sup>9</sup> USOA for Class B, C, and D Water Utilities – Account 101-Water plant in service.

<sup>10</sup> An example of how to record Proposition 50 grant-funded plant is as follows: Utility receives \$1,000,000 of Proposition 50 grant funds to pay for the construction of a new treatment plant. The total cost of the plant is \$2,000,000 (\$1,000,000 of Proposition 50 funds and \$1,000,000 of utility funds). First, the \$1,000,000 of Proposition 50 grant funds shall be recorded as a Debit to Account 120 - Cash and a Credit to Account 266-01 – Proposition 50 Contributions. Second, when the construction of the plant is completed, the \$1,000,000 of Proposition 50 grant funds shall be recorded as a Debit to Account 100-1 – Utility Plant in Service and a Credit to Account 120 – Cash. The utility funded portion of the construction would also be recorded as a Debit to Account 100-1 – Utility Plant in Service, upon completion and credited to the specific funding mechanism (examples include Cash, Accounts Payable, Notes Payable, or Retained Earnings). This results in the total value of the asset of \$2,000,000 being recorded in Account 100-1 – Utility Plant in Service. Since the \$1,000,000 that represents Proposition 50 grant funds is recorded in Account 266-01, it is deducted from Utility Plant in the calculation of Rate Base.

cost savings and imputed into the utilities' present base margin revenue requirement.<sup>11</sup>

Unless the utility has received authorization from DHS or the funding agency, Proposition 50 grant funds shall not be spent on expenses. We agree with ORA and Park that Proposition 50 grant funds that are expended for expenses authorized by DHS or another funding agency must not be included in the determination of the Results of Operations and the forecast of future expenses in a general gate case. CWA believes that inclusion or exclusion of operating expenses funded by Proposition 50 grant funds should be determined on the specific circumstances of the case. We disagree.

#### **4.3 Depreciation**

ORA and Park recommend that depreciation should be calculated using the existing methodology detailed in the Commission's Standard Practice U-4, while CWA recommends that straight-line depreciation should be used, as proposed in the OIR. We find no reason to deviate from our existing practice and, therefore, agree with ORA and Park that the existing rules should be followed. This means that depreciation on Proposition 50 grant-funded plant is recorded as a Debit to Account 266-01 and a Credit to Account 250 - Reserve for Depreciation of Utility Plant. The depreciation amount accrued each year shall be calculated in the same way as non-contributed plant (Standard Practices U-04-SM and U-04-W).

We agree with CWA that grant funds used to acquire land should not be amortized and included in the depreciation category; we also agree with ORA's

---

<sup>11</sup> Any difference between the projected and actual savings should be trued up in each water utility's general rate case. The purpose of this rule is to prevent utilities from profiting from indirect benefits.

recommendation that this apply to all non-depreciable property, which includes water rights.

While depreciation expenses from grant-funded plant should be excluded from ratemaking as a deduction, ORA and Park are correct in recommending that the utilities should deduct the depreciation expenses for income tax purposes and flow through to their customers any benefits derived from the tax deduction in the most direct fashion possible. We adopt this recommended rule.

#### **5. Construction of Proposition 50 Grant-funded Plant**

Projects funded by Proposition 50 grants may involve extensive planning and require several years to complete. We expect funding agencies will adopt timing rules specific to the grants they administer. However, in the event construction or study completion time limits are not established by the funding agency, then the following provisions are reasonable and shall apply: (1) construction of the project must start within one year after execution of the funding agreement; (2) the project shall conclude within three years after execution of the funding agreement; (3) utilities must seek Commission approval for extensions of time limits at least two months prior to the expiration of those limits or risk loss of undelivered funding; and (4) extension requests may be submitted by advice letter to the Commission's Water Division Director, who shall prepare a resolution for the Commission's consideration.

