BEFORE THE PUBLIC UTILITIES COMMISSION
OF THE STATE OF CALIFORNIA

Joint Application of Central Valley Gas Storage, LLC (U915G), AGL Resources Inc. and The Southern Company for Expedited *Ex Parte* Authorization to Transfer Ownership of Central Valley Gas Storage, LLC to The Southern Company.	A1511011 Application _________ (Filed November 9, 2015)

JOINT APPLICATION FOR TRANSFER OF OWNERSHIP
OF CENTRAL VALLEY GAS STORAGE, LLC (U915G)
PURSUANT TO PUBLIC UTILITIES CODE SECTION 854(a)

Pursuant to Section 854(a) of the California Public Utilities Code and Article 2 and Rule 3.6 of the California Public Utilities Commission's ("Commission") Rules of Practice and Procedure ("Rules"), Central Valley Gas Storage, LLC (U915G) ("Central Valley"), AGL Resources Inc. ("AGLR") and The Southern Company ("Southern Company") (collectively the "Joint Applicants") request expedited *ex parte* authorization to transfer indirect ownership of Central Valley to Southern Company from Central Valley's ultimate parent, AGLR, which will become a wholly owned subsidiary of Southern Company pursuant to an August 23, 2015 Agreement and Plan of Merger ("Merger Agreement"). As set forth in detail, below, Joint Applicants have satisfied all of the requirements for approval of the transfer of ownership, and respectfully request that the Commission issue an order approving the ownership transfer as requested herein.

I. OVERVIEW

This Application seeks Commission authorization pursuant to Section 854(a) of the Code for the transfer of indirect ownership of Central Valley to Southern Company.1/ Specifically, on

1/ Sections 854(b)-(c) of the California Public Utilities Code are not applicable here because neither AGLR, Southern Company, nor any of either company's affiliates has gross annual California revenues that

August 23, 2015, AGLR and Southern Company executed the Merger Agreement pursuant to which AGLR will become a wholly owned subsidiary of Southern Company. Central Valley is an indirect subsidiary of AGLR, and hence, upon approval of the merger, Central Valley will become an indirect subsidiary of Southern Company. Accordingly, Central Valley's indirect change in ownership is subject to the Commission's approval of this Application.

Notwithstanding the indirect change in ownership, Central Valley will continue to operate as an independent natural gas storage provider subject to the jurisdiction of the Commission. In addition, the transaction will not result in the transfer of any certificates, assets or customers of Central Valley. Central Valley will continue to be bound by all of the terms and conditions prescribed by the Commission in its decision granting Central Valley a Certificate of Public Convenience and Necessity ("CPCN") for construction and operation of its natural gas storage facility.2/

As detailed in this Application, Joint Applicants have met all the requirements for approval of a transfer of ownership. Specifically, in Section II, Joint Applicants have provided detailed descriptions of the various companies involved in the transaction. In Section III, Joint Applicants have described the transaction in detail. In Section IV, Joint Applicants have demonstrated that the transaction meets the public interest standard under § 854 of the Code. In Section V, Joint Applicants have shown compliance with the California Environmental Quality Act ("CEQA") (Public Resources Code § 21000 *et seq.*) by detailing reasons why the transfer of ownership is not a "project" under CEQA and, thus, not subject to review under that statute. In Sections VI and VII, Joint Applicants have requested expedited *ex parte* approval of the

---

exceed $500 million.

2/ Decision Granting Application for A Certificate of Public Convenience and Necessity to Construct and Operate a Gas Storage Facility, D.10-10-001, No. A.09-08-008 (CPUC Oct. 14, 2010).

transaction and provided all requisite information required under Rule 2.1(c) of the Commission's Rules of Practice and Procedure.

Based on this showing, Joint Applicants respectfully request the Commission to approve the transfer of ownership requested in this Application.

II. DESCRIPTION OF JOINT APPLICANTS

A. Central Valley Gas Storage, LLC and AGL Resources Inc.

Central Valley is a Delaware limited liability company with licenses to do business in California and Illinois. Its principal place of business is Lisle, Illinois.

Central Valley is a separate legal entity that is an indirect subsidiary of AGLR, which is a Georgia corporation headquartered in Atlanta, Georgia. AGLR's principal business is the distribution of natural gas through public utility operating companies in seven states: Nicor Gas Company in Illinois; Atlanta Gas Light Company in Georgia; Chattanooga Gas Company in Tennessee; Elizabethtown Gas in New Jersey; Elkton Gas in Maryland; Florida City Gas in Florida; and Virginia Natural Gas Company in Virginia. AGLR's seven utility companies currently serve nearly 4.5 million end-use customers. They are each state-regulated local gas distribution utilities that construct, operate, and maintain intrastate natural gas pipelines and distribution facilities. Through its non-utility subsidiaries, AGLR also is involved in several other businesses, including: retail natural gas marketing to end-use customers; natural gas asset management and related logistics activities for certain of its utilities and nonaffiliated companies; natural gas storage arbitrage and related activities; and the development and operation of high-deliverability natural gas storage assets.

With respect to market based-rate storage assets, in addition to Central Valley, AGLR owns two facilities currently in operation: Golden Triangle Storage, Inc., a salt cavern storage facility in Texas; and Jefferson Island Storage & Hub, L.L.C., a salt cavern storage facility located in Louisiana.

Other than Central Valley, the AGLR corporate family does not have any businesses based in California or own any assets on the West Coast.

On October 14, 2010, the Commission granted Central Valley's application for a CPCN authorizing the construction and operation of an underground natural gas storage facility in Colusa County.3/ Central Valley is comprised of (1) an 11 Bcf underground natural gas storage field ("Storage Field") within the Princeton Gas Field, (2) a compressor station and dehydration units, (3) a remote well pad site, (4) injection/withdrawal, observation, and salt water disposal wells, (5) a metering station, and (6) a natural gas pipeline extending approximately 14.7 miles from the Storage Field to an interconnection with the metering station and PG&E's Line 400/401 gas transmission pipeline. Central Valley commenced commercial operation in March 2012.

As the Commission is aware, in 2011 the Commission previously granted expedited *ex parte* authorization for the indirect transfer of ownership of Central Valley from Nicor, Inc. ("Nicor") to AGLR.4/ No interested parties protested Central Valley's application. In approving the transfer of ownership, the Commission also concluded that the underlying transactions were exempt from CEQA, and thus required no additional environmental review.

The current management team of Central Valley is as follows:

CEO	Peter I. Tumminello
President	Stephen J. Cittadine

3/ *Id.*

4/ Decision Approving Change in Ownership and Control of Central Valley Gas Storage, LLC D.11-05-030, No. A.11-01-021 (CPUC May 26, 2011).

Vice President, Storage and Peaking Operations	Timothy J. Hermann
Vice President, Risk Control	James J. Goerig
Treasurer	L. Stephen Cave
Corporate Secretary	Jeffrey P. Brown
Assistant Corporate Secretary	Dat T. Tran
Assistant Corporate Secretary	Barbara P. Christopher

B. Southern Company

Southern Company is an Atlanta-based public utility holding company currently providing electric utility service through four state-regulated operating companies in Alabama, Florida, Georgia and Mississippi. Southern Company brands are known for excellent customer service, high reliability and affordable prices. The first holding company in Southern Company's lineage dates to 1912. Currently, Southern Company is the parent of Alabama Power Company, Georgia Power Company, Gulf Power Company, and Mississippi Power Company. Approximately 90 percent of Southern Company's net income comes from its state-regulated electric utility subsidiaries. Southern Company's other subsidiaries include Southern Power, a wholesale energy provider, and Southern Telecom and SouthernLINC Wireless, which provide fiber optics and wireless communications. Today, Southern Company's state-regulated utilities serve more than 4.5 million customers throughout 120,000 square miles of regulated service territory.

Southern Company recognizes that public utilities have unique obligations and responsibilities to their customers. Consequently, Southern Company places the customers and communities that it serves at the center of everything it does. That philosophy is reflected in Southern Company's commitment to providing safe, reliable, and affordable service. It also informs Southern Company's efforts in the areas of economic development, business diversity, and community involvement. This philosophy is one of the reasons that Southern Company is one of only two utilities listed in Fortune's annual "World's Most Admired Electric and Gas Utility" rankings for each of the last five years.

Southern Company's organizational philosophy is founded on the strength, independence, and local management of its operating companies. Understanding and being responsive to the particular needs of each service territory is critical to providing first-rate utility service. Therefore, Southern Company's operating subsidiaries each have their own executive management teams that are responsible for each subsidiary's operations. These responsibilities extend beyond day-to-day operations and include responsibility for key decisions, such as long-term resource planning. Southern Company will apply the same organizational approach to AGLR and Central Valley.

D. Certificates of Formation and Financial Statements

A copy of Central Valley's Certificate of Formation is attached hereto as Exhibit 1. Central Valley is qualified to do business in the State of California. A copy of its Certificate of Registration to do business in California issued by the Secretary of State is attached hereto as Exhibit 2.

The most recent Annual Report to Shareholders, proxy statement, and financial statements from the Annual Report on Form 10-K for AGLR are attached as Exhibit 3, Exhibit 4, and Exhibit 5, respectively. The most recent Annual Report to shareholders, proxy statement, and financial statements from the Annual Report on Form 10-K for Southern are attached as Exhibit 6, Exhibit 7, and Exhibit 8, respectively.

III. DESCRIPTION OF THE MERGER

Southern Company, AMS Corp.5/ and AGLR have entered into the Merger Agreement, a copy of which is submitted with this Application as Exhibit 9. Pursuant to the terms of the Merger Agreement, subsequent to obtaining all applicable regulatory approvals, Southern Company will acquire AGLR by purchasing its common stock at a price of $66 per share. To finance this purchase, Southern Company plans to issue approximately $3 billion in new Southern Company equity between now and the end of 2019 and to issue approximately $5 billion in new debt at the Southern Company level.

Upon consummation of the merger (the "Closing"), AMS Corp. will be merged into AGLR and Southern Company will hold all of the common stock of AGLR. Although AGLR will continue to exist as a distinct corporate entity, it will no longer be a publicly

---

5/ AMS Corp., a Georgia corporation, is a wholly-owned subsidiary of Southern Company that was formed for the purpose of acquiring AGLR in the merger. AMS Corp. will cease to exist as a separate legal entity upon completion of the merger.

traded company. Instead, after the Closing, AGLR will continue to exist as a wholly-owned first-tier corporate subsidiary of Southern Company, and Central Valley's position within AGLR's corporate structure remains unchanged. A diagram showing the corporate organization structure both before and after the proposed transaction is shown in Exhibit 10.

Central Valley will retain its current name, its corporate form as a limited liability company, its principal place of business in Lisle, Illinois and its office on site in Colusa, California. Further, Central Valley will continue to operate as a California public utility, subject to the Commission's jurisdiction and applicable California law and regulations. After the transaction is completed, Central Valley will continue to hold the CPCN for its Storage Facility issued by the Commission in D.10-10-001 and will continue to be responsible for operating and maintaining safety and environmental oversight under its CPCN.

IV. THE PROPOSED TRANSFER OF CONTROL IS IN THE PUBLIC INTEREST

Public Utilities Code § 854(a) requires Commission authorization before a company may "merge, acquire, or control either directly or indirectly any public utility organized and doing business in this state."6/ The Commission has broad discretion to determine whether a particular transaction is in the public interest and should be approved under Section 854(a). Although there have been some cases where the Commission considered a different standard, in recent cases, the Commission has made clear that the appropriate standard to determine if a transfer of ownership should be approved is whether the transaction will or will not be "adverse to the public interest."7/ Accordingly, Joint Applicants request that the

---

6/ Cal. Pub. Util. Code § 854(a) (2010). Sections 854(b) and (c) of the California Public Utilities Code do not apply to this application because none of the entities involved have gross annual California revenues exceeding $500,000,000.

7/ *See, e.g.,* Decision Approving Ownership Transfer of Lodi Gas Storage L.L.C., D.14-12-013, A.14-09-001 (CPUC Dec. 4, 2014); Decision Approving Change in Ownership and Control of Central Valley Gas

Commission apply these same standards to this Joint Application, consistent with prior decisions regarding the change in ownership of independent gas storage providers, including the prior transfer of ownership of Central Valley to AGLR.

Under this standard, the indirect transfer of ownership is clearly in the public interest. There will be no adverse effect on the public interest because the transfer will not result in any change to the services provided by Central Valley, or to the rates or terms and conditions under which services are provided. Since commencement of service, Central Valley has provided unbundled storage services to the public at market-based rates as approved in D.10-10-001, subject to all terms and conditions of Central Valley's CPCN. In this regard, the Commission required Central Valley to maintain \$50 million of general liability insurance per occurrence and in the aggregate (with certain inflation adjustments) and to obtain the insurance either directly or through Nicor.8/ AGLR later assumed this responsibility from Nicor, pursuant to the Commission's approval of Central Valley's transfer of ownership from Nicor to AGLR.9/ Under the terms of the proposed transaction, Southern Company will replace AGLR as Central Valley's ultimate parent and, as such, Southern Company will commit to, and be bound by, this condition.

In addition, Central Valley represented in its CPCN application that:

> (1) Neither Nicor, nor any of its affiliates, conducts any business or owns any assets, besides Central Valley, in the state of California or on the West Coast with the exception of a very limited amount of business conducted by Nicor Services.10/

Storage, LLC D.11-05-030, No. A.11-01-021 (CPUC May 26, 2011); Opinion Approving Transfer of 100% Interest in Lodi Gas Storage, LLC to Buckeye Gas Storage LLC, D.08-01-018, No. A.07-07-025 (CPUC July 27, 2007); Opinion Approving, With Conditions, Transfer of Control and Related Financing, and Exempting Ancillary Transaction from Public Utilities Code Section 852 Pursuant to Section 583(b), D.06-11-019 at 14, No. A.06-05-033 (CPUC Nov. 9, 2006) (*In re Joint Application of Wild Goose Storage Inc., et al.*); Opinion Approving Transfer of 50% Interest in Lodi Holdings, LLC, D.05-12-007, No. A.05-08-031 (CPUC Dec. 1, 2005).

8/ D.10-10-001 at 33-34.

9/ D.11-05-030 at 6-7.

10/ Application of Central Valley Gas Storage, LLC for a Certificate of Public Convenience and

> (2) Neither Central Valley nor any of its affiliates has any contractual rights or obligations related to the gas storage industry in California or on the West Coast (other than the fact that Central Valley itself has since entered into contracts with California customers).11/

The proposed merger will not impact these representations or the conclusion that Central Valley and its affiliates lack market power in California and on the West Coast given that neither Southern Company nor any of its affiliates: (a) owns any gas storage or pipeline assets in California or the West Coast; (b) holds any firm natural gas storage capacity rights in California or the West Coast; or (c) holds any natural gas transportation capacity in California.12/. Since Central Valley's CPCN application filing and subsequent transfer of ownership to AGLR, Central Valley affiliate Sequent Energy Management ("Sequent"), a natural gas marketer operating nationwide, has entered into a small number of gas storage and gas transportation transactions on the West Coast.13/ These transactions do not provide Sequent, Central Valley or any other affiliates with control of gas storage assets amounting to market power. In light of the foregoing, the merger will have no significant impact on competition in the relevant marketplace.

Additionally, Central Valley will significantly benefit from Southern Company's combination with AGLR. The merger will combine two companies with complementary

---

Necessity for Construction and Operation of Natural Gas Storage Facilities at 5, D.10-10-001, No. A-09-08-008 (CPUC Aug. 5, 2009).

11/ *Id.* at 34.

12/ The only assets that the Southern Company holds in California are solar assets, which are identified in Exhibit 11. AGLR notes that Nicor Services no longer conducts any business in California.

13 Sequent has two storage contracts in California, one at PG&E's Citygate and the other at SoCalGas' Citygate. Both are for 2 Bcf MSQ, expiring March 31, 2016. Sequent also has a storage services master agreement with Central Valley but does not currently have any active storage transactions there. Along with being active in the daily interruptible transmission capacity market on PG&E's system, Sequent also holds transportation capacity on Kern River Gas Transmission with firm deliveries into SoCalGas' system at Kramer and Wheeler Ridge points, expiring April 30, 2018. In addition, Sequent delivers landfill gas into California.

expertise and skill sets and will create a combined company with a more geographically diverse footprint. The overall size of the combined company and Southern Company's strong financial position will provide AGLR and Central Valley with benefits that ultimately will inure to the benefit of customers. Southern Company has investment-grade credit ratings, substantial financial resources, and a consistent track record of maintaining the financial strength of its locally-operated and regulated subsidiaries. In this regard, rating agencies have already reviewed the terms of the merger, as announced on August 24, 2015, and considered the likely effects of the merger on credit quality. Among other things, those rating agencies cited the benefits that AGLR will realize from the enhanced scale and financial flexibility resulting from the merger. Post-Closing, the combined company will have the financial resources to enable Central Valley to continue to meet all of its capital needs and to continue providing provide safe and reliable services to California customers.

Finally, the merger will have no adverse impact on safety. Post-Closing, Central Valley will continue to function as an independent natural gas storage provider and the existing operating staff will continue to oversee day-to-day activities. Operations will remain consistent with current safety standards and Central Valley's Revised Natural Gas System Operator Safety Plan.

In short, Joint Applicants submit that the indirect change of ownership will have no negative consequences to the public interest and therefore should be promptly approved.

V. CEQA COMPLIANCE

The proposed transfer of ownership is not a "project" within the meaning of CEQA and, as a result, CEQA does not apply to this Application. Accordingly, pursuant to Rule 2.4 of the Commission's Rules, the Joints Applicants request that the Commission determine that the proposed transfer of ownership transaction is not a "project" within the meaning of CEQA, Public Resources Code, Section 21000, *et. seq.*

CEQA applies only to "projects." Projects subject to CEQA are defined as any "activity which may cause either a direct physical change to the environment, or reasonably foreseeable indirect physical change in the environment."14/ CEQA does not apply where the proposed "activity will not result in any direct or reasonably foreseeable indirect physical change in the environment."15/ The CEQA Guidelines provide for an exemption "[w]here it can be seen with certainty that there is no possibility that the proposed activity in question may have a significant effect on the environment."16/

In its issuance of a CPCN for the Central Valley Project, the Commission conducted a full environmental review under CEQA and adopted a Mitigated Negative Declaration.17/ Upon approval of this Application by the Commission, Central Valley will be obligated to continue operating its storage facility in the same manner as approved by the Commission in D.10-10-001, and Central Valley will continue to comply with all environmental conditions imposed in its CPCN and the required mitigation plan.

The transaction at issue in this Application simply involves the indirect transfer of ownership of Central Valley as a result of the proposed merger. Approval of such transfer of ownership will not result in any direct or indirect change in the environment or any change in Central Valley's previously reviewed and approved construction and operation criteria for its

---

14/ *See* Cal. Pub. Res. Code §§ 21065, 21080(a) (2010).
15/ Cal. Code Regs. 14, § 15060(c)(2) (2010).
16/ *Id.* § 15061(b)(3).
17/ D.10-10-001 at 43-47.

storage facility. The Commission has previously held that such transfers of control either do not constitute projects within the meaning of CEQA or qualify for an exemption from CEQA.18/

VI. REQUEST FOR EXPEDITED AND *EX PARTE* TREATMENT

The Joint Applicants request that the Commission approve this application on an expedited and *ex parte* basis. It is in the public interest that the Commission process this Application as expeditiously as possible to avoid any undue delay in the transition of the ownership of Central Valley. In this regard, Central Valley is requesting that a Proposed Initial Decision be issued in January 2016 so that a Final Commission Decision can be issued no later than February 2016.

In order to expedite the processing of this Application, Joint Applicants are requesting this matter be handled on an *ex parte* basis, consistent with similar applications for change in control of gas storage providers in California. For example, in previous transfers of control of Central Valley (A.11-01-021), Lodi (A.07-07-001) and Wild Goose Storage Inc. (A.06-05-033), the Commission approved the transfer on an expedited basis without hearings. Indeed, given that the authorization being requested in this Application is factually less complicated than in Central Valley's prior application (or the applications of either Lodi or Wild Goose), the Joint Applicants submit that the information presented in this Application is more than sufficient to permit the Commission to determine that the proposed transfer of ownership of Central Valley is in the public interest.

18/ Decision Approving Ownership Transfer of Lodi Gas Storage L.L.C., D.14-12-013, A.14-09-00 at 11; Decision Approving Change in Ownership and Control of Central Valley Gas Storage, LLC D.11-05-030 at 8; Opinion Approving Transfer of 100% Interest in Lodi Gas Storage, LLC to Buckeye Gas Storage LLC, D.08-01-018 at 26-27; *In re Joint Application of Wild Goose Storage, Inc., et al.*, D.06-11-019 at 32; Opinion Approving Transfer of 50% Interest in Lodi Holdings, LLC, D.03-02-071 at 25.

VII. RULE 2.1(c) REQUIREMENTS

Pursuant to Rule 2.1(c), Central Valley recommends the following:

A. Categorization

Consistent with the Commission's categorization in other similar proceedings, Central Valley proposes that this proceeding be categorized as ratesetting. Although this Application will not impact the rates of Central Valley's customers, the definitions of "adjudicatory" or "quasi-legislative" as set forth in Rules 1.3(a) and 1.3(d) clearly do not apply to this Application. Rule 7.1(e)(2) specifies that, when a proceeding does not clearly fit into any of the categories, it should be conducted under the rules for ratesetting proceedings. In addition, Rule 1.3(e) defines ratesetting proceedings to include "[o]ther proceedings" that do not fit clearly into any other category.

B. Need for Hearings

The Joint Applicants submit that hearings are unnecessary in this proceeding and that the information submitted in this Application is sufficient to allow the Commission to determine that the transfer of control will have no adverse impact on the public interest. Joint Applicants do not anticipate that any material issues of contested fact will arise regarding this transaction, further supporting the conclusion that hearings are not necessary.

C. Issues to be Considered

The only issue to be considered is whether the described transaction meets the public interest standard of Public Utilities Code section 854(a).

D. Proposed Schedule

Joint Applicants propose the following schedule:

Application filed	November 9, 2015
Public Notice	November 13, 2015

Period for submission of protest expires	December 13, 2015
Reply to comments/protests, if any	December 24, 2015
Proposed Decision Issued	January 25, 2016
Comments on PD (if needed)	February 14, 2016
Reply Comments on PD (if needed)	February 21, 2016
Final Commission Decision	February 25, 2016

E. Compliance with Procedural Requirements

This section cross-references compliance with the Rules applicable to this Application:

Rule 2.1	Section II.A-C; Section VII
Rule 2.2.	Section II.D; Exhibits 1-2
Rule 2.3	Section II.D; Exhibits 3-8
Rule 2.4	Section V
Rule 3.6	Section III

VIII. CONCLUSION

WHEREFORE, Joint Applicants respectfully request that the Commission issue an Order to become effective upon the date of issuance as follows:

1. Grant this Application for authorization, pursuant to Section 854(a) of the Public Utilities Code, for the transfer of ownership of Central Valley to Southern Company;

2. Grant Commission confirmation that CEQA does not apply to this transaction; and respect to the authorization sought herein as the Commission may deem appropriate.

3. Grant such additional authorization or further relief to Joint Applicants with respect to the authorization sought herein as the Commission may deem appropriate.

Respectfully submitted,

CERTIFICATE OF FORMATION

OF

Central Valley Gas Storage, L.L.C.

1. The name of the limited liability company is Central Valley Gas Storage, L.L.C.

2. The address of its registered office in the State of Delaware is: The Corporation Trust Center, 1209 Orange Street, in the City of Wilmington, Delaware 19801. The name of its registered agent at such address is The Corporation Trust Company.

IN WITNESS WHEREOF, the undersigned has executed this Certificate of Formation of Central Valley Gas Storage, L.L.C. this 6th day of February, 2008.

Nicor Energy Ventures Company – Member
Daniel R. Dodge - President

Exhibit 2

STATE OF CALIFORNIA
DEPARTMENT OF CONSERVATION
DIVISION OF OIL, GAS, AND GEOTHERMAL RESOURCES

DESIGNATION OF AGENT

In compliance with Section 3200 of the Public Resources Code, notice is hereby given and we hereby certify

that Central Valley Gas Storage, L.L.C.,
(Name of Operator)

an LLC organized and existing under and by virtue of the laws of the State of Delaware.

has appointed, authorized, and empowered CT Corporation System,
(Name of Individual)

whose address (where legal papers may be served) is 818 W. Seventh Street,
(Street Address and P.O. Box)

Los Angeles (Attention: Jere Keprios), California 90017, (213) 627-8252, as its
(City) (Zip Code) (Telephone Number)

agent for the State of California* N/A upon whom all orders, notices, and processes of the Supervisor or any court of law may be served. This notice revokes all former appointments made for this purpose.

IN WITNESS WHEREOF, the corporation has caused this certificate to be signed by its President and attested by its Secretary on

March 2nd, 2009.

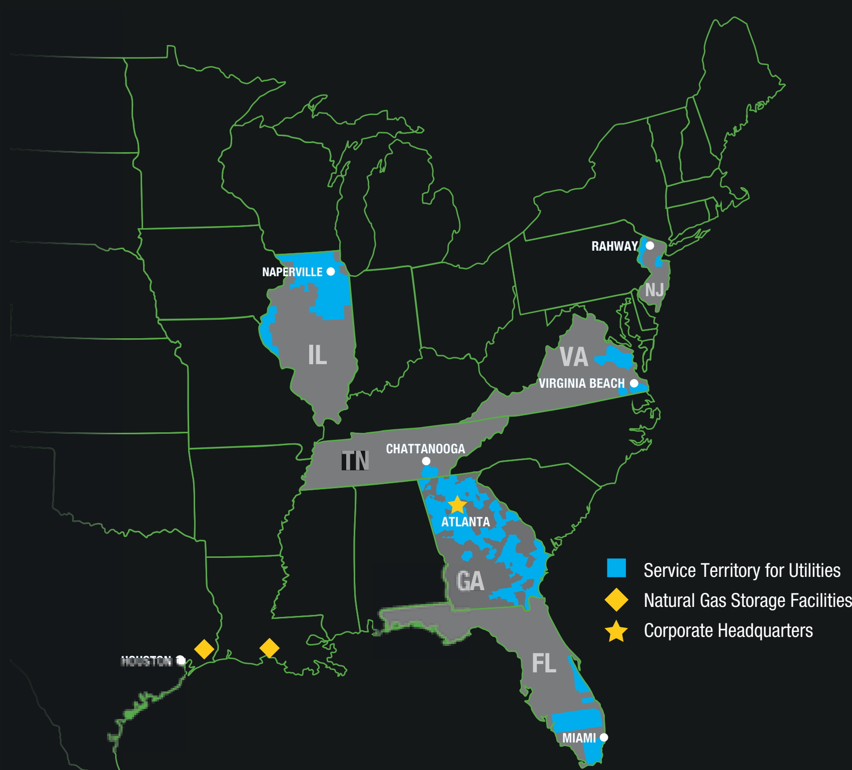
AGL Resources®

2014 Annual Report

Natural Gas. American. Abundant. Affordable.™

John W. Somerhalder II
Chairman, President and
Chief Executive Officer

AGL Resources serves approximately 4.5 million end-use customers in seven states through its utility subsidiaries within the distribution operations segment: Nicor Gas in Illinois, Atlanta Gas Light in Georgia, Virginia Natural Gas in Virginia, Elizabethtown Gas in New Jersey, Florida City Gas in Florida, Chattanooga Gas in Tennessee and Elkton Gas in Maryland. Our retail operations segment serves 0.6 million energy customers and 1.2 million service contracts and markets natural gas and related home services to end-use customers across 15 states. Our Houston-based wholesale services segment engages in natural gas storage and gas pipeline arbitrage and provides natural gas asset management and/or related logistics services for most of our utilities, as well as for non-affiliated companies. Our midstream operations segment provides natural gas storage and related activities and engages in the development and operations of high-deliverability natural gas storage facilities.



To Our Shareholders

2014 was the strongest year in AGL Resources' history, with consolidated earnings before interest and taxes (EBIT) of more than $1 billion, driven largely by record results in the wholesale services segment and bolstered by solid year-over-year growth in our distribution operations segment. Excluding the sale of Tropical Shipping that occurred in 2014, earnings per share (EPS) rose 92%, and our total shareholder return was 20%.

We executed on several strategic initiatives in 2014, including the sale of Tropical Shipping and the announcement of partnership investments totaling approximately $670 million in three major interstate pipelines. Importantly, we continue investing across all of our jurisdictions to ensure the safety and reliability of our systems. In addition to the successful pipeline replacement programs already in place in Georgia, New Jersey and Virginia (as depicted on the front and inside cover), we now are embarking on a nine-year infrastructure replacement program in Illinois that will enable us to spend approximately $200 million per year for system maintenance and upgrades. These programs all support state and federal efforts to modernize our nation's natural gas pipeline network.

For the majority of my tenure at AGL Resources, we have projected annual EPS growth in the range of 4% to 6%. With the initiatives noted above, we now expect an increase in our compound annual growth rate (CAGR) of earnings to a range of 5% to 8% over the next three years, compared to normalized 2014 results. Further, we anticipate this growth to accelerate to 6% to 9% over a five-year period. This higher projected growth rate is due largely to our ability to earn near our authorized rate of return in each jurisdiction that we serve through prudent investment and rigorous cost control. In addition, we have pursued and secured investments, such as those in interstate pipelines noted above, that generate returns in line with, or above, those of our regulated utilities.

Consistent with our strong performance in 2014, our Board of Directors in February approved our 13th consecutive annual dividend increase. For the second year in a row, we increased the dividend by more than 4%, and our indicated annual dividend now stands at $2.04 per share.

DISTRIBUTION OPERATIONS

In 2014 EBIT improved by $35 million, or 6%, compared to 2013 for our distribution operations segment, which includes our seven regulated utilities in Illinois, Georgia, Virginia, New Jersey, Florida, Tennessee and Maryland. The primary drivers of the increase were higher customer usage and growth, colder-than-normal weather in 2014 and higher revenues from our infrastructure investment programs. In addition, we effectively managed our operating expenses, which rose less than 2% — commensurate with the rate of inflation.

Natural gas continues to have a strong cost advantage over many other fuel sources. This fact, combined with successful marketing programs and system expansion into unserved or under-served areas, led to strong new customer growth in 2014. We added approximately 34,000 net meters in 2014 compared to approximately 27,000 in 2013, an increase of over 25%.

FINANCIAL HIGHLIGHTS

In millions, except per share amounts

	2014	2013
Operating revenues	**$ 5,385**	$ 4,209
Income from continuing operations	**$ 562**	$ 290
(Loss) income from discontinued operations, net of tax	**$ (80)**	$ 5
Net income attributable to AGL Resources Inc.	**$ 482**	$ 295
Diluted earnings per common share from continuing operations attributable to AGL Resources Inc.	**$ 4.71**	$ 2.45
Diluted earnings per common share attributable to AGL Resources Inc.	**$ 4.04**	$ 2.49
Market capitalization	**$ 6,522**	$ 5,615
Total assets	**$ 14,909**	$ 14,550
Total shareholder return	**20%**	23%

As mentioned, we have pipeline replacement and improvement programs underway in nearly every jurisdiction. We pioneered these efforts among regulated utilities starting in the 1990s. In total, we have spent approximately $1.5 billion to modernize more than 2,500 miles of pipeline across our system, and we now are embarking on a $1.5 billion program in Illinois. These programs benefit our customers as they keep our systems best-in-class in terms of safety and reliability. They also are cost-effective by reducing the need for expensive and time-consuming general rate cases. Finally, our shareholders also garner benefits as the time to recover investment in these programs is reduced due to the rider-based regulatory constructs under which we operate. In part because of significant investment in these programs, we do not anticipate any general rate case filings in 2015.

In addition to safety and reliability improvements, we also are committed to environmental matters, including the reduction of greenhouse gases (GHG). We have been a leader in activities to reduce GHGs since 1993, when we joined the Environmental Protection Agency's (EPA's) Natural Gas STAR Program as an original participant. The Natural Gas STAR Program provides a framework to encourage partner companies to implement methane emissions-reducing technologies and practices and document their voluntary emission reduction activities. In addition, we are one of seven in the natural gas value chain, and one of only two utilities, to form Our Nation's Energy Future (also known as "ONE Future"), which has the goal of reducing methane-leak loss rates across the value chain to less than 1%, a level that science indicates is not only cost-effective and attainable, but the point at which natural gas will remain the fuel of choice from a climate perspective. The EPA cited the ONE Future initiative as one it is committed to continue to work with to develop and verify robust commitments to reduce methane emissions.

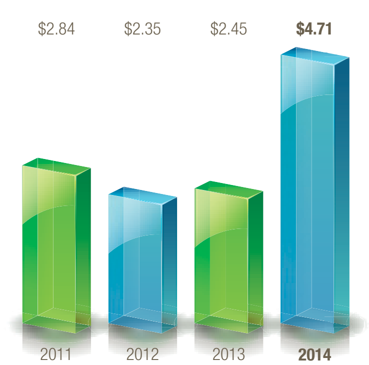
RETAIL OPERATIONS

Our retail operations segment includes the sale of natural gas to customers who have the option to choose their natural gas provider, as well as the provision of maintenance and warranty products for certain home utility services and appliances. We offer these products in 15 states. The retail operations segment reported EBIT of $132 million in 2014, in line with results from 2013. On an operational basis, the retail segment had very strong performance during a period of colder-than-normal weather. However, we also recorded hedge losses and inventory adjustments of $16 million in 2014; those losses are related to mark-to-market accounting and are expected to be substantially recognized as income in 2015 as the gas is delivered to customers. We continue to maintain our market-leading position in Georgia — our largest market – and we have been successful in expanding our service offerings across our entire retail footprint.

WHOLESALE SERVICES

Our wholesale services segment manages and optimizes natural gas storage inventory and pipeline transportation capacity for six of our utilities under asset management agreements approved by the regulatory commissions in those jurisdictions. We also provide asset management, optimization, producer and peaking services for other electric and natural gas utilities, power generation and large industrial customers around the country. Our 2014 EBIT for the segment of $422 million was the strongest in the company's history and drove our record consolidated earnings for the year. Earnings in this business in 2013 were muted by mark-to-market accounting losses, but our 2014 results reflect the recognition of prior-period economic earnings generation, as well as strong commercial activity generated during the year. Our wholesale business provides investors a low-risk option on the natural gas commodity markets and, as demonstrated in 2014, can generate significant value during periods of volatility in those markets.

ADJUSTED DILUTED EARNINGS PER SHARE[1]

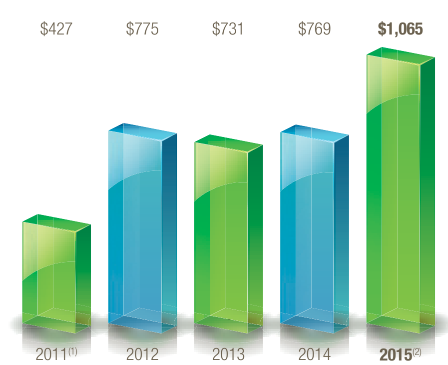


(1) For a reconciliation of adjusted EPS (which excludes costs related to the Nicor merger and additional accrual for the Nicor Gas PBR issue) to GAAP EPS, see our non-GAAP reconciliation section included within this report.

INDICATED ANNUAL DIVIDEND PER SHARE

(1) Indicated 2011 and 2012 dividend rate. As a result of the Nicor merger, AGL Resources shareholders of record as of the close of business on December 8, 2011, received a pro rata dividend of $.0.0989 for the stub period accruing from November 19, 2011 for a total dividend of $1.90. This same $0.0989 would have been added to the $1.74 dividends paid in 2012 if it were not for the Nicor merger.

CAPITAL EXPENDITURES
(In Millions)



(1) Amount for 2011 only includes Nicor expenditures subsequent to the merger date of December 9, 2011.
(2) Amount for 2015 is an estimate and is subject to change.

MIDSTREAM OPERATIONS

Our midstream operations segment consists primarily of high-deliverability natural gas storage facilities. EBIT in the segment declined by $7 million in 2014 compared to 2013. The change year-over-year was due largely to a one-time true up of natural gas storage inventory at one of our facilities as well as expected recontracting at lower rates.

Conditions in the storage market remain challenged, and market fundamentals are substantially different than when we first began investing in storage facilities nearly a decade ago. As a result, contracts we signed several years ago that are expiring or near expiration are being recontracted at significantly lower rates. We have seen a modest improvement in storage rates from 2013 to 2014; however, we expect it will take several more years for the market to recover to more robust and profitable levels.

One of our most exciting business opportunities came to fruition in 2014. Over the course of the year, we announced investments totaling approximately $670 million in three interstate pipelines. The pipelines, detailed below, are intended to bring low-cost shale gas to our customers in Georgia, New Jersey and Virginia. In addition to taking an ownership stake in these pipelines, in each instance we also have signed long-term capacity arrangements. These investments provide significant benefits to our customers in terms of access to low-cost natural gas supplies, and to our shareholders from the standpoint of generating solid investment returns. We expect to start realizing earnings from these pipeline investments in 2017.

Dollars in millions	Miles of Pipe	Expected capital expenditures [1]	Ownership Interest [1]	Scheduled year of completion
Dalton Pipeline	106	$210	50%	2017
PennEast Pipeline	108	200	20%	2017
Atlantic Coast Pipeline	550	260	5%	2018
Total	764	$670		

[1] Represents our expected capital expenditures and ownership interest, which may change.

PRIORITIES FOR 2015

Our business strategy for 2015 is consistent with prior years and representative of our safety- and customer-focused, steady-growth culture. Our focus is to capitalize on margin-enhancing opportunities across all business units, while ensuring efficient and safe operations. Several of our specific business objectives are detailed below:

- **Distribution operations:** Invest necessary capital to enhance and maintain safety and reliability; remain a low-cost leader within the industry; opportunistically expand our system and capitalize on potential customer conversions.
- **Retail operations:** Maintain market-leading position in Georgia and focus on margin growth in all markets; expand our overall market reach.
- **Wholesale services:** Maximize storage and transportation portfolio; effectively perform on existing asset management agreements and expand customers; grow gas supply to power generation markets.
- **Midstream operations:** Optimize storage portfolio, including expiring contracts; execute, in conjunction with partners, on interstate pipeline investments; pursue land-based LNG transportation opportunities.

In addition to these operational objectives, we target the following shareholder objectives:

- Generate EPS growth of 5% – 8% on a three-year CAGR basis, and 6% – 9% on a five-year basis;
- Grow rate base by 7% – 9% on a five-year CAGR rate basis;
- Fund all capital expenditure requirements with cash from operations and debt issuance, while remaining in our current credit ratings categories (no planned equity issuance at this time);
- Deploy surplus cash from wholesale services into businesses that generate a regulated rate of return; and
- Maintain a dividend payout ratio that is generally consistent with our peer group.

We are proud of our accomplishments in 2014 and confident that we have developed a strong platform for the long-term growth and success of our company. We provided 2015 earnings guidance in the range of $2.65 to $2.75 per diluted share, excluding our wholesale services segment, and $2.70 to $2.90 on a consolidated basis. Consolidated earnings are likely to vary due to mark-to-market movements associated with our retail operations and wholesale services businesses, as previously noted.

American, abundant and affordable natural gas remains at the forefront of our country's energy future. As one of the largest regulated natural gas providers in the United States, we are well positioned to capitalize on the many opportunities that lie ahead for our customers, our company and our shareholders.

Sincerely,

John W. Somerhalder II

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2014

Commission File Number 1-14174

AGL RESOURCES INC.

Ten Peachtree Place NE,
Atlanta, Georgia 30309

404-584-4000

Georgia	**58-2210952**
(State of incorporation)	(I.R.S. Employer Identification No.)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Name of each exchange on which registered
Common Stock, $5 Par Value	**New York Stock Exchange**

AGL Resources Inc. is a well-known seasoned issuer.

AGL Resources Inc. is required to file reports pursuant to Section 13 of the Securities Exchange Act.

AGL Resources Inc.: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act during the preceding 12 months, and (2) has been subject to such filing requirements for the past 90 days.

AGL Resources Inc. has submitted electronically and posted on its corporate website every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months.

AGL Resources Inc. believes that during the 2014 fiscal year, its executive officers, directors and 10% beneficial owners subject to Section 16(a) of the Securities Exchange Act complied with all applicable filing requirements, except as set forth under the caption “Section 16(a) Beneficial Ownership Reporting Compliance” in AGL Resources Inc.’s Proxy Statement for the 2015 Annual Meeting of Shareholders.

AGL Resources Inc. is a large accelerated filer and is not a shell company.

The aggregate market value of AGL Resources Inc.’s common stock held by non-affiliates of the registrant (based on the closing sale price on June 30, 2014, as reported by the New York Stock Exchange), was $6,574,107,387.

The number of shares of AGL Resources Inc.’s common stock outstanding as of February 4, 2015 was 119,656,937

DOCUMENTS INCORPORATED BY REFERENCE:

Portions of the Proxy Statement for the 2015 Annual Meeting of Shareholders (Proxy Statement) to be held on April 28, 2015, are incorporated by reference in Part III of this Form 10-K.

TABLE OF CONTENTS

GLOSSARY OF KEY TERMS

AFUDC	Allowance for funds used during construction, which represents the estimated cost of funds, from both debt and equity sources, used to finance the construction of major projects and is capitalized in rate base for ratemaking purposes when the completed projects are placed in service
AGL Capital	AGL Capital Corporation
AGL Credit Facility	$1.3 billion credit agreement entered into by AGL Capital to support the AGL Capital commercial paper program
AGL Resources	AGL Resources Inc., together with its consolidated subsidiaries
Atlanta Gas Light	Atlanta Gas Light Company
Atlantic Coast Pipeline	Atlantic Coast Pipeline, LLC
Bcf	Billion cubic feet
Central Valley	Central Valley Gas Storage, LLC
Chattanooga Gas	Chattanooga Gas Company
Chicago Hub	A venture of Nicor Gas, which provides natural gas storage and transmission-related services to marketers and gas distribution companies
Compass Energy	Compass Energy Services, Inc., which was sold in 2013
Dalton Pipeline	A 50% undivided ownership interest in a pipeline facility in Georgia
EBIT	Earnings before interest and taxes, the primary measure of our reportable segments' profit or loss, which includes operating income and other income and excludes financing costs, including interest on debt and income tax expense
EPA	U.S. Environmental Protection Agency
ERC	Environmental remediation costs associated with our distribution operations segment that are generally recoverable through rate mechanisms
FASB	Financial Accounting Standards Board
FERC	Federal Energy Regulatory Commission
Fitch	Fitch Ratings
GAAP	Accounting principles generally accepted in the United States of America
Georgia Commission	Georgia Public Service Commission, the state regulatory agency for Atlanta Gas Light
Georgia Natural Gas	The trade name under which SouthStar does business in Georgia
Golden Triangle	Golden Triangle Storage, Inc.
Heating Degree Days	A measure of the effects of weather on our businesses, calculated when the average daily temperatures are less than 65 degrees Fahrenheit
Heating Season	The period from November through March when natural gas usage and operating revenues are generally higher
Henry Hub	A major interconnection point of natural gas pipelines in Erath, Louisiana where NYMEX natural gas future contracts are priced
Horizon Pipeline	Horizon Pipeline Company, LLC
HVAC	Heating, ventilation and air conditioning
Illinois Commission	Illinois Commerce Commission, the state regulatory agency for Nicor Gas
Jefferson Island	Jefferson Island Storage & Hub, LLC
LDC	Local Distribution Company
LIBOR	London Inter-Bank Offered Rate
LIFO	Last-in, first-out
LNG	Liquefied natural gas
LOCOM	Lower of weighted average cost or current market price
Marketers	Marketers selling retail natural gas in Georgia and certificated by the Georgia Commission
MGP	Manufactured gas plant
Moody's	Moody's Investors Service
New Jersey BPU	New Jersey Board of Public Utilities, the state regulatory agency for Elizabethtown Gas
Nicor	Nicor Inc. - an acquisition completed in December 2011 and former holding company of Nicor Gas
Nicor Gas	Northern Illinois Gas Company, doing business as Nicor Gas Company
Nicor Gas Credit Facility	$700 million credit facility entered into by Nicor Gas to support its commercial paper program
NYMEX	New York Mercantile Exchange, Inc.
OCI	Other comprehensive income
Operating margin	A non-GAAP measure of income, calculated as operating revenues minus cost of goods sold and revenue tax expense
OTC	Over-the-counter
Pad gas	Volumes of non-working natural gas used to maintain the operational integrity of the natural gas storage facility, also known as base gas
PBR	Performance-based rate, a regulatory plan at Nicor Gas that provided economic incentives based on natural gas cost performance. The plan terminated in 2003
PennEast Pipeline	PennEast Pipeline Company, LLC
PGA	Purchased Gas Adjustment
Piedmont	Piedmont Natural Gas Company, Inc.
Pivotal Home Solutions	Nicor Energy Services Company, doing business as Pivotal Home Solutions
PP&E	Property, plant and equipment
S&P	Standard & Poor's Ratings Services
Sawgrass Storage	Sawgrass Storage, LLC
SEC	Securities and Exchange Commission
Sequent	Sequent Energy Management, L.P.
SouthStar	SouthStar Energy Services LLC
STRIDE	Atlanta Gas Light's Strategic Infrastructure Development and Enhancement program
Triton	Triton Container Investments LLC
Tropical Shipping	Tropical Shipping and Construction Company Limited
U.S.	United States
VaR	Value-at-risk is the maximum potential loss in portfolio value over a specified time period that is not expected to be exceeded within a given degree of probability.
Virginia Natural Gas	Virginia Natural Gas, Inc.
Virginia Commission	Virginia State Corporation Commission, the state regulatory agency for Virginia Natural Gas
WACC	Weighted average cost of capital
WACOG	Weighted average cost of gas
WNA	Weather normalization adjustment

PART I

ITEM 1. BUSINESS

Unless the context requires otherwise, references to “we,” “us,” “our” and the “company” are intended to mean AGL Resources Inc. The operations and businesses described in this filing are owned and operated, and management services are provided, by distinct direct and indirect subsidiaries of AGL Resources. AGL Resources was organized and incorporated in 1995 under the laws of the State of Georgia.

Business Overview

AGL Resources, headquartered in Atlanta, Georgia, is an energy services holding company whose primary business is the distribution of natural gas through our natural gas distribution utilities. We also are involved in several other businesses that are mainly related and complementary to our primary business. Our segments consist of the following four reportable segments, which are consistent with how management views and manages our businesses.

Distribution Operations
- Operation, construction and maintenance of 80,700 miles of natural gas pipeline and 14 storage facilities to provide safe and cost-effective service of natural gas to residential, commercial and industrial customers
- Serves 4.5 million customers across 7 states
- Rates of return are regulated by each individual state in return for exclusive franchises

Retail Operations
- Provision of natural gas commodity and related services to customers in competitive markets or markets that provide for customer choice
- Serves 628,000 energy customers and 1.2 million service contracts across 15 states

Wholesale Services
- Engages in natural gas storage, gas pipeline arbitrage and provides natural gas asset management and/or related logistics services for most of our utilities, as well as for non-affiliated companies
- Serves a variety of customers in the natural gas value chain with operations structured to optimize storage and transportation portfolios under a wide range of market conditions through the use of hedging tools that allow us to capture additional value while limiting risk

Midstream Operations
- Consists primarily of high deliverability natural gas storage facilities and select pipelines, enabling the provision of diverse sources of natural gas supplies to our customers

For more information on our segments, see Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations” under the caption “Results of Operations” and Note 13 to our consolidated financial statements under Item 8 herein.

Distribution Operations

Our distribution operations segment is the largest component of our business and includes seven natural gas local distribution utilities with their primary focus being the safe and reliable delivery of natural gas. These utilities construct, manage and maintain intrastate natural gas pipelines and distribution facilities and include:

Utility	State	Number of customers (in thousands)	Approximate miles of pipe
Nicor Gas	Illinois	2,195	34,100
Atlanta Gas Light	Georgia	1,560	32,600
Virginia Natural Gas	Virginia	287	5,500
Elizabethtown Gas	New Jersey	281	3,200
Florida City Gas	Florida	105	3,600
Chattanooga Gas	Tennessee	63	1,600
Elkton Gas	Maryland	6	100
Total		4,497	80,700

Competition and Customer Demand

Our utilities do not compete with other distributors of natural gas in their exclusive franchise territories, but face competition from other energy products. Our principal competitors are electric utilities and fuel oil and propane providers serving the residential, commercial and industrial markets throughout our service areas for our customers who are considering switching from a natural gas appliance. Accordingly, the potential displacement or replacement of natural gas appliances with electric appliances is a competitive factor.

Competition for space heating and general household and small commercial energy needs generally occurs at the initial installation phase when the customer or builder makes decisions as to which types of equipment to install. Customers generally use the chosen energy source for the life of the equipment. Customer demand for natural gas could be affected by numerous factors, including:

- change in the availability or price of natural gas and other forms of energy;

- general economic conditions;
- energy conservation, including state-supported energy efficiency programs;
- legislation and regulations; and
- the cost and capability to convert from natural gas to alternative energy products;

We continue to develop and grow our business through the use of a variety of targeted marketing programs designed to attract new customers and to retain existing customers. These efforts include working to add residential customers, multifamily complexes and commercial customers who might use natural gas, as well as evaluating and launching new natural gas related programs, products and services to enhance customer growth, mitigate customer attrition and increase operating revenues.

The natural gas related programs generally emphasize natural gas as the fuel of choice for customers and seek to expand the use of natural gas through a variety of promotional activities. In addition, we partner with numerous third-party entities such as builders, realtors, plumbers, mechanical contractors, architects and engineers to market the benefits of natural gas appliances and to identify potential retention options early in the process for those customers who might consider converting to alternative fuels.

Recent advances in natural gas drilling in shale producing regions in the U.S. have resulted in historically high supplies of natural gas and historically low prices for natural gas. This dynamic has provided solid cost advantages for natural gas when compared to electricity, fuel oil and propane and opportunities for growth for our businesses.

Sources of Natural Gas Supply and Transportation Services

Procurement plans for natural gas supply and transportation to serve our regulated utility customers are reviewed and approved by our state utility commissions. We purchase natural gas supplies in the open market by contracting with producers, marketers and from our wholly owned subsidiary, Sequent, under asset management agreements in states where this is approved by the state commission. We also contract for transportation and storage services from interstate pipelines that are regulated by the FERC. When firm pipeline services are temporarily not needed, we may release the services in the secondary market under FERC-approved capacity release provisions or utilize asset management arrangements, thereby reducing the net cost of natural gas charged to customers for most of our utilities. Peak-use requirements are met through utilization of company-owned storage facilities, pipeline transportation capacity, purchased storage services, peaking facilities and other supply sources, arranged by either our transportation customers or us. We have consistently been able to obtain sufficient supplies of natural gas to meet customer requirements. We believe natural gas supply and pipeline capacity will be sufficiently available to meet market demands in the foreseeable future.

Utility Regulation and Rate Design

Rate Structures Our utilities operate subject to regulations and oversight of the state regulatory agencies in each of the states served by our utilities with respect to rates charged to our customers, maintenance of accounting records and various service and safety matters. Rates charged to our customers vary according to customer class (residential, commercial or industrial) and rate jurisdiction. These agencies approve rates designed to provide us the opportunity to generate revenues to recover all prudently incurred costs, including a return on rate base sufficient to pay interest on debt and provide a reasonable return for our shareholders. Rate base generally consists of the original cost of the utility plant in service, working capital and certain other assets, less accumulated depreciation on the utility plant in service and net deferred income tax liabilities, and may include certain other additions or deductions.

The natural gas market for Atlanta Gas Light was deregulated in 1997. Accordingly, Marketers, rather than a traditional utility, sell natural gas to end-use customers in Georgia and handle customer billing functions. The Marketers file their rates monthly with the Georgia Commission. As a result of operating in a deregulated environment, Atlanta Gas Light's role includes:

- distributing natural gas for Marketers;
- constructing, operating and maintaining the gas system infrastructure, including responding to customer service calls and leaks;
- reading meters and maintaining underlying customer premise information for Marketers; and
- planning and contracting for capacity on interstate transportation and storage systems.

Atlanta Gas Light earns revenue by charging rates to its customers based primarily on monthly fixed charges that are set by the Georgia Commission and periodically adjusted. The Marketers add these fixed charges when billing customers. This mechanism, called a straight-fixed-variable rate design, minimizes the seasonality of Atlanta Gas Light’s revenues since the monthly fixed charge is not volumetric or directly weather dependent.

With the exception of Atlanta Gas Light, the earnings of our regulated utilities can be affected by customer consumption patterns that are largely a function of weather conditions and price levels for natural gas. Specifically, customer demand substantially increases during the Heating Season when natural gas is used for heating purposes. We have various mechanisms, such as weather normalization mechanisms and weather derivative instruments, in place at most of our utilities that limit our exposure to weather changes within typical ranges in these utilities’ respective service areas.

All of our utilities, excluding Atlanta Gas Light, are authorized to use natural gas cost recovery mechanisms that allow them to adjust their rates to reflect changes in the wholesale cost of natural gas and to ensure they recover all of the costs prudently incurred in purchasing gas for their customers. Since Atlanta Gas Light does not sell natural gas directly to its end-use customers, it does not need nor utilize a traditional natural gas cost recovery mechanism. However, Atlanta Gas Light does maintain natural gas inventory for the Marketers in Georgia and recovers the cost of this gas through recovery mechanisms approved by the Georgia Commission specific to Georgia's deregulated market. In addition to natural gas recovery mechanisms, we have other cost recovery mechanisms, such as regulatory riders, which vary by utility but allow us to recover certain costs, such as those related to environmental remediation and energy efficiency plans. In traditional rate designs, utilities recover a significant portion of their fixed customer service and pipeline infrastructure costs based on assumed natural gas volumes used by our customers. Three of our utilities have decoupled regulatory mechanisms in place that encourage conservation. We believe that separating, or decoupling, the recoverable amount of these fixed costs from the customer throughput volumes, or amounts of natural gas used by our customers, allows us to encourage our customers' energy conservation and ensures a more stable recovery of our fixed costs. The following table provides regulatory information for our six largest utilities.

$ in millions	Nicor Gas (9)	Atlanta Gas Light	Virginia Natural Gas	Elizabethtown Gas	Florida City Gas	Chattanooga Gas
Authorized return on rate base (1)	8.09%	8.10%	7.38%	7.64%	7.36%	7.41%
Estimated 2014 return on rate base (2)	8.56%	7.80%	6.45%	8.22%	5.37%	7.94%
Authorized return on equity (1)	10.17%	10.75%	10.00%	10.30%	11.25%	10.05%
Estimated 2014 return on equity (2)	12.12%	10.16%	8.77%	11.52%	8.41%	11.19%
Authorized rate base % of equity (1)	51.07%	51.00%	45.36%	47.89%	36.77%	46.06%
Rate base included in 2014 return on equity (2)	$1,561	$2,315	$590	$519	$182	$104
Weather normalization (3)			✓	✓		✓
Decoupled or straight-fixed-variable rates (4)		✓	✓			✓
Regulatory infrastructure program rates (5)	✓	✓	✓	✓		
Bad debt rider (6)	✓		✓			✓
Synergy sharing policy (7)		✓				
Energy efficiency plan (8)	✓		✓	✓	✓	✓
Last decision on change in rates	2009	2010	2011	2009	N/A	2010

(1) The authorized return on rate base, return on equity and percentage of equity were those authorized as of December 31, 2014.
(2) Estimates based on principles consistent with utility ratemaking in each jurisdiction. Rate base includes investments in regulatory infrastructure programs.
(3) Involves regulatory mechanisms that allow us to recover our costs in the event of unseasonal weather, but are not direct offsets to the potential impacts of weather and customer consumption on earnings. These mechanisms are designed to help stabilize operating results by increasing base rate amounts charged to customers when weather is warmer-than-normal and decreasing amounts charged when weather is colder-than-normal.
(4) Decoupled and straight-fixed-variable rate designs allow for the recovery of fixed customer service costs separately from assumed natural gas volumes used by our customers.
(5) Includes programs that update or expand our distribution systems and liquefied natural gas facilities.
(6) Involves the recovery (refund) of the amount of bad debt expense over (under) an established benchmark expense. Virginia Natural Gas and Chattanooga Gas recover the gas portion of bad debt expense through purchased gas adjustment (PGA) mechanisms.
(7) Involves the recovery of 50% of net synergy savings achieved on mergers and acquisitions.
(8) Includes the recovery of costs associated with plans to achieve specified energy savings goals.
(9) In connection with the December 2011 Nicor merger, we agreed to (i) not initiate a rate proceeding for Nicor Gas that would increase base rates prior to December 2014, (ii) maintain 2,070 full-time equivalent employees involved in the operation of Nicor Gas for a period of three years and (iii) maintain the personnel numbers in specific areas of safety oversight of the Nicor Gas system for a period of five years.

Current Regulatory Proceedings

Nicor Gas In June 2013, in connection with the PBR plan, the Illinois Commission issued an order requiring us to refund $72 million to current Nicor Gas customers through our PGA mechanism based upon natural gas throughput over 12 months beginning in July 2013. Approximately $43 million was refunded during 2014 and $29 million was refunded during 2013. For more information on the PBR plan, see Note 11 to our consolidated financial statements under Item 8 herein.

In August 2014, staff of the Illinois Commission and the Citizens Utility Board (CUB) filed testimony in the 2003 gas cost prudence review disputing certain gas loan transactions offered by Nicor Gas under its Chicago Hub services, requesting refunds of $18 million and $22 million, respectively. We filed surrebuttal testimony in December 2014 disputing that any refund is due, as Nicor Gas was authorized to enter into these transactions and revenues associated with such reduced rate payer costs as either credits to the PGA or reductions to base rates were consistent with then-current Illinois Commission orders governing these activities. We believe these claims engage in hindsight speculation, which is expressly prohibited in a prudence review examination, and we intend to vigorously defend against these claims. Evidentiary hearings are scheduled for March 2015. Similar gas loan transactions were provided in other open review years. The resolution will ultimately be decided by the Illinois Commission. We are currently unable to predict the ultimate outcome and have recorded no liability for this matter.

Nicor Gas' first three-year energy efficiency program, which outlines energy efficiency program offerings and therm reduction goals for a three-year period, ended in May 2014. Nicor Gas spent $125 million on the program and reduced customer usage by an estimated 46 million therms. Additionally, in May 2014, the Illinois Commission approved Nicor

Gas' second energy efficiency program, Energy Smart Plan, with expected spending of $93 million over a three-year period that began in June 2014. Nicor Gas spent $14 million on this new program in 2014.

Atlanta Gas Light In December 2012, Atlanta Gas Light filed a petition with the Georgia Commission for approval to resolve a volumetric imbalance of natural gas related to Atlanta Gas Light's use of retained storage assets to operationally balance the system for the benefit of the natural gas market. In September 2014, we filed a stipulation that was entered between us, staff of the Georgia Commission and several Marketers that included a resolution of the 4.6 Bcf imbalance over a five-year period from January 1, 2015 through December 31, 2019. The Georgia Commission approved the stipulation in December 2014. Over the five-year period, discretionary funds available to the Universal Service Fund, which is controlled by the Georgia Commission, will be used to resolve 25% of the imbalance, or approximately 1.15 Bcf of natural gas. Atlanta Gas Light is obligated to resolve 25% and we have recorded a reserve in our Consolidated Statements of Financial Position representing the future estimated cost to purchase the approximately 1.15 Bcf of natural gas. The cost to resolve the remaining difference of approximately 2.3 Bcf of natural gas will be recovered from all certificated Marketers through charges for system retained storage gas as it is used by the certificated Marketers.

In accordance with an order issued by the Georgia Commission, where AGL Resources makes a business acquisition that reduces the costs allocated or charged to Atlanta Gas Light for shared services, the net savings to Atlanta Gas Light will be shared equally between the firm customers of Atlanta Gas Light and our shareholders for a ten-year period. In December 2013, we filed a Report of Synergy Savings with the Georgia Commission in connection with the Nicor acquisition. If and when approved, the net savings should result in annual rate reductions to the firm customers of Atlanta Gas Light of $5 million. We expect this filing to be discussed by the staff of the Georgia Commission in February 2015.

We expect Atlanta Gas Light to file a petition with the Georgia Commission for approval of a rate increase to our STRIDE surcharge associated with the final accounting of our pipeline replacement program (PRP) in February 2015. The proposed rate increase is designed to collect the unrecovered revenue requirement of the program and is in accordance with the requirements set forth by the Georgia Commission that allows Atlanta Gas Light to make a true-up filing at the end of the program to recover the actual costs of the program. The program ended December 31, 2013.

Virginia Natural Gas In April 2014, the Governor of Virginia signed into law legislation that enables the state's natural gas utilities, including Virginia Natural Gas, to acquire long-term supplies of natural gas and make capital investments to facilitate the delivery of low-cost shale and coal-bed methane gas to Virginia homeowners and businesses. Under the terms of the new statute, Virginia Natural Gas could enter into commercial agreements to obtain up to 25% of its annual firm sales demand for natural gas through long-term contracts or investments such as purchases of reserves. Recovery on investments would be based upon the utility's authorized return on rate base, which would flow through the PGA mechanism or a similar mechanism. The new statute also allows us to build pipelines and other infrastructure that deliver shale and coal-bed methane gas into the state's markets that seek to reduce natural gas supply costs or reduce price volatility for consumers. All filings under this legislation require approval by the Virginia Commission, and we have not made any filings to date.

Supply Six of our utilities use asset management agreements with our wholly owned subsidiary, Sequent, for the primary purpose of reducing our utility customers' gas cost recovery rates through payments to the utilities by Sequent. For Atlanta Gas Light, these payments are controlled by the Georgia Commission and utilized for infrastructure improvements and to fund heating assistance programs, rather than for a reduction to gas cost recovery rates. Under these asset management agreements, Sequent supplies natural gas to the utility and markets available pipeline and storage capacity to improve the overall cost of supplying gas to the utility customers. Currently, the utilities primarily purchase their gas from Sequent. The purchase agreements require Sequent to provide firm gas to our utilities. However, these utilities maintain the right and ability to make their own gas supply purchases. This right allows our utilities to make long-term supply arrangements if they believe it is in the best interest of their customers. Nicor Gas has not entered into an asset management agreement with Sequent or any other parties.

Each agreement with Sequent has either an annual minimum guarantee within a profit sharing structure, a profit sharing structure without any annual minimum guarantee, or a fixed fee. From the inception of these agreements in 2001 through 2014, Sequent has made sharing payments under these agreements totaling $272 million. The following table provides payments made by Sequent to our utilities under these agreements during the last three years.

	Total amount received			
In millions	**2014**	**2013**	**2012**	**Expiration Date**
Elizabethtown Gas	$18	$6	$5	March 2019
Virginia Natural Gas	14	4	3	March 2016
Atlanta Gas Light	13	6	5	March 2017
Florida City Gas	1	1	1	(1)
Chattanooga Gas	1	1	1	March 2018
Total	$47	$18	$15	

(1) The term of the agreement is evergreen and renews automatically each year unless terminated by either party.

Transportation Our utilities use firm pipeline entitlements, storage services and/or peaking capacity contracted with interstate capacity providers to serve the firm natural gas supply needs of our customers. In addition, Nicor Gas, Atlanta

Gas Light, Chattanooga Gas, Elizabethtown Gas and Virginia Natural Gas operate on-system LNG facilities, underground natural gas storage fields and/or propane/air plants to meet the gas supply and deliverability requirements of their customers in the winter period. Generally, we work to build a portfolio of year-round firm transportation, seasonal storage and short-duration peaking services that will meet the needs of our customers under severe weather conditions with adequate operational flexibility to reliably manage the variability inherent in servicing customers using natural gas for space heating. Including seasonal storage and peaking services in this portfolio is more efficient and cost effective than reserving firm pipeline capacity rights all year for a limited number of cold winter days.

Our firm contracts range in duration from 3 to 25 years. We work to stagger terms to maintain our ability to adjust the overall portfolio to meet changing market conditions. Our utilities have contracted for capacity that is predominately sourced from producing areas in the midcontinent and gulf coast regions, and they continue to evaluate capacity options that will provide long-term access to reliable and affordable natural gas supplies. During 2014, we announced our participation in three pipeline projects that will provide access to shale gas in the proximity of our service territories. We have entered into longer-term contracts in connection with these pipeline projects, which resulted in an increase in the duration of our firm contracts compared to prior years. Given the number of agreements held by our utilities and the amount of capacity under contract, we make decisions as to the termination, extension or renegotiation of contracts every year.

Capital Projects

We continue to focus on capital discipline and cost control while moving ahead with projects and initiatives that we expect will have current and future benefits to us and our customers, provide an appropriate return on invested capital and ensure the safety, reliability and integrity of our utility infrastructure. Total capital expenditures incurred during 2014 for our distribution operations segment were $715 million. The following table and discussions provide updates on some of our larger capital projects under various programs at our distribution operations segment. These programs update or expand our distribution systems to improve system reliability and meet operational flexibility and growth. Our anticipated expenditures for these programs in 2015 are discussed in Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Liquidity and Capital Resources."

	Program	**Program details**	**Recovery**	**Expenditures in 2014** (in millions)	**Expenditures since project inception** (in millions)	**Miles of pipe installed since project inception**	**Scope of program** (total miles)	**Program duration** (years)	**Last year of program**

	Total			$180	$550	524	2,171		

(1) Early vintage plastic, risk based mid vintage plastic, mid vintage neighborhood convenience.
(2) Large diameter pressure improvement and system reinforcement projects.
(3) New business construction and strategic line extension.
(4) Cast iron and bare steel.
(5) Cast iron and distribution reinforcement.
(6) Galvanized and X-Tube steel. Expenditures and miles reported are post AGL Resources acquisition.
(7) Cast iron, bare steel, mid vintage plastic and risk based materials.
(8) Represents expenditures on qualifying infrastructure that will be placed into service after the rate freeze date, December 9, 2014.

Atlanta Gas Light Our STRIDE program is comprised of i-SRP, i-CGP and i-VPR. STRIDE includes a surcharge on firm customers that provides recovery of the revenue requirement for the ongoing programs and the PRP, which ended on December 31, 2013. These infrastructure development, enhancement and replacement programs are used to update and expand distribution systems and liquefied natural gas facilities, improve system reliability and meet operational flexibility and growth. The purpose of the i-SRP is to upgrade our distribution system and liquefied natural gas facilities in Georgia, improve our peak-day system reliability and operational flexibility, and create a platform to meet long-term forecasted growth. Under I-SRP, we must file an updated ten-year forecast of infrastructure requirements under i-SRP along with a new construction plan every three years for review and approval by the Georgia Commission. Our i-CGP authorizes Atlanta Gas Light to extend its pipeline facilities to serve customers in areas without pipeline access and create new economic development opportunities in Georgia.

A new $260 million, four-year STRIDE program was approved in December 2013, of which $214 million is for i-SRP related projects and $46 million is for i-CGP related projects. The program will be funded through a monthly rider surcharge per customer of $0.48 beginning in January 2015, which will increase to $0.96 beginning in January 2016 and to $1.43 beginning in January 2017. This surcharge will continue through 2025.

The purpose of the i-VPR program is to replace aging plastic pipe that was installed primarily in the mid-1960's to the early 1980's. We have identified approximately 3,300 miles of vintage plastic mains in our system that potentially should be considered for replacement over the next 15 - 20 years as it reaches the end of its useful life. In 2013, the Georgia Commission approved i-VPR, which includes the replacement of the first 756 miles of vintage plastic pipe over four years for $275 million. The program is being funded through an increase in the STRIDE monthly rider surcharge per customer of $0.48 through December 2014, which increases to $0.96 beginning in January 2015 and to $1.45 beginning in January 2016. This surcharge will continue through 2025. If the Georgia Commission elects to extend the i-VPR program beyond 2017, the remaining vintage plastic mains in our system could be considered for replacement through the program over the next 15 - 20 years as it reaches the end of its useful life. In December 2014, the Georgia Commission approved a stipulation between Atlanta Gas Light and the staff of the Georgia Commission that allows for the recovery or refund of certain operation and maintenance expenses associated with the i-VPR program that are above or below an established baseline amount of $7 million.

Nicor Gas In July 2013, Illinois enacted legislation that allows Nicor Gas to provide more widespread safety and reliability enhancements to its system. The legislation stipulates that rate increases to customer bills as a result of any infrastructure investments shall not exceed an annual average 4.0% of base rate revenues. In July 2014, the Illinois Commission approved our new regulatory infrastructure program, Investing in Illinois (previously known as Qualified Infrastructure Plant), for which we may implement rates under the program effective in March 2015. Our filing included a project scope with cost estimates for three years of $171 million in 2015, $173 million in 2016 and $171 million in 2017. Our current project scope includes cost estimates that are approximately $200 million in 2015 and $250 million in each of 2016 and 2017. These expenditure levels represent approximately 1.3%, 3.5% and 4.0% of annual average base rate revenues for 2015, 2016 and 2017, respectively, which are all within the program requirements.

Elizabethtown Gas Our extension of the enhanced infrastructure program in 2013 allowed for infrastructure investment of $115 million over four years, effective as of September 2013, and is focused on the replacement of aging cast iron of our pipeline system. Carrying charges on the additional capital spend are being accrued and deferred for regulatory purposes at a weighted average cost of capital (WACC) of 6.65%. We agreed to file a general rate case by September 2016. Prior accelerated infrastructure investments under this program will be recovered through a permanent adjustment to base rates.

In July 2014, the New Jersey BPU approved ENDURE, a program that will improve our distribution system's resiliency against coastal storms and floods. Under the proposed plan, Elizabethtown Gas will invest $15 million in infrastructure and related facilities and communication planning over a one year period from August 2014 through September 2015. The plan allows Elizabethtown Gas to increase its base rates effective November 1, 2015 for investments made under the program.

Virginia Natural Gas The SAVE program, which was approved in August 2012, involves replacing aging infrastructure as prioritized through Virginia Natural Gas' distribution integrity management program. SAVE was filed in accordance with a Virginia statute providing a regulatory cost recovery mechanism for costs associated with certain infrastructure replacement programs. This five-year program includes a maximum allowance for capital expenditure of $25 million per year, not to exceed $105 million in total. SAVE is subject to annual review by the Virginia Commission. We began recovering costs based on this program through a rate rider that became effective in August 2012. The second year performance rate update was approved by the Virginia Commission in July 2014 and became effective as of August 2014.

Environmental Remediation Costs

We are subject to federal, state and local laws and regulations governing environmental quality and pollution control. These laws and regulations require us to remove or remedy the effect on the environment of the disposal or release of specified substances at our current and former operating sites. As we continue to conduct the MGP remediation and enter into cleanup contracts, we are increasingly able to provide conventional engineering estimates of the likely costs of many elements of the remediation program. These estimates contain various engineering assumptions, which we refine and update on an ongoing basis. These costs are primarily recovered through rate riders.

See Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations” under the caption “Critical Accounting Policies and Estimates” and Note 3 to our consolidated financial statements under Item 8 herein for additional information about our environmental remediation liabilities and efforts.

Retail Operations

Our retail operations segment serves approximately 628,000 natural gas commodity customers and 1.2 million service contracts. Companies within our retail operations segment include SouthStar and Pivotal Home Solutions.

SouthStar is one of the largest retail natural gas marketers in the United States and markets natural gas to residential, commercial and industrial customers, primarily in Georgia and Illinois, where we capture spreads between wholesale and retail natural gas prices. Additionally, we offer our customers energy-related products that provide for natural gas price stability and utility bill management. These products mitigate and/or eliminate the risks to customers of colder-than-normal weather and/or changes in natural gas prices. We charge a fee or premium for these services. Through our commercial operations, we optimize storage and transportation assets and effectively manage commodity risk, which enables us to maintain competitive retail prices and operating margin.

SouthStar is a joint venture owned 85% by us and 15% by Piedmont and is governed by an executive committee with equal representation by both owners. After considering the relevant factors, we consolidate SouthStar in our financial statements. See Note 10 to our consolidated financial statements under Item 8 herein for more information.

Pivotal Home Solutions provides a suite of home protection products and services that offer homeowners additional financial stability regarding their energy service delivery, systems and appliances. We offer a proprietary line of customizable home warranty and energy efficiency plans that can be co-branded with utility and energy companies. We have a portable product suite, which can be offered in most geographies and markets. Pivotal Home Solutions serves customers in several states, primarily Illinois, Indiana and Ohio. Additionally, we are working to expand product offerings to customers in our affiliate companies to enhance the customer experience and retention, as well as promote switching to natural gas from other energy products, such as electricity, propane or fuel oil.

Competition and Operations Our retail operations business competes with other energy marketers to provide natural gas and related services to customers in the areas in which they operate. In the Georgia market, SouthStar operates as Georgia Natural Gas and is the largest of 12 Marketers in the state, with average customers of nearly 500,000 over the last three years and market share of approximately 31% during 2014.

In recent years, increased competition and the heavy promotion of fixed-price plans by SouthStar’s competitors have resulted in increased pressure on retail natural gas margins. In response to these market conditions, SouthStar’s residential and commercial customers have been migrating to fixed-price plans, which, combined with increased competition from other Marketers, has impacted SouthStar’s customer growth as well as margins. However, SouthStar has utilized new products and marketing partnerships to stabilize its portfolio mix in Georgia and has entered new retail markets to position the company for future growth.

In addition, similar to our natural gas utilities, our retail operations businesses face competition based on customer preferences for natural gas compared to other energy products, primarily electricity, and the comparative prices of those products. We continue to use a variety of targeted marketing programs to attract new customers and to retain existing customers.

SouthStar’s operations are sensitive to seasonal weather, natural gas prices, customer growth and consumption patterns similar to those affecting our utility operations. SouthStar’s retail pricing strategies and the use of a variety of hedging strategies, such as the use of futures, options, swaps, weather derivative instruments and other risk management tools, help to ensure retail customer costs are covered to mitigate the potential effect of these issues and commodity price risk on its operations. For more information on SouthStar’s energy marketing and risk management activities, see Item 7A, “Quantitative and Qualitative Disclosures About Market Risk” under the caption “Natural Gas Price Risk.”

Our retail operations business also experiences price, convenience and service competition from other warranty and HVAC companies. These businesses also bear risk from potential changes in the regulatory environment.

Wholesale Services

Our wholesale services segment consists of our wholly owned subsidiary, Sequent, which engages in asset management and optimization, storage, transportation, producer and peaking services and wholesale marketing of natural gas across the U.S. and Canada. Wholesale services utilizes a portfolio of natural gas storage assets, contracted supply from all of the major producing regions, as well as contracted storage and transportation capacity to provide these services to its customers. Its customers consist primarily of electric and natural gas utilities, power generators and large industrial customers. Our logistical expertise enables us to provide our customers with natural gas from the major producing regions and market hubs. We also leverage our portfolio of natural gas storage assets and contracted natural gas supply, transportation and storage capacity to meet our delivery requirements and customer obligations at competitive prices.

Wholesale services' portfolio of storage and transportation capacity enables us to generate additional operating margin by optimizing the contracted assets through the application of our wholesale market knowledge and risk management skills as opportunities arise. These asset optimization opportunities focus on capturing the value from idle or underutilized assets, typically by participating in transactions that take advantage of volatility in pricing differences between varying geographic locations and time horizons (location and seasonal spreads) within the natural gas supply, storage and transportation markets to generate earnings. We seek to mitigate the commodity price and volatility risks and protect our operating margin through a variety of risk management and economic hedging activities.

In May 2013, we sold Compass Energy, a non-regulated retail natural gas business supplying commercial and industrial customers. Under the terms of the purchase and sale agreement, we received an initial cash payment of $12 million, resulting in a pre-tax gain of $11 million ($5 million net of tax) and were eligible to receive contingent cash consideration up to $8 million with a guaranteed minimum receipt of $3 million that was recognized during 2013. In the third quarter of 2014, we negotiated with the buyer to settle the future earn-out payments and we received a cash payment of $4 million, resulting in the recognition of a $3 million gain. We have a five-year agreement through April 2018 to supply natural gas to our former customers.

Competition and operations Wholesale services competes for asset management, long-term supply and seasonal peaking service contracts with other energy wholesalers, often through a competitive bidding process. We are able to price competitively by utilizing our portfolio of contracted storage and transportation assets and by renewing and adding new contracts at prevailing market rates. We will continue to broaden our market presence where our portfolio of contracted storage and transportation assets provides us a competitive advantage, as well as continue our pursuit of additional opportunities with power generation companies and natural gas producers located in the areas of the country in which we operate. We are also focused on building our fee-based services as a source of operating margin that is less impacted by volatility in the marketplace.

We view our wholesale margins from two perspectives. First, we base our commercial decisions on economic value for both our natural gas storage and transportation transactions. For our natural gas storage transactions, economic value is determined based on the net operating revenue to be realized at the time the physical gas is withdrawn from storage and sold and the derivative instrument used to economically hedge natural gas price risk on the physical storage is settled. Similarly, for our natural gas transportation transactions, economic value is determined based on the net operating revenue to be realized at the time the physical gas is purchased, transported, and sold utilizing our transportation capacity along with the settlement value associated with any derivative instruments.

The second perspective is the values reported in accordance with GAAP and encompassing periods prior to and in the period of physical withdrawal and sale of inventory or purchase, transportation and sale of natural gas. We enter into derivatives to hedge price risk prior to when the related physical storage withdrawal or transportation transactions occur based upon our commercial evaluation of future market prices. The reported GAAP amount is affected by the process of accounting for the financial hedging instruments in interim periods at fair value and prior to the period the related physical storage and transportation transactions occur and are recognized in earnings. The change in fair value of the hedging instruments is recognized in earnings in the period of change and is recorded as unrealized gains or losses. This results in reported earnings volatility during the interim periods; however, the expected margin based upon the hedged economic value is ultimately realized in the period natural gas is physically withdrawn from storage or transported and sold at market prices and the related hedging instruments are settled.

For our natural gas storage portfolio, we purchase natural gas for storage when the current market price we pay plus the cost for transportation, storage and financing is less than the market price we anticipate we could receive in the future. We attempt to mitigate substantially all of the commodity price risk associated with our storage portfolio by using derivative instruments to reduce the risk associated with future changes in the price of natural gas. We sell NYMEX futures contracts or OTC derivatives in forward months to substantially protect the operating revenue that we will ultimately realize when the stored gas is actually sold.

Our natural gas acquisition strategy is designed to secure sufficient supplies of natural gas to meet the needs of our utility customers and to hedge natural gas prices to effectively manage costs, reduce price volatility and maintain a competitive advantage. Additionally, our hedging strategies and physical natural gas supplies in storage enable us to reduce earnings risk exposure due to higher gas costs.

Midstream Operations

Our midstream operations segment includes a number of businesses that are related and complementary to our primary business. The most significant of these businesses is our natural gas storage business, which develops, acquires and operates high-deliverability underground natural gas storage assets in the Gulf Coast region of the U.S. and in northern California. While this business can generate additional revenue during times of peak market demand for natural gas storage services, our natural gas storage facilities have a portfolio of short, medium and long-term contracts at fixed market rates. In addition to natural gas storage, this segment also includes our developing LNG business, which focuses on LNG for transportation, and select pipeline investments that are outside of state regulatory jurisdiction.

Pipelines During 2014, we entered into three pipeline agreements, as indicated in the following table, which are subject to regulatory approvals. These projects, along with our existing pipelines discussed below, will support our efforts to provide diverse sources of natural gas supplies to our customers, resolve current and long-term supply planning for new capacity, enhance system reliability and generate economic development in the areas served. The pipeline development projects will be financed through a combination of commercial paper and long-term debt issuances. See Note 10 to the consolidated financial statements under Item 8 herein for additional information.

Dollars in millions	**Miles of pipe**	**Expected capital expenditures** (1)	**Ownership interest** (1)	**Scheduled year of completion**	**Expected FERC filing process** File date	Approval date
Dalton Pipeline (2)	106	$210	50%	2017	2015	2016
PennEast Pipeline (3)	108	200	20%	2017	2015	2016
Atlantic Coast Pipeline (4)	550	260	5%	2018	2015	2016
Total	764	$670				

(1) Represents our expected capital expenditures and ownership interest, which may change.
(2) In April 2014, we entered into two agreements associated with the construction of the Dalton Lateral Pipeline, which will serve as an extension of the Transco pipeline system and provide additional natural gas supply to our customers in Georgia. The first is a construction and ownership agreement and the second is an agreement to lease our ownership in this lateral pipeline extension once it is placed in service.
(3) In August 2014, we entered into a joint venture to construct and operate a natural gas pipeline that will transport low-cost natural gas from the Marcellus Shale area to our customers in New Jersey. We believe this will alleviate takeaway constraints in the Marcellus region and help mitigate some of the price volatility experienced during the past winter.
(4) In September 2014, we entered into a joint venture to construct and operate a natural gas pipeline that will run from West Virginia through Virginia and into eastern North Carolina to meet the region's growing demand for natural gas. The proposed pipeline project is expected to transport natural gas to our customers in Virginia.

Magnolia Enterprise Holdings, Inc. This wholly owned subsidiary operates a pipeline that provides our Georgia customers diversification of natural gas sources and increased reliability of service in the event that supplies coming from other supply sources are disrupted.

Horizon Pipeline This 50% owned joint venture with Natural Gas Pipeline Company of America operates an approximate 70 mile natural gas pipeline stretching from Joliet, Illinois to near the Wisconsin/Illinois border. Nicor Gas has contracted for approximately 80% of Horizon Pipeline's total throughput capacity of 0.38 Bcf under an agreement expiring in May 2025.

Competition and operations Our natural gas storage facilities primarily compete with natural gas facilities in the Gulf Coast region of the U.S., as the majority of the existing and proposed high deliverability salt-dome natural gas storage facilities in North America are located in the Gulf Coast region. Salt caverns have also been leached from bedded salt formations in the Northeastern and Midwestern states. Competition for our Central Valley storage facility primarily consists of storage facilities in northern California and western North America.

The market fundamentals of the natural gas storage business are cyclical. The abundant supply of natural gas in recent years and the resulting lack of market and price volatility have negatively impacted the profitability of our storage facilities. In 2014, expiring storage capacity contracts were re-subscribed at lower prices and we anticipate these lower natural gas prices to continue in 2015 as compared to historical averages. The prices for natural gas storage capacity are expected to increase as supply and demand quantities reach equilibrium as the economy continues to improve, expected exports of LNG occur and/or natural gas demand increases in response to low prices and expanded uses for natural gas. We believe our storage assets are strategically located to benefit from these expected improvements in market fundamentals, including the overall growth in the natural gas market, and there are significant barriers to developing new storage facilities, including construction time and other costs, federal, state and local permitting and approvals and suitable and available sites, to capitalize on these expected improvements in market conditions.

Other

Our "other" non-reportable segment includes aggregated subsidiaries that individually are not significant on a stand-alone basis and that do not fit into one of our reportable segments. This segment includes our investment in Triton, which was not part of the sale of Tropical Shipping that closed on September 1, 2014. See Note 14 to the consolidated financial statements under Item 8 herein for additional information on the disposition of Tropical Shipping. AGL Services Company is a service company we established to provide certain centralized shared services to our reportable segments. We allocate substantially all of AGL Services Company's operating expenses and interest costs to our reportable segments in accordance with state regulations. Our EBIT results include the impact of these allocations to the various reportable segments.

AGL Capital, our wholly owned finance subsidiary, provides for our ongoing financing needs through a commercial paper program, the issuance of various debt instruments and other financing arrangements.

Employees

As of December 31, 2014, we had approximately 5,165 employees, all of whom were in the U.S. The decrease in total employees from 2013 primarily resulted from the sale of our Tropical Shipping business in 2014. The following table provides information about our natural gas utilities' collective bargaining agreements, which represent approximately 33% of our total employees.

	Number of employees	Contract expiration date
Nicor Gas		
International Brotherhood of Electrical Workers (Local No. 19) (1)	1,386	February 2017
Virginia Natural Gas		
International Brotherhood of Electrical Workers (Local No. 50) (2)	139	May 2015
Elizabethtown Gas		
Utility Workers Union of America (Local No. 424)	171	November 2015
Total	1,696	

(1) Nicor Gas' collective bargaining agreement expired in February 2014, and a new agreement was ratified in April 2014. The new agreement provides for additional operational enhancements and changes to certain benefits, but does not have a material effect on our consolidated financial statements.

(2) Contract negotiations are ongoing; however, we do not expect a new contract to be finalized prior to the expiration of the current contract. We have a continuation agreement in place and do not expect this to result in a work stoppage.

We believe that we have a good working relationship with our unionized employees and there have been no work stoppages at Virginia Natural Gas, Elizabethtown Gas, or Nicor Gas since we acquired those operations in 2000, 2004, and 2011, respectively. As we have done historically, we remain committed to work in good faith with the unions to renew or renegotiate collective bargaining agreements that balance the needs of the company and our employees. Our current collective bargaining agreements do not require our participation in multiemployer retirement plans and we have no obligation to contribute to any such plans.

Available Information

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and proxy statements, and amendments to those reports that we file with, or furnish to, the SEC are available free of charge at the SEC website http://www.sec.gov and at our website, www.aglresources.com, as soon as reasonably practicable after we electronically file such reports with, or furnish such reports to, the SEC. However, our website and any contents thereof should not be considered to be incorporated by reference into this document. We will furnish copies of such reports free of charge upon written request to our Investor Relations department. You can contact our Investor Relations department at:

AGL Resources Inc.
Investor Relations
P.O. Box 4569
Atlanta, GA 30302-4569
404-584-4000

In Part III of this Form 10-K, we incorporate certain information by reference from our Proxy Statement for our 2015 annual meeting of shareholders. We expect to file that Proxy Statement with the SEC on or about March 17, 2015, and we will make it available on our website as soon as reasonably practicable thereafter. Please refer to the Proxy Statement when it is available.

Additionally, our corporate governance guidelines, code of ethics, code of business conduct and the charters of each committee of our Board of Directors are available on our website. We will furnish copies of such information free of charge upon written request to our Investor Relations department.

ITEM 1A. RISK FACTORS

Forward-Looking Statements

This report and the documents incorporated by reference herein contain "forward-looking statements." These statements, which may relate to such matters as future earnings, growth, liquidity, supply and demand, costs, subsidiary performance, credit ratings, dividend payments, new technologies and strategic initiatives, often include words such as "anticipate," "assume," "believe," "can," "could," "estimate," "expect," "forecast," "future," "goal," "indicate," "intend," "may," "outlook," "plan," "potential," "predict," "project," "proposed," "seek," "should," "target," "would" or similar expressions. You are cautioned not to place undue reliance on forward-looking statements. While we believe that our expectations are reasonable in view of the information that we currently have, these expectations are subject to future events, risks and uncertainties, and there are numerous factors—many beyond our control—that could cause actual results to vary materially from these expectations.

Such events, risks and uncertainties include, but are not limited to, changes in price, supply and demand for natural gas and related products; the impact of changes in state and federal legislation and regulation, including any changes related to climate matters; actions taken by government agencies on rates and other matters; concentration of credit risk; utility and energy industry consolidation; the impact on cost and timeliness of construction projects by government and other approvals, development project delays, adequacy of supply of diversified vendors, and unexpected changes in project costs, including the cost of funds to finance these projects and our ability to recover our project costs from our customers; limits on pipeline capacity; the impact of acquisitions and divestitures, including recent acquisitions in our retail operations segment; our ability to successfully integrate operations that we have or may acquire or develop in the future; direct or indirect effects on our business, financial condition or liquidity resulting from a change in our credit ratings or the credit ratings of our counterparties or competitors; interest rate fluctuations; financial market conditions, including disruptions in the capital markets and lending environment; general economic conditions; uncertainties about environmental issues and the related impact of such issues, including our environmental remediation plans; the impact of the new depreciation rates for Nicor Gas; the impact of changes in weather, including climate change, on the temperature-sensitive portions of our business; the impact of natural disasters, such as hurricanes, on the supply and price of natural gas; acts of war or terrorism; the outcome of litigation; and the factors described in this Item 1A, “Risk Factors” and the other factors discussed in our filings with the SEC.

There also may be other factors that we do not anticipate or that we do not recognize are material that could cause results to differ materially from expectations. Forward-looking statements speak only as of the date they are made. We expressly disclaim any obligation to update or revise any forward-looking statement, whether as a result of future events, new information or otherwise, except as required by law.

Risks Related to Our Business

Our business is subject to substantial regulation by federal, state and local regulatory authorities. Adverse determinations by them and, in some instances, the absence of timely determinations, could adversely affect our business.

At the federal level, our business is regulated by the FERC. At the state level, our business is regulated by public service commissions or similar authorities, as well as local governing bodies with respect to certain issues.

Depending upon the jurisdiction, these regulatory authorities are generally entitled to review and approve many aspects of our operations, including the rates that we charge customers (including the recovery of costs for pipeline replacement and other capital projects), the rates of return on our equity investments in our operating companies, how we operate our business, and the interaction between our regulated operating companies and other subsidiaries that might provide products or services to those companies. In addition, our operating companies are generally subject to franchise agreements that entitle them to provide products and services.

While applicable law often provides a framework for the approvals that we need, the regulatory authorities generally have broad discretion. Moreover, in some jurisdictions, the regulatory process involves elected officials and is subject to inherent political issues, which can impact the approvals that we request. As a result, we may or may not be able to obtain the approvals that we request, the timing of obtaining those approvals can be uncertain, and the approvals can be subject to conditions that may or may not be favorable to our business. Should we not be able to obtain the rate increases that we request in a timely manner, should we not be able to fully recover the costs that we incur, or should we otherwise not obtain favorable approvals for the operation of our business, our business will be adversely impacted.

In addition, the regulatory environment in which we operate has increased in complexity over time, and further change is likely in many jurisdictions. These changes may or may not be favorable to our business. As the regulatory environment grows in complexity, inadvertent noncompliance is increasingly a greater risk. Noncompliance can, depending upon the circumstances, result in fines, penalties or other enforcement action by regulatory authorities, as well as damage our reputation and standing in the community, all of which would adversely impact our business.

Energy prices can fluctuate widely and quickly. To the extent that we have not anticipated and planned for those changes, our business can be adversely affected.

Recently, the price for natural gas and competing energy sources, such as oil, have fluctuated widely. Generally, we pass through changes in prices to the customers of our operating companies, and we have a process in place to continually review the adequacy of our utility gas rates and to take appropriate action with the applicable regulatory authorities. However, there is an inherent regulatory lag in adjusting rates and, in an increasing price environment, we have to bear the increased costs on an interim basis. We also have to incur additional financing costs as a result of purchasing more expensive gas.

In addition, increases in gas prices, both in absolute terms and relative to alternative energy sources, negatively impacts demand, the ability of customers to pay their utility bills and the timing of those payments (which lead to larger accounts receivable and greater bad debt expense) and various other factors. While the impact of some of these factors can be passed through to customers, there is generally a delay in that process that can adversely affect our business.

As noted below, for some portions of our business, we hedge the risk of price changes through the purchase of futures contracts and other means. These efforts, while designed to minimize the adverse impact of price changes, cannot assure that result. As a result, we retain exposure to price changes that can, in a volatile energy market, be extremely material and can adversely affect our business.

Variations in weather beyond what we have planned for can adversely impact our business.

A substantial portion of our revenue is derived from the transportation or sale of gas for space heating purposes. We plan for the demand of gas for this purpose based upon historical weather patterns and resulting demand. Where weather varies significantly beyond the range that we have planned for, it can impact us in many ways, including through increasing or decreasing the demand for gas, the cost of gas to us, and the availability, sufficiency and cost of transportation and storage capacity.

A decrease in the availability of adequate pipeline transportation capacity due to weather conditions or otherwise could adversely impact our business. We depend upon having access to adequate transportation and storage capacity for virtually all of our operations. A decrease in interstate pipeline capacity available to us, or an increase in competition for interstate pipeline transportation and storage capacity (e.g., even as a result of weather in regions that we do not significantly serve) could reduce our normal interstate supply of gas or cause rates to fluctuate.

We have WNA mechanisms for Virginia Natural Gas, Elizabethtown Gas and Chattanooga Gas that partially offset the impact of unusually cold or warm weather on residential and commercial customer billings and on our operating margin, although at Elizabethtown Gas, we could be required to return a portion of any WNA surcharge to its customers if Elizabethtown Gas' return on equity exceeds its authorized return on equity of 10.3%. These WNA regulatory mechanisms are most effective in a reasonable temperature range relative to normal weather using historical averages. Outside of those ranges, our financial exposure is greater.

We also have decoupled rate designs, including straight-fixed-variable, at Atlanta Gas Light, Virginia Natural Gas and Chattanooga Gas that allow for the recovery of fixed customer service costs separately from assumed natural gas volumes used by our customers. For more information, see Item 1, "Business" under the caption "Rate Structures" herein.

At Nicor Gas, approximately 60% of all usage is for space heating and approximately 75% of the usage and revenues occur from October through March. Weather fluctuations have the potential to significantly impact operating income and cash flow. For example, we estimate that a 100 degree-day variation from normal weather of 5,752 Heating Degree Days impacts Nicor Gas' margin, net of income taxes, by approximately $1 million under its current rate structure. For our weather risk associated with Nicor Gas, we utilize weather derivatives to reduce, but not eliminate, the risk of lower operating margins potentially resulting from significantly warmer-than-normal weather in Illinois. For more information, see Note 2 to the consolidated financial statements under Item 8 herein.

Changes in weather conditions may also impact SouthStar's earnings. As a result, SouthStar uses a variety of weather derivative instruments to mitigate the impact on its operating margin in the event of warmer or colder-than-normal weather in the winter months. However, these instruments do not fully mitigate the effects of unusually warm or cold weather.

Similarly, changes in weather conditions may also impact wholesale services' earnings. In addition to the impacts described above, weather impacts the ability of our wholesale services segment to capture value from location and seasonal spreads. Through the acquisition of natural gas and hedging of natural gas prices, wholesale services reduces some of the weather-related risks that it faces, but it cannot eliminate all of those risks.

Our retail energy businesses in Illinois, Nicor Solutions and Nicor Advanced Energy, offer utility-bill management products that mitigate and/or eliminate the risks of variations in weather to customers. We hedge this risk to reduce any adverse effects to us from weather variations.

We are subject to environmental regulation and our costs to comply are significant. Any changes in existing environmental regulation could adversely affect our business.

We are subject to extensive environmental regulation pursuant to a variety of federal, state and municipal laws and regulations. Such environmental regulation imposes, among other things, restrictions, liabilities and obligations associated with storage, transportation, treatment and disposal of MGP residuals and waste in connection with spills, releases and emissions of various substances into the environment. Environmental legislation also requires that our facilities, sites and other properties associated with our operations be operated, maintained, abandoned and reclaimed to the satisfaction of applicable regulatory authorities. Our current costs to comply with these laws and regulations are significant. Failure to comply with these laws and regulations and failure to obtain any required permits and licenses may expose us to material fines, penalties or interruptions in our operations.

We are generally responsible for liabilities associated with the environmental condition of the natural gas assets that we have operated, acquired or developed, regardless of when the liabilities arose and whether they are or were known or unknown. In addition, in connection with certain acquisitions and sales of assets, we may obtain, or be required to provide, indemnification against certain environmental liabilities. Before natural gas was widely available, we manufactured gas from coal and other fuels. Those manufacturing operations were known as MGPs, which we ceased operating in the 1950s. A number of environmental issues may exist with respect to MGP's. For more information regarding these obligations, see Note 11 to the consolidated financial statements under Item 8 herein. Claims against us under environmental laws and regulations could result in material costs and liabilities.

Existing environmental laws and regulations could also be revised or reinterpreted, and new laws and regulations could be adopted or become applicable to us or our facilities. With the trend toward stricter standards, greater regulation, more extensive permit requirements and an increase in the number and types of assets operated by us subject to environmental regulation, our environmental expenditures could increase in the future, and such expenditures may not be fully recoverable from our customers. Additionally, the discovery of presently unknown environmental conditions could give rise to expenditures and liabilities, including fines or penalties that could have a material adverse effect on our business.

Our infrastructure improvement and customer growth may be restricted by the capital-intensive nature of our business.

We must construct additions and replacements to our natural gas distribution systems to continue the expansion of our customer base and improve system reliability, especially during peak usage. We may also need to construct expansions of our existing natural gas storage facilities or develop and construct new natural gas storage facilities. The cost of such construction may be affected by the cost of obtaining government and other approvals, project delays, adequacy of supply of vendors, vendor performance, or unexpected changes in project costs. Weather, general economic conditions and the cost of funds to finance our capital projects can materially alter the cost, the projected construction schedule and the completion timeline of a project. Our cash flows may not be fully adequate to finance the cost of such construction. As a result, we may be required to fund a portion of our cash needs through borrowings, the issuance of common stock, or both. For our distribution operations segment, this may limit our ability to expand our infrastructure to connect new customers due to limits on the amount we can economically invest, which shifts costs to potential customers and may make it uneconomical for them to connect to our distribution systems. For our natural gas storage business, this may significantly reduce our earnings and return on investment from what would be expected for this business, or it may impair our ability to complete the expansions or development projects.

We may be exposed to regulatory and financial risks related to the impact of climate change and associated legislation and regulation.

Climate change is expected to receive increasing attention from the current federal administration, non-governmental organizations and legislators. Debate continues as to the extent to which our climate is changing, the potential causes of any change and its potential impacts. Some attribute climate change to increased levels of greenhouse gases, including carbon dioxide and methane, which has led to significant legislative and regulatory efforts to limit greenhouse gas emissions.

The EPA has begun using provisions of the Clean Air Act to regulate greenhouse gas emissions, including carbon dioxide and methane, differently than under historical precedent. Thus far, EPA has imposed greenhouse gas regulations on automobiles and implemented new permitting requirements for the construction or modification of major stationary sources of greenhouse gas emissions, including natural gas-fired power plants.

In addition, President Obama issued a Presidential Memorandum on June 25, 2013, directing the EPA to adopt performance standards to regulate greenhouse gas emissions from power plants. Specifically, the Presidential Memorandum directs the EPA to propose standards for future power plants by September 20, 2013 and propose regulations and emission guidelines for modified, reconstructed, and existing power plants by June 1, 2014. The Presidential Memorandum directs the EPA to finalize those regulations by June 1, 2015. States would be required to develop regulations implementing the EPA’s guidelines by June 30, 2016. It also includes a wide variety of other initiatives designed to reduce greenhouse gas emissions, prepare for the impacts of climate change, and lead international efforts to address climate change.

The outcome of federal and state actions to address climate change could potentially result in new regulations, additional charges to fund energy efficiency activities or other regulatory actions, which in turn could:

- result in increased costs associated with our operations,
- increase other costs to our business,
- affect the demand for natural gas (positively or negatively), and
- impact the prices we charge our customers and affect the competitive position of natural gas.

Because natural gas is a fossil fuel with low carbon content relative to other traditional fuels, future carbon constraints may create additional demand for natural gas, both for production of electricity and direct use in homes and businesses. The impact is already being seen in the power production sector due to both environmental regulations and low natural gas costs. However, methane, the primary constituent of natural gas, is a potent greenhouse gas. Future regulation of methane could likewise result in increased costs to us and affect the demand for natural gas, as well as the prices we charge our customers and the competitive position of natural gas.

Any adoption of regulation by federal or state governments mandating a substantial reduction in greenhouse gas emissions could have far-reaching and significant impacts on the energy industry. We cannot predict the potential impact of such laws or regulations on our business.

Transporting and storing natural gas involves numerous risks that may result in accidents and other operating risks and costs.

Our gas distribution and storage activities involve a variety of inherent hazards and operating risks, such as leaks, accidents, including explosions, and mechanical problems, which could result in serious injury to employees and non-employees, loss of human life, significant damage to property, environmental pollution and impairment of our operations, which in turn could lead to substantial losses to us. In accordance with customary industry practice, we maintain insurance against some, but not all, of these risks and losses. The location of pipelines and storage facilities near populated areas, including residential areas, commercial business centers and industrial sites, could increase the level of damages resulting from these risks. The occurrence of any of these events not fully covered by insurance could adversely affect our financial position and results of operations.

We face increasing competition, and if we are unable to compete effectively, our revenues, operating results and financial condition will be adversely affected, which may limit our ability to grow our business.

The natural gas business is highly competitive, increasingly complex, and we are facing increasing competition from other companies that supply energy, including electric companies, oil and propane providers and, in some cases, energy marketing and trading companies. In particular, the success of our retail businesses is affected by competition from other energy marketers providing retail natural gas services in our service territories, most notably in Illinois and Georgia. Natural gas competes with other forms of energy. The primary competitive factor is price. Changes in the price or availability of natural gas relative to other forms of energy and the ability of end users to convert to alternative fuels affect the demand for natural gas. In the case of commercial, industrial and agricultural customers, adverse economic conditions, including higher natural gas costs, could also cause these customers to bypass or disconnect from our systems in favor of special competitive contracts with lower per-unit costs.

Our retail operations segment markets fixed-price and fixed-bill contracts that protect customers against higher natural gas prices, or protect customers against both higher natural gas prices and colder weather. The sale of these fixed-price contracts may be adversely affected if natural gas prices are, or are perceived to be, low and stable. Our retail operations segment also faces risks in the form of price, convenience and service competition from other warranty and HVAC companies.

Our wholesale services segment competes for sales with national and regional full-service energy providers, energy merchants and producers, and pipelines based on our ability to aggregate competitively-priced commodities with transportation and storage capacity. Some of our competitors are larger and better capitalized than we are and have more national and global exposure than we do. The consolidation of this industry and the pricing to gain market share may affect our operating margin. We expect this trend to continue in the near term, and the increasing competition for asset management deals could result in downward pressure on the volume of transactions and the related operating margin available in this portion of Sequent’s business.

Our midstream operations segment competes with natural gas facilities in the Gulf Coast region of the U.S., as the majority of the existing and proposed high deliverability salt-dome natural gas storage facilities in North America are located in the Gulf Coast region. Competition for our Central Valley storage facility in northern California primarily consists of storage facilities in northern California and western North America. Storage values have declined over the past several years due to low gas prices and low volatility, and we expect this to continue in 2015.

A significant portion of our accounts receivable is subject to collection risks, due in part to a concentration of credit risk at Nicor Gas, Atlanta Gas Light, SouthStar and Sequent.

Nicor Gas and Sequent often extend credit to counterparties. Despite performing credit analyses prior to extending credit and seeking to implement netting agreements, if the counterparties fail to perform and any collateral Nicor Gas or Sequent has secured is inadequate, we could experience material financial losses.

Further, Sequent has a concentration of credit risk with a limited number of parties. Most of this concentration is with counterparties that are either load-serving utilities or end-use customers that have supplied some level of credit support. Default by any of these counterparties in their obligations to pay amounts due to Sequent could result in credit losses that could be significant.

We have accounts receivable collection risks in Georgia due to a concentration of credit risks related to the provision of natural gas services to approximately 12 Marketers. As a result, Atlanta Gas Light depends on a limited number of customers for a significant portion of its revenues.

Additionally, SouthStar markets directly to end-use customers and has periodically experienced credit losses as a result of severe cold weather or high prices for natural gas that increase customers’ bills and, consequently, impair customers’ ability to pay. For more information, see Item 7A, “Quantitative and Qualitative Disclosures About Market Risk” under the caption “Credit Risk” herein.

The asset management arrangements between Sequent and our LDC’s, and between Sequent and its non-affiliated customers, may not be renewed or may be renewed at lower levels, which could have a significant impact on Sequent’s business.

Sequent currently manages the storage and transportation assets of our affiliates Atlanta Gas Light, Virginia Natural Gas, Elizabethtown Gas, Florida City Gas, Chattanooga Gas and Elkton Gas. The profits it earns from the management of those assets with these affiliates are shared with their respective customers and for Atlanta Gas Light with the Georgia Commission’s Universal Service Fund, with the exception of Chattanooga Gas and Elkton Gas where Sequent is assessed annual fixed-fees. Entry into and renewal of these agreements are subject to regulatory approval, and we cannot predict whether such agreements will be renewed or the terms of such renewal.

Sequent also has asset management agreements with certain non-affiliated customers. Sequent's results could be significantly impacted if these agreements are not renewed or are amended or renewed with less favorable terms. Sustained low natural gas prices could reduce the demand for these types of asset management arrangements.

We are exposed to market risk and may incur losses in wholesale services, midstream operations and retail operations.

The commodity, storage and transportation portfolios at Sequent and the commodity and storage portfolios at midstream operations and SouthStar consist of contracts to buy and sell natural gas commodities, including contracts that are settled by the delivery of the commodity or cash. If the values of these contracts change in a direction or manner that we do not anticipate, we could experience financial losses from our trading activities. For more information, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "VaR" herein.

Our accounting results may not be indicative of the risks we are taking or the economic results we expect for wholesale services.

Although Sequent enters into various contracts to hedge the value of our energy assets and operations, the timing of the recognition of profits or losses on the hedges does not always correspond to the profits or losses on the item being hedged. The difference in accounting can result in volatility in Sequent's reported results, even though the expected operating margin is essentially unchanged from the date the transactions were initiated.

The cost of providing retirement plan benefits to eligible current and former employees is subject to changes in the performance of investments, demographics, and various other factors and assumptions. These changes may have a material adverse effect on us.

The cost of providing retirement plan benefits to eligible current and former employees is subject to changes in the market value of our pension fund assets, changing demographics and assumptions, including longer life expectancy of beneficiaries and changes in health care cost trends. Any sustained declines in equity markets and reductions in bond yields will have an adverse effect on the value of our pension plan assets. In these circumstances, we may be required to recognize an increased pension expense and a charge to our other comprehensive income to the extent that the actual return on assets in the pension fund is less than the expected return. We may be required to make additional contributions in future periods in order to preserve the current level of benefits under the plans and in accordance with federal funding requirements.

For more information, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Contractual Obligations and Commitments" and the subheading "Pension and Welfare Obligations" and Note 6 to the consolidated financial statements under Item 8 herein.

Natural disasters, terrorist activities and similarly unpredictable events could adversely affect our businesses.

Natural disasters may damage our assets, interrupt our business operations and adversely impact the demand for natural gas. Future acts of terrorism could be directed against companies operating in the U.S., and companies in the energy industry may face a heightened risk of exposure. The insurance industry has been disrupted by these types of events. As a result, the availability of insurance covering risks against which we and similar businesses typically insure may be limited or insufficient. In addition, the insurance we are able to obtain may have higher deductibles, higher premiums and more restrictive policy terms. In addition, an employee or third party may purposely, or inadvertently, fail to adhere to our policies and procedures or our policies and procedures may not be effective; this could result in the violation of a law or regulation, a material error or misstatement, damage to our reputation or the incurrence of substantial expense.

Work stoppages could adversely impact our businesses.

Some of our businesses are dependent upon employees who are represented by unions and are covered by collective bargaining agreements. These agreements may increase our costs, affect our ability to continue offering market-based salaries and benefits, and limit our ability to implement efficiency-related improvements. Disputes with the unions could result in work stoppages that could impact the delivery of natural gas and other services, which could strain relationships with customers, vendors and regulators. We believe that we have a good working relationship with our unionized employees and we remain committed to work in good faith with the unions to renew or renegotiate collective bargaining agreements that balance the needs of the company and our employees. For more information, see Item 1, "Business" under the caption "Employees" herein.

Changes in laws and regulations regarding the sale and marketing of products and services offered by our retail operations segment could adversely affect our results of operations, cash flows and financial condition.

Our retail operations segment provides various energy-related products and services. These include sales of natural gas and utility-bill management services to residential and small commercial customers, and the sale, repair, maintenance and warranty of heating, air conditioning and indoor air quality equipment. The sale and marketing of these products and services are subject to various state and federal laws and regulations. Changes in these laws and regulations could impose additional costs on, restrict or prohibit certain activities, which could adversely affect our results of operations, cash flows and financial condition.

Conservation could adversely affect our results of operations, cash flows and financial condition.

As a result of legislative and regulatory initiatives on energy conservation, we have put into place programs to promote additional energy efficiency by our customers. Funding for such programs is being recovered through cost recovery riders. However, the adverse impact of lower deliveries and resulting reduced margin could adversely affect our results of operations, cash flows and financial condition.

A security breach could disrupt our operating systems, shutdown our facilities or expose confidential personal information.

Security breaches of our information technology infrastructure, including cyber-attacks, could lead to system disruptions or generate facility shutdowns. If a cyber-attack or security breach were to occur, our business, results of operations and financial condition could be materially adversely affected. In addition, a cyber-attack could affect our ability to service our indebtedness, our ability to raise capital and our future growth opportunities.

Additionally, the protection of customer, employee and company data is critical to us. A breakdown or a breach in our systems that results in the unauthorized release of individually identifiable customer or other sensitive data could occur and could expose us to liability to our customers, vendors, financial institutions and others. In addition, a breakdown or breach could also materially increase the costs we incur to protect against such risks. There is no guarantee that the procedures that we have implemented to protect against unauthorized access to secured data are adequate to safeguard against all data security breaches, although, to our knowledge, we did not have any material security breaches in 2014.

We may pursue acquisitions, divestitures and other strategic transactions, the success of which may impact our results of operations, cash flows and financial condition.

We have pursued acquisitions to complement or expand our business, divestures and other strategic transactions in the past and expect to in the future. If we identify an acquisition candidate, we may not be able to successfully negotiate or finance the acquisition or integrate the acquired businesses with our existing business and services. Acquisitions may result in dilutive issuances of equity securities and the incurrence of debt and contingent liabilities, amortization expenses and substantial goodwill. Acquisitions may not be accretive to our earnings and may cause dilution to our earnings per share, which may negatively affect the market price of our common shares. Any failure to successfully integrate businesses that we acquire in an efficient and effective manner could have a material adverse effect on us. Similarly, we may divest portions of our business, which may also have material and adverse effects.

We assess goodwill for impairment at least annually and more frequently if events or circumstances occur that would more likely than not reduce the fair value of a reporting unit below its carrying value. We assess our long-lived assets, including finite-lived intangible assets, for impairment whenever events or circumstances indicate that an asset's carrying amount may not be recoverable. To the extent the value of goodwill or long-lived assets become impaired, we may be required to incur impairment charges that could have a material impact on our results of operations. No impairment of goodwill was recorded as a result of our 2014 annual impairment testing, as the fair value of each reporting unit was in excess of the carrying value. Additionally, no impairment of long-lived assets was recorded during 2014.

Since interest rates are a key component, among other assumptions, in the models used to estimate the fair values of our reporting units, as interest rates rise, the calculated fair values decrease and future impairments may occur. Further, the rates for contracting capacity at Jefferson Island, Golden Triangle and Central Valley are also key components in the models used to estimate their fair value. Consequently, a further decline in market fundamentals and the rates for contracting availability could result in future impairments. Due to the subjectivity of the assumptions and estimates underlying the impairment analysis, we cannot provide assurance that future analyses will not result in impairment. These assumptions and estimates include projected cash flows, current and future rates for contracted capacity, growth rates, WACC and market multiples. For additional information, see Item 7,"Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Critical Accounting Policies and Estimates" herein.

Risks Related to Our Corporate and Financial Structure

We depend on access to the capital and financial markets to fund our business. Any inability to access the capital or financial markets may limit our ability to execute our business plan or pursue improvements that we may rely on for future growth.

We rely on access to both short-term money markets (in the form of commercial paper and lines of credit) and long-term capital markets as sources of liquidity for capital and operating requirements not satisfied by the cash flow from our operations. If we are not able to access financial markets at competitive rates, our ability to implement our business plan and strategy will be negatively affected, and we may be forced to postpone, modify or cancel capital projects. Certain market disruptions may increase our cost of borrowing or affect our ability to access one or more financial markets. Such market disruptions could result from:

- adverse economic conditions;
    - adverse general capital market conditions;
    - poor performance and health of the utility industry in general;
    - bankruptcy or financial distress of unrelated energy companies or marketers;

- significant decrease in the demand for natural gas;
- adverse regulatory actions that affect our local gas distribution companies and our natural gas storage business;
- terrorist attacks on our facilities or our suppliers; or
- extreme weather conditions.

The amount of our working capital requirements in the near term will primarily depend on the market price of natural gas and weather. Higher natural gas prices may adversely impact our accounts receivable collections and may require us to increase borrowings under our credit facilities to fund our operations.

While we believe we can meet our capital requirements from our operations and our available sources of financing, we can provide no assurance that we will continue to be able to do so in the future, especially if the market price of natural gas increases significantly in the near term. The future effects on our business, liquidity and financial results due to market disruptions could be material and adverse to us, both in the ways described above or in ways that we do not currently anticipate.

A downgrade in our credit rating would require us to pay higher interest rates and could negatively affect our ability to access capital, or may require us to provide additional collateral to certain counterparties.

Our senior debt is currently assigned investment grade credit ratings. If the rating agencies downgrade our ratings, particularly below investment grade, it may significantly limit our access to the commercial paper market and our borrowing costs would increase. In addition, we would likely be required to pay a higher interest rate in future financings and our potential pool of investors and funding sources would likely decrease.

Additionally, if our credit rating by either S&P or Moody's falls to non-investment grade status, we would be required to provide additional collateral to continue conducting business with certain customers. For additional credit rating and interest rate information, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Liquidity and Capital Resources" and Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Interest Rate Risk" herein.

We are vulnerable to interest rate risk with respect to our debt, which could lead to changes in interest expense and adversely affect our earnings.

We are subject to interest rate risk in connection with the issuance of fixed-rate and variable-rate debt. In order to maintain our desired mix of fixed-rate and variable-rate debt, we may use interest rate swap agreements and exchange fixed-rate and variable-rate interest payment obligations over the life of the arrangements, without exchange of the underlying principal amounts. For additional information, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Interest Rate Risk" herein. However, we may not structure these swap agreements in a manner that manages our risks effectively. If we are unable to do so, our earnings may be reduced. In addition, higher interest rates, all other things equal, reduce the earnings that we derive from transactions where we capture the difference between authorized returns and short-term borrowings.

We are a holding company and are dependent on cash flow from our subsidiaries, which may not be available in the amounts and at the times we need.

A significant portion of our outstanding debt was issued by our wholly owned subsidiary, AGL Capital, which we fully and unconditionally guarantee. Since we are a holding company and have no operations separate from our investment in our subsidiaries, we are dependent on the net income and cash flows of our subsidiaries and their ability to pay upstream dividends or other distributions to meet our financial obligations and to pay dividends on our common stock. The ability of our subsidiaries to pay upstream dividends and make other distributions is subject to applicable state law and regulatory restrictions. In addition, Nicor Gas is not permitted to make money pool loans to affiliates. Refer to Item 5, "Market for the Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities" herein for additional information.

The use of derivative contracts in the normal course of our business could result in financial losses that negatively impact our results of operations.

We use derivative instruments, including futures, options, forwards and swaps, to manage our commodity and financial market risks. We could recognize financial losses on these contracts as a result of volatility in the market values of the underlying commodities or if a counterparty fails to perform under a contract. In addition, derivative contracts entered into for hedging purposes may not offset the underlying exposure being hedged as expected, resulting in financial losses. In the absence of actively quoted market prices and pricing information from external sources, the valuation of these derivative instruments can involve management's judgment or use of estimates. As a result, changes in the underlying assumptions or use of alternative valuation methods could adversely affect the reported fair values of these contracts.

As a result of cross-default provisions in our borrowing arrangements, we may be unable to satisfy all of our outstanding obligations in the event of a default on our part.

Our credit facilities contain cross-default provisions. Should an event of default occur under some of our debt agreements, we face the prospect of being in default under our other debt agreements, obligated in such instance to satisfy a large portion of our outstanding indebtedness and unable to satisfy all of our outstanding obligations simultaneously.

ITEM 1B. UNRESOLVED STAFF COMMENTS

We do not have any unresolved comments from the SEC staff regarding our periodic or current reports under the Securities Exchange Act of 1934, as amended.

ITEM 2. PROPERTIES

We consider our properties to be well maintained, in good operating condition and suitable for their intended purpose. The following provides the location and general character of the materially important properties that are used by our segments. Substantially all of Nicor Gas' properties are subject to the lien of the indenture securing its first mortgage bonds. See Note 8 to our consolidated financial statements under Item 8 herein.

Distribution and transmission mains

Our distribution systems transport natural gas from our pipeline suppliers to customers in our service areas. These systems consist primarily of distribution and transmission mains, compressor stations, peak shaving/storage plants, service lines, meters and regulators. At December 31, 2014, our distribution operations segment owned approximately 80,700 miles of underground distribution and transmission mains, which are located on easements or rights-of-way that generally provide for perpetual use. We maintain our mains through a program of continuous inspection and repair, and believe that our distribution systems are in good condition.

Storage assets

Distribution Operations We own and operate eight underground natural gas storage facilities in Illinois with a total inventory capacity of about 150 Bcf, approximately 135 Bcf of which can be cycled on an annual basis. The system is designed to meet about 50% of the estimated peak-day deliveries and approximately 40% of its normal winter deliveries in Illinois. This level of storage capability provides us with supply flexibility, improves the reliability of deliveries and can help mitigate the risk associated with seasonal price movements.

We have five LNG plants located in Georgia, New Jersey and Tennessee with LNG storage capacity of approximately 7.6 Bcf. In addition, we own one propane storage facility in Virginia with a storage capacity of approximately 0.3 Bcf. The LNG plants and propane storage facility are used by our distribution operations segment to supplement natural gas supply during peak usage periods.

Midstream Operations We own three high-deliverability natural gas storage and hub facilities that are operated by our midstream operations segment. Jefferson Island operates a storage facility in Louisiana currently consisting of two salt dome gas storage caverns. Golden Triangle operates a storage facility in Texas consisting of two salt dome caverns. Central Valley operates a depleted field storage facility in California. In addition, we have an LNG facility in Alabama that produces LNG for Pivotal LNG, a wholly owned subsidiary, to support its business of selling LNG as a substitute fuel in various markets. For additional information on our storage facilities, see Item 1, "Business" under the caption "Midstream Operations" herein.

Offices

All of our reportable segments own or lease office, warehouse and other facilities throughout our operating areas. We expect additional or substitute space to be available as needed to accommodate the expansion of our operations.

ITEM 3. LEGAL PROCEEDINGS

The nature of our business ordinarily results in periodic regulatory proceedings before various state and federal authorities. In addition, we are party as both plaintiff and defendant to a number of lawsuits related to our business on an ongoing basis. Management believes that the outcome of all regulatory proceedings and litigation in which we are currently involved will not have a material adverse effect on our consolidated financial condition or results of operations.

For more information regarding our regulatory proceedings and litigation, see Note 11 to our consolidated financial statements under the caption "Litigation" under Item 8 herein.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Holders of Common Stock, Stock Price and Dividend Information

Our common stock is listed on the New York Stock Exchange under the ticker symbol GAS. At February 4, 2015, there were 21,551 record holders of our common stock. Quarterly information concerning our high and low stock prices and cash dividends paid in 2014 and 2013 is as follows:

Quarter ended:	Sales price of common stock High	Sales price of common stock Low	Cash dividend per common share
March 31, 2014	$49.84	$45.17	$0.49
June 30, 2014	55.10	48.29	0.49
September 30, 2014	55.30	48.72	0.49
December 31, 2014	56.67	50.10	0.49
			$1.96

Quarter ended:	Sales price of common stock High	Sales price of common stock Low	Cash dividend per common share
March 31, 2013	$42.37	$38.86	$0.47
June 30, 2013	44.85	41.21	0.47
September 30, 2013	47.00	41.94	0.47
December 31, 2013	49.31	44.56	0.47
			$1.88

We have paid 268 consecutive quarterly dividends to our common shareholders beginning in 1948, historically four times each year: March 1, June 1, September 1 and December 1. Our common shareholders may receive dividends when declared at the discretion of our Board of Directors. See Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Capital Resources - Cash Flow from Financing Activities - Dividends on Common Stock" herein. Dividends may be paid in cash, stock or other form of payment, and payment of future dividends will depend on our future earnings, cash flow, financial requirements and other factors, some of which are noted below. In certain cases, our ability to pay dividends to our common shareholders is limited by the following:

- our ability to satisfy our obligations under certain financing agreements, including debt-to-capitalization covenants, and
- our ability to satisfy our obligations to any future preferred shareholders.

Under Georgia law, the payment of cash dividends to the holders of our common stock is limited to our legally available assets and subject to the prior payment of dividends on any outstanding shares of preferred stock. Our assets are not legally available for paying cash dividends if, after payment of the dividend:

- we could not pay our debts as they become due in the usual course of business, or
- our total assets would be less than our total liabilities plus, subject to some exceptions, any amounts necessary to satisfy (upon dissolution) the preferential rights of shareholders whose rights are superior to those of the shareholders receiving the dividends.

Issuer Purchases of Equity Securities

There were no purchases of our common stock by us or any affiliated purchasers during the three months ended December 31, 2014.

ITEM 6. SELECTED FINANCIAL DATA

Selected financial data about AGL Resources for the last five years is set forth in the table below which should be read in conjunction with the consolidated financial statements and related notes set forth in Item 8, "Financial Statements and Supplementary Data" herein. Additionally, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" herein for a discussion of the primary factors impacting the changes in our results of operations for the periods reflected in our Consolidated Statements of Income. The operations of our former Tropical Shipping business, which was sold during 2014, are reflected as discontinued operations and all prior periods have been recast to reflect the discontinued operations. Material changes from 2013 to 2014 are due primarily to earnings from our wholesale services segment, resulting mainly from colder-than-normal weather and associated natural gas price volatility in 2014. Material changes from 2011 to 2012 are primarily due to the Nicor merger, which closed on December 9, 2011.

Dollars and shares in millions, except per share amounts	**2014**	**2013**	**2012**	**2011**	**2010**

(1) Transaction expenses associated with the Nicor merger were excluded from operation and maintenance expenses and presented separately.
(2) Dividends declared per common share during the fiscal period divided by market value per common share as of the last day of the fiscal period.
(3) As of the last day of the fiscal period.
(4) Amounts for all periods include assets held for sale, which reflect the assets of our former Tropical Shipping business.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Executive Summary

We are an energy services holding company whose principal business is the distribution of natural gas in seven states – Illinois, Georgia, Virginia, New Jersey, Florida, Tennessee and Maryland – through our seven natural gas distribution utilities. We are also involved in several other businesses that are complementary to the distribution of natural gas. We have four reportable segments that consist of the following – distribution operations, retail operations, wholesale services and midstream operations – and one non-reportable segment – other. These segments are consistent with how management views and operates our business. Amounts shown in this Item 7, unless otherwise indicated, exclude assets held for sale and discontinued operations. See Note 14 to our consolidated financial statements under Item 8 herein for additional information. The following table provides certain information on our segments.

	EBIT			Assets			Capital expenditures		
	2014 (1)	**2013**	**2012**	**2014**	**2013**	**2012**	**2014**	**2013**	**2012**
Distribution operations	52%	84%	84%	81%	82%	82%	93%	93%	84%
Retail operations	12	20	18	5	5	4	1	1	1
Wholesale services	38	-	-	9	8	9	-	-	-
Midstream operations	(1)	(2)	2	5	5	5	2	2	8
Other/intercompany eliminations	(1)	(2)	(4)	-	-	-	4	4	7
Total	100%	100%	100%	100%	100%	100%	100%	100%	100%

(1) The EBIT in 2014 was impacted by significantly higher-than-normal commercial activity realized in wholesale services, which is not indicative of future performance.

In the third quarter of 2014, we adjusted the accounting treatment for our previously reported non-cash revenue recognition associated with our regulatory infrastructure programs in our distribution operations segment. The adjustments did not affect previously reported operating cash flows, nor are they expected to affect capital expenditure plans or dividend payments. We do not expect these adjustments to impact the levels of return from our infrastructure replacement programs, as all amounts will be recovered in accordance with allowed recovery mechanisms. The adjustments relate only to the timing of recognition and do not impact rates charged to customers. Additionally, we adjusted the amortization of intangible assets for customer relationships and trade names in our retail operations segment to reflect the amortization expense on a basis consistent with the pattern of undiscounted cash flows used to determine their fair values. In November 2014, we amended our 2013 Form 10-K and our Forms 10-Q for the quarters ended March 31, 2014 and June 30, 2014 to revise our financial statements to reflect these adjustments. Our prior-period financial statements included herein reflect these adjustments.

In September 2014, we closed on the sale of Tropical Shipping and received after-tax cash proceeds of approximately $225 million, as well as repatriated $86 million in cash. The transaction resulted in expenses, including taxes, of approximately $80 million or $(0.67) per share in 2014. Tropical Shipping operated as part of our cargo shipping segment and the financial results are classified as discontinued operations. Accordingly, all references to continuing operations exclude the operations of Tropical Shipping. The sale of Tropical Shipping allows us to focus on growing our core business of operating regulated utilities and complementary non-regulated energy businesses and provided us with flexibility around our near-term financing plans. For additional information on our discontinued operations, see Note 14 to our consolidated financial statements under Item 8 herein.

In 2014, our net income from continuing operations was $580 million, an increase of $272 million compared to income from continuing operations in 2013. This increase was primarily the result of significantly higher commercial activity and net hedge gains at wholesale services, mainly due to natural gas market volatility. This volatility was primarily generated by significantly colder-than normal weather in the first quarter of 2014, which also increased the operating margins at distribution operations and retail operations. Excluding the favorable weather impacts, we also achieved growth in our operating margins during 2014 as a result of targeted acquisition growth in retail operations. Our operating expenses in 2014 were higher compared to 2013 mainly as a result of higher incentive compensation expenses primarily related to higher earnings in 2014.

Our priorities for 2015 are consistent with the direction we have taken the company over the last several years. We will remain focused on efficient operations across all of our businesses, including offsetting inflationary pressures by aggressive cost controls, spreading costs across a broader customer base and sizing our operations to properly reflect market conditions. Several of our specific business objectives are detailed as follows:

- **Distribution Operations**: Invest necessary capital to enhance and maintain safety and reliability; remain a low-cost leader within the industry; opportunistically expand the system and capitalize on potential customer conversions. We intend to continue investing in our regulatory infrastructure programs in Georgia, Virginia, New Jersey and Tennessee to minimize regulatory lag and the recovery cycle. In July 2014, the Illinois Commission approved our new regulatory infrastructure program, Investing in Illinois (previously known as Qualified Infrastructure Plant), for which we will implement rates under the program effective in March 2015. We continue to effectively manage costs and leverage our shared services model across our businesses to largely overcome inflationary effects.

- **Retail Operations**: Maintain operating margins in Georgia and Illinois while continuing to expand into other profitable retail markets; expand our warranty businesses through partnership opportunities with our affiliates. We expect the Georgia retail market to remain highly competitive; however, our operating margins are forecasted to remain stable with modest growth and expansion into new markets.
- **Wholesale Services**: Maximize storage and transportation positions; effectively perform on existing asset management agreements, and expand customer base and maintain cost structure in line with market fundamentals. We anticipate volatility to remain low to moderate in certain areas of our portfolio; however, we expect near-term volatility in the supply-constrained Northeast corridor until expected new pipeline projects are completed and new capacity is placed into service. We continue to position our business to secure sufficient supplies of natural gas to meet the needs of our utility and third-party customers and to hedge natural gas prices to manage costs effectively, reduce price volatility and maintain a competitive advantage.
- **Midstream Operations**: Optimize storage portfolio, including contracts that have expired or will expire, pursue LNG transportation and natural gas pipeline opportunities and evaluate alternate uses for our storage facilities. In 2014, we announced our participation in three pipeline projects that we expect to provide a diverse source of natural gas to our customers in Georgia, New Jersey and Virginia. Subject to regulatory approvals, construction is expected to begin in the 2016-2017 timeframe with completion targeted in 2017-2018. For additional information on our pipeline projects, see Note 2 and Note 10 to our consolidated financial statements under Item 8 herein and Item 1, “Business” under the caption “Midstream Operations.”

Additionally, we will maintain our strong balance sheet and liquidity profile, solid investment grade ratings and our commitment to sustainable annual dividend growth. For additional information on our reportable segments, see Note 13 to our consolidated financial statements under Item 8 herein and Item 1, “Business.”

Results of Operations

We generate the majority of our operating revenues through the sale, distribution and storage of natural gas. We include in our consolidated revenues an estimate of revenues from natural gas distributed, but not yet billed to residential, commercial and industrial customers from the date of the last bill to the end of the reporting period. No individual customer or industry accounts for a significant portion of our revenues. The following table provides more information regarding the components of our operating revenues.

In millions	2014	2013	2012
Residential	$2,877	$2,422	$2,011
Commercial	861	696	656
Transportation	458	487	474
Industrial	242	180	262
Other (1)	947	424	159
Total operating revenues	$5,385	$4,209	$3,562

(1) Includes significantly higher-than-normal revenues at wholesale services in 2014, which are not indicative of future performance.

We evaluate segment performance using the measures of EBIT and operating margin. EBIT includes operating income and other income and expenses. Items that we do not include in EBIT are financing costs, including interest expense and income taxes, each of which we evaluate on a consolidated basis. Operating margin is a non-GAAP measure that is calculated as operating revenues minus cost of goods sold and revenue tax expense in distribution operations. Operating margin excludes operation and maintenance expense, depreciation and amortization, taxes other than income taxes, and the gain or loss on the sale of our assets. These items are included in our calculation of operating income as reflected in our Consolidated Statements of Income.

We believe operating margin is a better indicator than operating revenues for the contribution resulting from customer growth in our distribution operations segment since the cost of goods sold and revenue tax expenses can vary significantly and are generally billed directly to our customers. We also consider operating margin to be a better indicator in our retail operations, wholesale services and midstream operations segments since it is a direct measure of operating margin before overhead costs. You should not consider operating margin an alternative to, or a more meaningful indicator of, our operating performance than operating income, or net income attributable to AGL Resources Inc. as determined in accordance with GAAP. In addition, operating margin may not be comparable to similarly titled measures of other companies.

We also believe presenting the non-GAAP measurements of basic and diluted earnings per share - as adjusted, which excludes Nicor merger-related expenses and the additional accrual for the Nicor Gas PBR issue, provides investors with an additional measure of our performance. Adjusted basic and diluted earnings per share should not be considered an alternative to, or a more meaningful indicator of, our operating performance than our GAAP basic and diluted earnings per share. The following table reconciles operating revenue and operating margin to operating income and EBIT to earnings before income taxes and net income and our GAAP basic and diluted earnings per common share to our non-GAAP basic and diluted earnings per share – as adjusted, together with other consolidated financial information for the last three years.

In millions, except per share amounts	**2014**	**2013**	**2012**
Operating revenues	$5,385	$4,209	$3,562
Cost of goods sold	(2,765)	(2,110)	(1,583)

Interest expense, net	(179)	(170)	(183)
Income before income taxes	930	485	431
Income tax expense	(350)	(177)	(157)
Income from continuing operations	580	308	274
(Loss) income from discontinued operations, net of tax	(80)	5	1
Net income	500	313	275
Less net income attributable to the noncontrolling interest	18	18	15
Net income attributable to AGL Resources Inc.	$482	$295	$260
Amounts attributable to AGL Resources Inc.			
Income from continuing operations attributable to AGL Resources Inc.	$562	$290	$259
(Loss) income from discontinued operations, net of tax	(80)	5	1
Net income attributable to AGL Resources Inc.	$482	$295	$260
Per common share data			
Diluted earnings per common share from continuing operations	$4.71	$2.45	$2.20
Diluted (loss) earnings per common share from discontinued operations (2)	(0.67)	0.04	0.01
Additional accrual for Nicor Gas PBR issue	-	-	0.04
Transaction costs of Nicor merger	-	-	0.11
Diluted earnings per share - as adjusted	$4.04	$2.49	$2.36

(1) Adjusted for Nicor Gas' revenue tax expenses, as they are passed through directly to customers.

(2) In September 2014, we closed on the sale of Tropical Shipping. See Note 14 to our consolidated financial statements under Item 8 herein for additional information.

In 2014, our income from continuing operations attributable to AGL Resources Inc. increased by $272 million, or 94% compared to 2013. This increase was primarily the result of the following:

- Significantly higher commercial activity primarily in the first quarter of 2014, and mark-to-market hedge gains, net of LOCOM adjustments at wholesale services in 2014 from price volatility generated by colder-than-normal weather, which increased operating margin by $462 million compared to 2013.
- Increased operating margin at distribution operations and retail operations of $50 million mainly due to significantly colder-than-normal weather in 2014 compared to slightly colder-than-normal weather in 2013, as well as customer usage and customer growth. We also achieved growth as a result of our 2013 acquisitions and expansion into additional markets at retail operations.
- These increases were partially offset by a decrease in margin of $10 million at midstream operations primarily due to a retained fuel true-up at one of our storage facilities as a result of naturally occurring shrinkage of the caverns, as well as lower contracted firm rates at Jefferson Island and Central Valley.
- Favorability year-over-year was negatively impacted by higher incentive compensation expenses primarily related to higher earnings in 2014 and increased outside services expenses of $49 million, and the $8 million higher pre-tax gain in 2013 related to the sale of Compass Energy.
- Our income tax expense from continuing operations increased by $173 million for 2014 compared to 2013, primarily due to higher consolidated earnings. The increase was primarily a result of increased earnings at wholesale services.

In 2013, our income from continuing operations attributable to AGL Resources Inc. increased by $31 million, or 12% compared to 2012.

- The overall increase was primarily the result of increased operating margin at distribution operations and retail operations due to weather that was both colder-than-normal and colder than the prior year, increased regulatory infrastructure program revenues at Atlanta Gas Light, the acquisition of service contracts and residential and commercial energy customer relationships in our retail operations segment, as well as lower depreciation expense at Nicor Gas.
- The increase was unfavorably impacted by mark-to-market accounting hedge losses in our wholesale services segment during the second half of 2013, offset by higher commercial activity and the $11 million pre-tax gain on the sale of Compass Energy in 2013.

- Our midstream operations segment was unfavorable compared to 2012 due to the $8 million loss associated with the termination of the Sawgrass Storage project in 2013, as well as lower contracted firm rates at Jefferson Island and higher operating expenses at Golden Triangle, Central Valley and Pivotal LNG resulting from full year operations in 2013 as compared to partial year operations in 2012.
- Favorability year-over-year was also partially offset by higher incentive compensation expenses in most of our businesses, as our incentive compensation expense was above targeted levels in 2013 based on improved financial and operational performance compared to significantly below targeted annual levels in 2012 due to below target performance. In addition, our bad debt expense increased at distribution operations and retail operations primarily as a result of higher revenues from colder weather combined with natural gas prices that were higher than the prior year.
- In 2012, we recorded $20 million ($13 million net of tax) of Nicor merger-related expenses.
- In 2013, our interest expense decreased by $13 million compared to 2012. This decrease was the result of overall lower interest rates mostly offset by higher average debt outstanding primarily as a result of issuing $500 million of senior notes in place of variable-rate debt.
- In 2013, our income tax expense increased by $20 million or 13% compared to 2012 primarily due to higher consolidated earnings, as previously discussed.

The variances for each reportable segment are contained within the year-over-year discussion on the following pages.

Operating metrics

Weather We measure the effects of weather on our business primarily through Heating Degree Days, and we also consider operating costs that may vary with the effects of weather. Generally, increased Heating Degree Days result in higher demand for gas on our distribution systems. With the exception of Nicor Gas and Florida City Gas, we have various regulatory mechanisms, such as weather normalization mechanisms, which limit our exposure to weather changes within typical ranges in each of our utilities' respective service areas. However, our customers in Illinois and our retail operations customers in Georgia can be impacted by warmer or colder-than-normal weather. We have presented the Heating Degree Day information for those locations in the following table.

	Normal (1)	2014	2013	2012	2014 vs. 2013 colder (warmer)	2013 vs. 2012 colder (warmer)	2014 vs. normal colder (warmer)	2013 vs. normal colder (warmer)	2012 vs. normal colder (warmer)
Year ended December 31,									
Illinois (2)	5,752	6,556	6,305	4,863	4%	30%	14%	10%	(15)%
Georgia	2,599	2,882	2,689	1,934	7%	39%	11%	3%	(26)%
Quarter ended December 31,									
Illinois (2)	2,085	2,103	2,383	1,890	(12)%	26%	1%	14%	(9)%
Georgia	1,014	1,003	1,049	878	(4)%	19%	(1)%	3%	(13)%

(1) Normal represents the 10-year average from January 1, 2004 through December 31, 2013, for Illinois at Chicago Midway International Airport and for Georgia at Atlanta Hartsfield-Jackson International Airport, as obtained from the National Oceanic and Atmospheric Administration, National Climatic Data Center.

(2) The 10-year average Heating Degree Days established by the Illinois Commission in our last rate case, is 2,020 for the fourth quarter and 5,600 for the 12 months from 1998 through 2007.

In 2014, we experienced weather in Illinois that was 14% colder-than-normal and 4% colder than 2013. This weather positively impacted our 2014 EBIT at our utilities, primarily at Nicor Gas, by $20 million, and drove an increase of $12 million in 2013 based on 10-year normal weather. Georgia also experienced 11% colder-than-normal weather, and 7% colder weather than the same period last year. Colder-than-normal weather increased EBIT at retail operations by $14 million in 2014 and $9 million in 2013 compared to expected levels based on 10-year normal weather.

Customers The number of customers at distribution operations and energy customers at retail operations can be impacted by natural gas prices, economic conditions and competition from alternative fuels. Our energy customers at retail operations are primarily located in Georgia and Illinois. Our customer metrics highlight the average number of customers to which we provide services and are presented in the following table.

	Years ended December 31,			2014 vs. 2013 change		2013 vs. 2012 change	
(in thousands)	2014	2013	2012	#	%	#	%
Distribution operations customers (1)	4,497	4,479	4,459	18	0.4%	20	0.4%
Retail operations							
Energy customers (2)	628	619	623	9	1%	(4)	(1)%
Service contracts (3)	1,182	1,127	684	55	5%	443	65%
Market share in Georgia	31%	31%	32%		-%		(1)%

(1) In 2014, we implemented a process change at Nicor Gas that adversely impacted our customer count. This had the effect of immaterial growth for Nicor Gas from last year. Excluding Nicor Gas, our customer growth rate for 2014 was 0.8%.

(2) Increase from 2013 to 2014 primarily due to the addition of approximately 33,000 residential and commercial customer relationships acquired in Illinois in June 2013.

(3) Increase from 2012 to 2013 primarily due to acquisition of approximately 500,000 contracts on January 31, 2013.

We anticipate overall utility customer growth trends for 2014 to continue in 2015 based on an expectation of continuing improvement in the economy and relatively low natural gas prices. We use a variety of targeted marketing programs to attract new customers and to retain existing customers. These efforts include adding residential customers, multifamily complexes and commercial and industrial customers who use natural gas for purposes other than space heating, as well as evaluating and launching new natural gas related programs, products and services to enhance customer growth, mitigate customer attrition and increase operating revenues. These programs generally emphasize natural gas as the fuel of choice for customers and seek to expand the use of natural gas through a variety of promotional activities. We also target customer conversions to natural gas from other energy sources, emphasizing the pricing advantage of natural gas. These programs focus on premises that could be connected to our distribution system at little or no cost to the customer. In cases where conversion cost can be a disincentive, we may employ rebate programs and other assistance to address customer cost issues.

In 2015, we intend to continue efforts in our retail operations segment to enter into targeted markets and expand energy customers and its service contracts. We anticipate this expansion will provide growth opportunities in future years.

Volume Our natural gas volume metrics for distribution operations and retail operations present the effects of weather and customers' demand for natural gas compared to the prior year. Wholesale services' daily physical sales volumes represent the daily average natural gas volumes sold to its customers. Our volume metrics are presented in the following table:

	Year ended December 31,				
Distribution operations (In Bcf)	**2014**	**2013**	**2012**	**2014 vs. 2013 % change**	**2013 vs. 2012 % change**
Firm (1)	766	720	606	6%	19%
Interruptible	106	111	107	(5)%	4%
Total	872	831	713	5%	17%
Retail operations (In Bcf)					
Georgia firm	41	38	31	8%	23%
Illinois	17	9	8	89%	13%
Other (includes Florida, Maryland, New York and Ohio)	10	8	8	25%	-
Wholesale services					
Daily physical sales (Bcf/day)	6.32	5.73	5.54	10%	3%

(1) Year-over-year increases are primarily a result of colder weather.

Within our midstream operations segment, our natural gas storage businesses seek to have a significant portion of their working natural gas capacity under firm subscription, but also take into account current and expected market conditions. This allows our natural gas storage business to generate additional revenue during times of peak market demand for natural gas storage services, but retain some consistency with their earnings and maximize the value of the investments.

Our midstream operations storage business is cyclical, and the abundant supply of natural gas in recent years and the resulting lack of market and price volatility have negatively impacted the profitability of our storage facilities. Consistent with our expectations, we had contracts expire in 2014 that were re-subscribed at lower prices as compared to prior years. We anticipate these lower natural gas prices to continue in 2015 as compared to historical averages. We expect the rates at which we re-contract expiring capacity in 2015 to be marginally higher than re-contracting rates in 2014, but still significantly below historical averages. The prices for natural gas storage capacity are expected to increase as supply and demand quantities reach equilibrium as the economy continues to improve, expected exports of LNG occur and/or natural gas demand increases in response to low prices and expanded uses for natural gas. As of the periods presented, the overall monthly average firm subscription rates per facility and amount of firm capacity subscription were as follows:

	December 31, 2014		**December 31, 2013**	
	Avg. rates (1)	**Firm capacity under subscription** (1)	**Avg. rates** (1)	**Firm capacity under subscription** (1)
Jefferson Island	$0.108	4.6	$0.122	5.6
Golden Triangle	0.114	5.0	0.240	2.0
Central Valley	0.062	2.5	0.130	3.0

(1) Rates are per dekatherm. Firm capacity under subscription excludes 7 Bcf contracted by Sequent as of December 31, 2014, at an average monthly rate of $0.050 and 3.5 Bcf as of December 31, 2013, at an average monthly rate of $0.091.

Segment information Operating margin, operating expenses and EBIT information for each of our segments are contained in the following tables for the last three years.

In millions	Operating Margin (1) (2)			Operating Expenses (2) (3)			EBIT (1)		
	2014	**2013**	**2012**	**2014**	**2013**	**2012**	**2014**	**2013** (4)	**2012**
Distribution operations	$1,648	$1,615	$1,552	$1,075	$1,083	$1,044	$581	$546	$517
Retail operations	311	294	247	179	162	136	132	132	111
Wholesale services	501	39	50	79	53	54	422	(3)	(3)
Midstream operations	31	41	46	50	46	38	(17)	(10)	10
Other (5)	7	8	7	22	25	40	(9)	(10)	(21)
Intercompany eliminations	(8)	(8)	(8)	(8)	(8)	(8)	-	-	-
Consolidated	$2,490	$1,989	$1,894	$1,397	$1,361	$1,304	$1,109	$655	$614

(1) Operating margin is a non-GAAP measure. A reconciliation of operating revenue and operating margin to operating income, and EBIT to earnings before income taxes and net income is contained in "Results of Operations" herein. See Note 13 to our consolidated financial statements under Item 8 herein for additional segment information.
(2) Operating margin and operating expenses are adjusted for revenue tax expenses, which are passed through directly to our customers.
(3) Includes $20 million in Nicor merger transaction expenses for 2012 and an $8 million accrual in 2012 for the Nicor Gas PBR issue.
(4) EBIT for 2013 includes an $11 million pre-tax gain on sale of Compass Energy in our wholesale services segment and an $8 million pre-tax loss associated with the termination of the Sawgrass Storage project within our midstream operations segment.
(5) Our "other" non-reportable segment includes our investment in Triton, which was formerly part of our cargo shipping segment that is now classified as discontinued operations. See Note 14 to our consolidated financial statements under Item 8 herein for additional information.

During the Heating Season, natural gas usage and operating revenues are generally higher because more customers are connected to our distribution systems and natural gas usage is higher in periods of colder weather. Occasionally in the summer, wholesale services operating revenues are impacted due to peak usage by power generators in response to summer energy demands. Seasonality also affects the comparison of certain Consolidated Statements of Financial Position items across quarters, including receivables, unbilled revenue, inventories and short-term debt. However, these items are comparable when reviewing our annual results. Our base operating expenses, excluding cost of goods sold, interest expense and certain incentive compensation costs, are incurred relatively equally over any given year. Thus, our operating results can vary significantly from quarter to quarter as a result of seasonality. The EBIT of our distribution operations, retail operations and wholesale services segments are seasonal, as indicated in the table below.

% generated during Heating Season

	Revenues	EBIT
2014	73%	81%
2013	68	72
2012	70	76

Distribution Operations

Our distribution operations segment is the largest component of our business and is subject to regulation and oversight by agencies in each of the seven states we serve. These agencies approve natural gas rates designed to provide us the opportunity to generate revenues to recover the cost of natural gas delivered to our customers and our fixed and variable costs such as depreciation, interest, maintenance and overhead costs, and to earn a reasonable return for our shareholders. With the exception of Atlanta Gas Light, our second largest utility, the earnings of our regulated utilities can be affected by customer consumption patterns that are a function of weather conditions, price levels for natural gas and general economic conditions that may impact our customers' ability to pay for gas consumed. We have various mechanisms, such as weather normalization mechanisms at our utilities and weather derivative instruments that limit our exposure to weather changes within typical ranges in their respective service areas.

In millions	2014	2013
EBIT - prior year	**$546**	**$517**
Operating margin		
Increase mainly driven by non-weather-related customer usage and customer growth	22	9
Increased margin as a result of higher customer usage due to colder-than-normal weather	13	36
Increase from regulatory infrastructure programs, primarily at Atlanta Gas Light	10	4
(Decrease) increase primarily as a result of bad debt and energy efficiency program recoveries at Nicor Gas	(12)	19
Decreased gas storage carrying amounts at Atlanta Gas Light	-	(5)
Increase in operating margin	**33**	**63**
Operating expenses		
Decreased depreciation expense primarily due to the impact of Nicor Gas' new composite depreciation rate effective August 30, 2013, partially offset by increased PP&E from infrastructure additions and improvements	(22)	(8)
Decreased benefit expenses primarily related to lower pension costs due to change in actuarial gains and losses	(13)	(6)
(Decreased) increased rider expenses primarily as a result of energy efficiency program expenses at Nicor Gas	(12)	19
Increased payroll and variable compensation costs as a result of merit increases and higher earnings	19	37
Increased outside services and other expenses mainly as a result of maintenance programs	11	1
Increase due to weather-related expenses	5	-
Increased bad debt expenses related to colder-than-normal weather primarily at Elizabethtown Gas	4	4
Decreased operation and maintenance expense at Nicor Gas related to the 2012 PBR accrual	-	(8)
(Decrease) increase in operating expenses	**(8)**	**39**
(Decrease) increase in other income primarily from STRIDE Projects at Atlanta Gas Light	**(6)**	**5**
EBIT - current year	**$581**	**$546**

Retail Operations

Our retail operations segment, which consists of several businesses that provide energy-related products and services to retail markets, is also weather sensitive and uses a variety of hedging strategies, such as weather derivative instruments and other risk management tools, to partially mitigate potential weather impacts. During 2014, our retail operations' EBIT was negatively impacted by $16 million of unrealized hedge losses and LOCOM adjustments.

In millions	2014	2013
EBIT - prior year	**$132**	**$111**
Operating margin		
Increase due to acquisitions in January and June 2013	9	35
Increase primarily related to customer usage in Georgia and Illinois due to colder-than-normal weather, net of weather hedges	8	18
Increase primarily related to warranty service contract count and price increases	6	-
Increase primarily related to non-weather related customer usage and customer growth	5	1
Increase (decrease) related to change in gas costs and from retail price spreads	5	(11)
Change in value of derivatives as a result of changes in NYMEX natural gas prices	(13)	1
Change in LOCOM adjustment, net of recoveries	(3)	3
Increase in operating margin	**17**	**47**
Operating expenses		
Increased variable compensation costs, outside services, marketing and other	11	-
Increased due to weather-related expenses	3	-
Increased bad debt expenses primarily related to higher natural gas prices	2	3
Increased expenses primarily due to acquisitions in January and June 2013	1	23
Increase in operating expenses	**17**	**26**
EBIT - current year	**$132**	**$132**

Wholesale Services

Our wholesale services segment is involved in asset management and optimization, storage, transportation, producer and peaking services, natural gas supply, natural gas services and wholesale marketing. We have positioned the business to generate positive economic earnings even under low volatility market conditions. However, when market price volatility increases as we experienced in 2014, we are well positioned to capture significant value and generate stronger results. Results in 2014 for the wholesale services segment were the best in the company's history and not indicative of future performance. EBIT for our wholesale services segment is impacted by volatility in the natural gas market arising from a number of factors, including weather fluctuations and changes in supply or demand for natural gas in different regions of the country. We principally use physical and financial arrangements to reduce the risks associated with fluctuations in market conditions and changing commodity prices. These economic hedges may not qualify, or are not designated for, hedge accounting treatment. As a result, our reported earnings for wholesale services reflect changes in the fair values of certain derivatives. These values may change significantly from period to period and are reflected as gains or losses within our operating revenues.

In millions	2014	2013
EBIT - prior year	**$(3)**	**$(3)**
Operating margin		
Change in commercial activity largely driven by the transportation and storage portfolios in the Northeast and Midwest	319	90
Change in value of transportation and forward commodity derivatives from price movements related to natural gas transportation positions	111	(70)
Change in value of storage derivatives as a result of changes in NYMEX natural gas prices	102	(30)
Change in LOCOM adjustment, net of estimated current period recoveries	(66)	3
Decrease due to sale of Compass Energy in May 2013	(4)	(4)
Increase (decrease) in operating margin	**462**	**(11)**
Operating expenses		
Increased variable compensation expenses related to higher earnings and slightly higher other costs in 2014	28	3
Decrease due to sale of Compass Energy in May 2013	(2)	(4)
Increase (decrease) in operating expenses	**26**	**(1)**
(Decrease) increase in other income, primarily related to the gain on sale of Compass Energy	(11)	10
EBIT - current year	**$422**	**$(3)**

The following table illustrates the components of wholesale services' operating margin for the periods presented.

In millions	2014	2013	2012
Commercial activity recognized	$444	$129	$43
Gain (loss) on transportation and forward commodity derivatives	38	(73)	(3)
Gain (loss) on storage derivatives	86	(16)	14
Inventory LOCOM adjustment, net of estimated current period recoveries	(67)	(1)	(4)
Operating margin	$501	$39	$50

Change in commercial activity The commercial activity at wholesale services includes recognized storage and transportation values that were generated in prior periods, which reflect the impact of prior period hedge gains and losses as associated physical transactions occur in the period. Additionally, the commercial activity includes operating margin generated and recognized in the current period. For 2014, commercial activity increased significantly due to:

- the recognition of significantly higher operating margin associated with our transportation and storage portfolios, particularly in the Northeast and Midwest regions, from price volatility generated by significantly colder-than-normal weather in 2014, in part reflecting Sequent's strategy and focus on providing asset management and related services to producers around the major shale-producing regions and to natural gas-fired power generators, enabling Sequent to optimize the associated pipeline transportation and storage capacity assets
- the recognition of operating margin resulting from the withdrawal of storage inventory hedged at the end of 2013 that was included in the storage withdrawal schedule with a value of $28 million as of December 31, 2013
- the recognition of operating margin resulting from mark-to-market accounting derivative losses at the end of 2013

The 2013 change in commercial activity was primarily due to increased cash optimization opportunities related to constraints of natural gas purchased from producers in the Northeastern U.S. Commercial activity in 2013 was also impacted by the recognition of operating margin resulting from the withdrawal of storage inventory hedged at the end of 2012 that was included in the storage withdrawal schedule with a value of $27 million as of December 31, 2012. Additionally, increased volatility associated with colder weather contributed to the increase in commercial activity.

Change in storage and transportation derivatives A return of significantly higher price volatility in 2014 benefitted Sequent's portfolio of pipeline transportation and storage capacity assets throughout the country, primarily in the Gulf Coast, Northeast and Midwest markets. Storage derivative gains in 2014 are primarily due to the change in natural gas prices applicable to the locations of our specific storage assets. These increases were partially offset by a $66 million increase in the required LOCOM adjustment to natural gas inventories for the year ended December 31, 2014, net of estimated hedging recoveries.

Gains in our transportation and forward commodity derivative positions in 2014 are primarily the result of narrowing transportation basis spreads. Significantly colder-than-normal weather and higher demand together with natural gas transportation constraints due to growing shale production impacted forward prices at natural gas receipt and delivery points, primarily in the Northeast and the Midwest regions, during 2014. Transportation and forward commodity hedge losses in 2013 were the result of widening transportation basis spreads, and were recovered in 2014 with the physical flow of natural gas and utilization of the contracted transportation capacity.

We account for natural gas stored in inventory differently than the derivatives we use to mitigate the commodity price risk associated with our storage portfolio. The natural gas that we purchase and inject into storage is accounted for at the LOCOM value utilizing gas daily or spot prices at the end of the year. The derivatives we use to mitigate commodity price risk are accounted for at fair value and marked to market each period using forward natural gas prices. This difference in accounting treatment can result in volatility in wholesale services reported results, even though the expected net operating revenue and expected economic value are substantially unchanged since the date the transactions were initiated. These accounting timing differences also affect the comparability of wholesale services' period-over-period results, since changes in forward NYMEX prices do not increase and decrease on a consistent basis from year to year. Largely as a result of moderate weather in the fourth quarter of 2014 leading to significant decreases in natural gas prices, wholesale services recorded a $73 million LOCOM adjustment for the year ended December 31, 2014.

For our natural gas transportation portfolio, we enter into transportation capacity contracts with interstate and intrastate pipelines for the delivery of natural gas between receipt and delivery points in future periods. We purchase natural gas for transportation when the market price we pay for gas at a receipt point plus the cost of transportation capacity required to deliver the gas to the delivery point is less than the sales price at the delivery point. The difference between the prices at the receipt point and the delivery point is the transportation basis or location spread. Similar to our storage transactions, we attempt to mitigate the commodity price risk associated with our transportation portfolio by using derivative instruments to reduce the risk associated with future changes in the price of natural gas at the receipt and delivery points. We utilize futures contracts or OTC derivatives to hedge both the commodity price risk relative to the market price at the receipt point and the market price at the delivery point to substantially protect the operating revenue that we will ultimately realize once the natural gas is received, delivered and sold.

Volatility in the natural gas market arises from a number of factors, such as weather fluctuations or changes in supply or demand for natural gas in different regions of the country. The volatility of natural gas commodity prices has a significant impact on our customer rates, our long-term competitive position against other energy sources and the ability of our wholesale services segment to capture value from location and seasonal spreads. During both 2014 and 2013, we experienced increased price volatility brought on largely by colder weather and supply constraints in the Northeast and Midwest regions, which enabled us to capture value under these market conditions. Commercial activity in 2014 was particularly favorable due to significant natural gas price volatility as compared to prior years, largely the result of significantly colder-than-normal weather primarily in the first quarter. Prior year volatility was significantly lower due to lower daily Henry Hub spot market prices for natural gas in the U.S., robust natural gas supply, mild weather and ample storage.

While market conditions in 2014 experienced more natural gas price volatility, in the near term we anticipate low volatility in certain areas of our portfolio, but expect a continuation of some volatility in the supply-constrained Northeast corridor. Over the longer term, we expect volatility to be low to moderate and locational or transportation spreads to decrease over time as new pipelines are built to reduce the bottleneck in the currently constrained shale areas of the Northeast U.S. To the extent these pipelines are delayed or not built, our expectations are that volatility would increase. While natural gas supply increased during the 2013/2014 Heating Season in the U.S., it was not enough to meet the increased demand, resulting in the lowest storage levels in over a decade. U.S. storage levels have been restored but not to the level of previous years, which could lead to higher natural gas prices under colder-than-normal weather conditions. Additional economic factors may contribute to this environment, including the significant drop in oil and natural gas prices, which could lead to consolidation of natural gas producers and reduced levels of natural gas production. Further, if economic conditions continue to improve, the demand for natural gas may increase, which may cause natural gas prices to rise and drive higher volatility in the natural gas markets on a longer-term basis. We continue to position Sequent's business model with respect to fixed costs and the types of contracts pursued and executed, focusing on opportunities associated with expected new builds of power generation stations, LNG exporters and natural gas utilities and producers.

Sequent's expected natural gas withdrawals from storage and expected offset to hedge losses/gains associated with Sequent's transportation portfolio at December 31, 2014 are presented in the following tables, along with the net operating revenues expected at the time of withdrawal from storage and the physical flow of natural gas between contracted transportation receipt and delivery points. Sequent's expected net operating revenues exclude storage and transportation demand charges, as well as other variable fuel, withdrawal, receipt and delivery charges, but are net of the estimated impact of profit sharing under our asset management agreements. Further, the amounts that are realizable in future periods are based on the inventory withdrawal schedule, planned physical flow of natural gas between the transportation receipt and delivery points and forward natural gas prices at December 31, 2014. A portion of Sequent's storage inventory and transportation capacity is economically hedged with futures contracts, which results in realization of substantially fixed net operating revenues, timing notwithstanding.

	Storage withdrawal schedule		
Dollars in millions	**Total storage** (in Bcf) (WACOG $2.92)	**Expected net operating (losses) gains** (1)	**Physical transportation transactions – expected net operating losses** (2)
2015	66	$(5)	$(19)
2016 and thereafter	5	2	(19)
Total at December 31, 2014 (3)	71	$(3)	$(38)

(1) Represents expected operating gains (losses) from planned storage withdrawals associated with existing inventory positions and could change as Sequent adjusts its daily injection and withdrawal plans in response to changes in future market conditions and forward NYMEX price fluctuations.

(2) Represents the periods associated with the transportation derivative (gains) losses during which the derivatives will be settled and the physical transportation transactions will occur that offset the derivative (gains) losses recognized.

(3) Includes 5 Bcf in storage with expected operating revenues of $2 million that is currently inaccessible due to operational issues at a third-party storage facility. The owner of this facility is working to resolve these issues and the facility is expected to be operational by mid-2015. While we expect this inventory to be fully recovered, the timing of withdrawal of this gas may be impacted by the operational issues.

For the year ended December 31, 2014, we have recorded $86 million in gains associated with the hedging of our storage position, compared to $16 million in storage hedge losses in 2013. These hedge gains primarily relate to changes in natural gas prices during the fourth quarter of 2014 largely resulting from moderate weather. Sequent's storage withdrawals associated with existing inventory positions could change as Sequent adjusts its daily injection and withdrawal plans in response to changes in market conditions in future months and as forward NYMEX prices fluctuate.

The net operating (losses) revenues expected to be generated from the physical withdrawal of natural gas from storage do not reflect the earnings impact related to the movement in our hedges to lock in the forward location spread for the delivery of natural gas between two transportation delivery points associated with our transportation capacity portfolio.

For the year ended December 31, 2014, we have recorded $38 million in gains associated with the hedging of our transportation portfolio as compared to hedge losses of $73 million for the same period last year. Hedge losses in 2013 primarily related to forward transportation and commodity positions for 2014 and were largely offset in 2014 when the expected economic value was realized upon the physical flow of natural gas and the utilization of the contracted transportation capacity.

For more information on Sequent's energy marketing and risk management activities, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Natural Gas Price Risk."

For a discussion of commercial activity, see Item 1, "Business" under the caption "Wholesale Services."

Midstream Operations

Our midstream operations segment's primary activity is operating non-utility storage and pipeline facilities, including the development and operation of high-deliverability underground natural gas storage and pipeline assets. While this business can also generate additional revenue during times of peak market demand for natural gas storage services, certain of our storage services are covered under short-, medium- and long-term contracts at fixed market rates. Based on an engineering study and mechanical integrity tests performed in 2014, we identified a lower amount of working gas capacity, further resulting in the true-up of retained fuel at one of our storage facilities, negatively impacting EBIT by $10 million for the year ended December 31, 2014. The decrease in working gas capacity is a result of naturally occurring shrinkage of the storage cavern, and we are developing strategies to recover the decreased working capacity.

In millions	**2014**	**2013**
EBIT - prior year	**$(10)**	**$10**
Operating margin		
Decrease at Jefferson Island and Central Valley primarily due to lower subscription rates, as well as hedge gains at Central Valley in 2012 that did not occur in 2013	(6)	(5)
Decrease at one of our storage facilities related to true-up of retained fuel, partially offset by higher interruptible operating margins largely at Golden Triangle in 2014 due to optimizing the facilities during the significantly colder weather in 2014	(4)	-
Decrease in operating margin	**(10)**	**(5)**
Operating expenses		
Increased maintenance, outside service costs, depreciation expense and other	4	-
Increase from Central Valley Storage and Cavern 2 at Golden Triangle both beginning commercial service during 2012, and entry into the LNG markets	-	8
Increase in operating expenses	**4**	**8**
Increase (decrease) in other income, primarily related to the impairment loss at Sawgrass Storage in December 2013	**7**	**(7)**
EBIT - current year	**$(17)**	**$(10)**

Liquidity and Capital Resources

Overview The acquisition of natural gas and pipeline capacity, payment of dividends and funding of working capital needs primarily related to our natural gas inventory are our most significant short-term financing requirements. The liquidity required to fund these short-term needs is primarily provided by our operating activities, and any needs not met are primarily satisfied with short-term borrowings under our commercial paper programs, which are supported by the AGL Credit Facility and the Nicor Gas Credit Facility. For more information on the seasonality of our short-term borrowings, see "Short-term Debt" later in this section. The need for long-term capital is driven primarily by capital expenditures and maturities of long-term debt. Periodically, we raise funds supporting our long-term cash needs from the issuance of long-term debt or equity securities. We regularly evaluate our funding strategy and profile to ensure that we have sufficient liquidity for our short-term and long-term needs in a cost-effective manner.

Our financing activities, including long-term and short-term debt and equity, are subject to customary approval or review by state and federal regulatory bodies, including the various commissions of the states in which we conduct business. Certain financing activities we undertake may also be subject to approval by state regulatory agencies. A substantial portion of our consolidated assets, earnings and cash flows is derived from the operation of our regulated utility subsidiaries, whose legal authority to pay dividends or make other distributions to us is subject to regulation. Nicor Gas is restricted by regulation in the amount it can dividend or loan to affiliates and is not permitted to make money pool loans to affiliates.

We believe the amounts available to us under our long-term debt and credit facilities, as well as through the issuance of debt and equity securities combined with cash provided by operating activities will continue to allow us to meet our needs for working capital, pension and retiree welfare benefits, capital expenditures, anticipated debt redemptions, interest payments on debt obligations, dividend payments and other cash needs through the next several years. However, considering our January 2015 maturity of $200 million of senior notes that were repaid with commercial paper, our higher expected capital expenditures related to utility rate base and infrastructure investment and our recently announced pipeline projects, we anticipate issuing additional long-term debt as our financing needs and market conditions warrant.

Our ability to satisfy our working capital requirements and our debt service obligations, or fund planned capital expenditures, will substantially depend upon our future operating performance (which will be affected by prevailing economic conditions), and financial, business and other factors, some of which we are unable to control. These factors include, among others, regulatory changes, the price of and demand for natural gas, and operational risks.

Our capitalization and financing strategy is intended to ensure that we are properly capitalized with the appropriate mix of debt and equity securities. This strategy includes active management of the percentage of total debt relative to total capitalization, as well as the term and interest rate profile of our debt securities and maintenance of an appropriate mix of debt with fixed and floating interest rates. Our variable debt target is 20% to 45% of total debt. As of December 31, 2014, our variable-rate debt was $1.5 billion, or 31%, of our total debt, compared to $1.4 billion, or 28%, as of December 31, 2013. The increase was due to $120 million of senior notes that converted from fixed-rate to variable-rate during 2014. For more information on our debt, see Note 8 to our consolidated financial statements under Item 8 herein.

In January 2015, we executed $800 million in notional value of 10 year and 30 year fixed-rate forward-starting interest rate swaps to hedge potential interest rate volatility prior to anticipated issuances of senior notes in 2015 and 2016. These debt issuances will be used to reduce our commercial paper for the amount that was borrowed to repay our senior notes that matured in January 2015 and to fund upcoming debt maturities as well as the capital expenditures associated with increased utility investment and construction of our new pipeline projects. We have designated the forward-starting interest rate swaps, which will mature on the debt issuance dates, as cash flow hedges. See Item 7A, “Quantitative and Qualitative Disclosures About Market Risk” under the caption “Interest Rate Risk” for additional information.

Our objective continues to be maintaining our strong balance sheet and liquidity profile, solid investment grade ratings and our annual dividend growth. Additionally, we will continue to evaluate our need to increase available liquidity based on our view of working capital requirements, including the impact of changes in natural gas prices, liquidity requirements established by rating agencies, acquisitions and other factors. See Item 1A, “Risk Factors” for additional information on items that could impact our liquidity and capital resource requirements.

Short-term Debt The following table provides additional information on our short-term debt throughout the year.

In millions	**Year-end balance outstanding** (1)	**Daily average balance outstanding** (2)	**Minimum balance outstanding** (2)	**Largest balance outstanding** (2)
Commercial paper - AGL Capital	$590	$399	$-	$1,006
Commercial paper - Nicor Gas	585	279	58	614
Senior notes (3)	200	192	-	200
Total short-term debt and current portion of long-term debt	$1,375	$870	$58	$1,820

(1) As of December 31, 2014.
(2) For the twelve months ended December 31, 2014. The minimum and largest balances outstanding for each debt instrument occurred at different times during the year. Consequently, the total balances are not indicative of actual borrowings on any one day during the year.
(3) These senior notes matured in January 2015 and were repaid using commercial paper.

The largest, minimum and daily average balances borrowed under our commercial paper programs are important when assessing the intra-period fluctuations of our short-term borrowings and potential liquidity risk. The fluctuations are due to our seasonal cash requirements to fund working capital needs, in particular the purchase of natural gas inventory, margin calls and collateral posting requirements. Cash requirements generally increase between June and December as we purchase natural gas in advance of the Heating Season. The timing differences of when we pay our suppliers for natural gas purchases and when we recover our costs from our customers through their monthly bills can significantly affect our cash requirements. Our short-term debt balances are typically reduced during the Heating Season, as a significant portion of our current assets, primarily natural gas inventories, are converted into cash.

Our commercial paper borrowings are supported by the $1.3 billion AGL Credit Facility and $700 million Nicor Gas Credit Facility. The credit facilities can be drawn upon to meet working capital and other general corporate needs; however, the Nicor Gas Credit Facility can only be used for the working capital needs of Nicor Gas. The interest rates payable on borrowings under these facilities are calculated either at the alternative base rate, plus an applicable margin, or LIBOR, plus an applicable interest margin. The applicable interest margin used in both interest rate calculations will vary according to AGL Capital’s and Nicor Gas’ current credit ratings. At December 31, 2014 and 2013, we had no outstanding borrowings under either credit facility.

The timing of natural gas withdrawals is dependent on the weather and natural gas market conditions, both of which impact the price of natural gas. Increasing natural gas commodity prices can significantly impact our commercial paper borrowings. Based upon our total debt outstanding as of December 31, 2014, and our maximum 70% debt to total capitalization allowed under our financial covenants, we could potentially borrow an additional $700 million of commercial paper under the AGL Credit Facility and an additional $100 million of commercial paper under the Nicor Gas Credit Facility. As a result, based on current natural gas prices and our expected injection plan, we believe that we have sufficient liquidity to cover our working capital needs.

The lenders under our credit facilities and lines of credit are major financial institutions with $2.2 billion of committed balances and all had investment grade credit ratings as of December 31, 2014. It is possible that one or more lending commitments could be unavailable to us if the lender defaulted due to lack of funds or insolvency. However, based on our current assessment of our lenders' creditworthiness, we believe the risk of lender default is minimal. Commercial paper borrowings reduce availability of these credit facilities.

Long-term Debt Our long-term debt matures more than one year from December 31, 2014 and consists of medium-term notes: Series A, Series B, and Series C, which we issued under an indenture dated December 1989; senior notes; first mortgage bonds and gas facility revenue bonds.

Our long-term cash requirements primarily depend upon the level of capital expenditures, long-term debt maturities and decisions to refinance long-term debt. The following table summarizes our long-term debt issuances over the last three years.

	Issuance date	**Amount** *(in millions)*	**Term** *(in years)*	**Interest rate**
Gas facility revenue bonds	(1)	$200	10-20	Floating rate
Senior notes (2)	May 2013	$500	30	4.4%

(1) During the first quarter of 2013, we refinanced the gas facility revenue bonds. We had no cash receipts or payments in connection with the refinancing.
(2) The net proceeds were used to repay a portion of AGL Capital's commercial paper, including $225 million we borrowed to repay senior notes that matured on April 15, 2013.

Credit Ratings Our borrowing costs and our ability to obtain adequate and cost-effective financing are directly impacted by our credit ratings, as well as the availability of financial markets. Credit ratings are important to our counterparties when we engage in certain transactions, including OTC derivatives. It is our long-term objective to maintain or improve our credit ratings in order to manage our existing financing costs and enhance our ability to raise additional capital on favorable terms.

Credit ratings and outlooks are opinions subject to ongoing review by the rating agencies and may periodically change. The rating agencies regularly review our performance and financial condition and reevaluate their ratings of our long-term debt and short-term borrowings, our corporate ratings and our ratings outlook. There is no guarantee that a rating will remain in effect for any given period of time or that a rating will not be lowered or withdrawn entirely by a rating agency if, in its judgment, circumstances so warrant. A credit rating is not a recommendation to buy, sell or hold securities and each rating should be evaluated independently of other ratings.

Factors we consider important to assessing our credit ratings include our Consolidated Statements of Financial Position, leverage, capital spending, earnings, cash flow generation, available liquidity and overall business risks. We do not have any triggering events in our debt instruments that are tied to changes in our specified credit ratings or our stock price and have not entered into any agreements that would require us to issue equity based on credit ratings or other trigger events. As of December 31, 2014, if our credit rating had fallen below investment grade, we would have been required to provide collateral of $38 million to continue conducting business with certain customers. The following table summarizes our credit ratings as of December 31, 2014 and reflects no change from what was reported in our 2013 Form 10-K/A.

	AGL Resources			**Nicor Gas**		
	S&P	Moody's (1)	Fitch	S&P	Moody's	Fitch
Corporate rating	BBB+	n/a	BBB+	BBB+	n/a	A
Commercial paper	A-2	P-2	F2	A-2	P-1	F1
Senior unsecured	BBB+	A3	BBB+	BBB+	A2	A+
Senior secured	n/a	n/a	n/a	A	Aa3	AA-
Ratings outlook	Stable	Stable	Stable	Stable	Stable	Stable

(1) Credit ratings are for AGL Capital, whose obligations are fully and unconditionally guaranteed by AGL Resources.

A downgrade in our current ratings, particularly below investment grade, would increase our borrowing costs and could limit our access to the commercial paper market. In addition, we would likely be required to pay a higher interest rate in future financings, and our potential pool of investors and funding sources could decrease.

Default Provisions As indicated below, our debt instruments and other financial obligations include provisions that, if not complied with, could require early payment or similar actions.

- Our credit facilities contain customary events of default, including but not limited to, the failure to comply with certain affirmative and negative covenants, cross-defaults to certain other material indebtedness and a change of control.

- Our credit facilities contain certain non-financial covenants that, among other things, restrict liens and encumbrances, loans and investments, acquisitions, dividends and other restricted payments, asset dispositions, mergers and consolidations, and other matters customarily restricted in such agreements.
- Our credit facilities each include a financial covenant that requires us to maintain a ratio of total debt to total capitalization of no more than 70% at the end of any fiscal month. However, we typically seek to maintain these ratios at levels between 50% and 60%, except for temporary increases related to the timing of acquisition and financing activities. The following table contains our debt-to-capitalization ratios for December 31, which are below the maximum allowed.

	AGL Resources		Nicor Gas	
	2014	**2013**	**2014**	**2013**
Debt-to-capitalization ratio as calculated from our Consolidated Statements of Financial Position	57%	58%	62%	54%
Adjustments (1)	(2)	(1)	-	1
Debt-to-capitalization ratio as calculated within our credit facilities	55%	57%	62%	55%

(1) As defined in credit facilities, includes standby letters of credit, performance/surety bonds and excludes accumulated OCI items related to non-cash pension adjustments, other post-retirement benefits liability adjustments and accounting adjustments for cash flow hedges.

We were in compliance with all of our debt provisions and covenants, both financial and non-financial, as of December 31, 2014 and 2013. For more information on our default provisions, see Note 8 to our consolidated financial statements under Item 8 herein.

Cash Flows

We prepare our Consolidated Statements of Cash Flows using the indirect method. Under this method, we reconcile net income to cash flows from operating activities by adjusting net income for those items that impact net income but may not result in actual cash receipts or payments during the period. These reconciling items include depreciation and amortization, changes in derivative instrument assets and liabilities, deferred income taxes, gains or losses on the sale of assets and changes in the Consolidated Statements of Financial Position for working capital from the beginning to the end of the period. The following table provides a summary of our operating, investing and financing cash flows for the last three years.

In millions	**2014**	**2013**	**2012**
Net cash provided by (used in) (1):			
Operating activities	$655	$971	$1,003
Investing activities	(505)	(876)	(786)
Financing activities	(224)	(121)	(155)
Net (decrease) increase in cash and cash equivalents - continuing operations	(51)	(26)	53
Net (decrease) increase in cash and cash equivalents - discontinued operations	(23)	-	9
Cash and cash equivalents (including held for sale) at beginning of period	105	131	69
Cash and cash equivalents (including held for sale) at end of period	31	105	131
Less cash and cash equivalents held for sale at end of period	-	24	23
Cash and cash equivalents (excluding held for sale) at end of period	$31	$81	$108

(1) Includes activity for discontinued operations.

Cash Flow from Operating Activities *2014 compared to 2013* Our net cash flow provided by operating activities in 2014 was $655 million, a decrease of $316 million or 33% from 2013. The decrease was primarily related to (i) income taxes, largely driven by the utilization of a prior period net operating loss that reduced the 2013 tax obligation combined with taxes paid in 2014 due to increased earnings and the repatriation of cumulative foreign earnings of Tropical Shipping, (ii) increased cash for inventory and (iii) trade payables, other than energy marketing, due to higher accrued volumes in December 2013 compared to December 2012. These decreases were partially offset by increases primarily related to (i) higher earnings year over year largely attributed to significantly colder-than-normal weather in the current year and increased price volatility that enabled us to capture value in wholesale services and (ii) net energy marketing receivables and payables, due to higher cash received in 2014 from the prior year.

2013 compared to 2012 Our net cash flow provided by operating activities in 2013 was $971 million, a decrease of $32 million or 3% from 2012. The decrease was primarily related to (i) receivables, other than energy marketing, due to colder weather in 2013, which resulted in higher volumes primarily at distribution operations and retail operations that will be collected in future periods and (ii) income taxes, from accelerated tax depreciation in 2013 than in 2012. This decrease in cash provided by operating activities was partially offset by increased cash provided by (i) lower payments for incentive compensation in 2013 as a result of reduced earnings in 2012 as compared to 2011 and (ii) trade payables, other than energy marketing, due to higher gas purchase volumes primarily at distribution operations and retail operations resulting from colder weather in 2013.

Cash Flow from Investing Activities Our net cash flow used in investing activities in 2014 decreased $371 million or 42% from 2013, primarily as a result of approximately $225 million proceeds we received from the sale of Tropical Shipping during the third quarter of 2014. The decrease was also attributed to the $122 million spending on the acquisition of approximately 500,000 service plans during the first quarter of 2013. Partially offsetting this decrease was greater spending for PP&E expenditures. Our estimated PP&E expenditures for 2015 and our actual PP&E expenditures incurred in 2014, 2013 and 2012 are quantified in the following table.

In millions	Description	2015 (1)	2014	2013	2012
Distribution business	New construction and infrastructure improvements	$408	$475	$421	$371
Regulatory infrastructure programs (2)	Programs that update or expand our distribution systems and liquefied natural gas facilities to improve system reliability and meet operational flexibility and growth	424	180	226	263
Storage, pipelines and LNG facilities	Underground natural gas storage facilities, pipeline infrastructure and LNG production and transportation	103	15	8	61
Other	Primarily includes information technology and building and leasehold improvements	130	99	76	80
Total		$1,065	$769	$731	$775

(1) Estimated PP&E expenditures.
(2) Includes Investing in Illinois at Nicor Gas, STRIDE at Atlanta Gas Light, SAVE at Virginia Natural Gas and an enhanced infrastructure program at Elizabethtown Gas.

The 2014 increase in PP&E expenditures of $38 million, or 5%, was due to increased spending of $84 million primarily related to new construction and infrastructure improvements at our utilities. This was partially offset by a $46 million net decrease in expenditures for our regulatory infrastructure programs largely due to PRP at Atlanta Gas Light, which ended in 2013, offset by increased spending on our other regulatory infrastructure programs that primarily included $57 million at Atlanta Gas Light for i-VPR, $24 million at Elizabethtown Gas for AIR and $22 million at Nicor Gas for Investing in Illinois.

Our PP&E expenditures were $731 million for the year ended December 31, 2013, compared to $775 million for the same period in 2012.The decrease of $44 million, or 6%, was primarily due to decreased spending of $49 million on our natural gas storage projects consisting of $35 million at Central Valley and $14 million at Golden Triangle. Additionally, capital expenditures decreased $35 million for strategic projects and $16 million for utility infrastructure enhancement projects at Elizabethtown Gas. These decreases were partially offset by increased expenditures of $54 million for regulatory infrastructure programs at Atlanta Gas Light and $9 million for accelerated infrastructure replacement program projects at Virginia Natural Gas.

Our estimated expenditures for 2015 include discretionary spending for capital projects principally within the distribution business, regulatory infrastructure programs, natural gas storage and other categories. We continuously evaluate whether or not to proceed with these projects, reviewing them in relation to various factors, including our authorized returns on rate base, other returns on invested capital for projects of a similar nature, capital structure and credit ratings, among others. We will make adjustments to these discretionary expenditures as necessary based upon these factors.

Cash Flow from Financing Activities Our net cash flow used in financing activities in 2014 increased $103 million, or 85% from 2013 primarily as the result of our $494 million issuance of senior notes in May 2013 and recovery of working capital at wholesale services, partially offset by our $225 million repayment of senior notes in April 2013 and lower commercial paper repayments in 2014 due to higher working capital needs at distribution operations. For more information on our financing activities, see short and long-term debt within Item 7 under the caption “Liquidity and Capital Resources.”

Noncontrolling Interest We recorded cash distributions for SouthStar’s dividend distributions to Piedmont of $17 million in 2014 and 2013, and $14 million in 2012 as financing activities in our Consolidated Statements of Cash Flows. The primary reason for the increase in the distribution to Piedmont from 2012 to 2013 was increased earnings for 2012 compared to 2011 and a distribution of excess working capital from the joint venture in 2013. Additionally, we received $22.5 million from Piedmont in 2013 to maintain their 15% ownership interest after we contributed our Illinois Energy business to the SouthStar joint venture.

Dividends on Common Stock Our common stock dividend payments were $233 million in 2014, $222 million in 2013 and $203 million in 2012. The increases were generally the result of the annual dividend increase of $0.04 per share for each of the last three years. However, as a result of the Nicor merger, AGL Resources shareholders of record as of the close of business on December 8, 2011 received a pro rata dividend of $0.0989 per share for the stub period, which accrued from November 19, 2011 and totaled $7 million. The dividend payments made in February 2012 were reduced by this stub period dividend. For information about restrictions on our ability to pay dividends on our common stock, see Note 9 to our consolidated financial statements under Item 8 herein.

Shelf Registration In July 2013, we filed a shelf registration statement with the SEC, which expires in 2016. Under this shelf registration statement, debt securities will be issued by AGL Capital and related guarantees will be issued by AGL Resources under an indenture dated as of February 20, 2001, as supplemented and modified, as necessary, among AGL Capital, AGL Resources and The Bank of New York Mellon Trust Company, N.A., as trustee. The indenture provides for the issuance from time to time of debt securities in an unlimited dollar amount and an unlimited number of series, subject to our AGL Credit Facility financial covenant related to total debt to total capitalization.

Off-balance sheet arrangements We have certain guarantees, as further described in Note 11 to our consolidated financial statements under Item 8 herein. We believe the likelihood of any such payment under these guarantees is remote. No liability has been recorded for these guarantees. We also have authorized unrecognized ratemaking amounts, primarily composed of an allowed equity rate of return on assets associated with certain of our regulatory infrastructure programs, which are not reflected within our Consolidated Statements of Financial Position. See Note 3 to our consolidated financial statements under Item 8 herein for additional information.

Contractual Obligations and Commitments We have incurred various contractual obligations and financial commitments in the normal course of business that are reasonably likely to have a material effect on liquidity or the availability of requirements for capital resources. Contractual obligations include future cash payments required under existing contractual arrangements, such as debt and lease agreements. These obligations may result from both general financing activities and from commercial arrangements that are directly supported by related revenue-producing activities. Contingent financial commitments represent obligations that become payable only if certain predefined events occur, such as financial guarantees, and include the nature of the guarantee and the maximum potential amount of future payments that could be required of us as the guarantor. In 2014, we entered into several unconditional purchase obligations in the ordinary course of business. These include capacity and supply agreements related to the Dalton Pipeline, PennEast Pipeline, Atlantic Coast Pipeline and wholesale services. The following table illustrates our expected future contractual obligation payments and commitments and contingencies as of December 31, 2014.

In millions	Total	2015	2016	2017	2018	2019	2020 & thereafter
Recorded contractual obligations:							
Long-term debt (1)	$3,706	$200	$545	$22	$155	$350	$2,434
Short-term debt	1,175	1,175	-	-	-	-	-
Environmental remediation liabilities (2)	414	87	93	55	47	37	95
Total	$5,295	$1,462	$638	$77	$202	$387	$2,529
Unrecorded contractual obligations and commitments (3) (8):							
Pipeline charges, storage capacity and gas supply (4)	$4,303	$805	$457	$280	$234	$222	$2,305
Interest charges (5)	2,762	179	171	147	146	141	1,978
Operating leases (6)	188	33	31	24	17	18	65
Asset management agreements (7)	32	9	10	7	4	2	-
Standby letters of credit, performance/surety bonds (8)	50	49	1	-	-	-	-
Other	8	3	3	1	1	-	-
Total	$7,343	$1,078	$673	$459	$402	$383	$4,348

(1) Excludes the $75 million step up to fair value of first mortgage bonds, $16 million unamortized debt premium and $5 million interest rate swaps fair value adjustment. Includes the current portion of long-term debt of $200 million, which matured in January 2015.
(2) Includes charges recoverable through base rates or rate rider mechanisms.
(3) In accordance with GAAP, these items are not reflected in our Consolidated Statements of Financial Position.
(4) Includes charges recoverable through a natural gas cost recovery mechanism or alternatively billed to marketers and demand charges associated with Sequent. The gas supply balance includes amounts for Nicor Gas and SouthStar gas commodity purchase commitments of 51 Bcf at floating gas prices calculated using forward natural gas prices as of December 31, 2014, and is valued at $142 million. As we do for other subsidiaries, we provide guarantees to certain gas suppliers for SouthStar in support of payment obligations.
(5) Floating rate interest charges are calculated based on the interest rate as of December 31, 2014 and the maturity date of the underlying debt instrument. As of December 31, 2014, we have $53 million of accrued interest on our Consolidated Statements of Financial Position that will be paid in 2015.
(6) We have certain operating leases with provisions for step rent or escalation payments and certain lease concessions. We account for these leases by recognizing the future minimum lease payments on a straight-line basis over the respective minimum lease terms, in accordance with GAAP. Our operating leases are primarily for real estate.
(7) Represent fixed-fee minimum payments for Sequent's affiliated asset management agreements.
(8) We provide guarantees to certain municipalities and other agencies and certain gas suppliers of SouthStar in support of payment obligations.

Standby letters of credit and performance/surety bonds. We also have incurred various financial commitments in the normal course of business. Contingent financial commitments represent obligations that become payable only if certain predefined events occur, such as financial guarantees, and the maximum potential amount of future payments that could be required of us as the guarantor. We would expect to fund these contingent financial commitments with operating and financing cash flows.

Pension and welfare obligations. Generally, our funding policy is to contribute annually an amount that will at least equal the minimum amount required to comply with the Pension Protection Act. We calculate any required pension contributions using the traditional unit credit cost method; however, additional voluntary contributions are periodically made. Contributions are intended to provide not only for benefits attributed to service to date, but also for those expected to be earned in the future. The contributions represent the portion of the welfare costs for which we are responsible under the terms of our plan and minimum funding required by state regulatory commissions.

The state regulatory commissions in all of our jurisdictions, except Illinois, have phase-ins that defer a portion of the retirement benefit expenses for retirement plans other than pensions for future recovery. We recorded a regulatory asset for these future recoveries of $122 million as of December 31, 2014 and $108 million as of December 31, 2013. In Illinois, all accrued retirement plan expenses are recovered through base rates. See Note 6 to our consolidated financial statements under Item 8 herein for additional information about our pension and welfare plans.

In both 2014 and 2013, no contributions were required to our qualified pension plans. Based on the estimated funded status of the AGL Pension plan, we do not expect any required contribution to the plan in 2015. We may, at times, elect to contribute additional amounts to the AGL Pension Plan in accordance with the funding requirements of the Pension Protection Act.

Critical Accounting Policies and Estimates

The preparation of our financial statements in conformity with GAAP requires us to make estimates and judgments that affect the reported amounts in our consolidated financial statements and accompanying notes. Those judgments and estimates have a significant effect on our financial statements, primarily due to the need to make estimates about the effects of matters that are inherently uncertain. Actual results could differ from those estimates. We frequently reevaluate our judgments and estimates that are based upon historical experience and various other assumptions that we believe to be reasonable under the circumstances. The following is a summary of our most critical accounting policies, which represent those that may involve a higher degree of uncertainty, judgment and complexity. Our significant accounting policies are described in Note 2 to our consolidated financial statements under Item 8 herein.

Accounting for Rate-Regulated Subsidiaries

At December 31, 2014, our regulatory assets were $714 million and regulatory liabilities were $1.7 billion. At December 31, 2013, our regulatory assets were $819 million and regulatory liabilities were $1.7 billion.

Our natural gas distribution operations and certain regulated transmission and storage operations meet the criteria of a cost-based, rate-regulated entity under accounting principles generally accepted in the U.S. Accordingly, the financial results of these operations reflect the effects of the ratemaking and accounting practices and policies of the various regulatory commissions to which we are subject.

As a result, certain costs that would normally be expensed under GAAP are permitted to be capitalized or deferred on the balance sheet because it is probable that they can be recovered through rates. The periods in which revenues or expenses are recognized are impacted by regulation. In instances where other GAAP accounting treatment supersedes Accounting Standards Codification 980 - *Regulated Operations*, we apply the other GAAP accounting treatment. The amounts to be recovered or recognized are based upon historical experience and our understanding of the regulations.

Discontinuing the application of this method of accounting for regulatory assets and liabilities could significantly increase our operating expenses, as fewer costs would likely be capitalized or deferred on the balance sheet, which could reduce our net income. Assets and liabilities recognized as a result of rate regulation would be written off in income for the period in which the discontinuation occurred. A write-off of all our regulatory assets and regulatory liabilities at December 31, 2014 would result in 5% and 15% decreases in total assets and total liabilities, respectively. For more information on our regulated assets and liabilities, see Note 2 and Note 3 to our consolidated financial statements under Item 8 herein.

Accounting for Goodwill and Long-Lived Assets, including Intangible Assets

Goodwill We do not amortize our goodwill, but test it for impairment at the reporting unit level during the fourth fiscal quarter or more frequently if impairment indicators arise. These indicators include, but are not limited to, a significant change in operating performance, the business climate, legal or regulatory factors, or a planned sale or disposition of a significant portion of the business. A reporting unit is the operating segment, or a business one level below the operating segment (a component), if discrete financial information is prepared and regularly reviewed by management. Components are aggregated if they have similar economic characteristics.

As part of our impairment test, an initial assessment is made by comparing the fair value of a reporting unit with its carrying value, including goodwill. If the fair value is less than the carrying value, an impairment is indicated, and we must perform a second test to quantify the amount of the impairment. In the second test, we calculate the implied fair value of the goodwill by deducting the fair value of all tangible and intangible net assets of the reporting unit from the fair value of the entire reporting unit determined in step one of the assessment. If the carrying value of the goodwill exceeds the implied fair value of the goodwill, we record an impairment charge. To estimate the fair value of our reporting units, we use two generally accepted valuation approaches, an income approach and a market approach, using assumptions consistent with a market participant's perspective.

Under the income approach, fair value is determined based upon the present value of estimated future cash flows discounted at an appropriate risk-free rate that takes into consideration the time value of money, inflation and the risks inherent in ownership of the business being valued. These forecasts contain a degree of uncertainty, and changes in these projected cash flows could significantly increase or decrease the estimated fair value of the reporting unit. For the regulated reporting units, a fair recovery of and return on costs prudently incurred to serve customers is assumed. An unfavorable outcome in a rate case could cause the fair value of these reporting units to decrease. Key assumptions used in the income approach included return on equity for the regulated reporting units, long-term growth rates used to determine terminal values at the end of the discrete forecast period, and a discount rate. The discount rate is applied to estimated future cash flows and is one of the most significant assumptions used to determine fair value under the income approach. As interest rates rise, the calculated fair values will decrease. The terminal growth rate is based on a combination of historical and forecasted statistics for real gross domestic product and personal income for each utility service area.

Under the market approach, fair value is determined by applying market multiples to forecasted cash flows. This method uses metrics from similar publicly traded companies in the same industry to determine how much a knowledgeable investor in the marketplace would be willing to pay for an investment in a similar company.

The goodwill impairment testing develops a baseline test and performs a sensitivity analysis to calculate a reasonable valuation range. The sensitivities are derived by altering those assumptions that are subjective in nature and inherent to a discounted cash flows calculation. We weight the results of the two valuation approaches to estimate the fair value of each reporting unit.

The significant assumptions that drive the estimated fair values of our reporting units are projected cash flows, discount rates, growth rates, weighted average cost of capital (WACC), oil prices and market multiples. Due to the subjectivity of these assumptions, we cannot provide assurance that future analyses will not result in impairment, as a future impairment depends on market and economic factors affecting fair value. Our annual goodwill impairment analysis in the fourth quarter of 2014 indicated that the estimated fair value of all but one of our reporting units with goodwill was in excess of the carrying value by approximately 30% to over 600%, and were not at risk of failing step one of the impairment test.

Within our midstream operations segment, the estimated fair value of the storage and fuels reporting unit with $14 million of goodwill exceeded its carrying value by less than 5% and is at risk of failing the step one test. The discounted cash flow model used in the goodwill impairment test for this reporting unit assumed discrete period revenue growth through fiscal 2023 to reflect the recovery of subscription rates, stabilization of earnings and establishment of a reasonable base year of which we estimated the terminal value. In the terminal year, we assumed a long-term earnings growth rate of 2.5%, which is consistent with our 2013 annual goodwill impairment test, and we believe is appropriate given the current economic and industry-specific expectations. As of the valuation date, we utilized a WACC of 7.0%, which we believe is appropriate as it reflects the relative risk, the time value of money, and is consistent with the peer group of this reporting unit as well as the discount rate that was utilized in our 2013 annual goodwill impairment test.