All parties generally agree that construction of plant using grant funds should be put out for bid, with some flexibility allowed on the minimum number of bids, the criteria for awarding bids, and the possibility of sole source contracts under special circumstances. Parties also recommend that affiliate companies be allowed to bid if the process is in compliance with the Commission's affiliate rules. While our affiliate transaction rules are sufficient for other transactions,

the situation here is unique. Affiliate companies by definition share the same shareholders with the utility and, therefore, under the objectives we have set in this OIR, cannot earn a profit from Proposition 50 grant funds. We do not expect a utility affiliate to bid on a contract if it is precluded from earning a profit; therefore, we shall exclude affiliate transactions on projects involving Proposition 50 grant funds.

In summary, we adopt a rule requiring utilities to utilize a competitive bidding process when awarding contracts for the construction of Proposition 50 grant-funded projects, with the following criteria:

- A minimum of three competitive bids shall be required unless justification is provided showing why the minimum could not be met;
- If the utility does not choose the lowest bid, it must provide a detailed justification explaining why it chose not to accept the lowest bid;
- Utilities should be allowed to enter sole source contracts under special circumstances. Utilities need to seek by advice letter filing a Commission resolution granting a waiver for sole source contracts;
- Affiliate companies are not allowed to participate.

Next, we address the OIR's proposed rule that utilities may not use grant funds for work done prior to the execution of the funding agreement. CWA urges the Commission not to adopt the proposed rule because it may conflict with rules adopted by the funding agencies. ORA urges the Commission to retain the rule in order to avoid a potential windfall to the utility based on the lag time between a general rate case effective date and when the Proposition 50 funds are finally approved. Based on these comments, we find it reasonable to adopt a rule that utilities may not use grant funds for work done prior to the

execution of the funding agreement unless the funding agency has authorized this use and the Commission has reviewed and approved the ratemaking treatment.

## **6. Gain on Sale of Proposition 50 Grant-funded Plant**

### **6.1 Overview**

In order to ensure that private water utilities do not receive a gain on the sale of Proposition 50 grant-funded plant, parties generally proposed rules whereby the utility would return sales proceeds to the Proposition 50 funding agency. These funds would then be available for future public projects.

We take a different approach. We design our rules here to ensure that the plant sold retains its public interest integrity, i.e., no private company or its shareholders profit in any way and the public retains the benefit of a cost-free financed plant. We can accomplish this if the selling and purchasing water companies are both under the Commission's regulation. We can also ensure this if the purchasing entity is a public water agency. Only in the instance where the purchaser is an entity other than a private or municipal water provider do we find need for the selling utility to return all sales proceeds to the funding agency.

Pursuant to Section 851, a utility must apply to the Commission and receive an order authorizing it to dispose or encumber in whole or in part its property necessary or useful in the performance of its duties to the public. In order to ensure the Commission has prior review and approval over all Proposition 50 plant, we shall require utilities to comply with Section 851 for all disposition and encumbrance of Proposition 50 plant, including plant not deemed necessary or useful.

These rules apply to property such as land, plant, or water rights. The OIR raises the issue of intellectual property, the example being grant funds used for

the purpose of conducting a study. In cases such as this, the Commission should individually review the matter in the utility's general rate case, or by separate application if requested.

## **6.2 Sale to a Regulated Water Utility**

We find our objectives are best met by adopting the following rule to apply to the transfer of an asset, district, or total utility to another Commission-regulated water utility. If the asset to be transferred has been paid for with Proposition 50 grant funds in whole or in part, the transferring utility may not receive compensation for that portion of the asset that has been funded with Proposition 50 grant funds, and the purchasing utility shall record a non-ratebase asset in Account 266; the non-Proposition 50 portion of the asset, if any, should transfer at fair market value, pursuant to Section 2720.

An earlier Commission decision gives guidance on how to preserve the public interest integrity of Proposition 50 grant-funded plant that is sold to another regulated water utility. In D.98-11-019 (Lucerne Water Company acquired by Dominguez Water Corporation), the "fair market value" is based on the value of land and "company funded plant assets"<sup>12</sup> – non-utility funded plant such as Contributions<sup>13</sup> and advances are not included in the valuation. This decision also defines the value of "non-rate-based assets"<sup>14</sup> such as those funded with Contributions and Safe Drinking Water Bond Act (SDWBA) loans at their existing book value on the books of the selling utility. Since these items are not

---

<sup>12</sup> D.98-11-019, p. 9.