The cash flow forecast for the storage and fuels reporting unit assumed earnings growth over the next nine years. Should this growth not occur, this reporting unit will likely fail step one of a goodwill impairment test in a future period. Along with any reductions to our cash flow forecast, changes in other key assumptions used in our 2014 annual impairment analysis may result in the requirement to proceed to step two of the goodwill impairment test in future periods.

We will continue to monitor this reporting unit for impairment and note that continued declines in contracted capacity or subscription rates, declines for a sustained period at the current market rates or other changes to the key assumptions and factors used in this analysis may result in future failure of step one of the goodwill impairment test and may also result in a future impairment of goodwill. If subscription rates and subscribed volumes decline, the estimated future cash flows will decrease from our current estimates. As of December 31, 2014, we estimate that 11% of our future cash flows will be received over the next 10 years, an additional 24% over the following 10 years and 65% in periods thereafter over the remaining useful lives of our storage facilities.

Long-Lived Assets We depreciate or amortize our long-lived and intangible assets over their estimated useful lives. Currently, we have no significant indefinite-lived intangible assets. We assess our long-lived and intangible assets for impairment whenever events or changes in circumstances indicate that an asset's carrying amount may not be recoverable. When such events or circumstances are present, we assess the recoverability of long-lived assets by determining whether the carrying value will be recovered through the expected future cash flows. Impairment is indicated if the carrying amount of a long-lived asset exceeds the sum of the undiscounted future cash flows expected to result from the use and eventual disposition of the asset. If impairment is indicated, we record an impairment loss equal to the difference between the carrying value and the fair value of the long-lived asset.

We determined that there were no long-lived asset impairments in 2014; however, our Golden Triangle storage facility within midstream operations currently has less than a 5% cushion of its undiscounted cash flows over its book value. Accordingly, if this facility experiences further natural gas price declines or a prolonged slow recovery, future analyses may result in an impairment of these long-lived assets.

Our agreement in June 2013 to acquire customer relationship intangible assets within our retail operations segment included a provision for the seller to provide an adjustment to the $32 million purchase price for attrition that exceeds historical levels. In January 2015, we received $5 million from the seller that will be reflected as a reduction to our intangible assets on our Consolidated Statements of Financial Position in 2015 and will reduce the amortization for the same amount over the remaining useful life of 13.5 years.

Derivatives and Hedging Activities

The authoritative guidance to determine whether a contract meets the definition of a derivative instrument, contains an embedded derivative requiring bifurcation, or qualifies for hedge accounting treatment is voluminous and complex. The treatment of a single contract may vary from period to period depending upon accounting elections, changes in our assessment of the likelihood of future hedged transactions or new interpretations of accounting guidance. As a result, judgment is required in determining the appropriate accounting treatment. In addition, the estimated fair value of derivative instruments may change significantly from period to period depending upon market conditions, and changes in hedge effectiveness may impact the accounting treatment.

The authoritative guidance related to derivatives and hedging requires that every derivative instrument (including certain derivative instruments embedded in other contracts) be recorded on the Consolidated Statements of Financial Position as either an asset or liability measured at its fair value. However, if the derivative transaction qualifies for, and is designated as, a normal purchase or normal sale, it is exempted from fair value accounting treatment and is, instead, subject to traditional accrual accounting. We utilize market data or assumptions that market participants would use in pricing the derivative asset or liability, including assumptions about risk and the risks inherent in the inputs of the valuation technique.

The authoritative accounting guidance requires that changes in the derivatives' fair value are recognized concurrently in earnings unless specific hedge accounting criteria are met. If the derivatives meet those criteria, the guidance allows derivative gains and losses to offset related results of the hedged item in the income statement in the case of a fair value hedge, or to record the gains and losses in OCI until the hedged transaction occurs in the case of a cash flow hedge. Additionally, the guidance requires that a company formally designate a derivative as a hedge as well as document and assess the effectiveness of derivatives associated with transactions that receive hedge accounting treatment.

Nicor Gas and Elizabethtown Gas utilize derivative instruments to hedge the price risk for the purchase of natural gas for customers. These derivatives are reflected at fair value and are not designated as accounting hedges. Realized gains or losses on such instruments are included in the cost of gas delivered and are passed through directly to customers, subject to review by the applicable state regulatory commissions, and therefore have no direct impact on earnings. Unrealized changes in the fair value of these derivative instruments are deferred as regulatory assets or liabilities.

We use derivative instruments primarily to reduce the impact to our results of operations due to the risk of changes in the price of natural gas. The fair value of natural gas derivative instruments used to manage our exposure to changing natural gas prices reflects the estimated amounts that we would receive or pay to terminate or close the contracts at the reporting date, taking into account the current unrealized gains or losses on open contracts. For the derivatives utilized in retail operations and wholesale services that are not designated as accounting hedges, changes in fair value are reported as gains or losses in our results of operations in the period of change. Retail operations records derivative gains or losses arising from cash flow hedges in OCI and reclassifies them into earnings in the same period that the underlying hedged item is recognized in earnings.

Additionally, as required by the authoritative guidance, we are required to classify our derivative assets and liabilities based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy. The determination of the fair value of our derivative instruments incorporates various factors required under the guidance. These factors include:

- the credit worthiness of the counterparties involved and the impact of credit enhancements (such as cash deposits and letters of credit);
- events specific to a given counterparty; and
- the impact of our nonperformance risk on our liabilities.

We have recorded derivative instrument assets of $287 million at December 31, 2014 and $119 million at December 31, 2013. Additionally, we have recorded derivative liabilities of $93 million at December 31, 2014 and $80 million at December 31, 2013. We recorded gains on our Consolidated Statements of Income of $139 million in 2014 and $10 million in 2012 and losses of $97 million in 2013.

If there is a significant change in the underlying market prices or pricing assumptions we use in pricing our derivative assets or liabilities, we may experience a significant impact on our financial position, results of operations and cash flows. Our derivative and hedging activities are described in further detail in Note 2 and Note 5 to our consolidated financial statements under Item 8 and Item 1, "Business," herein.

Contingencies

Our accounting policies for contingencies cover a variety of activities that are incurred in the normal course of business and generally relate to contingencies for potentially uncollectible receivables, and legal and environmental exposures. We accrue for these contingencies when our assessments indicate that it is probable that a liability has been incurred or an asset will not be recovered, and an amount can be reasonably estimated. We base our estimates for these liabilities on currently available facts and our estimates of the ultimate outcome or resolution of the liability in the future.

Actual results may differ from estimates, and estimates can be, and often are, revised either negatively or positively depending on actual outcomes or changes in the facts or expectations surrounding each potential exposure. Changes in the estimates related to contingencies could have a negative impact on our consolidated results of operations, cash flows or financial position. Our contingencies are further discussed in Note 11 to our consolidated financial statements under Item 8 herein.

Pension and Welfare Plans

Our pension and welfare plan costs and liabilities are determined on an actuarial basis and are affected by numerous assumptions and estimates. We annually review the estimates and assumptions underlying our pension and welfare plan costs and liabilities and update them when appropriate. The critical actuarial assumptions used to develop the required estimates for our pension and welfare plans include the following key factors:

- assumed discount rates;
- expected return on plan assets;
- the market value of plan assets;
- assumed mortality table; and
- assumed health care costs.

The discount rate is utilized in calculating the actuarial present value of our pension and welfare obligations and our annual net pension and welfare costs. When establishing our discount rate, with the assistance of our actuaries, we consider high-grade bond indices. The single equivalent discount rate is derived by applying the appropriate spot rates based on high quality (AA or better) corporate bonds that have a yield higher than the regression mean yield curve, to the forecasted future cash flows in each year for each plan.

The expected long-term rate of return on assets is used to calculate the expected return on plan assets component of our annual pension and welfare plans costs. We estimate the expected return on plan assets by evaluating expected bond returns, equity risk premiums, asset allocations, the effects of active plan management, the impact of periodic plan asset rebalancing and historical performance. We also consider guidance from our investment advisors in making a final determination of our expected rate of return on assets. To the extent the actual rate of return on assets realized over the course of a year is greater or less than the assumed rate, it does not affect that year's annual pension or welfare plan cost; rather, this gain or loss reduces or increases future pension or welfare plan costs.

Equity market performance and corporate bond rates have a significant effect on our reported results. For the AGL Pension Plan, market performance affects our market-related value of plan assets (MRVPA), which is a calculated value and differs from the actual market value of plan assets. The MRVPA recognizes differences between the actual market value and expected market value of our plan assets and is determined by our actuaries using a five-year smoothing weighted average methodology. Gains and losses on plan assets are spread through the MRVPA based on the five-year smoothing weighted average methodology, which affects the expected return on plan assets component of pension expense.

In addition, differences between actuarial assumptions and actual plan experience are deferred and amortized into cost when the accumulated differences exceed 10% of the greater of the projected benefit obligation (PBO) or the MRVPA for the AGL Pension Plan. The excess, if any, is amortized over the average remaining service period of active employees.

During 2014, we recorded net periodic benefit costs of $39 million (pre-capitalization) related to our defined pension and welfare benefit plans. We estimate that in 2015, we will record net periodic pension and welfare benefit costs in the range of $45 million to $49 million (pre-capitalization), a $6 million to $10 million increase compared to 2014. In determining our estimated expenses for 2015, our actuarial consultant assumed the following expected return on plan assets and discount rates:

	Pension plans	Welfare plans
Discount rate	4.2%	4.0%
Expected return on plan assets	7.75%	7.75%

The actuarial assumptions we use may differ materially from actual results due to changing market and economic conditions, higher or lower withdrawal and retirement rates, and longer or shorter life spans of participants. The following table illustrates the effect of changing the critical actuarial assumptions for our pension and welfare plans while holding all other assumptions constant:

Dollars in millions	Percentage-point change in assumption	Increase (decrease) in PBO / APBO	Increase (decrease) in cost
Expected long-term return on plan assets	+ / - 1%	$ - / -	$(9) / 9
Discount rate	+ / - 1%	$(175) / 196	$(14) / 14

During 2014, our actuary gathered industry specific data in order to assess the appropriateness of the mortality rates for different industries and analyzed our industry group mortality experience. Accordingly, in 2014 we changed the mortality table and mortality improvement scales for the calculation of our benefit obligations as of December 31, 2014. This increased our PBO and accumulated projected benefit obligation (APBO) by $26 million and $10 million, respectively, compared to 2013.

See Note 4 and Note 6 to our consolidated financial statements under Item 8 herein for additional information on our pension and welfare plans.

Income Taxes

The determination of our provision for income taxes requires significant judgment, the use of estimates and the interpretation and application of complex tax laws. Significant judgment is required in assessing the timing and amounts of deductible and taxable items. We account for income taxes in accordance with authoritative guidance, which requires that deferred tax assets and liabilities be recognized using enacted tax rates for the effect of temporary differences between the book and tax basis of recorded assets and liabilities. The guidance also requires that deferred tax assets be reduced by a valuation allowance if it is more likely than not that some or all of the deferred tax assets will not be realized.

Deferred tax liabilities are estimated based on the expected future tax consequences of items recognized in the financial statements. Additionally, during the ordinary course of business, there are many transactions and calculations for which the ultimate tax determination is uncertain. As a result, we recognize tax liabilities based on estimates of whether additional taxes and interest will be due. After application of the federal statutory tax rate to book income, judgment is required with respect to the timing and deductibility of expense in our income tax returns.

With the sale of Tropical Shipping in the third quarter of 2014, we determined that the cumulative foreign earnings of that business would no longer be indefinitely reinvested offshore. Accordingly, we recognized income tax expense of $60 million in 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded, resulting in our repatriation of $86 million in cash.

For state income tax and other taxes, judgment is also required with respect to the apportionment among the various jurisdictions. A valuation allowance is recorded if we expect that it is more likely than not that our deferred tax assets will not be realized. In addition, we operate within multiple tax jurisdictions and we are subject to audits in these jurisdictions. These audits can involve complex issues, which may require an extended period of time to resolve. We maintain a liability for the estimate of potential income tax exposure and, in our opinion, adequate provisions for income taxes have been made for all years reported.

We had a $20 million valuation allowance on $307 million of deferred tax assets ($218 million of long-term and $89 million of current) as of December 31, 2014, reflecting the expectation that a majority of these assets will be realized. Our gross long-term deferred tax liability totaled $1,928 million at December 31, 2014. See Note 12 to our consolidated financial statements under Item 8 herein for additional information on our taxes.

We are required to determine whether tax benefits claimed or expected to be claimed on our tax return should be recorded in our consolidated financial statements. Under this guidance, we may recognize the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained on examination by the taxing authorities based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position should be measured based on the largest benefit that has a greater than 50% likelihood of being realized upon ultimate settlement.

Additionally, we recognize accrued interest related to uncertain tax positions in interest expense, and penalties in operating expense in the Consolidated Statements of Income. As of December 31, 2014, we did not have a liability recorded for payment of interest and penalties associated with uncertain tax positions.

Accounting Developments

See "Accounting Developments" in Note 2 to our consolidated financial statements under Item 8 herein.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to risks associated with natural gas prices, interest rates, credit and fuel prices. Natural gas price risk results from changes in the fair value of natural gas. Interest rate risk is caused by fluctuations in interest rates related to our portfolio of debt instruments and equity that we issue to provide financing and liquidity for our business. Credit risk results from the extension of credit throughout all aspects of our business, but is particularly concentrated at Atlanta Gas Light in distribution operations and in wholesale services. We use derivative instruments to manage these risks. Our use of derivative instruments is governed by a risk management policy, approved and monitored by our Risk Management Committee (RMC), which prohibits the use of derivatives for speculative purposes.

Our RMC is responsible for establishing the overall risk management policies and monitoring compliance with, and adherence to, the terms within these policies, including approval and authorization levels and delegation of these levels. Our RMC consists of members of senior management who monitor open natural gas price risk positions and other types of risk, corporate exposures, credit exposures and overall results of our risk management activities. It is chaired by our chief risk officer, who is responsible for ensuring that appropriate reporting mechanisms exist for the RMC to perform its monitoring functions.

Weather and Natural Gas Price Risks

Distribution Operations Our utilities, excluding Atlanta Gas Light, are authorized to use natural gas cost recovery mechanisms that allow them to adjust their rates to reflect changes in the wholesale cost of natural gas and to ensure they recover 100% of the costs incurred in purchasing gas for their customers. Since Atlanta Gas Light does not sell natural gas directly to its end-use customers, it has no natural gas price risk.

Nicor Gas and Elizabethtown Gas enter into derivative instruments to hedge the impact of market fluctuations in natural gas prices for customers. These derivatives are reflected at fair value and are not designated as hedges. Realized gains or losses on such instruments are included in the cost of gas delivered and are passed through directly to customers and therefore have no direct impact on earnings. Realized and unrealized changes in the fair value of these derivative instruments are deferred as regulatory assets or liabilities until recovered from or credited to our customers.

For our Illinois weather risk associated with Nicor Gas, we have a corporate weather hedging program that utilizes weather derivatives to reduce the risk of lower operating margins potentially resulting from significantly warmer-than-normal weather. For more information, see Note 2 to the consolidated financial statements under Item 8 herein.

Retail Operations and Wholesale Services We routinely utilize various types of derivative instruments to mitigate certain natural gas price and weather risks inherent in the natural gas industry. These instruments include a variety of exchange-traded and OTC energy contracts, such as forward contracts, futures contracts, options contracts and swap agreements. Retail operations and wholesale services also actively manage storage positions through a variety of hedging transactions for the purpose of managing exposures arising from changing natural gas prices. These hedging instruments are used to substantially protect economic margins (as spreads between wholesale and retail natural gas prices widen between periods) and thereby minimize our exposure to declining operating margins.

Midstream Operations We use derivative instruments to reduce our exposure to the risk of changes in the price of natural gas that will be purchased in future periods for pad gas, conditioning gas and additional volumes of gas used to de-water our caverns (de-water gas) during the construction or expansion of storage facilities. Pad gas includes volumes of non-working natural gas used to maintain the operational integrity of the caverns. Conditioning gas is used to ready a field for use and will be sold in connection with placing the storage facility into service. De-water gas is used to remove water from the cavern in anticipation of commercial service and will be sold after completion of de-watering. We also use derivative instruments for asset optimization purposes.

Consolidated The following tables include the fair values and average values of our consolidated derivative instruments as of the dates indicated. We base the average values on monthly averages for the 12 months ended December 31, 2014 and 2013.

	Derivative instruments average values (1) at December 31,	
In millions	**2014**	**2013**
Asset	$152	$107
Liability	101	49

(1) Excludes cash collateral amounts.

	Derivative instruments fair values netted with cash collateral at December 31,	
In millions	**2014**	**2013**
Asset	$287	$119
Liability	93	80

The following table illustrates the change in the net fair value of our derivative instruments during the 12 months ended December 31, 2014, 2013 and 2012, and provides detail of the net fair value of contracts outstanding as of December 31, 2014, 2013 and 2012.

In millions	**2014**	**2013**	**2012**
Net fair value of derivative instruments outstanding at beginning of period	$(82)	$36	$31
Derivative instruments realized or otherwise settled during period	38	(62)	(61)
Change in net fair value of derivative instruments	105	(56)	66
Net fair value of derivative instruments outstanding at end of period	61	(82)	36
Netting of cash collateral	133	121	69
Cash collateral and net fair value of derivative instruments outstanding at end of period (1)	$194	$39	$105

(1) Net fair value of derivative instruments outstanding includes $3 million premium and associated intrinsic value at December 31, 2014 and 2013, and $4 million at December 31, 2012 associated with weather derivatives.

The sources of our net fair value at December 31, 2014 are as follows.

In millions	Prices actively quoted (Level 1) (1)	Significant other observable inputs (Level 2) (2)
Mature through 2015	$(28)	$65
Mature 2016 – 2017	7	18
Mature 2018 – 2019	(1)	-
Total derivative instruments (3)	$(22)	$83

(1) Valued using NYMEX futures prices.
(2) Valued using basis transactions that represent the cost to transport natural gas from a NYMEX delivery point to the contract delivery point. These transactions are based on quotes obtained either through electronic trading platforms or directly from brokers.
(3) Excludes cash collateral amounts.

VaR Our VaR may not be comparable to that of other entities due to differences in the factors used to calculate VaR. Our VaR is determined on a 95% confidence interval and a 1-day holding period, which means that 95% of the time, the risk of loss in a day from a portfolio of positions is expected to be less than or equal to the amount of VaR calculated. Our open exposure is managed in accordance with established policies that limit market risk and require daily reporting of potential financial exposure to senior management, including the chief risk officer. Because we generally manage physical gas assets and economically protect our positions by hedging in the futures markets, our open exposure is generally mitigated. We employ daily risk testing, using both VaR and stress testing, to evaluate the risks of our open positions.

Natural gas markets experienced unprecedented levels of high volatility and prices due to the extended extreme cold weather during the first quarter of 2014, resulting in our VaR to be at elevated levels during the quarter as compared to prior periods. We actively managed and monitored the open positions and exposures that were driving the elevated VaR levels to not only remain in compliance with established policies, but to also mitigate the operational risks of not being able to meet customer needs under these extreme conditions. As conditions moderated at the end of the quarter, our period-end VaR was consistent with historical periods. We actively monitor open commodity positions and the resulting VaR. We also continue to maintain a relatively matched book, where our total buy volume is close to our sell volume, with minimal open natural gas price risk. Based on a 95% confidence interval and employing a 1-day holding period, SouthStar's portfolio of positions for the 12 months ended December 31, 2014, 2013 and 2012 were less than $0.1 million and Sequent had the following VaRs.

In millions	2014	2013	2012
Period end	$4.7	$4.7	$1.8
12-month average	4.3	2.3	2.0
High	19.7	4.9	4.8
Low	1.8	1.2	1.1

Interest Rate Risk

Interest rate fluctuations expose our variable-rate debt to changes in interest expense and cash flows. Our policy is to manage interest expense using a combination of fixed-rate and variable-rate debt. Based on $1.5 billion of variable-rate debt outstanding at December 31, 2014, a 100 basis point change in market interest rates would have resulted in an increase in pre-tax interest expense of $15 million on an annualized basis.

We sometimes utilize interest rate swaps to help us achieve our desired mix of variable to fixed-rate debt. Our variable-rate debt target generally ranges from 20% to 45% of total debt. We may also use forward-starting interest rate swaps and interest rate lock agreements to lock in fixed interest rates on our forecasted issuances of debt. The objective of these hedges is to offset the variability of future payments associated with the interest rate on debt instruments we expect to issue. The gain or loss on the interest rate swaps designated as cash flow hedges is generally deferred in accumulated OCI until settlement, at which point it is amortized to interest expense over the life of the related debt. For additional information, see Note 2 and Note 5 to our consolidated financial statements under Item 8 herein.

During the fourth quarter of 2014, $120 million of our senior notes converted from a fixed interest rate to a LIBOR-based variable interest rate. During the first quarter of 2015, we executed $800 million of fixed-rate forward-starting interest rate swaps to hedge potential interest rate volatility prior to anticipated debt issuances in 2015 and 2016. We have designated the forward-starting interest rate swaps, which will be settled on the debt issuance dates, as cash flow hedges.

Credit Risk

Distribution Operations Atlanta Gas Light has a concentration of credit risk, as it bills 12 certificated and active Marketers in Georgia for its services. The credit risk exposure to Marketers varies with the time of year, with exposure at its lowest in the nonpeak summer months and highest in the peak winter months. Marketers are responsible for the retail sale of natural gas to end-use customers in Georgia. These retail functions include customer service, billing, collections, and the purchase and sale of the natural gas commodity. The provisions of Atlanta Gas Light's tariff allow Atlanta Gas Light to obtain security support in an amount equal to a minimum of two times a Marketer's highest month's estimated bill from Atlanta Gas Light. For 2014, the four largest Marketers based on customer count accounted for approximately 14% of our consolidated operating margin and 20% of distribution operations' operating margin.

Several factors are designed to mitigate our risks from the increased concentration of credit that has resulted from deregulation. In addition to the security support described above, Atlanta Gas Light bills intrastate delivery service to Marketers in advance rather than in arrears. We accept credit support in the form of cash deposits, letters of credit/surety bonds from acceptable issuers and corporate guarantees from investment-grade entities. The RMC reviews on a monthly basis the adequacy of credit support coverage, credit rating profiles of credit support providers and payment status of each Marketer. We believe that adequate policies and procedures have been put in place to properly quantify, manage and report on Atlanta Gas Light's credit risk exposure to Marketers.

Atlanta Gas Light also faces potential credit risk in connection with assignments of interstate pipeline transportation and storage capacity to Marketers. Although Atlanta Gas Light assigns this capacity to Marketers, in the event that a Marketer fails to pay the interstate pipelines for the capacity, the interstate pipelines would in all likelihood seek repayment from Atlanta Gas Light.

Our gas distribution businesses offer options to help customers manage their bills, such as energy assistance programs for low-income customers and a budget payment plan that spreads gas bills more evenly throughout the year. Customer credit risk has been substantially mitigated at Nicor Gas by the bad debt rider approved by the Illinois Commission in 2010, which provides for the recovery from (or refund to) customers of the difference between Nicor Gas' actual bad debt experience on an annual basis and the benchmark bad debt expense included in its rates for the respective year. For Virginia Natural Gas and Chattanooga Gas, we are allowed to recover the gas portion of bad debt write-offs through their gas recovery mechanisms.

Nicor Gas faces potential credit risk in connection with its natural gas sales and procurement activities to the extent a counterparty defaults on a contract to pay for or deliver at agreed-upon terms and conditions. To manage this risk, Nicor Gas maintains credit policies to determine and monitor the creditworthiness of its counterparties. In doing so, Nicor Gas seeks guarantees or collateral, in the form of cash or letters of credit, which limits its exposure to any individual counterparty and enters into netting arrangements to mitigate counterparty credit risk.

Certain of our derivative instruments contain credit-risk-related or other contingent features that could increase the payments for collateral we post in the normal course of business when our financial instruments are in net liability positions. As of December 31, 2014, for agreements with such features, our distribution operations derivative instruments with liability fair values totaled $44 million, for which we had posted $20 million of collateral to our counterparties.

Retail Operations We obtain credit scores for our firm residential and small commercial customers using a national credit reporting agency, enrolling only those customers that meet or exceed our credit threshold. We consider potential interruptible and large commercial customers based on reviews of publicly available financial statements and commercially available credit reports. Prior to entering into a physical transaction, we also assign physical wholesale counterparties an internal credit rating and credit limit based on the counterparties' Moody's, S&P and Fitch ratings, commercially available credit reports and audited financial statements.

Wholesale Services We have established credit policies to determine and monitor the creditworthiness of counterparties, as well as the quality of pledged collateral. We also utilize master netting agreements whenever possible to mitigate exposure to counterparty credit risk. When we are engaged in more than one outstanding derivative transaction with the same counterparty and we also have a legally enforceable netting agreement with that counterparty, the "net" mark-to-market exposure represents the netting of the positive and negative exposures with that counterparty and a reasonable measure of our credit risk. We also use other netting agreements with certain counterparties with whom we conduct significant transactions. Master netting agreements enable us to net certain assets and liabilities by counterparty. We also net across product lines and against cash collateral, provided the master netting and cash collateral agreements include such provisions.

Additionally, we may require counterparties to pledge additional collateral when deemed necessary. We conduct credit evaluations and obtain appropriate internal approvals for a counterparty's line of credit before any transaction with the counterparty is executed. In most cases, the counterparty must have an investment grade rating, which includes a minimum long-term debt rating of Baa3 from Moody's and BBB- from S&P. Generally, we require credit enhancements by way of guaranty, cash deposit or letter of credit for transaction counterparties that do not have investment grade ratings.

We have a concentration of credit risk as measured by our 30-day receivable exposure plus forward exposure. As of December 31, 2014, our top 20 counterparties represented approximately 55% of the total counterparty exposure of $665 million, excluding $6 million of customer deposits.

As of December 31, 2014, our counterparties, or the counterparties' guarantors, had a weighted average S&P equivalent credit rating of A-, which is consistent with the prior year. The S&P equivalent credit rating is determined by a process of converting the lower of the S&P or Moody's ratings to an internal rating ranging from 9 to 1, with 9 being equivalent to AAA/Aaa by S&P and Moody's and 1 being D or Default by S&P and Moody's. A counterparty that does not have an external rating is assigned an internal rating based on the strength of the financial ratios of that counterparty. To arrive at the weighted average credit rating, each counterparty is assigned an internal ratio, which is multiplied by their credit exposure and summed for all counterparties. The sum is divided by the aggregate total counterparties' exposures, and this numeric value is then converted to an S&P equivalent. The following table shows our third-party natural gas contracts receivable and payable positions as of December 31.

In millions	Gross receivables 2014	Gross receivables 2013	Gross payables 2014	Gross payables 2013
Netting agreements in place:				
Counterparty is investment grade	$482	$496	$276	$265
Counterparty is non-investment grade	4	-	7	10
Counterparty has no external rating	263	260	494	393
No netting agreements in place:				
Counterparty is investment grade	30	29	-	2
Counterparty has no external rating	-	1	-	1
Amount recorded on Consolidated Statements of Financial Position	$779	$786	$777	$671

We have certain trade and credit contracts that have explicit minimum credit rating requirements. These credit rating requirements typically give counterparties the right to suspend or terminate credit if our credit ratings are downgraded to non-investment grade status. Under such circumstances, we would need to post collateral to continue transacting business with some of our counterparties. If such collateral were not posted, our ability to continue transacting business with these counterparties would be impaired. If our credit ratings had been downgraded to non-investment grade status, the required amounts to satisfy potential collateral demands under such agreements with our counterparties would have totaled $14 million at December 31, 2014, which would not have a material impact on our consolidated results of operations, cash flows or financial condition.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of AGL Resources Inc.:

In our opinion, the consolidated financial statements listed in the index appearing under Item 15(a)(1) present fairly, in all material respects, the financial position of AGL Resources Inc. and its subsidiaries at December 31, 2014 and 2013, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2014 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a)(2) presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and financial statement schedule, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express opinions on these financial statements, on the financial statement schedule, and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company’s internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company’s assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

February 11, 2015

Management's Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of our principal executive officer and principal financial officer, management conducted an evaluation of the effectiveness of our internal control over financial reporting as of December 31, 2014, using the criteria described in the *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the "COSO Framework").

Based on our evaluation under the COSO Framework, our management concluded that our internal control over financial reporting was effective as of December 31, 2014.

The effectiveness of our internal control over financial reporting as of December 31, 2014 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

Notes to Consolidated Financial Statements

Note 1 - Organization and Basis of Presentation

General

AGL Resources Inc. is an energy services holding company that conducts substantially all of its operations through its subsidiaries. Unless the context requires otherwise, references to “we,” “us,” “our,” the “company,” or “AGL Resources” mean consolidated AGL Resources Inc. and its subsidiaries.

Basis of Presentation

Our consolidated financial statements as of and for the period ended December 31, 2014 are prepared in accordance with GAAP and under the rules of the SEC. Our consolidated financial statements include our accounts, the accounts of our wholly owned subsidiaries, the accounts of our majority owned or otherwise controlled subsidiaries and the accounts of our variable interest entity, SouthStar, for which we are the primary beneficiary. For unconsolidated entities that we do not control, but exercise significant influence over, we primarily use the equity method of accounting and our proportionate share of income or loss is recorded on the Consolidated Statements of Income. See Note 10 for additional information. We have eliminated intercompany profits and transactions in consolidation except for intercompany profits where recovery of such amounts is probable under the affiliates’ rate regulation process.

In November 2014, we filed a 2013 Form 10-K/A to revise our financial statements and other affected disclosures for items related to the recognition of revenues for certain of our regulatory infrastructure programs and the amortization of our intangible assets as filed in our 2013 Form 10-K. Our prior period financial statements reflect the revised amounts reported in our 2013 Form 10-K/A.

In September 2014, we closed on the sale of Tropical Shipping, which historically operated within our cargo shipping segment. The assets and liabilities of these businesses are classified as held for sale on the Consolidated Statements of Financial Position, and the financial results of these businesses are reflected as discontinued operations on the Consolidated Statements of Income. Amounts shown in the following notes, unless otherwise indicated, exclude assets held for sale and discontinued operations. Cargo shipping also included our investment in Triton, which was not part of the sale and has been reclassified into our “other” non-reportable segments. See Note 14 for additional information.

Certain amounts from prior periods have been reclassified to conform to the current-period presentation. The reclassifications had no material impact on our prior-period balances.

Note 2 - Significant Accounting Policies and Methods of Application

Cash and Cash Equivalents

Our cash and cash equivalents primarily consist of cash on deposit, money market accounts and certificates of deposit held by domestic subsidiaries with original maturities of three months or less. As of December 31, 2013, $24 million of cash and cash equivalents within our Consolidated Statements of Financial Position held by Tropical Shipping were excluded from cash and cash equivalents and included in assets held for sale. Prior to closing the sale, cash and short-term investments that were held in off-shore accounts were repatriated. See Note 12 and Note 14 for additional information on our income taxes on the cumulative foreign earnings for which no tax liability had previously been recorded.

Energy Marketing Receivables and Payables

Our wholesale services segment provides services to retail and wholesale marketers and utility and industrial customers. These customers, also known as counterparties, utilize netting agreements that enable our wholesale services segment to net receivables and payables by counterparty upon settlement. Wholesale services also nets across product lines and against cash collateral, provided the master netting and cash collateral agreements include such provisions. While the amounts due from, or owed to, wholesale services’ counterparties are settled net, they are recorded on a gross basis in our Consolidated Statements of Financial Position as energy marketing receivables and energy marketing payables.

Our wholesale services segment has trade and credit contracts that contain minimum credit rating requirements. These credit rating requirements typically give counterparties the right to suspend or terminate credit if our credit ratings are downgraded to non-investment grade status. Under such circumstances, wholesale services would need to post collateral to continue transacting business with some of its counterparties. To date, our credit ratings have exceeded the minimum requirements. As of December 31, 2014 and 2013, the collateral that wholesale services would have been required to post if our credit ratings had been downgraded to non-investment grade status would not have had a material impact to our consolidated results of operations, cash flows or financial condition. If such collateral were not posted, wholesale services’ ability to continue transacting business with these counterparties would be negatively impacted.

Wholesale services has a concentration of credit risk for services it provides to marketers and to utility and industrial counterparties. This credit risk is generally concentrated in 20 of its counterparties and is measured by 30-day receivable exposure plus forward exposure. We evaluate the credit risk of our counterparties using an S&P equivalent credit rating, which is determined by a process of converting the lower of the S&P or Moody's rating to an internal rating ranging from 9 to 1, with 9 being equivalent to AAA/Aaa by S&P and Moody's and 1 being equivalent to D/Default by S&P and Moody's. A counterparty that does not have an external rating is assigned an internal rating based on the strength of its financial ratios. As of December 31, 2014, our top 20 counterparties represented 55%, or $367 million, of our total counterparty exposure and had a weighted average S&P equivalent rating of A-.

We have established credit policies to determine and monitor the creditworthiness of counterparties, including requirements for posting of collateral or other credit security, as well as the quality of pledged collateral. Collateral or credit security is most often in the form of cash or letters of credit from an investment-grade financial institution, but may also include cash or U.S. government securities held by a trustee. When wholesale services is engaged in more than one outstanding derivative transaction with the same counterparty and it also has a legally enforceable netting agreement with that counterparty, the "net" mark-to-market exposure represents the netting of the positive and negative exposures with that counterparty combined with a reasonable measure of our credit risk. Wholesale services also uses other netting agreements with certain counterparties with whom it conducts significant transactions.

Receivables and Allowance for Uncollectible Accounts

Our other trade receivables consist primarily of natural gas sales and transportation services billed to residential, commercial, industrial and other customers. We bill customers monthly, and our accounts receivable are due within 30 days. For the majority of our receivables, we establish an allowance for doubtful accounts based on our collection experience and other factors. For our remaining receivables, if we are aware of a specific customer's inability or reluctance to pay, we record an allowance for doubtful accounts against amounts due to reduce the receivable balance to the amount we reasonably expect to collect. If circumstances change, our estimate of the recoverability of accounts receivable could change as well. Circumstances that could affect our estimates include, but are not limited to, customer credit issues, customer deposits and general economic conditions. Customers' accounts are written off once we deem them to be uncollectible.

Nicor Gas Credit risk exposure at Nicor Gas is mitigated by a bad debt rider approved by the Illinois Commission. The bad debt rider provides for the recovery from (or refund to) customers of the difference between Nicor Gas' actual bad debt experience on an annual basis and the benchmark bad debt expense used to establish its base rates for the respective year. See Note 3 for additional information on the bad debt rider.

Atlanta Gas Light Concentration of credit risk occurs at Atlanta Gas Light for amounts billed for services and other costs to its customers, which consist of 12 Marketers in Georgia. The credit risk exposure to Marketers varies seasonally, with the lowest exposure in the nonpeak summer months and the highest exposure in the peak winter months. Marketers are responsible for the retail sale of natural gas to end-use customers in Georgia. The functions of the retail sale of gas include the purchase and sale of natural gas, customer service, billings and collections. We obtain credit security support in an amount equal to no less than two times a Marketer's highest month's estimated bill from Atlanta Gas Light.

Inventories

For our regulated utilities, except Nicor Gas, our natural gas inventories and the inventories we hold for Marketers in Georgia are carried at cost on a WACOG basis. In Georgia's competitive environment, Marketers sell natural gas to firm end-use customers at market-based prices. Part of the unbundling process, which resulted from deregulation and provides this competitive environment, is the assignment to Marketers of certain pipeline services that Atlanta Gas Light has under contract. On a monthly basis, Atlanta Gas Light assigns the majority of the pipeline storage services that it has under contract to Marketers, along with a corresponding amount of inventory. Atlanta Gas Light also retains and manages a portion of its pipeline storage assets and related natural gas inventories for system balancing and to serve system demand. See Note 11 for information regarding a regulatory filing by Atlanta Gas Light related to gas inventory.

Nicor Gas' inventory is carried at cost on a LIFO basis. Inventory decrements occurring during the year that are restored prior to year end are charged to cost of goods sold at the estimated annual replacement cost. Inventory decrements that are not restored prior to year end are charged to cost of goods sold at the actual LIFO cost of the layers liquidated. Since the cost of gas, including inventory costs, is charged to customers without markup, subject to Illinois Commission review, LIFO liquidations have no impact on net income. At December 31, 2014, the Nicor Gas LIFO inventory balance was $141 million. Based on the average cost of gas purchased in December 2014, the estimated replacement cost of Nicor Gas' inventory at December 31, 2014 was $346 million, which exceeded the LIFO cost by $205 million. During 2014, we liquidated 6.8 Bcf of our LIFO-based inventory at an average cost per million cubic feet (Mcf) of $3.98. For gas purchased in 2014, our average cost per Mcf was $1.33 higher than the average LIFO liquidation rate. Applying LIFO cost in valuing the liquidation, as opposed to using the average gas purchase cost, had the effect of decreasing the cost of gas in 2014 by $9 million.

Our retail operations, wholesale services and midstream operations segments carry inventory at the lower of cost or market value, where cost is determined on a WACOG basis. For these segments, we evaluate the weighted average cost of their natural gas inventories against market prices to determine whether any declines in market prices below the

WACOG are other than temporary. As indicated in the following LOCOM table, for any declines considered to be other than temporary, we record these pre-tax adjustments to our Consolidated Statements of Income to reduce the weighted average cost of the natural gas inventory to market value.

In millions	2014	2013	2012
Retail operations	$4	$1	$3
Wholesale services (1)	73	8	19
Midstream operations	-	-	1
Total	$77	$9	$23

(1) The increase in 2014 was due to a significant decline in natural gas prices in December 2014.

Additionally, we have $17 million of inventory at wholesale services that is currently inaccessible due to operational issues at a third-party storage facility. The owner of the storage facility is working to resolve these issues. While we expect this inventory to be fully recovered, the timing of withdrawal of this gas may be impacted by the operational issues.

At midstream operations, mechanical integrity tests and engineering studies are periodically performed on the storage facilities in accordance with certain state regulatory requirements. During 2014, an engineering study and mechanical integrity tests were performed at one of our storage facilities, identifying a lower amount of working gas capacity that is the result of naturally occurring shrinkage of the storage caverns. Further, based on the lower capacity and an analysis of the volume of natural gas stored in the facility, we recorded natural gas costs to true-up the amount of retained fuel at this facility in the amount of $10 million. Our other storage facilities at midstream operations were not impacted.

Regulated Operations

We account for the financial effects of regulation in accordance with authoritative guidance related to regulated entities whose rates are designed to recover the costs of providing service. In accordance with this guidance, incurred costs that would otherwise be charged to expense in the current period are capitalized as regulatory assets when it is probable that such costs will be recovered in rates in the future. Similarly, we recognize regulatory liabilities when it is probable that regulators will require customer refunds through future rates or when revenue is collected from customers for estimated expenditures that have not yet been incurred. Generally, regulatory assets and regulatory liabilities are amortized into our Consolidated Statements of Income over the period authorized by the regulatory commissions.

Fair Value Measurements

We have financial and nonfinancial assets and liabilities subject to fair value measurement. The financial assets and liabilities measured and carried at fair value include cash and cash equivalents, and derivative assets and liabilities. The carrying values of receivables, short and long-term investments, accounts payable, short-term debt, other current assets and liabilities, and accrued interest approximate fair value. Our nonfinancial assets and liabilities include pension and other retirement benefits. See Note 4 for additional fair value disclosures.

As defined in the authoritative guidance related to fair value measurements and disclosures, fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (exit price). We utilize market data or assumptions that market participants would use in valuing the asset or liability, including assumptions about risk and the risks inherent in the inputs to the valuation technique. These inputs can be readily observable, market corroborated or generally unobservable. We primarily apply the market approach for recurring fair value measurements to utilize the best available information. Accordingly, we use valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. We classify fair value balances based on the observance of those inputs. The guidance establishes a fair value hierarchy that prioritizes the inputs used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy defined by the guidance are as follows:

Level 1 Quoted prices in active markets for identical assets or liabilities as of the reporting date. Active markets are those in which transactions for the asset or liability occur in sufficient frequency and volume to provide pricing information on an ongoing basis. Our Level 1 items consist of exchange-traded derivatives, money market funds and certain retirement plan assets.

Level 2 Pricing inputs are other than quoted prices in active markets included in Level 1, which are either directly or indirectly observable as of the reporting date. Level 2 includes those financial and commodity instruments that are valued using valuation methodologies. These methodologies are primarily industry-standard methodologies that consider various assumptions, including quoted forward prices for commodities, time value, volatility factors, and current market and contractual prices for the underlying instruments, as well as other relevant economic measures. Substantially all of these assumptions are observable in the marketplace throughout the full term of the instrument, can be derived from observable data or are supported by observable levels at which transactions are executed in the marketplace. We obtain market price data from multiple sources in order to value some of our Level 2 transactions and this data is representative of transactions that occurred in the marketplace. Instruments in this category include shorter tenor exchange-traded and non-exchange-traded derivatives such as OTC forwards and options and certain retirement plan assets.

Level 3 Pricing inputs include significant unobservable inputs that may be used with internally developed methodologies to determine management's best estimate of fair value from the perspective of market participants. Level 3 instruments include those that may be more structured or otherwise tailored to customers' needs. Our Level 3 assets, liabilities and any applicable transfers are primarily related to our pension and welfare benefit plan assets as described in Note 4 and Note 6. We determine both transfers into and out of Level 3 using values at the end of the interim period in which the transfer occurred.

The authoritative guidance related to fair value measurements and disclosures also includes a two-step process to determine whether the market for a financial asset is inactive or a transaction is distressed. Currently, this authoritative guidance does not affect us, as our derivative instruments are traded in active markets.

Derivative Instruments

Our policy is to classify derivative cash flows and gains and losses within the same financial statement category as the hedged item, rather than by the nature of the instrument.

Fair Value Hierarchy Derivative assets and liabilities are classified in their entirety into the previously described fair value hierarchy levels based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy levels. The measurement of fair value incorporates various factors required under the guidance. These factors include not only the credit standing of the counterparties involved and the impact of credit enhancements (such as cash deposits, letters of credit and priority interests), but also the impact of our own nonperformance risk on our liabilities. To mitigate the risk that a counterparty to a derivative instrument defaults on settlement or otherwise fails to perform under contractual terms, we have established procedures to monitor the creditworthiness of counterparties, seek guarantees or collateral backup in the form of cash or letters of credit and, in most instances, enter into netting arrangements. See Note 4 for additional fair value disclosures.

Netting of Cash Collateral and Derivative Assets and Liabilities under Master Netting Arrangements We maintain accounts with brokers to facilitate financial derivative transactions in support of our energy marketing and risk management activities. Based on the value of our positions in these accounts and the associated margin requirements, we may be required to deposit cash into these broker accounts.

We have elected to net derivative assets and liabilities under master netting arrangements on our Consolidated Statements of Financial Position. With that election, we are also required to offset cash collateral held in our broker accounts with the associated net fair value of the instruments in the accounts. See Note 4 for additional information about our cash collateral.

Natural Gas and Weather Derivative Instruments The fair value of the natural gas derivative instruments that we use to manage exposures arising from changing natural gas prices and weather risk reflects the estimated amounts that we would receive or pay to terminate or close the contracts at the reporting date, taking into account the current unrealized gains or losses on open contracts. We use external market quotes and indices to value substantially all of our derivative instruments. See Note 5 for additional derivative disclosures.

Distribution Operations Nicor Gas, subject to review by the Illinois Commission, and Elizabethtown Gas, in accordance with a directive from the New Jersey BPU, enter into derivative instruments to hedge the impact of market fluctuations in natural gas prices. In accordance with regulatory requirements, any realized gains and losses related to these derivatives are reflected in natural gas costs and ultimately included in billings to customers. As previously noted, such derivative instruments are reported at fair value each reporting period in our Consolidated Statements of Financial Position. Hedge accounting is not elected and, in accordance with accounting guidance pertaining to rate-regulated entities, unrealized changes in the fair value of these derivative instruments are deferred or accrued as regulatory assets or liabilities until the related revenue is recognized.

For our Illinois weather risk associated with Nicor Gas, we have a corporate weather hedging program that utilizes weather derivatives to reduce the risk of lower operating margins potentially resulting from significantly warmer-than-normal weather in Illinois and is carried at intrinsic value. We will continue to use available methods to mitigate our exposure to weather in Illinois.

Retail Operations We have designated a portion of our derivative instruments, consisting of financial swaps to manage the risk associated with forecasted natural gas purchases and sales, as cash flow hedges. We record derivative gains or losses arising from cash flow hedges in OCI and reclassify them into earnings in the same period that the underlying hedged item is recognized in earnings.

We currently have minimal hedge ineffectiveness, which occurs when the gains or losses on the hedging instrument more than offset the losses or gains on the hedged item. Any cash flow hedge ineffectiveness is recorded in our Consolidated Statements of Income in the period in which it occurs. We have not designated the remainder of our derivative instruments as hedges for accounting purposes and, accordingly, we record changes in the fair values of such instruments within cost of goods sold in our Consolidated Statements of Income in the period of change.

We also enter into weather derivative contracts as economic hedges of operating margins in the event of warmer-than-normal weather in the Heating Season. Exchange-traded options are carried at fair value, with changes reflected in operating revenues. Non exchange-traded options are accounted for using the intrinsic value method and do not qualify for hedge accounting designation. Changes in the intrinsic value for non exchange-traded contracts are also reflected in operating revenues in our Consolidated Statements of Income.

Wholesale Services We purchase natural gas for storage when the current market price we pay to buy and transport natural gas plus the cost to store and finance the natural gas is less than the market price we can receive in the future, resulting in a positive net operating margin. We use NYMEX futures and OTC contracts to sell natural gas at that future price to substantially protect the operating margin we will ultimately realize when the stored natural gas is sold. We also enter into transactions to secure transportation capacity between delivery points in order to serve our customers and various markets. We use NYMEX futures and OTC contracts to capture the price differential or spread between the locations served by the capacity in order to substantially protect the operating margin we will ultimately realize when we physically flow natural gas between delivery points. These contracts generally meet the definition of derivatives and are carried at fair value in our Consolidated Statements of Financial Position, with changes in fair value recorded in operating revenues in our Consolidated Statements of Income in the period of change. These contracts are not designated as hedges for accounting purposes.

The purchase, transportation, storage and sale of natural gas are accounted for on a weighted average cost or accrual basis, as appropriate, rather than on the fair value basis we utilize for the derivatives used to mitigate the natural gas price risk associated with our storage and transportation portfolio. We incur monthly demand charges for the contracted storage and transportation capacity, and payments associated with asset management agreements, and we recognize these demand charges and payments in our Consolidated Statements of Income in the period they are incurred. This difference in accounting methods can result in volatility in our reported earnings, even though the economic margin is substantially unchanged from the dates the transactions were consummated.

Debt We estimate the fair value of debt using a discounted cash flow technique that incorporates a market interest yield curve with adjustments for duration, optionality and risk profile. In determining the market interest yield curve, we consider our currently assigned ratings for unsecured debt and the secured rating for the Nicor Gas first mortgage bonds.

Property, Plant and Equipment

A summary of our PP&E by classification as of December 31, 2014 and 2013 is provided in the following table.

In millions	2014	2013
Transportation and distribution	$9,105	$8,371
Storage facilities	1,202	1,170
Other	919	854
Construction work in progress	326	543
Total PP&E, gross	11,552	10,938
Less accumulated depreciation	2,462	2,295
Total PP&E, net	$9,090	$8,643

Distribution Operations Our natural gas utilities' PP&E consists of property and equipment that is currently in use, being held for future use and currently under construction. We report PP&E at its original cost, which includes:

- material and labor;
- contractor costs;
- construction overhead costs;
- AFUDC; and,
- Nicor Gas' pad gas - the portion considered to be non-recoverable is recorded as depreciable PP&E, while the portion considered to be recoverable is recorded as non-depreciable PP&E.

We recognize no gains or losses on depreciable utility property that is retired or otherwise disposed, as required under the composite depreciation method. Such gains and losses are ultimately refunded to, or recovered from, customers through future rate adjustments. Our natural gas utilities also hold property, primarily land; this is not presently used and useful in utility operations and is not included in rate base. Upon sale, any gain or loss is recognized in other income.

Retail Operations, Wholesale Services, Midstream Operations and Other PP&E includes property that is in use and under construction, and we report it at cost. We record a gain or loss within operation and maintenance expense for retired or otherwise disposed-of property. Natural gas in salt-dome storage at Jefferson Island and Golden Triangle that is retained as pad gas is classified as non-depreciable PP&E and is carried at cost. Central Valley has two types of pad gas in its depleted reservoir storage facility: The first is non-depreciable PP&E, which is carried at cost, and the second is non-recoverable, over which we have no contractual ownership.

On April 11, 2014, we entered into two arrangements associated with the Dalton Pipeline. The first was a construction and ownership agreement through which we will have a 50% undivided ownership interest in the 106 mile Dalton Pipeline that will be constructed in Georgia and serve as an extension of the Transco natural gas pipeline system into northwest Georgia. We also entered into an agreement to lease our 50% undivided ownership in the Dalton Pipeline once it is placed in service. The lease payments to be received are $26 million annually for an initial term of 25 years. The lessee will be responsible for maintaining the pipeline during the lease term and for providing service to transportation customers under its FERC-regulated tariff. Engineering design work has commenced and construction is expected to begin in the second quarter of 2016 with a targeted completion date in the second quarter of 2017. The capacity from this pipeline will further enhance system reliability as well as provide access to a more diverse supply of natural gas.

Depreciation Expense

We compute depreciation expense for distribution operations by applying composite, straight-line rates (approved by the state regulatory agencies) to the investment in depreciable property. More information on our rates used and the rate method is provided in the following table.

	2014	2013	2012
Atlanta Gas Light (1)	2.3%	2.6%	2.6%
Chattanooga Gas (1)	2.5%	2.5%	2.5%
Elizabethtown Gas (2)	2.5%	2.4%	2.4%
Elkton Gas (2)	2.8%	2.4%	2.4%
Florida City Gas (2)	3.9%	3.8%	3.9%
Nicor Gas (2) (3)	3.1%	3.1%	4.1%
Virginia Natural Gas (1)	2.5%	2.5%	2.5%

(1) Average composite straight-line depreciation rates for depreciable property, excluding transportation equipment, which may be depreciated in excess of useful life and recovered in rates.
(2) Composite straight-line depreciation rates.
(3) In October 2013, the Illinois Commission approved a composite depreciation rate of 3.07%. The depreciation rate was effective as of August 30, 2013, the date the depreciation study was filed, and had the effect of reducing our 2014 and 2013 depreciation expense by $51 million and $19 million, respectively.

For our non-regulated segments, we compute depreciation expense on a straight-line basis over the following estimated useful lives of the assets.

In years	Estimated useful life
Transportation equipment	5 – 10
Storage caverns	40 – 60
Other	up to 40

AFUDC and Capitalized Interest

Atlanta Gas Light, Nicor Gas, Chattanooga Gas and Elizabethtown Gas are authorized by applicable state regulatory agencies or legislatures to capitalize the cost of debt and equity funds as part of the cost of PP&E construction projects in our Consolidated Statements of Financial Position. The capital expenditures of our other three utilities do not qualify for AFUDC treatment. More information on our authorized or actual AFUDC rates is provided in the following table.

	2014	2013	2012
Atlanta Gas Light	8.10%	8.10%	8.10%
Nicor Gas (1)	0.24%	0.31%	0.36%
Chattanooga Gas	7.41%	7.41%	7.41%
Elizabethtown Gas (1)	0.44%	0.41%	0.51%
AFUDC (*in millions*) (2)	$7	$18	$8

(1) Variable rate is determined by FERC method of AFUDC accounting.
(2) Amount recorded in the Consolidated Statements of Income.

Asset Retirement Obligations

We record a liability at fair value for an asset retirement obligation (ARO) when a legal obligation to retire the asset has been incurred, with an offsetting increase to the carrying value of the related asset. Accretion of the ARO due to the passage of time is recorded as an operating expense. We have recorded an ARO of $3 million at December 31, 2014 and 2013 principally for our storage facilities. For our distribution PP&E, we cannot reasonably estimate the fair value of this obligation because we have determined that we have insufficient internal or industry information to reasonably estimate the potential settlement dates or costs.

Impairment of Assets

Our goodwill is not amortized, but is subject to an annual impairment test. Our other long-lived assets, including our finite-lived intangible assets, require an impairment review when events or circumstances indicate that the carrying amount may not be recoverable. We base our evaluation of the recoverability of other long-lived assets on the presence of impairment indicators such as the future economic benefit of the assets, any historical or future profitability measurements and other external market conditions or factors.

Goodwill We perform an annual goodwill impairment test on our reporting units that contain goodwill during the fourth quarter of each year, or more frequently if impairment indicators arise. These indicators include, but are not limited to, a significant change in operating performance, the business climate, legal or regulatory factors, or a planned sale or disposition of a significant portion of the business. To estimate the fair value of our reporting units, we use two generally accepted valuation approaches, the income approach and the market approach, using assumptions consistent with a market participant's perspective.

Under the income approach, fair value is estimated based on the present value of estimated future cash flows discounted at an appropriate risk-free rate that takes into consideration the time value of money, inflation and the risks inherent in ownership of the business being valued. The cash flow estimates contain a degree of uncertainty, and changes in the projected cash flows could significantly increase or decrease the estimated fair value of a reporting unit. For the regulated reporting units, a fair recovery of, and return on, costs prudently incurred to serve customers is assumed. An unfavorable outcome in a rate case could cause the fair value of these reporting units to decrease. Key assumptions used in the income approach include the return on equity for the regulated reporting units, long-term growth rates used to determine terminal values at the end of the discrete forecast period, current and future rates charged for contracted capacity and a discount rate. The discount rate is applied to estimated future cash flows and is one of the most significant assumptions used to determine fair value under the income approach. As interest rates rise, the calculated fair values will decrease. The terminal growth rate is based on a combination of historical and forecasted statistics for real gross domestic product and personal income for each utility service area. The estimated rates we will charge to customers for capacity in the storage caverns were based on internal and external rate forecasts.

Under the market approach, fair value is estimated by applying multiples to forecasted cash flows. This method uses metrics from similar publicly traded companies in the same industry, when available, to determine how much a knowledgeable investor in the marketplace would be willing to pay for an investment in a similar company.

We weight the results of the two valuation approaches to estimate the fair value of each reporting unit. Our goodwill impairment testing also develops a baseline test and performs a sensitivity analysis to calculate a reasonable valuation range. The sensitivities are derived by altering those assumptions that are subjective in nature and inherent to a discounted cash flows calculation.

The significant assumptions that drive the estimated values of our reporting units are projected cash flows, discount rates, growth rates, weighted average cost of capital (WACC) and market multiples. Due to the subjectivity of these assumptions, we cannot provide assurance that future analyses will not result in impairment, as a future impairment depends on market and economic factors affecting fair value. Our annual goodwill impairment analysis in the fourth quarter of 2014 indicated that the estimated fair values of all but one of our reporting units with goodwill were in excess of the carrying values by approximately 30% to over 600%, and were not at risk of failing step one of the impairment test.

Within our midstream operations segment, the estimated fair value of our storage and fuels reporting unit with $14 million of goodwill, exceeded its carrying value by less than 5% and is at risk of failing the step one test. The discounted cash flow model used in the goodwill impairment test for this reporting unit assumed discrete period revenue growth through fiscal 2023 to reflect the recovery of subscription rates, stabilization of earnings and establishment of a reasonable base year off of which we estimated the terminal value. In the terminal year, we assumed a long-term earnings growth rate of 2.5%, which is consistent with our 2013 annual goodwill impairment test, and we believe is appropriate given the current economic and industry specific expectations. As of the valuation date, we utilized a WACC of 7.0%, which we believe is appropriate as it reflects the relative risk, the time value of money, and is consistent with the peer group of this reporting unit as well as the discount rate that was utilized in our 2013 annual goodwill impairment test.

The cash flow forecast for the storage and fuels reporting unit assumed earnings growth over the next nine years. Should this growth not occur, this reporting unit may fail step one of a goodwill impairment test in a future period. Along with any reductions to our cash flow forecast, changes in other key assumptions used in our 2014 annual impairment analysis may result in the requirement to proceed to step two of the goodwill impairment test in future periods.

We will continue to monitor this reporting unit for impairment and note that continued declines in capacity or subscription rates, declines for a sustained period at the current market rates or other changes to the key assumptions and factors used in this analysis may result in a future impairment of goodwill. The amounts of goodwill as of December 31, 2014 and 2013 are provided below. In 2013, our goodwill increased by $51 million for an acquisition in our retail operations segment. For 2013, the goodwill at Tropical Shipping was classified as held for sale. See Note 14 for additional information.

In millions	**Distribution operations**	**Retail operations**	**Wholesale services**	**Midstream operations**	**Other**	**Consolidated**
Goodwill - December 31, 2014 and 2013	$1,640	$173	$-	$14	$-	$1,827

Long-Lived Assets We depreciate or amortize our long-lived assets and other intangible assets over their useful lives. We have no significant indefinite-lived intangible assets. These long-lived assets and other intangible assets are reviewed for impairment when events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. When such events or circumstances are present, we assess the recoverability of long-lived assets by determining whether the carrying value will be recovered through expected future cash flows. Impairment is indicated if the carrying amount of the long-lived asset exceeds the sum of the undiscounted future cash flows expected to result from the use and eventual disposition of the asset. If impairment is indicated, we record an impairment loss equal to the difference between the carrying value and the fair value of the long-lived asset.

We determined that there were no long-lived asset impairments in 2014; however, our Golden Triangle storage facility within midstream operations currently has less than a 5% cushion of its undiscounted cash flows over its book value. Accordingly, if it experiences further natural gas price declines or a prolonged slow recovery, future analyses may result in an impairment of these long-lived assets. We will continue to monitor the storage assets in midstream operations. In 2013, we recorded an $8 million loss related to Sawgrass Storage.

Intangible Assets Our intangible assets within our retail operations segment are presented in the following table and represent the estimated fair value at the date of acquisition of the acquired intangible assets in our businesses. As indicated previously, we perform an impairment review when impairment indicators are present. If present, we first determine whether the carrying amount of the asset is recoverable through the undiscounted future cash flows expected from the asset. If the carrying amount is not recoverable, we measure the impairment loss, if any, as the amount by which the carrying amount of the asset exceeds its fair value.

	Weighted average amortization period	**December 31, 2014**			**December 31, 2013**		
In millions	(in years)	**Gross**	**Accumulated amortization**	**Net**	**Gross**	**Accumulated amortization**	**Net**
Customer relationships	13	$130	$(42)	$88	$130	$(25)	$105
Trade names	13	45	(8)	37	45	(5)	40
Total		$175	$(50)	$125	$175	$(30)	$145

We amortize these intangible assets in a manner in which the economic benefits are consumed utilizing the undiscounted cash flows that were used in the determination of their fair values. Amortization expense was $20 million in 2014, $18 million in 2013 and $13 million in 2012. Amortization expense for the next five years is as follows:

In millions	**Amortization Expense**
2015	$17
2016	15
2017	14
2018	13
2019	11

Accounting for Retirement Benefit Plans

We recognize the funded status of our plans as an asset or a liability on our Consolidated Statements of Financial Position, measuring the plans' assets and obligations that determine our funded status as of the end of the fiscal year. We generally recognize, as a component of OCI, the changes in funded status that occurred during the year that are not yet recognized as part of net periodic benefit cost. Because substantially all of its retirement costs are recoverable through base rates, Nicor Gas defers the change in funded status that would normally be charged or credited to comprehensive income to a regulatory asset or liability until the period in which the costs are included in base rates, in accordance with the authoritative guidance for rate-regulated entities. The assets of our retirement plans are measured at fair value within the funded status and are classified in the fair value hierarchy in their entirety based on the lowest level of input that is significant to the fair value measurement.

In determining net periodic benefit cost, the expected return on plan assets component is determined by applying our expected return on assets to a calculated asset value, rather than to the fair value of the assets as of the end of the previous fiscal year. For more information, see Note 6. In addition, we have elected to amortize gains and losses caused by actual experience that differs from our assumptions into subsequent periods. The amount to be amortized is the amount of the cumulative gain or loss as of the beginning of the year, excluding those gains and losses not yet reflected in the calculated value, that exceeds 10 percent of the greater of the benefit obligation or the calculated asset value; and the amortization period is the average remaining service period of active employees.

Taxes

Income Taxes The reporting of our assets and liabilities for financial accounting purposes differs from the reporting for income tax purposes. The principal difference between net income and taxable income relates to the timing of deductions, primarily due to the benefits of tax depreciation since we generally depreciate assets for tax purposes over a shorter period of time than for book purposes. The determination of our provision for income taxes requires significant judgment, the use of estimates, and the interpretation and application of complex tax laws. Significant judgment is required in assessing the timing and amounts of deductible and taxable items. We report the tax effects of depreciation and other temporary differences as deferred income tax assets or liabilities in our Consolidated Statements of Financial Position.

We have current and deferred income taxes in our Consolidated Statements of Income. Current income tax expense consists of federal and state income tax less applicable tax credits related to the current year. Deferred income tax expense is generally equal to the changes in the deferred income tax liability and regulatory tax liability during the year.

Accumulated Deferred Income Tax Assets and Liabilities As noted above, we report some of our assets and liabilities differently for financial accounting purposes than we do for income tax purposes. We report the tax effects of the differences in those items as deferred income tax assets or liabilities in our Consolidated Statements of Financial Position. We measure these deferred income tax assets and liabilities using enacted income tax rates.

With the sale of Tropical Shipping in the third quarter of 2014, we determined that the cumulative foreign earnings of that business would no longer be indefinitely reinvested offshore. Accordingly, we recognized income tax expense of $60 million in 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded, resulting in our repatriation of $86 million in cash. Refer to Note 14 for additional information.

Income Tax Benefits The authoritative guidance related to income taxes requires us to determine whether tax benefits claimed or expected to be claimed on our tax return should be recorded in our consolidated financial statements. Under this guidance, we may recognize the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained upon examination by the taxing authorities, based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position should be measured based upon the largest benefit that has a greater than 50% likelihood of being realized upon ultimate settlement.

Uncertain Tax Positions We recognize accrued interest related to uncertain tax positions in interest expense and penalties in operating expense in our Consolidated Statements of Income.

Tax Collections We do not collect income taxes from our customers on behalf of governmental authorities. However, we do collect and remit various other taxes on behalf of various governmental authorities. We record these amounts in our Consolidated Statements of Financial Position. In other instances, we are allowed to recover from customers other taxes that are imposed upon us. We record such taxes as operating expenses and record the corresponding customer charges as operating revenues.

Revenues

Distribution operations We record revenues when goods or services are provided to customers. Those revenues are based on rates approved by the state regulatory commissions of our utilities.

As required by the Georgia Commission, Atlanta Gas Light bills Marketers in equal monthly installments for each residential, commercial and industrial end-use customer's distribution costs. Additionally, as required by the Georgia Commission, Atlanta Gas Light bills Marketers for capacity costs utilizing a seasonal rate design for the calculation of each residential end-use customer's annual straight-fixed-variable (SFV) charge, which reflects the historic volumetric usage pattern for the entire residential class. Generally, this seasonal rate design results in billing the Marketers a higher capacity charge in the winter months and a lower charge in the summer months, which impacts our operating cash flows. However, this seasonal billing requirement does not impact our revenues, which are recognized on a straight-line basis, because the associated rate mechanism ensures that we ultimately collect the full annual amount of the SFV charges.

All of our utilities, with the exception of Atlanta Gas Light, have rate structures that include volumetric rate designs that allow the opportunity to recover certain costs based on gas usage. Revenues from sales and transportation services are recognized in the same period in which the related volumes are delivered to customers. Revenues from residential and certain commercial and industrial customers are recognized on the basis of scheduled meter readings. Additionally, unbilled revenues are recognized for estimated deliveries of gas not yet billed to these customers, from the last bill date to the end of the accounting period. For other commercial and industrial customers and for all wholesale customers, revenues are based on actual deliveries to the end of the period.

The tariffs for Virginia Natural Gas, Elizabethtown Gas and Chattanooga Gas contain WNAs that partially mitigate the impact of unusually cold or warm weather on customer billings and operating margin. The WNAs have the effect of reducing customer bills when winter weather is colder-than-normal and increasing customer bills when weather is warmer-than-normal. In addition, the tariffs for Virginia Natural Gas, Chattanooga Gas and Elkton Gas contain revenue normalization mechanisms that mitigate the impact of conservation and declining customer usage.

Revenue Taxes We charge customers for gas revenue and gas use taxes imposed on us and remit amounts owed to various governmental authorities. Our policy for gas revenue taxes is to record the amounts charged by us to customers, which for some taxes includes a small administrative fee, as operating revenues, and to record the related taxes imposed on us as operating expenses in our Consolidated Statements of Income. Our policy for gas use taxes is to exclude these taxes from revenue and expense, aside from a small administrative fee that is included in operating revenues as the tax is imposed on the customer. As a result, the amount recorded in operating revenues will exceed the amount recorded in operating expenses by the amount of administrative fees that are retained by the company. Revenue taxes included in operating expenses were $130 million in 2014, $110 million in 2013 and $85 million in 2012.

Retail operations Revenues from natural gas sales and transportation services are recognized in the same period in which the related volumes are delivered to customers. Sales revenues from residential and certain commercial and industrial customers are recognized on the basis of scheduled meter readings. In addition, unbilled revenues are recognized for estimated deliveries of gas not yet billed to these customers, from the most recent meter reading date to the end of the accounting period. For other commercial and industrial customers and for all wholesale customers, revenues are based on actual deliveries during the period.

We recognize revenues on 12-month utility-bill management contracts as the lesser of cumulative earned or cumulative billed amounts. We recognize revenues for warranty and repair contracts on a straight-line basis over the contract term. Revenues for maintenance services are recognized at the time such services are performed.

Wholesale services Revenues from energy and risk management activities are required under authoritative guidance to be netted with the associated costs. Profits from sales between segments are eliminated and are recognized as goods or services sold to end-use customers. Transactions that qualify as derivatives under authoritative guidance related to derivatives and hedging are recorded at fair value with changes in fair value recognized in earnings in the period of change and characterized as unrealized gains or losses. Gains and losses on derivatives held for energy trading purposes are required to be presented net in revenue.

Midstream operations We record operating revenues for storage and transportation services in the period in which volumes are transported and storage services are provided. The majority of our storage services are covered under medium to long-term contracts at fixed market-based rates. We recognize our park and loan revenues ratably over the life of the contract.

Cost of Goods Sold

Distribution operations Excluding Atlanta Gas Light, which does not sell natural gas to end-use customers, we charge our utility customers for natural gas consumed using natural gas cost recovery mechanisms set by the state regulatory agencies. Under these mechanisms, all prudently incurred natural gas costs are passed through to customers without markup, subject to regulatory review. In accordance with the authoritative guidance for rate-regulated entities, we defer or accrue (that is, include as an asset or liability in the Consolidated Statements of Financial Position and exclude from, or include in, the Consolidated Statements of Income, respectively) the difference between the actual cost of goods sold and the amount of commodity revenue earned in a given period, such that no operating margin is recognized related to these costs. The deferred or accrued amount is either billed or refunded to our customers prospectively through adjustments to the commodity rate. Deferred natural gas costs are reflected as regulatory assets and accrued natural gas costs are reflected as regulatory liabilities. For more information, see Note 3.

Retail operations Our retail operations customers are charged for actual or estimated natural gas consumed. Within our cost of goods sold, we also include costs of fuel and lost and unaccounted for gas, adjustments to reduce the value of our inventories to market value and gains and losses associated with certain derivatives. Costs to service our warranty and repair contract claims and costs associated with the installation of HVAC equipment are recorded to cost of goods sold.

Operating Leases

We have certain operating leases with provisions for step rent or escalation payments and certain lease concessions. We account for these leases by recognizing the future minimum lease payments on a straight-line basis over the respective minimum lease terms, in accordance with authoritative guidance related to leases. This accounting treatment does not affect the future annual operating lease cash obligations. For more information, see Note 11.

Other Income

Our other income is detailed in the following table. For more information on our equity investment income, see Note 10.

In millions	**2014**	**2013**	**2012**
Equity investment income	$8	$3	$13
AFUDC - equity	5	12	6
Other, net	1	1	5
Total other income	$14	$16	$24

Earnings Per Common Share

We compute basic earnings per common share attributable to AGL Resources Inc. common shareholders by dividing our net income attributable to AGL Resources Inc. by the daily weighted average number of common shares outstanding. Diluted earnings per common share attributable to AGL Resources Inc. common shareholders reflect the potential reduction in earnings per common share attributable to AGL Resources Inc. common shareholders that occurs when potentially dilutive common shares are added to common shares outstanding.

We derive our potentially dilutive common shares by calculating the number of shares issuable under restricted stock, restricted stock units and stock options award programs. The vesting of certain shares of the restricted stock and restricted stock units depends on the satisfaction of defined performance criteria and/or time-based criteria. The future issuance of shares underlying the outstanding stock options depends on whether the market price of the common shares underlying the options exceeds the respective exercise prices of the stock options.

The following table shows the calculation of our diluted shares attributable to AGL Resources Inc. common shareholders for the periods presented as if performance units currently earned under the plan ultimately vest and as if stock options currently exercisable at prices below the average market prices are exercised.

In millions (except per share amounts)	**2014**	**2013**	**2012**
Income from continuing operations attributable to AGL Resources Inc.	$562	$290	$259
(Loss) income from discontinued operations, net of tax	(80)	5	1
Net income attributable to AGL Resources Inc.	$482	$295	$260
Denominator:			
Basic weighted average number of common shares outstanding (1)	118.8	117.9	117.0
Effect of dilutive securities	0.4	0.4	0.5
Diluted weighted average number of common shares outstanding (2)	119.2	118.3	117.5
Basic earnings per common share			
Continuing operations	$4.73	$2.46	$2.21
Discontinued operations	(0.67)	0.04	0.01
Basic earnings per common share attributable to AGL Resources Inc. common shareholders	$4.06	$2.50	$2.22
Diluted earnings per common share (2)			
Continuing operations	$4.71	$2.45	$2.20
Discontinued operations	(0.67)	0.04	0.01
Diluted earnings per common share attributable to AGL Resources Inc. common shareholders	$4.04	$2.49	$2.21

(1) Daily weighted average shares outstanding.

(2) There were no outstanding stock options excluded from the computation of diluted earnings per common share attributable to AGL Resources Inc. for any of the periods presented because their effect would have been anti-dilutive, as the exercise prices were greater than the average market price.

Sale of Compass Energy

On May 1, 2013, we sold Compass Energy, a non-regulated retail natural gas business supplying commercial and industrial customers, within our wholesale services segment. We received an initial cash payment of $12 million, which resulted in an $11 million pre-tax gain ($5 million net of tax). Under the terms of the purchase and sale agreement, we were eligible to receive contingent cash consideration up to $8 million with a guaranteed minimum receipt of $3 million that was recognized during 2013. The remaining $5 million of contingent cash consideration was to be received from the buyer annually over a five-year earn out period based upon the financial performance of Compass Energy. In the third quarter of 2014, we negotiated with the buyer to settle the future earn-out payments and we received $4 million, resulting in the recognition of a $3 million gain. We have a five-year agreement through April 2018 to supply natural gas to our former customers. As a result of our continued involvement, the sale of Compass Energy did not meet the criteria for treatment as a discontinued operation in 2014. Under the new accounting guidance, which became effective for us on January 1, 2015, the sale of Compass Energy is not considered a strategic shift in operations and would not be reflected as a discontinued operation if we were to terminate our continued involvement in the future.

Non-Wholly Owned Entities

We hold ownership interests in a number of business ventures with varying ownership structures. We evaluate all of our partnership interests and other variable interests to determine if each entity is a variable interest entity (VIE), as defined in the authoritative accounting guidance. If a venture is a VIE for which we are the primary beneficiary, we consolidate the assets, liabilities and results of operations of the entity. We reassess our conclusion as to whether an entity is a VIE upon certain occurrences, which are deemed reconsideration events under the guidance. We have concluded that the only venture that we are required to consolidate as a VIE, as we are the primary beneficiary, is SouthStar. On our Consolidated Statements of Financial Position, we recognize Piedmont's share of the non-wholly owned entity as a separate component of equity entitled "noncontrolling interest." Piedmont's share of current operations is reflected in "net income attributable to the noncontrolling interest" on our Consolidated Statements of Income. The consolidation of SouthStar has no effect on our calculation of basic or diluted earnings per common share amounts, which are based upon net income attributable to AGL Resources Inc.

For entities that are not determined to be VIEs, we evaluate whether we have control or significant influence over the investee to determine the appropriate consolidation and presentation. Generally, entities under our control are consolidated, and entities over which we can exert significant influence, but do not control, are accounted for under the equity method of accounting. However, we also invest in partnerships and limited liability companies that maintain separate ownership accounts. All such investments are required to be accounted for under the equity method unless our interest is so minor that there is virtually no influence over operating and financial policies, as are all investments in joint ventures.

Investments accounted for under the equity method are included in long-term investments on our Consolidated Statements of Financial Position, and the equity income is recorded within other income on our Consolidated Statements of Income and was immaterial for all periods presented. For additional information, see Note 10.

Acquisitions

On January 31, 2013, our retail operations segment acquired approximately 500,000 service contracts and certain other assets from NiSource Inc. for $122 million. These service contracts provide home warranty protection solutions and energy efficiency leasing solutions to residential and small business utility customers and complement the retail business acquired in the Nicor merger. Intangible assets related to this acquisition are primarily customer relationships of $46 million and trade names of $16 million. These intangible assets are being amortized over approximately 14 years for customer relationships and 10 years for trade names. The final allocation of the purchase price to the fair value of assets acquired and liabilities assumed is presented in the following table:

In millions	
Current assets	$3
PP&E	12
Goodwill	51
Intangible assets	62
Current liabilities	(6)
Total purchase price	$122

On June 30, 2013, our retail operations segment acquired approximately 33,000 residential and commercial energy customer relationships in Illinois for $32 million. These customer relationships have been recorded as an intangible asset and are being amortized over 15 years.

Use of Accounting Estimates

The preparation of our financial statements in conformity with GAAP requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses and the related disclosures. Our estimates are based on historical experience and various other assumptions that we believe to be reasonable under the circumstances. Our estimates may involve complex situations requiring a high degree of judgment either in the application and interpretation of existing literature or in the development of estimates that impact our financial statements. The most significant estimates relate to our rate-regulated subsidiaries, uncollectible accounts and other allowances for contingent losses, goodwill and other intangible assets, retirement plan benefit obligations, derivative and hedging activities and provisions for income taxes. We evaluate our estimates on an ongoing basis and our actual results could differ from our estimates.

Accounting Developments

In April 2014, the FASB issued authoritative guidance related to reporting discontinued operations. The guidance generally raises the threshold for disposals to qualify as discontinued operations and requires new disclosures of both discontinued operations and certain other material disposals that do not meet the definition of a discontinued operation. The guidance was effective for us prospectively beginning January 1, 2015. It had no impact on our accounting for the sale of Tropical Shipping. There was no impact on January 1, 2015, nor is there any reason we would expect this guidance to have a material impact on our consolidated financial statements in the foreseeable future.

In May 2014, the FASB issued an update to authoritative guidance related to revenue from contracts with customers. The update replaces most of the existing guidance with a single set of principles for recognizing revenue from contracts with customers. The guidance will be effective for us beginning January 1, 2017. Early adoption is not permitted. The new guidance must be applied retrospectively to each prior period presented or via a cumulative effect upon the date of initial application. We have not yet determined the impact of this new guidance, nor have we selected a transition method.

In June 2014, the FASB issued an update to authoritative guidance related to accounting for share-based payments when the terms of an award provide that a performance target could be achieved after the requisite service period. The guidance will be effective for us beginning January 1, 2016, and it will have no impact on our consolidated financial statements for our existing share-based plans.

Note 3 – Regulated Operations

Our regulatory assets and liabilities reflected within our Consolidated Statements of Financial Position as of December 31 are summarized in the following table.

In millions	2014	2013
Regulatory assets		
Recoverable ERC	$49	$45
Recoverable pension and retiree welfare benefit costs	12	9
Recoverable seasonal rates	10	10
Deferred natural gas costs	3	1
Other	9	49
Total regulatory assets - current	83	114
Recoverable ERC	326	433
Recoverable pension and retiree welfare benefit costs	110	99
Long-term debt fair value adjustment	74	82
Recoverable regulatory infrastructure program costs	69	55
Other	52	36
Total regulatory assets - long-term	631	705
Total regulatory assets	$714	$819
Regulatory liabilities		
Bad debt over collection	$33	$41
Accrued natural gas costs	27	92
Accumulated removal costs	25	27
Other	27	23
Total regulatory liabilities - current	112	183
Accumulated removal costs	1,520	1,445
Regulatory income tax liability	34	27
Unamortized investment tax credit	22	26
Bad debt over collection	12	17
Other	13	3
Total regulatory liabilities - long-term	1,601	1,518
Total regulatory liabilities	$1,713	$1,701

Base rates are designed to provide the opportunity to recover cost and a return on investment during the period rates are in effect. As such, all of our regulatory assets recoverable through base rates are subject to review by the respective state regulatory commission during future rate proceedings. We are not aware of evidence that these costs will not be recoverable through either rate riders or base rates, and we believe that we will be able to recover such costs consistent with our historical recoveries.

In the event that the provisions of authoritative guidance related to regulated operations were no longer applicable, we would recognize a write-off of regulatory assets that would result in a charge to net income. Additionally, while some regulatory liabilities would be written off, others would continue to be recorded as liabilities, but not as regulatory liabilities.

Although the natural gas distribution industry is competing with alternative fuels, primarily electricity, our utility operations continue to recover their costs through cost-based rates established by the state regulatory commissions. As a result, we believe that the accounting prescribed under the guidance remains appropriate. It is also our opinion that all regulatory assets are recoverable in future rate proceedings, and therefore we have not recorded any regulatory assets that are recoverable but are not yet included in base rates or contemplated in a rate rider or proceeding. The regulatory liabilities that do not represent revenue collected from customers for expenditures that have not yet been incurred are refunded to ratepayers through a rate rider or base rates. If the regulatory liability is included in base rates, the amount is reflected as a reduction to the rate base used to periodically set base rates.

The majority of our regulatory assets and liabilities listed in the preceding table are included in base rates except for the regulatory infrastructure program costs, ERC, bad debt over collection, natural gas costs and energy efficiency costs, which are recovered through specific rate riders on a dollar-for-dollar basis. The rate riders that authorize the recovery of regulatory infrastructure program costs and natural gas costs include both a recovery of cost and a return on investment during the recovery period. Nicor Gas' rate riders for environmental costs and energy efficiency costs provide a return of investment and expense including short-term interest on reconciliation balances. However, there is no interest associated with the under or over collections of bad debt expense.

Nicor Gas' pension and retiree welfare benefit costs have historically been considered in rate proceedings in the same period they are accrued under GAAP. As a regulated utility, Nicor Gas expects to continue rate recovery of the eligible costs of these defined benefit retirement plans and, accordingly, associated changes in the funded status of Nicor Gas' plans have been deferred as a regulatory asset or liability until recognized in net income, instead of being recognized in OCI. The Illinois Commission presently does not allow Nicor Gas the opportunity to earn a return on its recoverable retirement benefit costs. Such costs are expected to be recovered over a period of approximately 10 years. The regulatory assets related to debt are also not included in rate base, but the costs are recovered over the term of the debt through the authorized rate of return component of base rates.

Unrecognized Ratemaking Amounts The following table illustrates our authorized ratemaking amounts that are not recognized in our Consolidated Statements of Financial Position. These amounts are primarily composed of an allowed equity rate of return on assets associated with certain of our regulatory infrastructure programs. These amounts will be recognized as revenues in our financial statements in the periods they are collected in rates from our customers.

In millions	**Atlanta Gas Light**	**Virginia Natural Gas**	**Elizabethtown Gas**	**Total**
December 31, 2014	$113	$12	$2	$127
December 31, 2013	80	12	1	93

Natural Gas Costs We charge our utility customers for natural gas consumed using natural gas cost recovery mechanisms established by the state regulatory agencies. Under these mechanisms, all prudently incurred natural gas costs are passed through to customers without markup, subject to regulatory review. We defer or accrue the difference between the actual cost of gas and the amount of commodity revenue earned in a given period, such that no operating margin is recognized related to these costs. The deferred or accrued amount is either billed or refunded to our customers prospectively through adjustments to the commodity rate. Deferred natural gas costs are reflected as regulatory assets and accrued natural gas costs are reflected as regulatory liabilities.

Environmental Remediation Costs We are subject to federal, state and local laws and regulations governing environmental quality and pollution control that require us to remove or remedy the effect on the environment of the disposal or release of specified substances at our current and former operating sites, substantially all of which is related to our MGP sites. The ERC assets and liabilities are associated with our distribution operations segment and remediation costs are generally recoverable from customers through rate mechanisms approved by regulators. Accordingly, both costs incurred to remediate the former MGP sites, plus the future estimated cost recorded as liabilities, net of amounts previously collected, are recognized as a regulatory asset until recovered from customers.

Our ERC liabilities are estimates of future remediation costs for investigation and cleanup of our current and former operating sites that are contaminated. These estimates are based on conventional engineering estimates and the use of probabilistic models of potential costs when such estimates cannot be made, on an undiscounted basis. These estimates contain various assumptions, which we refine and update on an ongoing basis. These liabilities do not include other potential expenses, such as unasserted property damage claims, personal injury or natural resource damage claims, legal expenses or other costs for which we may be held liable but for which we cannot reasonably estimate an amount.

Our accrued ERC are not regulatory liabilities; however, they are deferred as a corresponding regulatory asset until the costs are recovered from customers. These recoverable ERC assets are a combination of accrued ERC liabilities and recoverable cash expenditures for investigation and cleanup costs. We primarily recover these deferred costs through three rate riders that authorize dollar-for-dollar recovery. We expect to collect $49 million in revenues over the next 12 months, which is reflected as a current regulatory asset. We recovered $51 million in 2014, $24 million in 2013 and $13 million in 2012 from our ERC rate riders. The following table provides more information on the costs related to remediation of our current and former operating sites.

In millions	**# of sites**	**Probabilistic model cost estimates** (1)	**Engineering estimates** (1)	**Amount recorded**	**Expected costs over next 12 months**	**Cost recovery period**
Illinois (2)	26	$205 - $462	$30	$230	$41	As incurred
New Jersey	6	105 - 177	14	118	16	7 years
Georgia and Florida	13	40 - 81	15	56	21	5 years
North Carolina (3)	1	n/a	10	10	9	No recovery
Total	46	$350 - $720	$69	$414 (4)	$87	

(1) The year-end ERC cost estimates were completed as of November 30, 2014. The liability recorded reflects a reduction of these cost estimates for expenses incurred during December.

(2) Nicor Gas is responsible in whole or in part for 26 MGP sites, of which two sites have been remediated and their use is no longer restricted by the environmental condition of the property. Nicor Gas and Commonwealth Edison Company are parties to an agreement to cooperate in cleaning up residue at 23 of the sites listed. Nicor Gas' allocated share of cleanup costs for these sites is 52%.

(3) We have no regulatory recovery mechanism for the site in North Carolina. Therefore, there is no amount included within our regulatory assets and changes in estimated costs are recognized in income in the period of change.

(4) Decrease of $33 million from December 31, 2013 primarily relates to lower engineering cost estimates for work completed during 2014, partially offset by a scope increase required by the Georgia Environmental Protection Division for a site in Georgia and increases at three Illinois sites due to refinement of the assumptions used in the cost method.

In July 2014, we reached a $77 million insurance settlement for environmental claims relating to potential contamination at our MGP sites in New Jersey and North Carolina. The terms of the settlement required the $77 million to be paid in two installments. We received $45 million in the third quarter of 2014 and this payment was primarily recorded as a reduction to our recoverable ERC regulatory asset. The remaining $32 million is due in the third quarter of 2015. We will file for approval with the New Jersey BPU to utilize the insurance proceeds related to the New Jersey sites to reduce the ERC expenditures that otherwise would have been recovered from our customers in future periods. As such, the settlement, once approved, is expected to reduce our recoverable ERC regulatory asset and have a favorable impact on the rates for our Elizabethtown Gas customers.

Bad Debt Rider Nicor Gas' bad debt rider provides for the recovery from, or refund to, customers of the difference between Nicor Gas' actual bad debt experience on an annual basis and a benchmark, as determined by the Illinois Commission in February 2010. The over recovery is recorded as an increase to operating expenses on our Consolidated Statements of Income and a regulatory liability on our Consolidated Statements of Financial Position until refunded to customers. In the period refunded, operating expenses are reduced and the regulatory liability is reversed. The actual bad debt experience and resulting refunds are shown in the following table.

		Actual	Total	Amount refunded in		Amount to be refunded in	
In millions	**Benchmark**	**bad debt**	**refund**	**2013**	**2014**	**2015**	**2016**
2014	$63	$35	$28	$-	$-	$16	$12
2013	63	21	42	-	25	17	-
2012	63	23	40	24	16	-	-

Accumulated Removal Costs In accordance with regulatory treatment, our depreciation rates are comprised of two cost components - historical cost and the estimated cost of removal, net of estimated salvage, of certain regulated properties. We collect these costs in base rates through straight-line depreciation expense, with a corresponding credit to accumulated depreciation. Because the accumulated estimated removal costs are not a generally accepted component of depreciation, but meet the requirements of authoritative guidance related to regulated operations, we have reclassified them from accumulated depreciation to the accumulated removal cost regulatory liability in our Consolidated Statements of Financial Position. In the rate setting process, the liability for these accumulated removal costs is treated as a reduction to the net rate base upon which our regulated utilities have the opportunity to earn their allowed rate of return.

Regulatory Infrastructure Programs We have infrastructure improvement programs at several of our utilities. Descriptions of these are as follows.

Nicor Gas In 2013, Illinois enacted legislation that allows Nicor Gas to provide more widespread safety and reliability enhancements to its distribution system. The legislation stipulates that rate increases to customer bills as a result of any infrastructure investments shall not exceed an annual average of 4.0% of base rate revenues. In July 2014, the Illinois Commission approved our new regulatory infrastructure program, Investing in Illinois (previously known as Qualified Infrastructure Plant), for which we may implement rates under the program effective in March 2015.

Atlanta Gas Light Our STRIDE program is comprised of the Integrated System Reinforcement Program (i-SRP), the Integrated Customer Growth Program (i-CGP), and the Integrated Vintage Plastic Replacement Program (i-VPR).

The purpose of the i-SRP is to upgrade our distribution system and liquefied natural gas facilities in Georgia, improve our peak-day system reliability and operational flexibility, and create a platform to meet long-term forecasted growth. The STRIDE program requires us to file an updated ten-year forecast of infrastructure requirements under i-SRP along with a new construction plan every three years for review and approval by the Georgia Commission. Our i-CGP authorizes Atlanta Gas Light to extend its pipeline facilities to serve customers in areas without pipeline access and create new economic development opportunities in Georgia.

A new $260 million, four-year STRIDE program was approved in December 2013, of which $214 million is for i-SRP related projects and $46 million is for i-CGP related projects. The program will be funded through a monthly rider surcharge per customer of $0.48 beginning in January 2015, which will increase to $0.96 beginning in January 2016 and to $1.43 beginning in January 2017. This surcharge will continue through 2025.

The purpose of the i-VPR program is to replace aging plastic pipe that was installed primarily in the 1960's to the early 1980's. We have identified approximately 3,300 miles of vintage plastic mains in our system that potentially should be considered for replacement over the next 15 - 20 years as it reaches the end of its useful life. In 2013, the Georgia Commission approved the replacement of 756 miles of vintage plastic pipe over four years at an estimated cost of $275 million. Additional reporting requirements and monitoring by the staff of the Georgia Commission were also included in the stipulation, which authorized a phased-in approach to funding the program through a monthly rider surcharge of $0.48 per customer through December 2014. This will increase to $0.96 beginning in January 2015 and to $1.45 beginning in January 2016, which will continue through 2025.

The orders for the STRIDE programs provide for recovery of all prudent costs incurred in the performance of the program. Atlanta Gas Light will recover from end-use customers, through billings to Marketers, the costs related to the programs net of any cost savings from the programs. All such amounts will be recovered through a combination of straight-fixed-variable rates and a STRIDE revenue rider surcharge. The regulatory asset represents recoverable incurred costs related to the programs that will be collected in future rates charged to customers through the rate riders. The future expected costs to be recovered through rates related to allowed, but not incurred costs, are recognized in an unrecognized ratemaking amount that is not reflected within our Consolidated Statements of Financial Position. This allowed cost consists primarily of the equity return on the capital investment under the program.

Atlanta Gas Light capitalizes and depreciates the capital expenditure costs incurred from the STRIDE programs over the life of the assets. Operation and maintenance costs are expensed as incurred. Recoveries, which are recorded as revenue, are based on a formula that allows Atlanta Gas Light to recover operation and maintenance costs in excess of those included in its current base rates, depreciation expense and an allowed rate of return on capital expenditures. However, Atlanta Gas Light is allowed the recovery of carrying costs on the under-recovered balance resulting from the timing difference.

Elizabethtown Gas In 2009, the New Jersey BPU approved the enhanced infrastructure program for Elizabethtown Gas, which was created in response to the New Jersey Governor's request for utilities to assist in the economic recovery by increasing infrastructure investments. In May 2011, the New Jersey BPU approved Elizabethtown Gas' request to spend an additional $40 million under this program before the end of 2012. Costs associated with the investment in this program are recovered through periodic adjustments to base rates that are approved by the New Jersey BPU. In August 2013, the New Jersey BPU approved the recovery of investments under this program through a permanent adjustment to base rates.

Additionally, in August 2013, we received approval from the New Jersey BPU for an extension of the accelerated infrastructure replacement program, which allows for infrastructure investment of $115 million over four years, effective as of September 1, 2013. Carrying charges on the additional capital expenditures will be deferred at a WACC of 6.65%, of which 4.27% will be within an unrecognized ratemaking amounts and will be recognized in future periods when recovered through rates. Unlike the previous program, there will be no adjustment to base rates for the investments under the extended program until Elizabethtown Gas files its next rate case. We agreed to file a general rate case by September 2016.

In September 2013, Elizabethtown Gas filed for a Natural Gas Distribution Utility Reinforcement Effort (ENDURE), a program designed to improve our distribution system's resiliency against coastal storms and floods. Under the proposed plan, Elizabethtown Gas is investing $15 million in infrastructure and related facilities and communication planning over a one year period that began in January 2014. In July 2014, the New Jersey BPU approved a modified ENDURE plan that allows for Elizabethtown Gas to increase its base rates effective November 1, 2015 for investments made under the program.

Virginia Natural Gas In 2012, the Virginia Commission approved SAVE, an accelerated infrastructure replacement program, which is expected to be completed over a five-year period. The program permits a maximum capital expenditure of $25 million per year, not to exceed $105 million in total. SAVE is subject to annual review by the Virginia Commission. We began recovering program costs through a rate rider that was effective August 1, 2012. The second year performance rate update was approved by the Virginia Commission in July 2014 and became effective as of August 2014.

Energy Smart Plan In May 2014, the Illinois Commission approved Nicor Gas' Energy Smart Plan, which outlines energy efficiency program offerings and therm reduction goals with spending of $93 million over a three-year period that began in June 2014. Nicor Gas' first energy efficiency program ended in May 2014.

Investment Tax Credits Deferred investment tax credits associated with distribution operations are included as a regulatory liability in our Consolidated Statements of Financial Position. These investment tax credits are being amortized over the estimated lives of the related properties as credits to income tax expense.

Regulatory Income Tax Liability For our regulated utilities, we measure deferred income tax assets and liabilities using enacted income tax rates. Thus, when the statutory income tax rate declines before a temporary difference has fully reversed, the deferred income tax liability must be reduced to reflect the newly enacted income tax rates. However, the amount of the reduction is transferred to our regulatory income tax liability, which we are amortizing over the lives of the related properties as the temporary differences reverse over approximately 30 years.

Other Regulatory Assets and Liabilities Our recoverable pension and retiree welfare benefit plan costs for our utilities other than Nicor Gas are expected to be recovered through base rates over the next 2 to 21 years, based on the remaining recovery periods as designated by the applicable state regulatory commissions. This category also includes recoverable seasonal rates, which reflect the difference between the recognition of a portion of Atlanta Gas Light's residential base rates revenues on a straight-line basis as compared to the collection of the revenues over a seasonal pattern. These amounts are fully recoverable through base rates within one year.

Note 4 - Fair Value Measurements

Retirement benefit plans assets

The assets of the AGL Resources Inc. Retirement Plan (AGL Plan), the Employees' Retirement Plan of NUI Corporation (NUI Plan), and the Health and Welfare Plan for Retirees and Inactive Employees of AGL Resources Inc. (AGL Welfare Plan) were allocated approximately 71% equity and 29% fixed income at December 31, 2014 and 74% equity and 26% fixed income at December 31, 2013 compared to our targets of 70% to 95% equity, 5% to 20% fixed income, and up to 10% cash for both periods. The plans' investment policies provide for some variation in these targets. The actual asset allocations of our retirement plans are presented in the following table by Level within the fair value hierarchy.

(1) Includes $9 million at December 31, 2014 and December 31, 2013 of medical benefit (health and welfare) component for 401h accounts to fund a portion of the other retirement benefits.
(2) Includes funds that invest primarily in U.S. common stocks.
(3) Includes funds that invest primarily in foreign equity and equity-related securities.
(4) Includes funds that invest primarily in common stocks of emerging markets.
(5) Includes funds that invest primarily in investment grade debt and fixed income securities.
(6) Includes funds that invest in limited / general partnerships, managed accounts, and other investment entities issued by non-traditional firms or "hedge funds."
(7) Includes funds that invest primarily in investment vehicles and commodity pools as a "fund of funds."

(8) Includes funds that invest in private equity and small buyout funds, partnership investments, direct investments, secondary investments, directly / indirectly in real estate and may invest in equity securities of real estate related companies, real estate mortgage loans, and real estate mezzanine loans.

The following is a reconciliation of our retirement plan assets in Level 3 of the fair value hierarchy.

	Fair value measurements using significant unobservable inputs - Level 3 (1)			
In millions	**Global hedged equity**	**Absolute return**	**Private capital**	**Total**
Balance at December 31, 2012	$38	$36	$23	$97
Actual return on plan assets	5	3	4	12
Sales	-	-	(5)	(5)
Balance at December 31, 2013	$43	$39	$22	$104
Actual return on plan assets	1	3	2	6
Sales	(15)	-	(4)	(19)
Balance at December 31, 2014	$29	$42	$20	$91

(1) There were no transfers out of Level 3, or between Level 1 and Level 2 for any of the periods presented.

Derivative Instruments

The following table summarizes, by level within the fair value hierarchy, our derivative assets and liabilities that were carried at fair value on a recurring basis in our Consolidated Statements of Financial Position as of December 31.

	2014		2013	
In millions	**Assets** (1)	**Liabilities**	**Assets** (1)	**Liabilities**
Natural gas derivatives				
Quoted prices in active markets (Level 1)	$58	$(80)	$6	$(79)
Significant other observable inputs (Level 2)	174	(94)	67	(79)
Netting of cash collateral	52	81	43	78
Total carrying value (2) (3)	$284	$(93)	$116	$(80)

(1) Balances of $3 million at December 31, 2014 and 2013 associated with certain weather derivatives have been excluded, as they are accounted for based on intrinsic value rather than fair value.
(2) There were no significant unobservable inputs (Level 3) for any of the dates presented.
(3) There were no significant transfers between Level 1, Level 2, or Level 3 for any of the dates presented.