<sup>13</sup> As we have discussed earlier, government provided funds, such as Proposition 50 grant funds are categorized as Contributions by this Commission and the USOA.

<sup>14</sup> D.98-11-019, p.12.

included in the valuation of a water utility's "fair market value," the selling utility receives no compensation at the disposal of contributed plant. The purchasing utility does not earn a return on either the existing book value or any premium to account for market value at the time of acquisition, since the contributed plant is recorded at its existing cost (not inflated for market value at the time of sale) in Contributions, which is deducted in the calculation of rate base.

Performing the fair market valuation of a single asset, a district, or a total utility without giving monetary consideration for the portion funded by contributions (including Proposition 50 grant-funded plant) is appropriate since the selling utility did not expend its own funds for the contributed portion of the plant and therefore should not be reimbursed for or profit from its sale.

The portion of the asset disposed of that has been funded with non-Proposition 50 funds shall be accounted for in accordance with the USOA Account 100-1 - Utility Plant in Service,<sup>15</sup> and included in the determination of the "fair market value", using the amount paid to the selling company for the non-Proposition 50 funded plant as the value of the plant recorded by the purchasing company. A gain shall be earned by the selling company on non-Proposition 50 funded plant and a return may be earned by the purchasing company on non-Proposition 50 funded plant.<sup>16</sup>

---

<sup>15</sup> See Account 392, Utility Plant Sold, Instruction 12 and 12F.

<sup>16</sup> As an example, we consider an asset owned by Utility F that was funded 50% with Proposition 50 grant funds and 50% with utility funds. It is sold to Utility G for \$6,000. The original total book value of the asset was \$2,000,000, with \$1,000,000 funded with Proposition 50 grant funds and \$1,000,000 funded with utility funds. The depreciated value of the asset is \$10,000 (\$5,000 attributable to the Proposition 50 grant funds and \$5,000 attributable to non-Proposition 50 funds). Utility F shall recognize a gain of

*Footnote continued on next page*

We next consider the sale of plant that is wholly financed from Proposition 50 grants. Based on the valuation discussed above, the Proposition 50 plant would not be included in the valuation of the company. On the books of the selling company, Account 266 shall be reduced by the depreciated book value of the asset, and no compensation shall be recorded since no payment shall be received for the Proposition 50 funded plant that has been disposed of. On the books of the purchasing company, both Account 100-1 and Account 266-01 shall be increased by that same depreciated book value so that no return is earned on the grant-funded asset by the purchasing company.

In its comments, Park raises a concern that the disposition of utility plant for no cost would be in violation of Sections 2718-2720, because those code sections require that assets acquired by a utility that are included in rate base be valued at fair market value. Since assets funded with Proposition 50 grant funds are not part of rate base, the requirements of this code section do not apply.

When Proposition 50 grant-funded plant is sold as part of the sale of a district or a total utility, the valuation of the district or total utility shall not include the value of Proposition 50 grant-funded plant. In that way, the value of these non-rate base items are not included in the determination of the payment to the selling company or the value of the rate base acquired by the purchasing utility. And, consistent with D.98-11-019, the Proposition 50 grant-funded plant would be recorded on the books of the purchasing utility at its depreciated book

---

\$1,000 on the non-Proposition 50 funded plant. Utility G would record the total asset value of \$11,000 in Account 100-1 - Utility Plant in Service (\$6,000 for non-Proposition 50 funded asset at the price it paid and \$5,000 for Proposition 50 grant-funded plant at its current depreciated book value), and a Credit to Account 266-01 of \$5,000 (the depreciated book value). In this way, Utility G earns a return on the non-Proposition 50 grant-funded plant of \$6,000 only (\$11,000 - \$5,000).

value, not its fair market value. In the case of the sale of the utility itself, the same rules apply as for a district.<sup>17 18</sup>

## 7. Sale to Municipal Provider

When Proposition 50 grant-funded plant is sold to a municipal water provider, the public interest integrity of the Proposition 50 grant is preserved. A municipal provider would deploy the Proposition 50 grant plant to provide water service to the public and there is not a concern with profit being realized by a private entity or its shareholders. While the Commission has no jurisdiction over how the municipality records the purchase or charges rates, the rules governing the transaction from the seller's position would still apply.