Debt

Our long-term debt is recorded at amortized cost, with the exception of Nicor Gas' first mortgage bonds, which are recorded at their acquisition-date fair value. We amortize the fair value adjustment of Nicor Gas' first mortgage bonds over the lives of the bonds. The following table presents the carrying amount and fair value of our long-term debt as of December 31.

In millions	**2014**	**2013**
Long-term debt carrying amount	$3,802	$3,813
Long-term debt fair value (1)	4,231	3,956

(1) Fair value determined using Level 2 inputs.

Note 5 - Derivative Instruments

Our risk management activities are monitored by our Risk Management Committee, which consists of members of senior management and is charged with reviewing our risk management activities and enforcing policies. Our use of derivative instruments, including physical transactions, is limited to predefined risk tolerances associated with pre-existing or anticipated physical natural gas sales and purchases and system use and storage. We use the following types of derivative instruments and energy-related contracts to manage natural gas price, interest rate, weather, automobile fuel price and foreign currency risks when deemed appropriate:

- forward, futures and options contracts;
- financial swaps;
- treasury locks;
- weather derivative contracts;
- storage and transportation capacity contracts; and
- foreign currency forward contracts

Certain of our derivative instruments contain credit-risk-related or other contingent features that could require us to post collateral in the normal course of business when our financial instruments are in net liability positions. As of December 31, 2014 and 2013, for agreements with such features, derivative instruments with liability fair values totaled $93 million and $80 million, respectively, for which we had posted no collateral to our counterparties. The maximum collateral that could be required with these features is $14 million. For more information, see "Energy Marketing Receivables and Payables" in Note 2, which also have credit risk-related contingent features. Our derivative instrument activities are included within operating cash flows as an increase (decrease) to net income of $(155) million, $66 million and $72 million for the periods ended December 31, 2014, 2013 and 2012, respectively.

The following table summarizes the various ways in which we account for our derivative instruments and the impact on our consolidated financial statements:

Accounting Treatment	Recognition and Measurement: Statements of Financial Position	Recognition and Measurement: Income Statements
Cash flow hedge	Derivative carried at fair value	Ineffective portion of the gain or loss realized and unrealized on the derivative instrument is recognized in earnings
	Effective portion of the gain or loss on the derivative instrument is reported initially as a component of accumulated OCI (loss)	Effective portion of the gain or loss realized and unrealized on the derivative instrument is reclassified out of accumulated OCI (loss) and into earnings when the hedged transaction affects earnings
Fair value hedge	Derivative carried at fair value	Gains or losses realized and unrealized on the derivative instrument and the hedged item are recognized in earnings. As a result, to the extent the hedge is effective, the gains or losses will offset and there is no impact on earnings. Any hedge ineffectiveness will impact earnings
	Changes in fair value of the hedged item are recorded as adjustments to the carrying amount of the hedged item	
Not designated as hedges	Derivative carried at fair value	Gains or losses realized and unrealized on the derivative instrument are recognized in earnings
	Distribution operations' gains and losses on derivative instruments are deferred as regulatory assets or liabilities until included in cost of goods sold	Gains or losses realized and unrealized on these derivative instruments are ultimately included in billings to customers and are recognized in cost of goods sold in the same period as the related revenues

Quantitative Disclosures Related to Derivative Instruments

As of the dates presented, our derivative instruments were comprised of both long and short natural gas positions. A long position is a contract to purchase natural gas, and a short position is a contract to sell natural gas. As of December 31, we had a net long natural gas contracts position outstanding in the following quantities:

In Bcf (1)	**2014** (2)	**2013**
Cash flow hedges	9	6
Not designated as hedges	75	183
Total volumes	84	189
Short position – cash flow hedges	(4)	(6)
Short position – not designated as hedges	(2,828)	(2,616)
Long position – cash flow hedges	16	12
Long position – not designated as hedges	2,900	2,799
Net long position	84	189

(1) Volumes related to Nicor Gas exclude variable-priced contracts, which are carried at fair value, but whose fair values are not directly impacted by changes in commodity prices.
(2) Approximately 100% of these contracts have durations of two years or less and less than 1% expire between two and five years.

Derivative Instruments in our Consolidated Statements of Financial Position

In accordance with regulatory requirements, gains and losses on derivative instruments used to hedge natural gas purchases for customer use at distribution operations are reflected in accrued natural gas costs within our Consolidated Statements of Financial Position until billed to customers. The following amounts deferred as a regulatory asset or liability on our Consolidated Statements of Financial Position represent the net realized gains (losses) related to these natural gas cost hedges for the years ended December 31.

In millions	2014	2013
Nicor Gas	$10	$4
Elizabethtown Gas	2	(6)

The following table presents the fair values and Consolidated Statements of Financial Position classifications of our derivative instruments as of December 31:

		2014		2013	
In millions	**Classification**	**Assets**	**Liabilities**	**Assets**	**Liabilities**
Designated as cash flow or fair value hedges					
Natural gas contracts	Current	$6	$(11)	$3	$(1)
Natural gas contracts	Long-term	-	(1)	-	-
Total designated as cash flow or fair value hedges		$6	$(12)	$3	$(1)
Not designated as hedges					
Natural gas contracts	Current	$1,061	$(1,020)	$691	$(761)
Natural gas contracts	Long-term	145	(119)	206	(220)
Total not designated as hedges		$1,206	$(1,139)	$897	$(981)
Gross amount of recognized assets and liabilities (1) (2)		1,212	(1,151)	900	(982)
Gross amounts offset in our Consolidated Statements of Financial Position (2)		(925)	1,058	(781)	902
Net amounts of assets and liabilities presented in our Consolidated Statements of Financial Position (3)		$287	$(93)	$119	$(80)

(1) The gross amounts of recognized assets and liabilities are netted within our Consolidated Statements of Financial Position to the extent that we have netting arrangements with the counterparties.

(2) As required by the authoritative guidance related to derivatives and hedging, the gross amounts of recognized assets and liabilities above do not include cash collateral held on deposit in broker margin accounts of $133 million as of December 31, 2014 and $121 million as of December 31, 2013. Cash collateral is included in the "Gross amounts offset in our Consolidated Statements of Financial Position" line of this table.

(3) At December 31, 2014 and 2013, we held letters of credit from counterparties that would offset, under master netting arrangements, an insignificant portion of these assets.

Derivative Instruments on the Consolidated Statements of Income

The following table presents the impacts of our derivative instruments in our Consolidated Statements of Income for the years ended December 31.

In millions	2014	2013	2012
Designated as cash flow or fair value hedges			
Natural gas contracts – net gain (loss) reclassified from OCI into cost of goods sold	$4	$(1)	$(5)
Natural gas contracts – net gain reclassified from OCI into operation and maintenance expense	1	-	-
Interest rate swaps – net loss reclassified from OCI into interest expense	-	(3)	(4)
Income tax (expense)/benefit	(2)	1	3
Total designated as cash flow or fair value hedges, net of tax	$3	$(3)	$(6)
Not designated as hedges (1)			
Natural gas contracts - net gain (loss) recorded in operating revenues	$149	$(90)	$34
Natural gas contracts - net gain (loss) recorded in cost of goods sold (2)	(7)	2	(4)
Income tax (expense)/benefit	(54)	34	(11)
Total not designated as hedges, net of tax	$88	$(54)	$19
Total gains (losses) on derivative instruments, net of tax	$91	$(57)	$13

(1) Associated with the fair value of derivative instruments held at December 31, 2014, 2013 and 2012.

(2) Excludes losses recorded in cost of goods sold associated with weather derivatives of $7 million, $5 million and $14 million for the years ended December 31, 2014, 2013 and 2012, respectively.

Any amounts recognized in operating income related to ineffectiveness or due to a forecasted transaction that is no longer expected to occur were immaterial for the years ended December 31, 2014, 2013 and 2012. Our expected gains to be reclassified from OCI into cost of goods sold, operation and maintenance expense, interest expense and operating revenues and recognized in our Consolidated Statements of Income over the next 12 months are $7 million. These deferred gains are related to natural gas derivative contracts associated with retail operations' and Nicor Gas' system use.

The expected gains are based upon the fair values of these financial instruments at December 31, 2014. The effective portion of gains and losses on derivative instruments qualifying as cash flow hedges that were recognized in OCI during the periods is presented on our Consolidated Statements of Income. See Note 9 for these amounts.

Note 6 - Employee Benefit Plans

Investment Policies, Strategies and Oversight of Plans

The Retirement Plan Investment Committee (the Committee) appointed by our Board of Directors is responsible for overseeing the investments of our defined benefit retirement plans. Further, we have an Investment Policy (the Policy) for our pension and welfare benefit plans whose goal is to preserve these plans' capital and maximize investment earnings in excess of inflation within acceptable levels of capital market volatility. To accomplish this goal, the plans' assets are managed to optimize long-term return while maintaining a high standard of portfolio quality and diversification.

In developing our allocation policy for the pension and welfare plan assets we examined projections of asset returns and volatility over a long-term horizon. In connection with this analysis, we evaluated the risk and return tradeoffs of alternative asset classes and asset mixes given long-term historical relationships as well as prospective capital market returns. We also conducted an asset-liability study to match projected asset growth with projected liability growth to determine whether there is sufficient liquidity for projected benefit payments. We developed our asset mix guidelines by incorporating the results of these analyses with an assessment of our risk posture, and taking into account industry practices. We periodically evaluate our investment strategy to ensure that plan assets are sufficient to meet the benefit obligations of the plans. As part of the ongoing evaluation, we may make changes to our targeted asset allocations and investment strategy.

Our investment strategy is designed to meet the following objectives:

- Generate investment returns that, in combination with our funding contributions, provide adequate funding to meet all current and future benefit obligations of the plans.
- Provide investment results that meet or exceed the assumed long-term rate of return, while maintaining the funded status of the plans at acceptable levels.
- Improve funded status over time.
- Decrease contribution and expense volatility as funded status improves.

To achieve these investment objectives, our investment strategy is divided into two primary portfolios of return seeking and liability hedging assets. Return seeking assets are intended to provide investment returns in excess of liability growth and reduce deficits in the funded status of the plans, while liability hedging assets are intended to reflect the sensitivity of the liabilities to changes in discount rates.

See Note 4 for a detailed listing of the investment types, amounts and percentages allocated to the plans. We will continue to diversify retirement plan investments to minimize the risk of large losses in a single asset class. We do not have a concentration of assets in a single entity, industry, country, commodity or class of investment fund. The Policy's permissible investments include domestic and international equities (including convertible securities and mutual funds), domestic and international fixed income securities (corporate and government obligations), cash and cash equivalents and other suitable investments.

Equity market performance and corporate bond rates have a significant effect on our reported funded status. Changes in the projected benefit obligation (PBO) and accumulated postretirement benefit obligation (APBO) are mainly driven by the assumed discount rate. Additionally, equity market performance has a significant effect on our market-related value of plan assets (MRVPA), which is used by the AGL Plan to determine the expected return on the plan assets component of net annual pension cost. The MRVPA is a calculated value. Gains and losses on plan assets are spread through the MRVPA based on the five-year smoothing weighted average methodology.

Pension Benefits

We sponsor the AGL Plan, which is a tax-qualified defined benefit retirement plan for our eligible employees. A defined benefit plan specifies the amount of benefits an eligible participant eventually will receive using information about the participant, including information related to the participant's earnings history, years of service and age. In 2012, we also sponsored two other tax-qualified defined benefit retirement plans for our eligible employees, a Nicor plan and a NUI plan. Effective as of December 31, 2012, the NUI plan and the Nicor plan were merged into the AGL Plan. The participants of the former Nicor and NUI plans are now being offered their benefits, as described below, through the AGL Plan.

We generally calculate the benefits under the AGL Plan based on age, years of service and pay. The benefit formula for the AGL Plan is currently a career average earnings formula. Participants who were employees as of July 1, 2000 and who were at least 50 years of age as of that date earned benefits until December 31, 2010 under a final average pay formula. Participants who were employed as of July 1, 2000, but did not satisfy the age requirement to continue under the final average earnings formula, transitioned to the career average earnings formula on July 1, 2000.

Effective January 1, 2012, the AGL Plan was frozen with respect to participation for non-union employees hired on or after that date. Effective January 1, 2013, the AGL Plan was frozen with respect to participation for union employees hired on or after that date. Such employees are entitled to employer provided benefits under their defined contribution plan that exceed defined contribution benefits for employees who participate in the defined benefit plan.

Participants in the former Nicor plan receive noncontributory defined pension benefits. These benefits cover substantially all employees of Nicor Gas and its affiliates that adopted the Nicor plan hired prior to 1998. Pension benefits are based on years of service and the highest average annual salary for management employees and job level for collectively bargained employees (referred to as pension bands). The benefit obligation related to collectively bargained benefits reflects the most recent collective bargained agreement terms with regards to the benefit increases.

Participants in the former NUI plan included substantially all of NUI Corporation's employees who were employed on or before December 31, 2005. Florida City Gas union employees, who until February 2008 participated in a union-sponsored multiemployer plan, became eligible to participate in the AGL Plan in February 2008. The AGL Plan provides pension benefits to NUI participants based on years of credited service and final average compensation as of the plan freeze date. Effective December 31, 2005, participation and benefit accrual under the NUI Plan were frozen. As of January 1, 2006, former participants in that plan became eligible to participate in the AGL Plan.

Welfare Benefits

Until December 31, 2012, we sponsored two defined benefit retiree health care plans for our eligible employees – the AGL Welfare Plan and the Nicor Welfare Benefit Plan (Nicor Welfare Plan). Eligibility for these benefits is based on age and years of service. Effective December 31, 2012, the Nicor Welfare Plan was terminated and as of January 1, 2013, all participants under that plan became eligible to participate in the AGL Welfare Plan. This change in plan participation eligibility did not affect the benefit terms. The Nicor Welfare Plan benefits described below are now being offered to such participants under the AGL Welfare Plan. Effective March 18, 2014, the Nicor Welfare Plan was closed to participation for all Nicor employees hired on or after that date.

The AGL Welfare Plan includes medical coverage for all eligible AGL Resources employees who were employed as of June 30, 2002, if they reach the plan's retirement age while working for us. In addition, the AGL Welfare Plan provides life insurance for all employees if they have ten years of service at retirement. Effective March 18, 2014, the life insurance coverage is not available to new employees hired on or after that date. The state regulatory commissions have approved phase-in plans that defer a portion of the related benefits expense for future recovery. The AGL Welfare Plan terms include a limit on the employer share of costs at limits based on the coverage tier, plan elected and salary level of the employee at retirement.

Medicare eligible retirees covered by the AGL Welfare Plan, including all of those at least age 65, receive benefits through our contribution to a retiree health reimbursement arrangement account. Additionally, on the pre-65 medical coverage of the AGL Welfare Plan, our expected cost is determined by a retiree premium schedule based on salary level and years of service. Due to the cost limits, there is no impact on our periodic benefit cost or on our accumulated projected benefit obligation for a change in the assumed healthcare cost trend rate for this portion of the plan.

The plan provisions that are applicable to prior participants in the Nicor Welfare Plan include health care and life insurance benefits to eligible retired employees and include a limit on the employer share of cost for employees hired after 1982.

The Medicare Prescription Drug, Improvement and Modernization Act of 2003 provides for a prescription drug benefit under Medicare Part D, as well as a federal subsidy to sponsors of retiree health care benefit plans that provide a benefit that is at least actuarially equivalent to Medicare Part D. Prescription drug coverage for the Nicor Gas Medicare-eligible population changed effective January 1, 2013 from an employer-sponsored prescription drug plan with the Retiree Drug Subsidy to an Employer Group Waiver Plan (EGWP). The EGWP replaces the employer sponsored prescription drug plan.

We also have a separate unfunded supplemental retirement health care plan that provides health care and life insurance benefits to employees of discontinued businesses. This plan is noncontributory with defined benefits. Net plan expenses were immaterial in 2014 and 2013. The APBO associated with this plan was $2 million at December 31, 2014 and $2 million at December 31, 2013.

Assumptions

We considered a variety of factors in determining and selecting our assumptions for the discount rate at December 31. We based our discount rates separately for each plan on an above-mean yield curve provided by our actuaries that is derived from a portfolio of high quality (rated AA or better) corporate bonds with a yield higher than the regression mean curve and the equivalent annuity cash flows.

The components of our pension and welfare costs are set forth in the following table.

Dollars in millions	Pension plans 2014	2013	2012	Welfare plans 2014	2013	2012
Service cost	$24	$29	$28	$2	$3	$4
Interest cost	47	43	44	15	14	16
Expected return on plan assets	(65)	(62)	(64)	(7)	(6)	(5)
Net amortization of prior service cost	(2)	(2)	(2)	(3)	(5)	(3)
Recognized actuarial loss	22	35	34	6	8	9
Net periodic benefit cost	$26	$43	$40	$13	$14	$21
Assumptions used to determine benefit costs						
Discount rate (1)	5.0%	4.2%	4.6%	4.7%	4.0%	4.5%
Expected return on plan assets (1)	7.8%	7.8%	8.4%	7.8%	7.8%	8.5%
Rate of compensation increase (1)	3.7%	3.7%	3.7%	3.7%	3.8%	3.8%
Pension band increase (2)	2.0%	2.0%	2.0%	n/a	n/a	n/a

(1) Rates are presented on a weighted average basis.
(2) Only applicable to the Nicor Gas union employees. The pension bands for the former Nicor Plan have been updated to reflect the new negotiated rates for 2015 and 2016, of 2.0% and 0%, respectively, as indicated in the union agreement dated March 2014.

The following tables present details about our pension and welfare plans.

Dollars in millions	Pension plans 2014	2013	Welfare plans 2014	2013
Change in plan assets				
Fair value of plan assets, January 1,	$907	$837	$93	$77
Actual return on plan assets	68	134	5	16
Employee contributions	-	-	2	3
Employer contributions	1	1	17	19
Benefits paid	(70)	(65)	(19)	(23)
Medicare Part D reimbursements	-	-	1	1
Fair value of plan assets, December 31,	$906	$907	$99	$93
Change in benefit obligation				
Benefit obligation, January 1,	$960	$1,046	$326	$354
Service cost	24	29	2	3
Interest cost	47	43	15	14
Actuarial loss (gain)	137	(93)	8	(26)
Medicare Part D reimbursements	-	-	1	1
Benefits paid	(70)	(65)	(19)	(23)
Employee contributions	-	-	1	3
Benefit obligation, December 31,	$1,098	$960	$334	$326
Funded status at end of year	$(192)	$(53)	$(235)	$(233)
Amounts recognized in the Consolidated Statements of Financial Position consist of				
Long-term asset (2)	$97	$117	$-	$-
Current liability	(2)	(2)	-	-
Long-term liability	(287)	(168)	(235)	(233)
Net liability at December 31,	$(192)	$(53)	$(235)	$(233)
Accumulated benefit obligation (1)	$1,027	$902	n/a	n/a
Assumptions used to determine benefit obligations				
Discount rate	4.2%	5.0%	4.0%	4.7%
Rate of compensation increase	3.7%	3.7%	3.7%	3.7%
Pension band increase (3)	2.0%	2.0%	n/a	n/a

(1) APBO differs from the projected benefit obligation in that APBO excludes the effect of salary and wage increases.
(2) As a result of historically having multiple plans, a portion of our obligation is in an asset position.
(3) Only applicable to the Nicor Gas union employees.

A portion of the net benefit cost or credit related to these plans has been capitalized as a cost of constructing gas distribution facilities and the remainder is included in operation and maintenance expense.

Assumptions used to determine the health care benefit cost for the AGL Welfare Plan were as follows:

	2014	2013
Health care cost trend rate assumed for next year	8.1%	8.4%
Ultimate rate to which the cost trend rate is assumed to decline	4.5%	4.5%
Year that reaches ultimate trend rate	2030	2030

Assumed health care cost trend rates can have a significant effect on the amounts reported for the health care plans. A one percentage point change in the assumed health care cost trend rates for the AGL Welfare Plan would have the following effects on our benefit obligation and there was no effect on our service and interest cost.

In millions	Effect on benefit obligation
1% Health care cost trend rate increase	$15
1% Health care cost trend rate decrease	(13)

As a result of a cap on expected cost for the AGL Welfare Plan, a one percentage point increase or decrease in the assumed health care trend does not materially affect the Plan's periodic benefit cost or accumulated benefit obligation.

The following table presents the amounts not yet reflected in net periodic benefit cost and included in net regulatory assets and accumulated OCI as of December 31, 2014 and 2013:

	Net regulatory assets		Accumulated OCI		Total	
In millions	Pension plans	Welfare plans	Pension plans	Welfare plans	Pension plans	Welfare plans
December 31, 2014:						
Prior service credit	$-	$(18)	$(6)	$-	$(6)	$(18)
Net loss	76	57	307	36	383	93
Total	$76	$39	$301	$36	$377	$75
December 31, 2013:						
Prior service credit	$-	$(20)	$(9)	$-	$(9)	$(20)
Net loss	61	60	210	30	271	90
Total	$61	$40	$201	$30	$262	$70

The 2015 estimated amortizations out of regulatory assets or accumulated OCI for these plans are set forth in the following table.

	Net regulatory assets		Accumulated OCI		Total	
In millions	Pension plans	Welfare plans	Pension plans	Welfare plans	Pension plans	Welfare plans
Amortization of prior service credit	$-	$(3)	$(2)	$-	$(2)	$(3)
Amortization of net loss	9	3	20	2	29	5

We recorded regulatory assets for anticipated future cost recoveries of $122 million and $108 million as of December 31, 2014 and 2013, respectively.

The following table presents the gross benefit payments expected for the years ended December 31, 2015 through 2024 for our pension and welfare plans. There will be benefit payments under these plans beyond 2024.

In millions	Pension plans	Welfare plans
2015	$61	$19
2016	64	20
2017	67	20
2018	70	21
2019	72	22
2020-2024	374	115

Contributions

Our employees generally do not contribute to our pension and welfare plans; however, Nicor Gas and pre-65 AGL retirees make nominal contributions to their health care plan. We fund the qualified pension plans by contributing at least the minimum amount required by applicable regulations and as recommended by our actuary. However, we may also contribute in excess of the minimum required amount. As required by The Pension Protection Act of 2006 (the Act), we calculate the minimum amount of funding using the traditional unit credit cost method.

The Act contained new funding requirements for single-employer defined benefit pension plans and established a 100% funding target (over a 7-year amortization period) for plan years beginning after December 31, 2007. In 2014 and 2013, we had no required contributions to the merged AGL Plan.

Employee Savings Plan Benefits

We sponsor defined contribution retirement benefit plans that allow eligible participants to make contributions to their accounts up to specified limits. Under these plans, our matching contributions to participant accounts were $17 million in 2014, $14 million in 2013 and $12 million in 2012.

Note 7 – Stock-Based Compensation

General

The AGL Resources Inc. Omnibus Performance Incentive Plan, as amended and restated, and the Long-Term Incentive Plan (1999) provide for the grant of incentive and nonqualified stock options, stock appreciation rights, shares of restricted stock, restricted stock units, performance cash awards and other stock-based awards to officers and key employees. Under the Omnibus Performance Incentive Plan, as of December 31, 2014, the number of shares issuable upon exercise of outstanding stock options, warrants and rights is 587,292 shares. Under the Long-Term Incentive Plan (1999) as of December 31, 2014, the number of shares issuable upon exercise of outstanding stock options, warrants and rights is 436,400 shares. The maximum number of shares available for future issuance under the Omnibus Performance Incentive Plan is 3,962,335 shares, which includes 1,551,040 shares previously available under the Nicor Inc. 2006 Long-Term Incentive Plan, as amended, pursuant to NYSE rules. No further grants will be made from the Long-Term Incentive Plan (1999) except for reload options that may be granted pursuant to the terms of certain outstanding options.

Accounting Treatment and Compensation Expense

We measure and recognize stock-based compensation expense for our stock-based awards over the requisite service period in our financial statements based on the estimated fair value at the date of grant for our stock-based awards using the modified prospective method. These stock awards include:

- stock options;
- stock and restricted stock awards; and
- performance units (restricted stock units, performance share units and performance cash units).

Performance-based stock awards and performance units contain market and performance conditions. Stock options, restricted stock awards and performance units also contain a service condition.

We estimate forfeitures over the requisite service period when recognizing compensation expense. These estimates are adjusted to the extent that actual forfeitures differ, or are expected to materially differ, from such estimates. The authoritative guidance requires excess tax benefits to be reported as a financing cash inflow. The difference between the proceeds from the exercise of our stock-based awards and the par value of the stock is recorded within additional paid-in capital.

We have granted incentive and nonqualified stock options with a strike price equal to the fair market value on the date of the grant. Fair market value is defined under the terms of the applicable plans as the closing price per share of AGL Resources common stock for the trading day immediately preceding the grant date, as reported in *The Wall Street Journal*. Stock options generally have a three-year vesting period.

The following table provides additional information related to our cash and stock-based compensation awards.

In millions	**2014**	**2013**	**2012**
Compensation costs (1)	$24	$22	$9
Income tax benefits (1)	1	1	1
Excess tax benefits (2)	-	-	1

(1) Recorded in our Consolidated Statements of Income.
(2) Recorded in our Consolidated Statements of Financial Position.

Incentive and Nonqualified Stock Options

The stock options we granted generally expire 10 years after the date of grant. Participants realize value from option grants only to the extent that the fair market value of our common stock on the date of exercise of the option exceeds the fair market value of the common stock on the date of the grant.

As of December 31, 2014 and 2013, we had no unrecognized compensation costs related to stock options. Cash received from stock option exercises for 2014 and 2013 were $9 million and $21 million, respectively, and the income tax benefit from stock option exercises was immaterial for both years. The following tables summarize activity related to stock options for key employees and non-employee directors. As used in the table, intrinsic value for options means the difference between the current market value and the grant price.

Stock Options

	Number of options	Weighted average exercise price	Weighted average remaining life (in years)	Aggregate intrinsic value (in millions)
Outstanding - December 31, 2011	1,823,154	$35.61		
Granted	-	-		
Exercised	(234,844)	32.07		
Forfeited	(59,720)	37.34		
Outstanding - December 31, 2012(1)	1,528,590	$36.09		
Granted	-	-		
Exercised	(617,358)	35.37		
Forfeited	(12,500)	38.36		
Outstanding - December 31, 2013 (1)	898,732	$36.55	3.0	$10
Granted	-	-	-	
Exercised	(267,182)	36.84	1.7	
Forfeited	(4,000)	39.71	2.7	
Outstanding - December 31, 2014 (1) (2)	627,550	$36.41	2.2	$11

(1) All options outstanding at December 31, 2014, 2013 and 2012 were exercisable.

(2) The range of exercise prices for the options outstanding at December 31, 2014 was $31.09 to $43.54.

We measure compensation cost related to stock options based on the fair value of these awards at their date of grant using the Black-Scholes option-pricing model. There were no options granted in 2014, 2013 and 2012. We use shares purchased under our 2006 share repurchase program to satisfy exercises to the extent that repurchased shares are available. Otherwise, we issue new shares from our authorized common stock.

Performance Units

In general, a performance unit is an award of the right to receive (i) an equal number of shares of our common stock, which we refer to as a restricted stock unit or (ii) cash, subject to the achievement of certain pre-established performance criteria, which we refer to as a performance cash unit. Performance units are subject to certain transfer restrictions and forfeiture upon termination of employment. The compensation cost of restricted stock unit awards is equal to the grant date fair value of the awards, recognized over the requisite service period, determined according to the authoritative guidance related to stock compensation. The compensation cost of performance cash unit awards is equal to the grant date fair value of the awards measured against progress towards the performance measure, recognized over the requisite service period. No other assumptions are used to value these awards.

Restricted Stock Units In general, a restricted stock unit is an award that represents the opportunity to receive a specified number of shares of our common stock, subject to the achievement of certain pre-established performance criteria. In 2014, we granted 44,272 restricted stock units (including dividends) to certain employees, all of which were outstanding as of December 31, 2014. These restricted stock units had a performance measurement period that ended December 31, 2014. The performance measure, which related to earnings before interest, income tax, depreciation and amortization, was met. As such, the related restricted stock awards will occur in 2015 and are subject to a three year service condition.

Performance Share Unit Awards A performance share unit award represents the opportunity to receive cash and shares subject to the achievement of certain pre-established performance criteria. In 2012, 2013 and 2014, we granted performance share unit awards to certain officers. These awards have a performance measure that relates to the company's relative total shareholder return relative to a group of peer companies. The recorded liability and maximum potential liability related to the 2014, 2013 and 2012 grants are as follows:

In millions	Measurement period end date	Fair value accrued at December 31, 2014	Maximum aggregate payout
Granted in 2012	December 31, 2014 (1)	$8	$20
Granted in 2013	December 31, 2015	7	21
Granted in 2014	December 31, 2016	4	24

(1) The actual liability is $8 million, and the maximum amount that could have been paid was $20 million.

Stock and Restricted Stock Awards

The compensation cost of both stock awards and restricted stock awards is equal to the grant date fair value of the awards, recognized over the requisite service period. No other assumptions are used to value the awards. We refer to restricted stock as an award of our common stock that is subject to time-based vesting or achievement of performance measures. Prior to vesting, restricted stock awards are subject to certain transfer restrictions and forfeiture upon termination of employment.

Stock Awards - ***Non-Employee Directors*** Non-employee director compensation may be paid in shares of our common stock in connection with initial election, the annual retainer, and chair retainers, as applicable. Stock awards for non-employee directors are 100% vested and non-forfeitable as of the date of grant. During 2014, we issued 21,903 shares with a weighted average fair value of $52.97 to our non-employee directors.

Restricted Stock Awards - Employees The following table summarizes the restricted stock awards activity for our employees during the last three years.

	Shares of restricted stock	Weighted average remaining vesting period (in years)	Weighted average fair value
Outstanding - December 31, 2011 (1)	477,354		$34.40
Issued	268,840		40.08
Forfeited	(28,829)		39.07
Vested	(214,274)		36.45
Outstanding - December 31, 2012 (1)	503,091		$39.44
Issued	175,935		42.41
Forfeited	(33,352)		40.64
Vested	(204,421)		38.71
Outstanding - December 31, 2013 (1)	441,253	1.8	$40.82
Issued	262,235	4.4	47.03
Forfeited	(14,895)	2.4	43.41
Vested	(225,683)	-	42.31
Outstanding - December 31, 2014 (1)	462,910	1.8	$43.54

(1) Subject to restriction.

Employee Stock Purchase Plan (ESPP)

We have a nonqualified, broad based ESPP for all eligible employees. As of December 31, 2014, there were 422,564 shares available for future issuance under this plan. Employees may purchase shares of our common stock in quarterly intervals at 85% of fair market value, and we record an expense for the 15% purchase price discount. Employee ESPP contributions may not exceed $25,000 per employee during any calendar year.

	2014	2013	2012
Shares purchased on the open market	100,199	97,734	103,589
Average per-share purchase price	$51.60	$42.96	$38.96
Total purchase price discount	$739,598	$628,358	$591,855

Note 8 - Debt and Credit Facilities

Our financing activities, including long-term and short-term debt, are subject to customary approval or review by state and federal regulatory bodies. Our wholly owned subsidiary, AGL Capital, was established to provide for our ongoing financing needs through a commercial paper program, the issuance of various debt and hybrid securities and other financing arrangements. We fully and unconditionally guarantee all debt issued by AGL Capital. Nicor Gas is not permitted by regulation to make loans to affiliates or utilize AGL Capital for its financing needs. The following table provides maturity dates, year-to-date weighted average interest rates and amounts outstanding for our various debt securities and facilities that are included in our Consolidated Statements of Financial Position.

		December 31, 2014		December 31, 2013	
Dollars in millions	Year(s) due	Weighted average interest rate (1)	Outstanding	Weighted average interest rate (1)	Outstanding
Short-term debt					
Commercial paper - AGL Capital (2)	2015	0.3%	$590	0.4%	$857
Commercial paper - Nicor Gas (2)	2015	0.2	585	0.3	314
Total short-term debt		0.3%	$1,175	0.4%	$1,171
Current portion of long-term debt	2015	5.0%	$200	-%	$-
Long-term debt - excluding current portion					
Senior notes	2016-2043	5.0%	$2,625	5.0%	$2,825
First mortgage bonds	2016-2038	5.6	500	5.6	500
Gas facility revenue bonds	2022-2033	0.9	200	1.0	200
Medium-term notes	2017-2027	7.8	181	7.8	181
Total principal long-term debt		4.9%	$3,506	4.9%	$3,706
Fair value adjustment of long-term debt (3)	2016-2038	n/a	80	n/a	91
Unamortized debt premium, net	n/a	n/a	16	n/a	16
Total non-principal long-term debt		n/a	96	n/a	107
Total long-term debt			$3,602		$3,813
Total debt			$4,977		$4,984

(1) Interest rates are calculated based on the daily weighted average balance outstanding for the 12 months ended December 31, 2014 and 2013.
(2) As of December 31, 2014, the effective interest rates on our commercial paper borrowings were 0.5% for AGL Capital and 0.4% for Nicor Gas.
(3) See Note 4 for additional information on our fair value measurements.

Short-term Debt

Our short-term debt at December 31, 2014 and 2013 was comprised of borrowings under our commercial paper programs.

Commercial Paper Programs We maintain commercial paper programs at AGL Capital and at Nicor Gas that consist of short-term, unsecured promissory notes used in conjunction with cash from operations to fund our seasonal working capital requirements. Working capital needs fluctuate during the year and are highest during the injection period in advance of the Heating Season. The Nicor Gas commercial paper program supports working capital needs at Nicor Gas, while all of our other subsidiaries and SouthStar participate in the AGL Capital commercial paper program. During 2014, our commercial paper maturities ranged from 1 to 108 days, and at December 31, 2014, remaining terms to maturity ranged from 2 to 70 days. During 2014, total borrowings and repayments netted to a borrowing of $4 million. For commercial paper issuances with original maturities over three months, borrowings and repayments were $50 million and $195 million, respectively. During 2014, we utilized a portion of the approximately $225 million in proceeds and distributions from the sale of Tropical Shipping to reduce our commercial paper borrowings.

Credit Facilities At December 31, 2014 and 2013, there were no outstanding borrowings under either the AGL Capital or Nicor Gas credit facilities. In 2013, the AGL Credit Facility and Nicor Gas Credit Facility maturity dates were extended to November 10, 2017 and December 15, 2017, respectively. The terms, conditions and pricing under the agreements remain unchanged.

Current Portion of Long-term Debt The current portion of our long-term debt at December 31, 2014 is composed of the portion of our long-term debt due within the next 12 months.

Long-term Debt

Our long-term debt at December 31, 2014 and 2013 consisted of medium-term notes: Series A, Series B, and Series C, which we issued under an indenture dated December 1, 1989; senior notes; first mortgage bonds; and gas facility revenue bonds. Some of these issuances were completed in the private placement market. In determining that those specific bonds qualify for exemption from registration under Section 4(2) of the Securities Act of 1933, we relied on the facts that the bonds were offered only to a limited number of large institutional investors and each institutional investor that purchased the bonds represented that it was purchasing the bonds for its own account and not with a view to distribute them. We fully and unconditionally guarantee all of our senior notes and gas facility revenue bonds. Additionally, substantially all of Nicor Gas' properties are subject to the lien of the indenture securing its first mortgage bonds.

The majority of our long-term debt matures after fiscal year 2019. The annual maturities of our long-term debt for the next five years and thereafter are as follows:

Year	Amount (in millions)
2015	$200
2016	545
2017	22
2018	155
2019	350
Thereafter	2,434
Total	$3,706

Senior Notes There were no senior note issuances in 2014; however, during the fourth quarter of 2014, $120 million of senior notes that were issued to help fund the Nicor merger converted from a 1.9% fixed rate to a LIBOR-based floating rate. In 2013, we issued $500 million in 30-year senior notes with a fixed interest rate of 4.4%. The net proceeds were used to repay a portion of AGL Capital's commercial paper.

On January 23, 2015, we executed $800 million in notional value of 10 year and 30 year fixed-rate forward-starting interest rate swaps to hedge potential interest rate volatility prior to anticipated issuances of senior notes during 2015 and 2016. These debt issuances will be used to reduce our commercial paper for the amount that was borrowed to repay our senior notes that matured in January 2015 and to fund upcoming debt maturities as well as capital expenditures associated with increased utility investment and construction of our new pipeline projects. We have designated the forward-starting interest rate swaps, which will be settled on the debt issuance dates, as cash flow hedges.

First Mortgage Bonds We acquired the first mortgage bonds of Nicor Gas, which were issued through the public and private placement markets, as a result of the 2011 merger.

Gas Facility Revenue Bonds We are party to a series of loan agreements with the New Jersey Economic Development Authority and Brevard County, Florida under which a series of gas facility revenue bonds has been issued. These revenue bonds are issued by state agencies or counties to investors, and proceeds from the issuance are then loaned to us.

During 2013, we refinanced $200 million of our outstanding tax-exempt gas facility revenue bonds, which involved a combination of the issuance of $60 million of refunding bonds to, and the purchase of $140 million of existing bonds by, a syndicate of banks. We had no cash receipts or payments in connection with the refinancing. The letters of credit providing credit support for the outstanding revenue bonds along with other related agreements were terminated as a result of the refinancing.

Financial and Non-Financial Covenants

The AGL Credit Facility and the Nicor Gas Credit Facility each include a financial covenant that requires us to maintain a ratio of total debt to total capitalization of no more than 70% at the end of any fiscal month; however, our goal is to maintain these ratios at levels between 50% and 60%. These ratios, as calculated in accordance with the debt covenants, include standby letters of credit and surety bonds and exclude accumulated OCI items related to non-cash pension adjustments, welfare benefits liability adjustments and accounting adjustments for cash flow hedges. Adjusting for these items, the following table contains our debt-to-capitalization ratios as of December 31, which are below the maximum allowed.

	AGL Resources		Nicor Gas	
	2014	2013	2014	2013
Debt-to-capitalization ratio	55%	57%	62%	55%

The credit facilities contain certain non-financial covenants that, among other things, restrict liens and encumbrances, loans and investments, acquisitions, dividends and other restricted payments, asset dispositions, mergers and consolidations and other matters customarily restricted in such agreements.

Default Provisions

Our credit facilities and other financial obligations include provisions that, if not complied with, could require early payment or similar actions. The most important default events include the following:

- a maximum leverage ratio
- insolvency events and/or nonpayment of scheduled principal or interest payments
- acceleration of other financial obligations
- change of control provisions

We have no triggering events in our debt instruments that are tied to changes in our specified credit ratings or our stock price and have not entered into any transaction that requires us to issue equity based on credit ratings or other triggering events. We were in compliance with all existing debt provisions and covenants, both financial and non-financial, as of December 31, 2014 and 2013.

Note 9 - Equity

Treasury Shares

Our Board of Directors authorized us to purchase up to 8 million treasury shares through our repurchase plan, which expired on January 31, 2011. This plan was used to offset shares issued under our employee and non-employee director incentive compensation plans and our dividend reinvestment and stock purchase plans. Stock purchases under this plan were made in the open market or in private transactions at times and in amounts that we deemed appropriate. We held the purchased shares as treasury shares and accounted for them using the cost method. We purchased no treasury shares in 2014 or 2013.

Preferred Securities

At December 31, 2014 and 2013, we had 10 million shares of authorized, unissued Class A junior participating preferred stock, no par value, and 10 million shares of authorized, unissued preferred stock, no par value.

Dividends

Our common shareholders may receive dividends when declared at the discretion of our Board of Directors. Dividends may be paid in cash, stock or other form of payment, and payment of future dividends will depend on our future earnings, cash flow, financial requirements and other factors.

Additionally, we derive a substantial portion of our consolidated assets, earnings and cash flow from the operation of regulated utility subsidiaries, whose legal authority to pay dividends or make other distributions to us is subject to regulation. As with most other companies, the payment of dividends is restricted by laws in the states where we conduct business. In certain cases, our ability to pay dividends to our common shareholders is limited by (i) our ability to pay our debts as they become due in the usual course of business and satisfy our obligations under certain financing agreements, including our debt-to-capitalization covenant, (ii) our ability to maintain total assets below total liabilities, and (iii) our ability to satisfy our obligations to any preferred shareholders.

Accumulated Other Comprehensive Loss

Our share of comprehensive income includes net income plus OCI (loss), which includes changes in fair value of certain derivatives designated as cash flow hedges, certain changes in pension and welfare benefit plans and reclassifications for amounts included in net income less net income, and OCI attributable to the noncontrolling interest. For more information on our derivative instruments, see Note 5. For more information on our pensions and retirement benefit obligations, see Note 6. Our OCI (loss) amounts are aggregated within accumulated other comprehensive loss on our Consolidated Statement of Financial Position. The following table provides changes in the components of our accumulated other comprehensive loss balances net of the related income tax effects.

In millions (1)	Cash flow hedges	Retirement benefit plans	Total
Balance as of December 31, 2011	$(7)	$(210)	$(217)
Other comprehensive income (loss)	4	(5)	(1)
Balance as of December 31, 2012	(3)	(215)	(218)
Other comprehensive income, before reclassifications	1	66	67
Amounts reclassified from accumulated other comprehensive loss	3	12	15
Balance as of December 31, 2013	1	(137)	(136)
Other comprehensive loss, before reclassifications	(6)	(71)	(77)
Amounts reclassified from accumulated other comprehensive loss	(1)	8	7
Balance as of December 31, 2014	$(6)	$(200)	$(206)

(1) All amounts are net of income taxes. Amounts in parentheses indicate debits to accumulated other comprehensive loss.

The following table provides details of the reclassifications out of accumulated other comprehensive loss for the years ended December 31, 2014 and 2013 and the ultimate unfavorable impact on net income.

In millions (1)	December 31, 2014	December 31, 2013
Cash flow hedges		
Cost of goods sold (natural gas contracts)	$4	$(1)
Operation and maintenance expense (natural gas contracts)	1	-
Interest expense (interest rate contracts)	-	(3)
Total before income tax	5	(4)
Income tax (expense)/benefit	(2)	1
Cash flow hedges net of income tax	3	(3)
Less noncontrolling interest	2	-
Total cash flow hedges net of income tax	1	(3)
Retirement benefit plans		
Operation and maintenance expense (actuarial losses)(2)	(15)	(25)
Operation and maintenance expense (prior service credits) (2)	2	5
Total before income tax	(13)	(20)
Income tax benefit	5	8
Total retirement benefit plans	(8)	(12)
Total reclassification	$(7)	$(15)

(1) Amounts in parentheses indicate reductions to our net income and to accumulated other comprehensive loss. Except for retirement benefit plan amounts, the net income impacts are immediate.
(2) Amortization of these accumulated other comprehensive loss components is included in the computation of net periodic benefit cost. See Note 6 for additional details about net periodic benefit cost.

Note 10 - Non-Wholly Owned Entities

Variable Interest Entities

On a quarterly basis, we evaluate our variable interests in other entities, primarily ownership interests, to determine if they represent a variable interest entity (VIE) as defined by the authoritative accounting guidance on consolidation, and if so, which party is the primary beneficiary. We have determined that SouthStar, a joint venture owned by us and Piedmont, is our only VIE for which we are the primary beneficiary. This requires us to consolidate its assets, liabilities and Statements of Income. Our conclusion that SouthStar is a VIE resulted from our equal voting rights with Piedmont not being proportional to our economic obligation to absorb 85% of losses or residual returns from the joint venture. We account for our ownership of SouthStar in accordance with authoritative accounting guidance, which is described within Note 2.

SouthStar markets natural gas and related services under the trade name Georgia Natural Gas to customers in Georgia, and under various other trade names to customers in Illinois, Ohio, Florida, Maryland, Michigan and New York. Following are additional factors we considered in determining that we have the power to direct SouthStar’s activities that most significantly impact its performance.

Operations

Our wholly owned subsidiaries Nicor Gas and Atlanta Gas Light provide the following services, which affect SouthStar’s operations:

- meter reading for SouthStar’s customers in Illinois and Georgia
- maintenance and expansion of the natural gas infrastructure in Illinois and Georgia

- assignment of storage and transportation capacity used in delivering natural gas to SouthStar's customers

Liquidity and capital resources

- guarantees of SouthStar's activities with, and its credit exposure to, its counterparties and to certain natural gas suppliers in support of SouthStar's payment obligations
- support of SouthStar's daily cash management activities and assistance ensuring SouthStar has adequate liquidity and working capital resources by allowing SouthStar to utilize the AGL Capital commercial paper program for its liquidity and working capital requirements in accordance with our services agreement

Back office functions

- accounting, information technology, legal, human resources, credit and internal controls services in accordance with our services agreement

SouthStar's earnings are allocated entirely in accordance with the ownership interests and are seasonal in nature, with the majority occurring during the first and fourth quarters of each year. SouthStar's current assets consist primarily of natural gas inventory, derivative instruments and receivables from its customers. SouthStar also has receivables from us due to its participation in AGL Capital's commercial paper program. SouthStar's current liabilities consist primarily of accrued natural gas costs, other accrued expenses, customer deposits, derivative instruments and payables to us from its participation in AGL Capital's commercial paper program.

SouthStar's contractual commitments and obligations, including operating leases and agreements with third-party providers, do not contain terms that would trigger material financial obligations in the event that such contracts were terminated. As a result, our maximum exposure to a loss at SouthStar is considered to be immaterial. SouthStar's creditors have no recourse to our general credit beyond our corporate guarantees that we have provided to SouthStar's counterparties and natural gas suppliers. We have provided no financial or other support that was not previously contractually required. With the exception of our corporate guarantees and the aforementioned limited protections related to goodwill and intangible assets, we have not entered into any arrangements that could require us to provide financial support to SouthStar.

Price and volume fluctuations of SouthStar's natural gas inventories can cause significant variations in our working capital and cash flow from operations. Changes in our operating cash flows are also attributable to SouthStar's working capital changes resulting from the impact of weather, the timing of customer collections, payments for natural gas purchases and cash collateral amounts that SouthStar maintains to facilitate its derivative instruments.

Cash flows used in our investing activities include capital expenditures for SouthStar for the year ended December 31, of $7 million for 2014, $3 million for 2013 and $1 million for 2012. Cash flows used in our financing activities include SouthStar's distribution to Piedmont for its portion of SouthStar's annual earnings from the previous year. Generally, this distribution occurs in the first quarter of each fiscal year. For the years ended December 31, 2014, 2013 and 2012, SouthStar distributed $17 million, $17 million and $14 million to Piedmont, respectively.

On September 1, 2013, we contributed to SouthStar our Illinois retail energy businesses with approximately 108,000 customers. Additionally, Piedmont contributed to SouthStar $22.5 million in cash to maintain its 15% ownership in the joint venture. In connection with the contribution of our Illinois retail energy businesses, we provided certain limited protections to Piedmont regarding the value of the contributed businesses related to goodwill and other intangible assets. Piedmont's contribution is reflected as an increase to the noncontrolling interest on our Consolidated Statements of Financial Position and a financing activity on our Consolidated Statements of Cash Flows. These funds were used to reduce our commercial paper borrowings. The following table provides additional information on SouthStar's assets and liabilities as of December 31, which are consolidated within our Consolidated Statements of Financial Position.

	2014			2013		
In millions	**Consolidated**	**SouthStar** (1)	**%** (2)	**Consolidated**	**SouthStar** (1)	**%** (2)
Current assets	$2,890	$238	8%	$2,895	$264	9%
Goodwill and other intangible assets	1,952	125	6	1,972	133	7
Long-term assets and other deferred debits	10,067	17	-	9,683	13	-
Total assets	$14,909	$380	3%	$14,550	$410	3%
Current liabilities	$3,219	$71	2%	$3,118	$95	3%
Long-term liabilities and other deferred credits	7,862	-	-	7,819	-	-
Total liabilities	11,081	71	1	10,937	95	1
Equity	3,828	309	8	3,613	315	9
Total liabilities and equity	$14,909	$380	3%	$14,550	$410	3%

(1) These amounts reflect information for SouthStar and exclude intercompany eliminations and the balances of our wholly owned subsidiary with an 85% ownership interest in SouthStar.
(2) SouthStar's percentage of the amount on our Consolidated Statements of Financial Position.

The following table provides information on SouthStar's operating revenues and operating expenses for the years ended December 31, which are consolidated within our Consolidated Statements of Income.

In millions	2014	2013
Operating revenues	$866	$687
Operating expenses		
Cost of goods sold	645	491
Operation and maintenance	87	72
Depreciation and amortization	11	7
Taxes other than income taxes	1	1
Total operating expenses	744	571
Operating income	$122	$116

Equity Method Investments

Triton We have an investment in Triton, a cargo container leasing company, which is included within our "other" non-reportable segment. Container equipment that is acquired by Triton is accounted for in tranches as defined in Triton's operating agreement, and investors make capital contributions to Triton to invest in each of the tranches. As of December 31, 2014, we had invested in seven tranches established by Triton.

Horizon Pipeline We own a 50% interest in a joint venture with Natural Gas Pipeline Company of America that is regulated by the FERC and is included within our midstream operations segment. Horizon Pipeline operates an approximate 70-mile natural gas pipeline from Joliet, Illinois to near the Wisconsin/Illinois border. Nicor Gas typically contracts for 70% to 80% of the total capacity.

Sawgrass Storage We own a 50% interest in Sawgrass Storage, a joint venture between us and a privately held energy exploration and production company for the development of an underground natural gas storage facility in Louisiana with 30 Bcf of working gas capacity and is included within our midstream operations segment. In December 2013, the joint venture decided to terminate the development of this facility and recognized an impairment loss of $16 million, which reduced the carrying amount of the joint venture's long-lived assets to fair value. Consequently, we recognized our 50% interest in the loss during the fourth quarter of 2013, resulting in an $8 million ($5 million net of tax) charge to operating income.

The carrying amounts of our investments that are accounted for under the equity method at December 31 were as follows:

In millions	2014	2013
Triton	$62	$70
Horizon Pipeline	14	15
Other (1)	4	1
Total	$80	$86

(1) Includes our current investment in PennEast Pipeline of $1 million and Atlantic Coast pipeline of $2 million as of December 31, 2014.

Income from our equity method investments is classified as other income in our Consolidated Statements of Income. The following table provides the income from our equity method investments for the years ended December 31. The majority of our net equity investment income is attributable to our investment in Triton. For more information on our other income, see Note 2. During 2014 and 2013, we received distributions of $17 million from our equity investees.

In millions	2014	2013	2012
Triton	$6	$9	$11
Horizon Pipeline	2	2	2
Other	-	(8)	-
Total	$8	$3	$13

In 2014, we entered into two interstate pipeline joint ventures within our midstream operations segment as described below. Our investments in these joint ventures were immaterial in 2014. The capacity from these joint ventures will further enhance system reliability as well as provide access to a more diverse supply of natural gas. We have concluded that, at present, both are VIEs. We are not considered the primary beneficiary and, therefore, we have not consolidated the financial statements for these joint ventures in our consolidated financial statements because we share in the ability to direct the activities that most significantly impact their economic performance with their other member companies. We have accounted for our investment in these joint ventures using the equity method of accounting, and we have classified the investments in other noncurrent assets in our Consolidated Statements of Financial Position.

PennEast Pipeline On August 11, 2014, we entered into a joint venture in which we hold a 20% ownership interest to develop and operate a 108-mile natural gas pipeline between New Jersey and Pennsylvania with initial transportation capacity of 1 Bcf per day, which may be expanded to 1.2 Bcf per day. Subject to FERC approval, construction is expected to begin in the first quarter of 2017 with a targeted completion date in the fourth quarter of 2017.

Atlantic Coast Pipeline On September 2, 2014, we entered into a joint venture in which we hold a 5% ownership interest to develop and operate a 550-mile natural gas pipeline in North Carolina, Virginia, and West Virginia with initial transportation capacity of 1.5 Bcf per day, which may be expanded to 2.0 Bcf per day. Subject to FERC approval, construction is expected to begin in the second half of 2016 with a targeted completion date in the second half of 2018.

Note 11 - Commitments, Guarantees and Contingencies

We have incurred various contractual obligations and financial commitments in the normal course of our operating and financing activities that are reasonably likely to have a material effect on liquidity or the availability of capital resources. Contractual obligations include future cash payments required under existing contractual arrangements, such as debt and lease agreements. These obligations may result from both general financing activities and from commercial arrangements that are directly supported by related revenue-producing activities. In 2014, we entered into several unconditional purchase obligations in the ordinary course of business. These include capacity and supply agreements related to the Dalton Pipeline, PennEast Pipeline, Atlantic Coast Pipeline and wholesale services, which are reflected in the table below. The following table illustrates our expected future contractual payments under our obligations and other commitments as of December 31, 2014.

In millions	**Total**	**2015**	**2016**	**2017**	**2018**	**2019**	**2020 & thereafter**
Recorded contractual obligations:							
Long-term debt (1)	$3,706	$200	$545	$22	$155	$350	$2,434
Short-term debt	1,175	1,175	-	-	-	-	-
Environmental remediation liabilities (2)	414	87	93	55	47	37	95
Total	$5,295	$1,462	$638	$77	$202	$387	$2,529
Unrecorded contractual obligations and commitments (3) (8):							
Pipeline charges, storage capacity and gas supply (4)	$4,303	$805	$457	$280	$234	$222	$2,305
Interest charges (5)	2,762	179	171	147	146	141	1,978
Operating leases (6)	188	33	31	24	17	18	65
Asset management agreements (7)	32	9	10	7	4	2	-
Standby letters of credit, performance/surety bonds (8)	50	49	1	-	-	-	-
Other	8	3	3	1	1	-	-
Total	$7,343	$1,078	$673	$459	$402	$383	$4,348

(1) Excludes the $75 million step up to fair value of first mortgage bonds, $16 million unamortized debt premium and $5 million interest rate swaps fair value adjustment. Includes our current portion of long-term debt of $200 million, which matured in January 2015.
(2) Includes charges recoverable through base rates or rate rider mechanisms.
(3) In accordance with GAAP, these items are not reflected in our Consolidated Statements of Financial Position.
(4) Includes charges recoverable through a natural gas cost recovery mechanism or alternatively billed to marketers and demand charges associated with Sequent. The gas supply balance includes amounts for Nicor Gas and SouthStar gas commodity purchase commitments of 51 Bcf at floating gas prices calculated using forward natural gas prices as of December 31, 2014, and is valued at $142 million. As we do for other subsidiaries, we provide guarantees to certain gas suppliers for SouthStar in support of payment obligations.
(5) Floating rate interest charges are calculated based on the interest rate as of December 31, 2014 and the maturity date of the underlying debt instrument. As of December 31, 2014, we have $53 million of accrued interest on our Consolidated Statements of Financial Position that will be paid in 2015.
(6) We have certain operating leases with provisions for step rent or escalation payments and certain lease concessions. We account for these leases by recognizing the future minimum lease payments on a straight-line basis over the respective minimum lease terms, in accordance with GAAP. However, this lease accounting treatment does not affect the future annual operating lease cash obligations as shown herein. Our operating leases are primarily for real estate.
(7) Represent fixed-fee minimum payments for Sequent's affiliated asset management agreements.
(8) We provide guarantees to certain municipalities and other agencies and certain gas suppliers of SouthStar in support of payment obligations.

Contingencies and Guarantees

Contingent financial commitments, such as financial guarantees, represent obligations that become payable only if certain predefined events occur. We have certain subsidiaries that enter into various financial and performance guarantees and indemnities providing assurance to third parties. We believe the likelihood of payment under our guarantees is remote. No liability has been recorded for such guarantees and indemnifications as the fair value was inconsequential at inception.

Financial guarantees AGL Equipment Leasing Inc. (AEL), a wholly owned subsidiary, holds our interest in Triton and has an obligation to restore to zero any deficit in its equity account for income tax purposes in the unlikely event that Triton is liquidated and a deficit balance remains. This obligation was not impacted by the 2014 sale of Tropical Shipping and continues for the life of the Triton partnerships. Any payment is effectively limited to the net assets of AEL, which were less than $1 million at December 31, 2014. We believe the likelihood of any such payment by AEL is remote and as such no liability has been recorded for this obligation.

Indemnities In certain instances, we have undertaken to indemnify current property owners and others against costs associated with the effects and/or remediation of contaminated sites for which we may be responsible under applicable federal or state environmental laws, generally with no limitation as to the amount. These indemnifications relate primarily to ongoing coal tar cleanup, as discussed in Environmental Matters. We believe that the likelihood of payment under our other environmental indemnifications is remote. No liability has been recorded for such indemnifications as the fair value was inconsequential at inception.

Regulatory Matters

In December 2012, Atlanta Gas Light filed a petition with the Georgia Commission for approval to resolve a volumetric imbalance of natural gas related to Atlanta Gas Light's use of retained storage assets to operationally balance the system for the benefit of the natural gas market. In September 2014, we filed a stipulation that was entered between us, staff of the Georgia Commission and several Marketers that included a resolution of the 4.6 Bcf imbalance over a five-year period from January 1, 2015 through December 31, 2019. The Georgia Commission approved the stipulation in December 2014. Over the five-year period, discretionary funds available to the Universal Service Fund, which is controlled by the Georgia Commission, will be used to resolve 25% of the imbalance, or approximately 1.15 Bcf of natural gas. Atlanta Gas Light is obligated to resolve 25% and we have recorded a reserve in our Consolidated Statements of Financial Position representing the future estimated cost to purchase the approximately 1.15 Bcf of natural gas. The cost to resolve the remaining difference of approximately 2.3 Bcf of natural gas will be recovered from all certificated Marketers through charges for system retained storage gas as it is used by the certificated Marketers.

On August 7, 2014, staff of the Illinois Commission and the Citizens Utility Board (CUB) filed testimony in the 2003 gas cost prudence review disputing certain gas loan transactions offered by Nicor Gas under its Chicago Hub services requesting refunds of $18 million and $22 million, respectively. We filed surrebuttal testimony in December 2014 in this proceeding disputing that any refund is due, as Nicor Gas was authorized to enter into these transactions and revenues associated with such transactions reduced rate payers' costs as either credits to the purchased gas adjustment (PGA) or reductions to base rates consistent with then-current Illinois Commission orders governing these activities. We believe these claims engage in hindsight speculation, which is expressly prohibited in a prudence review examination, and we intend to vigorously defend against these claims. Evidentiary hearings are scheduled for March 2015. Similar gas loan transactions were provided in other open review years. The resolution will ultimately be decided by the Illinois Commission. We are currently unable to predict the ultimate outcome and have recorded no liability for this matter.

Environmental Matters

We are subject to federal, state and local laws and regulations governing environmental quality and pollution control that require us to remove or remedy the effect on the environment of the disposal or release of specified substances at current and former operating sites. See Note 3 for additional information.

We are involved in an investigation by the EPA regarding the applicable regulatory requirements for polychlorinated biphenyl in the Nicor Gas distribution system. While we are unable to predict the outcome of this matter or to reasonably estimate our potential exposure related thereto, if any, and have not recorded a liability associated with this contingency, the final disposition of this matter is not expected to have a material adverse impact on our liquidity or financial condition.

Litigation

We are involved in litigation arising in the normal course of business. Although in some cases we are unable to estimate the amount of loss reasonably possible in addition to any amounts already recognized, it is possible that the resolution of these contingencies, either individually or in aggregate, will require us to take charges against, or will result in reductions in, future earnings. Management believes that while the resolution of these contingencies, whether individually or in aggregate, could be material to earnings in a particular period, they will not have a material adverse effect on our consolidated financial position, results of operations or cash flows.

PBR Proceeding Nicor Gas' PBR plan was a regulatory plan that provided economic incentives based on natural gas cost performance. The PBR plan went into effect in 2000 and was terminated effective January 1, 2003, following allegations that Nicor Gas acted improperly in connection with the plan. Under this plan, Nicor Gas' total gas supply costs were compared to a market-sensitive benchmark. Savings and losses relative to the benchmark were determined annually and shared equally with sales customers. Since 2002, the amount of the savings and losses required to be shared has been disputed by the CUB and others, with the Illinois Attorney General (IAG) intervening, and subject to extensive contested discovery and other regulatory proceedings before administrative law judges and the Illinois Commission. In 2009, the staff of the Illinois Commission, IAG and CUB requested refunds of $85 million, $255 million and $305 million, respectively.

In February 2012, we committed to a stipulation with the staff of the Illinois Commission for a resolution of the dispute through credits to Nicor Gas customers of $64 million. On November 5, 2012, the Administrative Law Judges issued a proposed order for a refund of $72 million to ratepayers. In the fourth quarter of 2012, we increased our accrual for this dispute by $8 million for a total of $72 million as a result of these developments and their effect on the estimated liability.

On June 7, 2013, the Illinois Commission issued an order requiring us to refund $72 million to current Nicor Gas customers through our PGA mechanism based upon natural gas throughput over 12 months beginning on July 1, 2013. Approximately $43 million was refunded during the first half of 2014, which resulted in the completion of all refunds. On February 28, 2014, the CUB appealed the Illinois Commission's order requesting refunds consistent with its 2009 request to the appellate court in Illinois and Nicor Gas filed its response brief on July 25, 2014. The CUB filed its reply brief on October 17, 2014. There is no set time frame for a final ruling by the appellate court.

Other In addition to the matters set forth above, we are involved with legal or administrative proceedings before various courts and agencies with respect to general claims, taxes, environmental, gas cost prudence reviews and other matters. We are unable to determine the ultimate outcome of these other contingencies. We believe that these amounts are appropriately reflected in our consolidated financial statements, including the recording of appropriate liabilities when reasonably estimable.

Note 12 - Income Taxes

Income Tax Expense

The relative split between current and deferred taxes is due to a variety of factors, including true ups of prior year tax returns, and most importantly, the timing of our property-related deductions. Components of income tax expense in the Consolidated Statements of Income are shown in the following table.

In millions	2014	2013	2012
Current income taxes			
Federal	$113	$164	$8
State	38	35	4
Deferred income taxes			
Federal	184	(8)	128
State	17	(11)	20
Amortization of investment tax credits	(2)	(3)	(3)
Total income tax expense	$350	$177	$157

The reconciliations between the statutory federal income tax rate of 35%, the effective rate and the related amount of income tax expense for the years ended December 31, in our Consolidated Statements of Income are presented in the following table.

In millions	2014	2013	2012
Computed tax expense at statutory rate	$325	$165	$151
State income tax, net of federal income tax benefit	36	20	19
Tax effect of net income attributable to the noncontrolling interest	(7)	(7)	(6)
Amortization of investment tax credits	(2)	(3)	(3)
Affordable housing credits	(2)	(2)	(2)
Flexible dividend deduction	(2)	(2)	(2)
Sale of Compass Energy	-	6	-
Other	2	-	-
Total income tax expense on Consolidated Statements of Income	$350	$177	$157

Accumulated Deferred Income Tax Assets and Liabilities

We report some of our assets and liabilities differently for financial accounting purposes than we do for income tax purposes. We report the tax effects of the differences in those items as deferred income tax assets or liabilities in our Consolidated Statements of Financial Position. We measure the assets and liabilities using income tax rates that are currently in effect. The current portion of our deferred income taxes is recognized within current assets in our Consolidated Statements of Financial Position. We have provided a valuation allowance for some of these items that reduce our net deferred tax assets to amounts we believe are more likely than not to be realized in future periods. With respect to our continuing operations, we have net operating losses in various jurisdictions. Components that give rise to the net current and long-term accumulated deferred income tax liability are as follows.

In millions	As of December 31, 2014	2013
Current accumulated deferred income tax liabilities		
Mark-to-market	$33	$-
Inventory	26	18
Total current accumulated deferred income tax liabilities	59	18
Current accumulated deferred income tax assets		
Compensation accruals	30	19
Lower of cost or market	26	-
Allowance for doubtful accounts	12	10
Mark-to-market	-	24
Other	21	16
Total current accumulated deferred income tax assets	89	69
Valuation allowances (1)	(6)	(8)
Total current accumulated deferred income tax assets, net of valuation allowance	83	61
Net current accumulated deferred income tax asset	$24	$43
Long-term accumulated deferred income tax liabilities		
Property - accelerated depreciation and other property-related items	$1,801	$1,608
Investments in partnerships	16	18
Acquisition intangibles	14	11
Mark-to-market	12	-
Undistributed earnings of foreign subsidiaries	-	26
Other	85	97
Total long-term accumulated deferred income tax liabilities	1,928	1,760
Long-term accumulated deferred income tax assets		
Unfunded pension and retiree welfare benefit obligation	117	92
Deferred investment tax credits	6	7
Mark-to-market	-	3
Other	95	44
Total long-term accumulated deferred income tax assets	218	146
Valuation allowances (1)	(14)	(14)
Total long-term accumulated deferred income tax assets, net of valuation allowance	204	132
Net long-term accumulated deferred income tax liability	$1,724	$1,628

(1) The total valuation allowance in 2014 and 2013 is $20 million and $22 million respectively. For 2014 the total is comprised of $1 million due to net operating losses of a former non-operating facility that are not allowed in New Jersey and $19 million related to our investment in Triton. For 2013 the total is comprised of $3 million due to net operating losses in New Jersey of a former non-operating facility that are not allowed in New Jersey and $19 million related to our investment in Triton. New Jersey net operating losses expired in 2014, resulting in the reduction of the valuation allowance.

Tax Benefits

As of December 31, 2014, and December 31, 2013, we did not have a liability for unrecognized tax benefits. Based on current information, we do not anticipate that this will change materially in 2015. As of December 31, 2014, we did not have a liability recorded for payment of interest or penalties associated with uncertain tax positions nor did we have any such interest or penalties during 2014 or 2013.

We file a U.S. federal consolidated income tax return and various state income tax returns. We are no longer subject to income tax examinations by the Internal Revenue Service or in any state for years before 2011.

Note 13 - Segment Information

Our reportable segments comprise revenue-generating components of our company for which we produce separate financial information internally that we regularly use to make operating decisions and assess performance. Our determination of reportable segments considers the strategic operating units under which we manage sales of various products and services to customers in differing regulatory environments. We manage our businesses through four reportable segments - distribution operations, retail operations, wholesale services, midstream operations. Our non-reportable segments are combined and presented as “other segments”.

Effective September 1, 2014, we closed on the sale of Tropical Shipping, which historically operated within our cargo shipping segment. The assets and liabilities of these businesses are classified as held for sale on the Consolidated Statements of Financial Position, and the financial results of these businesses as of December 31, 2013 are reflected as discontinued operations on the Consolidated Statements of Income. Amounts shown in this note, unless otherwise indicated, exclude assets held for sale and discontinued operations. Cargo shipping also included our investment in Triton, which was not part of the sale and has been reclassified to a non-reportable segment. See Note 14 for additional information.

Our distribution operations segment is the largest component of our business and includes natural gas local distribution utilities in seven states. These utilities construct, manage, and maintain intrastate natural gas pipelines and distribution facilities. Although the operations of our distribution operations segment are geographically dispersed, the operating subsidiaries within the distribution operations segment are regulated utilities, with rates determined by individual state regulatory commissions. These natural gas distribution utilities have similar economic and risk characteristics.

We are also involved in several related and complementary businesses. Our retail operations segment includes retail natural gas marketing to end-use customers primarily in Georgia and Illinois. Additionally, retail operations provides home protection products and services. Our wholesale services segment engages in natural gas storage and gas pipeline arbitrage and related activities. Additionally, they provide natural gas asset management and/or related logistics services for each of our utilities except Nicor Gas, as well as for non-affiliated companies. Our midstream operations segment includes our non-utility storage and pipeline operations, including the operation of high-deliverability natural gas storage assets. Our “other” non-reportable segments include subsidiaries that individually are not significant on a stand-alone basis and that do not fit into one of our reportable segments.

The chief operating decision maker of the company is the Chairman, President and Chief Executive Officer, who utilizes EBIT as the primary measure of profit and loss in assessing the results of each segment’s operations. EBIT includes operating income and other income and expenses. Items we do not include in EBIT are income taxes and financing costs, including interest expense, each of which we evaluate on a consolidated basis. Summarized Statements of Income, Statements of Financial Position and capital expenditure information by segment as of and for the years ended December 31, 2014, 2013 and 2012 are shown in the following tables.

2014

In millions	**Distribution operations**	**Retail operations**	**Wholesale services** (1)	**Midstream operations**	**Other segments** (2)	**Intercompany eliminations**	**Consolidated**
Operating revenues from external parties	$3,802	$994	$578	$88	$7	$(84)	$5,385

Capital expenditures	$684	$9	$2	$12	$24	$-	$731

2012

In millions	Distribution operations	Retail operations	Wholesale services (1)	Midstream operations	Other segments (2)	Intercompany eliminations	Consolidated
Operating revenues from external parties	$2,691	$733	$88	$78	$7	$(35)	$3,562
Intercompany revenues	167	2	-	-	-	(169)	-
Total operating revenues	2,858	735	88	78	7	(204)	3,562
Operating expenses							
Cost of goods sold	1,221	488	38	32	-	(196)	1,583
Operation and maintenance	642	114	48	19	1	(8)	816
Depreciation and amortization	347	18	2	14	13	-	394
Nicor merger expenses (4)	-	-	-	-	20	-	20
Taxes other than income taxes	140	4	4	5	6	-	159
Total operating expenses	2,350	624	92	70	40	(204)	2,972
Operating income (loss)	508	111	(4)	8	(33)	-	590
Other income	9	-	1	2	12	-	24
EBIT	$517	$111	$(3)	$10	$(21)	$-	$614
Identifiable and total assets (3)	$11,256	$506	$1,218	$720	$9,848	$(9,769)	$13,779
Capital expenditures	$649	$8	$3	$62	$53	$-	$775

(1) The revenues for wholesale services are netted with costs associated with its energy and risk management activities. A reconciliation of our operating revenues and our intercompany revenues for the years ended December 31, are shown in the following table. Wholesale services 2014 operating revenues are related to colder-than-normal weather and extreme volatility and are not indicative of future performance.

In millions	Third party gross revenues	Intercompany revenues	Total gross revenues	Less gross gas costs	Operating revenues
2014	$10,709	$718	$11,427	$10,849	$578
2013	7,681	417	8,098	8,038	60
2012	6,089	350	6,439	6,351	88

(2) Our other non-reportable segments now also include our investment in Triton, which was part of our cargo shipping segment that is classified as discontinued operations. For more information, see Note 14.

(3) Identifiable assets are those used in each segment’s operations and exclude assets held for sale.

(4) Transaction expenses associated with the Nicor merger are shown separately to better compare year-over-year results.

Note 14 - Discontinued Operations

On September 1, 2014, we closed on the sale of Tropical Shipping to an unrelated third party. The after-tax cash proceeds and distributions from the transaction were approximately $225 million. We determined that the cumulative foreign earnings of Tropical Shipping would no longer be indefinitely reinvested offshore. Accordingly, we recognized income tax expense of $60 million, of which $31 million was recorded in the first quarter of 2014, and the remaining $29 million was recorded in the third quarter of 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded, resulting in our repatriation of $86 million in cash.

During the first quarter of 2014, based upon the negotiated sales price, we also recorded a goodwill impairment charge of $19 million, for which there is no income tax benefit. Additionally, we recognized a total of $7 million charge in the second and third quarters of 2014 related to the suspension of depreciation and amortization for assets that we were not compensated for by the buyer.

The assets and liabilities of Tropical Shipping classified as held for sale on the Consolidated Statements of Financial Position are as follows:

In millions	**December 31, 2013**
Current assets	
Cash and cash equivalents	$24
Short-term investments	1
Receivables	36
Inventories	9
Other	1
Total current assets	71
Long-term assets and other deferred debits	
Property, plant and equipment, net	124
Goodwill	61
Intangible assets	19
Other	8
Total long-term assets and other deferred debits	212
Total assets held for sale	$283
Current liabilities	
Accrued expenses	$7
Other accounts payable - trade	11
Other	22
Total liabilities held for sale	$40

The financial results of these businesses are reflected as discontinued operations, and all prior periods presented have been recast to reflect the discontinued operations. The components of discontinued operations recorded on the Consolidated Statements of Income as of December 31, are as follows:

In millions	**2014**	**2013**	**2012**
Operating revenues	$243	$365	$342
Operating expenses			
Cost of goods sold	149	222	208
Operation and maintenance (1)	75	110	106
Depreciation and amortization (2)	5	19	22
Taxes other than income taxes	5	6	6
Loss on sale and goodwill impairment (3)	28	-	-
Total operating expenses	262	357	342
Operating (loss) income	(19)	8	-
(Loss) income before income taxes	(19)	8	-
Income tax expense (4)	(61)	3	(1)
(Loss) income from discontinued operations, net of tax	$(80)	$5	$1

(1) Includes $1 million for another business not related to Tropical Shipping that we discontinued in 2014 and was included in our "other" non-reportable segment.
(2) We ceased depreciating and amortizing Tropical Shipping's assets on April 4, 2014, as a result of entering into an agreement to sell this business and the assets were classified as held for sale.
(3) Primarily relates to the suspension of depreciation and amortization during 2014 totaling $7 million, and $19 million of goodwill attributable to Tropical Shipping that was impaired as of March 31, 2014, based on the negotiated sales price.
(4) Includes $60 million that was recorded in 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded.

Note 15 - Selected Quarterly Financial Data (Unaudited)

The variance in our quarterly earnings is primarily the result of the seasonal nature of the distribution of natural gas to customers, the volatility within our wholesale services segment and the sale of our cargo shipping segment in 2014. During the Heating Season, natural gas usage and operating revenues are generally higher at our distribution operations and retail operations segments as more customers are connected to our distribution systems and natural gas usage is higher in periods of colder weather. However, our base operating expenses, excluding cost of goods sold, interest expense and certain incentive compensation costs, are incurred relatively uniformly over any given year. Thus, our operating results can vary significantly from quarter to quarter as a result of seasonality.

Our 2014 operating revenues and operating income were higher than 2013, primarily as a result of significantly colder-than-normal weather in 2014, volatility in the natural gas market and transportation constraints in the Northeast and Midwest. Our quarterly financial data for 2014 and 2013 are summarized below.

In millions, except per share amounts	**March 31**	**June 30**	**September 30**	**December 31**
2014				
Operating revenues	$2,462	$889	$589	$1,445
Operating income	592	139	78	286
EBIT	595	141	81	292
Income from continuing operations	346	59	23	152
Income from continuing operations attributable to AGL Resources Inc.	334	57	23	148
(Loss) income from discontinued operations, net of tax	(50)	1	(31)	-
Net income (loss) attributable to AGL Resources Inc.	284	58	(8)	148
Basic earnings (loss) per common share:				
Continuing operations	2.82	0.48	0.19	1.24
Discontinued operations	(0.43)	0.01	(0.25)	-
Diluted earnings (loss) per common share:				
Continuing operations	2.81	0.48	0.19	1.24
Discontinued operations	(0.43)	0.01	(0.25)	-
2013				
Operating revenues	$1,612	$805	$574	$1,218
Operating income	290	113	70	166
EBIT	295	119	77	164
Income from continuing operations	159	45	24	80
Income from continuing operations attributable to AGL Resources Inc.	149	44	24	73
Income (loss) from discontinued operations, net of tax	1	(1)	1	4
Net income attributable to AGL Resources Inc.	150	43	25	77
Basic earnings (loss) per common share:				
Continuing operations	1.27	0.38	0.20	0.61
Discontinued operations	0.01	(0.01)	0.01	0.03
Diluted earnings (loss) per common share:				
Continuing operations	1.26	0.38	0.20	0.61
Discontinued operations	0.01	(0.01)	0.01	0.03

Our basic and diluted earnings per common share are calculated based on the weighted daily average number of common shares and common share equivalents outstanding during the quarter. Those totals differ from the basic and diluted earnings per common share attributable to AGL Resources Inc. common shareholders shown in the Consolidated Statements of Income, which are based on the weighted average number of common shares and common share equivalents outstanding during the entire year.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None

ITEM 9A. CONTROLS AND PROCEDURES

Conclusions Regarding the Effectiveness of Disclosure Controls and Procedures

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934, as amended (the Exchange Act), as of December 31, 2014. No system of controls, no matter how well-designed and operated, can provide absolute assurance that the objectives of the system of controls are met, and no evaluation of controls can provide assurance that the system of controls has operated effectively in all cases. Our disclosure controls and procedures, however, are designed to provide reasonable assurance that the objectives of disclosure controls and procedures are met.

Based on this evaluation and considering the remediation efforts described below, our principal executive officer and our principal financial officer concluded that our disclosure controls and procedures were effective as of December 31, 2014. Our disclosure controls and procedures are designed to ensure that information we are required to disclose in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods in SEC rules and forms and that such information is accumulated and communicated to our management, including our principal executive officer and our principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Remediation of Previously Disclosed Material Weakness in Internal Control Over Financial Reporting

As previously disclosed in our Quarterly Report on Form 10-Q for the quarterly period ended September 30, 2014, we did not maintain effective controls to appropriately apply the accounting guidance related to the recognition of allowed versus incurred costs. Specifically, the Company did not have controls to address the recognition of allowed versus incurred costs, primarily related to an allowed equity return, applied to the accounting for our regulated infrastructure programs and related disclosures that operated at a level of precision to prevent or detect potential material misstatements to the Company's consolidated financial statements. Our principal executive officer and our principal financial officer concluded that our disclosure controls and procedures were not effective as of September 30, 2014 because of the material weakness.

We revised our consolidated financial statements for the years ended December 31, 2013, 2012 and 2011, for each of the quarterly periods during the year ended December 31, 2013, and for the quarters ended March 31, 2014 and June 30, 2014 to reflect certain accounting adjustments. We amended our Annual Report on Form 10-K/A for the year ended December 31, 2013, and our Quarterly Reports on Form 10-Q/A for the quarterly periods ending March 31, 2014 and June 30, 2014, to reflect those adjustments and the conclusions by our principal executive officer and our principal financial officer that our disclosure controls and procedures were not effective and by our management that our internal control over financial reporting were not effective as of December 31, 2013. Refer to "Management's Annual Report on Internal Control over Financial Reporting" within Item 8 and Item 9A Controls and Procedures in our Annual Report on Form 10-K/A for the year ended December 31, 2013, for further discussion of our material weakness in internal control over financial reporting.

We committed to remediating the material weakness and, as such, implemented changes to our internal control over financial reporting. We implemented additional procedures to address the underlying causes of the material weakness prior to filing our amended 2013 Annual Report on Form 10-K/A, and continued to implement changes and improvements in our internal control over financial reporting to remediate the control deficiency that caused the material weakness. During the fourth quarter of 2014, the following actions have been implemented:

- Completed training for all appropriate personnel regarding the applicable accounting guidance and requirements through internal training meetings and training by an outside expert to employees in technical, general and regulatory accounting functions, internal audit, and management positions.
- Reviewed all regulatory programs to ensure the proper evaluation of deferral components and proper treatment of allowed versus incurred costs pursuant to the relevant accounting guidance.
- Created a process and designed controls to capture and calculate allowed versus incurred costs and to record appropriate amounts in the consolidated financial statements. We identified appropriate processes, reviews and other controls to ensure accurate amounts were appropriately reflected in our consolidated financial statements.
- Conducted a review of our organization structure, reporting relationships and adequacy of staffing levels and made specific staffing changes as a result of our review.
- The procedures described above have been implemented and controls have been successfully tested.

Management is committed to a strong internal control environment. With full implementation and testing of the design and operating effectiveness of the newly implemented and revised controls, the actions described above successfully remediated the material weakness in our internal control over financial reporting and our principal executive officer and principal financial officer concluded that our disclosure controls and procedures were effective and our management concluded that our internal control over financial reporting were effective as of December 31, 2014.

Changes in Internal Control over Financial Reporting

The changes in the aforementioned remediation efforts were changes in our internal control over financial reporting that occurred during the quarter ended December 31, 2014, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Reports of Management and Independent Registered Public Accounting Firm on Internal Control Over Financial Reporting

Management has assessed, and our independent registered public accounting firm, PricewaterhouseCoopers LLP, has audited, our internal control over financial reporting as of December 31, 2014. The unqualified reports of management and PricewaterhouseCoopers LLP are included in Item 8 of this Annual Report on Form 10-K and are incorporated by reference herein.

ITEM 9B. OTHER INFORMATION

None

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

EXECUTIVE OFFICERS OF THE REGISTRANT

Set forth below are the names, ages and positions of our executive officers along with their business experience during the past five years. All officers serve at the discretion of our Board of Directors. All information is as of the date of the filing of this report.

Name, age and position with the company	Periods served
John W. Somerhalder II, Age 59	
Chairman, President and Chief Executive Officer	October 2007 - Present
Andrew W. Evans, Age 48	
Executive Vice President and Chief Financial Officer	November 2010 - Present
Executive Vice President, Chief Financial Officer and Treasurer	June 2009 - November 2010
Henry P. Linginfelter, Age 54	
Executive Vice President, Distribution Operations	December 2011 - Present
Executive Vice President, Utility Operations	June 2007 - December 2011
Melanie M. Platt, Age 60	
Executive Vice President, Chief People Officer	December 2011 - Present
Senior Vice President, Human Resources and Marketing Communications	November 2008 - December 2011
Paul R. Shlanta, Age 57	
Executive Vice President, General Counsel and Chief Ethics and Compliance Officer	September 2005 - Present
Peter I. Tumminello, Age 52	
Executive Vice President, Wholesale Services, and President Sequent	December 2011 - Present
President, Sequent	April 2010 - December 2011
Executive Vice President, Business Development and Support, Sequent	February 2007 - April 2010

The other information required by this item with respect to directors will be set forth under the captions “Proposal 1 - Election of Directors,” “Corporate Governance - Ethics and Compliance Program,” and “Corporate Governance - Committees of the Board” in the Proxy Statement for our 2015 Annual Meeting of Shareholders or in a subsequent amendment to this report. The information required by this item with respect to Section 16(a) beneficial ownership reporting compliance will be set forth under the caption “Section 16(a) Beneficial Ownership Reporting Compliance” in the Proxy Statement or subsequent amendment referred to above. All such information that is provided in the Proxy Statement is incorporated herein by reference.

ITEM 11. EXECUTIVE COMPENSATION

The information required by this item will be set forth under the captions “Compensation Committee Report,” “Compensation Committee Interlocks and Insider Participation,” “Director Compensation,” “Compensation Discussion and Analysis” and “Executive Compensation” in the Proxy Statement or subsequent amendment referred to in Item 10 above. All such information that is provided in the Proxy Statement is incorporated herein by reference, except for the information under the caption “Compensation Committee Report” which is specifically not so incorporated herein by reference.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

The information required by this item will be set forth under the captions “Security Ownership of Certain Beneficial Owners and Management” and “Executive Compensation - Equity Compensation Plan Information” in the Proxy Statement or subsequent amendment referred to in Item 10 above. All such information that is provided in the Proxy Statement is incorporated herein by reference.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS AND DIRECTOR INDEPENDENCE

The information required by this item will be set forth under the captions “Corporate Governance - Director Independence” and “- Policy on Related Person Transactions” and “Certain Relationships and Related Transactions” in the Proxy Statement or subsequent amendment referred to in Item 10 above. All such information that is provided in the Proxy Statement is incorporated herein by reference.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

The information required by this item will be set forth under the caption “Proposal 2 - Ratification of the Appointment of PricewaterhouseCoopers LLP as Our Independent Registered Public Accounting Firm for 2015” in the Proxy Statement or subsequent amendment referred to in Item 10 above. All such information that is provided in the Proxy Statement is incorporated herein by reference.

PART IV

ITEM 15. EXHIBITS, FINANCIAL STATEMENT SCHEDULES

(a) Documents Filed as Part of This Report.

- Report of Independent Registered Public Accounting Firm
- Management’s Report on Internal Control Over Financial Reporting

(1) Financial Statements Included in Item 8 are the following:

- Report of Independent Registered Public Accounting Firm
- Management’s Report on Internal Control Over Financial Reporting
- Consolidated Statements of Financial Position as of December 31, 2014 and 2013
- Consolidated Statements of Income for the years ended December 31, 2014, 2013 and 2012
- Consolidated Statements of Comprehensive Income (Loss) for the years ended December 31, 2014, 2013 and 2012
- Consolidated Statements of Equity for the years ended December 31, 2014, 2013 and 2012
- Consolidated Statements of Cash Flows for the years ended December 31, 2014, 2013 and 2012
- Notes to Consolidated Financial Statements

(2) Financial Statement Schedules

Financial Statement Schedule II. Valuation and Qualifying Accounts - Allowance for Uncollectible Accounts and Income Tax Valuations for Each of the Three Years in the Period Ended December 31, 2014. Schedules other than those referred to above are omitted and are not applicable or not required, or the required information is shown in the financial statements or notes thereto.

Exhibit 31.1 – Certification of John W. Somerhalder II pursuant to Rule 13a – 14(a)

CERTIFICATIONS

I, John W. Somerhalder II, certify that:

1. I have reviewed this annual report on Form 10-K of AGL Resources Inc.;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
   (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
   (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
   (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
   (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
   (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
   (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Corporate Information

Annual Meeting

The 2015 annual meeting of shareholders will be held Tuesday, April 28, 2015, at AGL Resources' corporate headquarters, Ten Peachtree Place, N.E., Atlanta, GA 30309.

ResourcesDIRECT™

New investors may make an initial investment, and shareholders of record may acquire additional shares of our common stock, through ResourcesDIRECT™ without paying brokerage fees or service charges. Initial cash investments, quarterly cash dividends and/or optional cash purchases may be invested through the plan prospectus and enrollment materials. Contact our transfer agent at 800-468-9716 or visit our website at aglresources.com.

Holders of Common Stock, Stock Price and Dividend Information

At February 4, 2015, there were 21,551 record holders of our common stock. Quarterly information concerning our high and low stock prices and cash dividends paid in 2014 and 2013 is as follows:

2014

Quarter ended	Sales price of common stock High	Low	Close	Cash dividend per common share
March 31, 2014	$49.84	$45.17	$48.96	$0.49
June 30, 2014	55.10	48.29	55.03	0.49
September 30, 2014	55.30	48.72	51.34	0.49
December 31, 2014	56.67	50.10	54.51	0.49
				$1.96

2013

Quarter ended	Sales price of common stock High	Low	Close	Cash dividend per common share
March 31, 2013	$42.37	$38.86	$41.95	$0.47
June 30, 2013	44.85	41.21	42.86	0.47
September 30, 2013	47.00	41.94	46.03	0.47
December 31, 2013	49.31	44.56	47.23	0.47
				$1.88

We have paid 269 consecutive quarterly dividends to common shareholders beginning in 1948, historically four times a year: March 1, June 1, September 1 and December 1. Our common shareholders may receive dividends when declared at the discretion of our Board of Directors, and payment of future dividends will depend on our future earnings, cash flow, financial requirements and other factors. In February 2015, we increased our quarterly dividend to $0.51 per share.

Stock Exchange Listing

Our common stock is traded on the New York Stock Exchange under the symbol "GAS" and quoted in The Wall Street Journal as "AGL Res."

Comparison of Five-Year Cumulative Total Return*

The graph below compares the cumulative five-year total return provided shareholders on AGL Resources Inc's common stock relative to the cumulative total returns of the S&P 500© index and two customized peer groups of 12 companies each, whose individual companies are listed in footnotes 1 and 2 below. An investment of $100 (with reinvestment of all dividends) is assumed to have been made in our common stock, in each index and in each of the peer groups on 12/31/2009 and its relative performance is tracked through 12/31/2014.

[1] There are 12 companies included in the company's new customized peer group which are Atmos Energy Corp., Centerpoint Energy Inc., Integrys Energy Group Inc., New Jersey Resources Corp., Nisource Inc., Piedmont Natural Gas Company Inc., Sempra Energy, Southwest Gas Corp., The Laclede Group Inc., UGI Corp., Vectren Corp. and WGL Holdings Inc.

[2] The 12 companies included in the company's old customized peer group are Atmos Energy Corp., Centerpoint Energy Inc., Integrys Energy Group Inc., New Jersey Resources Corp., Nisource Inc., Oneok Inc., Piedmont Natural Gas Company Inc., Sempra Energy, Southwest Gas Corp., UGI Corp., Vectren Corp. and WGL Holdings Inc.

	12/09	12/10	12/11	12/12	12/13	12/14
AGL Resources Inc	$100.00	$103.00	$127.32	$125.91	$155.24	$186.26
S&P 500	100.00	115.06	117.49	136.30	180.44	205.14
Old Peer Group	100.00	112.82	140.32	153.36	199.52	244.00
New Peer Group	100.00	110.97	132.38	146.26	185.58	236.43

* $100 invested on 12/31/09 in stock or index, including reinvestment of dividends. Fiscal year ending December 31.

The stock price performance included in this graph is not necessarily indicative of future stock price performance.

March 17, 2015

To Our Shareholders:

On behalf of the board of directors, I am pleased to invite you to attend AGL Resources' 2015 annual meeting of shareholders to be held on Tuesday, April 28, 2015, at our corporate headquarters at Ten Peachtree Place, Atlanta, Georgia. The meeting will start at 10:00 a.m., Eastern time. A map with directions is included in the attached proxy statement. **Please note that you will need to present an admission ticket and picture identification in order to attend the meeting in person.** Please see page 6 of the attached proxy statement for more information about attending the meeting in person. The matters to be acted upon at the meeting are described in the Notice of Annual Meeting of Shareholders and Proxy Statement. During the annual meeting of shareholders, we will discuss our efforts and achievements in 2014. We will update shareholders on our business plans for 2015. Our directors, officers and other employees will be available to answer any questions you may have.

Your vote is very important to us. Regardless of the number of shares you own, please vote. You may vote by telephone (using the toll-free number on your proxy or vote instruction card), internet (using the address provided on your proxy or vote instruction card), or paper proxy or vote instruction card. Please see page 2 of the attached proxy statement or your enclosed proxy or vote instruction card for more detailed information about the various options for voting your shares.

Thank you for your ongoing ownership and support. We hope to see you at our annual meeting.

Sincerely,

John W. Somerhalder II

NOTICE OF 2015 ANNUAL MEETING OF SHAREHOLDERS

Time and Date:	10:00 a.m., Eastern time, Tuesday, April 28, 2015
Place:	Ten Peachtree Place, Atlanta, Georgia
Items of Business:	— Elect fifteen directors to serve until the 2016 annual meeting; — Ratify the appointment of PricewaterhouseCoopers LLP as our independent registered public accounting firm for 2015; — Approve a non-binding resolution to approve the compensation of our named executive officers; — Approve an amendment to the Company’s amended and restated articles of incorporation to provide holders of at least 25% of the voting power of all outstanding shares entitled to vote the right to call a special meeting of shareholders; — Consider and act upon the shareholder proposal regarding an independent chairman policy as described in this proxy statement, if properly presented at the annual meeting; — Consider and act upon the shareholder proposal regarding the adoption of quantitative goals for reducing greenhouse gas emissions and report on plans to achieve such goals as described in this proxy statement, if properly presented at the annual meeting; and — Transact such other business as may properly come before the annual meeting or any adjournments.
Who May Vote:	You may vote if you owned shares of our common stock at the close of business on February 17, 2015 (the record date).
Proxy Voting:	Your vote is important. Please vote in one of these ways: — use the toll-free telephone number shown on the enclosed proxy or vote instruction card; — visit the website listed on your proxy or vote instruction card; or — mark, sign, date and promptly return the enclosed proxy or vote instruction card in the enclosed postage-paid envelope.
Proxy Statement:	A copy of our proxy statement for the annual meeting, which contains information that is relevant to the proposals to be voted on at the annual meeting, is attached.
Annual Report:	A copy of our 2014 annual report, which contains financial and other information about our business, is enclosed.
Date of Availability:	On or about March 17, 2015, we will mail to certain shareholders a Notice of Internet Availability of Proxy Materials containing instructions on how to access our proxy statement and 2014 annual report and how to vote online. All other shareholders will receive the proxy statement and annual report by mail.

By Order of the Board of Directors,

Myra C. Bierria

Myra C. Bierria
Corporate Secretary

AGL Resources Inc.
Attention: Investor Relations
P.O. Box 4569, Location 1071
Atlanta, Georgia 30302-4569
Our proxy statement and our 2014 annual report and Form 10-K may be accessed at ***www.proxyvote.com***
and our website at ***www.aglresources.com***

Table of Contents

PROXY STATEMENT

ABOUT THE ANNUAL MEETING

Who is soliciting my proxy?

The board of directors of AGL Resources is providing you these proxy materials in connection with the solicitation of proxies to be voted at our 2015 annual meeting of shareholders and at any postponement or adjournment of the annual meeting. The proxies will be voted in accordance with your instructions by John W. Somerhalder II, our chairman, president and chief executive officer; Paul R. Shlanta, our executive vice president, general counsel and chief ethics and compliance officer; and Andrew W. Evans, our executive vice president and chief financial officer, or any of them. If your shares are held in our AGL Resources Inc. Retirement Savings Plus Plan (the “Retirement Savings Plus Plan” or the “AGL 401(k) Plan”) or Nicor Gas Thrift Plan, your proxy will be voted by Merrill Lynch Bank and Trust Co., FSB, which is the trustee for these plans. The trustee of the AGL 401(k) Plan will vote your shares in accordance with your instructions and if you fail to provide voting instructions, the trustee will vote your shares in accordance with the discretionary instructions of the Administrative Committee of the 401(k) plans. It is expected that the Administrative Committee will instruct the trustee of the AGL 401(k) Plan to vote your shares in accordance with your telephone, internet or written proxy vote, or if you do not vote, “FOR” all nominees listed in proposal 1, “FOR” proposals 2, 3 and 4, and “AGAINST” proposals 5 and 6, and as instructed by the Administrative Committee on any other proposals that may properly come before the meeting. The trustee of the Nicor Gas Thrift Plan will vote your shares in accordance with your instructions, and if you fail to give the trustee proper instructions, it will vote your shares in the same proportion that other participants in the plan have voted their shares.

Why did I receive a Notice of Internet Availability of Proxy Materials (Notice) in the mail instead of a printed set of proxy materials?

Pursuant to the rules of the Securities and Exchange Commission (“SEC”), we are permitted to furnish our proxy materials over the internet to our shareholders by delivering a Notice in the mail. We are sending the Notice to certain record and beneficial shareholders. These shareholders have the ability to access the proxy materials, including our proxy statement and annual report, at *www.proxyvote.com* or to request a printed or email set of the proxy materials. Instructions on how to access the proxy materials over the internet or to receive a printed set may be found in the Notice. Shareholders who receive a printed set of proxy materials will not receive the Notice, but may still access our proxy materials over the internet at *www.proxyvote.com*.

When will Proxy Materials be provided to shareholders?

A Notice of Internet Availability of Proxy Materials or this Proxy Statement is first being mailed to shareholders on or about March 17, 2015.

Important Notice Regarding the Availability of Proxy Materials for the Shareholder Meeting to be Held on April 28, 2015.

The proxy statement and annual report are available at www.proxyvote.com

What will I be voting on?

You will be voting on:

- Proposal 1—the election of 15 directors to serve until the 2016 annual meeting;

Table of Contents

- Proposal 2—the ratification of the appointment of PricewaterhouseCoopers LLP as our independent registered public accounting firm for 2015;
- Proposal 3—the approval of a non-binding resolution to approve the compensation of our Named Executive Officers, as described in the Compensation Discussion and Analysis section, the tabular disclosure regarding such compensation, and the accompanying narrative disclosure, set forth in this proxy statement;
- Proposal 4— the approval of an amendment to the Company's amended and restated articles of incorporation to provide holders of at least 25% of the voting power of all outstanding shares entitled to vote the right to call a special meeting of shareholders;
- Proposal 5—the consideration of the shareholder proposal regarding an independent chairman policy as described in this proxy statement, if properly presented at the annual meeting;
- Proposal 6—the consideration of the shareholder proposal regarding the adoption of quantitative goals for reducing greenhouse gas emissions and report on plans to achieve such goals as described in this proxy statement, if properly presented at the annual meeting; and
- such other business as may properly come before the annual meeting or any adjournments.