---

<sup>17</sup> For example, Utility A decides to sell one of its three districts (call it District X) to Utility B. District X includes Proposition 50 grant-funded plant with a depreciated value of \$50,000. Valuation of the district shall not include the Proposition 50 grant-funded plant. Therefore, not only does Utility A not receive payment for the depreciated book value of the Proposition 50 grant-funded plant, it receives no gain on its disposition, either. Utility B must record the Proposition 50 grant-funded plant at the depreciated book value of the seller (\$50,000) in Account 100-1 and Account 266. Since the selling utility did not receive payment for the Proposition 50 plant, it receives no gain or reimbursement for the book value of the Proposition 50 plant. Since Utility B records the Proposition 50 plant it has acquired in Account 266 at its depreciated book value, no return is earned by it.

<sup>18</sup> In some cases, it may be difficult or impossible to perform a valuation of the "fair market value" of a district or total utility without the Proposition 50 funded plant. If there is no way to perform the valuation any other way, the Proposition 50 grant-funded plant must be deducted from the "fair market value" of the total utility that has been determined by the valuation. Since the value of the Proposition 50 grant-funded plant in the valuation has most likely been inflated, the selling utility should inflate the depreciated book value of the Proposition 50 grant-funded plant using the Handy Whitman index. This inflated value of Proposition 50 grant-funded plant should be deducted from the "fair market value" of the utility. This "Adjusted Fair Market Value" would then be used to determine the reasonable purchase price of the utility.

**8. Sale to an Entity Other Than a Private or Municipal Water Provider**

This is the category where the Commission cannot ensure that the Proposition 50 grant-funded plant sold retains its public interest integrity. The purchasing entities may include private companies as well as cities or counties exercising eminent domain powers for purposes of land development. Consistent with our objectives in this OIR, we find that the appropriate treatment in these cases is for the buyer to pay fair market value and for the selling utility to remit all proceeds received from the sale to the original funding agency.

**9. Notification to the Commission**

Utilities must receive Commission approval for SDWBA and Drinking Water State Revolving Fund loans because these loans are repaid by the utility through a surcharge to ratepayers. For any portion of plant that is paid for by non-Proposition 50 grant funds, this same procedure shall be followed. The utility should seek Commission approval through the application process, either in its general rate case or separately.

For plant wholly funded by a Proposition 50 grant, as well as for the partially funded Proposition 50 portion of a plant, we should require notification to the Director of the Water Division when the utility signs a letter of commitment with the funding agency administering the grant and again upon completing the funding agreement execution with the funding agency.

In addition, each utility that receives Proposition 50 grant funds shall so state in its Annual Report to the Commission, with the detail of the type and location of the plant constructed.

**10. Comments to the Draft Decision**

The draft decision of ALJ Walwyn was mailed to the parties in accordance with Pub. Util. Code § 311(g)(1) and Rule 77.7 of the Commission's Rules of

Practice and Procedure. Comments were filed on \_\_\_\_\_, and reply comments were filed on \_\_\_\_\_.

### **11. Assignment of Proceeding**

Michael R. Peevey is the Assigned Commissioner and Christine M. Walwyn is the assigned ALJ in this proceeding.

### **Findings of Fact**

1. Receipt of Proposition 50 grant funds by Commission-regulated water utilities will allow the utilities and their customers to benefit by providing cost-free funds for needed investments in water supply, treatment, and security.

2. The rules we adopt here are designed to preserve the public interest integrity of Proposition 50 grant funds by ensuring that investor-owned water utilities and their shareholders will not be able to profit in any way through the receipt of public funds, and that the public retains the benefit of public funding.

3. DHS criteria and guidelines require matching funds for Proposition 50 grants that are not for disadvantaged communities or small water systems.