How does the board recommend I vote on the proposals?

The board of directors recommends you vote "FOR" all nominees listed in proposal 1, "FOR" each of proposals 2, 3 and 4, and "AGAINST" each of proposals 5 and 6.

How do I vote?

Most of our shareholders have three options for submitting their votes;

- By telephone,
- Via the internet, or
- By mail.

If your AGL Resources shares are held in your name on the records maintained by Wells Fargo Bank, N.A., our transfer agent (meaning you are a "shareholder of record"), please follow the instructions on your proxy card.

If your AGL Resources shares are held through a brokerage firm or bank (that is, in "street name"), your ability to vote by telephone or over the internet depends on the voting process of your brokerage firm or bank. Please follow the directions on your vote instruction card.

Regardless of whether your AGL Resources shares are held by you as a record shareholder or in street name, you may attend the meeting and vote your shares in person. Please note that if your shares are held in street name and you want to vote in person, you must bring evidence of your stock ownership, such as a proxy obtained from your street name nominee (particularly if you want to vote your shares at the annual meeting) or your most recent brokerage account statement (in which case you will not be able to vote your shares at the meeting), together with valid picture identification.

Even if you plan to attend the meeting, we encourage you to vote your shares by telephone, internet or mail to simplify the voting process at the meeting.

How do I vote if my shares are held in one of the 401(k) plans?

If your AGL Resources shares are held in one of the 401(k) plans, only the plan trustee can vote your plan shares even if you attend the annual meeting in person. The plan trustee will vote your shares in accordance with your telephone, internet or written proxy vote. Please follow the instructions on your proxy card.

May I revoke my proxy?

Yes. You may revoke your proxy or vote instructions at any time before the annual meeting by voting again by telephone or via the internet or by timely signing and returning another proxy or vote instruction card with a later date. Additionally, if you are a shareholder of record or if you are a street name holder who has obtained a vote instruction card from your street name nominee, and you decide to attend the meeting and vote in person, you may request that any proxy or vote instruction card that you previously submitted not be used.

What if I don't specify my choices when returning my proxy or vote instruction card?

If you return a signed and dated proxy or vote instruction card without indicating your vote, your shares will be voted "FOR" all nominees listed in proposal 1, "FOR" each of proposals 2, 3 and 4, and "AGAINST" each of proposals 5 and 6 and in the discretion of the proxies on any other matter that may properly come before the meeting.

If you hold AGL Resources shares through one of our 401(k) plans and you return the proxy card but do not properly sign or date it or specify how you want your plan shares voted, it is expected that (i) in the case of the AGL 401(k) Plan, the plan trustee, upon instruction from the Administrative Committee of the AGL 401(k) Plan, will vote your plan shares "FOR" all nominees listed in proposal 1, "FOR" each of proposals 2, 3 and 4, and "AGAINST" each of proposals 5 and 6, and as instructed by the Administrative Committee on any other proposals that may properly come before the meeting and (ii) in the case of the Nicor Gas Thrift Plan, the plan trustee will vote your plan shares in the same proportion that other participants in the plan have voted their shares.

May my shares be voted if I don't submit a proxy or voting instructions?

If your AGL Resources shares are registered in your name on the books kept by our transfer agent and you do not return a signed proxy and do not vote by telephone or via the internet or in person at the meeting, your shares will not be voted.

If your AGL Resources shares are held in street name and you do not submit any voting instructions, your brokerage firm or bank may or may not vote your shares with regard to each of the six proposals, depending on stock exchange rules. If your AGL Resources shares are held through one of the 401(k) plans and you do not return the proxy card for those plan shares and do not vote by telephone or the internet or in person, it is expected that, in the case of the AGL 401(k) Plan, the plan trustee, upon instruction from the Administrative Committee, will vote your shares "FOR" all nominees listed in proposal 1, "FOR" each of proposals 2, 3 and 4, and "AGAINST" each of proposals 5 and 6, and as instructed by the Administrative Committee on any other proposals that may properly come before the meeting. In the case of the Nicor Gas Thrift Plan, the plan trustee will vote your shares in the same proportion that other participants in the plan have voted their shares.

How many shares may I vote?

As of February 17, 2015, the record date for voting at the annual meeting, 119,792,280 shares of common stock of AGL Resources were outstanding and entitled to be voted at the annual meeting. You are entitled to one vote for each share of AGL Resources common stock you owned on the record date.

Is there a list of shareholders entitled to notice of the annual meeting?

A list of shareholders entitled to notice of the annual meeting will be available at the annual meeting for inspection by any shareholder. A list of shareholders will also be available for inspection by any shareholder during ordinary business hours at our principal place of business at Ten Peachtree Place, Atlanta, Georgia.

How many votes must be present to hold the annual meeting?

A majority of the 119,792,280 shares of AGL Resources' common stock outstanding on the record date and eligible to be voted, must be present, either in person or represented by proxy, to conduct the annual meeting.

How many votes are needed to approve each of the proposals?

The following are the vote requirements for each of the proposals:

- *Election of 15 directors*: In uncontested elections, a director must receive the vote of at least the majority of votes cast with respect to his or her election in order to be elected. Each of the 15 director nominees for whom the votes cast "FOR" election exceed 50% of the number of votes cast with respect to that director's election will be elected as a director.
- *Ratification of the appointment of PricewaterhouseCoopers LLP*: Ratification of the appointment of PricewaterhouseCoopers LLP as our independent registered public accounting firm requires the votes cast "FOR" to exceed the votes cast "AGAINST."
- *Advisory Vote on Executive Compensation*: Adoption of the non-binding resolution to approve executive compensation requires the votes cast "FOR" to exceed the votes cast "AGAINST."
- *Approval of the amendment to the Company's amended and restated articles of incorporation:* Approval of the amendment to the Company's amended and restated articles of incorporation requires the affirmative vote of the majority of shares entitled to vote on the proposal.
- *Shareholder Proposal regarding an Independent Chairman Policy*: Adoption of this shareholder proposal requires the votes cast "FOR" to exceed the votes cast "AGAINST."
- *Shareholder Proposal regarding Goals for Reducing Greenhouse Gas Emissions*: Adoption of this shareholder proposal requires the votes cast "FOR" to exceed the votes cast "AGAINST."

What happens if a director nominee fails to receive a majority of the votes cast in his or her election?

As described under the caption, "Proposal 1—Election of Directors—General—Vote Requirements for Election," our bylaws provide that a director nominee in an uncontested election must receive the affirmative vote of at least the majority of votes cast in order to be elected. If the votes cast "FOR" the director's election do not exceed 50% of the number of votes cast with respect to that director's election, the director must promptly tender his or her resignation to the board of directors following certification of the shareholder vote. The Nominating, Governance and Corporate Responsibility Committee must then recommend to the board of directors whether to accept or reject the tendered resignation or whether to take other action. The board must then act on the tendered resignation and publicly disclose its decision and the rationale behind the decision within 90 days after the certification of the election results.

What if I vote against electing directors?

In voting for the election of directors, a vote "against" one or more director nominees will be counted for quorum purposes. Such a vote also will be counted for purposes of determining whether a director nominee received the affirmative vote of at least the majority of votes cast in order to be elected. Please see "What happens if a director nominee fails to receive a majority of the votes cast in his or her election?" above.

How will abstentions and broker non-votes be treated?

Abstentions and broker non-votes will be treated as shares present and entitled to vote for quorum purposes. Abstentions and broker non-votes will not be treated as "votes cast" and consequently they will not affect the outcome of the vote on the election of directors or the determination of whether a director nominee has received the affirmative vote of the majority of votes cast (Proposal 1), the proposal to ratify the appointment of PricewaterhouseCoopers LLP as our independent registered public accounting firm (Proposal 2), the proposal to adopt the non-binding resolution to approve the compensation of our named executive officers (Proposal 3), or the shareholder proposals described in this proxy statement (Proposal 5 and Proposal 6). Abstentions or a failure to vote will have the same effect as a vote "AGAINST" the proposal to approve an amendment to the Company's amended and restated articles of incorporation (Proposal 4).

"Broker non-votes" occur on a matter up for vote when a broker, bank or other holder of shares you own in "street name" is not permitted to vote on that particular matter without instructions from you, you do not give such instructions and the broker or other nominee indicates on its proxy card, or otherwise notifies us, that it does not have authority to vote its shares on that matter.

Whether a broker has authority to vote its shares on uninstructed matters is determined by stock exchange rules.

Could other matters be decided at the annual meeting?

We do not know of any other matters that will be considered at the annual meeting. If a matter that is not listed on the proxy or vote instruction card is properly brought before the annual meeting in accordance with Section 1.2 of our bylaws, the persons named as proxies will vote in accordance with their judgment of what is in the best interest of the Company, based on the discretionary voting authority conferred on them by the proxy and vote instruction cards.

Who will count the votes?

Representatives of Broadridge Financial Solutions, Inc. will count the votes and act as inspector of elections.

Where and when will I be able to find the voting results?

We will post the voting results on our website at *www.aglresources.com* within four business days after the annual meeting. You also will find the results in a Current Report on Form 8-K, which we expect to file with the SEC within four business days following the annual meeting.

What does it mean if I receive more than one proxy card?

It means that you have multiple accounts with brokerage firms, banks and/or our transfer agent. Please vote all of these shares. We recommend that you contact your broker, bank and/or our transfer agent to consolidate as many accounts as possible under the same name and address. All communications concerning accounts for shares registered in your name on the books kept by our transfer agent, including address changes, name changes, inquiries to transfer shares and similar issues, may be handled by making a toll-free call to Wells Fargo Shareowner Services at (800) 468-9716.

What do I need to bring with me if I want to attend the annual meeting?

The annual meeting is open to all holders of our common stock. To attend the annual meeting, you will need to bring an admission ticket and valid picture identification. If your shares are registered in your name on the books kept by our transfer agent or your shares are held in one of the 401(k) plans, your admission ticket is part of your proxy card or may be printed from the internet when you vote online.

If your shares are held in street name by your brokerage firm or bank, you will need to bring evidence of your stock ownership, such as a proxy obtained from your street name nominee (particularly if you want to vote your shares at the annual meeting) or your most recent brokerage account statement (in which case you will not be able to vote your shares at the annual meeting), together with valid picture identification. You also may request that we send you an admission ticket. If you do not have either an admission ticket or proof that you own our common stock, together with valid picture identification, you may not be admitted to the meeting.

What happens if the annual meeting is postponed or adjourned?

Your proxy will still be valid and may be voted at a postponed or adjourned meeting, unless the board of directors fixes a new record date for the postponed or adjourned meeting, which the board is required to do if the postponement or adjournment is for more than 120 days. If the meeting is postponed or adjourned, you will still be able to change or revoke your proxy until it is voted.

When are shareholder proposals for the 2016 annual meeting due?

Our bylaws require shareholders to give us advance notice of any shareholder nominations of directors and of any other matters shareholders wish to present for action at an annual meeting of shareholders. The required notice must be given within a prescribed time frame, which is calculated by reference to the date that the proxy statement was released to shareholders in connection with our most recent annual meeting. Accordingly, with respect to our 2016 annual meeting of shareholders, our bylaws require notice to be provided to our Corporate Secretary at AGL Resources Inc., P.O. Box 4569, Location 1466, Atlanta, Georgia 30302-4569 no later than November 18, 2015. However, if the 2016 annual meeting of shareholders is held on a date more than 30 days from the date contemplated at the time of this proxy statement, our bylaws require notice to be provided to our Corporate Secretary at the address above not fewer than the later of (i) 150 days prior to the date of the 2016 annual meeting of shareholders or (ii) the date which is ten days after the date of the first public announcement or other notification to shareholders of the date of the 2016 annual meeting of shareholders.

If you are interested in submitting a proposal for inclusion in our proxy statement for the 2016 annual meeting of shareholders, you need to follow the procedures outlined in the SEC’s Rule 14a-8. To be eligible for inclusion, your shareholder proposal intended for inclusion in the proxy statement for the 2016 annual meeting of shareholders must be received no later than November 18, 2015, by our Corporate Secretary at the address above.

This deadline does not apply to questions a shareholder may wish to ask at the annual meeting.

Table of Contents

Who pays the costs associated with this proxy solicitation?

AGL Resources pays the expenses of soliciting proxies. We have hired Alliance Advisors LLC to assist in the solicitation of proxies. Alliance Advisors LLC may solicit proxies in person or by telephone, facsimile or electronic transmission. We will pay Alliance Advisors LLC approximately $11,500 plus customary costs and expenses for these services. Additionally, proxies may be solicited on our behalf by directors, officers and employees, in person or by telephone, facsimile or electronic transmission. Directors, officers and employees will not be paid additional fees for those services.

CORPORATE GOVERNANCE

Board of Directors

Our business affairs are managed under the direction of the board of directors in accordance with the Georgia Business Corporation Code, our amended and restated articles of incorporation and our bylaws. The role of the board of directors is to govern our affairs for the benefit of our shareholders and other constituencies, which include our employees, customers, suppliers, creditors and the communities in which we do business. The board strives to ensure the success and continuity of our business through the appointment of qualified executive management, overseen by the board.

Director Independence

Pursuant to New York Stock Exchange listing standards, our board of directors has adopted a formal set of categorical Standards for Determining Director Independence (the “Standards”). In accordance with these Standards, a director must be determined to have no material relationship with the Company other than as a director in order to be considered an independent director. The Standards specify the criteria by which the independence of our directors will be determined, including strict guidelines for directors and their immediate family members with respect to past employment or affiliation with the Company or its independent registered public accounting firm. The Standards also set forth independence criteria applicable to members of the Audit Committee, the Compensation Committee and the Nominating, Governance and Corporate Responsibility Committee of the board of directors. These Standards are available on our website at *www.aglresources.com*.

In accordance with these Standards, the board undertook in February 2015 an annual review of director independence. Based on this review, the board has affirmatively determined that, as to each current non-employee director, no material relationship exists that would interfere with the exercise of independent judgment in carrying out the responsibilities of a director and that each current non-employee director qualifies as “independent” in accordance with the Standards and the independence standards of the New York Stock Exchange.

John W. Somerhalder II, our chairman, president and chief executive officer, is not independent because of his employment by the Company. Mr. Somerhalder will not participate in any action of the board related to his compensation or any other matters requiring action by only non-employee directors.

In making these independence determinations, the board considered that in the ordinary course of business, transactions may occur between the Company and its subsidiaries and companies at which some of our directors are or have been directors, officers or employees. The board also considered that the Company and its subsidiaries may make charitable contributions to not-for-profit organizations where our directors or their immediate family members serve or are executive officers.

Policy on Related Person Transactions

The board of directors recognizes that related person transactions present a heightened risk of conflicts of interest and, therefore, has adopted a written policy with respect to related person transactions. For the purpose of the policy, “Related Persons” include (a) each executive officer as defined under Section 16 of the Securities Exchange Act of 1934, as amended, or the “Exchange Act,” (b) each executive and senior vice president of AGL Resources, (c) each nominee for or member of the board of directors, (d) each holder of more than 5% of our common stock, or a “Significant Shareholder,” and (e) any immediate family member, as defined under the Exchange Act, of the persons listed in (a) through (d) above. A “Related Person Transaction” is a transaction between us and any Related Person, other than (1) transactions available to all employees or customers generally; (2) transactions involving less than $120,000 when aggregated with all similar transactions since January 1, 2014; (3) transactions excluded from disclosure in paragraphs four through seven of the instructions to Item 404(a) of Regulation S-K under the Exchange Act; and (4) charitable contributions by the Company to a charitable organization with which a Related Person’s only relationship is as an employee (other than an executive officer), if the aggregate amount involved does not exceed the greater of $1,000,000 or 2% of the charitable organization’s annual receipts for the preceding fiscal year.

Under the policy, when management becomes aware of a Related Person Transaction involving a dollar amount that is less than two percent of either the Company’s consolidated gross revenues or the consolidated gross revenues of the Related Person, or any affiliate of such Related Person, for the prior fiscal year, management reports the transaction to the Chairman of the Nominating, Governance and Corporate Responsibility Committee. When management becomes aware of a Related Person Transaction involving a dollar amount that is equal to or exceeds two percent of either the Company’s consolidated gross revenues or the consolidated gross revenues of the Related Person, or any affiliate of such Related Person, for the prior fiscal year, management reports the transaction to the Nominating, Governance and Corporate Responsibility Committee and requests approval or ratification of the transaction.

Transactions requiring approval or ratification must be approved by a majority of the disinterested members of the Nominating, Governance and Corporate Responsibility Committee. The Chairman will report to the full Nominating, Governance and Corporate Responsibility Committee at its next regularly scheduled committee meeting any Related Person Transactions that are presented to him or her. The Nominating, Governance and Corporate Responsibility Committee will report to the full board all Related Person Transactions presented to it.

Board Leadership Structure

Our Company is led by Mr. John Somerhalder, who has served as our president and chief executive officer since March 2006 and our chairman, president and chief executive officer since October 2007. In 2014, our board of directors consisted of Mr. Somerhalder and 14 independent directors. Each of the standing committees of our board of directors is chaired by an independent director and each of our Audit, Compensation and Nominating, Governance and Corporate Responsibility committees is comprised entirely of independent directors.

Under our Guidelines on Significant Corporate Governance Issues, or our Corporate Governance Guidelines, a copy of which is available on our website at *www.aglresources.com*, if the chairman of the board of directors is an executive officer or employee of the Company, then the board of directors shall appoint, from among the independent directors, a lead director. Mr. Arthur E. Johnson currently serves as our Lead Director.

The board of directors appoints the Lead Director for a term ending on the earlier of (a) three years from the date of appointment or (b) the last day of the individual’s service on the board of directors. The Lead Director: (a) serves as chairman of the Executive Committee of the board of directors; (b) presides at the executive sessions of non-management directors; (c) collaborates with our chairman, president and chief executive officer, our general counsel and our corporate secretary on setting the annual calendar and agendas for all regular meetings of the board and its standing committees; (d) maintains close contact with the chairperson of each standing committee; (e) oversees the Company's policy on communications between shareholders or other interested parties and non-management directors; and (f) in conjunction with the chairperson of the Compensation Committee, communicates the results of the annual evaluation of the chief executive officer to the chief executive officer on behalf of the board of directors.

We have determined that our current board leadership structure is appropriate and helps ensure both effective and efficient governance for the Company, for a number of reasons, the most significant of which are the following:

- A combined chairman and chief executive officer role allows for more productive meetings. The chief executive officer is the individual selected by the board of directors to manage the Company on a day to day basis, and his direct involvement in the Company's operations makes him best positioned to lead productive board strategic planning sessions and determine the time allocated to each agenda item in discussions of the Company's short- and long-term objectives.
- Our board structure provides strong oversight by independent directors and in addition a majority of our operations are subject to extensive regulation. In fact, our chief executive officer is the only one of our current 15 directors who is not independent. Our Lead Director's responsibilities include leading executive sessions of the board of directors during which our independent directors meet without management. These executive sessions allow the board of directors to review key decisions and discuss matters in a manner that is independent of the chief executive officer, and where necessary, critical of the chief executive officer and senior management. In addition, each of our board's standing committees is chaired by an independent director.
- Recognizing there may be a circumstance where a shareholder or other interested party's interest should be represented independent of management, a key responsibility of the Lead Director is to receive, review and, where necessary, act upon direct communications from shareholders and other interested parties.

If you wish to communicate directly with (i) the board of directors generally, (ii) the presiding director of executive sessions of non-management directors (our Lead Director), or (iii) non-management directors as a group, you should contact the Company's Ethics and Compliance Helpline at (800) 350-1014 or at *www.mycompliancereport.com* using the access ID, "AGL." Calls to the helpline and reports made via the website, if you choose, can be made anonymously.

The Board's Role in Risk Oversight

The board oversees the Company's risk assessment and risk management processes. It does so in part through the committees of the board. Our Audit Committee has the responsibility to review with management the Company's (i) policies governing the process by which risk assessment and risk management are undertaken; and (ii) major financial risk exposures and the steps management has taken to monitor and control such exposures. Our Finance and Risk Management Committee has the responsibility to (i) review with management the steps taken by management to ensure compliance with the Company's risk management policies and procedures relating to interest rate risk, currency risk, credit risk, commodity risk and derivatives related to any of the foregoing; (ii) review steps taken by management to establish and monitor trading and risk management systems and controls at the Company's asset management and optimization businesses and to ensure compliance at such businesses with risk management policies and procedures applicable to such businesses; and (iii) review management's assessment of controls and procedures associated with such businesses' management of transactions with affiliates and any reporting obligations to state or federal regulatory authorities. Our chief risk officer provides a quarterly report to the Finance and Risk Management Committee and meets in executive sessions with the Finance and Risk Management Committee at each regularly scheduled meeting. Each of the other committees of the board of directors has principal responsibility for reviewing and discussing with management those risk exposures: (i) specified in their charters or (ii) identified from time to time by the committees themselves or by the Audit Committee.

In addition, the board authorized the formation of the Company's Risk Management Committee (RMC), a committee of certain members of senior management. The RMC is responsible for establishing specific risk management policies and monitoring compliance with, and adherence to, the terms of these policies. Members of the RMC are members of senior management who monitor natural gas price risk positions and other types of risk, corporate exposures, credit exposures and overall results of our risk management activities. The RMC is chaired by the Company's chief risk officer, who is responsible for ensuring that appropriate reporting mechanisms exist for the RMC to perform its monitoring functions.

The Company conducts an annual enterprise risk assessment, overseen by a sub-committee of the RMC. The purpose of the assessment includes identifying and rating the management of all of the Company's significant risk exposures. The RMC uses the results of this assessment to prioritize the goals of the Company's risk management program and monitor the Company's major risks. Management reports to the board of directors any new risks identified since the previous year's assessment.

Table of Contents

Committees of the Board

The board of directors has established five standing committees to assist it in discharging its duties. Actions taken by any committee of the board are reported to the board, usually at the board meeting next following a committee meeting. Each standing committee has adopted a written charter, which is available on our website at *www.aglresources.com* and is available upon request to our Corporate Secretary at AGL Resources Inc., P.O. Box 4569, Location 1466, Atlanta, Georgia 30302-4569. The committees of the board and their members at December 31, 2014 are as shown in the following table.

Audit Committee

The Audit Committee met 12 times during 2014. All members of the Audit Committee are independent, non-employee directors, as defined under the listing standards of the New York Stock Exchange and our Standards. The Audit Committee's primary function is to assist the board of directors in fulfilling its oversight responsibilities. Among other things, the Audit Committee reviews (1) the integrity of our financial statements, including our internal control over financial reporting, (2) our compliance with legal and regulatory requirements, (3) the independent registered public accounting firm's qualifications and independence, (4) the performance of our internal audit function, and (5) the performance of the independent registered public accounting firm. Our chief financial officer, chief ethics and compliance officer, chief audit executive, chief accounting officer and representatives of our independent registered public accounting firm each provide a quarterly report to and meet in separate executive sessions with the Audit Committee each quarter.

The board of directors has determined that all members of the Audit Committee satisfy the enhanced independence standards applicable to all members of the Audit Committee under the independence requirements of the SEC, the New York Stock Exchange and the Company's Standards for Determining Director Independence. The board also has determined that all members of the Audit Committee meet the financial literacy requirements of the New York Stock Exchange listing standards. The board has further determined that Henry C. Wolf, the Audit Committee Chair, is an "audit committee financial expert" within the meaning of SEC regulations. Information regarding Mr. Wolf's qualification as an "audit committee financial expert" is included in his biographical information under the caption, "Proposal 1—Election of Directors."

Additional information regarding the Audit Committee and its functions and responsibilities is included in this proxy statement under the captions "Audit Committee Report" and "Proposal 2—Ratification of the Appointment of PricewaterhouseCoopers LLP as our Independent Registered Public Accounting Firm for 2015."

Compensation Committee

The Compensation Committee met six times during 2014. All members of the Compensation Committee are independent, non-employee directors, as defined under the listing standards of the New York Stock Exchange and our Standards for Determining Director Independence. Among other things, the Compensation Committee assists the board of directors in its efforts to achieve its goal of maximizing the long-term total return to shareholders by establishing policies by which officers, directors and employees are to be compensated in accordance with the board's compensation philosophy and objectives and by overseeing management succession and executive development processes.

The board of directors delegated to the Compensation Committee the following areas of responsibility that are more fully described in the Compensation Committee's charter: (1) evaluation of the chief executive officer, (2) succession and development planning for executive officers, (3) compensation of non-employee members of the board of directors, (4) compensation of the executive officers, including salary, short- and long-term incentives, and employment or severance arrangements, (5) establishment of performance objectives for executive officers under the Company's short- and long-term incentive compensation plans and determination of the attainment of such performance objectives, and (6) oversight of benefit plans and administration of long-term incentive plans.

The Compensation Committee has delegated to our chief executive officer the authority to grant equity awards to employees of the Company solely in connection with non-annual grants to employees other than executive officers. The Compensation Committee has established narrowly defined, pre-approved parameters regarding the terms and conditions of grants under the delegated authority, including the eligible employee groups, the maximum number of shares subject to the delegation, the determination of the exercise price and other terms and conditions of the awards. In January 2014, the Compensation Committee adopted a policy on granting equity compensation awards that provides additional terms and conditions for making grants. See "Compensation Discussion and Analysis—Other Policies Governing our Executive Compensation Program—Grants of Long-Term Incentive Awards" for more detail concerning our grant policy.

Our chief executive officer, based on the performance evaluations of the other executive officers, recommends to the Compensation Committee compensation for those executive officers. The executive officers, including our chief executive officer, also provide recommendations to the Compensation Committee from time to time related to compensation philosophy, program design, compliance, performance measures and competitive strategy.

The Compensation Committee's charter provides that the Compensation Committee, in its sole discretion, has the authority to retain compensation consultants. Accordingly, Frederic W. Cook & Co., Inc. ("F.W. Cook"), was retained directly by the Compensation Committee to assist it in 2014. F.W. Cook's role is to provide expertise and data as needed by the Compensation Committee pertaining to all aspects of executive and director compensation, including but not limited to advice and counsel as to the amount and form of executive and director compensation, and to advise the Compensation Committee on emerging trends, best practices and regulatory practices.

The Compensation Committee evaluated the independence of F.W. Cook in light of new SEC rules and New York Stock Exchange listing standards, which require consideration of the following factors:

- whether any other services are provided to the Company by the consultant;
- the fees paid by the Company as a percentage of the consulting firm's total revenue;
- the policies or procedures maintained by the consulting firm that are designed to prevent a conflict of interest;
- any business or personal relationships between the individual consultants involved in the engagement and a member of the Compensation Committee;
- any company stock owned by the individual consultants involved in the engagement; and
- any business or personal relationships between our executive officers and the consulting firm or the individual consultants involved in the engagement.

The Compensation Committee discussed these considerations and concluded that the engagement of F.W. Cook and the services provided to the Compensation Committee by F.W. Cook did not raise any conflict of interest.

Executive Committee

The Executive Committee met two times during 2014. The Executive Committee may meet during intervals between board meetings and has the same authority as the full board of directors, subject to limitations imposed by law or our bylaws.

Finance and Risk Management Committee

The Finance and Risk Management Committee met five times during 2014. The Finance and Risk Management Committee's primary function is to assist the board of directors in fulfilling its oversight responsibilities. Among other things, the Finance and Risk Management Committee oversees (1) the management of our balance sheet including leverage, liquidity, funding sources and related matters, (2) the annual capital budget and certain capital projects, (3) management's assessments, actions, processes and procedures concerning our exposure to risks identified in the Finance and Risk Management Committee's charter, and (4) any other matters that the board may delegate to the Finance and Risk Management Committee from time to time. Our chief risk officer provides a quarterly report to and meets in executive session with the Finance and Risk Management Committee at each regularly scheduled meeting.

Nominating, Governance and Corporate Responsibility Committee

The Nominating, Governance and Corporate Responsibility Committee met five times during 2014. All members of the Nominating, Governance and Corporate Responsibility Committee are independent, non-employee directors, as defined under the listing standards of the New York Stock Exchange and our Standards for Determining Director Independence. The Nominating, Governance and Corporate Responsibility Committee's primary responsibilities include (1) identifying individuals qualified to serve on the board of directors and recommending director nominees for selection by the full board of directors or shareholders, (2) evaluating, formulating and recommending to the board of directors corporate governance policies, and (3) overseeing the Company's position on corporate, social and environmental responsibilities.

Nomination of Director Candidates. The board of directors is responsible for recommending director candidates for election by the shareholders and for electing directors to fill vacancies or newly created directorships. The board of directors has delegated the screening and evaluation process for director candidates to the Nominating, Governance and Corporate Responsibility Committee, which identifies, evaluates and recruits highly qualified director candidates and recommends them to the board of directors. Potential candidates for director may come to the attention of the Nominating, Governance and Corporate Responsibility Committee through current directors, management, professional search firms, shareholders or other persons.

If the Nominating, Governance and Corporate Responsibility Committee has either identified a prospective nominee or determined that an additional or replacement director is required, the Nominating, Governance and Corporate Responsibility Committee may take such measures that it considers appropriate in connection with its evaluation of a director candidate, including candidate interviews, engagement of an outside firm to gather additional information and inquiry of persons with knowledge of the candidate's qualifications and character. In its evaluation of director candidates, including the members of the board of directors eligible for reelection, the Nominating, Governance and Corporate Responsibility Committee considers the current size and composition of the board of directors and the needs of the board of directors and the respective committees of the board in view of the criteria for directors described in our Corporate Governance Guidelines, a copy of which is available on our website at *www.aglresources.com.*

The Nominating, Governance and Corporate Responsibility Committee will consider director nominees proposed by shareholders. A shareholder may recommend a person for nomination for election to our board of directors by writing to our Corporate Secretary at AGL Resources Inc., P.O. Box 4569, Location 1466, Atlanta, Georgia 30302-4569. Pursuant to our Corporate Governance Guidelines, each submission must include:

- A brief biographical description of the candidate, including background and experience;
- The candidate's name, age, business address, and residence address;
- The candidate's principal occupation;
- The following information about the shareholder making the recommendation:
  - the name and record address of such shareholder;
  - the number of shares of our common stock owned beneficially or of record by such shareholder;
  - a description of all arrangements or undertakings between such shareholder and each proposed

nominee and any other person or persons (including their names) pursuant to which the nominations are to be made by such shareholder; and

- The written consent of the candidate to being named as a nominee and to serve as a director if elected.

A shareholder's recommendation for a candidate for nomination to be elected at the next annual meeting of shareholders must be received by our Corporate Secretary no later than 45 days prior to the end of the year preceding such annual meeting of shareholders. The Nominating, Governance and Corporate Responsibility Committee will evaluate these recommendations in the same manner as it evaluates all other nominees, using the criteria described in our Corporate Governance Guidelines.

The Nominating, Governance and Corporate Responsibility Committee periodically engages a third party search firm to identify possible director candidates for the Nominating, Governance and Corporate Responsibility Committee's consideration based on skills and characteristics identified by the Nominating, Governance and Corporate Responsibility Committee and in light of gaps in board composition that the Nominating, Governance and Corporate Responsibility Committee may identify from time to time as the issues facing the board evolve. Such skills and characteristics desirable in the context of the then current make-up of the board of directors may include diversity, age, business or professional background, financial literacy and expertise, availability, commitment, independence and other relevant criteria.

Practices for Considering Diversity. The charter of the Nominating, Governance and Corporate Responsibility Committee provides that it shall review, at least annually, the appropriate skills and characteristics of members of the board of directors in the context of the then current make-up of the board. This assessment includes the following factors: geographic representation (representative of our service territories); diversity of professional skills and experience; diversity of age, gender and race; energy industry experience; community relations within our service territories; and other criteria that the Nominating, Governance and Corporate Responsibility Committee or the full board determines to be relevant. It is the practice of the Nominating, Governance and Corporate Responsibility Committee to consider these factors when screening and evaluating candidates for nomination to the board of directors.

Board and Committee Meetings

Members of the board are kept informed through reports routinely presented at board and committee meetings by our chief executive officer and other company leaders and through other means. During 2014, the board of directors held eight meetings. Each director attended 75% or more of the aggregate of all meetings of the board and each committee on which he or she served.

Executive Sessions without Management

To promote open discussion among the non-management directors, the board of directors schedules regular executive sessions in which the non-management directors meet without management's participation. Such sessions are scheduled to occur at every regularly scheduled board meeting. The presiding director at such executive sessions is the Lead Director and Chairman of the Executive Committee of the board of directors. During 2014, the board met in executive session five times.

Communications with Directors

Shareholders and other interested parties may communicate with our board of directors or, alternatively, with the presiding director of executive sessions of our non-management directors or with the non-management directors as a group via our Ethics and Compliance Helpline at (800) 350-1014 or at *www.mycompliancereport.com*. A copy of our Procedures for Communicating with the Board of Directors of AGL Resources Inc. is available on our website at *www.aglresources.com* and is available in print to any shareholder who requests it from our Corporate Secretary at AGL Resources Inc., P.O. Box 4569, Location 1466, Atlanta, Georgia 30302-4569.

Ethics and Compliance Program

The board of directors is responsible for overseeing management's implementation of the Company's ethics and compliance program to ensure that our business is conducted in a consistently legal and ethical manner. As part of the ethics and compliance program, our Company has established, and the board of directors has approved, our Code of Conduct and Ethics. Our Code of Conduct and Ethics governs the way we treat our customers and co-workers, guides our community interactions, and strengthens our commitment to excellence and integrity. The Code of Conduct and Ethics covers a wide range of professional conduct, including environmental, health and safety standards, employment policies, conflicts of interest, accuracy of records, fair dealing, insider trading and strict adherence to all laws and regulations applicable to the conduct of our business. Under the Code of Conduct and Ethics, employees are required to conduct the Company's activities in an ethical and lawful manner and all employees are expected to report any situation where they believe our internal policies or external laws are being violated. Our Code of Conduct and Ethics applies to our directors, officers and all of our employees.

In addition, the board of directors has adopted a Code of Ethics for the Chief Executive Officer and the Senior Financial Officers, or our Officers Code of Ethics, designed to deter wrongdoing and promote the following: honest and ethical conduct; full, fair, accurate, timely and understandable disclosure in documents filed with or submitted to the SEC; compliance with applicable governmental laws, rules and regulations; prompt internal reporting of violations of the Officers Code of Ethics; and accountability for adherence to the Officers Code of Ethics.

Any waiver of the Code of Conduct and Ethics or Officers Code of Ethics for an executive officer or, where applicable, for a member of the board of directors, requires the approval of the board of directors or a duly authorized committee of the board and will be promptly disclosed on our website at *www.aglresources.com*. No waivers have been granted under the codes.

The board of directors also has adopted Guidelines on Significant Corporate Governance Issues, or our Corporate Governance Guidelines, that set forth guidelines for the operation of the board of directors and its committees. The board periodically reviews our governance practices and procedures, evaluating them against corporate governance best practices.

Our Code of Conduct and Ethics, our Officers Code of Ethics and our Corporate Governance Guidelines are available on our website at *www.aglresources.com.* They also are available to any shareholder upon request to our Corporate Secretary at AGL Resources Inc. at P.O. Box 4569, Location 1466, Atlanta, Georgia 30302-4569.

Table of Contents

SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT

Directors and Executive Officers

The following table presents the number of shares of AGL Resources common stock beneficially owned by each director, each named executive officer and by all executive officers and directors as a group as of December 31, 2014, based on information furnished by them to us. Our named executive officers are those individuals named in the Summary Compensation Table under the caption “Executive Compensation.”

Beneficial ownership as reported in the table below has been determined in accordance with SEC regulations and includes shares of common stock which may be acquired within 60 days after December 31, 2014, upon the exercise of outstanding stock options but excludes shares and share equivalents held under deferral plans which are disclosed in a separate column. Unless otherwise indicated, all directors and executive officers have sole voting and investment power with respect to the shares shown. As of December 31, 2014, no individual director or named executive officer beneficially owned 1% or more of our common stock. Our executive officers and directors as a group beneficially owned approximately 1% of our common stock.

	Shares of Common Stock Beneficially Owned			
Name	Owned Shares	Option Shares(1)	Shares and Share Equivalents Held Under Deferral Plans(2)	Total
Sandra N. Bane	3,410	0	14,621	18,031
Thomas D. Bell, Jr.	30,465	0	0	30,465
Norman R. Bobins(3)	10,494	0	0	10,494
Charles R. Crisp	14,668	0	14,056	28,724
Brenda J. Gaines	10,082	0	0	10,082

All executive officers and directors as a group (20 persons)(6)	626,071	417,810	278,001	1,321,882

(1) Reflects the shares that may be acquired upon exercise of stock options granted under the AGL Resources Inc. Omnibus Performance Incentive Plan, as Amended and Restated (which we refer to as the OPIP), the Long-Term Incentive Plan (1999) (which we refer to as the Long-Term Incentive Plan) and which was the predecessor plan to the OPIP, or under the Officer Incentive Plan.

(2) Represents shares of common stock, common stock equivalents and accrued dividend credits held for non-employee directors under the 1998 Common Stock Equivalent Plan for Non-Employee Directors, which we refer to as the Common Stock Equivalent Plan, and, for the named executive officers, under the Nonqualified Savings Plan. The common stock equivalents track the performance of AGL Resources common stock and are payable in cash. The shares and share equivalents may not be voted or transferred by the participants.

(3) Includes 502 shares held in a trust for which Mr. Bobins has sole voting and investment power with respect to the shares.

(4) Includes 4,610 shares held in a trust for which Mr. Rau has sole voting and investment power with respect to the shares.

(5) Includes 69,711 shares held in a trust for which Mr. Somerhalder has sole voting and investment power with respect to the shares.

(6) Includes 34,428 shares for which a member of the group who is not a named executive officer has shared voting and investment power.

Owners of More Than 5% of AGL Resources Common Stock

We are aware of the following shareholders who beneficially own more than 5% of AGL Resources common stock.

Name and Address of Beneficial Owner	Shares of Common Stock Beneficially Owned	Percent of Class
BlackRock, Inc. 55 East 52nd Street New York, NY 10022	9,515,698(1)	8.0%
The Vanguard Group, Inc. 100 Vanguard Blvd. Malvern, PA 19355	9,551,741(2)	8.0%

(1) Based on the Schedule 13G/A filed with the SEC on January 23, 2015, in which BlackRock, Inc. reported that it holds all of its shares as a parent holding company or control person in accordance with Rule 13d-1(b)(1)(ii)(G) of the Exchange Act and has sole voting power with respect to 8,714,732 of its shares and sole dispositive power with respect to all of its shares.

(2) Based on the Schedule 13G/A filed with the SEC on February 11, 2015, in which The Vanguard Group, Inc. (“Vanguard”) reported that it holds all of its shares as an investment advisor in accordance with Rule 13d-1(b)(1)(ii)(E) of the Exchange Act and has sole voting power of 177,858 of the total shares, sole dispositive power of 9,392,033 of the total shares and shared dispositive power of 159,708 of the total shares.

Based on the Schedule 13G/A, (i) Vanguard Fiduciary Trust Company (“VFTC”), a wholly-owned subsidiary of Vanguard, is the beneficial owner of 159,708 shares or 0.13% of the common stock outstanding of the Company as a result of its serving as investment manager of collective trust accounts, and as such, VFTC directs the voting of these 159,708 shares; and (ii) Vanguard Investments Australia, Ltd. (“VIA”), a wholly-owned subsidiary of Vanguard, is the beneficial owner of 18,150 shares or 0.01% of the common stock outstanding of the Company as a result of its serving as investment manager of Australian investment offerings, and as such, VIA directs the voting of these 18,150 shares.

DIRECTOR COMPENSATION

General

A director who is an employee of the Company receives no additional compensation for his or her services as a director. A director who is not an employee (a non-employee director) receives compensation for his or her services as described in the following paragraphs. All directors are reimbursed for reasonable expenses incurred in connection with attendance at board and committee meetings.

Annual Retainer

Each non-employee director receives an annual retainer for service as a director on the first day of each annual service term. The amount and form of the annual retainer are fixed from time to time by resolution of the board. For 2014, the annual retainer was $190,000, of which $95,000, or the Cash Portion, was payable in cash and $95,000, or the Equity Portion, was payable in shares of our common stock on the first day of the annual service term. Alternatively, a director may choose to receive his or her entire retainer (including the Cash Portion) in shares of our common stock, or to defer the retainer under the Common Stock Equivalent Plan.

Amounts deferred under the Common Stock Equivalent Plan are invested in common stock equivalents that track the performance of our common stock and are credited with equivalents to dividend payments that are made on our common stock. Common stock equivalents may not be voted or transferred. At the end of a participating non-employee director’s board service, he or she receives a cash distribution based on the then-current market value of his or her common stock equivalents and dividend equivalents.

Non-employee directors do not receive additional compensation for attending board or committee meetings.

Committee Chair and Lead Director Retainer

Committee chairs receive an additional annual retainer on the first day of each annual service term. For 2014, the additional annual retainer for each committee chair was $15,000 and the additional annual retainer for the Lead Director was $25,000. The committee chair and Lead Director retainers were payable, at the election of each director, in cash or shares of our common stock, or they were deferred under the Common Stock Equivalent Plan.

Table of Contents

2014 Non-Employee Director Compensation Paid

The following table summarizes compensation earned and paid to or deferred by each non-employee director for service as a director during 2014.

2014 Non-Employee Director Compensation

Name	Fees Earned or Paid in Cash ($)	Stock Awards ($)(1)(2)	All Other Compensation ($)	Total ($)
Sandra N. Bane	95,000	95,000	—	190,000
Thomas D. Bell, Jr.	95,000	95,028	—	190,028
Norman R. Bobins	95,000	95,028	—	190,028
Charles R. Crisp	95,000	95,028	—	190,028
Brenda J. Gaines	95,000	95,028	—	190,028
Arthur E. Johnson	135,000	95,000	—	230,000

John E. Rau	Common Stock	190,003
James A. Rubright	Common Stock	95,028
Bettina M. Whyte	Common Stock Equivalent	115,000
Henry C. Wolf	Common Stock	200,015

Table of Contents

(2) The aggregate number of stock awards, which includes shares of our common stock and common stock equivalents, for each of the non-employee directors outstanding at December 31, 2014, was as follows:

Name	Shares Outstanding (#)	Common Stock Equivalents Outstanding (#)(a)	Total Stock Awards Outstanding (#)(a)
Sandra N. Bane	3,410	14,621	18,031
Thomas D. Bell, Jr.	30,465	0	30,465
Norman R. Bobins	10,494	0	10,494
Charles R. Crisp	14,668	14,056	28,724
Brenda J. Gaines	10,082	0	10,082
Arthur E. Johnson	4,338	48,161	52,499
Wyck A. Knox, Jr.	12,122	46,400	58,522
Dennis M. Love	36,600	40,630	77,230
Charles H. McTier	2,428	15,311	17,739
Dean R. O'Hare	20,501	897	21,398
Armando J. Olivera	1,875	11,889	13,764
John E. Rau	20,840	0	20,840
James A. Rubright	19,469	25,272	44,741
Bettina M. Whyte	14,506	17,991	32,497
Henry C. Wolf	30,863	12,823	43,686

(a) Includes dividend equivalents.

Share Ownership and Holding Period Requirements for Non-Employee Directors

In order to serve on our board, directors are required to own shares of our common stock. Our share ownership guidelines for non-employee directors require that non-employee directors own shares of our common stock having a value of at least $475,000, which represents five times the value of the Equity Portion of the annual retainer. Each director has five years from the date of his or her initial election to meet the share ownership requirement. Common stock equivalents and shares issuable upon the exercise of vested stock options are included in the determination of the ownership guideline amount. We believe that the equity component of non-employee director compensation serves to further align the interests of the non-employee directors with the interests of our shareholders.

Under the terms of the Amended and Restated 2006 Non-Employee Directors Equity Compensation Plan (the "2006 Directors Plan"), non-employee directors are required to hold shares awarded under such plan until the earlier of (i) five years from the date of the initial stock award or subsequent stock grant; (ii) termination of the non-employee director's service; or (iii) a change in control of the Company. Shares subject to the holding period include all shares issued in connection with the initial stock award under the plan and all shares issued under the plan in payment of all or part of a director's annual retainer.

PROPOSAL 1—ELECTION OF DIRECTORS

GENERAL

The board of directors presently consists of 15 members, 14 of whom are non-employee directors. At the 2015 annual meeting, all 15 of the current directors will stand for re-election.

Vote Requirements for Election

Our bylaws provide that, in uncontested elections, a director must receive at least the majority of votes cast by shareholders with respect to his or her election at a meeting at which a quorum is present in order to be elected. Thus, each director nominee for whom the votes cast "FOR" election exceed 50% of the number of votes cast with respect to that director's election will be re-elected as a director. If any director nominee in an uncontested election does not receive the affirmative vote of a majority of the votes cast (including votes to withhold authority) with respect to that director's election, that director must promptly tender his or her resignation to the board following certification of the shareholder vote. The requirement that a director tender his or her resignation if he or she does not receive a majority of the votes cast does not apply in the case of a contested election where the number of nominees exceeds the number of directors to be elected.

Following such a tender of resignation, the Nominating, Governance and Corporate Responsibility Committee, excluding any director tendering his or her resignation if he or she is a member of the Nominating, Governance and Corporate Responsibility Committee, will make a recommendation to the board as to whether to accept or reject the resignation or whether other action should be taken. The board will then act on the Nominating, Governance and Corporate Responsibility Committee's recommendation and publicly disclose its decision and rationale within 90 days after the date of the certification of the election results. The director who tenders his or her resignation will not participate in the board's decision. If the director's resignation is not accepted by the board, the director shall continue to serve until his or her successor is duly elected or until his or her earlier death, resignation or removal. If the director's resignation is accepted by the board of directors, any resulting vacancy may be filled as provided in the bylaws or the board of directors may decrease the size of the board.

If a majority of the Nominating, Governance and Corporate Responsibility Committee does not receive a majority of the votes cast in their respective elections, then the independent members of the board who did not fail to receive a majority of the votes cast will appoint a committee from among themselves to consider the resignation offers and recommend to the board whether to accept them. If the only directors who did not fail to receive a majority of the votes cast constitute three or fewer directors, all directors may participate in the action regarding whether to accept the resignation offers.

Board Member and Nominee Qualifications

The experience, qualifications, attributes and skills that our board of directors considered in concluding that each of the current members of the board of directors and each of the nominees for election at the 2015 annual meeting should serve as a director include: (1) geographic representation (representative of our service territories); (2) diversity of professional skills and experience; (3) diversity of age, gender and race; (4) energy industry experience; and (5) community relations within our service territories.

When an incumbent director is up for re-election, the Nominating, Governance and Corporate Responsibility Committee reviews the performance, skills and characteristics of such incumbent director before making a determination to recommend that the full board nominate him or her for re-election.

A description of the specific experience, qualifications, attributes and skills that led our board of directors to conclude that each of the continuing members of the board of directors and each of the nominees should serve as a director follows the biographical information of each director and nominee below.

The board of directors, based on the recommendation of its Nominating, Governance and Corporate Responsibility Committee, has nominated Sandra N. Bane, Thomas D. Bell, Jr., Norman R. Bobins, Charles R. Crisp, Brenda J. Gaines, Arthur E. Johnson, Wyck A. Knox, Jr., Dennis M. Love, Dean R. O'Hare, Armando J. Olivera, John E. Rau, James A. Rubright, John W. Somerhalder II, Bettina M. Whyte and Henry C. Wolf for election as directors at the annual meeting. All of the nominees are current directors of the Company. If elected, each of the nominees will hold office for a one-year term expiring at the annual meeting of shareholders in 2016. Each of the nominees has agreed to serve as a director if elected by the shareholders.

If any nominee becomes unable to stand for election, the board may:

- designate a substitute nominee, in which case the proxies and the trustee of the AGL 401(k) Plan, as applicable, will vote all valid proxies for the election of the substitute nominee named by the board;
- allow the vacancy to remain open until a suitable candidate is identified; or
- reduce the authorized number of directors accordingly.

Nominees For Election

Sandra N. Bane, former audit partner with KPMG LLP from 1985 until her retirement in 1998; head of the Western Region's Merchandising practice at KPMG LLP and partner in charge of the region's Human Resources department for two years; accountant with increasing responsibilities at KPMG LLP from 1975 until 1996; currently a director of Big 5 Sporting Goods Corporation and Transamerica Asset Management Group, a mutual fund company; and formerly a director of PETCO Animal Supplies, Inc. Ms. Bane, 62, has been a director of AGL Resources since February 2008.

Ms. Bane brings many years of experience as an audit partner at KPMG with extensive financial accounting knowledge that is critical to our board of directors. Ms. Bane's experience with accounting principles, financial reporting rules and regulations, evaluating financial results and generally overseeing the financial reporting process of large public companies from an independent auditor's perspective and as a board member and audit committee member of other public companies makes her an invaluable asset to our board of directors.

Table of Contents

Thomas D. Bell, Jr., Chairman of Mesa Capital Partners, LLC, a real estate investment firm, since 2011; former Chairman of SecurAmerica LLC, a provider of premium contract security services, from January 2010 to September 2012; former Chairman and Chief Executive Officer of Cousins Properties Incorporated, a fully integrated real estate investment trust, from December 2006 until July 2009; President and Chief Executive Officer of Cousins Properties Incorporated from January 2002 until December 2006; real estate consultant to Credit Suisse First Boston from August 2001 until January 2002; special limited partner at Forstmann Little from January 2001 until July 2001; Chairman and Chief Executive Officer of Young & Rubicam, Inc. from January 2000 until November 2000; President and Chief Operating Officer of Young & Rubicam, Inc. from September 1999 until January 2000; Chairman and Chief Executive Officer of Young & Rubicam Advertising from March 1998 until August 1999; currently a director of Regal Entertainment Group, Norfolk Southern Corporation and the US Chamber of Commerce; and formerly a director of Cousins Properties Incorporated, Credit Suisse First Boston, Credit Suisse Group and Lincoln Financial Group. Mr. Bell, 65, has been a director of AGL Resources since July 2004. Mr. Bell previously served as a director of AGL Resources from July 2003 until April 2004.

Mr. Bell's extensive experience as a chief executive officer and chief operating officer of public companies demonstrates his leadership capability and business acumen. His experience with complex financial and operational issues in the real estate industry along with his service on the board of directors of a variety of public companies, including such companies' audit and compensation committees, brings valuable financial, operational and strategic expertise to our board of directors.

Norman R. Bobins, Chief Executive of Norman Bobins Consulting LLC, an independent consulting firm, since 2008; Chairman of The PrivateBank—Chicago since 2008; President and Chief Executive Officer of ABN AMRO North America from 2006 to 2007; Senior Executive Vice President of ABN AMRO Bank N.V. from 2002 to 2007; President and Chief Executive Officer of LaSalle Bank Corporation from 2003 to 2007; Chairman, President and Chief Executive Officer of LaSalle Bank from 2000 to 2007; President of LaSalle Bank Midwest from 2005 to 2007; currently a director of AAR Corp., Aviv Reit, Inc. and PrivateBancorp, Inc.; and formerly a director of SIMS Metal Management. Mr. Bobins, age 72, has been a director of AGL Resources since December 2011 and was a director of Nicor Inc. from 2007 to 2011.

Mr. Bobins has held several senior executive positions at various banking institutions, including LaSalle Bank Corporation, which was one of the largest bank holding companies in the Midwest, and where Mr. Bobins served as chairman, chief executive officer and president. Mr. Bobins' extensive knowledge of and experience in banking and finance and his prominent position in the Midwestern business community qualify him to serve on our board of directors. We also benefit from Mr. Bobins' extensive experience in leadership roles with numerous business, civic and philanthropic organizations in the Chicago area, which helps provide our Company with important business insights and access to other business leaders.

Table of Contents

Charles R. Crisp, former President and Chief Executive Officer of Coral Energy, LLC, a subsidiary of Shell Oil Company, which provided energy-related products and services associated with wholesale natural gas and power, from 1999 until his retirement in October 2000; President and Chief Operating Officer of Coral Energy, LLC from 1998 until 1999; joined Houston Industries in 1996 and served as President of its domestic power generation group until 1998; served as President, Chief Operating Officer and a director of Tejas Gas Corporation from 1988 until 1996; joined Houston Pipe Line Co. in 1985 where he served as a Vice President, Executive Vice President and President until 1988; served as Executive Vice President of Perry Gas Companies Inc. from 1982 until 1985; began his career in the energy industry in 1969 with Conoco Inc. where he held various engineering, operations and management positions from 1969 until 1982; and currently a director of EOG Resources Inc., IntercontinentalExchange, Inc. ("ICE") and Targa Resources Corp. Mr. Crisp, 67, has been a director of AGL Resources since April 2003.

Mr. Crisp's extensive energy experience is critical to our board of directors. Mr. Crisp's vast understanding of many aspects of our industry and his experience serving on the board of directors of three other public companies in the energy industry are invaluable. In addition, Mr. Crisp's leadership and business experience and deep knowledge of various sectors of the energy industry provide our board of directors with crucial insight.

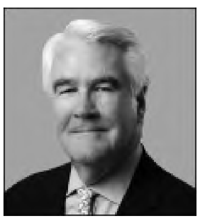
Brenda J. Gaines, former Chief Executive Officer of Diners Club North America, a division of Citigroup, a charge and credit card services company, from 2002 until her retirement in 2004; President of Diners Club North America from 1999 to 2004; Executive Vice President-Corporate Card Sales of Diners Club North America from 1994 to 1999; currently a director of Federal National Mortgage Association (Fannie Mae) and Tenet Healthcare Corporation; and formerly a director of CNA Financial Corporation and Office Depot, Inc. Ms. Gaines, 65, has been a director of AGL Resources since December 2011 and was a director of Nicor Inc. from 2006 to 2011.

Ms. Gaines has more than 25 years of experience working in the corporate and government arenas. She served as the deputy chief of staff and commissioner of housing for the City of Chicago. She has substantial training in corporate governance and has served as a speaker and panel member in various Risk Metrics certified courses on corporate governance, particularly those focusing on audit committees. As senior vice president, president and chief executive officer of Diners Club North America, Ms. Gaines led the activities for the North American franchise of the $29 billion Diners Club International network.

Ms. Gaines' business leadership skills, marketing knowledge, experience in government service and on the boards of directors of other companies qualify Ms. Gaines to serve on our board of directors. In addition, Ms. Gaines' corporate governance training and experience provides our board of directors with valuable insight and expertise.

Arthur E. Johnson, Lead Director of our board of directors since April 2009; former Senior Vice President, Corporate Strategic Development, of Lockheed Martin Corporation, an advanced technology company engaged in research, design, development, manufacture and integration of advanced technology systems, from 2001 until his retirement in March 2009; Vice President, Corporate Strategic Development, of Lockheed Martin Corporation from 1999 until 2001; President and Chief Operating Officer of Lockheed Martin Corporation Information and Services Sector from 1997 until 1999; President of Lockheed Martin Corporation Systems Integration Group from April 1996 until August 1997; President of Loral Corporation Federal Systems Group from 1994 until 1996; currently a director of Booz Allen Hamilton Inc., Eaton Corporation plc and an independent trustee of Fidelity Investments Fixed Income and Asset Allocation Funds; and formerly a director of Delta Air Lines Inc. and IKON Office Solutions Corporation. Mr. Johnson, 68, has been a director of AGL Resources since February 2002.

Mr. Johnson brings many years of experience in senior management with significant responsibilities in the areas of large company management and operations, business strategy development and strategic partnerships, which provide valuable insight to our board of directors. As we continue to evaluate growth opportunities, Mr. Johnson’s strategic planning insights have proven to be significantly beneficial to our board of directors. He also possesses extensive experience in the area of information services and technology that is extremely valuable to our board of directors. In addition, Mr. Johnson’s service on the board of directors of other public companies brings valuable experience and insight to our board of directors.



Wyck A. Knox, Jr., retired partner in, and former Chairman of the Executive Committee (for four years) of, the law firm of Kilpatrick Stockton LLP, now Kilpatrick Townsend & Stockton, LLP, or a predecessor firm, from 1976 until his retirement in 2007; and Chairman and Chief Executive Officer of Knox Rivers Construction Company from 1976 until 1995. Mr. Knox, 74, has been a director of AGL Resources since November 1998.

With over 47 years of legal experience and deep-rooted affiliations with a diverse array of business, political and philanthropic organizations in Georgia, Mr. Knox brings immense insight to the board of directors from the perspective of one of our largest service territories.

Table of Contents

Dennis M. Love, Chairman of the Board and Chief Executive Officer of Printpack Inc., which manufactures flexible and rigid packaging materials used primarily for consumer products, since 1987; currently a director of Oxford Industries, Inc.; and formerly a director of Caraustar Industries, Inc. Mr. Love, 59 has been a director of AGL Resources since October 1999.

Mr. Love's more than 25 years of experience as a chief executive officer brings key senior management and operational experience to our board of directors. Mr. Love's successful management and growth of his family-owned business to include international operations demonstrate his business strategy and acumen. His service on the nominating, compensation and governance committee of the board of directors of Oxford Industries also provides valuable insight on public company governance and compensation practices.

Dean R. O'Hare, former Chairman and Chief Executive Officer of The Chubb Corporation, a multi-billion dollar organization providing property and casualty insurance for personal and commercial customers worldwide, from 1988 until his retirement in November 2002; President of The Chubb Corporation from 1986 until 1988; Chief Financial Officer of The Chubb Corporation from 1980 until 1986; various other positions with increasing responsibility at The Chubb Corporation until being named officer from 1963 until 1972; currently a director of Fluor Corporation; and formerly a director of HJ Heinz Company. Mr. O'Hare, 72, has been a director of AGL Resources since August 2005.

As the former chief executive officer and chief financial officer of a Fortune 500 company with over 30 years of global business experience, Mr. O'Hare is a valuable member of our board of directors. Mr. O'Hare brings significant large public company operational, financial and corporate governance experience to our board of directors and his experience and relationships in one of our largest service territories, along with his service on the compensation committee and governance committee of the board of directors of Fluor Corporation, provide key insight to our board of directors. Mr. O'Hare's extensive experience with the Chubb Corporation also brings valuable risk management experience to our board of directors.

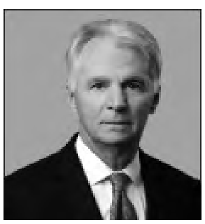
Armando J. Olivera, former President and Chief Executive Officer, Florida Power & Light Company ("FP&L"), an electric utility services company with over $10 billion in annual revenue, from June 2003 until his retirement in May 2012; various other positions with increasing responsibility at FP&L from 1972 to 2003; currently a director of Fluor Corporation, Consolidated Edison and Lennar Corporation; and formerly a director of FP&L. Mr. Olivera, 65, has been a director of AGL Resources Inc. since December 2011 and was a director of Nicor Inc. from 2008 to 2011.

Mr. Olivera was a 40-year veteran of FP&L. Throughout his career at FP&L, he served in several senior executive positions, including president and chief executive officer at the time of his retirement.

Mr. Olivera's experience in and understanding of utility regulation, operations and finance as well as his strong business leadership skills qualify him to serve on our board of directors. He has served in a leadership role on a number of electric utility industry groups including chairman of the Florida Reliability Council, chairman of the Association of Edison Illuminating Companies and president of the Southeastern Electric Exchange. He also has served in a number of community and educational organizations. He is currently a trustee of Miami Dade College and Cornell University and a director of Cornell Atkinson Sustainability Center.

John E. Rau, President and Chief Executive Officer of Miami Corporation, a private asset management firm, since December 2002; Chairman of Chicago Title and Trust Company Foundation, a charitable foundation, since March 2000; President and Chief Executive Officer of Chicago Title Corporation, a financial services corporation, from January 1997 to March 2000; currently a director of First Industrial Realty Trust, Inc. and BMO Financial Corp./BMO Harris Bank, N.A.; and previously a director of BorgWarner Inc. and Wm. Wrigley Jr. Company. Mr. Rau, 66, has been a director of AGL Resources since December 2011, was a director of Nicor Inc. from 1998 to 2011 and Nicor Inc.'s lead director from 2006 to 2011.

Mr. Rau is the chief executive officer of Miami Corporation, a private investment management company. He has served as chief executive officer at two major public companies and dean of Indiana University's Kelley School of Business. Mr. Rau also has served in leadership roles at numerous business, civic and philanthropic organizations. He has authored several dozen nationally published essays and reviews and a book on the characteristics of successful chief executive officers.
Mr. Rau's strong leadership skills, his service on other boards of directors and his extensive knowledge of banking, finance, economics and real estate qualify him to serve on our board of directors. Mr. Rau's prominent position in the Midwestern business community helps provide our Company with a wide variety of business insights and access to other business leaders.



James A. Rubright, former Chairman and Chief Executive Officer of RockTenn Company, an integrated paperboard and packaging company, from 1999 until his retirement in October 2013; and Executive Vice President of Sonat, Inc., an energy company, from 1994 until 1999; currently, Mr. Rubright is a principal in Privet Fund Management, LLC, a hedge fund management company, and is a director of Forestar Group, Inc. and HD Supply Holdings, Inc.; and formerly a director of Avondale, Inc., Oxford Industries, Inc. and RockTenn Company. Mr. Rubright, 68, has been a director of AGL Resources since August 2001.

Table of Contents

Mr. Rubright's experience on the board of directors of a variety of public companies along with his proven success as the chief executive officer of a large public company demonstrates his leadership capability and extensive knowledge of complex financial and operational issues that public companies face. In addition, his experience as a chief executive officer of a Fortune 500 company brings vital senior management experience and business acumen to our board of directors. Mr. Rubright's extensive experience in the natural gas industry provides valuable insight to our board of directors. Mr. Rubright's unique background brings a deep understanding of operations and strategy with an added layer of risk management experience that is an important aspect of the composition of our board of directors.

John W. Somerhalder II, our Chairman since October 2007 and our President and Chief Executive Officer since March 2006; Executive Vice President of El Paso Corporation, a natural gas and related energy products provider and owner of North America's largest natural gas pipeline system and one of North America's largest independent natural gas producers, from 2000 until May 2005, where he continued service under a professional services agreement from May 2005 until March 2006; President, El Paso Pipeline Group from 2001 until 2005; President of Tennessee Gas Pipeline Company, an El Paso company from 1996 until 1999; President of El Paso Energy Resources Company from April 1996 until December 1996; Senior Vice President, Operations and Engineering, El Paso Natural Gas Company from 1992 until 1996; Vice President, Engineering, El Paso Natural Gas Company from 1986 until 1990; from 1977 until 1990, various other positions with increasing responsibility at El Paso Corporation and its subsidiaries until being named an officer in 1990; and currently a director of AGL Resources Inc. and Crestwood Equity Partners LP. Mr. Somerhalder, 59, has been a director of AGL Resources since March 2006.

With over 30 years of energy industry experience at almost every level of a large public company, Mr. Somerhalder is well positioned to lead our management team and provide essential insight and guidance to the board of directors from an inside perspective of the day-to-day operations of the Company, along with experience and comprehensive knowledge of the natural gas industry.

Bettina M. Whyte, Managing Director and Senior Advisor, Alvarez & Marsal Holdings, LLC, a leading independent global professional services firm, since January 2011; Chairman of the Advisory Board of Bridge Associates, LLC, a leading turnaround, crisis and interim management firm, from October 2007 until December 2010; Managing Director and Head of the Special Situations Group of MBIA Insurance Corporation, a world leader in credit enhancement services and a global provider of fixed-income asset management services, from March 2006 until October 2007; Managing Director of AlixPartners, LLC, a business turnaround management and financial advisory firm, from April 1997 until March 2006; Partner and National Director of Business Turnaround Services, Price Waterhouse LLP from 1990 until 1997; and currently a director of Akal Security, Inc., Amerisure Companies and RockTenn Company. Ms. Whyte, 65, has been a director of AGL Resources since October 2004.

Ms. Whyte has vast experience in the financial and operational restructuring of complex businesses, and her service as interim chief executive officer, chief operating officer and chief restructuring officer of numerous troubled public and private companies is essential to our board of directors. Her experience on the board of directors of other public companies and her insight on financial and operational issues add value to our board of directors.

Henry C. Wolf, former Vice Chairman and Chief Financial Officer of Norfolk Southern Corporation, a holding company that controls a major freight railroad and owns a natural resources company and telecommunications company, from 1998 until his retirement in 2007; Executive Vice President—Finance of Norfolk Southern Corporation from 1993 until 1998; Vice President-Taxes of Norfolk Southern Corporation from 1991 until 1993; various other positions with increasing responsibility at Norfolk Southern Corporation in the finance division from 1973 until 1991; formerly a director of Hertz Global Holdings, Inc.; and currently serves as a trustee of Colonial Williamsburg Foundation. Mr. Wolf, 72, has been a director of AGL Resources since April 2004.

Mr. Wolf's unique professional background of over 40 years of experience with legal, financial, tax and accounting matters along with his demonstrated executive level management skills make him an important advisor. His skills are a vital asset to our board of directors at a time when accurate and transparent accounting, a sound financial footing and exemplary governance practices are essential. In addition, his background in strategic planning and experience with mergers and acquisitions in a regulated environment represent an important resource for the Company.

Under our Guidelines on Significant Corporate Governance Issues, each member of the board of directors is required to attend the annual meeting of shareholders unless unavoidable circumstances preclude attendance. All of our then current directors attended our 2014 annual meeting of shareholders.

THE BOARD OF DIRECTORS RECOMMENDS THAT SHAREHOLDERS VOTE "FOR" ALL OF THE ABOVE NOMINEES.

AUDIT COMMITTEE REPORT

The Audit Committee of the board of directors is composed of seven directors, each of whom is an independent director, as defined under the listing standards of the New York Stock Exchange and the Company's Standards for Determining Director Independence. The Audit Committee operates under a written charter adopted by the board of directors, a copy of which is available on the Company's website at *www.aglresources.com*.

The Audit Committee reviews the Company's financial reporting process on behalf of the board of directors. In fulfilling its responsibilities, the Audit Committee has reviewed and discussed the audited financial statements contained in the Company's Annual Report on Form 10-K for 2014 with management and the Company's independent registered public accounting firm, PricewaterhouseCoopers LLP. Management is responsible for the Company's financial statements and the financial reporting process, including the system of internal control over financial reporting. PricewaterhouseCoopers is responsible for expressing an opinion on the conformity of those audited financial statements with accounting principles generally accepted in the United States and on the effectiveness of the Company's internal control over financial reporting.

The Audit Committee has discussed with PricewaterhouseCoopers the matters required to be discussed by applicable audit standards adopted by the Public Company Accounting Oversight Board, including Auditing Standard No. 16, "Communication with Audit Committees," regarding PricewaterhouseCoopers' judgments about the quality of the Company's accounting principles as applied in its financial reporting. In addition, the Audit Committee has discussed with PricewaterhouseCoopers its independence from the Company and from Company management, including the matters in the written disclosures and the letter provided to the Audit Committee by PricewaterhouseCoopers as required by the applicable requirements of the Public Company Accounting Oversight Board. The Audit Committee has concluded that PricewaterhouseCoopers is independent from the Company and its management.

Based on the reviews and discussions referred to above, the Audit Committee recommended that the board of directors approve the inclusion of the audited financial statements in the Company's Annual Report on Form 10-K for 2014 for filing with the SEC.

Henry C. Wolf (Chair)

PROPOSAL 2—RATIFICATION OF THE APPOINTMENT OF PRICEWATERHOUSECOOPERS LLP AS OUR INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM FOR 2015

Appointment of Independent Registered Public Accounting Firm

PricewaterhouseCoopers LLP served as our independent registered public accounting firm and audited our annual financial statements for the fiscal year ended December 31, 2014, and the effectiveness of our internal control over financial reporting as of December 31, 2014.

PricewaterhouseCoopers has served as our principal independent registered public accounting firm since 2003.

The Audit Committee has appointed PricewaterhouseCoopers to be our independent registered public accounting firm for the fiscal year ending December 31, 2015. The shareholders are asked to ratify this appointment at the annual meeting. In the event shareholders do not ratify the appointment of PricewaterhouseCoopers as our independent registered public accounting firm for 2015, the Audit Committee will review its future selection of our independent registered public accounting firm.

Representatives of PricewaterhouseCoopers will attend the annual meeting and will have the opportunity to make a statement if they so desire. They will also be available to answer appropriate questions.

Audit and Non-Audit Fees

The following table summarizes certain fees billed by PricewaterhouseCoopers for 2014 and 2013:

Fee Category:	2014	2013
Audit fees	$ 4,247,068	$ 3,589,435
Audit-related fees	275,000	132,000
Tax fees	43,200	51,561
All other fees	0	27,000
Total fees	$ 4,565,268	$ 3,799,996

Set forth below is a description of the nature of the services that PricewaterhouseCoopers provided to us in exchange for such fees.

Audit Fees

Represents fees PricewaterhouseCoopers billed us for the audit of our annual financial statements, the review of our quarterly financial statements and services normally provided in connection with statutory and regulatory filings. These include fees incurred in meeting the internal control over financial reporting compliance requirements of Section 404 of the Sarbanes-Oxley Act of 2002, as well as fees for audits of several subsidiaries.

Audit-Related Fees

Represents fees PricewaterhouseCoopers billed us for audit and review-related services, including services relating to a review report on internal controls provided to third parties, potential acquisitions and dispositions and the audit of employee benefit plan financial statements.

Tax Fees

Represents fees PricewaterhouseCoopers billed us for tax compliance, planning and advisory services.

All Other Fees

Represents fees PricewaterhouseCoopers billed us for our attendance at accounting and tax conferences.

The Audit Committee pre-approved all of the above audit, audit-related, tax and other fees of PricewaterhouseCoopers, as required by the pre-approval policy described below.

Audit Committee Audit and Non-Audit Services Approval Policy

Consistent with rules and regulations pursuant to the Sarbanes-Oxley Act of 2002 regarding registered public accounting firm independence, the Audit Committee has responsibility for appointing, setting compensation and overseeing the work of the Company's independent registered public accounting firm. In recognition of this responsibility, the Audit Committee adopted a policy that requires specific Audit Committee approval before any services are provided by the independent registered public accounting firm.

Prior to engagement of the independent registered public accounting firm for the next year's audit, management submits to the Audit Committee for approval a summary of services expected to be rendered during that year and an estimate of the related fees for (1) audit services, (2) audit-related services, (3) tax services, and (4) all other services. The Audit Committee pre-approves these services by category of service and budget amount. The services and fees must be deemed compatible with the maintenance of the independent registered public accounting firm's independence. The Audit Committee requires the independent registered public accounting firm and management to report actual fees versus the budget periodically throughout the year by category of service. During the year, circumstances may arise when it may become necessary to engage the independent registered public accounting firm for additional services not contemplated in the original pre-approval. In those instances, the Audit Committee requires that management obtain specific approval from the Audit Committee before engaging the independent registered public accounting firm.

The Audit Committee may delegate approval authority to one or more of its members. The member to whom such authority is delegated must present for ratification any approval decisions to the Audit Committee at its next scheduled meeting.

THE BOARD OF DIRECTORS RECOMMENDS THAT SHAREHOLDERS VOTE "FOR" THE PROPOSAL TO RATIFY THE APPOINTMENT OF PRICEWATERHOUSECOOPERS LLP AS OUR INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM FOR 2015.

COMPENSATION COMMITTEE REPORT

The Compensation Committee of the board of directors is composed of eight directors, each of whom is an independent director, as defined under the listing standards of the New York Stock Exchange and the Company's Standards for Determining Director Independence. The Compensation Committee operates under a written charter adopted by the board of directors, a copy of which is available on the Company's website at *www.aglresources.com*.

The Compensation Committee has reviewed and discussed with management the "Compensation Discussion and Analysis," or CD&A, section of this proxy statement required by Item 402(b) of Regulation S-K promulgated by the SEC. Based on the Committee's review and discussions with management, the Committee recommended to the board of directors that the CD&A be included in the Company's 2014 annual report on Form 10-K and in this proxy statement.

Bettina M. Whyte (Chair)
Sandra N. Bane
Thomas D. Bell, Jr.
Norman R. Bobins
Charles R. Crisp
Armando J. Olivera
James A. Rubright
Henry C. Wolf

The information contained in the Compensation Committee Report shall not be deemed to be "soliciting material" or to be "filed" with the Securities and Exchange Commission, nor shall such information be incorporated by reference into any future filing under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended, except to the extent that we specifically incorporate it by reference in such filing.

COMPENSATION COMMITTEE INTERLOCKS AND INSIDER PARTICIPATION

The following directors served on the Compensation Committee during 2014: Sandra N. Bane, Thomas D. Bell, Jr., Norman R. Bobins, Charles R. Crisp, Armando J. Olivera, James A. Rubright, Bettina M. Whyte (Chair) and Henry C. Wolf. None of such persons was, during 2014 or previously, an officer or employee of AGL Resources or any of its subsidiaries and each such person was an independent director as defined under the listing standards of the New York Stock Exchange and our Standards for Determining Director Independence. There were no Compensation Committee interlocks or insider participation in compensation decisions that are required to be disclosed in this proxy statement. None of the members of the Compensation Committee had any relationship requiring disclosure under "Certain Relationships and Related Transactions."

COMPENSATION DISCUSSION AND ANALYSIS

The following section contains a detailed description of our compensation objectives and policies, the elements of our compensation program, and the material factors the Compensation Committee considered in setting the compensation of our named executive officers for 2014, who are listed below:

Name	Title
John W. Somerhalder II	Chairman of the Board, President and Chief Executive Officer
Andrew W. Evans	Executive Vice President and Chief Financial Officer
Henry P. Linginfelter	Executive Vice President, Distribution Operations
Paul R. Shlanta	Executive Vice President, General Counsel, and Chief Ethics and Compliance Officer
Peter I. Tumminello	Executive Vice President, Wholesale Services, and President of Sequent Energy Management (Sequent)

Compensation Philosophy

Our compensation program is designed to reward employees for achieving our strategic and financial objectives; to attract, retain, motivate and reward top executive talent; and to foster long-term value creation for the Company and its shareholders. In support of this, our program is intended to:

- align executives' interests with those of our shareholders by creating a strong focus on stock ownership and basing pay on performance measures that are expected to drive long-term, sustained shareholder value growth;
- include a strong link between pay and performance, by placing a significant portion of compensation "at risk" based on Company and business unit performance;
- assure the Company's access to top executive talent and protect against competitor recruitment through compensation opportunities that are market competitive and commensurate with the executives' responsibilities, experience and demonstrated performance; and
- reinforce business strategies and reflect the Company's core values by rewarding desired performance, promoting desired competencies and recognizing contributions to business success that are consistent with those core values.

How We Tie Pay to Company Performance

Our executive compensation program contains three elements of total direct compensation: base salary, annual incentive, and long-term equity awards. Our program is structured so that a significant portion of target total direct compensation depends upon our achievement of certain goals and targets related to financial and operational performance, and our total shareholder return relative to our peer group. We believe these performance criteria strengthen the alignment between executive pay and value-creation for our shareholders.

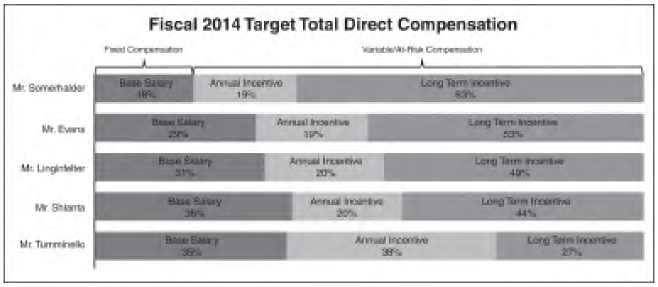
Our annual incentive awards, which are paid in cash, are conditioned upon our achievement of pre-established performance goals. Annual incentive awards for Messrs. Somerhalder, Evans, Linginfelter and Shlanta are based upon achievement of an adjusted earnings per share goal, which we call "Plan EPS," and

Table of Contents

business unit goals, while Mr. Tumminello's annual incentive award is based primarily on pre-bonus accrual EBIT, which we call "Plan Earnings," of Sequent Energy Management, L.P. ("Sequent"), our wholesale services segment.

Our long-term equity awards consist of performance-based restricted stock units, which require achievement of an annual EBITDA target, and performance share units, which are earned based on our total shareholder return relative to our peer group over a period of three years.

As shown in the following chart, a significant portion of target total direct compensation for each of our named executive officers in 2014 was based on company or business unit performance requirements.



2014 Performance Highlights

- In 2014, we achieved the strongest financial results in our company's history; we generated net income from continuing operations attributable to AGL Resources of $562 million and diluted earnings per share (EPS) from continuing operations of $4.71, compared to net income from continuing operations attributable to AGL Resources of $290 million and diluted EPS from continuing operations of $2.45 in fiscal year 2013.
- We increased our annual dividend to shareholders by 4.1%, from $1.96 per share to $2.04 per share, continuing our strong track record of annual dividend increases.
- We generated total shareholder return (stock price appreciation and dividends) of 42% for the three-year period ended December 31, 2014.
- We completed the sale of our Tropical Shipping and Seven Seas Insurance businesses, generating approximately $225 million of after-tax proceeds and cash repatriation; the transaction enabled the company to exit a non-core business at a favorable multiple of EBITDA and will allow us to redeploy those proceeds in more strategic areas of regulated investment.
- We announced agreements to invest approximately $670 million in three interstate pipeline projects, which will ultimately enhance service to our utility customers in three of the states we serve (Georgia, New Jersey and Virginia), and which we expect to provide solid, FERC-regulated investment returns for our shareholders.
- We achieved important legislative and regulatory outcomes during 2014 in several of our state jurisdictions. These programs allow us to invest in our system infrastructure and continue to provide safe, reliable gas distribution service to our customers, while reducing the time required to recover our investments. As an example, our "Investing in Illinois"

program, approved in 2014, will enable us to invest $1.5 billion over the next nine years to enhance our Nicor Gas system and to grow our rate base substantially in Illinois.

2014 Performance and Compensation

Reflecting our pay-for-performance compensation philosophy, the compensation of our named executive officers was directly affected by our financial results in 2014, both with respect to the amount of annual incentive and long-term equity awards earned and the underlying value of long-term equity awards.

In the third quarter of 2014, we revised the way we account for the non-cash revenue that we recognize in connection with our infrastructure replacement programs. This impacted the timing of revenue recognition in our distribution operations segment. We also revised our method of amortizing our intangible assets in our retail operations segment and other uncorrected items. We corrected our accounting process for 2014, assessed the materiality of these items, and concluded that they were not material to any prior annual or quarterly periods and did not require an accounting restatement. However, we did revise our financial statements for the years ended December 31, 2013, 2012, and 2011, in an amended Form 10-K/A for the year ended December 31, 2013, and for the quarters ended March 31, 2014 and June 30, 2014, and the comparable periods in 2013, in amended Forms 10-Q/A for those periods. In addition, as previously reported, we determined that for 2011, had the underlying accounting originally reflected the distinction between regulatory accounting principles and GAAP, certain long-term incentives that were based upon results for the performance period ended December 31, 2011 would not have been awarded. The Compensation Committee of our board of directors and the full board took these items into consideration when determining 2014 executive compensation. For more information, see Note 1 to our audited Consolidated Financial Statements in our Annual Report on Form 10-K. For more information about the impact on our 2014 annual incentive program, see the discussion starting on page 48 of this proxy statement.

Annual Incentive Awards

- Our 2014 annual incentive awards were based upon a combination of several goals:
  - Corporate Plan EPS (described on page 49),
  - Margin, safety and customer service, and EBIT metrics for our regulated business segment (Distribution Operations) (described on page 51),
  - EBITDA metrics for our non-regulated business segments (described on page 51), and
  - Operating and Maintenance Expense minus Expenses Related to Benefits and Incentives (O&M Expense less B&I) for our regulated and non-regulated business segments (described on page 50).
- As noted above, 2014 was a successful year for the Company, and we met the Plan EPS hurdle and exceeded the target goals under the annual incentive plan. In calculating the “affordability factor” that applies to the 2014 annual incentive awards, the Compensation Committee decided to consider the full impact, both positive and negative, of the accounting revisions described above. Accordingly, the named executive officers earned an annual incentive plan payout for 2014 ranging from 169% to 177% of target. Please see the discussion of the annual incentive award program beginning on page 48.

- In light of the accounting revisions in 2014, including the impact on long-term incentives that were awarded for 2011 performance, the Compensation Committee decided to reduce the 2014 annual incentive payouts to certain individuals ultimately responsible for our accounting function, including our CEO and CFO. For more information about this adjustment of the 2014 annual incentive payout, see the discussion starting on page 53 of this proxy statement.
- We provide a separate annual incentive program for Mr. Tumminello, who serves as president of Sequent and leads our wholesale services segment and our storage and liquefied natural gas/fuels (storage and fuels) operations in our midstream operations segment. Mr. Tumminello's annual incentive is primarily based upon Sequent's Plan Earnings, with a smaller component based on the performance of midstream operations (storage and fuels). Based upon 2014 performance, Mr. Tumminello received an incentive plan award of $3,550,000, of which $1,593,020 was deferred for payout over a twenty-four month period in accordance with a mandatory retention provision in his program. Please see page 53 for a description of Mr. Tumminello's incentive program.

Long-Term Incentive Awards

- In 2014, we continued to grant performance-based restricted stock units (representing 30% of each executive's target long-term incentive value) and performance share units (representing 70% of each executive's target long-term incentive value). The restricted stock units include a one-year EBITDA hurdle and a four-year ratable time-based vesting schedule. Because the Company met the EBITDA hurdle, 25% of the RSUs granted in 2014 were vested and the remainder of the awards converted to time-vesting restricted stock for the remaining three years of the vesting period.
- The performance share units are earned based upon the Company's relative total shareholder return (RTSR) over a three-year period, compared to a peer group consisting of 12 comparable companies. The performance period for the performance share units granted in 2014 will be completed at the end of 2016.
- The performance share units granted in 2012, which had a three-year performance period that ended December 31, 2014, were earned at 83% of target because AGL's RTSR was at the 41.6 percentile ranking relative to its peer group. Please see the discussion of the long-term incentive awards beginning on page 55.

Continuity Agreements

- Each of our executives has a "continuity agreement" that provides severance pay if the executive's employment is terminated in certain circumstances in connection with a change in control of the Company. The agreements have a "double-trigger" provision, which means that severance benefits are not provided unless both (i) a change in control occurs and (ii) the executive incurs an involuntary termination within a designated period of time. The term of each continuity agreement runs through December 31, 2015. A description of the continuity agreements begins on page 57.

Limited Perquisites

- As in prior years, the only perquisite that we offer our executives is reimbursement for mandatory tax return preparation. To the extent that the entire authorized amount is not used for tax preparation, it may be applied to financial or estate planning.

Table of Contents

Changes in Compensation Program for 2014. As part of its ongoing effort to enhance and refine the compensation program, the Compensation Committee made several important changes to the compensation program for 2014:

- Effective January 1, 2014, base salaries were increased by 3% for Messrs. Somerhalder, Shlanta and Tumminello, and by 6% for Messrs. Evans and Linginfelter.
- Mr. Somerhalder's target long-term incentive opportunity for 2014 was equal to \$3.5 million (up from \$3.3 million in 2013), and Mr. Evans' target long-term incentive opportunity for 2014 was equal to 184% of his base salary (up from 160% of base salary in 2013). These changes were intended to provide each of these executive officers with a more fully competitive total direct compensation opportunity.
- Restricted stock units granted in 2014 vest ratably over four years (25% per year) including the performance year, provided that an EBITDA performance hurdle for the first year is met and the grantee remains in service through each such vesting date. In the past, our restricted stock units vested ratably over the three years following the performance year (33.3% per year in years 2, 3 and 4).
- Restricted stock units granted in 2014 also include dividend equivalent rights, so that dividends declared on Company common stock while an award remains outstanding will be credited to the award in the form of additional shares having a value equal to the dividend amount and being subject to the same vesting requirements. In the past, dividend equivalents were not credited to restricted stock unit awards. As in prior years, performance share units are not credited with dividend equivalents.

Governance and Evolving Compensation Practices

The Compensation Committee and Company management are mindful of evolving practices in executive compensation and corporate governance. In response, we have adopted certain policies and practices that are in keeping with "best practices" in many areas. For example:

- We do not provide excessive executive perquisites or extraordinary relocation benefits to our named executive officers.
- We do not provide tax gross-ups on compensation paid to our named executive officers, or on "golden parachute" excise taxes.
- Our Omnibus Performance Incentive Plan has "double-trigger" vesting for equity awards in the context of a change in control if the awards are assumed by the acquiring company.
- Our Omnibus Performance Incentive Plan expressly prohibits repricing of options (directly or indirectly) without prior shareholder approval.
- The Compensation Committee engages an independent compensation consultant.
- Our stock ownership policy requires that each executive must retain at least 75% of net shares from his or her equity awards until the ownership requirement is met.
- Company policy prohibits directors and executive officers from engaging in hedging activities involving Company stock.
- Company policy requires the recovery of certain incentive-based compensation paid to current or former executive officers in the event of an accounting restatement.

Say on Pay Results and Consideration of Shareholder Support

At the annual meeting of shareholders on April 29, 2014, over 95% of the votes cast were in favor of the advisory vote to approve executive compensation. The Compensation Committee considered this positive result and concluded that the shareholders continue to support the compensation paid to our executive officers and the Company's overall pay practices.

In light of this support, the Compensation Committee decided to retain the core design of our executive compensation program for 2014, with an emphasis on short and long-term incentive compensation that rewards our senior executives when they successfully implement our business plan and, in turn, deliver value for our shareholders.

The Committee will continue to monitor best practices, future advisory votes on executive compensation and other shareholder feedback to guide it in evaluating the alignment of the Company's executive compensation program with the interests of the Company and its shareholders. The Committee invites our shareholders to communicate any concerns or opinions on executive pay directly to the Board. Please refer to "Corporate Governance—Communications with Directors" on page 17 for information about communicating with the Board.

Based upon the preference expressed by our shareholders at the 2011 annual meeting, the Board has implemented an annual advisory vote on executive compensation. The next required vote on the frequency of shareholder votes on executive compensation is scheduled to occur at the 2017 annual meeting.

Table of Contents

How We Make Compensation Decisions

The Compensation Committee oversees our executive compensation program. Information about the Compensation Committee and its composition and responsibilities can be found on page 13 of this proxy statement, under the caption “Corporate Governance—Committees of the Board—Compensation Committee.” The Compensation Committee engages the services of Frederic W. Cook & Co., Inc. (F.W. Cook), an independent consultant. F.W. Cook reports directly to the Compensation Committee and provides no other services to the Company. The following table outlines the roles and responsibilities of various parties in determining executive compensation.

	Roles and Responsibilities
Compensation Committee	• Approves incentive programs and sets performance goals. • Determines appropriate levels of compensation for our executives, other than our CEO. • Recommends to independent Board members compensation opportunities and awards for our CEO.
F.W. Cook (Independent consultant to the Compensation Committee)	• Provides a competitive assessment of our executives’ compensation levels and programs. • Provides advice, research and analytical services on a variety of subjects, including compensation trends, best practices, peer group comparisons and the compensation of our non-employee directors.
Independent Directors on Full Board	• Evaluates CEO performance. • Approves compensation for our CEO.
CEO	• Develops an assessment of individual performance for each other named executive officer. • Provides recommendations to the Compensation Committee regarding individual compensation levels for such executives. • Provides recommendations to the Compensation Committee regarding goals for the performance measures in the incentive plans.
Other members of management	• Our Human Resources staff provides data and information relating to our compensation programs to the Compensation Committee and F.W. Cook to help facilitate the Compensation Committee’s review of competitive compensation practices. • Our chief financial officer provides the Compensation Committee with reports on financial performance as it relates to key business drivers and performance measures included in incentive program designs.

Table of Contents

Competitive Market Information

Each year the Compensation Committee works with F.W. Cook to review the market competitiveness of our executive compensation programs and levels and to re-evaluate the companies included in our comparator groups to ensure that we have the appropriate marketplace focus. For 2014, F.W. Cook prepared a competitive assessment of our executives' base salaries, target annual incentive awards, and long-term incentive opportunities, against an "energy industry database" and an "executive compensation peer group."

Energy Industry Database

For 2014, the "energy industry database" included energy services companies in Towers Watson's Energy Industry Services Compensation Database with assets or revenue between one-third and three times ours. This group was used as the primary source to assess competitive levels of compensation for our executives. We believe this larger selection of companies provides more accurate and reliable information than a smaller peer group and better reflects the labor market for our executive talent.

For 2014, the following forty companies were included in our energy industry database:

The AES Corporation
Alliant Energy Corporation
Ameren Corporation
Atmos Energy Corporation
Calpine Corporation
CenterPoint Energy, Inc.
CMS Energy Corporation
Consolidated Edison, Inc.
Dominion Resources Inc.
DTE Energy Company
Edison International
Energen Corporation
Entergy Corporation
EQT Corporation
First Solar, Inc.
IDACORP, Inc.
Integrys Energy Group, Inc.
MDU Resources Group, Inc.
NextEra Energy, Inc.
NiSource Inc.
Northeast Utilities
NV Energy Inc.
OGE Energy Corp.
Pepco Holdings, Inc.
Pinnacle West Capital Corporation
PNM Resources, Inc.
Portland General Electric Company
PPL Corporation
Public Service Enterprise Group Incorporated
SCANA Corporation
Sempra Energy
Southwest Gas Corporation
Spectra Energy Corp.
TECO Energy, Inc.
UGI Corporation
UIL Holdings Corporation
Vectren Corporation
Westar Energy, Inc.
Wisconsin Energy Corporation
Xcel Energy Inc.

Executive Compensation Peer Group

In 2014, we also reviewed compensation data for 12 natural gas providers as a secondary point of reference. The companies in this "executive compensation peer group" were selected based upon their size and business operations. With assistance from F.W. Cook, the following criteria were developed for this group:

Size Requirements	***Industry Requirements***
Must be roughly one-third to three times our size in at least *two* of the following categories: • assets; • revenue; or • market capitalization	Must be a traditional natural gas local distribution company (LDC) and must meet at least *one* of the following: • includes non-regulated businesses such as storage, pipeline or construction services; • includes asset management/trading business similar to Sequent; or • conducts business in three or more states

To evaluate the peer group composition, F.W. Cook also considered:

- The comparator companies' disclosure of their own peer groups (particularly where they listed AGL Resources as a peer);
- Listings of comparator companies used in reports relating to the Company prepared by investment analysts and shareholder advisory services; and
- Mergers and acquisition activity for the comparator companies.

For 2014, the following twelve companies were included in our executive compensation peer group:

Atmos Energy Corporation
CenterPoint Energy, Inc.
Integrys Energy Group, Inc.
Laclede Group, Inc.[1]
New Jersey Resources Corporation
NiSource Inc.
Piedmont Natural Gas Company Inc.[1]
Sempra Energy
Southwest Gas Corporation
UGI Corporation
Vectren Corporation
WGL Holdings, Inc.

1 At the time the peer group was approved, Laclede and Piedmont met only one of the three size requirements (revenue for Laclede and market cap for Piedmont), but the Committee decided to include these companies due to the overall similarities in business characteristics with the Company.

Table of Contents

To perform a more meaningful analysis of Mr. Tumminello's compensation as the president of Sequent, F.W. Cook used the Towers Watson Energy Trading and Marketing Survey, which included data more directly comparable to Mr. Tumminello's position. This survey data included the following companies having energy trading and marketing operations:

Atmos Energy Corporation
BP
Cargill
CenterPoint Energy, Inc.
Chevron
Constellation Energy
Dominion Resources Inc.
EDF Trading
Iberdrola Renewables, Inc.
Nexen, Inc.
NRG Energy
Occidental Petroleum
ONEOK
PPL Corporation
Williams Energy Services

Compensation Elements and their Purpose

Our executive compensation program includes the following elements.

Compensation Element	***Overview/Objectives***
Base Salary	• Fixed portion of an executive's annual compensation; is intended to recognize fundamental market value for the skills and experience of the individual relative to the responsibilities of his or her position. • Foundation of our program; most other elements are determined as a percentage of base salary.
Annual incentive award[1]	• Annual cash incentive award is intended to vary as a direct reflection of Company and business unit performance. • Target opportunities are a percentage of base salary and represent the amount of money to be paid if expected performance is achieved. • Achievement of a performance hurdle is required for any payout. • Actual awards may range between 0% and 200% of target, based on performance against goals. • To achieve a 200% award, performance must meet or exceed the maximum performance levels for all performance measures.
Long-term incentive awards (performance-based restricted stock units and performance share units)	• Stock-based incentives reward performance over a multi-year period, link executive's interests to those of shareholders, and encourage retention. • Performance measures include EBITDA achievement for performance-based restricted stock units and total shareholder return, relative to the performance of the executive compensation peer group, for performance share units. • Vesting schedules serve to encourage retention and further tie an executive's compensation to stock price appreciation during the vesting period.

Table of Contents

Compensation Element	Overview/Objectives
Employee health and welfare and retirement benefit plans	• Competitive levels of medical, retirement and income protection, such as life and disability insurance coverage, are provided. • Executives participate in the same programs offered to all of our eligible employees. • To maintain consistent retirement benefit levels, we also provide non-qualified retirement benefits to executives and other highly-compensated employees who are adversely affected by limits imposed on contributions and total benefits under our retirement plans. The retirement plans available to the executives are described in more detail beginning on page 64.
Severance and other termination payments	• Severance benefits are provided in the event an executive's employment is terminated in certain circumstances in connection with a change in control of the Company. • Agreements provide security to executives so that they may focus on the Company and best interests of the shareholders during a transaction or potential transaction.
Financial planning / tax return preparation perquisite	• We reimburse executives for up to $18,000 per year for Company-mandated tax return preparation. We require professional tax return preparation as a means of ensuring tax compliance by our executives. To the extent that the entire amount is not used for tax preparation, it may be applied to financial or estate planning.

1 Mr. Tumminello's incentive program is described separately on page 53.

Setting 2014 Total Direct Compensation Opportunities

When setting base salary and target amounts for annual and long-term incentives, the Compensation Committee examined each component of pay on both a stand-alone basis and as a total. Pay decisions were based on the Compensation Committee's business judgment, informed by the comparative data, professional advice and other considerations, including the individual executive's experience and performance, internal pay equity and mastery of position responsibilities. As in prior years, target annual and long-term incentive values were set as a percentage of base salary for each of our named executive officers, other than Mr. Somerhalder's target long-term incentive, which was set as a specific amount, and Mr. Tumminello's target annual incentive, which was largely based on a percentage of Sequent's pre-bonus accrual EBIT.

Table of Contents

Fiscal 2014 Target Compensation Elements

	Base Salary	Target Annual Incentive ($ or % of Base Salary)	Target Long-Term Incentive ($ or % of Base Salary)	Target Total Direct Compensation
John W. Somerhalder II	$974,967	110%	$ 3,500,000	$ 5,547,431
Andrew W. Evans	$559,438	65%	184%	$ 1,952,440
Henry P. Linginfelter	$547,286	65%	160%	$ 1,778,680
Paul R. Shlanta	$449,143	55%	120%	$ 1,235,142
Peter I. Tumminello	$366,011	$ 391,250	75%	$ 1,031,768

Base Salaries

Each of the named executive officers received a 3% increase in base salary, effective January 1, 2014, except for Mr. Evans and Mr. Linginfelter, who each received a 6% increase. In determining base salary, the Compensation Committee considered competitive market base pay levels, as reflected in the competitive data provided by F.W. Cook, its general assessment of the performance of our CEO, and the performance assessments and recommendations for the other named executive officers presented to the Compensation Committee by our CEO. Performance assessments for base salary were subjective and non-formulaic and were not based upon any specific financial criteria.