4. Utilities must apply to the Commission, either in a general rate case or by separate filing, for authority to collect from their customers for the non-Proposition 50 funded investment and for approval of the financing it proposes for this investment.

5. Our existing account for Contributions in Aid of Construction (CIAC) differs from Proposition 50 funded projects because CIAC is used to fund a utility plant project in its entirety, while Proposition 50 projects can be jointly funded by grant funds and utility-provided funds. It is important to separately track Proposition 50 grant funds.

6. There is a need for a clear audit trail between the utilities' fixed asset accounting system and the general ledger. Utilities should modify, as necessary,

their work order tracking systems so that grant-funded projects can be reviewed and audited.

7. We should establish a new account, Account 266, titled “Publicly Funded Grant Plant” and limit its use to government grants. Account 266 should follow the existing format for Account 265 as it pertains to not being eligible for rate base recovery, records and depreciation.

8. When Proposition 50 grant funds are initially received from the funding agency, the water utility must place these funds in a separate, interest-bearing bank account that is restricted to Proposition 50 grant funds only. Any interest earned must be treated in the same manner as the grant funds.

9. Operating expenses, administrative and general expenses, and taxes associated with Proposition 50 grant-funded plant, but not funded with Proposition 50 funds, shall be allowed in the determination of rates, if determined to be reasonable by the Commission.

10. Any indirect benefits resulting from Proposition 50 grant-funded plant such as reductions in operating expenses resulting from infrastructure improvements, must be projected as cost savings and imputed into the utilities’ present base margin revenue requirement.

11. Unless the utility has received authorization from DHS or the funding agency, Proposition 50 grant funds should not be spent on expenses. Grant funds that are expended for expenses authorized by DHS or another funding agency, must not be included in the determination of the Results of Operations and the forecast of future expenses in a general rate case.

12. Depreciation on Proposition 50 grant-funded plant must be calculated using the existing methodology detailed in the Commission’s Standard Practice

U-4. Grant funds used to acquire land or other non-depreciable property such as water rights, may not be amortized or included in this category.

13. The utilities must deduct depreciation expenses for income tax purposes and flow through to their customers any benefits derived from the tax deduction in the most direct fashion possible.

14. In the event construction or study completion time limits are not established by the funding agency, then the following provisions are reasonable and should apply:

- Construction of the project must start within one year after execution of the funding agreement;
- The project shall conclude within three years after execution of the funding agreement;
- Utilities must seek Commission approval for extensions of time limits at least two months prior to the expiration of those limits or risk loss of undelivered funding; and
- Extension requests may be submitted by advice letter to the Commission's Water Division Director for processing as a Commission resolution.

15. Because they share the same shareholders, neither utilities nor their affiliate companies and their shareholders should be allowed to earn a profit on Proposition 50 grant-funded projects.

16. Water utilities should use a competitive bidding process when awarding contracts for the construction of Proposition 50 grant-funded projects, with the following criteria:

- A minimum of three competitive bids shall be required unless justification is provided showing why the minimum could not be met;
- If the utility does not choose the lowest bid, it should provide a detailed justification explaining why it chose not to accept the lowest bid;

- Utilities should be allowed to enter sole source contracts under special circumstances. Utilities must seek a Commission waiver for sole source contracts.
- Affiliate companies are not allowed to participate.

17. Water utilities may not use grant funds for work done prior to the execution of the grant funding agreement unless the funding agency has authorized this use and the Commission has reviewed and approved the ratemaking treatment.

18. In order to ensure that the Commission has prior review and approval over all Proposition 50 plant transactions, the water utilities must comply with the provisions of Public Utilities Code Section 851 for all disposition and encumbrance of grant-funded plant, including plant not deemed necessary or useful.

19. The rules we adopt here should apply to all tangible property funded with Proposition 50 grants. In cases of intangible property, such as the intellectual property of a study, the Commission should individually review the matter in the utility's general rate case or, if requested, by separate application.