Annual Incentive Awards

Performance Hurdle

Our annual incentive program is a subplan of the Company's Omnibus Performance Incentive Plan, which was approved by shareholders in 2011. Each of the named executive officers participates in the annual incentive program, other than Mr. Tumminello who participates in a separate program. Mr. Tumminello's incentive program is described separately on page 53.

For 2014, we continued the practice of utilizing a performance hurdle for our annual incentive program so that awards may qualify as performance-based compensation under Code Section 162(m). Achievement of the performance hurdle allows the Compensation Committee to fund the program up to the maximum payout level established for each award, or to provide for a lesser amount based upon the annual performance goals established by the Compensation Committee, which are described below. Achievement of the performance hurdle is required for any funding of the annual incentive program for the executive officers (for either the corporate component or the business unit component). The performance hurdle approved by the Compensation Committee for 2014 was Plan EPS of $2.64. The method of determining Plan EPS is described below under the heading "Corporate Measure."

Weighting of Executive Performance Goals

The performance measures for the 2014 annual incentive awards were derived from our annual operating plan and business strategy. The Compensation Committee approved a uniform weighting of goals for the named executive officers (other than Mr. Tumminello) as follows:

- 60% corporate performance, measured by Plan EPS
- 40% business unit performance, measured as described below

1. Corporate Measure

The annual incentive plan uses a corporate performance measure, which we refer to as “Plan EPS.” While EPS is a commonly understood metric, the Compensation Committee views EPS determined in accordance with generally accepted accounting principles (GAAP) as not accurately reflecting the value the Company created during a particular year with respect to our wholesale services segment (Sequent). For compensation purposes, we seek to consider and measure the economic value for the period in which it is generated, regardless of the period in which it is reported under GAAP. The method of determining 2014 Plan EPS was approved by the Compensation Committee at the time the performance goals were established.

In accordance with this method, when calculating 2014 Plan EPS, we started with GAAP EPS and subtracted the value created and credited for compensation purposes in 2013 which was expected to be reported in future periods, including 2014. We then added the value created and credited for compensation purposes in 2014 that will be reported on a GAAP basis in future periods. This was accomplished by adjusting for the economic value associated with Sequent’s storage and transportation positions.

At the time performance goals were established, the Compensation Committee also provided that 2014 Plan EPS would exclude the following:

- the effect of non-cash losses, including asset or goodwill impairment charges and loss on the sale of assets or subsidiaries;
- transaction costs associated with business combinations and related integration costs;
- changes in estimates or adjustments to actual settlement amounts equal to $100,000 or more related to legal issues existing at and prior to the closing date of an acquisition; and
- adjustments resulting from changes in GAAP.

For 2014, the Compensation Committee approved a Plan EPS “target” amount of $2.84, which would result in a 100% payout of the corporate component. This target amount:

- was consistent with the midpoint of our initial published range of earnings guidance (excluding wholesale services) of $2.75 for 2014, plus $0.70 of expected EPS on a GAAP basis to be generated by the wholesale services segment as included in our 2014 earnings guidance;
- was expected to be an appropriate target when considering our 2014 business objectives; and
- took into consideration the anticipated volatility and treatment of earnings from our wholesale services business unit.

The Compensation Committee also approved a “threshold” Plan EPS of $2.74, which must be met before any corporate performance component could be earned. At “threshold” performance, the corporate component would pay out at 50%.

Below threshold performance, no corporate component would be paid, but as long as the $2.64 Plan EPS performance hurdle was met, the business unit components would be eligible to pay out based on actual business unit outcomes.

As shown in the table below, actual Plan EPS for 2014 was $3.99, which is above both the performance hurdle and the threshold goal set for 2014. Accordingly, the named executive officers earned a payout related to the corporate performance component.

2014 Corporate Measure—Goals and Results

	Performance Hurdle 162(m) Qualifier	Threshold (50%)	Target (100%)	150%	Maximum (200%)	Actual Plan EPS
GAAP EPS(1)	$ 3.06	$ 3.16	$ 3.26	$ 3.36	$ 3.46	$ 4.71
Adjusted for value created by wholesale services in 2013 which was reported on a GAAP basis in 2014(2)	(0.52)	(0.52)	(0.52)	(0.52)	(0.52)	(0.52)
Adjusted for ***expected*** value to be created by wholesale services in 2014 which will be recognized on a GAAP basis in future periods	0.10	0.10	0.10	0.10	0.10	—
Adjusted for ***actual*** value created by wholesale services in 2014 which will be recognized on a GAAP basis in future periods	—	—	—	—	—	(0.20)
Plan EPS	$ 2.64	$ 2.74	$ 2.84	$ 2.94	$ 3.04	$ 3.99

(1) Diluted EPS from continuing operations attributable to AGL Resources Inc.
(2) Used in the calculation of 2013 Plan EPS.

2. Business Unit Measures

The business unit component of the annual incentive plan uses performance measures and key operating metrics for the following regulated and non-regulated business segments:

Regulated	Non-Regulated
Distribution Operations	Wholesale Services
	Retail Operations
	Midstream Operations

These performance measures and metrics, which are described in more detail below, accounted for 80% of the AIP business unit component for each of the named executive officers in 2014.

In addition, we also use another measure that we refer to as “O&M Expense Less B&I,” which relates to a business unit’s operating and maintenance expense, including inflationary costs, minus expenses related to benefits and incentives, such as pension, postretirement, healthcare and other employee benefits as well as expenses related to annual and long-term incentive compensation. O&M Expense Less B&I reflects our ability to manage our cost structure, which is critical to meeting the corporate AIP targets described above. O&M Expense Less B&I accounted for 20% of the AIP business unit component for each of the named executive officers in 2014.

For 2014, the Compensation Committee approved the same weighting of the three business unit categories (regulated, non-regulated, and O&M Expense Less B&I) for each of the participating named executive officers, other than for Mr. Linginfelter, our Executive Vice President, Distribution Operations, whose business unit goals remain focused on the regulated business.

Table of Contents

2014 Business Unit Measure—Goals and Weightings

Name	Regulated Business (Distribution Operations)[1]	Non-Regulated Businesses[2]	O&M Expense Less B&I	Total
John W. Somerhalder II	50%	30%	20%	100%
Andrew W. Evans	50%	30%	20%	100%
Henry P. Linginfelter	80%	—	20%	100%
Paul R. Shlanta	50%	30%	20%	100%

(1) Performance for the regulated business was based on composite results.
(2) Performance for the non-regulated businesses was weighted as follows:

Non-Regulated Business Unit Weightings	
Wholesale Services	45%
Retail Operations	45%
Midstream Operations	10%

Business unit measures for our regulated business (Distribution Operations) were based upon margin goals (20%) and specific metrics relating to safety and customer service (80%). In addition, these measures were multiplied by an "affordability factor" that would serve to reduce the payout level based upon the business unit's EBIT, with results interpolated on a straight line basis between the following performance levels:

Distribution Operations Performance (EBIT)—Affordability Factor

EBIT	< $575 million	$575 million	$585 million	$595 million
Affordability Factor (level of funding)	0%	50%	75%	100%

Because distribution operations was expected to contribute approximately 75% of the Company's EBIT for 2014, the affordability factor served to ensure a level of earnings contribution from distribution operations that we believed was appropriate to fund any of the business unit measures. Accordingly, the affordability factor was applied to both the regulated and non-regulated business units. The Company revised its financial statements for the first six months of 2014 to, among other matters, correctly exclude the deferred return on equity in connection with infrastructure replacement programs. The revised accounting resulted in a decrease in revenue related to regulatory assets and a related decrease in interest expense. The affordability factor, which is based on EBIT, reflects the impact of the decreased revenue but not the benefit of the decreased interest expense under our revised accounting. In the Compensation Committee's judgment, in considering the purpose of the affordability factor, it was determined that it was also appropriate to reflect the benefit of decreased interest expense. As adjusted, this resulted in an affordability factor of 90%. In the Compensation Committee's judgment, this adjustment was appropriate to accurately reflect the effect on the affordability factor of the full impact of the accounting revisions.

Business unit measures for our non-regulated businesses were based upon EBITDA for each business unit. The non-regulated business measures did not include a separate affordability factor because the performance measures already include EBITDA targets. However, as described above, the funding of the non-regulated business unit measures was dependent upon the EBIT performance of distribution operations and the corresponding affordability factor.

Business unit goals, derived from the budget approved by the board, were determined for each named executive officer, other than Mr. Tumminello, including a threshold, below which no award would be provided, a target amount, and a maximum award of 200%. These performance ranges were set in a qualitative, non-formulaic manner, based upon a combination of historical performance and our expected performance for 2014. The performance for each business unit goal was measured independently and combined based on the weightings described above to determine a final business unit performance score. The following table reflects the payout percentage at different performance levels.

	Business Unit Performance Score Achieved	Payout %[1]
Minimum	**50%**	**0%**
	60%	20%
	70%	40%
	80%	60%
	90%	80%
Target	**100%**	**100%**
	110%	120%
	120%	140%
	130%	160%
	140%	180%
Maximum	**150%**	**200%**

(1) As noted above, the final payout amount for the AIP business unit component for each named executive officer, other than Mr. Tumminello, was conditioned on the $2.64 Plan EPS performance hurdle being met and was subject to the affordability factor based on EBIT of distribution operations.

Review of Awards and Reductions for Certain Executives

The Compensation Committee reserves the right to adjust performance objectives during the course of the year in order to reflect changes in the Company and our business. In determining the corporate performance components under our Omnibus Performance Incentive Plan, the Compensation Committee has the authority to: (i) exclude extraordinary one-time effects, which could increase or decrease award payments, if, in its business judgment, our Company and our shareholders are better served by that result; and (ii) exercise negative discretion against reported results which would serve to reduce an award otherwise due.

As described above, the Compensation Committee determined that it was appropriate to factor in decreased interest expense in the calculation of the affordability factor for the 2014 annual incentive award.

Table of Contents

In addition, after considering the 2014 accounting revisions and other issues relating to our accounting processes and controls in 2014, as well as the long-term incentives that were awarded based upon results for the performance period ended December 31, 2011 that would not have been awarded under our revised accounting for that period, the Compensation Committee exercised its negative discretion to reduce the final annual incentive award payouts for 2014 for certain individuals ultimately responsible for our accounting function, including the following reductions for our CEO and CFO.

Discretionary Reduction to 2014 AIP Payouts	
John W. Somerhalder II	($500,000)
Andrew W. Evans	($175,000)

For 2014, the Compensation Committee did not exercise discretion in connection with the calculation of any other performance goals or amounts.

Annual Incentive Performance Composite Results

The following table provides the aggregate weighted result of all performance measures (corporate and business unit) for each of the named executive officers, other than Mr. Tumminello. This amount was multiplied by the executive's target opportunity (expressed as a percentage of salary) to determine the actual amount earned.

2014 Annual Incentive Award—Composite Performance and Results

	Corporate Payout Percentage (60% weighting)	Business Unit Payout Percentage (40% weighting)	Total Payout Percentage	2014 Target Opportunity (% of Base Salary)	Calculated Payout Amount	Discretionary Reduction by Compensation Committee	2014 Annual Incentive Payout
John W. Somerhalder II	200%	134%	174%	110%	$1,852,563	($500,000)	$1,352,563
Andrew W. Evans	200%	143%	177%	65%	$ 637,102	($175,000)	$ 462,102
Henry P. Linginfelter	200%	122%	169%	65%	$ 594,383	—	$ 594,383
Paul R. Shlanta	200%	143%	177%	55%	$ 435,470	—	$ 435,470

Annual Incentive Award for Mr. Tumminello

For 2014, Mr. Tumminello's annual incentive award primarily was based on Plan Earnings for wholesale services, as described below. This is consistent with our philosophy of placing greater emphasis upon the cash compensation of members of our wholesale services segment. As president of Sequent, Mr. Tumminello was eligible to receive an amount under our Omnibus Performance Incentive Plan equal to 9.375% of an incentive pool established for employees of Sequent under the Sequent Incentive Plan (Sequent Plan), calculated as if he were an actual participant in the Sequent Plan. The first 8.125% of the incentive pool under the Sequent Plan is regarded as "target" performance, and the remaining 1.25% may be earned based on Mr. Tumminello's individual performance as assessed by our chief executive officer and approved by the Compensation Committee.

The Sequent incentive pool was funded based on a pre-determined formula. The 2014 pool funded at a rate of 12% of Sequent's pre-bonus accrual EBIT ("Plan Earnings"). When calculating 2014 Plan Earnings for Sequent, we started with Sequent's pre-bonus accrual EBIT, adjusted for its interest expense for 2014 and the December 31, 2013 rollout value associated with storage and transportation hedges, added the December 31, 2014 rollout value associated with storage and transportation hedges, and adjusted for other items, as defined by the plan and consistent with historical practice. At the time performance goals were established, the Compensation Committee also provided that for purposes of calculating the pre-bonus accrual EBIT for Mr. Tumminello's annual incentive award, any one-time, non-recurring items under GAAP arising during 2014 would be excluded, and Sequent's 2014 Plan Earnings would exclude the same items excluded in the calculation of Plan EPS, as described on page 49.

Similar to prior years, the Compensation Committee authorized an additional incentive for Mr. Tumminello having a target payout amount of $50,000 (with up to $100,000 maximum payout amount), which he was eligible to earn based upon the 2014 EBITDA performance of midstream operations (storage and fuels), which he oversees. The storage and fuels component was conditioned upon the Company achieving the performance hurdle of $2.64 Plan EPS.

For 2014, Sequent's Plan Earnings were $324.7 million, which after adjustment resulted in the funding of an incentive pool of approximately $37.7 million. Mr. Tumminello's annual incentive payout amount was $3,550,000 and was calculated as follows:

2014 Annual Incentive Award for Mr. Tumminello—Composite Performance and Results

8.125% of Sequent Pool	$	3,064,616
Individual Performance	$	473,769
Midstream Operations Performance		
Storage and Fuels component	$	11,615
Total Incentive Award	$	3,550,000

The Sequent Plan provides that if Mr. Tumminello's annual incentive award exceeds his base salary, then 50% of the overage is subject to mandatory deferral. Under this mandatory deferral provision, one half of the deferred amount is paid twelve months after the initial incentive payment, and the other half is paid twenty-four months after the initial payment. This deferral feature is intended to act as a retention vehicle. Of Mr. Tumminello's 2014 incentive award, a total of $1,593,020 was deferred for payout over twenty-four months.

Though not subject to an absolute maximum, the size of the Sequent Plan incentive pool, and correspondingly Mr. Tumminello's annual incentive award, is constrained by a framework of established risk parameters including open position limits, value-at-risk limits, stop-loss limits, and credit limits.

The Compensation Committee has reviewed management's analysis of the Sequent Plan and determined that because of the operational limits on Sequent and the risk management oversight by the Company, the Sequent Plan does not incent excessive risk taking.

Long-term Incentive Awards

Two types of long-term incentive grants were awarded in 2014. Performance-based restricted stock units (representing 30% of each executive's target long-term incentive value), and performance share units (representing 70% of each executive's target long-term incentive value) were selected based on the following factors:

- the impact each type of award has on shareholder value creation and executive motivation and retention;
- competitive practice; and
- balancing the cost of equity awards and the projected impact on shareholder dilution.

Performance-based Restricted Stock Units

Restricted stock units have a one-year measurement period, and their vesting is contingent on the Company's achievement of a Corporate EBITDA goal during that period. The EBITDA threshold is set at a level to ensure adequate cash flow to fund dividends and capital expenditure commitments. If the threshold goal is met, one-fourth of the restricted stock units vest immediately, and the remaining three-fourths are subject to annual time-based vesting over the remaining three years of the vesting period. The restricted stock units convert to an equal number of shares of restricted stock during this time-vesting period, except for Mr. Somerhalder, whose awards remain restricted stock units during the entire vesting period. Dividends declared on Company common stock while an award remains outstanding will be credited to the award in the form of additional shares having a value equal to the dividend amount and being subject to the same vesting requirements. The restricted stock unit awards are designed to focus the executives on the Company's EBITDA and to provide retention value during the vesting period.

For 2014, because the Company's EBITDA exceeded the threshold for the restricted share units, one-fourth of the awards vested on March 1, 2015, and the remaining units were converted to restricted stock with annual time-based vesting through 2018, except for Mr. Somerhalder, whose award remains restricted stock units during such vesting period. The value of these awards as of the date of grant is reflected in the 2014 Grants of Plan-Based Awards Table and in the Stock Awards column of the Summary Compensation Table.

Performance Threshold (Corporate EBITDA)	Actual Result (Corporate EBITDA Achieved)
$1.0 billion	$1.5 billion

Performance Share Units

Performance share units (PSUs) vest over a three-year period with a performance measure based upon Relative Total Shareholder Return (RTSR). RTSR is measured by ranking the relative stock price and dividend performance of our Company to the companies in the executive compensation peer group described on page 45. The use of RTSR as a performance measure requires executive focus that is aligned with the interests of shareholders and provides diversity in our use of performance indicators.

Table of Contents

For the purposes of determining PSUs, Total Shareholder Return is defined as:

Price $_{begin}$ = share price at the beginning of the period
Price $_{end}$ = share price at the end of the period
Dividends = total dividends paid for the period
TSR = (Price $_{end}$ – Price $_{begin}$ + Dividends)/Price $_{begin}$

Once the actual performance is computed, PSUs earned may increase or decrease from target grant levels, depending upon our performance relative to our executive compensation peer group, according to the following scale:

TSR Rank	Percentile Rank	Shares Earned as % of Target Shares	
1	100%	200%	Maximum
2	92%	184%	
3	83%	166%	
4	75%	150%	
5	67%	134%	
6	58%	116%	
7	50%	100%	Target
8	42%	84%	
9	33%	66%	
10	25%	50%	Threshold
>10	0%	0%	

The resulting awards will be settled half in cash and half in shares. To promote officer share ownership, the cash portion must first be used to cover the taxes incurred from the total award.

Performance share units are not credited with dividend equivalents. When determining the number of PSUs to be granted, however, the Compensation Committee factors in the value of dividends expected to be paid during the vesting period.

During the most recently completed three-year performance period (January 1, 2012 to December 31, 2014), the Company achieved an RTSR percentile rank of 41.6%, which exceeded the threshold target level and resulted in 83% of the target PSUs earned. Accordingly, the PSUs granted in 2012 (having a 2012-2014 performance period) paid out in the following amounts:

Payout of 2012 PSUs (2012-2014 Performance Period)

Name	Shares (#)	Cash ($)
John W. Somerhalder II	23,178	1,263,201
Andrew W. Evans	5,761	313,920
Henry P. Linginfelter	5,632	306,944
Paul R. Shlanta	3,569	194,511
Peter I. Tumminello	1,818	99,081

Continuity Agreements

Each of our executives has a change-in-control severance agreement, referred to as a Continuity Agreement. The Compensation Committee believes these agreements are desirable because of the retentive value they would provide during critical periods relating to potential change in control. Each of the agreements in place in 2014 has a term that runs through December 31, 2015. These agreements do not contain an excise tax gross-up and provide that no severance payments or benefits may be paid under the agreements unless a change in control is actually consummated and the executive has a qualifying termination of employment.

Tables disclosing the estimated costs associated with these agreements, and footnotes describing their principal terms, begin on page 67 under the heading "Potential Payments upon Termination or Change in Control."

Other Policies Governing our Executive Compensation Program

Grants of Long-Term Incentive Awards

In January 2014, the Compensation Committee adopted a Policy on Granting Equity Compensation Awards. Pursuant to the policy, annual equity awards typically are granted on the third trading day following the Company's release of year-end financial results. Such awards are approved not more than 30 days in advance by the Compensation Committee or the board. The number of shares subject to each such equity award is determined based on the dollar value for the awards approved by the Committee or the board and the fair market value of the Company's common stock on the grant date. The policy prohibits the Compensation Committee, the board, and any member of the Company's management from backdating or manipulating any equity award, or manipulating the timing of the public release of material information or of any equity award with the intent of benefitting a recipient of the award.

Recoupment Policy

The Company maintains a compensation recoupment policy that became effective January 1, 2012. This policy provides that in the event that the Company is required to prepare an accounting restatement due to material noncompliance with financial reporting requirements under the U.S. securities laws, it will seek to recover from any current or former executive officer incentive-based compensation (including equity compensation) received during the three-year period preceding the date on which the accounting restatement was required to be made. The amount to be recovered is the excess of the amount paid calculated by reference to the erroneous data, over the amount that would have been paid to the executive officer calculated using the corrected accounting statement data. This compensation recovery would be applied regardless of whether the executive officer engaged in misconduct or otherwise caused or contributed to the requirement for the restatement.

As described above on page 39 of this proxy statement, in 2014 we revised our financial statements for certain prior periods. The Company assessed the materiality of the adjustments involved and concluded that they were not material to any prior annual or interim period and that the Company was not required to prepare an accounting restatement. Accordingly, the provisions of our compensation recoupment policy were not applicable to this revision.

Hedging and Pledging Policies

Company policy prohibits directors and executive officers from engaging in hedging activities involving Company stock. Holding Company stock in a margin account or pledging Company stock as collateral for a loan is discouraged by company policy and requires the prior approval of the Company's Chief Ethics and Compliance Officer.

Accounting and Tax Treatment of Direct Compensation

Under current accounting principles, we do not expect accounting treatment of differing forms of awards to vary significantly. Accordingly, although accounting treatment is a consideration, we do not expect it to have a material effect on our selection of forms of compensation.

Section 162(m) of the Code places a limit of $1,000,000 on the amount of compensation that we may deduct in any one year with respect to any one of our named executive officers, other than the CFO. However, qualifying performance-based compensation will not be subject to the deduction limit if certain requirements are met. The Omnibus Performance Incentive Plan is designed to allow the Compensation Committee to grant equity awards that may qualify for the performance-based compensation exemption from Section 162(m), such as restricted stock units and performance cash awards. The annual incentive program, as a subplan of the Omnibus Performance Incentive Plan, also allows annual cash incentive awards that may qualify as performance-based compensation.

The Compensation Committee generally expects that awards under our long-term incentive programs and the annual incentive for executives will qualify as performance-based compensation under Section 162(m), but such tax treatment is not guaranteed. In addition, to maintain flexibility in compensating our executives, the Compensation Committee reserves the right to use its judgment to adjust performance goals or to authorize compensation payments that may cause the awards to be subject to the Section 162(m) limit when the Compensation Committee believes that such adjustments or payments are appropriate.

Stock Ownership

We maintain stock ownership guidelines designed to ensure sustained, meaningful executive share ownership, align executive long-term interests with shareholders, and demonstrate the commitment of our officers to enhancing long-term shareholder value. Each of our executive officers is encouraged to own shares of our common stock having a market value equal to or exceeding a given multiple of his or her annual base salary–five times for Mr. Somerhalder, and three times for each of the other named executive officers. The guidelines require that each executive retain at least 75% of net shares (after tax withholding) from their equity awards until the ownership requirements are met. In calculating compliance with the ownership guidelines, we include all of the stock owned by an executive, restricted stock and in-the-money value of vested stock options, and stock included in an executive's account under our Retirement Savings Plus Plan and Nonqualified Savings Plan. As of December 31, 2014, each of our named executive officers met the ownership guidelines.

2015 Compensation Program

The Compensation Committee and the board of directors approved several changes to the compensation program for 2015:

- Effective January 1, 2015, base salaries for the executive officers were increased by 3%, which is consistent with our overall increase budget for salaried employees.
- Performance share units granted in 2015 will have two performance metrics – relative total shareholder return (weighted at 75%) and cumulative earnings per share (weighted at 25%) – which will be measured over a three-year performance period.

EXECUTIVE COMPENSATION

Compensation Paid to Named Executive Officers

The Summary Compensation Table below reflects the total compensation earned by our chief executive officer, our chief financial officer and each of our three most highly compensated executive officers who served as an executive officer as of December 31, 2014. These five officers are our "named executive officers."

Summary Compensation Table

Name and Principal Position	Year	Salary ($)(1)	Bonus ($)	Stock Awards ($)(3)	Option Awards ($)	Non-Equity Incentive Plan Compensation ($)(4)	Change in Pension Value and Nonqualified Deferred Compensation Earnings ($)(5)	All Other Compensation ($)(6)	Total ($)

LP									

(1) For each of the named executive officers, includes salary that was eligible for deferral, at the election of the named executive officer, under our Retirement Savings Plus Plan and Nonqualified Savings Plan.

(2) Reflects the cash portion of a special award granted to Mr. Tumminello in connection with the sale of Compass Energy Services in 2013.

(3) Reflects the aggregate grant date fair value of stock awards, which was computed in accordance with FASB ASC Topic 718 without regard to estimated forfeitures related to service-based vesting conditions. The assumptions used in calculating these amounts are incorporated by reference to Note 7—"Stock-Based Compensation" to the financial statements in our annual report on Form 10-K filed with the SEC on February 12, 2015. The grant date fair value of the restricted stock units granted in 2014 was determined by reference to the closing price of the shares on the grant date. The grant date fair value of the performance unit awards granted in 2014 was computed by multiplying (i) the target number of units awarded to each named executive officer, which was the assumed probable outcome as of the grant date, by (ii) the closing price of the underlying shares on the grant date. Assuming, instead, that the highest level of performance conditions would be achieved, the grant date fair values of these performance unit awards would have been $6,652,400 for Mr. Somerhalder, $1,956,909 for Mr. Evans, $1,664,735 for Mr. Linginfelter, $1,024,788 for Mr. Shlanta and $522,206 for Mr. Tumminello.

(4) Reflects annual incentive compensation earned under our annual incentive plan (or Mr. Tumminello's annual incentive arrangement).

(5) Reflects the aggregate change in the actuarial present value of the named executive officer's accumulated benefit under the Retirement Plan, which we refer to as the Pension Plan, and the Excess Plan, both of which are defined benefit plans, and, in addition, for Mr. Somerhalder, under the terms set forth in an individual agreement. None of the named executive officers received any interest on deferred compensation at an above-market rate of interest.

(6) The following table reflects the items that are included in the "All Other Compensation" column for 2014.

Table of Contents

All Other Compensation Detail

Name	Company Contributions to the Retirement Savings Plus Plan ($)(a)	Company Contributions to the Nonqualified Savings Plan ($)(a)	Perquisites ($)(b)	Other Income ($)	Total All Other Compensation ($)
John W. Somerhalder II	13,520	131,521	14,000	—	159,041
Andrew W. Evans	11,375	50,312	14,000	—	75,687
Henry P. Linginfelter	13,520	46,730	11,404	—	71,654
Paul R. Shlanta	13,520	32,714	18,000	—	64,234
Peter I. Tumminello	13,520	30,572	14,000	—	58,092

(a) Amounts of matching contributions contributed by the Company to the Retirement Savings Plus Plan and Nonqualified Savings Plan are calculated on the same basis for all plan participants in the relevant plan, including the named executive officers.

(b) Reflects the incurred cost to the Company in connection with financial planning and tax return preparation benefits.

Grants of Plan-Based Awards

The following table presents information concerning plan-based awards granted to each of the named executive officers during 2014.

2014 Grants of Plan-Based Awards

			Estimated Future Payouts Under Non-Equity Incentive Plan Awards(1)(2)			Estimated Future Payouts Under Equity Incentive Plan Awards				
Name	Grant Date	Approval Date	Threshold ($)	Target ($)	Maximum ($)	Threshold (#)	Target (#)	Maximum (#)	All Other Stock Awards: Number of Shares of Stock or Units (#)	Grant Date Fair Value of Stock and Option Awards ($)(5)
John W. Somerhalder II	02/03/14			1,072,464	2,144,928					
	02/10/14(3)	02/04/14	—			30,510	61,020	122,040		3,326,200
	02/10/14(4)	02/04/14					22,820			1,046,069
Andrew W. Evans	02/03/14			363,635	727,270

	02/10/14(4)	02/03/14					6,710			307,586
Henry P. Linginfelter	02/03/14	02/03/14		355,736	711,472					
	02/10/14(3)	02/03/14	—			7,635	15,270	30,540	—	832,368
	02/10/14(4)	02/03/14					5,710			261,746
Paul R. Shlanta	02/03/14	02/03/14		247,029	494,058					
	02/10/14(3)	02/03/14	—			4,700	9,400	18,800	—	512,394
	02/10/14(4)	02/03/14					3,510			160,898
Peter I. Tumminello	02/03/14	02/03/14		391,250	443,750					
	02/10/14(3)	02/03/14	—			2,395	4,790	9,580		261,103
	02/10/14(4)	02/03/14					1,790			82,054

(1) Reflects annual incentive opportunity for 2014 under the annual incentive plan and the OPIP.

(2) The annual incentive award includes a corporate component and a business unit component. The threshold payout amount for the 2014 corporate component was as follows: $319,937 for Mr. Somerhalder; $107,903 for Mr. Evans; $105,559 for Mr. Linginfelter; and $73,693 for Mr. Shlanta. The 2014 business unit component consisted of a series of differently-weighted metrics and could pay out anywhere from 0% to 200% of target. Accordingly, the business unit component did not include a threshold amount.

The annual incentive award for Mr. Tumminello is not subject to a true maximum as it is based on an incentive pool. Please refer to page 53 for more detail.

(3) Reflects performance share units granted under the OPIP with a 36-month performance measurement period that ends December 31, 2016. These units are payable 50% in shares of AGL Common Stock and 50% in cash.

(4) Reflects restricted stock units granted under the OPIP with a 12-month performance measurement period that ended December 31, 2014.

(5) Reflects the aggregate grant date fair value of stock awards, which are based on target-level award and computed in accordance with FASB ASC Topic 718. The assumptions used in calculating these amounts are incorporated by reference to Note 7—"Stock-Based Compensation" to the financial statements in our annual report on Form 10-K filed with the SEC on February 12, 2015.

Outstanding Equity Awards at Fiscal Year End

(1) Restricted stock units having satisfied criteria for the applicable performance measurement period, converted into an equal number of shares of restricted stock and vest at the rate of one-third per year, with vesting dates on March 1, 2013, March 1, 2014 and March 1, 2015.

(2) Performance share unit awards have a performance measurement period related to the Company's RTSR, with the measurement period ending on December 31, 2014. Awards shall be payable 50% in shares of AGL Resources common stock and 50% in cash. The RTSR as of December 31, 2014 results in a payout percentage of 83%.

(3) Reflects restricted stock awards granted under the OPIP with a three-year cliff vesting requirement.

(4) Restricted stock units having satisfied criteria for the applicable performance measurement period, converted into an equal number of shares of restricted stock and vest at the rate of one-third per year, with vesting dates on March 1, 2015, March 1, 2016 and March 1, 2017.

(5) Performance share unit awards have a performance measurement period related to the Company's RTSR, with the measurement period ending on December 31, 2015. Awards shall be payable 50% in shares of AGL Resources common stock and 50% in cash.

(6) Reflects restricted stock award granted under the OPIP with a three-year ratable vesting requirement.

(7) Restricted stock units having a performance measurement period related to the Company's EBITDA, with the measurement period ended December 31, 2014.

(8) Performance share unit awards have a performance measurement period related to the RTSR, with the measurement period ending on December 31, 2016. Awards shall be payable 50% in shares of AGL Resources common stock and 50% in cash.

Table of Contents

Option Exercises and Stock Vested

The following table presents information concerning stock options exercised by the named executive officers in 2014 and stock awards held by our named executive officers that vested in 2014.

2014 Stock Option Exercises and Stock Vested

	Option Awards		Stock Awards	
Name	Number of Shares Acquired on Exercise (#)	Value Realized on Exercise ($)	Number of Shares Acquired on Vesting (#)(1)	Value Realized on Vesting ($)(1)
John W. Somerhalder II	—	—	36,842	1,779,015
Andrew W. Evans			13,332	649,280
Henry P. Linginfelter	26,900	384,161	13,037	634,917
Paul R. Shlanta	20,200	294,962	6,944	339,270
Peter I. Tumminello			6,875	342,770

(1) Represents the number of shares that vested in 2014 and the aggregate value of such shares based upon the fair market value of our common stock on the applicable vesting date.

Pension Benefits

The table below shows the present value of accumulated benefits payable to each of the named executive officers, including the number of years of service credited to each such named executive officer under our Pension Plan and Excess Plan, and, for Mr. Somerhalder, under terms set forth in an individual agreement. Assumptions used in the calculations are set forth in a table below the footnotes to the following table.

2014 Pension Benefits

Name	Plan Name(1)(2)	Number of Years Credited Service (#)	Present Value of Accumulated Benefit ($)	Payments During Last Fiscal Year ($)
John W. Somerhalder II	Pension Plan	9	318,155	—
	Excess Plan	9	1,978,387	—
	Individual Agreement(3)	9(4)	731,925	—
Andrew W. Evans	Pension Plan	13	331,697	—
	Excess Plan	13	634,336	—
Henry P. Linginfelter	Pension Plan	34	763,585	—
	Excess Plan	34	702,190	—
Paul R. Shlanta	Pension Plan	17	503,397	—
	Excess Plan	17	771,334	—
Peter I. Tumminello	Pension Plan	11	295,249	—
	Excess Plan	11	579,371	—

(1) The AGL Resources Inc. Retirement Plan, which we refer to as the Pension Plan, is a broad-based, tax-qualified defined benefit plan. Generally, all of our union employees who have a hire date on, or before, December 31, 2012, and all of our non-union employees who have a hire date on, or before, December 31, 2011 are eligible to participate in the Pension Plan, upon completion of one year of service and attainment of age 21. Plan benefits are determined, generally, by a "career average" earnings formula. Generally, the Pension Plan provides that the term "compensation" means base pay, overtime and bonuses. Benefits vest upon completion of five years of service. A participant's accrued benefit is calculated based upon the normal form of benefits for that participant, as of the date the participant will reach the Pension Plan's normal retirement age of 65. The normal form of benefits for a participant who is single is a life annuity. The normal form for a married participant is a joint and 50% survivor annuity. The Pension Plan provides for the payment of benefits in other forms, if the participant so elects. These other forms include various annuities, and (for a broad class of employees, including the named executive officers) only in cases where a participant's benefit is less than $10,000, a single lump sum payment. Other employee groups may elect an unlimited lump sum. A participant may elect to receive benefits earlier than normal retirement age, once the participant has reached the early retirement age of 55. If a participant elects to commence benefits earlier than normal retirement age, the monthly payments will be reduced to reflect the fact that payments may continue over a longer period of time than if the employee had retired at normal retirement age. If the participant satisfies the Pension Plan's requirements for early retirement (age 55 with 5 years of service), the reduced amount is subsidized so that the reduction from the full normal retirement benefit is less severe than a full actuarial reduction. If the participant does not satisfy the early retirement criteria, the reduced payments represent the actuarial equivalent of the full normal retirement benefit.

(2) The AGL Resources Inc. Excess Benefit Plan, which we refer to as the Excess Plan, is a non-qualified, and unfunded, defined benefit plan designed for the benefit of a select group of management or highly compensated employees. Specifically, the Excess Plan is available to our employees who have a hire date on, or before, December 31, 2011, who are adversely affected by limitations set forth in the U.S. tax code, imposed on benefits under a tax-qualified plan, such as the Pension Plan. Benefits under the Excess Plan are calculated pursuant to a formula that first determines what the participant's benefit would be under the Pension Plan, but for the imposition of the U.S. tax code limits and then subtracts from that figure, the amount the participant will actually be entitled to under the Pension Plan. Benefits under the Excess Plan are paid in the same forms available under the Pension Plan, and are distributed at the later of separation from service or age 62.

(3) Mr. Somerhalder's individual agreement provides for one additional year of benefit accrual credit under the Pension Plan and Excess Plan for each year of service completed, up to a maximum of five additional years.

(4) In accordance with the terms of Mr. Somerhalder's individual agreement, a maximum of five years of credited service is used in this calculation.

Pension Benefit Assumptions

We used the following assumptions in calculating the present value of accumulated benefits:

• Retirement age:	Earliest unreduced
• Payment form:	Life annuity
• Discount rate:	4.20% at 12/31/2014
• Postretirement mortality:	RP-2014 mortality table, backed up to 2007 by Scale MP2014 and projected forward with the Mercer SSA intermediate alternative mortality improvement scale.
• Salary scale:	None
• Preretirement decrements: (mortality, withdrawals, disability)	None

Nonqualified Deferred Compensation

The table below relates to and describes compensation deferred by named executive officers under our Nonqualified Savings Plan.

Nonqualified Deferred Compensation

Name	Executive Contributions in Last FY ($)(1)	Registrant Contributions in Last FY ($)(2)	Aggregate Earnings in Last FY ($)	Aggregate Withdrawals/ Distributions ($)	Aggregate Balance at Last FYE ($)(3)
John W. Somerhalder II	202,340	131,521	420,564	—	2,621,909
Andrew W. Evans	80,652	50,312	53,979	—	1,080,848
Henry P. Linginfelter	77,973	46,730	55,767	—	932,252
Paul R. Shlanta	53,265	32,714	106,214	—	1,328,058
Peter I. Tumminello	47,034	30,572	69,360	—	1,690,643

(1) All amounts set forth in this column are included in the Summary Compensation Table in the Salary column.

(2) All amounts set forth in this column represent Company contributions to our Nonqualified Savings Plan and are included in the Summary Compensation Table in the All Other Compensation column.

(3) Amounts set forth in this column for each named executive officer include amounts previously reported in the Summary Compensation Table, in the previous years when earned if that officer's compensation was required to be disclosed in a previous year. Amounts previously reported in such years include previously earned, but deferred, salary and annual incentive and Company matching contributions. This total reflects each named executive officer's deferrals, matching contributions and investment experience.

The Nonqualified Savings Plan allows eligible employees to defer up to 75% of base salary and up to 100% of annual incentive pay as before-tax contributions. The timing restrictions for contribution deferral elections are intended to comply with Section 409A of the U.S. tax code, as well as other applicable tax code provisions. For Employees who participate in our pension plan, including the named executive officers, the Company matches contributions at a rate of 65% of participant contributions, up to the first 8% of the participant's covered compensation. However, matching contributions under the Nonqualified Savings Plan are offset by the maximum matching contributions the participant could receive under our tax-qualified Retirement Savings Plus Plan. Each participant in the Nonqualified Savings Plan has a plan account, which represents a bookkeeping entry reflecting contributions and earnings/losses on the actual performance of the participant's notional investments. Participants are always 100% vested in their own contributions and vest in employer matching contributions over a three-year period according to a vesting schedule. The vesting associated with employer matching contributions is based upon employment service with the Company and is not subject to vesting based upon when the contribution itself was made. Distributions of a participant's account balance occur following a termination of employment. Participants have the option of taking distributions, following termination of employment, in the following forms: (i) a single lump sum cash payment; (ii) a lump sum cash payment of a portion of the participant's account, with the remainder distributed in up to ten equal annual installments; or (iii) between one and ten equal annual installments. The notional investment choices under the Nonqualified Savings Plan are similar to the investment choices in the Retirement Savings Plus Plan.

Potential Payments upon Termination or Change in Control

We have entered into certain agreements and maintain certain plans that will require us to provide compensation and benefits to our named executive officers in the event of a termination of employment following a change in control of our Company. We do not otherwise maintain any agreement, plan or practice that specifically provides for compensation to a named executive officer upon termination of employment. The appropriate amount of compensation payable to each named executive officer in each relevant situation is listed in the tables below. Footnotes relating to all of these tables follow the last table on page 72.

Table of Contents

The following table describes the potential payments upon termination of employment with the Company for John W. Somerhalder II, our chairman, president and chief executive officer.

Executive Benefits and Payments Upon Termination(1)	Potential Payments Upon Termination Other Than in Connection with a Change in Control			Potential Payments Upon Termination Following a Change in Control

TOTAL:	(2)	(3)	(4)	$ 6,838,025	(6)

Below is a description of the assumptions that we used in creating the tables above. Unless otherwise noted, the descriptions of the payments below are applicable to all of the above tables relating to potential payments upon termination or change in control.

Notes to Potential Payments upon Termination or Change in Control Tables

(1) For purposes of this analysis, we assumed the executive's compensation as current base salary, target annual incentive opportunity and target long-term incentive opportunity, each as of December 31, 2014. Each column assumes the named executive officer's date of termination is December 31, 2014 and the price per share of our common stock on the date of termination is $54.51.

(2) If the executive leaves voluntarily prior to retirement eligibility, compensation stops as of the termination date. All outstanding and unvested long-term incentive awards would be forfeited. No further benefits would be earned under ERISA-qualified plans. Balances related to compensation deferred under the Nonqualified Savings Plan, if any, would be paid out in the year following the year of termination and at

least six months following the date of termination, or later if the executive had timely elected. Prorated accrued and unused vacation would be paid. If the executive was retirement-eligible at the time of voluntary termination and elected to retire, in addition to commencing retirement benefits, he would be entitled to a prorated annual incentive under the annual incentive plan, conditioned on the Company's satisfaction of applicable performance goals, and prorated vesting of certain long-term incentive awards, conditioned on the Company's satisfaction of applicable performance goals. The satisfaction of such goals would be measured at the end of the performance period, and any payment would be made at that time. Due to the future performance measurement, the value of the unvested performance-based awards is not currently calculable.

(3) If the executive is terminated without "cause," a severance agreement may be executed based upon the facts and circumstances of the termination and in exchange for a release of any future liabilities which might otherwise be claimed by the executive. Due to the wide range and variety of circumstances, there is no preset policy governing involuntary severance compensation. However, any terms of such a special agreement would be subject to the review and approval of the Compensation Committee. Upon such a termination, no further benefits would be earned under ERISA-qualified plans. Balances related to compensation deferred under the Nonqualified Savings Plan, if any, would be paid out in the year following the year of termination and at least six months following the date of termination, or later if the executive had timely elected. Outstanding long-term incentive awards would be forfeited and annual incentive would not be payable.

The prorated value of accrued but unused vacation would be paid.

(4) If the executive is terminated for "cause," compensation stops as of the termination date. All outstanding long-term incentive awards would be forfeited. No further benefits would be earned under ERISA-qualified plans. Balances related to compensation deferred under the Nonqualified Savings Plan, if any, would be paid out in the year following the year of termination and at least six months following the date of termination, or later if the executive had timely elected. The prorated value of accrued but unused vacation would be paid.

(5) If the executive is terminated without cause, or resigns for good reason, generally, within two years of a change in control (as described below) the terms and conditions described below under "Payments upon a Termination in connection with a Change in Control" would apply.

(6) If the executive's employment terminates as a result of death, a death benefit would be paid to the executive's estate in an amount equal to the lesser of one year's base salary or $250,000 from a Company-sponsored plan that covers all employees. That plan does not discriminate in favor of executives, or highly compensated employees. Upon a determination of long-term disability, payments would be made, based on the level of coverage elected and paid for by the executive, under our group disability plan. Our disability plan is also a plan that does not discriminate in favor of executives, or highly compensated employees. In the event of death or disability, the executive (or the executive's designated beneficiary) also would receive a prorated annual incentive under the annual incentive plan,

conditioned on the Company's satisfaction of applicable performance goals, and prorated vesting of all unvested stock options. In addition, long-term incentive awards would vest on a pro rata basis with performance conditioned on the Company's satisfaction of applicable performance goals. The satisfaction of such goals would be measured at the end of the performance period, and any payment made at that time. Due to the future performance measurement, the value of the unvested performance-based awards is not currently calculable.

Balances related to compensation deferred under the Nonqualified Savings Plan, if any, would be paid out in the year following the year of termination, or later if the executive has so elected. The prorated value of accrued but unused vacation would be paid.

Payments upon a Termination in connection with a Change in Control

Each of the named executive officers has a continuity agreement with us, as referenced on page 40 in the Compensation Discussion and Analysis. The purpose of these agreements is to retain key management personnel and assure continued productivity of such personnel in the event of a change in control of our Company.

The continuity agreements define a "change in control" to generally mean the occurrence of any of the following events:

- the acquisition by a person or group of persons of more than 50% of our voting securities, based upon total fair market value or total voting power;
- the acquisition, within a twelve-month period by a person or group of more than 35% of the total voting power of the stock of the Company;
- the replacement, during a twelve-month period of a majority of members of our board of directors with directors not endorsed by a majority of the incumbent directors; or
- the acquisition by a person or group of assets of the Company, having a fair market value of at least 50% of the fair market value of all Company assets, immediately before such acquisition.

Benefits are only provided under the continuity agreements in the event of a termination without "cause" or resignation for "good reason" within two years after a change in control, or after our announcement of our intention to engage in a transaction that is expected to result in a change in control, provided that a change in control actually occurs. No benefits are provided if a change in control does not occur, for any terminations that occur outside these periods, or for any termination for cause, resignation without good reason, or termination due to death or disability whenever they occur. "Cause" includes failure to perform duties and responsibilities, willful fraud, dishonesty or malfeasance that results in material harm to the Company, or a plea of guilty or no contest to a felony. "Good reason" includes a material diminution of position, duties or responsibilities; material diminution of base salary or annual incentive opportunity (unless consistent with a diminution for all executives at a comparable level), a material breach by the Company of any agreement under which the executive provides services, or a material change in the geographic location (at least 50 miles) of the executive's primary employment location.

An officer who has a qualifying termination event during the change in control period would be entitled to:

- a severance benefit equal to two times the sum of his or her base salary plus the average annual incentive compensation actually paid during the three years prior to the year of the qualifying termination;

- a prorated annual incentive compensation payment for the year of the qualifying termination, based on the number of days the named executive officer was employed by us during that year and the greater of the target annual incentive for the officer or the incentive that would be paid based upon actual performance through the date of termination;
- two-year continuation of medical, dental and life insurance benefits;
- potential vesting of long-term incentive compensation, pursuant to the terms of the plan the awards were granted under; and
- outplacement assistance.

The executives may also receive reimbursement of legal fees in connection with the enforcement of payments under the continuity agreements.

If the payments under the continuity agreements and under any other compensation arrangement with the Company, were to exceed three times the base amount permitted under Section 280G(b)(3) of the U.S. tax code, the payments would be reduced and payable only to the maximum amount which could be paid without the imposition of the excise tax under Section 4999 of the U.S. tax code, unless the officer's payment of such excise taxes and all other applicable taxes on the full payment amount would result in him or her receiving a greater resulting amount, net of such taxes. For 2014, calculations performed on amounts potentially payable if severance under the continuity agreements was triggered reflect that a reduction (or "cutback") would be more beneficial to Messrs. Evans, Linginfelter and Shlanta than payment of the extra taxes but not for Messrs. Somerhalder and Tumminello. Where applicable the tables reflect the amount of the required cutback and the net payments payable after the cutback was applied.

The continuity agreements contain covenants on the part of the executive relating to the maintenance of our confidential information and that require the executive to refrain from taking action that disparages the reputation of the Company or any of its subsidiaries or, for a period of 24 months following a qualifying termination, from soliciting employees of the Company or its subsidiaries.

Summary of Potential Payments upon a Change in Control

The following table summarizes the value of the payments that each of our named executive officers would receive as a result of the vesting of long-term incentive awards if a change in control had occurred on December 31, 2014, the awards were *not* assumed or substituted by the successor company, and the executive did *not* incur a termination of employment. The amounts in the table exclude the value of long-term incentive awards that were vested by their terms on December 31, 2014. If the awards were assumed or substituted by the successor company in such an instance, then the awards will continue to vest pursuant to their original terms and no value would be received by our named executive officers.

	John W. Somerhalder II	Andrew W. Evans	Henry P. Linginfelter	Paul R. Shlanta	Peter I. Tumminello
Stock Options	$ —	$ —	$ —	$ —	$ —
Unvested Restricted Stock	1,613,495	1,229,563	1,220,297	252,199	1,110,368
Unvested Restricted Stock Units	1,243,918	365,762	311,252	191,330	95,573
Unvested Performance Share Units	6,200,512	1,591,510	1,514,652	954,652	486,411
Total	$ 9,057,925	$ 3,186,835	$ 3,046,201	$ 1,398,181	$ 1,692,352

Each column assumes the change in control had occurred on December 31, 2014 and the price per share of our common stock on the date of termination is $54.51. All awards were granted under our OPIP, which provides that such awards will only become vested and non-forfeitable immediately following the change in control (absent a qualifying termination of employment), if the surviving entity fails to assume or substitute the awards.

Equity Compensation Plan Information

The following table provides information as of December 31, 2014, with respect to the shares of our common stock that may be issued under our existing equity compensation plans:

Plan Category	Number of Securities to be Issued Upon Exercise of Outstanding Options, Warrants and Rights (a)(1)	Weighted Average Exercise Price of Outstanding Options, Warrants and Rights (b)	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (Excluding Securities Reflected in Column(a)) (c)(1)
Equity compensation plans approved by security holders	1,023,692	$ 37.17	2,872,272
Equity compensation plans not approved by security holders	0	0	1,551,040
Total	1,023,692	—	4,423,312

Table of Contents

(1) Includes shares issuable as follows:

Name of Plan	Approved by Security Holders	Active/ Inactive Plan (a)	Number of Securities to be Issued Upon Exercise of Outstanding Options, Warrants and Rights	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (Excluding Outstanding Options)
Omnibus Performance Incentive Plan, as Amended and Restated (OPIP)	□	Active	587,292	2,411,295(b)
Long-Term Incentive Plan (1999)	□	Inactive	436,400	0
2006 Directors Plan	□	Active	N/A	38,413
Employee Stock Purchase Plan	□	Active	N/A	422,564
Subtotal—Approved Plans			1,023,692	2,872,272
Assumed Nicor Inc. Plan Shares under OPIP(c)	No	Active	0	1,551,040
Subtotal—Not Approved Plans			0	1,551,040
Total	—	—	1,023,692	4,423,312

(a) No further grants will be made under the inactive plan except for reload options that may be granted under outstanding option agreements under the 1999 Long-Term Incentive Plan.

(b) The Omnibus Performance Incentive Plan, as Amended and Restated (OPIP), includes separate pools of shares for share counting purposes. The amount shown in the table above includes 1,000,000 shares which are available for future issuance as awards pursuant to stock options or stock appreciation rights under the “Remainder Reserve.” If issued pursuant to full value awards (which include awards other than stock options or stock appreciation rights), only 200,000 shares could be issued under the Remainder Reserve. In such event, the number of securities remaining available for future issuance under the OPIP, the subtotal for approved plans, and the total each would decrease by 800,000 shares.

(c) Pursuant to the terms of the OPIP, which was approved by our shareholders, shares available under a shareholder-approved plan of a company acquired by the Company (as appropriately adjusted to reflect the transaction) may be issued under the OPIP pursuant to awards granted to individuals who were not employees of the Company or a related company immediately before such transaction. These assumed shares do not count against the maximum share limitation specified in the OPIP. Such assumption of shares in a merger does not require approval of our shareholders under the rules of the New York Stock Exchange or otherwise. The shares designated as “Assumed Nicor Inc. Plan Shares” in the table above remained available under the Nicor Inc. 2006 Long-Term Incentive Plan, as amended, at the time of our merger with Nicor Inc. These shares were assumed under the OPIP and are available for future issuance to persons who were not employees of the Company or a related company immediately prior to our merger with Nicor Inc.

Table of Contents

PROPOSAL 3—ADVISORY VOTE ON EXECUTIVE COMPENSATION

In accordance with Section 14A of the Exchange Act, each year, our shareholders have the opportunity to vote to approve, on an advisory (non-binding) basis, the compensation of our named executive officers as disclosed in our annual proxy statement in accordance with the SEC's rules.

As described in detail under the heading "Executive Compensation—Compensation Discussion and Analysis," our executive compensation programs are designed to attract, motivate and retain our named executive officers, who are critical to our success. Under these programs, our named executive officers are rewarded for the achievement of specific annual, long-term and strategic goals, corporate goals and the realization of increased shareholder value. Please read the "Compensation Discussion and Analysis" beginning on page 37 for additional details about our executive compensation programs, including information about the fiscal year 2014 compensation of our named executive officers.

The Compensation Committee reviews the compensation programs for our named executive officers in an effort to achieve the desired goals of aligning our executive compensation structure with Company performance, our shareholders' interests and current market practices. We believe that this alignment motivates our executives to achieve our key financial and strategic goals, creating long-term shareholder value.

We are asking our shareholders to indicate their support for our named executive officer compensation as described in this proxy statement. This proposal, commonly known as a "say-on-pay" proposal, gives our shareholders the opportunity to express their views on our named executive officers' compensation. This vote is not intended to address any specific item of compensation, but rather the overall compensation of our named executive officers and the philosophy, policies and practices described in this proxy statement. Accordingly, we are asking our shareholders to vote "FOR" the following resolution at the annual meeting:

> "RESOLVED, that the Company's shareholders approve, on an advisory basis, the compensation of the named executive officers, as disclosed in the Company's Proxy Statement for the 2015 Annual Meeting of Shareholders pursuant to the compensation disclosure rules of the Securities and Exchange Commission, including the Compensation Discussion and Analysis, the accompanying compensation tables and the related narrative disclosure."

The say-on-pay vote is advisory and therefore not binding on the Company, the Compensation Committee or our board of directors. Our board of directors and our Compensation Committee value the opinions of our shareholders. Following the annual meeting, we will consider our shareholders' feedback and the Compensation Committee will evaluate whether any actions are necessary to address this feedback.

THE BOARD OF DIRECTORS RECOMMENDS THAT SHAREHOLDERS VOTE "FOR" THE APPROVAL OF THE COMPENSATION OF OUR NAMED EXECUTIVE OFFICERS, AS DISCLOSED IN THIS PROXY STATEMENT.

PROPOSAL 4— APPROVAL OF AN AMENDMENT TO THE COMPANY'S AMENDED AND RESTATED ARTICLES OF INCORPORATION TO PROVIDE HOLDERS OF AT LEAST 25% OF THE VOTING POWER OF ALL OUTSTANDING SHARES ENTITLED TO VOTE THE RIGHT TO CALL A SPECIAL MEETING OF SHAREHOLDERS

The board is requesting that shareholders approve an amendment to article VIII of the Company's amended and restated articles of incorporation so that shareholders of record holding, in a net long position continuously for at least one year, not less than 25% of all outstanding shares entitled to vote will have the right to call a special meeting of shareholders, subject to procedures set forth in section 1.3 of the Company's bylaws. A shareholder's "net long position" is the amount of shares in which the shareholder holds a positive (i.e., "long") economic interest, reduced by the amount of shares in which the shareholder holds a negative (i.e., "short") economic interest.

Currently, article VIII of the Company's amended and restated articles of incorporation permits holders of not less than 100% of the shares of the Company's then outstanding common stock to call a special meeting of shareholders. Similarly, section 1.3 of the Company's bylaws, as amended, requires the Company to hold a special meeting of shareholders upon delivery to the Company's Corporate Secretary of a signed and dated written demand for the meeting from holders of 100% of the votes entitled to be cast on any issues proposed to be considered at the proposed special meeting of shareholders.

The proposed amendment would amend article VIII of the Company's amended and restated articles of incorporation as set forth below, with the changes noted:

> At any time in the interval between annual meetings of shareholders, special meetings of the shareholders may be called by the Chairman of the Board of Directors, the President, the Board of Directors or the Executive Committee by vote at a meeting, by a majority of Directors in writing without a meeting, or by the holders of not less than ~~100%~~ 25% of the shares of Common Stock then outstanding and entitled to vote, who held that amount of shares in a net long position continuously for at least one year. The procedure to be followed by shareholders seeking to call a special meeting of shareholders and the methodology for determining the percentage of votes entitled to be cast by the shareholders seeking to call a special meeting of shareholders (including without limitation the calculation of the amount of a net long position or other limitations or conditions) shall be as set forth in the Corporation's Bylaws.

The proposed amendment was approved by the board after careful review of the ongoing evolution of corporate governance practices. The board believes that lowering the required ownership threshold to request a special meeting to 25% strikes a balance between enhancing the rights of shareholders to call a special meeting and protecting against the risk that a small minority of shareholders, including shareholders with special interests, could require a special meeting resulting in financial expense, administrative burden and disruption to the Company's business. For each special meeting of shareholders, the Company would be required to provide each shareholder with notice and proxy materials, which results in significant expenses. Moreover, preparing for shareholder meetings requires significant attention of the Company's directors, officers and employees, diverting their attention from performing their primary function, which is to operate effectively the Company's business in the best interest of shareholders. Given these facts, the board believes that special meetings of shareholders should only be called to consider extraordinary matters that are of interest to a broad base of shareholders who cannot have their consideration delayed until the next annual meeting. By taking into account (a) the extent to which shareholders requesting a special meeting hedge their shares (or otherwise offset their economic exposure in their shares) and (b) the length of time those shares have been held, the “net long position” requirement ensures that shareholders seeking to exercise the right to call a special meeting have both a true economic and non-transitory interest in the Company. This length of ownership requirement is consistent with the SEC’s current rules affecting shareholder rights concerning annual and special shareholder meetings. Specifically, it is the same length of ownership requirement for determining a shareholder’s eligibility to submit a shareholder proposal for an annual or special shareholder meeting.

The board is committed to good governance practices and is interested in the views and concerns of the Company’s shareholders. The board will continue to maintain the Company’s existing governance mechanisms that afford management and the board the ability to respond to proposals and concerns of all shareholders, regardless of the level of share ownership.

If the proposed amendment to article VIII of the Company’s amended and restated articles of incorporation is approved by shareholders, it will become effective upon the filing of articles of amendment with the Georgia Secretary of State. The Company will file those articles of amendment promptly after the 2015 Annual Meeting. Following the effectiveness of the articles of amendment, the board will adopt amendments to section 1.3 of the Company’s bylaws including provisions dealing with the information required to be furnished with any special meeting request, the determination of the requesting shareholders’ net long position, the scope of business to be considered at any special meeting, and the date by which a special meeting must be held pursuant to any qualifying request.

THE BOARD OF DIRECTORS RECOMMENDS THAT SHAREHOLDERS VOTE “FOR” THE APPROVAL OF THE AMENDMENT OF THE COMPANY’S AMENDED AND RESTATED ARTICLES OF INCORPORATION.

PROPOSAL 5—SHAREHOLDER PROPOSAL: INDEPENDENT CHAIRMAN POLICY

The Company has received the following shareholder proposal. Pursuant to Rule 14a-8(l)(1) of the Exchange Act, the Company will provide the name, address and number of securities held by the proponents of this proposal to any shareholder upon receipt of a written or oral request. You may contact our Corporate Secretary for this information at AGL Resources Inc., Attn: Corporate Secretary, P.O. Box 4569, Location 1466, Atlanta, Georgia 30302-4569.

The Company is not responsible for the contents of this proposal or supporting statement, both of which are quoted verbatim in italics below.

What is the proposal?

RESOLVED: That the stockholders of AGL Resources ("AGL" or "the Company") ask the board of directors to adopt a policy that, whenever possible, the board's chairman should be an independent director who has not previously served as an executive officer of the Company. The policy should be implemented so as not to violate any contractual obligation. The policy should also specify (a) how to select a new independent chairman if a current chairman ceases to be independent during the time between annual meetings of shareholders; and, (b) that compliance with the policy is excused if no independent director is available and willing to serve as chairman.

SUPPORTING STATEMENT

It is the responsibility of the Board of Directors to protect shareholders' long-term interests by providing independent oversight of management, including the Chief Executive Officer (CEO), in directing the corporation's business and affairs. Currently Mr. John Somerhalder is Chairman of the Board and CEO of our Company. We believe that this scheme may not adequately protect shareholders.

We believe that an independent Chairman who sets agendas, priorities and procedures for the board can enhance board oversight of management and help ensure the objective functioning of an effective board. We also believe that having an independent Chairman (in practice as well as appearance) can improve accountability to shareowners, and we view the alternative of having a lead outside trustee, even one with a robust set of duties, as not adequate to fulfill these functions.

A number of respected institutions recommend such separation. CalPERS' Corporate Core Principles and Guidelines state that "the independence of a majority of the Board is not enough"; "the leadership of the board must embrace independence, and it must ultimately change the way in which directors interact with management." In 2009 the Milstein Center at Yale School of management issued a report, endorsed by a number of investors and board members, which recommended splitting the two positions as the default provision for U.S. companies. A commission of The Conference Board stated in a 2003 report "Each corporation should give careful consideration to separating the offices of Chairman of the Board and CEO, with those two roles being performed by separate individuals. The Chairman would be one of the independent directors."

We believe that the recent economic crisis demonstrates that no matter how many Independent trustees there are on the Board, that Board is less able to provide independent oversight of the officers if the Chairman of that Board is also the CEO of the Company.

We, therefore, urge shareholders to vote FOR this proposal.

What does the board recommend?

THE BOARD OF DIRECTORS RECOMMENDS THAT YOU VOTE "AGAINST" THIS PROPOSAL FOR THE FOLLOWING REASONS:

The board has considered this proposal and believes that it is not in the best interests of the Company or its shareholders because (i) the board's existing leadership structure and composition provide effective independent oversight of management, (ii) the current leadership structure is working effectively and (iii) the proposal would unnecessarily limit the board's flexibility.

The board strongly believes that the Company's current leadership structure already achieves the independent leadership and effective management oversight sought by the proposal. Specifically:

- Currently, 14 of the 15 incumbent members of the board are independent, according to the criteria specified by applicable laws and regulations of the SEC, the listing standards of the New York Stock Exchange and the Company's Standards for Determining Director Independence.
- Under the Company's Corporate Governance Guidelines, if the Chairman is an executive officer or employee of the Company, then the board of directors shall appoint, from among the independent directors, a Lead Director. This has been the Company's policy since 2007. The Lead Director, appointed from among the board's independent directors, has significant authority and responsibilities as outlined on page 9 under the heading "Corporate Governance—Board Leadership Structure." Recognizing there may be a circumstance where a shareholder or other interested party's interest should be represented independent of management, a key responsibility of the Lead Director is to receive, review and, where necessary, act upon direct communications from shareholders and other interested parties. Mr. Arthur E. Johnson currently serves as our Lead Director.
- Non-management directors meet for a portion of each regular meeting in executive sessions chaired by the Lead Director with no members of management present. These executive sessions allow the board to review key decisions and discuss matters in a manner that is independent of the Chief Executive Officer and, where necessary, critical of the Chief Executive Officer and senior management.
- Each of the board's standing committees is chaired by an independent director and each of our Audit, Compensation and Nominating, Governance and Corporate Responsibility committees is comprised entirely of independent directors.

The board further believes that the current leadership structure is working effectively. Among other benefits, Mr. Somerhalder's role as Chief Executive Officer enables him, working with the Lead Director, to act as a bridge between management and the board, helping management and the board to act with a common purpose. Mr. Somerhalder's combined roles as Chief Executive Officer and Chairman promote unified leadership and direction for the Company. Mr. Somerhalder's knowledge of the day-to-day operations of the Company, perspective on competitive developments, understanding of shareholder interests, and relationships with business partners and employees allow him to provide effective leadership in his role as Chairman and Chief Executive Officer. Also, a combined Chairman and Chief Executive Officer role allows for more productive board meetings. The board believes the Company's strong financial performance and achievement of key strategic objectives demonstrates the effectiveness of the current leadership structure.

In view of our highly independent board structure and the Company's sound governance practices, the Company believes it is important to retain flexibility to adopt the most effective board leadership structure as the facts and circumstances warrant and to be able to select the director best suited to serve as Chairman. The proposal would create an unnecessary limitation on the board's flexibility and deprive the board of the opportunity to select the most qualified and appropriate individual to lead the board.

The board of directors recommends a vote **"AGAINST"** this proposal.

PROPOSAL 6—SHAREHOLDER PROPOSAL: GOALS FOR REDUCING GREENHOUSE GAS EMISSIONS

The Company has received the following shareholder proposal. Pursuant to Rule 14a-8(l)(1) of the Exchange Act, the Company will provide the name, address and number of securities held by the proponent of this proposal to any shareholder upon receipt of a written or oral request. You may contact our Corporate Secretary for this information at AGL Resources Inc., Attn: Corporate Secretary, P.O. Box 4569, Location 1466, Atlanta, Georgia 30302-4569.

The Company is not responsible for the contents of this proposal or supporting statement, both of which are quoted verbatim in italics below.

What is the proposal?

Resolved*: Shareholders request that AGL Resources Inc. adopt quantitative company-wide goals for reducing GHG emissions from operations and products and report on its plans to achieve these goals by June 2015.*

Supporting Statement*: In 2013, the Intergovernmental Panel on Climate Change (IPCC), the world's leading scientific authority on climate change, released its fifth assessment report concluding that human-caused "warming of the climate system is unequivocal," with many of the impacts of warming already "unprecedented over decades to millennia."*

PWC states that to mitigate climate change the G20 needs to reduce its carbon intensity 6 percent per year and the global economy needs to decarbonize 6 percent per dollar GDP.

In 2012, the US experienced 11 such events resulting in an estimated $110 billion dollars in total damages and 377 fatalities. Drought in the U.S. Midwest in 2012 affected 80 percent of agricultural land, particularly corn and soybean production, costing approximately $30 billion dollars.

Analysis by McKinsey & Co., Deloitte Consulting, and Point380 found that U.S. companies could reduce emissions 3 percent annually between now and 2020 and realize savings up to $780 billion dollars.

Further analysis by Calvert, Ceres, WWF, and David Gardiner and Associates demonstrated that 53 Fortune 100 companies in 2012 alone reported that they are conservatively saving $1.1 billion dollars annually by decreasing their GHG emissions.

In Climate Action and Profitability: CDP S&P 500 Climate Change Report 2014, industry leaders in the S&P 500 that are actively managing and planning for climate change report:

- *18 percent higher return-on-equity than peers and 67 percent higher return-on-equity than companies who do not disclose on climate change.*
- *50 percent lower earnings volatility over past decade than low-ranking peers.*
- *21 percent stronger dividend growth than low-ranking peers.*

While over 500 businesses, including General Motors, Microsoft, and Nike signed the Climate Declaration that states, "Tackling climate change is one of America's greatest economic opportunities of the 21st century," AGL Resources Inc. is largely silent on emissions reductions.

The economic, business and societal impacts of climate change are of *paramount importance to investors. 767 institutional investors with $92 trillion dollars in assets under management have supported CDP's request to over 6,000 companies for disclosure of carbon emissions, reduction goals, and climate change strategies to address these risks.*

We recommend AGL Resources Inc. take into consideration the IPCC analysis and identified emission reduction targets as it sets its own scientific-based goal. We also recommend that AGL Resources Inc. consider renewable energy procurement as a strategy to achieve its emission reduction goals.

What does the board recommend?

THE BOARD OF DIRECTORS RECOMMENDS THAT YOU VOTE "AGAINST" THIS PROPOSAL FOR THE FOLLOWING REASONS:

The Company is engaged primarily in the distribution of natural gas to residential, commercial and industrial customers through a vast pipeline network. For more than a decade we have been committed to aggressively addressing greenhouse gas (GHG) emissions and have a demonstrated track record of success through participation in federal emission reduction programs, investing in system safety and reliability improvements that also lower emissions and through active participation in efforts to develop sound government policy for GHG emissions regulation.

Over the past 20 years, we have been an industry leader in pipeline replacement and repairs, spending over $1.5 billion in Georgia, New Jersey and Virginia to modernize over 2,500 miles of pipeline across our system. Through these safety and reliability activities, a core aspect of our business, we continue to achieve significant GHG emissions reductions. Further, as of 2015, we are embarking upon a nine-year $1.5 billion infrastructure replacement program in Illinois that will also reduce GHG emissions.

In addition to investing heavily to improve our distribution systems:

- The Company has been a leader in activities to reduce greenhouse gas emissions since 1993, when it joined the Environmental Protection Agency's Natural Gas STAR Program as an original participant. The Natural Gas STAR Program provides a framework to encourage partner companies to implement methane emissions reducing technologies and practices and document their voluntary emission reduction activities. The Company continuously implements changes to its operations, many of which yield measurable reductions in greenhouse gas and other emissions. During the first ten years of the Company's participation in Natural Gas STAR, it reduced cumulative emissions by over 700,000 mt CO2E.
- On January 14, 2015, the White House announced the Environmental Protection Agency's intention to expand the Natural Gas STAR Program's voluntary methane emissions program, and the Company intends to remain fully engaged with this initiative.
- The Company regularly works with its regulators—as well as advocates for legislation—to develop programs to accelerate the replacement of infrastructure, such as pipelines and valves, one of the significant benefits of which is to reduce direct fugitive emissions of methane. The Company's

efforts have been very successful—and were recently featured in the American Gas Association magazine as an example of industry best practices.

- The Company is one of seven in the natural gas value chain, and one of only two utilities, to form Our Nation's Energy Future (also known as "ONE Future"), which has the goal of reducing methane leak loss rates across the value chain to less than 1%, a level which all available science indicates is not only cost-effective and attainable, but the point at which natural gas becomes the unassailable fuel of choice from a climate perspective. The EPA cited the ONE Future initiative as one it is committed to continue to work with to develop and verify robust commitments to reduce methane emissions. The Company actively advocates for value chain-wide methane emission standards, and has met with representatives of the White House, Environmental Protection Agency, Department of Energy, and Federal Energy Regulatory Commission on this issue.

Because of these on-going Company efforts, our demonstrated commitment to GHG emissions reductions and the emergence of federal GHG regulations, the Board does not believe it is in the best interests of the Company, nor would it be an efficient use of Company resources, to establish, at this time, voluntary, quantitative GHG emission reduction goals for the Company's products and operations and issue a report by June 2015, regarding its plans to achieve these goals. The Board does not believe that the proposed report would add value to the Company's efforts in this area.

The board of directors recommends a vote **"AGAINST"** this proposal.

CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

The Vanguard Group, Inc. was a beneficial owner of more than 5% of the Company's common stock during 2014. The Vanguard Group, Inc. or its subsidiaries ("Vanguard") served as the trustee and recordkeeper for the Birdsall Retirement Savings Plan, which was available to employees in our Tropical Shipping business. In September 2014, we sold our Tropical Shipping business. From January to September 2014, Vanguard was paid approximately $229,357 for trustee and recordkeeping services.

Table of Contents

SECTION 16(a) BENEFICIAL OWNERSHIP REPORTING COMPLIANCE

Section 16(a) of the Exchange Act requires our directors and certain of our officers, including executive officers, and any person who owns more than 10% of our common stock to file reports of initial common stock ownership and changes in common stock ownership with the SEC and the New York Stock Exchange. Such persons are required by SEC regulations to furnish us with copies of all Section 16(a) forms that they file.

To our knowledge, based solely on our review of the copies of such reports received by us and written representations that no other reports were required for those persons during 2014, all filing requirements were met except, due to administrative constraint, as provided in this paragraph. Bryan E. Seas made a single late filing reporting a single transaction. Andrew W. Evans, Henry P. Linginfelter, Melanie M. Platt, Paul R. Shlanta and Peter I. Tumminello each made a single late filing reporting two transactions. John W. Somerhalder II made two late filings reporting two transactions in the first late filing and a single transaction in the second late filing.

AGL Resources Inc.
ANNUAL MEETING OF SHAREHOLDERS
Tuesday, April 28, 2015
10:00 a.m., Eastern Time
10 Peachtree Place
Atlanta, Georgia 30309

AGL Resources

Revocable Proxy - Common Stock

THIS PROXY IS SOLICITED BY THE BOARD OF DIRECTORS FOR THE 2015 ANNUAL MEETING OF SHAREHOLDERS

The undersigned hereby appoints John W. Somerhalder II, Paul R. Shlanta and Andrew W. Evans, and each of them, proxies, with full power of substitution, to act for and in the name of the undersigned, to vote all shares of Common Stock of AGL Resources Inc. (the "Company") that the undersigned is entitled to vote at the 2015 Annual Meeting of Shareholders of the Company, to be held on Tuesday, April 28, 2015, and at any and all adjournments or postponements thereof, as indicated on the reverse side of this card.

The undersigned hereby appoints Merrill Lynch Bank & Trust Co., FSB, which acts as Trustee for the AGL Resources Inc. Retirement Savings Plus Plan (the "AGL 401(k) Plan") and the Nicor Gas Thrift Plan (the "Nicor 401(k) Plan"), as proxy, to act for and in the name of the undersigned, to vote all shares of Common Stock of the Company that have been allocated to the account of the undersigned under the AGL 401(k) Plan or the Nicor 401(k) Plan, as applicable, at the 2015 Annual Meeting of Shareholders of the Company, to held on Tuesday, April 28, 2015, and at any and all adjournments or postponements thereof, as indicated on the reverse side of this card. Under the terms of the AGL 401(k) Plan and the Nicor 401(k) Plan, only the Trustee of the plan can vote the shares allocated to the accounts of the participants, even if such participants or their beneficiaries attend the Annual Meeting in person.

Receipt of the Notice of the Annual Meeting, the accompanying Proxy Statement and the 2014 Annual Report to Shareholders is hereby acknowledged.

PLEASE VOTE, DATE AND SIGN ON REVERSE AND RETURN PROMPTLY IN THE ENCLOSED POSTAGE-PAID ENVELOPE.

Your telephone or Internet vote authorizes the proxies to vote the shares in the same manner as if you marked, signed and returned your proxy card.

Compass Energy	Compass Energy Services, Inc., which was sold in 2013
Dalton Pipeline	A 50% undivided ownership interest in a pipeline facility in Georgia
EBIT	Earnings before interest and taxes, the primary measure of our reportable segments' profit or loss, which includes operating income and other income and excludes financing costs, including interest on debt and income tax expense
EPA	U.S. Environmental Protection Agency
ERC	Environmental remediation costs associated with our distribution operations segment that are generally recoverable through rate mechanisms
FASB	Financial Accounting Standards Board
FERC	Federal Energy Regulatory Commission
Fitch	Fitch Ratings
GAAP	Accounting principles generally accepted in the United States of America
Georgia Commission	Georgia Public Service Commission, the state regulatory agency for Atlanta Gas Light
Georgia Natural Gas	The trade name under which SouthStar does business in Georgia
Golden Triangle	Golden Triangle Storage, Inc.
Heating Degree Days	A measure of the effects of weather on our businesses, calculated when the average daily temperatures are less than 65 degrees Fahrenheit
Heating Season	The period from November through March when natural gas usage and operating revenues are generally higher
Henry Hub	A major interconnection point of natural gas pipelines in Erath, Louisiana where NYMEX natural gas future contracts are priced
Horizon Pipeline	Horizon Pipeline Company, LLC
HVAC	Heating, ventilation and air conditioning
Illinois Commission	Illinois Commerce Commission, the state regulatory agency for Nicor Gas
Jefferson Island	Jefferson Island Storage & Hub, LLC
LDC	Local Distribution Company
LIBOR	London Inter-Bank Offered Rate
LIFO	Last-in, first-out
LNG	Liquefied natural gas
LOCOM	Lower of weighted average cost or current market price
Marketers	Marketers selling retail natural gas in Georgia and certificated by the Georgia Commission
MGP	Manufactured gas plant
Moody's	Moody's Investors Service
New Jersey BPU	New Jersey Board of Public Utilities, the state regulatory agency for Elizabethtown Gas
Nicor	Nicor Inc. - an acquisition completed in December 2011 and former holding company of Nicor Gas
Nicor Gas	Northern Illinois Gas Company, doing business as Nicor Gas Company
Nicor Gas Credit Facility	$700 million credit facility entered into by Nicor Gas to support its commercial paper program
NYMEX	New York Mercantile Exchange, Inc.
OCI	Other comprehensive income
Operating margin	A non-GAAP measure of income, calculated as operating revenues minus cost of goods sold and revenue tax expense
OTC	Over-the-counter
Pad gas	Volumes of non-working natural gas used to maintain the operational integrity of the natural gas storage facility, also known as base gas
PBR	Performance-based rate, a regulatory plan at Nicor Gas that provided economic incentives based on natural gas cost performance. The plan terminated in 2003
PennEast Pipeline	PennEast Pipeline Company, LLC
PGA	Purchased Gas Adjustment
Piedmont	Piedmont Natural Gas Company, Inc.
Pivotal Home Solutions	Nicor Energy Services Company, doing business as Pivotal Home Solutions
PP&E	Property, plant and equipment
S&P	Standard & Poor's Ratings Services
Sawgrass Storage	Sawgrass Storage, LLC
SEC	Securities and Exchange Commission
Sequent	Sequent Energy Management, L.P.
SouthStar	SouthStar Energy Services LLC
STRIDE	Atlanta Gas Light's Strategic Infrastructure Development and Enhancement program
Triton	Triton Container Investments LLC
Tropical Shipping	Tropical Shipping and Construction Company Limited
U.S.	United States
VaR	Value-at-risk is the maximum potential loss in portfolio value over a specified time period that is not expected to be exceeded within a given degree of probability.
Virginia Natural Gas	Virginia Natural Gas, Inc.
Virginia Commission	Virginia State Corporation Commission, the state regulatory agency for Virginia Natural Gas
WACC	Weighted average cost of capital
WACOG	Weighted average cost of gas
WNA	Weather normalization adjustment

PART I

ITEM 1. BUSINESS

Unless the context requires otherwise, references to "we," "us," "our" and the "company" are intended to mean AGL Resources Inc. The operations and businesses described in this filing are owned and operated, and management services are provided, by distinct direct and indirect subsidiaries of AGL Resources. AGL Resources was organized and incorporated in 1995 under the laws of the State of Georgia.

Business Overview

AGL Resources, headquartered in Atlanta, Georgia, is an energy services holding company whose primary business is the distribution of natural gas through our natural gas distribution utilities. We also are involved in several other businesses that are mainly related and complementary to our primary business. Our segments consist of the following four reportable segments, which are consistent with how management views and manages our businesses.

Distribution Operations
- Operation, construction and maintenance of 80,700 miles of natural gas pipeline and 14 storage facilities to provide safe and cost-effective service of natural gas to residential, commercial and industrial customers
- Serves 4.5 million customers across 7 states
- Rates of return are regulated by each individual state in return for exclusive franchises

Retail Operations
- Provision of natural gas commodity and related services to customers in competitive markets or markets that provide for customer choice
- Serves 628,000 energy customers and 1.2 million service contracts across 15 states

Wholesale Services
- Engages in natural gas storage, gas pipeline arbitrage and provides natural gas asset management and/or related logistics services for most of our utilities, as well as for non-affiliated companies
- Serves a variety of customers in the natural gas value chain with operations structured to optimize storage and transportation portfolios under a wide range of market conditions through the use of hedging tools that allow us to capture additional value while limiting risk

Midstream Operations
- Consists primarily of high deliverability natural gas storage facilities and select pipelines, enabling the provision of diverse sources of natural gas supplies to our customers

For more information on our segments, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Results of Operations" and Note 13 to our consolidated financial statements under Item 8 herein.

Distribution Operations

Our distribution operations segment is the largest component of our business and includes seven natural gas local distribution utilities with their primary focus being the safe and reliable delivery of natural gas. These utilities construct, manage and maintain intrastate natural gas pipelines and distribution facilities and include:

Utility	State	Number of customers (in thousands)	Approximate miles of pipe
Nicor Gas	Illinois	2,195	34,100
Atlanta Gas Light	Georgia	1,560	32,600
Virginia Natural Gas	Virginia	287	5,500
Elizabethtown Gas	New Jersey	281	3,200
Florida City Gas	Florida	105	3,600
Chattanooga Gas	Tennessee	63	1,600
Elkton Gas	Maryland	6	100
Total		4,497	80,700

Competition and Customer Demand

Our utilities do not compete with other distributors of natural gas in their exclusive franchise territories, but face competition from other energy products. Our principal competitors are electric utilities and fuel oil and propane providers serving the residential, commercial and industrial markets throughout our service areas for our customers who are considering switching from a natural gas appliance. Accordingly, the potential displacement or replacement of natural gas appliances with electric appliances is a competitive factor.

Competition for space heating and general household and small commercial energy needs generally occurs at the initial installation phase when the customer or builder makes decisions as to which types of equipment to install. Customers generally use the chosen energy source for the life of the equipment. Customer demand for natural gas could be affected by numerous factors, including:

- change in the availability or price of natural gas and other forms of energy;

- general economic conditions;
- energy conservation, including state-supported energy efficiency programs;
- legislation and regulations; and
- the cost and capability to convert from natural gas to alternative energy products;

We continue to develop and grow our business through the use of a variety of targeted marketing programs designed to attract new customers and to retain existing customers. These efforts include working to add residential customers, multifamily complexes and commercial customers who might use natural gas, as well as evaluating and launching new natural gas related programs, products and services to enhance customer growth, mitigate customer attrition and increase operating revenues.

The natural gas related programs generally emphasize natural gas as the fuel of choice for customers and seek to expand the use of natural gas through a variety of promotional activities. In addition, we partner with numerous third-party entities such as builders, realtors, plumbers, mechanical contractors, architects and engineers to market the benefits of natural gas appliances and to identify potential retention options early in the process for those customers who might consider converting to alternative fuels.

Recent advances in natural gas drilling in shale producing regions in the U.S. have resulted in historically high supplies of natural gas and historically low prices for natural gas. This dynamic has provided solid cost advantages for natural gas when compared to electricity, fuel oil and propane and opportunities for growth for our businesses.

Sources of Natural Gas Supply and Transportation Services

Procurement plans for natural gas supply and transportation to serve our regulated utility customers are reviewed and approved by our state utility commissions. We purchase natural gas supplies in the open market by contracting with producers, marketers and from our wholly owned subsidiary, Sequent, under asset management agreements in states where this is approved by the state commission. We also contract for transportation and storage services from interstate pipelines that are regulated by the FERC. When firm pipeline services are temporarily not needed, we may release the services in the secondary market under FERC-approved capacity release provisions or utilize asset management arrangements, thereby reducing the net cost of natural gas charged to customers for most of our utilities. Peak-use requirements are met through utilization of company-owned storage facilities, pipeline transportation capacity, purchased storage services, peaking facilities and other supply sources, arranged by either our transportation customers or us. We have consistently been able to obtain sufficient supplies of natural gas to meet customer requirements. We believe natural gas supply and pipeline capacity will be sufficiently available to meet market demands in the foreseeable future.

Utility Regulation and Rate Design

Rate Structures Our utilities operate subject to regulations and oversight of the state regulatory agencies in each of the states served by our utilities with respect to rates charged to our customers, maintenance of accounting records and various service and safety matters. Rates charged to our customers vary according to customer class (residential, commercial or industrial) and rate jurisdiction. These agencies approve rates designed to provide us the opportunity to generate revenues to recover all prudently incurred costs, including a return on rate base sufficient to pay interest on debt and provide a reasonable return for our shareholders. Rate base generally consists of the original cost of the utility plant in service, working capital and certain other assets, less accumulated depreciation on the utility plant in service and net deferred income tax liabilities, and may include certain other additions or deductions.

The natural gas market for Atlanta Gas Light was deregulated in 1997. Accordingly, Marketers, rather than a traditional utility, sell natural gas to end-use customers in Georgia and handle customer billing functions. The Marketers file their rates monthly with the Georgia Commission. As a result of operating in a deregulated environment, Atlanta Gas Light's role includes:

- distributing natural gas for Marketers;
- constructing, operating and maintaining the gas system infrastructure, including responding to customer service calls and leaks;
- reading meters and maintaining underlying customer premise information for Marketers; and
- planning and contracting for capacity on interstate transportation and storage systems.

Atlanta Gas Light earns revenue by charging rates to its customers based primarily on monthly fixed charges that are set by the Georgia Commission and periodically adjusted. The Marketers add these fixed charges when billing customers. This mechanism, called a straight-fixed-variable rate design, minimizes the seasonality of Atlanta Gas Light’s revenues since the monthly fixed charge is not volumetric or directly weather dependent.

With the exception of Atlanta Gas Light, the earnings of our regulated utilities can be affected by customer consumption patterns that are largely a function of weather conditions and price levels for natural gas. Specifically, customer demand substantially increases during the Heating Season when natural gas is used for heating purposes. We have various mechanisms, such as weather normalization mechanisms and weather derivative instruments, in place at most of our utilities that limit our exposure to weather changes within typical ranges in these utilities’ respective service areas.

All of our utilities, excluding Atlanta Gas Light, are authorized to use natural gas cost recovery mechanisms that allow them to adjust their rates to reflect changes in the wholesale cost of natural gas and to ensure they recover all of the costs prudently incurred in purchasing gas for their customers. Since Atlanta Gas Light does not sell natural gas directly to its end-use customers, it does not need nor utilize a traditional natural gas cost recovery mechanism. However, Atlanta Gas Light does maintain natural gas inventory for the Marketers in Georgia and recovers the cost of this gas through recovery mechanisms approved by the Georgia Commission specific to Georgia's deregulated market. In addition to natural gas recovery mechanisms, we have other cost recovery mechanisms, such as regulatory riders, which vary by utility but allow us to recover certain costs, such as those related to environmental remediation and energy efficiency plans. In traditional rate designs, utilities recover a significant portion of their fixed customer service and pipeline infrastructure costs based on assumed natural gas volumes used by our customers. Three of our utilities have decoupled regulatory mechanisms in place that encourage conservation. We believe that separating, or decoupling, the recoverable amount of these fixed costs from the customer throughput volumes, or amounts of natural gas used by our customers, allows us to encourage our customers' energy conservation and ensures a more stable recovery of our fixed costs. The following table provides regulatory information for our six largest utilities.

$ in millions	**Nicor Gas** (9)	**Atlanta Gas Light**	**Virginia Natural Gas**	**Elizabethtown Gas**	**Florida City Gas**	**Chattanooga Gas**
Authorized return on rate base (1)	8.09%	8.10%	7.38%	7.64%	7.36%	7.41%
Estimated 2014 return on rate base (2)	8.56%	7.80%	6.45%	8.22%	5.37%	7.94%
Authorized return on equity (1)	10.17%	10.75%	10.00%	10.30%	11.25%	10.05%
Estimated 2014 return on equity (2)	12.12%	10.16%	8.77%	11.52%	8.41%	11.19%
Authorized rate base % of equity (1)	51.07%	51.00%	45.36%	47.89%	36.77%	46.06%
Rate base included in 2014 return on equity (2)	$1,561	$2,315	$590	$519	$182	$104
Weather normalization (3)			✓	✓		✓
Decoupled or straight-fixed-variable rates (4)		✓	✓			✓
Regulatory infrastructure program rates (5)	✓	✓	✓	✓		
Bad debt rider (6)	✓		✓			✓
Synergy sharing policy (7)		✓				
Energy efficiency plan (8)	✓		✓	✓	✓	✓
Last decision on change in rates	2009	2010	2011	2009	N/A	2010

(1) The authorized return on rate base, return on equity and percentage of equity were those authorized as of December 31, 2014.
(2) Estimates based on principles consistent with utility ratemaking in each jurisdiction. Rate base includes investments in regulatory infrastructure programs.
(3) Involves regulatory mechanisms that allow us to recover our costs in the event of unseasonal weather, but are not direct offsets to the potential impacts of weather and customer consumption on earnings. These mechanisms are designed to help stabilize operating results by increasing base rate amounts charged to customers when weather is warmer-than-normal and decreasing amounts charged when weather is colder-than-normal.
(4) Decoupled and straight-fixed-variable rate designs allow for the recovery of fixed customer service costs separately from assumed natural gas volumes used by our customers.
(5) Includes programs that update or expand our distribution systems and liquefied natural gas facilities.
(6) Involves the recovery (refund) of the amount of bad debt expense over (under) an established benchmark expense. Virginia Natural Gas and Chattanooga Gas recover the gas portion of bad debt expense through purchased gas adjustment (PGA) mechanisms.
(7) Involves the recovery of 50% of net synergy savings achieved on mergers and acquisitions.
(8) Includes the recovery of costs associated with plans to achieve specified energy savings goals.
(9) In connection with the December 2011 Nicor merger, we agreed to (i) not initiate a rate proceeding for Nicor Gas that would increase base rates prior to December 2014, (ii) maintain 2,070 full-time equivalent employees involved in the operation of Nicor Gas for a period of three years and (iii) maintain the personnel numbers in specific areas of safety oversight of the Nicor Gas system for a period of five years.

Current Regulatory Proceedings

Nicor Gas In June 2013, in connection with the PBR plan, the Illinois Commission issued an order requiring us to refund $72 million to current Nicor Gas customers through our PGA mechanism based upon natural gas throughput over 12 months beginning in July 2013. Approximately $43 million was refunded during 2014 and $29 million was refunded during 2013. For more information on the PBR plan, see Note 11 to our consolidated financial statements under Item 8 herein.

In August 2014, staff of the Illinois Commission and the Citizens Utility Board (CUB) filed testimony in the 2003 gas cost prudence review disputing certain gas loan transactions offered by Nicor Gas under its Chicago Hub services, requesting refunds of $18 million and $22 million, respectively. We filed surrebuttal testimony in December 2014 disputing that any refund is due, as Nicor Gas was authorized to enter into these transactions and revenues associated with such reduced rate payer costs as either credits to the PGA or reductions to base rates were consistent with then-current Illinois Commission orders governing these activities. We believe these claims engage in hindsight speculation, which is expressly prohibited in a prudence review examination, and we intend to vigorously defend against these claims. Evidentiary hearings are scheduled for March 2015. Similar gas loan transactions were provided in other open review years. The resolution will ultimately be decided by the Illinois Commission. We are currently unable to predict the ultimate outcome and have recorded no liability for this matter.

Nicor Gas' first three-year energy efficiency program, which outlines energy efficiency program offerings and therm reduction goals for a three-year period, ended in May 2014. Nicor Gas spent $125 million on the program and reduced customer usage by an estimated 46 million therms. Additionally, in May 2014, the Illinois Commission approved Nicor

Gas' second energy efficiency program, Energy Smart Plan, with expected spending of $93 million over a three-year period that began in June 2014. Nicor Gas spent $14 million on this new program in 2014.

Atlanta Gas Light In December 2012, Atlanta Gas Light filed a petition with the Georgia Commission for approval to resolve a volumetric imbalance of natural gas related to Atlanta Gas Light's use of retained storage assets to operationally balance the system for the benefit of the natural gas market. In September 2014, we filed a stipulation that was entered between us, staff of the Georgia Commission and several Marketers that included a resolution of the 4.6 Bcf imbalance over a five-year period from January 1, 2015 through December 31, 2019. The Georgia Commission approved the stipulation in December 2014. Over the five-year period, discretionary funds available to the Universal Service Fund, which is controlled by the Georgia Commission, will be used to resolve 25% of the imbalance, or approximately 1.15 Bcf of natural gas. Atlanta Gas Light is obligated to resolve 25% and we have recorded a reserve in our Consolidated Statements of Financial Position representing the future estimated cost to purchase the approximately 1.15 Bcf of natural gas. The cost to resolve the remaining difference of approximately 2.3 Bcf of natural gas will be recovered from all certificated Marketers through charges for system retained storage gas as it is used by the certificated Marketers.

In accordance with an order issued by the Georgia Commission, where AGL Resources makes a business acquisition that reduces the costs allocated or charged to Atlanta Gas Light for shared services, the net savings to Atlanta Gas Light will be shared equally between the firm customers of Atlanta Gas Light and our shareholders for a ten-year period. In December 2013, we filed a Report of Synergy Savings with the Georgia Commission in connection with the Nicor acquisition. If and when approved, the net savings should result in annual rate reductions to the firm customers of Atlanta Gas Light of $5 million. We expect this filing to be discussed by the staff of the Georgia Commission in February 2015.

We expect Atlanta Gas Light to file a petition with the Georgia Commission for approval of a rate increase to our STRIDE surcharge associated with the final accounting of our pipeline replacement program (PRP) in February 2015. The proposed rate increase is designed to collect the unrecovered revenue requirement of the program and is in accordance with the requirements set forth by the Georgia Commission that allows Atlanta Gas Light to make a true-up filing at the end of the program to recover the actual costs of the program. The program ended December 31, 2013.

Virginia Natural Gas In April 2014, the Governor of Virginia signed into law legislation that enables the state's natural gas utilities, including Virginia Natural Gas, to acquire long-term supplies of natural gas and make capital investments to facilitate the delivery of low-cost shale and coal-bed methane gas to Virginia homeowners and businesses. Under the terms of the new statute, Virginia Natural Gas could enter into commercial agreements to obtain up to 25% of its annual firm sales demand for natural gas through long-term contracts or investments such as purchases of reserves. Recovery on investments would be based upon the utility's authorized return on rate base, which would flow through the PGA mechanism or a similar mechanism. The new statute also allows us to build pipelines and other infrastructure that deliver shale and coal-bed methane gas into the state's markets that seek to reduce natural gas supply costs or reduce price volatility for consumers. All filings under this legislation require approval by the Virginia Commission, and we have not made any filings to date.

Supply Six of our utilities use asset management agreements with our wholly owned subsidiary, Sequent, for the primary purpose of reducing our utility customers' gas cost recovery rates through payments to the utilities by Sequent. For Atlanta Gas Light, these payments are controlled by the Georgia Commission and utilized for infrastructure improvements and to fund heating assistance programs, rather than for a reduction to gas cost recovery rates. Under these asset management agreements, Sequent supplies natural gas to the utility and markets available pipeline and storage capacity to improve the overall cost of supplying gas to the utility customers. Currently, the utilities primarily purchase their gas from Sequent. The purchase agreements require Sequent to provide firm gas to our utilities. However, these utilities maintain the right and ability to make their own gas supply purchases. This right allows our utilities to make long-term supply arrangements if they believe it is in the best interest of their customers. Nicor Gas has not entered into an asset management agreement with Sequent or any other parties.

Each agreement with Sequent has either an annual minimum guarantee within a profit sharing structure, a profit sharing structure without any annual minimum guarantee, or a fixed fee. From the inception of these agreements in 2001 through 2014, Sequent has made sharing payments under these agreements totaling $272 million. The following table provides payments made by Sequent to our utilities under these agreements during the last three years.

	Total amount received			
In millions	**2014**	**2013**	**2012**	**Expiration Date**
Elizabethtown Gas	$18	$6	$5	March 2019
Virginia Natural Gas	14	4	3	March 2016
Atlanta Gas Light	13	6	5	March 2017
Florida City Gas	1	1	1	(1)
Chattanooga Gas	1	1	1	March 2018
Total	$47	$18	$15	

(1) The term of the agreement is evergreen and renews automatically each year unless terminated by either party.

Transportation Our utilities use firm pipeline entitlements, storage services and/or peaking capacity contracted with interstate capacity providers to serve the firm natural gas supply needs of our customers. In addition, Nicor Gas, Atlanta

Gas Light, Chattanooga Gas, Elizabethtown Gas and Virginia Natural Gas operate on-system LNG facilities, underground natural gas storage fields and/or propane/air plants to meet the gas supply and deliverability requirements of their customers in the winter period. Generally, we work to build a portfolio of year-round firm transportation, seasonal storage and short-duration peaking services that will meet the needs of our customers under severe weather conditions with adequate operational flexibility to reliably manage the variability inherent in servicing customers using natural gas for space heating. Including seasonal storage and peaking services in this portfolio is more efficient and cost effective than reserving firm pipeline capacity rights all year for a limited number of cold winter days.

Our firm contracts range in duration from 3 to 25 years. We work to stagger terms to maintain our ability to adjust the overall portfolio to meet changing market conditions. Our utilities have contracted for capacity that is predominately sourced from producing areas in the midcontinent and gulf coast regions, and they continue to evaluate capacity options that will provide long-term access to reliable and affordable natural gas supplies. During 2014, we announced our participation in three pipeline projects that will provide access to shale gas in the proximity of our service territories. We have entered into longer-term contracts in connection with these pipeline projects, which resulted in an increase in the duration of our firm contracts compared to prior years. Given the number of agreements held by our utilities and the amount of capacity under contract, we make decisions as to the termination, extension or renegotiation of contracts every year.