20. The following rule should apply to the transfer of an asset district, or total utility to another Commission-regulated water utility. If the asset to be transferred has been paid for with Proposition 50 grant funds in whole or part, the transferring utility may not receive compensation for the portion of the asset that has been funded with Proposition 50 grant funds, and the purchasing utility shall record a non-ratebase asset in Account 266. The non-Proposition 50 portion of the asset, if any, should transfer at fair market value pursuant to Section 2720.

21. When Proposition 50 grant-funded plant is sold to a municipal water utility that will deploy the asset to provide water service to the public, the public interest integrity of the Proposition 50 grant is preserved, and the rules

governing the transaction from the selling utility's position would be the same as if the sale were to a Commission-regulated utility.

22. When Proposition 50 grant-funded assets are sold to an entity other than a utility or municipal water provider, such as private unregulated companies, or cities or counties exercising eminent domain powers for purposes other than acquiring a municipal water system, the public interest integrity of the grant is not preserved. In these instances, the appropriate treatment is for the buyer to pay fair market value and for the selling utility to remit all proceeds received from the sale of the Proposition 50 grant-funded asset to the funding agency.

23. For plant wholly funded by a Proposition 50 grant, as well as for the partially funded Proposition 50 portion of a plant, the utility must notify the Director of the Water Division when the utility signs a letter of commitment with the state agency administering the fund and again upon completing the funding agreement execution with the funding agency. For any portion of plant that is paid for by non-Proposition 50 grant funds, the utility must obtain Commission approval in its general rate case or through separate application.

24. Each utility that receives Proposition 50 grant funds should so state in its Annual Report to the Commission, with detail of the type, dollar value, and location of the plant constructed.

### **Conclusions of Law**

1. Pursuant to Article XII, Section 6 of the California Constitution, the Public Utilities Code statutes, and our own adopted rules and regulations, the Commission prescribes all accounting and ratemaking practices for investor-owned utilities.

2. We should adopt rules that govern the accounting and ratemaking treatment for Proposition 50 grant-funded plant that ensure that utilities and

their shareholders will not be able to profit in any way through the receipt of public funds.

3. The rules described in the foregoing Opinion and Findings of Fact, and set forth in Appendix A, should be adopted.
4. This proceeding should be closed.

**O R D E R**

**IT IS ORDERED:**

1. The rules attached in Appendix A are adopted.
2. This proceeding is closed.

This order is effective today.

Dated \_\_\_\_\_, at San Francisco, California.

## APPENDIX A

### RULES FOR THE ACCOUNTING OF PROPOSITION 50 GRANT FUNDS

These rules shall apply to all transactions involving Proposition 50 grant funds.

1. No return shall be earned by Commission-regulated water utilities (Utilities) on Proposition 50 grant-funded plant.
2. No gain shall be recovered by utilities on the disposition of Proposition 50 grant-funded plant.
3. When Proposition 50 Grant Funds are received from the funding agency, the utility must place these funds in a separate, interest-bearing bank account that is restricted to Proposition 50 grant funds only. Any interest earned should be treated in the same manner as the grant funds. On the books of the company, it shall record the funds as a Debit to Account 120 - Cash and a Credit to Account 266 - Publicly Funded Grant Plant. When the authorized plant (authorized by the California Department of Health Services (DHS), the Department of Water Resources (DWR) or another funding agency) has been constructed, a second set of entries shall be recorded as a Debit to Account 100-1 - Utility Plant in Service and a Credit to Account 120 - Cash. Account 266 shall follow the following rules:
  - 3.1 This account shall include only publicly funded grants and any interest accrued on the grant funds.
  - 3.2 The records supporting the entries to this account must be so kept that the utility can furnish information as to the purpose of each grant, and shall be segregated between depreciable and non-depreciable property.
  - 3.3 Depreciation accrued on the depreciable portion of properties included in this account shall be charged to this account rather than to Account 503, Depreciation, the charges to this account to continue until such time as the balance in this account applicable to such properties has been completely amortized. (See Utility Plant Instruction 3.F.<sup>1</sup>) The