Capital Projects

We continue to focus on capital discipline and cost control while moving ahead with projects and initiatives that we expect will have current and future benefits to us and our customers, provide an appropriate return on invested capital and ensure the safety, reliability and integrity of our utility infrastructure. Total capital expenditures incurred during 2014 for our distribution operations segment were $715 million. The following table and discussions provide updates on some of our larger capital projects under various programs at our distribution operations segment. These programs update or expand our distribution systems to improve system reliability and meet operational flexibility and growth. Our anticipated expenditures for these programs in 2015 are discussed in Item 7, “Management’s Discussion and Analysis of Financial Condition and Results of Operations” under the caption “Liquidity and Capital Resources.”

	Program	**Program details**	**Recovery**	**Expenditures in 2014** (in millions)	**Expenditures since project inception** (in millions)	**Miles of pipe installed since project inception**	**Scope of program** (total miles)	**Program duration** (years)	**Last year of program**
Atlanta Gas Light	Integrated Vintage Plastic Replacement Program (i-VPR)	(1)	Rider	$62	$67	194	756	4	2017
Atlanta Gas Light	Integrated System Reinforcement Program (i-SRP)	(2)	Rider	13	264	n/a	n/a	8	2017

	Total			$180	$550	524	2,171		

(1) Early vintage plastic, risk based mid vintage plastic, mid vintage neighborhood convenience.
(2) Large diameter pressure improvement and system reinforcement projects.
(3) New business construction and strategic line extension.
(4) Cast iron and bare steel.
(5) Cast iron and distribution reinforcement.
(6) Galvanized and X-Tube steel. Expenditures and miles reported are post AGL Resources acquisition.
(7) Cast iron, bare steel, mid vintage plastic and risk based materials.
(8) Represents expenditures on qualifying infrastructure that will be placed into service after the rate freeze date, December 9, 2014.

Atlanta Gas Light Our STRIDE program is comprised of i-SRP, i-CGP and i-VPR. STRIDE includes a surcharge on firm customers that provides recovery of the revenue requirement for the ongoing programs and the PRP, which ended on December 31, 2013. These infrastructure development, enhancement and replacement programs are used to update and expand distribution systems and liquefied natural gas facilities, improve system reliability and meet operational flexibility and growth. The purpose of the i-SRP is to upgrade our distribution system and liquefied natural gas facilities in Georgia, improve our peak-day system reliability and operational flexibility, and create a platform to meet long-term forecasted growth. Under I-SRP, we must file an updated ten-year forecast of infrastructure requirements under i-SRP along with a new construction plan every three years for review and approval by the Georgia Commission. Our i-CGP authorizes Atlanta Gas Light to extend its pipeline facilities to serve customers in areas without pipeline access and create new economic development opportunities in Georgia.

A new $260 million, four-year STRIDE program was approved in December 2013, of which $214 million is for i-SRP related projects and $46 million is for i-CGP related projects. The program will be funded through a monthly rider surcharge per customer of $0.48 beginning in January 2015, which will increase to $0.96 beginning in January 2016 and to $1.43 beginning in January 2017. This surcharge will continue through 2025.

The purpose of the i-VPR program is to replace aging plastic pipe that was installed primarily in the mid-1960's to the early 1980's. We have identified approximately 3,300 miles of vintage plastic mains in our system that potentially should be considered for replacement over the next 15 - 20 years as it reaches the end of its useful life. In 2013, the Georgia Commission approved i-VPR, which includes the replacement of the first 756 miles of vintage plastic pipe over four years for $275 million. The program is being funded through an increase in the STRIDE monthly rider surcharge per customer of $0.48 through December 2014, which increases to $0.96 beginning in January 2015 and to $1.45 beginning in January 2016. This surcharge will continue through 2025. If the Georgia Commission elects to extend the i-VPR program beyond 2017, the remaining vintage plastic mains in our system could be considered for replacement through the program over the next 15 - 20 years as it reaches the end of its useful life. In December 2014, the Georgia Commission approved a stipulation between Atlanta Gas Light and the staff of the Georgia Commission that allows for the recovery or refund of certain operation and maintenance expenses associated with the i-VPR program that are above or below an established baseline amount of $7 million.

Nicor Gas In July 2013, Illinois enacted legislation that allows Nicor Gas to provide more widespread safety and reliability enhancements to its system. The legislation stipulates that rate increases to customer bills as a result of any infrastructure investments shall not exceed an annual average 4.0% of base rate revenues. In July 2014, the Illinois Commission approved our new regulatory infrastructure program, Investing in Illinois (previously known as Qualified Infrastructure Plant), for which we may implement rates under the program effective in March 2015. Our filing included a project scope with cost estimates for three years of $171 million in 2015, $173 million in 2016 and $171 million in 2017. Our current project scope includes cost estimates that are approximately $200 million in 2015 and $250 million in each of 2016 and 2017. These expenditure levels represent approximately 1.3%, 3.5% and 4.0% of annual average base rate revenues for 2015, 2016 and 2017, respectively, which are all within the program requirements.

Elizabethtown Gas Our extension of the enhanced infrastructure program in 2013 allowed for infrastructure investment of $115 million over four years, effective as of September 2013, and is focused on the replacement of aging cast iron of our pipeline system. Carrying charges on the additional capital spend are being accrued and deferred for regulatory purposes at a weighted average cost of capital (WACC) of 6.65%. We agreed to file a general rate case by September 2016. Prior accelerated infrastructure investments under this program will be recovered through a permanent adjustment to base rates.

In July 2014, the New Jersey BPU approved ENDURE, a program that will improve our distribution system's resiliency against coastal storms and floods. Under the proposed plan, Elizabethtown Gas will invest $15 million in infrastructure and related facilities and communication planning over a one year period from August 2014 through September 2015. The plan allows Elizabethtown Gas to increase its base rates effective November 1, 2015 for investments made under the program.

Virginia Natural Gas The SAVE program, which was approved in August 2012, involves replacing aging infrastructure as prioritized through Virginia Natural Gas' distribution integrity management program. SAVE was filed in accordance with a Virginia statute providing a regulatory cost recovery mechanism for costs associated with certain infrastructure replacement programs. This five-year program includes a maximum allowance for capital expenditure of $25 million per year, not to exceed $105 million in total. SAVE is subject to annual review by the Virginia Commission. We began recovering costs based on this program through a rate rider that became effective in August 2012. The second year performance rate update was approved by the Virginia Commission in July 2014 and became effective as of August 2014.

Environmental Remediation Costs

We are subject to federal, state and local laws and regulations governing environmental quality and pollution control. These laws and regulations require us to remove or remedy the effect on the environment of the disposal or release of specified substances at our current and former operating sites. As we continue to conduct the MGP remediation and enter into cleanup contracts, we are increasingly able to provide conventional engineering estimates of the likely costs of many elements of the remediation program. These estimates contain various engineering assumptions, which we refine and update on an ongoing basis. These costs are primarily recovered through rate riders.

See Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Critical Accounting Policies and Estimates" and Note 3 to our consolidated financial statements under Item 8 herein for additional information about our environmental remediation liabilities and efforts.

Retail Operations

Our retail operations segment serves approximately 628,000 natural gas commodity customers and 1.2 million service contracts. Companies within our retail operations segment include SouthStar and Pivotal Home Solutions.

SouthStar is one of the largest retail natural gas marketers in the United States and markets natural gas to residential, commercial and industrial customers, primarily in Georgia and Illinois, where we capture spreads between wholesale and retail natural gas prices. Additionally, we offer our customers energy-related products that provide for natural gas price stability and utility bill management. These products mitigate and/or eliminate the risks to customers of colder-than-normal weather and/or changes in natural gas prices. We charge a fee or premium for these services. Through our commercial operations, we optimize storage and transportation assets and effectively manage commodity risk, which enables us to maintain competitive retail prices and operating margin.

SouthStar is a joint venture owned 85% by us and 15% by Piedmont and is governed by an executive committee with equal representation by both owners. After considering the relevant factors, we consolidate SouthStar in our financial statements. See Note 10 to our consolidated financial statements under Item 8 herein for more information.

Pivotal Home Solutions provides a suite of home protection products and services that offer homeowners additional financial stability regarding their energy service delivery, systems and appliances. We offer a proprietary line of customizable home warranty and energy efficiency plans that can be co-branded with utility and energy companies. We have a portable product suite, which can be offered in most geographies and markets. Pivotal Home Solutions serves customers in several states, primarily Illinois, Indiana and Ohio. Additionally, we are working to expand product offerings to customers in our affiliate companies to enhance the customer experience and retention, as well as promote switching to natural gas from other energy products, such as electricity, propane or fuel oil.

Competition and Operations Our retail operations business competes with other energy marketers to provide natural gas and related services to customers in the areas in which they operate. In the Georgia market, SouthStar operates as Georgia Natural Gas and is the largest of 12 Marketers in the state, with average customers of nearly 500,000 over the last three years and market share of approximately 31% during 2014.

In recent years, increased competition and the heavy promotion of fixed-price plans by SouthStar's competitors have resulted in increased pressure on retail natural gas margins. In response to these market conditions, SouthStar's residential and commercial customers have been migrating to fixed-price plans, which, combined with increased competition from other Marketers, has impacted SouthStar's customer growth as well as margins. However, SouthStar has utilized new products and marketing partnerships to stabilize its portfolio mix in Georgia and has entered new retail markets to position the company for future growth.

In addition, similar to our natural gas utilities, our retail operations businesses face competition based on customer preferences for natural gas compared to other energy products, primarily electricity, and the comparative prices of those products. We continue to use a variety of targeted marketing programs to attract new customers and to retain existing customers.

SouthStar's operations are sensitive to seasonal weather, natural gas prices, customer growth and consumption patterns similar to those affecting our utility operations. SouthStar's retail pricing strategies and the use of a variety of hedging strategies, such as the use of futures, options, swaps, weather derivative instruments and other risk management tools, help to ensure retail customer costs are covered to mitigate the potential effect of these issues and commodity price risk on its operations. For more information on SouthStar's energy marketing and risk management activities, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Natural Gas Price Risk."

Our retail operations business also experiences price, convenience and service competition from other warranty and HVAC companies. These businesses also bear risk from potential changes in the regulatory environment.

Wholesale Services

Our wholesale services segment consists of our wholly owned subsidiary, Sequent, which engages in asset management and optimization, storage, transportation, producer and peaking services and wholesale marketing of natural gas across the U.S. and Canada. Wholesale services utilizes a portfolio of natural gas storage assets, contracted supply from all of the major producing regions, as well as contracted storage and transportation capacity to provide these services to its customers. Its customers consist primarily of electric and natural gas utilities, power generators and large industrial customers. Our logistical expertise enables us to provide our customers with natural gas from the major producing regions and market hubs. We also leverage our portfolio of natural gas storage assets and contracted natural gas supply, transportation and storage capacity to meet our delivery requirements and customer obligations at competitive prices.

Wholesale services' portfolio of storage and transportation capacity enables us to generate additional operating margin by optimizing the contracted assets through the application of our wholesale market knowledge and risk management skills as opportunities arise. These asset optimization opportunities focus on capturing the value from idle or underutilized assets, typically by participating in transactions that take advantage of volatility in pricing differences between varying geographic locations and time horizons (location and seasonal spreads) within the natural gas supply, storage and transportation markets to generate earnings. We seek to mitigate the commodity price and volatility risks and protect our operating margin through a variety of risk management and economic hedging activities.

In May 2013, we sold Compass Energy, a non-regulated retail natural gas business supplying commercial and industrial customers. Under the terms of the purchase and sale agreement, we received an initial cash payment of $12 million, resulting in a pre-tax gain of $11 million ($5 million net of tax) and were eligible to receive contingent cash consideration up to $8 million with a guaranteed minimum receipt of $3 million that was recognized during 2013. In the third quarter of 2014, we negotiated with the buyer to settle the future earn-out payments and we received a cash payment of $4 million, resulting in the recognition of a $3 million gain. We have a five-year agreement through April 2018 to supply natural gas to our former customers.

Competition and operations Wholesale services competes for asset management, long-term supply and seasonal peaking service contracts with other energy wholesalers, often through a competitive bidding process. We are able to price competitively by utilizing our portfolio of contracted storage and transportation assets and by renewing and adding new contracts at prevailing market rates. We will continue to broaden our market presence where our portfolio of contracted storage and transportation assets provides us a competitive advantage, as well as continue our pursuit of additional opportunities with power generation companies and natural gas producers located in the areas of the country in which we operate. We are also focused on building our fee-based services as a source of operating margin that is less impacted by volatility in the marketplace.

We view our wholesale margins from two perspectives. First, we base our commercial decisions on economic value for both our natural gas storage and transportation transactions. For our natural gas storage transactions, economic value is determined based on the net operating revenue to be realized at the time the physical gas is withdrawn from storage and sold and the derivative instrument used to economically hedge natural gas price risk on the physical storage is settled. Similarly, for our natural gas transportation transactions, economic value is determined based on the net operating revenue to be realized at the time the physical gas is purchased, transported, and sold utilizing our transportation capacity along with the settlement value associated with any derivative instruments.

The second perspective is the values reported in accordance with GAAP and encompassing periods prior to and in the period of physical withdrawal and sale of inventory or purchase, transportation and sale of natural gas. We enter into derivatives to hedge price risk prior to when the related physical storage withdrawal or transportation transactions occur based upon our commercial evaluation of future market prices. The reported GAAP amount is affected by the process of accounting for the financial hedging instruments in interim periods at fair value and prior to the period the related physical storage and transportation transactions occur and are recognized in earnings. The change in fair value of the hedging instruments is recognized in earnings in the period of change and is recorded as unrealized gains or losses. This results in reported earnings volatility during the interim periods; however, the expected margin based upon the hedged economic value is ultimately realized in the period natural gas is physically withdrawn from storage or transported and sold at market prices and the related hedging instruments are settled.

For our natural gas storage portfolio, we purchase natural gas for storage when the current market price we pay plus the cost for transportation, storage and financing is less than the market price we anticipate we could receive in the future. We attempt to mitigate substantially all of the commodity price risk associated with our storage portfolio by using derivative instruments to reduce the risk associated with future changes in the price of natural gas. We sell NYMEX futures contracts or OTC derivatives in forward months to substantially protect the operating revenue that we will ultimately realize when the stored gas is actually sold.

Our natural gas acquisition strategy is designed to secure sufficient supplies of natural gas to meet the needs of our utility customers and to hedge natural gas prices to effectively manage costs, reduce price volatility and maintain a competitive advantage. Additionally, our hedging strategies and physical natural gas supplies in storage enable us to reduce earnings risk exposure due to higher gas costs.

Midstream Operations

Our midstream operations segment includes a number of businesses that are related and complementary to our primary business. The most significant of these businesses is our natural gas storage business, which develops, acquires and operates high-deliverability underground natural gas storage assets in the Gulf Coast region of the U.S. and in northern California. While this business can generate additional revenue during times of peak market demand for natural gas storage services, our natural gas storage facilities have a portfolio of short, medium and long-term contracts at fixed market rates. In addition to natural gas storage, this segment also includes our developing LNG business, which focuses on LNG for transportation, and select pipeline investments that are outside of state regulatory jurisdiction.

Pipelines During 2014, we entered into three pipeline agreements, as indicated in the following table, which are subject to regulatory approvals. These projects, along with our existing pipelines discussed below, will support our efforts to provide diverse sources of natural gas supplies to our customers, resolve current and long-term supply planning for new capacity, enhance system reliability and generate economic development in the areas served. The pipeline development projects will be financed through a combination of commercial paper and long-term debt issuances. See Note 10 to the consolidated financial statements under Item 8 herein for additional information.

Dollars in millions	**Miles of pipe**	**Expected capital expenditures** (1)	**Ownership interest** (1)	**Scheduled year of completion**	**Expected FERC filing process** File date	Approval date
Dalton Pipeline (2)	106	$210	50%	2017	2015	2016
PennEast Pipeline (3)	108	200	20%	2017	2015	2016
Atlantic Coast Pipeline (4)	550	260	5%	2018	2015	2016
Total	764	$670				

(1) Represents our expected capital expenditures and ownership interest, which may change.
(2) In April 2014, we entered into two agreements associated with the construction of the Dalton Lateral Pipeline, which will serve as an extension of the Transco pipeline system and provide additional natural gas supply to our customers in Georgia. The first is a construction and ownership agreement and the second is an agreement to lease our ownership in this lateral pipeline extension once it is placed in service.
(3) In August 2014, we entered into a joint venture to construct and operate a natural gas pipeline that will transport low-cost natural gas from the Marcellus Shale area to our customers in New Jersey. We believe this will alleviate takeaway constraints in the Marcellus region and help mitigate some of the price volatility experienced during the past winter.
(4) In September 2014, we entered into a joint venture to construct and operate a natural gas pipeline that will run from West Virginia through Virginia and into eastern North Carolina to meet the region's growing demand for natural gas. The proposed pipeline project is expected to transport natural gas to our customers in Virginia.

Magnolia Enterprise Holdings, Inc. This wholly owned subsidiary operates a pipeline that provides our Georgia customers diversification of natural gas sources and increased reliability of service in the event that supplies coming from other supply sources are disrupted.

Horizon Pipeline This 50% owned joint venture with Natural Gas Pipeline Company of America operates an approximate 70 mile natural gas pipeline stretching from Joliet, Illinois to near the Wisconsin/Illinois border. Nicor Gas has contracted for approximately 80% of Horizon Pipeline's total throughput capacity of 0.38 Bcf under an agreement expiring in May 2025.

Competition and operations Our natural gas storage facilities primarily compete with natural gas facilities in the Gulf Coast region of the U.S., as the majority of the existing and proposed high deliverability salt-dome natural gas storage facilities in North America are located in the Gulf Coast region. Salt caverns have also been leached from bedded salt formations in the Northeastern and Midwestern states. Competition for our Central Valley storage facility primarily consists of storage facilities in northern California and western North America.

The market fundamentals of the natural gas storage business are cyclical. The abundant supply of natural gas in recent years and the resulting lack of market and price volatility have negatively impacted the profitability of our storage facilities. In 2014, expiring storage capacity contracts were re-subscribed at lower prices and we anticipate these lower natural gas prices to continue in 2015 as compared to historical averages. The prices for natural gas storage capacity are expected to increase as supply and demand quantities reach equilibrium as the economy continues to improve, expected exports of LNG occur and/or natural gas demand increases in response to low prices and expanded uses for natural gas. We believe our storage assets are strategically located to benefit from these expected improvements in market fundamentals, including the overall growth in the natural gas market, and there are significant barriers to developing new storage facilities, including construction time and other costs, federal, state and local permitting and approvals and suitable and available sites, to capitalize on these expected improvements in market conditions.

Other

Our "other" non-reportable segment includes aggregated subsidiaries that individually are not significant on a stand-alone basis and that do not fit into one of our reportable segments. This segment includes our investment in Triton, which was not part of the sale of Tropical Shipping that closed on September 1, 2014. See Note 14 to the consolidated financial statements under Item 8 herein for additional information on the disposition of Tropical Shipping. AGL Services Company is a service company we established to provide certain centralized shared services to our reportable segments. We allocate substantially all of AGL Services Company's operating expenses and interest costs to our reportable segments in accordance with state regulations. Our EBIT results include the impact of these allocations to the various reportable segments.

AGL Capital, our wholly owned finance subsidiary, provides for our ongoing financing needs through a commercial paper program, the issuance of various debt instruments and other financing arrangements.

Employees

As of December 31, 2014, we had approximately 5,165 employees, all of whom were in the U.S. The decrease in total employees from 2013 primarily resulted from the sale of our Tropical Shipping business in 2014.

The following table provides information about our natural gas utilities' collective bargaining agreements, which represent approximately 33% of our total employees.

	Number of employees	Contract expiration date
Nicor Gas		
International Brotherhood of Electrical Workers (Local No. 19) (1)	1,386	February 2017
Virginia Natural Gas		
International Brotherhood of Electrical Workers (Local No. 50) (2)	139	May 2015
Elizabethtown Gas		
Utility Workers Union of America (Local No. 424)	171	November 2015
Total	1,696	

(1) Nicor Gas' collective bargaining agreement expired in February 2014, and a new agreement was ratified in April 2014. The new agreement provides for additional operational enhancements and changes to certain benefits, but does not have a material effect on our consolidated financial statements.

(2) Contract negotiations are ongoing; however, we do not expect a new contract to be finalized prior to the expiration of the current contract. We have a continuation agreement in place and do not expect this to result in a work stoppage.

We believe that we have a good working relationship with our unionized employees and there have been no work stoppages at Virginia Natural Gas, Elizabethtown Gas, or Nicor Gas since we acquired those operations in 2000, 2004, and 2011, respectively. As we have done historically, we remain committed to work in good faith with the unions to renew or renegotiate collective bargaining agreements that balance the needs of the company and our employees. Our current collective bargaining agreements do not require our participation in multiemployer retirement plans and we have no obligation to contribute to any such plans.

Available Information

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and proxy statements, and amendments to those reports that we file with, or furnish to, the SEC are available free of charge at the SEC website http://www.sec.gov and at our website, www.aglresources.com, as soon as reasonably practicable after we electronically file such reports with, or furnish such reports to, the SEC. However, our website and any contents thereof should not be considered to be incorporated by reference into this document. We will furnish copies of such reports free of charge upon written request to our Investor Relations department. You can contact our Investor Relations department at:

AGL Resources Inc.
Investor Relations
P.O. Box 4569
Atlanta, GA 30302-4569
404-584-4000

In Part III of this Form 10-K, we incorporate certain information by reference from our Proxy Statement for our 2015 annual meeting of shareholders. We expect to file that Proxy Statement with the SEC on or about March 17, 2015, and we will make it available on our website as soon as reasonably practicable thereafter. Please refer to the Proxy Statement when it is available.

Additionally, our corporate governance guidelines, code of ethics, code of business conduct and the charters of each committee of our Board of Directors are available on our website. We will furnish copies of such information free of charge upon written request to our Investor Relations department.

ITEM 1A. RISK FACTORS

Forward-Looking Statements

This report and the documents incorporated by reference herein contain "forward-looking statements." These statements, which may relate to such matters as future earnings, growth, liquidity, supply and demand, costs, subsidiary performance, credit ratings, dividend payments, new technologies and strategic initiatives, often include words such as "anticipate," "assume," "believe," "can," "could," "estimate," "expect," "forecast," "future," "goal," "indicate," "intend," "may," "outlook," "plan," "potential," "predict," "project," "proposed," "seek," "should," "target," "would" or similar expressions. You are cautioned not to place undue reliance on forward-looking statements. While we believe that our expectations are reasonable in view of the information that we currently have, these expectations are subject to future events, risks and uncertainties, and there are numerous factors—many beyond our control—that could cause actual results to vary materially from these expectations.

Such events, risks and uncertainties include, but are not limited to, changes in price, supply and demand for natural gas and related products; the impact of changes in state and federal legislation and regulation, including any changes related to climate matters; actions taken by government agencies on rates and other matters; concentration of credit risk; utility and energy industry consolidation; the impact on cost and timeliness of construction projects by government and other approvals, development project delays, adequacy of supply of diversified vendors, and unexpected changes in project costs, including the cost of funds to finance these projects and our ability to recover our project costs from our customers; limits on pipeline capacity; the impact of acquisitions and divestitures, including recent acquisitions in our retail operations segment; our ability to successfully integrate operations that we have or may acquire or develop in the future; direct or indirect effects on our business, financial condition or liquidity resulting from a change in our credit ratings or the credit ratings of our counterparties or competitors; interest rate fluctuations; financial market conditions, including disruptions in the capital markets and lending environment; general economic conditions; uncertainties about environmental issues and the related impact of such issues, including our environmental remediation plans; the impact of the new depreciation rates for Nicor Gas; the impact of changes in weather, including climate change, on the temperature-sensitive portions of our business; the impact of natural disasters, such as hurricanes, on the supply and price of natural gas; acts of war or terrorism; the outcome of litigation; and the factors described in this Item 1A, "Risk Factors" and the other factors discussed in our filings with the SEC.

There also may be other factors that we do not anticipate or that we do not recognize are material that could cause results to differ materially from expectations. Forward-looking statements speak only as of the date they are made. We expressly disclaim any obligation to update or revise any forward-looking statement, whether as a result of future events, new information or otherwise, except as required by law.

Risks Related to Our Business

Our business is subject to substantial regulation by federal, state and local regulatory authorities. Adverse determinations by them and, in some instances, the absence of timely determinations, could adversely affect our business.

At the federal level, our business is regulated by the FERC. At the state level, our business is regulated by public service commissions or similar authorities, as well as local governing bodies with respect to certain issues.

Depending upon the jurisdiction, these regulatory authorities are generally entitled to review and approve many aspects of our operations, including the rates that we charge customers (including the recovery of costs for pipeline replacement and other capital projects), the rates of return on our equity investments in our operating companies, how we operate our business, and the interaction between our regulated operating companies and other subsidiaries that might provide products or services to those companies. In addition, our operating companies are generally subject to franchise agreements that entitle them to provide products and services.

While applicable law often provides a framework for the approvals that we need, the regulatory authorities generally have broad discretion. Moreover, in some jurisdictions, the regulatory process involves elected officials and is subject to inherent political issues, which can impact the approvals that we request. As a result, we may or may not be able to obtain the approvals that we request, the timing of obtaining those approvals can be uncertain, and the approvals can be subject to conditions that may or may not be favorable to our business. Should we not be able to obtain the rate increases that we request in a timely manner, should we not be able to fully recover the costs that we incur, or should we otherwise not obtain favorable approvals for the operation of our business, our business will be adversely impacted.

In addition, the regulatory environment in which we operate has increased in complexity over time, and further change is likely in many jurisdictions. These changes may or may not be favorable to our business. As the regulatory environment grows in complexity, inadvertent noncompliance is increasingly a greater risk. Noncompliance can, depending upon the circumstances, result in fines, penalties or other enforcement action by regulatory authorities, as well as damage our reputation and standing in the community, all of which would adversely impact our business.

Energy prices can fluctuate widely and quickly. To the extent that we have not anticipated and planned for those changes, our business can be adversely affected.

Recently, the price for natural gas and competing energy sources, such as oil, have fluctuated widely. Generally, we pass through changes in prices to the customers of our operating companies, and we have a process in place to continually review the adequacy of our utility gas rates and to take appropriate action with the applicable regulatory authorities. However, there is an inherent regulatory lag in adjusting rates and, in an increasing price environment, we have to bear the increased costs on an interim basis. We also have to incur additional financing costs as a result of purchasing more expensive gas.

In addition, increases in gas prices, both in absolute terms and relative to alternative energy sources, negatively impacts demand, the ability of customers to pay their utility bills and the timing of those payments (which lead to larger accounts receivable and greater bad debt expense) and various other factors. While the impact of some of these factors can be passed through to customers, there is generally a delay in that process that can adversely affect our business.

As noted below, for some portions of our business, we hedge the risk of price changes through the purchase of futures contracts and other means. These efforts, while designed to minimize the adverse impact of price changes, cannot assure that result. As a result, we retain exposure to price changes that can, in a volatile energy market, be extremely material and can adversely affect our business.

Variations in weather beyond what we have planned for can adversely impact our business.

A substantial portion of our revenue is derived from the transportation or sale of gas for space heating purposes. We plan for the demand of gas for this purpose based upon historical weather patterns and resulting demand. Where weather varies significantly beyond the range that we have planned for, it can impact us in many ways, including through increasing or decreasing the demand for gas, the cost of gas to us, and the availability, sufficiency and cost of transportation and storage capacity.

A decrease in the availability of adequate pipeline transportation capacity due to weather conditions or otherwise could adversely impact our business. We depend upon having access to adequate transportation and storage capacity for virtually all of our operations. A decrease in interstate pipeline capacity available to us, or an increase in competition for interstate pipeline transportation and storage capacity (e.g., even as a result of weather in regions that we do not significantly serve) could reduce our normal interstate supply of gas or cause rates to fluctuate.

We have WNA mechanisms for Virginia Natural Gas, Elizabethtown Gas and Chattanooga Gas that partially offset the impact of unusually cold or warm weather on residential and commercial customer billings and on our operating margin, although at Elizabethtown Gas, we could be required to return a portion of any WNA surcharge to its customers if Elizabethtown Gas' return on equity exceeds its authorized return on equity of 10.3%. These WNA regulatory mechanisms are most effective in a reasonable temperature range relative to normal weather using historical averages. Outside of those ranges, our financial exposure is greater.

We also have decoupled rate designs, including straight-fixed-variable, at Atlanta Gas Light, Virginia Natural Gas and Chattanooga Gas that allow for the recovery of fixed customer service costs separately from assumed natural gas volumes used by our customers. For more information, see Item 1, "Business" under the caption "Rate Structures" herein.

At Nicor Gas, approximately 60% of all usage is for space heating and approximately 75% of the usage and revenues occur from October through March. Weather fluctuations have the potential to significantly impact operating income and cash flow. For example, we estimate that a 100 degree-day variation from normal weather of 5,752 Heating Degree Days impacts Nicor Gas' margin, net of income taxes, by approximately $1 million under its current rate structure. For our weather risk associated with Nicor Gas, we utilize weather derivatives to reduce, but not eliminate, the risk of lower operating margins potentially resulting from significantly warmer-than-normal weather in Illinois. For more information, see Note 2 to the consolidated financial statements under Item 8 herein.

Changes in weather conditions may also impact SouthStar's earnings. As a result, SouthStar uses a variety of weather derivative instruments to mitigate the impact on its operating margin in the event of warmer or colder-than-normal weather in the winter months. However, these instruments do not fully mitigate the effects of unusually warm or cold weather.

Similarly, changes in weather conditions may also impact wholesale services' earnings. In addition to the impacts described above, weather impacts the ability of our wholesale services segment to capture value from location and seasonal spreads. Through the acquisition of natural gas and hedging of natural gas prices, wholesale services reduces some of the weather-related risks that it faces, but it cannot eliminate all of those risks.

Our retail energy businesses in Illinois, Nicor Solutions and Nicor Advanced Energy, offer utility-bill management products that mitigate and/or eliminate the risks of variations in weather to customers. We hedge this risk to reduce any adverse effects to us from weather variations.

We are subject to environmental regulation and our costs to comply are significant. Any changes in existing environmental regulation could adversely affect our business.

We are subject to extensive environmental regulation pursuant to a variety of federal, state and municipal laws and regulations. Such environmental regulation imposes, among other things, restrictions, liabilities and obligations associated with storage, transportation, treatment and disposal of MGP residuals and waste in connection with spills, releases and emissions of various substances into the environment. Environmental legislation also requires that our facilities, sites and other properties associated with our operations be operated, maintained, abandoned and reclaimed to the satisfaction of applicable regulatory authorities. Our current costs to comply with these laws and regulations are significant. Failure to comply with these laws and regulations and failure to obtain any required permits and licenses may expose us to material fines, penalties or interruptions in our operations.

We are generally responsible for liabilities associated with the environmental condition of the natural gas assets that we have operated, acquired or developed, regardless of when the liabilities arose and whether they are or were known or unknown. In addition, in connection with certain acquisitions and sales of assets, we may obtain, or be required to provide, indemnification against certain environmental liabilities. Before natural gas was widely available, we manufactured gas from coal and other fuels. Those manufacturing operations were known as MGPs, which we ceased operating in the 1950s. A number of environmental issues may exist with respect to MGP's. For more information regarding these obligations, see Note 11 to the consolidated financial statements under Item 8 herein. Claims against us under environmental laws and regulations could result in material costs and liabilities.

Existing environmental laws and regulations could also be revised or reinterpreted, and new laws and regulations could be adopted or become applicable to us or our facilities. With the trend toward stricter standards, greater regulation, more extensive permit requirements and an increase in the number and types of assets operated by us subject to environmental regulation, our environmental expenditures could increase in the future, and such expenditures may not be fully recoverable from our customers. Additionally, the discovery of presently unknown environmental conditions could give rise to expenditures and liabilities, including fines or penalties that could have a material adverse effect on our business.

Our infrastructure improvement and customer growth may be restricted by the capital-intensive nature of our business.

We must construct additions and replacements to our natural gas distribution systems to continue the expansion of our customer base and improve system reliability, especially during peak usage. We may also need to construct expansions of our existing natural gas storage facilities or develop and construct new natural gas storage facilities. The cost of such construction may be affected by the cost of obtaining government and other approvals, project delays, adequacy of supply of vendors, vendor performance, or unexpected changes in project costs. Weather, general economic conditions and the cost of funds to finance our capital projects can materially alter the cost, the projected construction schedule and the completion timeline of a project. Our cash flows may not be fully adequate to finance the cost of such construction. As a result, we may be required to fund a portion of our cash needs through borrowings, the issuance of common stock, or both. For our distribution operations segment, this may limit our ability to expand our infrastructure to connect new customers due to limits on the amount we can economically invest, which shifts costs to potential customers and may make it uneconomical for them to connect to our distribution systems. For our natural gas storage business, this may significantly reduce our earnings and return on investment from what would be expected for this business, or it may impair our ability to complete the expansions or development projects.

We may be exposed to regulatory and financial risks related to the impact of climate change and associated legislation and regulation.

Climate change is expected to receive increasing attention from the current federal administration, non-governmental organizations and legislators. Debate continues as to the extent to which our climate is changing, the potential causes of any change and its potential impacts. Some attribute climate change to increased levels of greenhouse gases, including carbon dioxide and methane, which has led to significant legislative and regulatory efforts to limit greenhouse gas emissions.

The EPA has begun using provisions of the Clean Air Act to regulate greenhouse gas emissions, including carbon dioxide and methane, differently than under historical precedent. Thus far, EPA has imposed greenhouse gas regulations on automobiles and implemented new permitting requirements for the construction or modification of major stationary sources of greenhouse gas emissions, including natural gas-fired power plants.

In addition, President Obama issued a Presidential Memorandum on June 25, 2013, directing the EPA to adopt performance standards to regulate greenhouse gas emissions from power plants. Specifically, the Presidential Memorandum directs the EPA to propose standards for future power plants by September 20, 2013 and propose regulations and emission guidelines for modified, reconstructed, and existing power plants by June 1, 2014. The Presidential Memorandum directs the EPA to finalize those regulations by June 1, 2015. States would be required to develop regulations implementing the EPA's guidelines by June 30, 2016. It also includes a wide variety of other initiatives designed to reduce greenhouse gas emissions, prepare for the impacts of climate change, and lead international efforts to address climate change.

The outcome of federal and state actions to address climate change could potentially result in new regulations, additional charges to fund energy efficiency activities or other regulatory actions, which in turn could:

- result in increased costs associated with our operations,
- increase other costs to our business,
- affect the demand for natural gas (positively or negatively), and
- impact the prices we charge our customers and affect the competitive position of natural gas.

Because natural gas is a fossil fuel with low carbon content relative to other traditional fuels, future carbon constraints may create additional demand for natural gas, both for production of electricity and direct use in homes and businesses. The impact is already being seen in the power production sector due to both environmental regulations and low natural gas costs. However, methane, the primary constituent of natural gas, is a potent greenhouse gas. Future regulation of methane could likewise result in increased costs to us and affect the demand for natural gas, as well as the prices we charge our customers and the competitive position of natural gas.

Any adoption of regulation by federal or state governments mandating a substantial reduction in greenhouse gas emissions could have far-reaching and significant impacts on the energy industry. We cannot predict the potential impact of such laws or regulations on our business.

Transporting and storing natural gas involves numerous risks that may result in accidents and other operating risks and costs.

Our gas distribution and storage activities involve a variety of inherent hazards and operating risks, such as leaks, accidents, including explosions, and mechanical problems, which could result in serious injury to employees and non-employees, loss of human life, significant damage to property, environmental pollution and impairment of our operations, which in turn could lead to substantial losses to us. In accordance with customary industry practice, we maintain insurance against some, but not all, of these risks and losses. The location of pipelines and storage facilities near populated areas, including residential areas, commercial business centers and industrial sites, could increase the level of damages resulting from these risks. The occurrence of any of these events not fully covered by insurance could adversely affect our financial position and results of operations.

We face increasing competition, and if we are unable to compete effectively, our revenues, operating results and financial condition will be adversely affected, which may limit our ability to grow our business.

The natural gas business is highly competitive, increasingly complex, and we are facing increasing competition from other companies that supply energy, including electric companies, oil and propane providers and, in some cases, energy marketing and trading companies. In particular, the success of our retail businesses is affected by competition from other energy marketers providing retail natural gas services in our service territories, most notably in Illinois and Georgia. Natural gas competes with other forms of energy. The primary competitive factor is price. Changes in the price or availability of natural gas relative to other forms of energy and the ability of end users to convert to alternative fuels affect the demand for natural gas. In the case of commercial, industrial and agricultural customers, adverse economic conditions, including higher natural gas costs, could also cause these customers to bypass or disconnect from our systems in favor of special competitive contracts with lower per-unit costs.

Our retail operations segment markets fixed-price and fixed-bill contracts that protect customers against higher natural gas prices, or protect customers against both higher natural gas prices and colder weather. The sale of these fixed-price contracts may be adversely affected if natural gas prices are, or are perceived to be, low and stable. Our retail operations segment also faces risks in the form of price, convenience and service competition from other warranty and HVAC companies.

Our wholesale services segment competes for sales with national and regional full-service energy providers, energy merchants and producers, and pipelines based on our ability to aggregate competitively-priced commodities with transportation and storage capacity. Some of our competitors are larger and better capitalized than we are and have more national and global exposure than we do. The consolidation of this industry and the pricing to gain market share may affect our operating margin. We expect this trend to continue in the near term, and the increasing competition for asset management deals could result in downward pressure on the volume of transactions and the related operating margin available in this portion of Sequent’s business.

Our midstream operations segment competes with natural gas facilities in the Gulf Coast region of the U.S., as the majority of the existing and proposed high deliverability salt-dome natural gas storage facilities in North America are located in the Gulf Coast region. Competition for our Central Valley storage facility in northern California primarily consists of storage facilities in northern California and western North America. Storage values have declined over the past several years due to low gas prices and low volatility, and we expect this to continue in 2015.

A significant portion of our accounts receivable is subject to collection risks, due in part to a concentration of credit risk at Nicor Gas, Atlanta Gas Light, SouthStar and Sequent.

Nicor Gas and Sequent often extend credit to counterparties. Despite performing credit analyses prior to extending credit and seeking to implement netting agreements, if the counterparties fail to perform and any collateral Nicor Gas or Sequent has secured is inadequate, we could experience material financial losses.

Further, Sequent has a concentration of credit risk with a limited number of parties. Most of this concentration is with counterparties that are either load-serving utilities or end-use customers that have supplied some level of credit support. Default by any of these counterparties in their obligations to pay amounts due to Sequent could result in credit losses that could be significant.

We have accounts receivable collection risks in Georgia due to a concentration of credit risks related to the provision of natural gas services to approximately 12 Marketers. As a result, Atlanta Gas Light depends on a limited number of customers for a significant portion of its revenues.

Additionally, SouthStar markets directly to end-use customers and has periodically experienced credit losses as a result of severe cold weather or high prices for natural gas that increase customers’ bills and, consequently, impair customers’ ability to pay. For more information, see Item 7A, “Quantitative and Qualitative Disclosures About Market Risk” under the caption “Credit Risk” herein.

The asset management arrangements between Sequent and our LDC’s, and between Sequent and its non-affiliated customers, may not be renewed or may be renewed at lower levels, which could have a significant impact on Sequent’s business.

Sequent currently manages the storage and transportation assets of our affiliates Atlanta Gas Light, Virginia Natural Gas, Elizabethtown Gas, Florida City Gas, Chattanooga Gas and Elkton Gas. The profits it earns from the management of those assets with these affiliates are shared with their respective customers and for Atlanta Gas Light with the Georgia Commission’s Universal Service Fund, with the exception of Chattanooga Gas and Elkton Gas where Sequent is assessed annual fixed-fees. Entry into and renewal of these agreements are subject to regulatory approval, and we cannot predict whether such agreements will be renewed or the terms of such renewal.

Sequent also has asset management agreements with certain non-affiliated customers. Sequent's results could be significantly impacted if these agreements are not renewed or are amended or renewed with less favorable terms. Sustained low natural gas prices could reduce the demand for these types of asset management arrangements.

We are exposed to market risk and may incur losses in wholesale services, midstream operations and retail operations.

The commodity, storage and transportation portfolios at Sequent and the commodity and storage portfolios at midstream operations and SouthStar consist of contracts to buy and sell natural gas commodities, including contracts that are settled by the delivery of the commodity or cash. If the values of these contracts change in a direction or manner that we do not anticipate, we could experience financial losses from our trading activities. For more information, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "VaR" herein.

Our accounting results may not be indicative of the risks we are taking or the economic results we expect for wholesale services.

Although Sequent enters into various contracts to hedge the value of our energy assets and operations, the timing of the recognition of profits or losses on the hedges does not always correspond to the profits or losses on the item being hedged. The difference in accounting can result in volatility in Sequent's reported results, even though the expected operating margin is essentially unchanged from the date the transactions were initiated.

The cost of providing retirement plan benefits to eligible current and former employees is subject to changes in the performance of investments, demographics, and various other factors and assumptions. These changes may have a material adverse effect on us.

The cost of providing retirement plan benefits to eligible current and former employees is subject to changes in the market value of our pension fund assets, changing demographics and assumptions, including longer life expectancy of beneficiaries and changes in health care cost trends. Any sustained declines in equity markets and reductions in bond yields will have an adverse effect on the value of our pension plan assets. In these circumstances, we may be required to recognize an increased pension expense and a charge to our other comprehensive income to the extent that the actual return on assets in the pension fund is less than the expected return. We may be required to make additional contributions in future periods in order to preserve the current level of benefits under the plans and in accordance with federal funding requirements.

For more information, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Contractual Obligations and Commitments" and the subheading "Pension and Welfare Obligations" and Note 6 to the consolidated financial statements under Item 8 herein.

Natural disasters, terrorist activities and similarly unpredictable events could adversely affect our businesses.

Natural disasters may damage our assets, interrupt our business operations and adversely impact the demand for natural gas. Future acts of terrorism could be directed against companies operating in the U.S., and companies in the energy industry may face a heightened risk of exposure. The insurance industry has been disrupted by these types of events. As a result, the availability of insurance covering risks against which we and similar businesses typically insure may be limited or insufficient. In addition, the insurance we are able to obtain may have higher deductibles, higher premiums and more restrictive policy terms. In addition, an employee or third party may purposely, or inadvertently, fail to adhere to our policies and procedures or our policies and procedures may not be effective; this could result in the violation of a law or regulation, a material error or misstatement, damage to our reputation or the incurrence of substantial expense.

Work stoppages could adversely impact our businesses.

Some of our businesses are dependent upon employees who are represented by unions and are covered by collective bargaining agreements. These agreements may increase our costs, affect our ability to continue offering market-based salaries and benefits, and limit our ability to implement efficiency-related improvements. Disputes with the unions could result in work stoppages that could impact the delivery of natural gas and other services, which could strain relationships with customers, vendors and regulators. We believe that we have a good working relationship with our unionized employees and we remain committed to work in good faith with the unions to renew or renegotiate collective bargaining agreements that balance the needs of the company and our employees. For more information, see Item 1, "Business" under the caption "Employees" herein.

Changes in laws and regulations regarding the sale and marketing of products and services offered by our retail operations segment could adversely affect our results of operations, cash flows and financial condition.

Our retail operations segment provides various energy-related products and services. These include sales of natural gas and utility-bill management services to residential and small commercial customers, and the sale, repair, maintenance and warranty of heating, air conditioning and indoor air quality equipment. The sale and marketing of these products and services are subject to various state and federal laws and regulations. Changes in these laws and regulations could impose additional costs on, restrict or prohibit certain activities, which could adversely affect our results of operations, cash flows and financial condition.

Conservation could adversely affect our results of operations, cash flows and financial condition.

As a result of legislative and regulatory initiatives on energy conservation, we have put into place programs to promote additional energy efficiency by our customers. Funding for such programs is being recovered through cost recovery riders. However, the adverse impact of lower deliveries and resulting reduced margin could adversely affect our results of operations, cash flows and financial condition.

A security breach could disrupt our operating systems, shutdown our facilities or expose confidential personal information.

Security breaches of our information technology infrastructure, including cyber-attacks, could lead to system disruptions or generate facility shutdowns. If a cyber-attack or security breach were to occur, our business, results of operations and financial condition could be materially adversely affected. In addition, a cyber-attack could affect our ability to service our indebtedness, our ability to raise capital and our future growth opportunities.

Additionally, the protection of customer, employee and company data is critical to us. A breakdown or a breach in our systems that results in the unauthorized release of individually identifiable customer or other sensitive data could occur and could expose us to liability to our customers, vendors, financial institutions and others. In addition, a breakdown or breach could also materially increase the costs we incur to protect against such risks. There is no guarantee that the procedures that we have implemented to protect against unauthorized access to secured data are adequate to safeguard against all data security breaches, although, to our knowledge, we did not have any material security breaches in 2014.

We may pursue acquisitions, divestitures and other strategic transactions, the success of which may impact our results of operations, cash flows and financial condition.

We have pursued acquisitions to complement or expand our business, divestures and other strategic transactions in the past and expect to in the future. If we identify an acquisition candidate, we may not be able to successfully negotiate or finance the acquisition or integrate the acquired businesses with our existing business and services. Acquisitions may result in dilutive issuances of equity securities and the incurrence of debt and contingent liabilities, amortization expenses and substantial goodwill. Acquisitions may not be accretive to our earnings and may cause dilution to our earnings per share, which may negatively affect the market price of our common shares. Any failure to successfully integrate businesses that we acquire in an efficient and effective manner could have a material adverse effect on us. Similarly, we may divest portions of our business, which may also have material and adverse effects.

We assess goodwill for impairment at least annually and more frequently if events or circumstances occur that would more likely than not reduce the fair value of a reporting unit below its carrying value. We assess our long-lived assets, including finite-lived intangible assets, for impairment whenever events or circumstances indicate that an asset's carrying amount may not be recoverable. To the extent the value of goodwill or long-lived assets become impaired, we may be required to incur impairment charges that could have a material impact on our results of operations. No impairment of goodwill was recorded as a result of our 2014 annual impairment testing, as the fair value of each reporting unit was in excess of the carrying value. Additionally, no impairment of long-lived assets was recorded during 2014.

Since interest rates are a key component, among other assumptions, in the models used to estimate the fair values of our reporting units, as interest rates rise, the calculated fair values decrease and future impairments may occur. Further, the rates for contracting capacity at Jefferson Island, Golden Triangle and Central Valley are also key components in the models used to estimate their fair value. Consequently, a further decline in market fundamentals and the rates for contracting availability could result in future impairments. Due to the subjectivity of the assumptions and estimates underlying the impairment analysis, we cannot provide assurance that future analyses will not result in impairment. These assumptions and estimates include projected cash flows, current and future rates for contracted capacity, growth rates, WACC and market multiples. For additional information, see Item 7,"Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Critical Accounting Policies and Estimates" herein.

Risks Related to Our Corporate and Financial Structure

We depend on access to the capital and financial markets to fund our business. Any inability to access the capital or financial markets may limit our ability to execute our business plan or pursue improvements that we may rely on for future growth.

We rely on access to both short-term money markets (in the form of commercial paper and lines of credit) and long-term capital markets as sources of liquidity for capital and operating requirements not satisfied by the cash flow from our operations. If we are not able to access financial markets at competitive rates, our ability to implement our business plan and strategy will be negatively affected, and we may be forced to postpone, modify or cancel capital projects. Certain market disruptions may increase our cost of borrowing or affect our ability to access one or more financial markets. Such market disruptions could result from:

- adverse economic conditions;

- adverse general capital market conditions;
- poor performance and health of the utility industry in general;
- bankruptcy or financial distress of unrelated energy companies or marketers;
- significant decrease in the demand for natural gas;
- adverse regulatory actions that affect our local gas distribution companies and our natural gas storage business;
- terrorist attacks on our facilities or our suppliers; or
- extreme weather conditions.

The amount of our working capital requirements in the near term will primarily depend on the market price of natural gas and weather. Higher natural gas prices may adversely impact our accounts receivable collections and may require us to increase borrowings under our credit facilities to fund our operations.

While we believe we can meet our capital requirements from our operations and our available sources of financing, we can provide no assurance that we will continue to be able to do so in the future, especially if the market price of natural gas increases significantly in the near term. The future effects on our business, liquidity and financial results due to market disruptions could be material and adverse to us, both in the ways described above or in ways that we do not currently anticipate.

A downgrade in our credit rating would require us to pay higher interest rates and could negatively affect our ability to access capital, or may require us to provide additional collateral to certain counterparties.

Our senior debt is currently assigned investment grade credit ratings. If the rating agencies downgrade our ratings, particularly below investment grade, it may significantly limit our access to the commercial paper market and our borrowing costs would increase. In addition, we would likely be required to pay a higher interest rate in future financings and our potential pool of investors and funding sources would likely decrease.

Additionally, if our credit rating by either S&P or Moody's falls to non-investment grade status, we would be required to provide additional collateral to continue conducting business with certain customers. For additional credit rating and interest rate information, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" under the caption "Liquidity and Capital Resources" and Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Interest Rate Risk" herein.

We are vulnerable to interest rate risk with respect to our debt, which could lead to changes in interest expense and adversely affect our earnings.

We are subject to interest rate risk in connection with the issuance of fixed-rate and variable-rate debt. In order to maintain our desired mix of fixed-rate and variable-rate debt, we may use interest rate swap agreements and exchange fixed-rate and variable-rate interest payment obligations over the life of the arrangements, without exchange of the underlying principal amounts. For additional information, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Interest Rate Risk" herein. However, we may not structure these swap agreements in a manner that manages our risks effectively. If we are unable to do so, our earnings may be reduced. In addition, higher interest rates, all other things equal, reduce the earnings that we derive from transactions where we capture the difference between authorized returns and short-term borrowings.

We are a holding company and are dependent on cash flow from our subsidiaries, which may not be available in the amounts and at the times we need.

A significant portion of our outstanding debt was issued by our wholly owned subsidiary, AGL Capital, which we fully and unconditionally guarantee. Since we are a holding company and have no operations separate from our investment in our subsidiaries, we are dependent on the net income and cash flows of our subsidiaries and their ability to pay upstream dividends or other distributions to meet our financial obligations and to pay dividends on our common stock. The ability of our subsidiaries to pay upstream dividends and make other distributions is subject to applicable state law and regulatory restrictions. In addition, Nicor Gas is not permitted to make money pool loans to affiliates. Refer to Item 5, "Market for the Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities" herein for additional information.

The use of derivative contracts in the normal course of our business could result in financial losses that negatively impact our results of operations.

We use derivative instruments, including futures, options, forwards and swaps, to manage our commodity and financial market risks. We could recognize financial losses on these contracts as a result of volatility in the market values of the underlying commodities or if a counterparty fails to perform under a contract. In addition, derivative contracts entered into for hedging purposes may not offset the underlying exposure being hedged as expected, resulting in financial losses. In the absence of actively quoted market prices and pricing information from external sources, the valuation of these derivative instruments can involve management's judgment or use of estimates. As a result, changes in the underlying assumptions or use of alternative valuation methods could adversely affect the reported fair values of these contracts.

As a result of cross-default provisions in our borrowing arrangements, we may be unable to satisfy all of our outstanding obligations in the event of a default on our part.

Our credit facilities contain cross-default provisions. Should an event of default occur under some of our debt agreements, we face the prospect of being in default under our other debt agreements, obligated in such instance to satisfy a large portion of our outstanding indebtedness and unable to satisfy all of our outstanding obligations simultaneously.

ITEM 1B. UNRESOLVED STAFF COMMENTS

We do not have any unresolved comments from the SEC staff regarding our periodic or current reports under the Securities Exchange Act of 1934, as amended.

ITEM 2. PROPERTIES

We consider our properties to be well maintained, in good operating condition and suitable for their intended purpose. The following provides the location and general character of the materially important properties that are used by our segments. Substantially all of Nicor Gas' properties are subject to the lien of the indenture securing its first mortgage bonds. See Note 8 to our consolidated financial statements under Item 8 herein.

Distribution and transmission mains

Our distribution systems transport natural gas from our pipeline suppliers to customers in our service areas. These systems consist primarily of distribution and transmission mains, compressor stations, peak shaving/storage plants, service lines, meters and regulators. At December 31, 2014, our distribution operations segment owned approximately 80,700 miles of underground distribution and transmission mains, which are located on easements or rights-of-way that generally provide for perpetual use. We maintain our mains through a program of continuous inspection and repair, and believe that our distribution systems are in good condition.

Storage assets

Distribution Operations We own and operate eight underground natural gas storage facilities in Illinois with a total inventory capacity of about 150 Bcf, approximately 135 Bcf of which can be cycled on an annual basis. The system is designed to meet about 50% of the estimated peak-day deliveries and approximately 40% of its normal winter deliveries in Illinois. This level of storage capability provides us with supply flexibility, improves the reliability of deliveries and can help mitigate the risk associated with seasonal price movements.

We have five LNG plants located in Georgia, New Jersey and Tennessee with LNG storage capacity of approximately 7.6 Bcf. In addition, we own one propane storage facility in Virginia with a storage capacity of approximately 0.3 Bcf. The LNG plants and propane storage facility are used by our distribution operations segment to supplement natural gas supply during peak usage periods.

Midstream Operations We own three high-deliverability natural gas storage and hub facilities that are operated by our midstream operations segment. Jefferson Island operates a storage facility in Louisiana currently consisting of two salt dome gas storage caverns. Golden Triangle operates a storage facility in Texas consisting of two salt dome caverns. Central Valley operates a depleted field storage facility in California. In addition, we have an LNG facility in Alabama that produces LNG for Pivotal LNG, a wholly owned subsidiary, to support its business of selling LNG as a substitute fuel in various markets. For additional information on our storage facilities, see Item 1, "Business" under the caption "Midstream Operations" herein.

Offices

All of our reportable segments own or lease office, warehouse and other facilities throughout our operating areas. We expect additional or substitute space to be available as needed to accommodate the expansion of our operations.

ITEM 3. LEGAL PROCEEDINGS

The nature of our business ordinarily results in periodic regulatory proceedings before various state and federal authorities. In addition, we are party as both plaintiff and defendant to a number of lawsuits related to our business on an ongoing basis. Management believes that the outcome of all regulatory proceedings and litigation in which we are currently involved will not have a material adverse effect on our consolidated financial condition or results of operations.

For more information regarding our regulatory proceedings and litigation, see Note 11 to our consolidated financial statements under the caption "Litigation" under Item 8 herein.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Holders of Common Stock, Stock Price and Dividend Information

Our common stock is listed on the New York Stock Exchange under the ticker symbol GAS. At February 4, 2015, there were 21,551 record holders of our common stock. Quarterly information concerning our high and low stock prices and cash dividends paid in 2014 and 2013 is as follows:

	Sales price of common stock		Cash dividend per common
Quarter ended:	**High**	**Low**	**share**
March 31, 2014	$49.84	$45.17	$0.49
June 30, 2014	55.10	48.29	0.49
September 30, 2014	55.30	48.72	0.49
December 31, 2014	56.67	50.10	0.49
			$1.96

	Sales price of common stock		Cash dividend per common
Quarter ended:	**High**	**Low**	**share**
March 31, 2013	$42.37	$38.86	$0.47
June 30, 2013	44.85	41.21	0.47
September 30, 2013	47.00	41.94	0.47
December 31, 2013	49.31	44.56	0.47
			$1.88

We have paid 268 consecutive quarterly dividends to our common shareholders beginning in 1948, historically four times each year: March 1, June 1, September 1 and December 1. Our common shareholders may receive dividends when declared at the discretion of our Board of Directors. See Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Capital Resources - Cash Flow from Financing Activities - Dividends on Common Stock" herein. Dividends may be paid in cash, stock or other form of payment, and payment of future dividends will depend on our future earnings, cash flow, financial requirements and other factors, some of which are noted below. In certain cases, our ability to pay dividends to our common shareholders is limited by the following:

- our ability to satisfy our obligations under certain financing agreements, including debt-to-capitalization covenants, and
- our ability to satisfy our obligations to any future preferred shareholders.

Under Georgia law, the payment of cash dividends to the holders of our common stock is limited to our legally available assets and subject to the prior payment of dividends on any outstanding shares of preferred stock. Our assets are not legally available for paying cash dividends if, after payment of the dividend:

- we could not pay our debts as they become due in the usual course of business, or
- our total assets would be less than our total liabilities plus, subject to some exceptions, any amounts necessary to satisfy (upon dissolution) the preferential rights of shareholders whose rights are superior to those of the shareholders receiving the dividends.

Issuer Purchases of Equity Securities

There were no purchases of our common stock by us or any affiliated purchasers during the three months ended December 31, 2014.

ITEM 6. SELECTED FINANCIAL DATA

Selected financial data about AGL Resources for the last five years is set forth in the table below which should be read in conjunction with the consolidated financial statements and related notes set forth in Item 8, "Financial Statements and Supplementary Data" herein. Additionally, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" herein for a discussion of the primary factors impacting the changes in our results of operations for the periods reflected in our Consolidated Statements of Income. The operations of our former Tropical Shipping business, which was sold during 2014, are reflected as discontinued operations and all prior periods have been recast to reflect the discontinued operations. Material changes from 2013 to 2014 are due primarily to earnings from our wholesale services segment, resulting mainly from colder-than-normal weather and associated natural gas price volatility in 2014. Material changes from 2011 to 2012 are primarily due to the Nicor merger, which closed on December 9, 2011.

Dollars and shares in millions, except per share amounts	**2014**	**2013**	**2012**	**2011**	**2010**

(1) Transaction expenses associated with the Nicor merger were excluded from operation and maintenance expenses and presented separately.
(2) Dividends declared per common share during the fiscal period divided by market value per common share as of the last day of the fiscal period.
(3) As of the last day of the fiscal period.
(4) Amounts for all periods include assets held for sale, which reflect the assets of our former Tropical Shipping business.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Executive Summary

We are an energy services holding company whose principal business is the distribution of natural gas in seven states – Illinois, Georgia, Virginia, New Jersey, Florida, Tennessee and Maryland – through our seven natural gas distribution utilities. We are also involved in several other businesses that are complementary to the distribution of natural gas. We have four reportable segments that consist of the following – distribution operations, retail operations, wholesale services and midstream operations – and one non-reportable segment – other. These segments are consistent with how management views and operates our business. Amounts shown in this Item 7, unless otherwise indicated, exclude assets held for sale and discontinued operations. See Note 14 to our consolidated financial statements under Item 8 herein for additional information. The following table provides certain information on our segments.

	EBIT			Assets			Capital expenditures		
	2014 (1)	2013	2012	2014	2013	2012	2014	2013	2012
Distribution operations	52%	84%	84%	81%	82%	82%	93%	93%	84%
Retail operations	12	20	18	5	5	4	1	1	1
Wholesale services	38	-	-	9	8	9	-	-	-
Midstream operations	(1)	(2)	2	5	5	5	2	2	8
Other/intercompany eliminations	(1)	(2)	(4)	-	-	-	4	4	7
Total	100%	100%	100%	100%	100%	100%	100%	100%	100%

(1) The EBIT in 2014 was impacted by significantly higher-than-normal commercial activity realized in wholesale services, which is not indicative of future performance.

In the third quarter of 2014, we adjusted the accounting treatment for our previously reported non-cash revenue recognition associated with our regulatory infrastructure programs in our distribution operations segment. The adjustments did not affect previously reported operating cash flows, nor are they expected to affect capital expenditure plans or dividend payments. We do not expect these adjustments to impact the levels of return from our infrastructure replacement programs, as all amounts will be recovered in accordance with allowed recovery mechanisms. The adjustments relate only to the timing of recognition and do not impact rates charged to customers. Additionally, we adjusted the amortization of intangible assets for customer relationships and trade names in our retail operations segment to reflect the amortization expense on a basis consistent with the pattern of undiscounted cash flows used to determine their fair values. In November 2014, we amended our 2013 Form 10-K and our Forms 10-Q for the quarters ended March 31, 2014 and June 30, 2014 to revise our financial statements to reflect these adjustments. Our prior-period financial statements included herein reflect these adjustments.

In September 2014, we closed on the sale of Tropical Shipping and received after-tax cash proceeds of approximately $225 million, as well as repatriated $86 million in cash. The transaction resulted in expenses, including taxes, of approximately $80 million or $(0.67) per share in 2014. Tropical Shipping operated as part of our cargo shipping segment and the financial results are classified as discontinued operations. Accordingly, all references to continuing operations exclude the operations of Tropical Shipping. The sale of Tropical Shipping allows us to focus on growing our core business of operating regulated utilities and complementary non-regulated energy businesses and provided us with flexibility around our near-term financing plans. For additional information on our discontinued operations, see Note 14 to our consolidated financial statements under Item 8 herein.

In 2014, our net income from continuing operations was $580 million, an increase of $272 million compared to income from continuing operations in 2013. This increase was primarily the result of significantly higher commercial activity and net hedge gains at wholesale services, mainly due to natural gas market volatility. This volatility was primarily generated by significantly colder-than normal weather in the first quarter of 2014, which also increased the operating margins at distribution operations and retail operations. Excluding the favorable weather impacts, we also achieved growth in our operating margins during 2014 as a result of targeted acquisition growth in retail operations. Our operating expenses in 2014 were higher compared to 2013 mainly as a result of higher incentive compensation expenses primarily related to higher earnings in 2014.

Our priorities for 2015 are consistent with the direction we have taken the company over the last several years. We will remain focused on efficient operations across all of our businesses, including offsetting inflationary pressures by aggressive cost controls, spreading costs across a broader customer base and sizing our operations to properly reflect market conditions. Several of our specific business objectives are detailed as follows:

- **Distribution Operations**: Invest necessary capital to enhance and maintain safety and reliability; remain a low-cost leader within the industry; opportunistically expand the system and capitalize on potential customer conversions. We intend to continue investing in our regulatory infrastructure programs in Georgia, Virginia, New Jersey and Tennessee to minimize regulatory lag and the recovery cycle. In July 2014, the Illinois Commission approved our new regulatory infrastructure program, Investing in Illinois (previously known as Qualified Infrastructure Plant), for which we will implement rates under the program effective in March 2015.

We continue to effectively manage costs and leverage our shared services model across our businesses to largely overcome inflationary effects.

- **Retail Operations**: Maintain operating margins in Georgia and Illinois while continuing to expand into other profitable retail markets; expand our warranty businesses through partnership opportunities with our affiliates. We expect the Georgia retail market to remain highly competitive; however, our operating margins are forecasted to remain stable with modest growth and expansion into new markets.
- **Wholesale Services**: Maximize storage and transportation positions; effectively perform on existing asset management agreements, and expand customer base and maintain cost structure in line with market fundamentals. We anticipate volatility to remain low to moderate in certain areas of our portfolio; however, we expect near-term volatility in the supply-constrained Northeast corridor until expected new pipeline projects are completed and new capacity is placed into service. We continue to position our business to secure sufficient supplies of natural gas to meet the needs of our utility and third-party customers and to hedge natural gas prices to manage costs effectively, reduce price volatility and maintain a competitive advantage.
- **Midstream Operations**: Optimize storage portfolio, including contracts that have expired or will expire, pursue LNG transportation and natural gas pipeline opportunities and evaluate alternate uses for our storage facilities. In 2014, we announced our participation in three pipeline projects that we expect to provide a diverse source of natural gas to our customers in Georgia, New Jersey and Virginia. Subject to regulatory approvals, construction is expected to begin in the 2016-2017 timeframe with completion targeted in 2017-2018. For additional information on our pipeline projects, see Note 2 and Note 10 to our consolidated financial statements under Item 8 herein and Item 1, "Business" under the caption "Midstream Operations."

Additionally, we will maintain our strong balance sheet and liquidity profile, solid investment grade ratings and our commitment to sustainable annual dividend growth. For additional information on our reportable segments, see Note 13 to our consolidated financial statements under Item 8 herein and Item 1, "Business."

Results of Operations

We generate the majority of our operating revenues through the sale, distribution and storage of natural gas. We include in our consolidated revenues an estimate of revenues from natural gas distributed, but not yet billed to residential, commercial and industrial customers from the date of the last bill to the end of the reporting period. No individual customer or industry accounts for a significant portion of our revenues. The following table provides more information regarding the components of our operating revenues.

In millions	**2014**	**2013**	**2012**
Residential	$2,877	$2,422	$2,011
Commercial	861	696	656
Transportation	458	487	474
Industrial	242	180	262
Other (1)	947	424	159
Total operating revenues	$5,385	$4,209	$3,562

(1) Includes significantly higher-than-normal revenues at wholesale services in 2014, which are not indicative of future performance.

We evaluate segment performance using the measures of EBIT and operating margin. EBIT includes operating income and other income and expenses. Items that we do not include in EBIT are financing costs, including interest expense and income taxes, each of which we evaluate on a consolidated basis. Operating margin is a non-GAAP measure that is calculated as operating revenues minus cost of goods sold and revenue tax expense in distribution operations. Operating margin excludes operation and maintenance expense, depreciation and amortization, taxes other than income taxes, and the gain or loss on the sale of our assets. These items are included in our calculation of operating income as reflected in our Consolidated Statements of Income.

We believe operating margin is a better indicator than operating revenues for the contribution resulting from customer growth in our distribution operations segment since the cost of goods sold and revenue tax expenses can vary significantly and are generally billed directly to our customers. We also consider operating margin to be a better indicator in our retail operations, wholesale services and midstream operations segments since it is a direct measure of operating margin before overhead costs. You should not consider operating margin an alternative to, or a more meaningful indicator of, our operating performance than operating income, or net income attributable to AGL Resources Inc. as determined in accordance with GAAP. In addition, operating margin may not be comparable to similarly titled measures of other companies.

We also believe presenting the non-GAAP measurements of basic and diluted earnings per share - as adjusted, which excludes Nicor merger-related expenses and the additional accrual for the Nicor Gas PBR issue, provides investors with an additional measure of our performance. Adjusted basic and diluted earnings per share should not be considered an alternative to, or a more meaningful indicator of, our operating performance than our GAAP basic and diluted earnings per share. The following table reconciles operating revenue and operating margin to operating income and EBIT to earnings before income taxes and net income and our GAAP basic and diluted earnings per common share to our non-GAAP basic and diluted earnings per share – as adjusted, together with other consolidated financial information for the last three years.

In millions, except per share amounts	**2014**	**2013**	**2012**
Operating revenues	$5,385	$4,209	$3,562
Cost of goods sold	(2,765)	(2,110)	(1,583)
Revenue tax expense (1)	(130)	(110)	(85)
Operating margin	2,490	1,989	1,894

Revenue tax expense (1)	130	110	85
Gain on disposition of assets	2	11	-
Nicor merger expenses	-	-	(20)
Operating income	1,095	639	590
Other income	14	16	24
EBIT	1,109	655	614
Interest expense, net	(179)	(170)	(183)
Income before income taxes	930	485	431
Income tax expense	(350)	(177)	(157)
Income from continuing operations	580	308	274
(Loss) income from discontinued operations, net of tax	(80)	5	1
Net income	500	313	275
Less net income attributable to the noncontrolling interest	18	18	15
Net income attributable to AGL Resources Inc.	$482	$295	$260
Amounts attributable to AGL Resources Inc.			
Income from continuing operations attributable to AGL Resources Inc.	$562	$290	$259
(Loss) income from discontinued operations, net of tax	(80)	5	1
Net income attributable to AGL Resources Inc.	$482	$295	$260
Per common share data			
Diluted earnings per common share from continuing operations	$4.71	$2.45	$2.20
Diluted (loss) earnings per common share from discontinued operations (2)	(0.67)	0.04	0.01
Additional accrual for Nicor Gas PBR issue	-	-	0.04
Transaction costs of Nicor merger	-	-	0.11
Diluted earnings per share - as adjusted	$4.04	$2.49	$2.36

(1) Adjusted for Nicor Gas' revenue tax expenses, as they are passed through directly to customers.
(2) In September 2014, we closed on the sale of Tropical Shipping. See Note 14 to our consolidated financial statements under Item 8 herein for additional information.

In 2014, our income from continuing operations attributable to AGL Resources Inc. increased by $272 million, or 94% compared to 2013. This increase was primarily the result of the following:

- Significantly higher commercial activity primarily in the first quarter of 2014, and mark-to-market hedge gains, net of LOCOM adjustments at wholesale services in 2014 from price volatility generated by colder-than-normal weather, which increased operating margin by $462 million compared to 2013.
- Increased operating margin at distribution operations and retail operations of $50 million mainly due to significantly colder-than-normal weather in 2014 compared to slightly colder-than-normal weather in 2013, as well as customer usage and customer growth. We also achieved growth as a result of our 2013 acquisitions and expansion into additional markets at retail operations.
- These increases were partially offset by a decrease in margin of $10 million at midstream operations primarily due to a retained fuel true-up at one of our storage facilities as a result of naturally occurring shrinkage of the caverns, as well as lower contracted firm rates at Jefferson Island and Central Valley.
- Favorability year-over-year was negatively impacted by higher incentive compensation expenses primarily related to higher earnings in 2014 and increased outside services expenses of $49 million, and the $8 million higher pre-tax gain in 2013 related to the sale of Compass Energy.
- Our income tax expense from continuing operations increased by $173 million for 2014 compared to 2013, primarily due to higher consolidated earnings. The increase was primarily a result of increased earnings at wholesale services.

In 2013, our income from continuing operations attributable to AGL Resources Inc. increased by $31 million, or 12% compared to 2012.

- The overall increase was primarily the result of increased operating margin at distribution operations and retail operations due to weather that was both colder-than-normal and colder than the prior year, increased regulatory infrastructure program revenues at Atlanta Gas Light, the acquisition of service contracts and residential and commercial energy customer relationships in our retail operations segment, as well as lower depreciation expense at Nicor Gas.

- The increase was unfavorably impacted by mark-to-market accounting hedge losses in our wholesale services segment during the second half of 2013, offset by higher commercial activity and the $11 million pre-tax gain on the sale of Compass Energy in 2013.
- Our midstream operations segment was unfavorable compared to 2012 due to the $8 million loss associated with the termination of the Sawgrass Storage project in 2013, as well as lower contracted firm rates at Jefferson Island and higher operating expenses at Golden Triangle, Central Valley and Pivotal LNG resulting from full year operations in 2013 as compared to partial year operations in 2012.
- Favorability year-over-year was also partially offset by higher incentive compensation expenses in most of our businesses, as our incentive compensation expense was above targeted levels in 2013 based on improved financial and operational performance compared to significantly below targeted annual levels in 2012 due to below target performance. In addition, our bad debt expense increased at distribution operations and retail operations primarily as a result of higher revenues from colder weather combined with natural gas prices that were higher than the prior year.
- In 2012, we recorded $20 million ($13 million net of tax) of Nicor merger-related expenses.
- In 2013, our interest expense decreased by $13 million compared to 2012. This decrease was the result of overall lower interest rates mostly offset by higher average debt outstanding primarily as a result of issuing $500 million of senior notes in place of variable-rate debt.
- In 2013, our income tax expense increased by $20 million or 13% compared to 2012 primarily due to higher consolidated earnings, as previously discussed.

The variances for each reportable segment are contained within the year-over-year discussion on the following pages.

Operating metrics

Weather We measure the effects of weather on our business primarily through Heating Degree Days, and we also consider operating costs that may vary with the effects of weather. Generally, increased Heating Degree Days result in higher demand for gas on our distribution systems. With the exception of Nicor Gas and Florida City Gas, we have various regulatory mechanisms, such as weather normalization mechanisms, which limit our exposure to weather changes within typical ranges in each of our utilities' respective service areas. However, our customers in Illinois and our retail operations customers in Georgia can be impacted by warmer or colder-than-normal weather. We have presented the Heating Degree Day information for those locations in the following table.

	Normal (1)	2014	2013	2012	2014 vs. 2013 colder (warmer)	2013 vs. 2012 colder (warmer)	2014 vs. normal colder (warmer)	2013 vs. normal colder (warmer)	2012 vs. normal colder (warmer)
Year ended December 31,									
Illinois (2)	5,752	6,556	6,305	4,863	4%	30%	14%	10%	(15)%
Georgia	2,599	2,882	2,689	1,934	7%	39%	11%	3%	(26)%
Quarter ended December 31,									
Illinois (2)	2,085	2,103	2,383	1,890	(12)%	26%	1%	14%	(9)%
Georgia	1,014	1,003	1,049	878	(4)%	19%	(1)%	3%	(13)%

(1) Normal represents the 10-year average from January 1, 2004 through December 31, 2013, for Illinois at Chicago Midway International Airport and for Georgia at Atlanta Hartsfield-Jackson International Airport, as obtained from the National Oceanic and Atmospheric Administration, National Climatic Data Center.

(2) The 10-year average Heating Degree Days established by the Illinois Commission in our last rate case, is 2,020 for the fourth quarter and 5,600 for the 12 months from 1998 through 2007.

In 2014, we experienced weather in Illinois that was 14% colder-than-normal and 4% colder than 2013. This weather positively impacted our 2014 EBIT at our utilities, primarily at Nicor Gas, by $20 million, and drove an increase of $12 million in 2013 based on 10-year normal weather. Georgia also experienced 11% colder-than-normal weather, and 7% colder weather than the same period last year. Colder-than-normal weather increased EBIT at retail operations by $14 million in 2014 and $9 million in 2013 compared to expected levels based on 10-year normal weather.

Customers The number of customers at distribution operations and energy customers at retail operations can be impacted by natural gas prices, economic conditions and competition from alternative fuels. Our energy customers at retail operations are primarily located in Georgia and Illinois. Our customer metrics highlight the average number of customers to which we provide services and are presented in the following table.

	Years ended December 31,			2014 vs. 2013 change		2013 vs. 2012 change	
(in thousands)	2014	2013	2012	#	%	#	%
Distribution operations customers (1)	4,497	4,479	4,459	18	0.4%	20	0.4%
Retail operations							
Energy customers (2)	628	619	623	9	1%	(4)	(1)%
Service contracts (3)	1,182	1,127	684	55	5%	443	65%
Market share in Georgia	31%	31%	32%		-%		(1)%

(1) In 2014, we implemented a process change at Nicor Gas that adversely impacted our customer count. This had the effect of immaterial growth for Nicor Gas from last year. Excluding Nicor Gas, our customer growth rate for 2014 was 0.8%.
(2) Increase from 2013 to 2014 primarily due to the addition of approximately 33,000 residential and commercial customer relationships acquired in Illinois in June 2013.
(3) Increase from 2012 to 2013 primarily due to acquisition of approximately 500,000 contracts on January 31, 2013.

We anticipate overall utility customer growth trends for 2014 to continue in 2015 based on an expectation of continuing improvement in the economy and relatively low natural gas prices. We use a variety of targeted marketing programs to attract new customers and to retain existing customers. These efforts include adding residential customers, multifamily complexes and commercial and industrial customers who use natural gas for purposes other than space heating, as well as evaluating and launching new natural gas related programs, products and services to enhance customer growth, mitigate customer attrition and increase operating revenues. These programs generally emphasize natural gas as the fuel of choice for customers and seek to expand the use of natural gas through a variety of promotional activities. We also target customer conversions to natural gas from other energy sources, emphasizing the pricing advantage of natural gas. These programs focus on premises that could be connected to our distribution system at little or no cost to the customer. In cases where conversion cost can be a disincentive, we may employ rebate programs and other assistance to address customer cost issues.

In 2015, we intend to continue efforts in our retail operations segment to enter into targeted markets and expand energy customers and its service contracts. We anticipate this expansion will provide growth opportunities in future years.

Volume Our natural gas volume metrics for distribution operations and retail operations present the effects of weather and customers' demand for natural gas compared to the prior year. Wholesale services' daily physical sales volumes represent the daily average natural gas volumes sold to its customers. Our volume metrics are presented in the following table:

	Year ended December 31,				
Distribution operations (In Bcf)	**2014**	**2013**	**2012**	**2014 vs. 2013 % change**	**2013 vs. 2012 % change**
Firm (1)	766	720	606	6%	19%
Interruptible	106	111	107	(5)%	4%
Total	872	831	713	5%	17%
Retail operations (In Bcf)					
Georgia firm	41	38	31	8%	23%
Illinois	17	9	8	89%	13%
Other (includes Florida, Maryland, New York and Ohio)	10	8	8	25%	-
Wholesale services					
Daily physical sales (Bcf/day)	6.32	5.73	5.54	10%	3%

(1) Year-over-year increases are primarily a result of colder weather.

Within our midstream operations segment, our natural gas storage businesses seek to have a significant portion of their working natural gas capacity under firm subscription, but also take into account current and expected market conditions. This allows our natural gas storage business to generate additional revenue during times of peak market demand for natural gas storage services, but retain some consistency with their earnings and maximize the value of the investments.

Our midstream operations storage business is cyclical, and the abundant supply of natural gas in recent years and the resulting lack of market and price volatility have negatively impacted the profitability of our storage facilities. Consistent with our expectations, we had contracts expire in 2014 that were re-subscribed at lower prices as compared to prior years. We anticipate these lower natural gas prices to continue in 2015 as compared to historical averages. We expect the rates at which we re-contract expiring capacity in 2015 to be marginally higher than re-contracting rates in 2014, but still significantly below historical averages. The prices for natural gas storage capacity are expected to increase as supply and demand quantities reach equilibrium as the economy continues to improve, expected exports of LNG occur and/or natural gas demand increases in response to low prices and expanded uses for natural gas. As of the periods presented, the overall monthly average firm subscription rates per facility and amount of firm capacity subscription were as follows:

	December 31, 2014		**December 31, 2013**	
	Avg. rates (1)	**Firm capacity under subscription** (1)	**Avg. rates** (1)	**Firm capacity under subscription** (1)
Jefferson Island	$0.108	4.6	$0.122	5.6
Golden Triangle	0.114	5.0	0.240	2.0
Central Valley	0.062	2.5	0.130	3.0

(1) Rates are per dekatherm. Firm capacity under subscription excludes 7 Bcf contracted by Sequent as of December 31, 2014, at an average monthly rate of $0.050 and 3.5 Bcf as of December 31, 2013, at an average monthly rate of $0.091.

Segment information Operating margin, operating expenses and EBIT information for each of our segments are contained in the following tables for the last three years.

	Operating Margin (1) (2)			**Operating Expenses** (2) (3)			**EBIT** (1)		
In millions	**2014**	**2013**	**2012**	**2014**	**2013**	**2012**	**2014**	**2013** (4)	**2012**
Distribution operations	$1,648	$1,615	$1,552	$1,075	$1,083	$1,044	$581	$546	$517
Retail operations	311	294	247	179	162	136	132	132	111
Wholesale services	501	39	50	79	53	54	422	(3)	(3)
Midstream operations	31	41	46	50	46	38	(17)	(10)	10
Other (5)	7	8	7	22	25	40	(9)	(10)	(21)
Intercompany eliminations	(8)	(8)	(8)	(8)	(8)	(8)	-	-	-
Consolidated	$2,490	$1,989	$1,894	$1,397	$1,361	$1,304	$1,109	$655	$614

(1) Operating margin is a non-GAAP measure. A reconciliation of operating revenue and operating margin to operating income, and EBIT to earnings before income taxes and net income is contained in “Results of Operations” herein. See Note 13 to our consolidated financial statements under Item 8 herein for additional segment information.
(2) Operating margin and operating expenses are adjusted for revenue tax expenses, which are passed through directly to our customers.
(3) Includes $20 million in Nicor merger transaction expenses for 2012 and an $8 million accrual in 2012 for the Nicor Gas PBR issue.
(4) EBIT for 2013 includes an $11 million pre-tax gain on sale of Compass Energy in our wholesale services segment and an $8 million pre-tax loss associated with the termination of the Sawgrass Storage project within our midstream operations segment.
(5) Our “other” non-reportable segment includes our investment in Triton, which was formerly part of our cargo shipping segment that is now classified as discontinued operations. See Note 14 to our consolidated financial statements under Item 8 herein for additional information.

During the Heating Season, natural gas usage and operating revenues are generally higher because more customers are connected to our distribution systems and natural gas usage is higher in periods of colder weather. Occasionally in the summer, wholesale services operating revenues are impacted due to peak usage by power generators in response to summer energy demands. Seasonality also affects the comparison of certain Consolidated Statements of Financial Position items across quarters, including receivables, unbilled revenue, inventories and short-term debt. However, these items are comparable when reviewing our annual results. Our base operating expenses, excluding cost of goods sold, interest expense and certain incentive compensation costs, are incurred relatively equally over any given year. Thus, our operating results can vary significantly from quarter to quarter as a result of seasonality. The EBIT of our distribution operations, retail operations and wholesale services segments are seasonal, as indicated in the table below.

% generated during Heating Season

	Revenues	**EBIT**
2014	73%	81%
2013	68	72
2012	70	76

Distribution Operations

Our distribution operations segment is the largest component of our business and is subject to regulation and oversight by agencies in each of the seven states we serve. These agencies approve natural gas rates designed to provide us the opportunity to generate revenues to recover the cost of natural gas delivered to our customers and our fixed and variable costs such as depreciation, interest, maintenance and overhead costs, and to earn a reasonable return for our shareholders. With the exception of Atlanta Gas Light, our second largest utility, the earnings of our regulated utilities can be affected by customer consumption patterns that are a function of weather conditions, price levels for natural gas and general economic conditions that may impact our customers’ ability to pay for gas consumed. We have various mechanisms, such as weather normalization mechanisms at our utilities and weather derivative instruments that limit our exposure to weather changes within typical ranges in their respective service areas.

In millions	2014	2013
EBIT - prior year	**$546**	**$517**
Operating margin		
Increase mainly driven by non-weather-related customer usage and customer growth	22	9
Increased margin as a result of higher customer usage due to colder-than-normal weather	13	36
Increase from regulatory infrastructure programs, primarily at Atlanta Gas Light	10	4
(Decrease) increase primarily as a result of bad debt and energy efficiency program recoveries at Nicor Gas	(12)	19
Decreased gas storage carrying amounts at Atlanta Gas Light	-	(5)
Increase in operating margin	**33**	**63**
Operating expenses		
Decreased depreciation expense primarily due to the impact of Nicor Gas' new composite depreciation rate effective August 30, 2013, partially offset by increased PP&E from infrastructure additions and improvements	(22)	(8)
Decreased benefit expenses primarily related to lower pension costs due to change in actuarial gains and losses	(13)	(6)
(Decreased) increased rider expenses primarily as a result of energy efficiency program expenses at Nicor Gas	(12)	19
Increased payroll and variable compensation costs as a result of merit increases and higher earnings	19	37
Increased outside services and other expenses mainly as a result of maintenance programs	11	1
Increase due to weather-related expenses	5	-
Increased bad debt expenses related to colder-than-normal weather primarily at Elizabethtown Gas	4	4
Decreased operation and maintenance expense at Nicor Gas related to the 2012 PBR accrual	-	(8)
(Decrease) increase in operating expenses	**(8)**	**39**
(Decrease) increase in other income primarily from STRIDE Projects at Atlanta Gas Light	**(6)**	**5**
EBIT - current year	**$581**	**$546**

Retail Operations

Our retail operations segment, which consists of several businesses that provide energy-related products and services to retail markets, is also weather sensitive and uses a variety of hedging strategies, such as weather derivative instruments and other risk management tools, to partially mitigate potential weather impacts. During 2014, our retail operations' EBIT was negatively impacted by $16 million of unrealized hedge losses and LOCOM adjustments.

In millions	2014	2013
EBIT - prior year	**$132**	**$111**
Operating margin		
Increase due to acquisitions in January and June 2013	9	35
Increase primarily related to customer usage in Georgia and Illinois due to colder-than-normal weather, net of weather hedges	8	18
Increase primarily related to warranty service contract count and price increases	6	-
Increase primarily related to non-weather related customer usage and customer growth	5	1
Increase (decrease) related to change in gas costs and from retail price spreads	5	(11)
Change in value of derivatives as a result of changes in NYMEX natural gas prices	(13)	1
Change in LOCOM adjustment, net of recoveries	(3)	3
Increase in operating margin	**17**	**47**
Operating expenses		
Increased variable compensation costs, outside services, marketing and other	11	-
Increased due to weather-related expenses	3	-
Increased bad debt expenses primarily related to higher natural gas prices	2	3
Increased expenses primarily due to acquisitions in January and June 2013	1	23
Increase in operating expenses	**17**	**26**
EBIT - current year	**$132**	**$132**

Wholesale Services

Our wholesale services segment is involved in asset management and optimization, storage, transportation, producer and peaking services, natural gas supply, natural gas services and wholesale marketing. We have positioned the business to generate positive economic earnings even under low volatility market conditions. However, when market price volatility increases as we experienced in 2014, we are well positioned to capture significant value and generate stronger results. Results in 2014 for the wholesale services segment were the best in the company's history and not indicative of future performance. EBIT for our wholesale services segment is impacted by volatility in the natural gas market arising from a number of factors, including weather fluctuations and changes in supply or demand for natural gas in different regions of the country. We principally use physical and financial arrangements to reduce the risks associated with fluctuations in market conditions and changing commodity prices. These economic hedges may not qualify, or are not designated for, hedge accounting treatment. As a result, our reported earnings for wholesale services reflect changes in the fair values of certain derivatives. These values may change significantly from period to period and are reflected as gains or losses within our operating revenues.

In millions	2014	2013
EBIT - prior year	**$(3)**	**$(3)**
Operating margin		
Change in commercial activity largely driven by the transportation and storage portfolios in the Northeast and Midwest	319	90
Change in value of transportation and forward commodity derivatives from price movements related to natural gas transportation positions	111	(70)
Change in value of storage derivatives as a result of changes in NYMEX natural gas prices	102	(30)
Change in LOCOM adjustment, net of estimated current period recoveries	(66)	3
Decrease due to sale of Compass Energy in May 2013	(4)	(4)
Increase (decrease) in operating margin	**462**	**(11)**
Operating expenses		
Increased variable compensation expenses related to higher earnings and slightly higher other costs in 2014	28	3
Decrease due to sale of Compass Energy in May 2013	(2)	(4)
Increase (decrease) in operating expenses	**26**	**(1)**
(Decrease) increase in other income, primarily related to the gain on sale of Compass Energy	(11)	10
EBIT - current year	**$422**	**$(3)**

The following table illustrates the components of wholesale services' operating margin for the periods presented.

In millions	2014	2013	2012
Commercial activity recognized	$444	$129	$43
Gain (loss) on transportation and forward commodity derivatives	38	(73)	(3)
Gain (loss) on storage derivatives	86	(16)	14
Inventory LOCOM adjustment, net of estimated current period recoveries	(67)	(1)	(4)
Operating margin	$501	$39	$50

Change in commercial activity The commercial activity at wholesale services includes recognized storage and transportation values that were generated in prior periods, which reflect the impact of prior period hedge gains and losses as associated physical transactions occur in the period. Additionally, the commercial activity includes operating margin generated and recognized in the current period. For 2014, commercial activity increased significantly due to:

- the recognition of significantly higher operating margin associated with our transportation and storage portfolios, particularly in the Northeast and Midwest regions, from price volatility generated by significantly colder-than-normal weather in 2014, in part reflecting Sequent's strategy and focus on providing asset management and related services to producers around the major shale-producing regions and to natural gas-fired power generators, enabling Sequent to optimize the associated pipeline transportation and storage capacity assets
- the recognition of operating margin resulting from the withdrawal of storage inventory hedged at the end of 2013 that was included in the storage withdrawal schedule with a value of $28 million as of December 31, 2013
- the recognition of operating margin resulting from mark-to-market accounting derivative losses at the end of 2013

The 2013 change in commercial activity was primarily due to increased cash optimization opportunities related to constraints of natural gas purchased from producers in the Northeastern U.S. Commercial activity in 2013 was also impacted by the recognition of operating margin resulting from the withdrawal of storage inventory hedged at the end of 2012 that was included in the storage withdrawal schedule with a value of $27 million as of December 31, 2012. Additionally, increased volatility associated with colder weather contributed to the increase in commercial activity.

Change in storage and transportation derivatives A return of significantly higher price volatility in 2014 benefitted Sequent's portfolio of pipeline transportation and storage capacity assets throughout the country, primarily in the Gulf Coast, Northeast and Midwest markets. Storage derivative gains in 2014 are primarily due to the change in natural gas prices applicable to the locations of our specific storage assets. These increases were partially offset by a $66 million increase in the required LOCOM adjustment to natural gas inventories for the year ended December 31, 2014, net of estimated hedging recoveries.

Gains in our transportation and forward commodity derivative positions in 2014 are primarily the result of narrowing transportation basis spreads. Significantly colder-than-normal weather and higher demand together with natural gas transportation constraints due to growing shale production impacted forward prices at natural gas receipt and delivery points, primarily in the Northeast and the Midwest regions, during 2014. Transportation and forward commodity hedge losses in 2013 were the result of widening transportation basis spreads, and were recovered in 2014 with the physical flow of natural gas and utilization of the contracted transportation capacity.

We account for natural gas stored in inventory differently than the derivatives we use to mitigate the commodity price risk associated with our storage portfolio. The natural gas that we purchase and inject into storage is accounted for at the LOCOM value utilizing gas daily or spot prices at the end of the year. The derivatives we use to mitigate commodity price risk are accounted for at fair value and marked to market each period using forward natural gas prices. This difference in accounting treatment can result in volatility in wholesale services reported results, even though the expected net operating revenue and expected economic value are substantially unchanged since the date the transactions were initiated. These accounting timing differences also affect the comparability of wholesale services' period-over-period results, since changes in forward NYMEX prices do not increase and decrease on a consistent basis from year to year. Largely as a result of moderate weather in the fourth quarter of 2014 leading to significant decreases in natural gas prices, wholesale services recorded a $73 million LOCOM adjustment for the year ended December 31, 2014.

For our natural gas transportation portfolio, we enter into transportation capacity contracts with interstate and intrastate pipelines for the delivery of natural gas between receipt and delivery points in future periods. We purchase natural gas for transportation when the market price we pay for gas at a receipt point plus the cost of transportation capacity required to deliver the gas to the delivery point is less than the sales price at the delivery point. The difference between the prices at the receipt point and the delivery point is the transportation basis or location spread. Similar to our storage transactions, we attempt to mitigate the commodity price risk associated with our transportation portfolio by using derivative instruments to reduce the risk associated with future changes in the price of natural gas at the receipt and delivery points. We utilize futures contracts or OTC derivatives to hedge both the commodity price risk relative to the market price at the receipt point and the market price at the delivery point to substantially protect the operating revenue that we will ultimately realize once the natural gas is received, delivered and sold.

Volatility in the natural gas market arises from a number of factors, such as weather fluctuations or changes in supply or demand for natural gas in different regions of the country. The volatility of natural gas commodity prices has a significant impact on our customer rates, our long-term competitive position against other energy sources and the ability of our wholesale services segment to capture value from location and seasonal spreads. During both 2014 and 2013, we experienced increased price volatility brought on largely by colder weather and supply constraints in the Northeast and Midwest regions, which enabled us to capture value under these market conditions. Commercial activity in 2014 was particularly favorable due to significant natural gas price volatility as compared to prior years, largely the result of significantly colder-than-normal weather primarily in the first quarter. Prior year volatility was significantly lower due to lower daily Henry Hub spot market prices for natural gas in the U.S., robust natural gas supply, mild weather and ample storage.

While market conditions in 2014 experienced more natural gas price volatility, in the near term we anticipate low volatility in certain areas of our portfolio, but expect a continuation of some volatility in the supply-constrained Northeast corridor. Over the longer term, we expect volatility to be low to moderate and locational or transportation spreads to decrease over time as new pipelines are built to reduce the bottleneck in the currently constrained shale areas of the Northeast U.S. To the extent these pipelines are delayed or not built, our expectations are that volatility would increase. While natural gas supply increased during the 2013/2014 Heating Season in the U.S., it was not enough to meet the increased demand, resulting in the lowest storage levels in over a decade. U.S. storage levels have been restored but not to the level of previous years, which could lead to higher natural gas prices under colder-than-normal weather conditions. Additional economic factors may contribute to this environment, including the significant drop in oil and natural gas prices, which could lead to consolidation of natural gas producers and reduced levels of natural gas production. Further, if economic conditions continue to improve, the demand for natural gas may increase, which may cause natural gas prices to rise and drive higher volatility in the natural gas markets on a longer-term basis. We continue to position Sequent's business model with respect to fixed costs and the types of contracts pursued and executed, focusing on opportunities associated with expected new builds of power generation stations, LNG exporters and natural gas utilities and producers.

Sequent's expected natural gas withdrawals from storage and expected offset to hedge losses/gains associated with Sequent's transportation portfolio at December 31, 2014 are presented in the following tables, along with the net operating revenues expected at the time of withdrawal from storage and the physical flow of natural gas between contracted transportation receipt and delivery points. Sequent's expected net operating revenues exclude storage and transportation demand charges, as well as other variable fuel, withdrawal, receipt and delivery charges, but are net of the estimated impact of profit sharing under our asset management agreements. Further, the amounts that are realizable in future periods are based on the inventory withdrawal schedule, planned physical flow of natural gas between the transportation receipt and delivery points and forward natural gas prices at December 31, 2014. A portion of Sequent's storage inventory and transportation capacity is economically hedged with futures contracts, which results in realization of substantially fixed net operating revenues, timing notwithstanding.

	Storage withdrawal schedule		
Dollars in millions	**Total storage** (in Bcf) (WACOG $2.92)	**Expected net operating (losses) gains** (1)	**Physical transportation transactions – expected net operating losses** (2)
2015	66	$(5)	$(19)
2016 and thereafter	5	2	(19)
Total at December 31, 2014 (3)	71	$(3)	$(38)

(1) Represents expected operating gains (losses) from planned storage withdrawals associated with existing inventory positions and could change as Sequent adjusts its daily injection and withdrawal plans in response to changes in future market conditions and forward NYMEX price fluctuations.

(2) Represents the periods associated with the transportation derivative (gains) losses during which the derivatives will be settled and the physical transportation transactions will occur that offset the derivative (gains) losses recognized.

(3) Includes 5 Bcf in storage with expected operating revenues of $2 million that is currently inaccessible due to operational issues at a third-party storage facility. The owner of this facility is working to resolve these issues and the facility is expected to be operational by mid-2015. While we expect this inventory to be fully recovered, the timing of withdrawal of this gas may be impacted by the operational issues.

For the year ended December 31, 2014, we have recorded $86 million in gains associated with the hedging of our storage position, compared to $16 million in storage hedge losses in 2013. These hedge gains primarily relate to changes in natural gas prices during the fourth quarter of 2014 largely resulting from moderate weather. Sequent's storage withdrawals associated with existing inventory positions could change as Sequent adjusts its daily injection and withdrawal plans in response to changes in market conditions in future months and as forward NYMEX prices fluctuate.

The net operating (losses) revenues expected to be generated from the physical withdrawal of natural gas from storage do not reflect the earnings impact related to the movement in our hedges to lock in the forward location spread for the delivery of natural gas between two transportation delivery points associated with our transportation capacity portfolio.

For the year ended December 31, 2014, we have recorded $38 million in gains associated with the hedging of our transportation portfolio as compared to hedge losses of $73 million for the same period last year. Hedge losses in 2013 primarily related to forward transportation and commodity positions for 2014 and were largely offset in 2014 when the expected economic value was realized upon the physical flow of natural gas and the utilization of the contracted transportation capacity.