---

<sup>1</sup> Utility Plant Instruction 3.F. "Utility plant contributed to the utility or constructed by it from contributions to it of cash or its equivalent shall be charged to the utility plant accounts at cost of construction. There shall be credited to the depreciation and amortization reserve accounts the estimated amount of depreciation and amortization applicable to the property at the time of this contribution to the utility. The difference

*Footnote continued on next page*

- balance in the account applicable to non-depreciable property shall remain unchanged until such time as the property is sold or otherwise retired. At time of retirement of non-depreciable property, which was acquired by grant funds, the costs thereof shall be credited to the appropriate plant account and charged to this account in order to eliminate any credit balance in the grant account applicable thereto.
- 3.4 It is intended under the provisions contained in the preceding paragraph that the credit balance in the account will be written off over a period equal to the actual service life of the property involved. The net salvage realized on the retirement of grant-funded property shall be recorded as a credit to Account 250, Reserve for Depreciation of Utility Plant.
4. Operating Expenses, Administrative and General Expenses, and Taxes associated with Proposition 50 grant-funded plant, but not funded with Proposition 50 funds, shall be allowed, if determined to be reasonable by this Commission. The reasonableness of these costs shall be determined in the general rate case that addresses the results of operations for the district these expenses occur in.
  5. Any indirect benefits resulting from Proposition 50 grant-funded plant such as reductions in operating expenses resulting from infrastructure improvements, must be projected as cost savings and imputed into the utilities' revenue requirement.
  6. Unless the utility has received authorization from DHS or the funding agency, Proposition 50 grant funds should not be spent on expenses. Grant funds that are expended for expenses authorized by DHS or another funding agency, must not be included in the determination of the Results of Operations and the forecast of future expenses in a general rate case.
  7. Depreciation on Proposition 50 grant-funded plant must be calculated using the existing methodology detailed in the Commission's Standard Practice U-4. Grant funds used to acquire land should not be amortized or included in this category as well as other non-depreciable property such as water rights.

---

between the amounts included in the utility plant account and the reserve accounts shall be credited to Account 265, Contributions in Aid of Construction."

8. The utilities must deduct depreciation expenses for income tax purposes and flow through to their customers any benefits derived from the tax deduction in the most direct fashion possible.
9. In the event construction or study completion time limits are not established by the funding agency, then the following provisions are reasonable and should apply:
  - Construction of the project must start within one year after execution of the funding agreement;
  - The project shall conclude within three years after execution of the funding agreement;
  - Utilities must seek Commission approval for extensions of time limits at least two months prior to the expiration of those limits or risk loss of undelivered funding; and
  - Extension requests may be submitted by advice letter to the Commission's Water Division Director for processing as a Commission resolution.
10. Because they share the same shareholders, neither utilities nor their affiliate companies and their shareholders should be allowed to engineer or install the facilities for Proposition 50 grant-funded projects.
11. Utilities should use a competitive bidding process when awarding contracts for the construction of Proposition 50 grant-funded projects, with the following criteria:
  - A minimum of three competitive bids shall be required unless justification is provided showing why the minimum could not be met;
  - If the utility does not choose the lowest bid, it must provide a detailed justification explaining why it chose not to accept the lowest bid;
  - Utilities should be allowed to enter sole source contracts under special circumstances. Utilities must seek by advice letter filing a Commission resolution granting a waiver for sole source contracts;
  - Affiliate companies are not allowed to participate.
12. Water utilities may not use grant funds for work done prior to the execution of the grant funding agreement unless the funding agency has authorized this use and the Commission has reviewed and approved the ratemaking treatment.

13. In order to ensure that the Commission has prior review and approval over all Proposition 50 plant transactions, the water utilities must comply with the provisions of Public Utilities Code Section 851 for all disposition and encumbrance of grant-funded plant, including plant not deemed necessary or useful.
14. These rules apply to all tangible property funded with Proposition 50 grants. In cases of intangible property, such as the intellectual property of a study, the Commission should individually review the matter in the utility's general rate case or, if requested, by separate application.
15. The following rule should apply to the transfer of an asset, district, or total utility to another Commission-regulated water utility. If the asset to be transferred has been paid for with Proposition 50 grant funds in whole or part, the transferring utility may not receive compensation for the portion of the asset that has been funded with Proposition 50 grant funds, and the purchasing utility shall record a non-ratebase asset in Account 266. The non-Proposition 50 portion of the asset, if any, should transfer at fair market value.<sup>2</sup>
16. When Proposition 50 grant-funded plant is sold to a municipal water provider that will deploy the asset to provide water service to the public, the public interest integrity of the Proposition 50 grant is preserved, and the rules governing the transaction from the selling utility's position would be the same as if the sale were to a utility.
17. When Proposition 50 grant-funded assets are sold to an entity other than a utility or municipal water provider, such as private unregulated companies or cities or counties exercising eminent domain powers for purposes other

---

<sup>2</sup> For example, Utility A decides to sell one of its three districts (call it District X) to Utility B. District X includes Proposition 50 grant-funded plant with a depreciated value of \$50,000. Valuation of the district shall not include the Proposition 50 grant-funded plant. Therefore, not only does Utility A not receive payment for the depreciated book value of the Proposition 50 grant-funded plant, it receives no gain on its disposition, either. Utility B must record the Proposition 50 grant-funded plant at the depreciated book value of the seller (\$50,000) in Account 100-1 and Account 266. Since the selling utility did not receive payment for the Proposition 50 plant, it receives no gain or reimbursement for the book value of the Proposition 50 plant. Since Utility B records the Proposition 50 plant it has acquired in Account 266 at its depreciated book value, no return is earned by it.

than acquiring a municipal water system, the public interest integrity of the grant is not preserved. In these instances, the appropriate treatment is for the buyer to pay fair market value and for the selling utility to remit all proceeds received from the sale of the Proposition 50 grant-funded asset to the funding agency.

18. For plant wholly funded by a Proposition 50 grant, as well as for the partially funded Proposition 50 portion of a plant, the utility must notify the Director of the Water Division when the utility signs a letter of commitment with the state agency administering the fund and again upon completing the funding agreement execution with the responsible agency. For any portion of plant that is paid for by non-Proposition 50 grant funds, the utility must obtain Commission approval in its general rate case or through separate application.
19. All utilities that receive Proposition 50 grant funds must provide the following information regarding its Proposition 50 grant-funded plant in its Annual Report to the Commission: (1) Amount of Proposition 50 grant funds received, (2) Amount of Proposition 50 grant funds spent in the year covered by the Annual Report, and (3) Description of plant constructed with Proposition 50 grant funds.

**(END OF APPENDIX A)**

**APPENDIX B**

**Summary of Prop 50 Grant Programs Open to Regulated Utilities  
Funds Available for Each Chapter**

Chapter 3 – Water Security, Approximately (Approx.) \$50,000,000 Total (Ttl)  
Grants range from \$50,000 - \$10,000,000

Chapter 4a1 – Small Community Water System Facilities, Approx. \$14,000,000 Ttl  
Grants range from \$5,000 - \$2,000,000

Chapter 4a2 – Contaminant Treatment & Removal, Approx. \$14,000,000 Ttl  
Grants range from \$50,000 - \$2,000,000

Chapter 4a3 – Community Water System Monitoring Facilities, Approx.  
\$14,000,000 Ttl  
Grants range from \$5,000 - \$2,000,000

Chapter 4a4 – Drinking Water Source Protection, Approx. \$14,000,000 Ttl  
Grants range from \$50,000 - \$2,000,000

Chapter 4a5 – Disinfection Byproduct Treatment Facilities,  
Approx. \$14,000,000 Ttl  
Grants range from \$50,000 - \$2,000,000

Chapter 4b – Southern California Projects to Reduce Demand on Colorado River,  
Approx. \$260,000,000 Ttl  
Grants range from \$50,000 - \$20,000,000

Chapter 6b – Contaminant Removal, Approx. \$25,000,000 Ttl  
Grants range from \$50,000 - \$5,000,000

Chapter 6c – UV & Ozone Disinfection, Approx. \$25,000,000 Ttl  
Grants range from \$50,000 - \$5,000,000