For more information on Sequent's energy marketing and risk management activities, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Natural Gas Price Risk."

For a discussion of commercial activity, see Item 1, "Business" under the caption "Wholesale Services."

Midstream Operations

Our midstream operations segment's primary activity is operating non-utility storage and pipeline facilities, including the development and operation of high-deliverability underground natural gas storage and pipeline assets. While this business can also generate additional revenue during times of peak market demand for natural gas storage services, certain of our storage services are covered under short-, medium- and long-term contracts at fixed market rates. Based on an engineering study and mechanical integrity tests performed in 2014, we identified a lower amount of working gas capacity, further resulting in the true-up of retained fuel at one of our storage facilities, negatively impacting EBIT by $10 million for the year ended December 31, 2014. The decrease in working gas capacity is a result of naturally occurring shrinkage of the storage cavern, and we are developing strategies to recover the decreased working capacity.

In millions	**2014**	**2013**
EBIT - prior year	**$(10)**	**$10**
Operating margin		
Decrease at Jefferson Island and Central Valley primarily due to lower subscription rates, as well as hedge gains at Central Valley in 2012 that did not occur in 2013	(6)	(5)
Decrease at one of our storage facilities related to true-up of retained fuel, partially offset by higher interruptible operating margins largely at Golden Triangle in 2014 due to optimizing the facilities during the significantly colder weather in 2014	(4)	-
Decrease in operating margin	**(10)**	**(5)**

Increased maintenance, outside service costs, depreciation expense and other	4	-
Increase from Central Valley Storage and Cavern 2 at Golden Triangle both beginning commercial service during 2012, and entry into the LNG markets	-	8
Increase in operating expenses	**4**	**8**
Increase (decrease) in other income, primarily related to the impairment loss at Sawgrass Storage in December 2013	**7**	**(7)**
EBIT - current year	**$(17)**	**$(10)**

Liquidity and Capital Resources

Overview The acquisition of natural gas and pipeline capacity, payment of dividends and funding of working capital needs primarily related to our natural gas inventory are our most significant short-term financing requirements. The liquidity required to fund these short-term needs is primarily provided by our operating activities, and any needs not met are primarily satisfied with short-term borrowings under our commercial paper programs, which are supported by the AGL Credit Facility and the Nicor Gas Credit Facility. For more information on the seasonality of our short-term borrowings, see "Short-term Debt" later in this section. The need for long-term capital is driven primarily by capital expenditures and maturities of long-term debt. Periodically, we raise funds supporting our long-term cash needs from the issuance of long-term debt or equity securities. We regularly evaluate our funding strategy and profile to ensure that we have sufficient liquidity for our short-term and long-term needs in a cost-effective manner.

Our financing activities, including long-term and short-term debt and equity, are subject to customary approval or review by state and federal regulatory bodies, including the various commissions of the states in which we conduct business. Certain financing activities we undertake may also be subject to approval by state regulatory agencies. A substantial portion of our consolidated assets, earnings and cash flows is derived from the operation of our regulated utility subsidiaries, whose legal authority to pay dividends or make other distributions to us is subject to regulation. Nicor Gas is restricted by regulation in the amount it can dividend or loan to affiliates and is not permitted to make money pool loans to affiliates.

We believe the amounts available to us under our long-term debt and credit facilities, as well as through the issuance of debt and equity securities combined with cash provided by operating activities will continue to allow us to meet our needs for working capital, pension and retiree welfare benefits, capital expenditures, anticipated debt redemptions, interest payments on debt obligations, dividend payments and other cash needs through the next several years. However, considering our January 2015 maturity of $200 million of senior notes that were repaid with commercial paper, our higher expected capital expenditures related to utility rate base and infrastructure investment and our recently announced pipeline projects, we anticipate issuing additional long-term debt as our financing needs and market conditions warrant.

Our ability to satisfy our working capital requirements and our debt service obligations, or fund planned capital expenditures, will substantially depend upon our future operating performance (which will be affected by prevailing economic conditions), and financial, business and other factors, some of which we are unable to control. These factors include, among others, regulatory changes, the price of and demand for natural gas, and operational risks.

Our capitalization and financing strategy is intended to ensure that we are properly capitalized with the appropriate mix of debt and equity securities. This strategy includes active management of the percentage of total debt relative to total capitalization, as well as the term and interest rate profile of our debt securities and maintenance of an appropriate mix of debt with fixed and floating interest rates. Our variable debt target is 20% to 45% of total debt. As of December 31, 2014, our variable-rate debt was $1.5 billion, or 31%, of our total debt, compared to $1.4 billion, or 28%, as of December 31, 2013. The increase was due to $120 million of senior notes that converted from fixed-rate to variable-rate during 2014. For more information on our debt, see Note 8 to our consolidated financial statements under Item 8 herein.

In January 2015, we executed $800 million in notional value of 10 year and 30 year fixed-rate forward-starting interest rate swaps to hedge potential interest rate volatility prior to anticipated issuances of senior notes in 2015 and 2016. These debt issuances will be used to reduce our commercial paper for the amount that was borrowed to repay our senior notes that matured in January 2015 and to fund upcoming debt maturities as well as the capital expenditures associated with increased utility investment and construction of our new pipeline projects. We have designated the forward-starting interest rate swaps, which will mature on the debt issuance dates, as cash flow hedges. See Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" under the caption "Interest Rate Risk" for additional information.

Our objective continues to be maintaining our strong balance sheet and liquidity profile, solid investment grade ratings and our annual dividend growth. Additionally, we will continue to evaluate our need to increase available liquidity based on our view of working capital requirements, including the impact of changes in natural gas prices, liquidity requirements established by rating agencies, acquisitions and other factors. See Item 1A, "Risk Factors" for additional information on items that could impact our liquidity and capital resource requirements.

Short-term Debt The following table provides additional information on our short-term debt throughout the year.

In millions	**Year-end balance outstanding** (1)	**Daily average balance outstanding** (2)	**Minimum balance outstanding** (2)	**Largest balance outstanding** (2)
Commercial paper - AGL Capital	$590	$399	$-	$1,006
Commercial paper - Nicor Gas	585	279	58	614
Senior notes (3)	200	192	-	200
Total short-term debt and current portion of long-term debt	$1,375	$870	$58	$1,820

(1) As of December 31, 2014.
(2) For the twelve months ended December 31, 2014. The minimum and largest balances outstanding for each debt instrument occurred at different times during the year. Consequently, the total balances are not indicative of actual borrowings on any one day during the year.
(3) These senior notes matured in January 2015 and were repaid using commercial paper.

The largest, minimum and daily average balances borrowed under our commercial paper programs are important when assessing the intra-period fluctuations of our short-term borrowings and potential liquidity risk. The fluctuations are due to our seasonal cash requirements to fund working capital needs, in particular the purchase of natural gas inventory, margin calls and collateral posting requirements. Cash requirements generally increase between June and December as we purchase natural gas in advance of the Heating Season. The timing differences of when we pay our suppliers for natural gas purchases and when we recover our costs from our customers through their monthly bills can significantly affect our cash requirements. Our short-term debt balances are typically reduced during the Heating Season, as a significant portion of our current assets, primarily natural gas inventories, are converted into cash.

Our commercial paper borrowings are supported by the $1.3 billion AGL Credit Facility and $700 million Nicor Gas Credit Facility. The credit facilities can be drawn upon to meet working capital and other general corporate needs; however, the Nicor Gas Credit Facility can only be used for the working capital needs of Nicor Gas. The interest rates payable on borrowings under these facilities are calculated either at the alternative base rate, plus an applicable margin, or LIBOR, plus an applicable interest margin. The applicable interest margin used in both interest rate calculations will vary according to AGL Capital's and Nicor Gas' current credit ratings. At December 31, 2014 and 2013, we had no outstanding borrowings under either credit facility.

The timing of natural gas withdrawals is dependent on the weather and natural gas market conditions, both of which impact the price of natural gas. Increasing natural gas commodity prices can significantly impact our commercial paper borrowings. Based upon our total debt outstanding as of December 31, 2014, and our maximum 70% debt to total capitalization allowed under our financial covenants, we could potentially borrow an additional $700 million of commercial paper under the AGL Credit Facility and an additional $100 million of commercial paper under the Nicor Gas Credit Facility. As a result, based on current natural gas prices and our expected injection plan, we believe that we have sufficient liquidity to cover our working capital needs.

The lenders under our credit facilities and lines of credit are major financial institutions with $2.2 billion of committed balances and all had investment grade credit ratings as of December 31, 2014. It is possible that one or more lending commitments could be unavailable to us if the lender defaulted due to lack of funds or insolvency. However, based on our current assessment of our lenders' creditworthiness, we believe the risk of lender default is minimal. Commercial paper borrowings reduce availability of these credit facilities.

Long-term Debt Our long-term debt matures more than one year from December 31, 2014 and consists of medium-term notes: Series A, Series B, and Series C, which we issued under an indenture dated December 1989; senior notes; first mortgage bonds and gas facility revenue bonds.

Our long-term cash requirements primarily depend upon the level of capital expenditures, long-term debt maturities and decisions to refinance long-term debt. The following table summarizes our long-term debt issuances over the last three years.

	Issuance date	**Amount** *(in millions)*	**Term** *(in years)*	**Interest rate**
Gas facility revenue bonds	(1)	$200	10-20	Floating rate
Senior notes (2)	May 2013	$500	30	4.4%

(1) During the first quarter of 2013, we refinanced the gas facility revenue bonds. We had no cash receipts or payments in connection with the refinancing.
(2) The net proceeds were used to repay a portion of AGL Capital's commercial paper, including $225 million we borrowed to repay senior notes that matured on April 15, 2013.

Credit Ratings Our borrowing costs and our ability to obtain adequate and cost-effective financing are directly impacted by our credit ratings, as well as the availability of financial markets. Credit ratings are important to our counterparties when we engage in certain transactions, including OTC derivatives. It is our long-term objective to maintain or improve our credit ratings in order to manage our existing financing costs and enhance our ability to raise additional capital on favorable terms.

Credit ratings and outlooks are opinions subject to ongoing review by the rating agencies and may periodically change. The rating agencies regularly review our performance and financial condition and reevaluate their ratings of our long-term debt and short-term borrowings, our corporate ratings and our ratings outlook. There is no guarantee that a rating will remain in effect for any given period of time or that a rating will not be lowered or withdrawn entirely by a rating agency if, in its judgment, circumstances so warrant. A credit rating is not a recommendation to buy, sell or hold securities and each rating should be evaluated independently of other ratings.

Factors we consider important to assessing our credit ratings include our Consolidated Statements of Financial Position, leverage, capital spending, earnings, cash flow generation, available liquidity and overall business risks. We do not have any triggering events in our debt instruments that are tied to changes in our specified credit ratings or our stock price and have not entered into any agreements that would require us to issue equity based on credit ratings or other trigger events. As of December 31, 2014, if our credit rating had fallen below investment grade, we would have been required to provide collateral of $38 million to continue conducting business with certain customers. The following table summarizes our credit ratings as of December 31, 2014 and reflects no change from what was reported in our 2013 Form 10-K/A.

	AGL Resources			**Nicor Gas**		
	S&P	Moody's (1)	Fitch	S&P	Moody's	Fitch
Corporate rating	BBB+	n/a	BBB+	BBB+	n/a	A
Commercial paper	A-2	P-2	F2	A-2	P-1	F1
Senior unsecured	BBB+	A3	BBB+	BBB+	A2	A+
Senior secured	n/a	n/a	n/a	A	Aa3	AA-
Ratings outlook	Stable	Stable	Stable	Stable	Stable	Stable

(1) Credit ratings are for AGL Capital, whose obligations are fully and unconditionally guaranteed by AGL Resources.

A downgrade in our current ratings, particularly below investment grade, would increase our borrowing costs and could limit our access to the commercial paper market. In addition, we would likely be required to pay a higher interest rate in future financings, and our potential pool of investors and funding sources could decrease.

Default Provisions As indicated below, our debt instruments and other financial obligations include provisions that, if not complied with, could require early payment or similar actions.

- Our credit facilities contain customary events of default, including but not limited to, the failure to comply with certain affirmative and negative covenants, cross-defaults to certain other material indebtedness and a change of control.
- Our credit facilities contain certain non-financial covenants that, among other things, restrict liens and encumbrances, loans and investments, acquisitions, dividends and other restricted payments, asset dispositions, mergers and consolidations, and other matters customarily restricted in such agreements.
- Our credit facilities each include a financial covenant that requires us to maintain a ratio of total debt to total capitalization of no more than 70% at the end of any fiscal month. However, we typically seek to maintain these ratios at levels between 50% and 60%, except for temporary increases related to the timing of acquisition and financing activities. The following table contains our debt-to-capitalization ratios for December 31, which are below the maximum allowed.

	AGL Resources		Nicor Gas	
	2014	2013	2014	2013
Debt-to-capitalization ratio as calculated from our Consolidated Statements of Financial Position	57%	58%	62%	54%
Adjustments (1)	(2)	(1)	-	1
Debt-to-capitalization ratio as calculated within our credit facilities	55%	57%	62%	55%

(1) As defined in credit facilities, includes standby letters of credit, performance/surety bonds and excludes accumulated OCI items related to non-cash pension adjustments, other post-retirement benefits liability adjustments and accounting adjustments for cash flow hedges.

We were in compliance with all of our debt provisions and covenants, both financial and non-financial, as of December 31, 2014 and 2013. For more information on our default provisions, see Note 8 to our consolidated financial statements under Item 8 herein.

Cash Flows

We prepare our Consolidated Statements of Cash Flows using the indirect method. Under this method, we reconcile net income to cash flows from operating activities by adjusting net income for those items that impact net income but may not result in actual cash receipts or payments during the period. These reconciling items include depreciation and amortization, changes in derivative instrument assets and liabilities, deferred income taxes, gains or losses on the sale of assets and changes in the Consolidated Statements of Financial Position for working capital from the beginning to the end of the period. The following table provides a summary of our operating, investing and financing cash flows for the last three years.

In millions	2014	2013	2012
Net cash provided by (used in) (1):			
Operating activities	$655	$971	$1,003
Investing activities	(505)	(876)	(786)
Financing activities	(224)	(121)	(155)
Net (decrease) increase in cash and cash equivalents - continuing operations	(51)	(26)	53
Net (decrease) increase in cash and cash equivalents - discontinued operations	(23)	-	9
Cash and cash equivalents (including held for sale) at beginning of period	105	131	69
Cash and cash equivalents (including held for sale) at end of period	31	105	131
Less cash and cash equivalents held for sale at end of period	-	24	23
Cash and cash equivalents (excluding held for sale) at end of period	$31	$81	$108

(1) Includes activity for discontinued operations.

Cash Flow from Operating Activities *2014 compared to 2013* Our net cash flow provided by operating activities in 2014 was $655 million, a decrease of $316 million or 33% from 2013. The decrease was primarily related to (i) income taxes, largely driven by the utilization of a prior period net operating loss that reduced the 2013 tax obligation combined with taxes paid in 2014 due to increased earnings and the repatriation of cumulative foreign earnings of Tropical Shipping, (ii) increased cash for inventory and (iii) trade payables, other than energy marketing, due to higher accrued volumes in December 2013 compared to December 2012. These decreases were partially offset by increases primarily related to (i) higher earnings year over year largely attributed to significantly colder-than-normal weather in the current year and increased price volatility that enabled us to capture value in wholesale services and (ii) net energy marketing receivables and payables, due to higher cash received in 2014 from the prior year.

2013 compared to 2012 Our net cash flow provided by operating activities in 2013 was $971 million, a decrease of $32 million or 3% from 2012. The decrease was primarily related to (i) receivables, other than energy marketing, due to colder weather in 2013, which resulted in higher volumes primarily at distribution operations and retail operations that will be collected in future periods and (ii) income taxes, from accelerated tax depreciation in 2013 than in 2012. This decrease in cash provided by operating activities was partially offset by increased cash provided by (i) lower payments for incentive compensation in 2013 as a result of reduced earnings in 2012 as compared to 2011 and (ii) trade payables, other than energy marketing, due to higher gas purchase volumes primarily at distribution operations and retail operations resulting from colder weather in 2013.

Cash Flow from Investing Activities Our net cash flow used in investing activities in 2014 decreased $371 million or 42% from 2013, primarily as a result of approximately $225 million proceeds we received from the sale of Tropical Shipping during the third quarter of 2014. The decrease was also attributed to the $122 million spending on the acquisition of approximately 500,000 service plans during the first quarter of 2013. Partially offsetting this decrease was greater spending for PP&E expenditures. Our estimated PP&E expenditures for 2015 and our actual PP&E expenditures incurred in 2014, 2013 and 2012 are quantified in the following table.

In millions	**Description**	**2015** (1)	**2014**	**2013**	**2012**
Distribution business	New construction and infrastructure improvements	$408	$475	$421	$371
Regulatory infrastructure programs (2)	Programs that update or expand our distribution systems and liquefied natural gas facilities to improve system reliability and meet operational flexibility and growth	424	180	226	263
Storage, pipelines and LNG facilities	Underground natural gas storage facilities, pipeline infrastructure and LNG production and transportation	103	15	8	61
Other	Primarily includes information technology and building and leasehold improvements	130	99	76	80
Total		$1,065	$769	$731	$775

(1) Estimated PP&E expenditures.
(2) Includes Investing in Illinois at Nicor Gas, STRIDE at Atlanta Gas Light, SAVE at Virginia Natural Gas and an enhanced infrastructure program at Elizabethtown Gas.

The 2014 increase in PP&E expenditures of $38 million, or 5%, was due to increased spending of $84 million primarily related to new construction and infrastructure improvements at our utilities. This was partially offset by a $46 million net decrease in expenditures for our regulatory infrastructure programs largely due to PRP at Atlanta Gas Light, which ended in 2013, offset by increased spending on our other regulatory infrastructure programs that primarily included $57 million at Atlanta Gas Light for i-VPR, $24 million at Elizabethtown Gas for AIR and $22 million at Nicor Gas for Investing in Illinois.

Our PP&E expenditures were $731 million for the year ended December 31, 2013, compared to $775 million for the same period in 2012.The decrease of $44 million, or 6%, was primarily due to decreased spending of $49 million on our natural gas storage projects consisting of $35 million at Central Valley and $14 million at Golden Triangle. Additionally, capital expenditures decreased $35 million for strategic projects and $16 million for utility infrastructure enhancement projects at Elizabethtown Gas. These decreases were partially offset by increased expenditures of $54 million for regulatory infrastructure programs at Atlanta Gas Light and $9 million for accelerated infrastructure replacement program projects at Virginia Natural Gas.

Our estimated expenditures for 2015 include discretionary spending for capital projects principally within the distribution business, regulatory infrastructure programs, natural gas storage and other categories. We continuously evaluate whether or not to proceed with these projects, reviewing them in relation to various factors, including our authorized returns on rate base, other returns on invested capital for projects of a similar nature, capital structure and credit ratings, among others. We will make adjustments to these discretionary expenditures as necessary based upon these factors.

Cash Flow from Financing Activities Our net cash flow used in financing activities in 2014 increased $103 million, or 85% from 2013 primarily as the result of our $494 million issuance of senior notes in May 2013 and recovery of working capital at wholesale services, partially offset by our $225 million repayment of senior notes in April 2013 and lower commercial paper repayments in 2014 due to higher working capital needs at distribution operations. For more information on our financing activities, see short and long-term debt within Item 7 under the caption “Liquidity and Capital Resources.”

Noncontrolling Interest We recorded cash distributions for SouthStar’s dividend distributions to Piedmont of $17 million in 2014 and 2013, and $14 million in 2012 as financing activities in our Consolidated Statements of Cash Flows. The primary reason for the increase in the distribution to Piedmont from 2012 to 2013 was increased earnings for 2012 compared to 2011 and a distribution of excess working capital from the joint venture in 2013. Additionally, we received $22.5 million from Piedmont in 2013 to maintain their 15% ownership interest after we contributed our Illinois Energy business to the SouthStar joint venture.

Dividends on Common Stock Our common stock dividend payments were $233 million in 2014, $222 million in 2013 and $203 million in 2012. The increases were generally the result of the annual dividend increase of $0.04 per share for each of the last three years. However, as a result of the Nicor merger, AGL Resources shareholders of record as of the close of business on December 8, 2011 received a pro rata dividend of $0.0989 per share for the stub period, which accrued from November 19, 2011 and totaled $7 million. The dividend payments made in February 2012 were reduced by this stub period dividend. For information about restrictions on our ability to pay dividends on our common stock, see Note 9 to our consolidated financial statements under Item 8 herein.

Shelf Registration In July 2013, we filed a shelf registration statement with the SEC, which expires in 2016. Under this shelf registration statement, debt securities will be issued by AGL Capital and related guarantees will be issued by AGL Resources under an indenture dated as of February 20, 2001, as supplemented and modified, as necessary, among AGL Capital, AGL Resources and The Bank of New York Mellon Trust Company, N.A., as trustee. The indenture provides for the issuance from time to time of debt securities in an unlimited dollar amount and an unlimited number of series, subject to our AGL Credit Facility financial covenant related to total debt to total capitalization.

Off-balance sheet arrangements We have certain guarantees, as further described in Note 11 to our consolidated financial statements under Item 8 herein. We believe the likelihood of any such payment under these guarantees is remote. No liability has been recorded for these guarantees. We also have authorized unrecognized ratemaking amounts, primarily composed of an allowed equity rate of return on assets associated with certain of our regulatory infrastructure programs, which are not reflected within our Consolidated Statements of Financial Position. See Note 3 to our consolidated financial statements under Item 8 herein for additional information.

Contractual Obligations and Commitments We have incurred various contractual obligations and financial commitments in the normal course of business that are reasonably likely to have a material effect on liquidity or the availability of requirements for capital resources. Contractual obligations include future cash payments required under existing contractual arrangements, such as debt and lease agreements. These obligations may result from both general financing activities and from commercial arrangements that are directly supported by related revenue-producing activities. Contingent financial commitments represent obligations that become payable only if certain predefined events occur, such as financial guarantees, and include the nature of the guarantee and the maximum potential amount of future payments that could be required of us as the guarantor. In 2014, we entered into several unconditional purchase obligations in the ordinary course of business. These include capacity and supply agreements related to the Dalton Pipeline, PennEast Pipeline, Atlantic Coast Pipeline and wholesale services. The following table illustrates our expected future contractual obligation payments and commitments and contingencies as of December 31, 2014.

In millions	Total	2015	2016	2017	2018	2019	2020 & thereafter
Recorded contractual obligations:							
Long-term debt (1)	$3,706	$200	$545	$22	$155	$350	$2,434
Short-term debt	1,175	1,175	-	-	-	-	-
Environmental remediation liabilities (2)	414	87	93	55	47	37	95
Total	$5,295	$1,462	$638	$77	$202	$387	$2,529
Unrecorded contractual obligations and commitments (3) (8):							
Pipeline charges, storage capacity and gas supply (4)	$4,303	$805	$457	$280	$234	$222	$2,305
Interest charges (5)	2,762	179	171	147	146	141	1,978
Operating leases (6)	188	33	31	24	17	18	65
Asset management agreements (7)	32	9	10	7	4	2	-
Standby letters of credit, performance/surety bonds (8)	50	49	1	-	-	-	-
Other	8	3	3	1	1	-	-
Total	$7,343	$1,078	$673	$459	$402	$383	$4,348

(1) Excludes the $75 million step up to fair value of first mortgage bonds, $16 million unamortized debt premium and $5 million interest rate swaps fair value adjustment. Includes the current portion of long-term debt of $200 million, which matured in January 2015.
(2) Includes charges recoverable through base rates or rate rider mechanisms.
(3) In accordance with GAAP, these items are not reflected in our Consolidated Statements of Financial Position.
(4) Includes charges recoverable through a natural gas cost recovery mechanism or alternatively billed to marketers and demand charges associated with Sequent. The gas supply balance includes amounts for Nicor Gas and SouthStar gas commodity purchase commitments of 51 Bcf at floating gas prices calculated using forward natural gas prices as of December 31, 2014, and is valued at $142 million. As we do for other subsidiaries, we provide guarantees to certain gas suppliers for SouthStar in support of payment obligations.
(5) Floating rate interest charges are calculated based on the interest rate as of December 31, 2014 and the maturity date of the underlying debt instrument. As of December 31, 2014, we have $53 million of accrued interest on our Consolidated Statements of Financial Position that will be paid in 2015.
(6) We have certain operating leases with provisions for step rent or escalation payments and certain lease concessions. We account for these leases by recognizing the future minimum lease payments on a straight-line basis over the respective minimum lease terms, in accordance with GAAP. Our operating leases are primarily for real estate.
(7) Represent fixed-fee minimum payments for Sequent’s affiliated asset management agreements.
(8) We provide guarantees to certain municipalities and other agencies and certain gas suppliers of SouthStar in support of payment obligations.

Standby letters of credit and performance/surety bonds. We also have incurred various financial commitments in the normal course of business. Contingent financial commitments represent obligations that become payable only if certain predefined events occur, such as financial guarantees, and the maximum potential amount of future payments that could be required of us as the guarantor. We would expect to fund these contingent financial commitments with operating and financing cash flows.

Pension and welfare obligations. Generally, our funding policy is to contribute annually an amount that will at least equal the minimum amount required to comply with the Pension Protection Act. We calculate any required pension contributions using the traditional unit credit cost method; however, additional voluntary contributions are periodically made. Contributions are intended to provide not only for benefits attributed to service to date, but also for those expected to be earned in the future. The contributions represent the portion of the welfare costs for which we are responsible under the terms of our plan and minimum funding required by state regulatory commissions.

The state regulatory commissions in all of our jurisdictions, except Illinois, have phase-ins that defer a portion of the retirement benefit expenses for retirement plans other than pensions for future recovery. We recorded a regulatory asset for these future recoveries of $122 million as of December 31, 2014 and $108 million as of December 31, 2013. In Illinois, all accrued retirement plan expenses are recovered through base rates. See Note 6 to our consolidated financial statements under Item 8 herein for additional information about our pension and welfare plans.

In both 2014 and 2013, no contributions were required to our qualified pension plans. Based on the estimated funded status of the AGL Pension plan, we do not expect any required contribution to the plan in 2015. We may, at times, elect to contribute additional amounts to the AGL Pension Plan in accordance with the funding requirements of the Pension Protection Act.

Critical Accounting Policies and Estimates

The preparation of our financial statements in conformity with GAAP requires us to make estimates and judgments that affect the reported amounts in our consolidated financial statements and accompanying notes. Those judgments and estimates have a significant effect on our financial statements, primarily due to the need to make estimates about the effects of matters that are inherently uncertain. Actual results could differ from those estimates. We frequently reevaluate our judgments and estimates that are based upon historical experience and various other assumptions that we believe to be reasonable under the circumstances. The following is a summary of our most critical accounting policies, which represent those that may involve a higher degree of uncertainty, judgment and complexity. Our significant accounting policies are described in Note 2 to our consolidated financial statements under Item 8 herein.

Accounting for Rate-Regulated Subsidiaries

At December 31, 2014, our regulatory assets were $714 million and regulatory liabilities were $1.7 billion. At December 31, 2013, our regulatory assets were $819 million and regulatory liabilities were $1.7 billion.

Our natural gas distribution operations and certain regulated transmission and storage operations meet the criteria of a cost-based, rate-regulated entity under accounting principles generally accepted in the U.S. Accordingly, the financial results of these operations reflect the effects of the ratemaking and accounting practices and policies of the various regulatory commissions to which we are subject.

As a result, certain costs that would normally be expensed under GAAP are permitted to be capitalized or deferred on the balance sheet because it is probable that they can be recovered through rates. The periods in which revenues or expenses are recognized are impacted by regulation. In instances where other GAAP accounting treatment supersedes Accounting Standards Codification 980 - *Regulated Operations*, we apply the other GAAP accounting treatment. The amounts to be recovered or recognized are based upon historical experience and our understanding of the regulations.

Discontinuing the application of this method of accounting for regulatory assets and liabilities could significantly increase our operating expenses, as fewer costs would likely be capitalized or deferred on the balance sheet, which could reduce our net income. Assets and liabilities recognized as a result of rate regulation would be written off in income for the period in which the discontinuation occurred. A write-off of all our regulatory assets and regulatory liabilities at December 31, 2014 would result in 5% and 15% decreases in total assets and total liabilities, respectively. For more information on our regulated assets and liabilities, see Note 2 and Note 3 to our consolidated financial statements under Item 8 herein.

Accounting for Goodwill and Long-Lived Assets, including Intangible Assets

Goodwill We do not amortize our goodwill, but test it for impairment at the reporting unit level during the fourth fiscal quarter or more frequently if impairment indicators arise. These indicators include, but are not limited to, a significant change in operating performance, the business climate, legal or regulatory factors, or a planned sale or disposition of a significant portion of the business. A reporting unit is the operating segment, or a business one level below the operating segment (a component), if discrete financial information is prepared and regularly reviewed by management. Components are aggregated if they have similar economic characteristics.

As part of our impairment test, an initial assessment is made by comparing the fair value of a reporting unit with its carrying value, including goodwill. If the fair value is less than the carrying value, an impairment is indicated, and we must perform a second test to quantify the amount of the impairment. In the second test, we calculate the implied fair value of the goodwill by deducting the fair value of all tangible and intangible net assets of the reporting unit from the fair value of the entire reporting unit determined in step one of the assessment. If the carrying value of the goodwill exceeds the implied fair value of the goodwill, we record an impairment charge. To estimate the fair value of our reporting units, we use two generally accepted valuation approaches, an income approach and a market approach, using assumptions consistent with a market participant’s perspective.

Under the income approach, fair value is determined based upon the present value of estimated future cash flows discounted at an appropriate risk-free rate that takes into consideration the time value of money, inflation and the risks inherent in ownership of the business being valued. These forecasts contain a degree of uncertainty, and changes in these projected cash flows could significantly increase or decrease the estimated fair value of the reporting unit. For the regulated reporting units, a fair recovery of and return on costs prudently incurred to serve customers is assumed. An unfavorable outcome in a rate case could cause the fair value of these reporting units to decrease. Key assumptions used in the income approach included return on equity for the regulated reporting units, long-term growth rates used to determine terminal values at the end of the discrete forecast period, and a discount rate. The discount rate is applied to estimated future cash flows and is one of the most significant assumptions used to determine fair value under the income approach. As interest rates rise, the calculated fair values will decrease. The terminal growth rate is based on a combination of historical and forecasted statistics for real gross domestic product and personal income for each utility service area.

Under the market approach, fair value is determined by applying market multiples to forecasted cash flows. This method uses metrics from similar publicly traded companies in the same industry to determine how much a knowledgeable investor in the marketplace would be willing to pay for an investment in a similar company.

The goodwill impairment testing develops a baseline test and performs a sensitivity analysis to calculate a reasonable valuation range. The sensitivities are derived by altering those assumptions that are subjective in nature and inherent to a discounted cash flows calculation. We weight the results of the two valuation approaches to estimate the fair value of each reporting unit.

The significant assumptions that drive the estimated fair values of our reporting units are projected cash flows, discount rates, growth rates, weighted average cost of capital (WACC), oil prices and market multiples. Due to the subjectivity of these assumptions, we cannot provide assurance that future analyses will not result in impairment, as a future impairment depends on market and economic factors affecting fair value. Our annual goodwill impairment analysis in the fourth quarter of 2014 indicated that the estimated fair value of all but one of our reporting units with goodwill was in excess of the carrying value by approximately 30% to over 600%, and were not at risk of failing step one of the impairment test.

Within our midstream operations segment, the estimated fair value of the storage and fuels reporting unit with $14 million of goodwill exceeded its carrying value by less than 5% and is at risk of failing the step one test. The discounted cash flow model used in the goodwill impairment test for this reporting unit assumed discrete period revenue growth through fiscal 2023 to reflect the recovery of subscription rates, stabilization of earnings and establishment of a reasonable base year of which we estimated the terminal value. In the terminal year, we assumed a long-term earnings growth rate of 2.5%, which is consistent with our 2013 annual goodwill impairment test, and we believe is appropriate given the current economic and industry-specific expectations. As of the valuation date, we utilized a WACC of 7.0%, which we believe is appropriate as it reflects the relative risk, the time value of money, and is consistent with the peer group of this reporting unit as well as the discount rate that was utilized in our 2013 annual goodwill impairment test.

The cash flow forecast for the storage and fuels reporting unit assumed earnings growth over the next nine years. Should this growth not occur, this reporting unit will likely fail step one of a goodwill impairment test in a future period. Along with any reductions to our cash flow forecast, changes in other key assumptions used in our 2014 annual impairment analysis may result in the requirement to proceed to step two of the goodwill impairment test in future periods.

We will continue to monitor this reporting unit for impairment and note that continued declines in contracted capacity or subscription rates, declines for a sustained period at the current market rates or other changes to the key assumptions and factors used in this analysis may result in future failure of step one of the goodwill impairment test and may also result in a future impairment of goodwill. If subscription rates and subscribed volumes decline, the estimated future cash flows will decrease from our current estimates. As of December 31, 2014, we estimate that 11% of our future cash flows will be received over the next 10 years, an additional 24% over the following 10 years and 65% in periods thereafter over the remaining useful lives of our storage facilities.

Long-Lived Assets We depreciate or amortize our long-lived and intangible assets over their estimated useful lives. Currently, we have no significant indefinite-lived intangible assets. We assess our long-lived and intangible assets for impairment whenever events or changes in circumstances indicate that an asset's carrying amount may not be recoverable. When such events or circumstances are present, we assess the recoverability of long-lived assets by determining whether the carrying value will be recovered through the expected future cash flows. Impairment is indicated if the carrying amount of a long-lived asset exceeds the sum of the undiscounted future cash flows expected to result from the use and eventual disposition of the asset. If impairment is indicated, we record an impairment loss equal to the difference between the carrying value and the fair value of the long-lived asset.

We determined that there were no long-lived asset impairments in 2014; however, our Golden Triangle storage facility within midstream operations currently has less than a 5% cushion of its undiscounted cash flows over its book value. Accordingly, if this facility experiences further natural gas price declines or a prolonged slow recovery, future analyses may result in an impairment of these long-lived assets.

Our agreement in June 2013 to acquire customer relationship intangible assets within our retail operations segment included a provision for the seller to provide an adjustment to the $32 million purchase price for attrition that exceeds historical levels. In January 2015, we received $5 million from the seller that will be reflected as a reduction to our intangible assets on our Consolidated Statements of Financial Position in 2015 and will reduce the amortization for the same amount over the remaining useful life of 13.5 years.

Derivatives and Hedging Activities

The authoritative guidance to determine whether a contract meets the definition of a derivative instrument, contains an embedded derivative requiring bifurcation, or qualifies for hedge accounting treatment is voluminous and complex. The treatment of a single contract may vary from period to period depending upon accounting elections, changes in our assessment of the likelihood of future hedged transactions or new interpretations of accounting guidance. As a result, judgment is required in determining the appropriate accounting treatment. In addition, the estimated fair value of derivative instruments may change significantly from period to period depending upon market conditions, and changes in hedge effectiveness may impact the accounting treatment.

The authoritative guidance related to derivatives and hedging requires that every derivative instrument (including certain derivative instruments embedded in other contracts) be recorded on the Consolidated Statements of Financial Position as either an asset or liability measured at its fair value. However, if the derivative transaction qualifies for, and is designated as, a normal purchase or normal sale, it is exempted from fair value accounting treatment and is, instead, subject to traditional accrual accounting. We utilize market data or assumptions that market participants would use in pricing the derivative asset or liability, including assumptions about risk and the risks inherent in the inputs of the valuation technique.

The authoritative accounting guidance requires that changes in the derivatives' fair value are recognized concurrently in earnings unless specific hedge accounting criteria are met. If the derivatives meet those criteria, the guidance allows derivative gains and losses to offset related results of the hedged item in the income statement in the case of a fair value hedge, or to record the gains and losses in OCI until the hedged transaction occurs in the case of a cash flow hedge. Additionally, the guidance requires that a company formally designate a derivative as a hedge as well as document and assess the effectiveness of derivatives associated with transactions that receive hedge accounting treatment.

Nicor Gas and Elizabethtown Gas utilize derivative instruments to hedge the price risk for the purchase of natural gas for customers. These derivatives are reflected at fair value and are not designated as accounting hedges. Realized gains or losses on such instruments are included in the cost of gas delivered and are passed through directly to customers, subject to review by the applicable state regulatory commissions, and therefore have no direct impact on earnings. Unrealized changes in the fair value of these derivative instruments are deferred as regulatory assets or liabilities.

We use derivative instruments primarily to reduce the impact to our results of operations due to the risk of changes in the price of natural gas. The fair value of natural gas derivative instruments used to manage our exposure to changing natural gas prices reflects the estimated amounts that we would receive or pay to terminate or close the contracts at the reporting date, taking into account the current unrealized gains or losses on open contracts. For the derivatives utilized in retail operations and wholesale services that are not designated as accounting hedges, changes in fair value are reported as gains or losses in our results of operations in the period of change. Retail operations records derivative gains or losses arising from cash flow hedges in OCI and reclassifies them into earnings in the same period that the underlying hedged item is recognized in earnings.

Additionally, as required by the authoritative guidance, we are required to classify our derivative assets and liabilities based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy. The determination of the fair value of our derivative instruments incorporates various factors required under the guidance. These factors include:

- the credit worthiness of the counterparties involved and the impact of credit enhancements (such as cash deposits and letters of credit);
- events specific to a given counterparty; and
- the impact of our nonperformance risk on our liabilities.

We have recorded derivative instrument assets of $287 million at December 31, 2014 and $119 million at December 31, 2013. Additionally, we have recorded derivative liabilities of $93 million at December 31, 2014 and $80 million at December 31, 2013. We recorded gains on our Consolidated Statements of Income of $139 million in 2014 and $10 million in 2012 and losses of $97 million in 2013.

If there is a significant change in the underlying market prices or pricing assumptions we use in pricing our derivative assets or liabilities, we may experience a significant impact on our financial position, results of operations and cash flows. Our derivative and hedging activities are described in further detail in Note 2 and Note 5 to our consolidated financial statements under Item 8 and Item 1, "Business," herein.

Contingencies

Our accounting policies for contingencies cover a variety of activities that are incurred in the normal course of business and generally relate to contingencies for potentially uncollectible receivables, and legal and environmental exposures. We accrue for these contingencies when our assessments indicate that it is probable that a liability has been incurred or an asset will not be recovered, and an amount can be reasonably estimated. We base our estimates for these liabilities on currently available facts and our estimates of the ultimate outcome or resolution of the liability in the future.

Actual results may differ from estimates, and estimates can be, and often are, revised either negatively or positively depending on actual outcomes or changes in the facts or expectations surrounding each potential exposure. Changes in the estimates related to contingencies could have a negative impact on our consolidated results of operations, cash flows or financial position. Our contingencies are further discussed in Note 11 to our consolidated financial statements under Item 8 herein.

Pension and Welfare Plans

Our pension and welfare plan costs and liabilities are determined on an actuarial basis and are affected by numerous assumptions and estimates. We annually review the estimates and assumptions underlying our pension and welfare plan costs and liabilities and update them when appropriate. The critical actuarial assumptions used to develop the required estimates for our pension and welfare plans include the following key factors:

- assumed discount rates;
- expected return on plan assets;
- the market value of plan assets;
- assumed mortality table; and
- assumed health care costs.

The discount rate is utilized in calculating the actuarial present value of our pension and welfare obligations and our annual net pension and welfare costs. When establishing our discount rate, with the assistance of our actuaries, we consider high-grade bond indices. The single equivalent discount rate is derived by applying the appropriate spot rates based on high quality (AA or better) corporate bonds that have a yield higher than the regression mean yield curve, to the forecasted future cash flows in each year for each plan.

The expected long-term rate of return on assets is used to calculate the expected return on plan assets component of our annual pension and welfare plans costs. We estimate the expected return on plan assets by evaluating expected bond returns, equity risk premiums, asset allocations, the effects of active plan management, the impact of periodic plan asset rebalancing and historical performance. We also consider guidance from our investment advisors in making a final determination of our expected rate of return on assets. To the extent the actual rate of return on assets realized over the course of a year is greater or less than the assumed rate, it does not affect that year’s annual pension or welfare plan cost; rather, this gain or loss reduces or increases future pension or welfare plan costs.

Equity market performance and corporate bond rates have a significant effect on our reported results. For the AGL Pension Plan, market performance affects our market-related value of plan assets (MRVPA), which is a calculated value and differs from the actual market value of plan assets. The MRVPA recognizes differences between the actual market value and expected market value of our plan assets and is determined by our actuaries using a five-year smoothing weighted average methodology. Gains and losses on plan assets are spread through the MRVPA based on the five-year smoothing weighted average methodology, which affects the expected return on plan assets component of pension expense.

In addition, differences between actuarial assumptions and actual plan experience are deferred and amortized into cost when the accumulated differences exceed 10% of the greater of the projected benefit obligation (PBO) or the MRVPA for the AGL Pension Plan. The excess, if any, is amortized over the average remaining service period of active employees.

During 2014, we recorded net periodic benefit costs of $39 million (pre-capitalization) related to our defined pension and welfare benefit plans. We estimate that in 2015, we will record net periodic pension and welfare benefit costs in the range of $45 million to $49 million (pre-capitalization), a $6 million to $10 million increase compared to 2014. In determining our estimated expenses for 2015, our actuarial consultant assumed the following expected return on plan assets and discount rates:

	Pension plans	Welfare plans
Discount rate	4.2%	4.0%
Expected return on plan assets	7.75%	7.75%

The actuarial assumptions we use may differ materially from actual results due to changing market and economic conditions, higher or lower withdrawal and retirement rates, and longer or shorter life spans of participants. The following table illustrates the effect of changing the critical actuarial assumptions for our pension and welfare plans while holding all other assumptions constant:

Dollars in millions	Percentage-point change in assumption	Increase (decrease) in PBO / APBO	Increase (decrease) in cost
Expected long-term return on plan assets	+ / - 1%	$ - / -	$(9) / 9
Discount rate	+ / - 1%	$(175) / 196	$(14) / 14

During 2014, our actuary gathered industry specific data in order to assess the appropriateness of the mortality rates for different industries and analyzed our industry group mortality experience. Accordingly, in 2014 we changed the mortality table and mortality improvement scales for the calculation of our benefit obligations as of December 31, 2014. This increased our PBO and accumulated projected benefit obligation (APBO) by $26 million and $10 million, respectively, compared to 2013.

See Note 4 and Note 6 to our consolidated financial statements under Item 8 herein for additional information on our pension and welfare plans.

Income Taxes

The determination of our provision for income taxes requires significant judgment, the use of estimates and the interpretation and application of complex tax laws. Significant judgment is required in assessing the timing and amounts of deductible and taxable items. We account for income taxes in accordance with authoritative guidance, which requires that deferred tax assets and liabilities be recognized using enacted tax rates for the effect of temporary differences between the book and tax basis of recorded assets and liabilities. The guidance also requires that deferred tax assets be reduced by a valuation allowance if it is more likely than not that some or all of the deferred tax assets will not be realized.

Deferred tax liabilities are estimated based on the expected future tax consequences of items recognized in the financial statements. Additionally, during the ordinary course of business, there are many transactions and calculations for which the ultimate tax determination is uncertain. As a result, we recognize tax liabilities based on estimates of whether additional taxes and interest will be due. After application of the federal statutory tax rate to book income, judgment is required with respect to the timing and deductibility of expense in our income tax returns.

With the sale of Tropical Shipping in the third quarter of 2014, we determined that the cumulative foreign earnings of that business would no longer be indefinitely reinvested offshore. Accordingly, we recognized income tax expense of $60 million in 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded, resulting in our repatriation of $86 million in cash.

For state income tax and other taxes, judgment is also required with respect to the apportionment among the various jurisdictions. A valuation allowance is recorded if we expect that it is more likely than not that our deferred tax assets will not be realized. In addition, we operate within multiple tax jurisdictions and we are subject to audits in these jurisdictions. These audits can involve complex issues, which may require an extended period of time to resolve. We maintain a liability for the estimate of potential income tax exposure and, in our opinion, adequate provisions for income taxes have been made for all years reported.

We had a $20 million valuation allowance on $307 million of deferred tax assets ($218 million of long-term and $89 million of current) as of December 31, 2014, reflecting the expectation that a majority of these assets will be realized. Our gross long-term deferred tax liability totaled $1,928 million at December 31, 2014. See Note 12 to our consolidated financial statements under Item 8 herein for additional information on our taxes.

We are required to determine whether tax benefits claimed or expected to be claimed on our tax return should be recorded in our consolidated financial statements. Under this guidance, we may recognize the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained on examination by the taxing authorities based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position should be measured based on the largest benefit that has a greater than 50% likelihood of being realized upon ultimate settlement.

Additionally, we recognize accrued interest related to uncertain tax positions in interest expense, and penalties in operating expense in the Consolidated Statements of Income. As of December 31, 2014, we did not have a liability recorded for payment of interest and penalties associated with uncertain tax positions.

Accounting Developments

See “Accounting Developments” in Note 2 to our consolidated financial statements under Item 8 herein.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to risks associated with natural gas prices, interest rates, credit and fuel prices. Natural gas price risk results from changes in the fair value of natural gas. Interest rate risk is caused by fluctuations in interest rates related to our portfolio of debt instruments and equity that we issue to provide financing and liquidity for our business. Credit risk results from the extension of credit throughout all aspects of our business, but is particularly concentrated at Atlanta Gas Light in distribution operations and in wholesale services. We use derivative instruments to manage these risks. Our use of derivative instruments is governed by a risk management policy, approved and monitored by our Risk Management Committee (RMC), which prohibits the use of derivatives for speculative purposes.

Our RMC is responsible for establishing the overall risk management policies and monitoring compliance with, and adherence to, the terms within these policies, including approval and authorization levels and delegation of these levels. Our RMC consists of members of senior management who monitor open natural gas price risk positions and other types of risk, corporate exposures, credit exposures and overall results of our risk management activities. It is chaired by our chief risk officer, who is responsible for ensuring that appropriate reporting mechanisms exist for the RMC to perform its monitoring functions.

Weather and Natural Gas Price Risks

Distribution Operations Our utilities, excluding Atlanta Gas Light, are authorized to use natural gas cost recovery mechanisms that allow them to adjust their rates to reflect changes in the wholesale cost of natural gas and to ensure they recover 100% of the costs incurred in purchasing gas for their customers. Since Atlanta Gas Light does not sell natural gas directly to its end-use customers, it has no natural gas price risk.

Nicor Gas and Elizabethtown Gas enter into derivative instruments to hedge the impact of market fluctuations in natural gas prices for customers. These derivatives are reflected at fair value and are not designated as hedges. Realized gains or losses on such instruments are included in the cost of gas delivered and are passed through directly to customers and therefore have no direct impact on earnings. Realized and unrealized changes in the fair value of these derivative instruments are deferred as regulatory assets or liabilities until recovered from or credited to our customers.

For our Illinois weather risk associated with Nicor Gas, we have a corporate weather hedging program that utilizes weather derivatives to reduce the risk of lower operating margins potentially resulting from significantly warmer-than-normal weather. For more information, see Note 2 to the consolidated financial statements under Item 8 herein.

Retail Operations and Wholesale Services We routinely utilize various types of derivative instruments to mitigate certain natural gas price and weather risks inherent in the natural gas industry. These instruments include a variety of exchange-traded and OTC energy contracts, such as forward contracts, futures contracts, options contracts and swap agreements. Retail operations and wholesale services also actively manage storage positions through a variety of hedging transactions for the purpose of managing exposures arising from changing natural gas prices. These hedging instruments are used to substantially protect economic margins (as spreads between wholesale and retail natural gas prices widen between periods) and thereby minimize our exposure to declining operating margins.

Midstream Operations We use derivative instruments to reduce our exposure to the risk of changes in the price of natural gas that will be purchased in future periods for pad gas, conditioning gas and additional volumes of gas used to de-water our caverns (de-water gas) during the construction or expansion of storage facilities. Pad gas includes volumes of non-working natural gas used to maintain the operational integrity of the caverns. Conditioning gas is used to ready a field for use and will be sold in connection with placing the storage facility into service. De-water gas is used to remove water from the cavern in anticipation of commercial service and will be sold after completion of de-watering. We also use derivative instruments for asset optimization purposes.

Consolidated The following tables include the fair values and average values of our consolidated derivative instruments as of the dates indicated. We base the average values on monthly averages for the 12 months ended December 31, 2014 and 2013.

	Derivative instruments average values (1) **at December 31,**	
In millions	**2014**	**2013**
Asset	$152	$107
Liability	101	49

(1) Excludes cash collateral amounts.

	Derivative instruments fair values netted with cash collateral at December 31,	
In millions	**2014**	**2013**
Asset	$287	$119
Liability	93	80

The following table illustrates the change in the net fair value of our derivative instruments during the 12 months ended December 31, 2014, 2013 and 2012, and provides detail of the net fair value of contracts outstanding as of December 31, 2014, 2013 and 2012.

In millions	**2014**	**2013**	**2012**
Net fair value of derivative instruments outstanding at beginning of period	$(82)	$36	$31
Derivative instruments realized or otherwise settled during period	38	(62)	(61)
Change in net fair value of derivative instruments	105	(56)	66
Net fair value of derivative instruments outstanding at end of period	61	(82)	36
Netting of cash collateral	133	121	69
Cash collateral and net fair value of derivative instruments outstanding at end of period (1)	$194	$39	$105

(1) Net fair value of derivative instruments outstanding includes $3 million premium and associated intrinsic value at December 31, 2014 and 2013, and $4 million at December 31, 2012 associated with weather derivatives.

The sources of our net fair value at December 31, 2014 are as follows.

In millions	**Prices actively quoted (Level 1)** (1)	**Significant other observable inputs (Level 2)** (2)
Mature through 2015	$(28)	$65
Mature 2016 – 2017	7	18
Mature 2018 – 2019	(1)	-
Total derivative instruments (3)	$(22)	$83

(1) Valued using NYMEX futures prices.
(2) Valued using basis transactions that represent the cost to transport natural gas from a NYMEX delivery point to the contract delivery point. These transactions are based on quotes obtained either through electronic trading platforms or directly from brokers.
(3) Excludes cash collateral amounts.

VaR Our VaR may not be comparable to that of other entities due to differences in the factors used to calculate VaR. Our VaR is determined on a 95% confidence interval and a 1-day holding period, which means that 95% of the time, the risk of loss in a day from a portfolio of positions is expected to be less than or equal to the amount of VaR calculated. Our open exposure is managed in accordance with established policies that limit market risk and require daily reporting of potential financial exposure to senior management, including the chief risk officer. Because we generally manage physical gas assets and economically protect our positions by hedging in the futures markets, our open exposure is generally mitigated. We employ daily risk testing, using both VaR and stress testing, to evaluate the risks of our open positions.

Natural gas markets experienced unprecedented levels of high volatility and prices due to the extended extreme cold weather during the first quarter of 2014, resulting in our VaR to be at elevated levels during the quarter as compared to prior periods. We actively managed and monitored the open positions and exposures that were driving the elevated VaR levels to not only remain in compliance with established policies, but to also mitigate the operational risks of not being able to meet customer needs under these extreme conditions. As conditions moderated at the end of the quarter, our period-end VaR was consistent with historical periods. We actively monitor open commodity positions and the resulting VaR. We also continue to maintain a relatively matched book, where our total buy volume is close to our sell volume, with minimal open natural gas price risk. Based on a 95% confidence interval and employing a 1-day holding period, SouthStar's portfolio of positions for the 12 months ended December 31, 2014, 2013 and 2012 were less than $0.1 million and Sequent had the following VaRs.

In millions	**2014**	**2013**	**2012**
Period end	$4.7	$4.7	$1.8
12-month average	4.3	2.3	2.0
High	19.7	4.9	4.8
Low	1.8	1.2	1.1

Interest Rate Risk

Interest rate fluctuations expose our variable-rate debt to changes in interest expense and cash flows. Our policy is to manage interest expense using a combination of fixed-rate and variable-rate debt. Based on $1.5 billion of variable-rate debt outstanding at December 31, 2014, a 100 basis point change in market interest rates would have resulted in an increase in pre-tax interest expense of $15 million on an annualized basis.

We sometimes utilize interest rate swaps to help us achieve our desired mix of variable to fixed-rate debt. Our variable-rate debt target generally ranges from 20% to 45% of total debt. We may also use forward-starting interest rate swaps and interest rate lock agreements to lock in fixed interest rates on our forecasted issuances of debt. The objective of these hedges is to offset the variability of future payments associated with the interest rate on debt instruments we expect to issue. The gain or loss on the interest rate swaps designated as cash flow hedges is generally deferred in accumulated OCI until settlement, at which point it is amortized to interest expense over the life of the related debt. For additional information, see Note 2 and Note 5 to our consolidated financial statements under Item 8 herein.

During the fourth quarter of 2014, $120 million of our senior notes converted from a fixed interest rate to a LIBOR-based variable interest rate. During the first quarter of 2015, we executed $800 million of fixed-rate forward-starting interest rate swaps to hedge potential interest rate volatility prior to anticipated debt issuances in 2015 and 2016. We have designated the forward-starting interest rate swaps, which will be settled on the debt issuance dates, as cash flow hedges.

Credit Risk

Distribution Operations Atlanta Gas Light has a concentration of credit risk, as it bills 12 certificated and active Marketers in Georgia for its services. The credit risk exposure to Marketers varies with the time of year, with exposure at its lowest in the nonpeak summer months and highest in the peak winter months. Marketers are responsible for the retail sale of natural gas to end-use customers in Georgia. These retail functions include customer service, billing, collections, and the purchase and sale of the natural gas commodity. The provisions of Atlanta Gas Light's tariff allow Atlanta Gas Light to obtain security support in an amount equal to a minimum of two times a Marketer's highest month's estimated bill from Atlanta Gas Light. For 2014, the four largest Marketers based on customer count accounted for approximately 14% of our consolidated operating margin and 20% of distribution operations' operating margin.

Several factors are designed to mitigate our risks from the increased concentration of credit that has resulted from deregulation. In addition to the security support described above, Atlanta Gas Light bills intrastate delivery service to Marketers in advance rather than in arrears. We accept credit support in the form of cash deposits, letters of credit/surety bonds from acceptable issuers and corporate guarantees from investment-grade entities. The RMC reviews on a monthly basis the adequacy of credit support coverage, credit rating profiles of credit support providers and payment status of each Marketer. We believe that adequate policies and procedures have been put in place to properly quantify, manage and report on Atlanta Gas Light's credit risk exposure to Marketers.

Atlanta Gas Light also faces potential credit risk in connection with assignments of interstate pipeline transportation and storage capacity to Marketers. Although Atlanta Gas Light assigns this capacity to Marketers, in the event that a Marketer fails to pay the interstate pipelines for the capacity, the interstate pipelines would in all likelihood seek repayment from Atlanta Gas Light.

Our gas distribution businesses offer options to help customers manage their bills, such as energy assistance programs for low-income customers and a budget payment plan that spreads gas bills more evenly throughout the year. Customer credit risk has been substantially mitigated at Nicor Gas by the bad debt rider approved by the Illinois Commission in 2010, which provides for the recovery from (or refund to) customers of the difference between Nicor Gas' actual bad debt experience on an annual basis and the benchmark bad debt expense included in its rates for the respective year. For Virginia Natural Gas and Chattanooga Gas, we are allowed to recover the gas portion of bad debt write-offs through their gas recovery mechanisms.

Nicor Gas faces potential credit risk in connection with its natural gas sales and procurement activities to the extent a counterparty defaults on a contract to pay for or deliver at agreed-upon terms and conditions. To manage this risk, Nicor Gas maintains credit policies to determine and monitor the creditworthiness of its counterparties. In doing so, Nicor Gas seeks guarantees or collateral, in the form of cash or letters of credit, which limits its exposure to any individual counterparty and enters into netting arrangements to mitigate counterparty credit risk.

Certain of our derivative instruments contain credit-risk-related or other contingent features that could increase the payments for collateral we post in the normal course of business when our financial instruments are in net liability positions. As of December 31, 2014, for agreements with such features, our distribution operations derivative instruments with liability fair values totaled $44 million, for which we had posted $20 million of collateral to our counterparties.

Retail Operations We obtain credit scores for our firm residential and small commercial customers using a national credit reporting agency, enrolling only those customers that meet or exceed our credit threshold. We consider potential interruptible and large commercial customers based on reviews of publicly available financial statements and commercially available credit reports. Prior to entering into a physical transaction, we also assign physical wholesale counterparties an internal credit rating and credit limit based on the counterparties' Moody's, S&P and Fitch ratings, commercially available credit reports and audited financial statements.

Wholesale Services We have established credit policies to determine and monitor the creditworthiness of counterparties, as well as the quality of pledged collateral. We also utilize master netting agreements whenever possible to mitigate exposure to counterparty credit risk. When we are engaged in more than one outstanding derivative transaction with the same counterparty and we also have a legally enforceable netting agreement with that counterparty, the "net" mark-to-market exposure represents the netting of the positive and negative exposures with that counterparty and a reasonable measure of our credit risk. We also use other netting agreements with certain counterparties with whom we conduct significant transactions. Master netting agreements enable us to net certain assets and liabilities by counterparty. We also net across product lines and against cash collateral, provided the master netting and cash collateral agreements include such provisions.

Additionally, we may require counterparties to pledge additional collateral when deemed necessary. We conduct credit evaluations and obtain appropriate internal approvals for a counterparty's line of credit before any transaction with the counterparty is executed. In most cases, the counterparty must have an investment grade rating, which includes a minimum long-term debt rating of Baa3 from Moody's and BBB- from S&P. Generally, we require credit enhancements by way of guaranty, cash deposit or letter of credit for transaction counterparties that do not have investment grade ratings.

We have a concentration of credit risk as measured by our 30-day receivable exposure plus forward exposure. As of December 31, 2014, our top 20 counterparties represented approximately 55% of the total counterparty exposure of $665 million, excluding $6 million of customer deposits.

As of December 31, 2014, our counterparties, or the counterparties' guarantors, had a weighted average S&P equivalent credit rating of A-, which is consistent with the prior year. The S&P equivalent credit rating is determined by a process of converting the lower of the S&P or Moody's ratings to an internal rating ranging from 9 to 1, with 9 being equivalent to AAA/Aaa by S&P and Moody's and 1 being D or Default by S&P and Moody's. A counterparty that does not have an external rating is assigned an internal rating based on the strength of the financial ratios of that counterparty. To arrive at the weighted average credit rating, each counterparty is assigned an internal ratio, which is multiplied by their credit exposure and summed for all counterparties. The sum is divided by the aggregate total counterparties' exposures, and this numeric value is then converted to an S&P equivalent. The following table shows our third-party natural gas contracts receivable and payable positions as of December 31.

	Gross receivables		Gross payables	
In millions	**2014**	**2013**	**2014**	**2013**
Netting agreements in place:				
Counterparty is investment grade	$482	$496	$276	$265
Counterparty is non-investment grade	4	-	7	10
Counterparty has no external rating	263	260	494	393
No netting agreements in place:				
Counterparty is investment grade	30	29	-	2
Counterparty has no external rating	-	1	-	1
Amount recorded on Consolidated Statements of Financial Position	$779	$786	$777	$671

We have certain trade and credit contracts that have explicit minimum credit rating requirements. These credit rating requirements typically give counterparties the right to suspend or terminate credit if our credit ratings are downgraded to non-investment grade status. Under such circumstances, we would need to post collateral to continue transacting business with some of our counterparties. If such collateral were not posted, our ability to continue transacting business with these counterparties would be impaired. If our credit ratings had been downgraded to non-investment grade status, the required amounts to satisfy potential collateral demands under such agreements with our counterparties would have totaled $14 million at December 31, 2014, which would not have a material impact on our consolidated results of operations, cash flows or financial condition.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of AGL Resources Inc.:

In our opinion, the consolidated financial statements listed in the index appearing under Item 15(a)(1) present fairly, in all material respects, the financial position of AGL Resources Inc. and its subsidiaries at December 31, 2014 and 2013, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2014 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a)(2) presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and financial statement schedule, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express opinions on these financial statements, on the financial statement schedule, and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company’s internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company’s assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

February 11, 2015

Management’s Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of our principal executive officer and principal financial officer, management conducted an evaluation of the effectiveness of our internal control over financial reporting as of December 31, 2014, using the criteria described in the *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the “COSO Framework”).

Based on our evaluation under the COSO Framework, our management concluded that our internal control over financial reporting was effective as of December 31, 2014.

The effectiveness of our internal control over financial reporting as of December 31, 2014 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

Notes to Consolidated Financial Statements

Note 1 - Organization and Basis of Presentation

General

AGL Resources Inc. is an energy services holding company that conducts substantially all of its operations through its subsidiaries. Unless the context requires otherwise, references to “we,” “us,” “our,” the “company,” or “AGL Resources” mean consolidated AGL Resources Inc. and its subsidiaries.

Basis of Presentation

Our consolidated financial statements as of and for the period ended December 31, 2014 are prepared in accordance with GAAP and under the rules of the SEC. Our consolidated financial statements include our accounts, the accounts of our wholly owned subsidiaries, the accounts of our majority owned or otherwise controlled subsidiaries and the accounts of our variable interest entity, SouthStar, for which we are the primary beneficiary. For unconsolidated entities that we do not control, but exercise significant influence over, we primarily use the equity method of accounting and our proportionate share of income or loss is recorded on the Consolidated Statements of Income. See Note 10 for additional information. We have eliminated intercompany profits and transactions in consolidation except for intercompany profits where recovery of such amounts is probable under the affiliates’ rate regulation process.

In November 2014, we filed a 2013 Form 10-K/A to revise our financial statements and other affected disclosures for items related to the recognition of revenues for certain of our regulatory infrastructure programs and the amortization of our intangible assets as filed in our 2013 Form 10-K. Our prior period financial statements reflect the revised amounts reported in our 2013 Form 10-K/A.

In September 2014, we closed on the sale of Tropical Shipping, which historically operated within our cargo shipping segment. The assets and liabilities of these businesses are classified as held for sale on the Consolidated Statements of Financial Position, and the financial results of these businesses are reflected as discontinued operations on the Consolidated Statements of Income. Amounts shown in the following notes, unless otherwise indicated, exclude assets held for sale and discontinued operations. Cargo shipping also included our investment in Triton, which was not part of the sale and has been reclassified into our “other” non-reportable segments. See Note 14 for additional information.

Certain amounts from prior periods have been reclassified to conform to the current-period presentation. The reclassifications had no material impact on our prior-period balances.

Note 2 - Significant Accounting Policies and Methods of Application

Cash and Cash Equivalents

Our cash and cash equivalents primarily consist of cash on deposit, money market accounts and certificates of deposit held by domestic subsidiaries with original maturities of three months or less. As of December 31, 2013, $24 million of cash and cash equivalents within our Consolidated Statements of Financial Position held by Tropical Shipping were excluded from cash and cash equivalents and included in assets held for sale. Prior to closing the sale, cash and short-term investments that were held in off-shore accounts were repatriated. See Note 12 and Note 14 for additional information on our income taxes on the cumulative foreign earnings for which no tax liability had previously been recorded.

Energy Marketing Receivables and Payables

Our wholesale services segment provides services to retail and wholesale marketers and utility and industrial customers. These customers, also known as counterparties, utilize netting agreements that enable our wholesale services segment to net receivables and payables by counterparty upon settlement. Wholesale services also nets across product lines and against cash collateral, provided the master netting and cash collateral agreements include such provisions. While the amounts due from, or owed to, wholesale services’ counterparties are settled net, they are recorded on a gross basis in our Consolidated Statements of Financial Position as energy marketing receivables and energy marketing payables.

Our wholesale services segment has trade and credit contracts that contain minimum credit rating requirements. These credit rating requirements typically give counterparties the right to suspend or terminate credit if our credit ratings are downgraded to non-investment grade status. Under such circumstances, wholesale services would need to post collateral to continue transacting business with some of its counterparties. To date, our credit ratings have exceeded the minimum requirements. As of December 31, 2014 and 2013, the collateral that wholesale services would have been required to post if our credit ratings had been downgraded to non-investment grade status would not have had a material impact to our consolidated results of operations, cash flows or financial condition. If such collateral were not posted, wholesale services’ ability to continue transacting business with these counterparties would be negatively impacted.

Wholesale services has a concentration of credit risk for services it provides to marketers and to utility and industrial counterparties. This credit risk is generally concentrated in 20 of its counterparties and is measured by 30-day receivable exposure plus forward exposure. We evaluate the credit risk of our counterparties using an S&P equivalent credit rating, which is determined by a process of converting the lower of the S&P or Moody's rating to an internal rating ranging from 9 to 1, with 9 being equivalent to AAA/Aaa by S&P and Moody's and 1 being equivalent to D/Default by S&P and Moody's. A counterparty that does not have an external rating is assigned an internal rating based on the strength of its financial ratios. As of December 31, 2014, our top 20 counterparties represented 55%, or $367 million, of our total counterparty exposure and had a weighted average S&P equivalent rating of A-.

We have established credit policies to determine and monitor the creditworthiness of counterparties, including requirements for posting of collateral or other credit security, as well as the quality of pledged collateral. Collateral or credit security is most often in the form of cash or letters of credit from an investment-grade financial institution, but may also include cash or U.S. government securities held by a trustee. When wholesale services is engaged in more than one outstanding derivative transaction with the same counterparty and it also has a legally enforceable netting agreement with that counterparty, the "net" mark-to-market exposure represents the netting of the positive and negative exposures with that counterparty combined with a reasonable measure of our credit risk. Wholesale services also uses other netting agreements with certain counterparties with whom it conducts significant transactions.

Receivables and Allowance for Uncollectible Accounts

Our other trade receivables consist primarily of natural gas sales and transportation services billed to residential, commercial, industrial and other customers. We bill customers monthly, and our accounts receivable are due within 30 days. For the majority of our receivables, we establish an allowance for doubtful accounts based on our collection experience and other factors. For our remaining receivables, if we are aware of a specific customer's inability or reluctance to pay, we record an allowance for doubtful accounts against amounts due to reduce the receivable balance to the amount we reasonably expect to collect. If circumstances change, our estimate of the recoverability of accounts receivable could change as well. Circumstances that could affect our estimates include, but are not limited to, customer credit issues, customer deposits and general economic conditions. Customers' accounts are written off once we deem them to be uncollectible.

Nicor Gas Credit risk exposure at Nicor Gas is mitigated by a bad debt rider approved by the Illinois Commission. The bad debt rider provides for the recovery from (or refund to) customers of the difference between Nicor Gas' actual bad debt experience on an annual basis and the benchmark bad debt expense used to establish its base rates for the respective year. See Note 3 for additional information on the bad debt rider.

Atlanta Gas Light Concentration of credit risk occurs at Atlanta Gas Light for amounts billed for services and other costs to its customers, which consist of 12 Marketers in Georgia. The credit risk exposure to Marketers varies seasonally, with the lowest exposure in the nonpeak summer months and the highest exposure in the peak winter months. Marketers are responsible for the retail sale of natural gas to end-use customers in Georgia. The functions of the retail sale of gas include the purchase and sale of natural gas, customer service, billings and collections. We obtain credit security support in an amount equal to no less than two times a Marketer's highest month's estimated bill from Atlanta Gas Light.

Inventories

For our regulated utilities, except Nicor Gas, our natural gas inventories and the inventories we hold for Marketers in Georgia are carried at cost on a WACOG basis. In Georgia's competitive environment, Marketers sell natural gas to firm end-use customers at market-based prices. Part of the unbundling process, which resulted from deregulation and provides this competitive environment, is the assignment to Marketers of certain pipeline services that Atlanta Gas Light has under contract. On a monthly basis, Atlanta Gas Light assigns the majority of the pipeline storage services that it has under contract to Marketers, along with a corresponding amount of inventory. Atlanta Gas Light also retains and manages a portion of its pipeline storage assets and related natural gas inventories for system balancing and to serve system demand. See Note 11 for information regarding a regulatory filing by Atlanta Gas Light related to gas inventory.

Nicor Gas' inventory is carried at cost on a LIFO basis. Inventory decrements occurring during the year that are restored prior to year end are charged to cost of goods sold at the estimated annual replacement cost. Inventory decrements that are not restored prior to year end are charged to cost of goods sold at the actual LIFO cost of the layers liquidated. Since the cost of gas, including inventory costs, is charged to customers without markup, subject to Illinois Commission review, LIFO liquidations have no impact on net income. At December 31, 2014, the Nicor Gas LIFO inventory balance was $141 million. Based on the average cost of gas purchased in December 2014, the estimated replacement cost of Nicor Gas' inventory at December 31, 2014 was $346 million, which exceeded the LIFO cost by $205 million. During 2014, we liquidated 6.8 Bcf of our LIFO-based inventory at an average cost per million cubic feet (Mcf) of $3.98. For gas purchased in 2014, our average cost per Mcf was $1.33 higher than the average LIFO liquidation rate. Applying LIFO cost in valuing the liquidation, as opposed to using the average gas purchase cost, had the effect of decreasing the cost of gas in 2014 by $9 million.

Our retail operations, wholesale services and midstream operations segments carry inventory at the lower of cost or market value, where cost is determined on a WACOG basis. For these segments, we evaluate the weighted average cost of their natural gas inventories against market prices to determine whether any declines in market prices below the

WACOG are other than temporary. As indicated in the following LOCOM table, for any declines considered to be other than temporary, we record these pre-tax adjustments to our Consolidated Statements of Income to reduce the weighted average cost of the natural gas inventory to market value.

In millions	**2014**	**2013**	**2012**
Retail operations	$4	$1	$3
Wholesale services (1)	73	8	19
Midstream operations	-	-	1
Total	$77	$9	$23

(1) The increase in 2014 was due to a significant decline in natural gas prices in December 2014.

Additionally, we have $17 million of inventory at wholesale services that is currently inaccessible due to operational issues at a third-party storage facility. The owner of the storage facility is working to resolve these issues. While we expect this inventory to be fully recovered, the timing of withdrawal of this gas may be impacted by the operational issues.

At midstream operations, mechanical integrity tests and engineering studies are periodically performed on the storage facilities in accordance with certain state regulatory requirements. During 2014, an engineering study and mechanical integrity tests were performed at one of our storage facilities, identifying a lower amount of working gas capacity that is the result of naturally occurring shrinkage of the storage caverns. Further, based on the lower capacity and an analysis of the volume of natural gas stored in the facility, we recorded natural gas costs to true-up the amount of retained fuel at this facility in the amount of $10 million. Our other storage facilities at midstream operations were not impacted.

Regulated Operations

We account for the financial effects of regulation in accordance with authoritative guidance related to regulated entities whose rates are designed to recover the costs of providing service. In accordance with this guidance, incurred costs that would otherwise be charged to expense in the current period are capitalized as regulatory assets when it is probable that such costs will be recovered in rates in the future. Similarly, we recognize regulatory liabilities when it is probable that regulators will require customer refunds through future rates or when revenue is collected from customers for estimated expenditures that have not yet been incurred. Generally, regulatory assets and regulatory liabilities are amortized into our Consolidated Statements of Income over the period authorized by the regulatory commissions.

Fair Value Measurements

We have financial and nonfinancial assets and liabilities subject to fair value measurement. The financial assets and liabilities measured and carried at fair value include cash and cash equivalents, and derivative assets and liabilities. The carrying values of receivables, short and long-term investments, accounts payable, short-term debt, other current assets and liabilities, and accrued interest approximate fair value. Our nonfinancial assets and liabilities include pension and other retirement benefits. See Note 4 for additional fair value disclosures.

As defined in the authoritative guidance related to fair value measurements and disclosures, fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (exit price). We utilize market data or assumptions that market participants would use in valuing the asset or liability, including assumptions about risk and the risks inherent in the inputs to the valuation technique. These inputs can be readily observable, market corroborated or generally unobservable. We primarily apply the market approach for recurring fair value measurements to utilize the best available information. Accordingly, we use valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. We classify fair value balances based on the observance of those inputs. The guidance establishes a fair value hierarchy that prioritizes the inputs used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy defined by the guidance are as follows:

Level 1 Quoted prices in active markets for identical assets or liabilities as of the reporting date. Active markets are those in which transactions for the asset or liability occur in sufficient frequency and volume to provide pricing information on an ongoing basis. Our Level 1 items consist of exchange-traded derivatives, money market funds and certain retirement plan assets.

Level 2 Pricing inputs are other than quoted prices in active markets included in Level 1, which are either directly or indirectly observable as of the reporting date. Level 2 includes those financial and commodity instruments that are valued using valuation methodologies. These methodologies are primarily industry-standard methodologies that consider various assumptions, including quoted forward prices for commodities, time value, volatility factors, and current market and contractual prices for the underlying instruments, as well as other relevant economic measures. Substantially all of these assumptions are observable in the marketplace throughout the full term of the instrument, can be derived from observable data or are supported by observable levels at which transactions are executed in the marketplace. We obtain market price data from multiple sources in order to value some of our Level 2 transactions and this data is representative of transactions that occurred in the marketplace. Instruments in this category include shorter tenor exchange-traded and non-exchange-traded derivatives such as OTC forwards and options and certain retirement plan assets.

Level 3 Pricing inputs include significant unobservable inputs that may be used with internally developed methodologies to determine management's best estimate of fair value from the perspective of market participants. Level 3 instruments include those that may be more structured or otherwise tailored to customers' needs. Our Level 3 assets, liabilities and any applicable transfers are primarily related to our pension and welfare benefit plan assets as described in Note 4 and Note 6. We determine both transfers into and out of Level 3 using values at the end of the interim period in which the transfer occurred.

The authoritative guidance related to fair value measurements and disclosures also includes a two-step process to determine whether the market for a financial asset is inactive or a transaction is distressed. Currently, this authoritative guidance does not affect us, as our derivative instruments are traded in active markets.

Derivative Instruments

Our policy is to classify derivative cash flows and gains and losses within the same financial statement category as the hedged item, rather than by the nature of the instrument.

Fair Value Hierarchy Derivative assets and liabilities are classified in their entirety into the previously described fair value hierarchy levels based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy levels. The measurement of fair value incorporates various factors required under the guidance. These factors include not only the credit standing of the counterparties involved and the impact of credit enhancements (such as cash deposits, letters of credit and priority interests), but also the impact of our own nonperformance risk on our liabilities. To mitigate the risk that a counterparty to a derivative instrument defaults on settlement or otherwise fails to perform under contractual terms, we have established procedures to monitor the creditworthiness of counterparties, seek guarantees or collateral backup in the form of cash or letters of credit and, in most instances, enter into netting arrangements. See Note 4 for additional fair value disclosures.

Netting of Cash Collateral and Derivative Assets and Liabilities under Master Netting Arrangements We maintain accounts with brokers to facilitate financial derivative transactions in support of our energy marketing and risk management activities. Based on the value of our positions in these accounts and the associated margin requirements, we may be required to deposit cash into these broker accounts.

We have elected to net derivative assets and liabilities under master netting arrangements on our Consolidated Statements of Financial Position. With that election, we are also required to offset cash collateral held in our broker accounts with the associated net fair value of the instruments in the accounts. See Note 4 for additional information about our cash collateral.

Natural Gas and Weather Derivative Instruments The fair value of the natural gas derivative instruments that we use to manage exposures arising from changing natural gas prices and weather risk reflects the estimated amounts that we would receive or pay to terminate or close the contracts at the reporting date, taking into account the current unrealized gains or losses on open contracts. We use external market quotes and indices to value substantially all of our derivative instruments. See Note 5 for additional derivative disclosures.

Distribution Operations Nicor Gas, subject to review by the Illinois Commission, and Elizabethtown Gas, in accordance with a directive from the New Jersey BPU, enter into derivative instruments to hedge the impact of market fluctuations in natural gas prices. In accordance with regulatory requirements, any realized gains and losses related to these derivatives are reflected in natural gas costs and ultimately included in billings to customers. As previously noted, such derivative instruments are reported at fair value each reporting period in our Consolidated Statements of Financial Position. Hedge accounting is not elected and, in accordance with accounting guidance pertaining to rate-regulated entities, unrealized changes in the fair value of these derivative instruments are deferred or accrued as regulatory assets or liabilities until the related revenue is recognized.

For our Illinois weather risk associated with Nicor Gas, we have a corporate weather hedging program that utilizes weather derivatives to reduce the risk of lower operating margins potentially resulting from significantly warmer-than-normal weather in Illinois and is carried at intrinsic value. We will continue to use available methods to mitigate our exposure to weather in Illinois.

Retail Operations We have designated a portion of our derivative instruments, consisting of financial swaps to manage the risk associated with forecasted natural gas purchases and sales, as cash flow hedges. We record derivative gains or losses arising from cash flow hedges in OCI and reclassify them into earnings in the same period that the underlying hedged item is recognized in earnings.

We currently have minimal hedge ineffectiveness, which occurs when the gains or losses on the hedging instrument more than offset the losses or gains on the hedged item. Any cash flow hedge ineffectiveness is recorded in our Consolidated Statements of Income in the period in which it occurs. We have not designated the remainder of our derivative instruments as hedges for accounting purposes and, accordingly, we record changes in the fair values of such instruments within cost of goods sold in our Consolidated Statements of Income in the period of change.

We also enter into weather derivative contracts as economic hedges of operating margins in the event of warmer-than-normal weather in the Heating Season. Exchange-traded options are carried at fair value, with changes reflected in operating revenues. Non exchange-traded options are accounted for using the intrinsic value method and do not qualify for hedge accounting designation. Changes in the intrinsic value for non exchange-traded contracts are also reflected in operating revenues in our Consolidated Statements of Income.

Wholesale Services We purchase natural gas for storage when the current market price we pay to buy and transport natural gas plus the cost to store and finance the natural gas is less than the market price we can receive in the future, resulting in a positive net operating margin. We use NYMEX futures and OTC contracts to sell natural gas at that future price to substantially protect the operating margin we will ultimately realize when the stored natural gas is sold. We also enter into transactions to secure transportation capacity between delivery points in order to serve our customers and various markets. We use NYMEX futures and OTC contracts to capture the price differential or spread between the locations served by the capacity in order to substantially protect the operating margin we will ultimately realize when we physically flow natural gas between delivery points. These contracts generally meet the definition of derivatives and are carried at fair value in our Consolidated Statements of Financial Position, with changes in fair value recorded in operating revenues in our Consolidated Statements of Income in the period of change. These contracts are not designated as hedges for accounting purposes.

The purchase, transportation, storage and sale of natural gas are accounted for on a weighted average cost or accrual basis, as appropriate, rather than on the fair value basis we utilize for the derivatives used to mitigate the natural gas price risk associated with our storage and transportation portfolio. We incur monthly demand charges for the contracted storage and transportation capacity, and payments associated with asset management agreements, and we recognize these demand charges and payments in our Consolidated Statements of Income in the period they are incurred. This difference in accounting methods can result in volatility in our reported earnings, even though the economic margin is substantially unchanged from the dates the transactions were consummated.

Debt We estimate the fair value of debt using a discounted cash flow technique that incorporates a market interest yield curve with adjustments for duration, optionality and risk profile. In determining the market interest yield curve, we consider our currently assigned ratings for unsecured debt and the secured rating for the Nicor Gas first mortgage bonds.

Property, Plant and Equipment

A summary of our PP&E by classification as of December 31, 2014 and 2013 is provided in the following table.

In millions	**2014**	**2013**
Transportation and distribution	$9,105	$8,371
Storage facilities	1,202	1,170
Other	919	854
Construction work in progress	326	543
Total PP&E, gross	11,552	10,938
Less accumulated depreciation	2,462	2,295
Total PP&E, net	$9,090	$8,643

Distribution Operations Our natural gas utilities' PP&E consists of property and equipment that is currently in use, being held for future use and currently under construction. We report PP&E at its original cost, which includes:

- material and labor;
- contractor costs;
- construction overhead costs;
- AFUDC; and,
- Nicor Gas' pad gas - the portion considered to be non-recoverable is recorded as depreciable PP&E, while the portion considered to be recoverable is recorded as non-depreciable PP&E.

We recognize no gains or losses on depreciable utility property that is retired or otherwise disposed, as required under the composite depreciation method. Such gains and losses are ultimately refunded to, or recovered from, customers through future rate adjustments. Our natural gas utilities also hold property, primarily land; this is not presently used and useful in utility operations and is not included in rate base. Upon sale, any gain or loss is recognized in other income.

Retail Operations, Wholesale Services, Midstream Operations and Other PP&E includes property that is in use and under construction, and we report it at cost. We record a gain or loss within operation and maintenance expense for retired or otherwise disposed-of property. Natural gas in salt-dome storage at Jefferson Island and Golden Triangle that is retained as pad gas is classified as non-depreciable PP&E and is carried at cost. Central Valley has two types of pad gas in its depleted reservoir storage facility: The first is non-depreciable PP&E, which is carried at cost, and the second is non-recoverable, over which we have no contractual ownership.

On April 11, 2014, we entered into two arrangements associated with the Dalton Pipeline. The first was a construction and ownership agreement through which we will have a 50% undivided ownership interest in the 106 mile Dalton Pipeline that will be constructed in Georgia and serve as an extension of the Transco natural gas pipeline system into northwest Georgia. We also entered into an agreement to lease our 50% undivided ownership in the Dalton Pipeline once it is placed in service. The lease payments to be received are $26 million annually for an initial term of 25 years. The lessee will be responsible for maintaining the pipeline during the lease term and for providing service to transportation customers under its FERC-regulated tariff. Engineering design work has commenced and construction is expected to begin in the second quarter of 2016 with a targeted completion date in the second quarter of 2017. The capacity from this pipeline will further enhance system reliability as well as provide access to a more diverse supply of natural gas.

Depreciation Expense

We compute depreciation expense for distribution operations by applying composite, straight-line rates (approved by the state regulatory agencies) to the investment in depreciable property. More information on our rates used and the rate method is provided in the following table.

	2014	2013	2012
Atlanta Gas Light (1)	2.3%	2.6%	2.6%
Chattanooga Gas (1)	2.5%	2.5%	2.5%
Elizabethtown Gas (2)	2.5%	2.4%	2.4%
Elkton Gas (2)	2.8%	2.4%	2.4%
Florida City Gas (2)	3.9%	3.8%	3.9%
Nicor Gas (2) (3)	3.1%	3.1%	4.1%
Virginia Natural Gas (1)	2.5%	2.5%	2.5%

(1) Average composite straight-line depreciation rates for depreciable property, excluding transportation equipment, which may be depreciated in excess of useful life and recovered in rates.
(2) Composite straight-line depreciation rates.
(3) In October 2013, the Illinois Commission approved a composite depreciation rate of 3.07%. The depreciation rate was effective as of August 30, 2013, the date the depreciation study was filed, and had the effect of reducing our 2014 and 2013 depreciation expense by $51 million and $19 million, respectively.

For our non-regulated segments, we compute depreciation expense on a straight-line basis over the following estimated useful lives of the assets.

In years	Estimated useful life
Transportation equipment	5 – 10
Storage caverns	40 – 60
Other	up to 40

AFUDC and Capitalized Interest

Atlanta Gas Light, Nicor Gas, Chattanooga Gas and Elizabethtown Gas are authorized by applicable state regulatory agencies or legislatures to capitalize the cost of debt and equity funds as part of the cost of PP&E construction projects in our Consolidated Statements of Financial Position. The capital expenditures of our other three utilities do not qualify for AFUDC treatment. More information on our authorized or actual AFUDC rates is provided in the following table.

	2014	2013	2012
Atlanta Gas Light	8.10%	8.10%	8.10%
Nicor Gas (1)	0.24%	0.31%	0.36%
Chattanooga Gas	7.41%	7.41%	7.41%
Elizabethtown Gas (1)	0.44%	0.41%	0.51%
AFUDC (*in millions*) (2)	$7	$18	$8

(1) Variable rate is determined by FERC method of AFUDC accounting.
(2) Amount recorded in the Consolidated Statements of Income.

Asset Retirement Obligations

We record a liability at fair value for an asset retirement obligation (ARO) when a legal obligation to retire the asset has been incurred, with an offsetting increase to the carrying value of the related asset. Accretion of the ARO due to the passage of time is recorded as an operating expense. We have recorded an ARO of $3 million at December 31, 2014 and 2013 principally for our storage facilities. For our distribution PP&E, we cannot reasonably estimate the fair value of this obligation because we have determined that we have insufficient internal or industry information to reasonably estimate the potential settlement dates or costs.

Impairment of Assets

Our goodwill is not amortized, but is subject to an annual impairment test. Our other long-lived assets, including our finite-lived intangible assets, require an impairment review when events or circumstances indicate that the carrying amount may not be recoverable. We base our evaluation of the recoverability of other long-lived assets on the presence of impairment indicators such as the future economic benefit of the assets, any historical or future profitability measurements and other external market conditions or factors.

Goodwill We perform an annual goodwill impairment test on our reporting units that contain goodwill during the fourth quarter of each year, or more frequently if impairment indicators arise. These indicators include, but are not limited to, a significant change in operating performance, the business climate, legal or regulatory factors, or a planned sale or disposition of a significant portion of the business. To estimate the fair value of our reporting units, we use two generally accepted valuation approaches, the income approach and the market approach, using assumptions consistent with a market participant's perspective.

Under the income approach, fair value is estimated based on the present value of estimated future cash flows discounted at an appropriate risk-free rate that takes into consideration the time value of money, inflation and the risks inherent in ownership of the business being valued. The cash flow estimates contain a degree of uncertainty, and changes in the projected cash flows could significantly increase or decrease the estimated fair value of a reporting unit. For the regulated reporting units, a fair recovery of, and return on, costs prudently incurred to serve customers is assumed. An unfavorable outcome in a rate case could cause the fair value of these reporting units to decrease. Key assumptions used in the income approach include the return on equity for the regulated reporting units, long-term growth rates used to determine terminal values at the end of the discrete forecast period, current and future rates charged for contracted capacity and a discount rate. The discount rate is applied to estimated future cash flows and is one of the most significant assumptions used to determine fair value under the income approach. As interest rates rise, the calculated fair values will decrease. The terminal growth rate is based on a combination of historical and forecasted statistics for real gross domestic product and personal income for each utility service area. The estimated rates we will charge to customers for capacity in the storage caverns were based on internal and external rate forecasts.

Under the market approach, fair value is estimated by applying multiples to forecasted cash flows. This method uses metrics from similar publicly traded companies in the same industry, when available, to determine how much a knowledgeable investor in the marketplace would be willing to pay for an investment in a similar company.

We weight the results of the two valuation approaches to estimate the fair value of each reporting unit. Our goodwill impairment testing also develops a baseline test and performs a sensitivity analysis to calculate a reasonable valuation range. The sensitivities are derived by altering those assumptions that are subjective in nature and inherent to a discounted cash flows calculation.

The significant assumptions that drive the estimated values of our reporting units are projected cash flows, discount rates, growth rates, weighted average cost of capital (WACC) and market multiples. Due to the subjectivity of these assumptions, we cannot provide assurance that future analyses will not result in impairment, as a future impairment depends on market and economic factors affecting fair value. Our annual goodwill impairment analysis in the fourth quarter of 2014 indicated that the estimated fair values of all but one of our reporting units with goodwill were in excess of the carrying values by approximately 30% to over 600%, and were not at risk of failing step one of the impairment test.

Within our midstream operations segment, the estimated fair value of our storage and fuels reporting unit with $14 million of goodwill, exceeded its carrying value by less than 5% and is at risk of failing the step one test. The discounted cash flow model used in the goodwill impairment test for this reporting unit assumed discrete period revenue growth through fiscal 2023 to reflect the recovery of subscription rates, stabilization of earnings and establishment of a reasonable base year off of which we estimated the terminal value. In the terminal year, we assumed a long-term earnings growth rate of 2.5%, which is consistent with our 2013 annual goodwill impairment test, and we believe is appropriate given the current economic and industry specific expectations. As of the valuation date, we utilized a WACC of 7.0%, which we believe is appropriate as it reflects the relative risk, the time value of money, and is consistent with the peer group of this reporting unit as well as the discount rate that was utilized in our 2013 annual goodwill impairment test.

The cash flow forecast for the storage and fuels reporting unit assumed earnings growth over the next nine years. Should this growth not occur, this reporting unit may fail step one of a goodwill impairment test in a future period. Along with any reductions to our cash flow forecast, changes in other key assumptions used in our 2014 annual impairment analysis may result in the requirement to proceed to step two of the goodwill impairment test in future periods.

We will continue to monitor this reporting unit for impairment and note that continued declines in capacity or subscription rates, declines for a sustained period at the current market rates or other changes to the key assumptions and factors used in this analysis may result in a future impairment of goodwill. The amounts of goodwill as of December 31, 2014 and 2013 are provided below. In 2013, our goodwill increased by $51 million for an acquisition in our retail operations segment. For 2013, the goodwill at Tropical Shipping was classified as held for sale. See Note 14 for additional information.

In millions	**Distribution operations**	**Retail operations**	**Wholesale services**	**Midstream operations**	**Other**	**Consolidated**
Goodwill - December 31, 2014 and 2013	$1,640	$173	$-	$14	$-	$1,827

Long-Lived Assets We depreciate or amortize our long-lived assets and other intangible assets over their useful lives. We have no significant indefinite-lived intangible assets. These long-lived assets and other intangible assets are reviewed for impairment when events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. When such events or circumstances are present, we assess the recoverability of long-lived assets by determining whether the carrying value will be recovered through expected future cash flows. Impairment is indicated if the carrying amount of the long-lived asset exceeds the sum of the undiscounted future cash flows expected to result from the use and eventual disposition of the asset. If impairment is indicated, we record an impairment loss equal to the difference between the carrying value and the fair value of the long-lived asset.

We determined that there were no long-lived asset impairments in 2014; however, our Golden Triangle storage facility within midstream operations currently has less than a 5% cushion of its undiscounted cash flows over its book value. Accordingly, if it experiences further natural gas price declines or a prolonged slow recovery, future analyses may result in an impairment of these long-lived assets. We will continue to monitor the storage assets in midstream operations. In 2013, we recorded an $8 million loss related to Sawgrass Storage.

Intangible Assets Our intangible assets within our retail operations segment are presented in the following table and represent the estimated fair value at the date of acquisition of the acquired intangible assets in our businesses. As indicated previously, we perform an impairment review when impairment indicators are present. If present, we first determine whether the carrying amount of the asset is recoverable through the undiscounted future cash flows expected from the asset. If the carrying amount is not recoverable, we measure the impairment loss, if any, as the amount by which the carrying amount of the asset exceeds its fair value.

In millions	**Weighted average amortization period** (in years)	**December 31, 2014** Gross	Accumulated amortization	Net	**December 31, 2013** Gross	Accumulated amortization	Net
Customer relationships	13	$130	$(42)	$88	$130	$(25)	$105
Trade names	13	45	(8)	37	45	(5)	40
Total		$175	$(50)	$125	$175	$(30)	$145

We amortize these intangible assets in a manner in which the economic benefits are consumed utilizing the undiscounted cash flows that were used in the determination of their fair values. Amortization expense was $20 million in 2014, $18 million in 2013 and $13 million in 2012. Amortization expense for the next five years is as follows:

In millions	**Amortization Expense**
2015	$17
2016	15
2017	14
2018	13
2019	11

Accounting for Retirement Benefit Plans

We recognize the funded status of our plans as an asset or a liability on our Consolidated Statements of Financial Position, measuring the plans' assets and obligations that determine our funded status as of the end of the fiscal year. We generally recognize, as a component of OCI, the changes in funded status that occurred during the year that are not yet recognized as part of net periodic benefit cost. Because substantially all of its retirement costs are recoverable through base rates, Nicor Gas defers the change in funded status that would normally be charged or credited to comprehensive income to a regulatory asset or liability until the period in which the costs are included in base rates, in accordance with the authoritative guidance for rate-regulated entities. The assets of our retirement plans are measured at fair value within the funded status and are classified in the fair value hierarchy in their entirety based on the lowest level of input that is significant to the fair value measurement.

In determining net periodic benefit cost, the expected return on plan assets component is determined by applying our expected return on assets to a calculated asset value, rather than to the fair value of the assets as of the end of the previous fiscal year. For more information, see Note 6. In addition, we have elected to amortize gains and losses caused by actual experience that differs from our assumptions into subsequent periods. The amount to be amortized is the amount of the cumulative gain or loss as of the beginning of the year, excluding those gains and losses not yet reflected in the calculated value, that exceeds 10 percent of the greater of the benefit obligation or the calculated asset value; and the amortization period is the average remaining service period of active employees.

Taxes

Income Taxes The reporting of our assets and liabilities for financial accounting purposes differs from the reporting for income tax purposes. The principal difference between net income and taxable income relates to the timing of deductions, primarily due to the benefits of tax depreciation since we generally depreciate assets for tax purposes over a shorter period of time than for book purposes. The determination of our provision for income taxes requires significant judgment, the use of estimates, and the interpretation and application of complex tax laws. Significant judgment is required in assessing the timing and amounts of deductible and taxable items. We report the tax effects of depreciation and other temporary differences as deferred income tax assets or liabilities in our Consolidated Statements of Financial Position.

We have current and deferred income taxes in our Consolidated Statements of Income. Current income tax expense consists of federal and state income tax less applicable tax credits related to the current year. Deferred income tax expense is generally equal to the changes in the deferred income tax liability and regulatory tax liability during the year.

Accumulated Deferred Income Tax Assets and Liabilities As noted above, we report some of our assets and liabilities differently for financial accounting purposes than we do for income tax purposes. We report the tax effects of the differences in those items as deferred income tax assets or liabilities in our Consolidated Statements of Financial Position. We measure these deferred income tax assets and liabilities using enacted income tax rates.

With the sale of Tropical Shipping in the third quarter of 2014, we determined that the cumulative foreign earnings of that business would no longer be indefinitely reinvested offshore. Accordingly, we recognized income tax expense of $60 million in 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded, resulting in our repatriation of $86 million in cash. Refer to Note 14 for additional information.

Income Tax Benefits The authoritative guidance related to income taxes requires us to determine whether tax benefits claimed or expected to be claimed on our tax return should be recorded in our consolidated financial statements. Under this guidance, we may recognize the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained upon examination by the taxing authorities, based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position should be measured based upon the largest benefit that has a greater than 50% likelihood of being realized upon ultimate settlement.

Uncertain Tax Positions We recognize accrued interest related to uncertain tax positions in interest expense and penalties in operating expense in our Consolidated Statements of Income.

Tax Collections We do not collect income taxes from our customers on behalf of governmental authorities. However, we do collect and remit various other taxes on behalf of various governmental authorities. We record these amounts in our Consolidated Statements of Financial Position. In other instances, we are allowed to recover from customers other taxes that are imposed upon us. We record such taxes as operating expenses and record the corresponding customer charges as operating revenues.

Revenues

Distribution operations We record revenues when goods or services are provided to customers. Those revenues are based on rates approved by the state regulatory commissions of our utilities.

As required by the Georgia Commission, Atlanta Gas Light bills Marketers in equal monthly installments for each residential, commercial and industrial end-use customer's distribution costs. Additionally, as required by the Georgia Commission, Atlanta Gas Light bills Marketers for capacity costs utilizing a seasonal rate design for the calculation of each residential end-use customer's annual straight-fixed-variable (SFV) charge, which reflects the historic volumetric usage pattern for the entire residential class. Generally, this seasonal rate design results in billing the Marketers a higher capacity charge in the winter months and a lower charge in the summer months, which impacts our operating cash flows. However, this seasonal billing requirement does not impact our revenues, which are recognized on a straight-line basis, because the associated rate mechanism ensures that we ultimately collect the full annual amount of the SFV charges.

All of our utilities, with the exception of Atlanta Gas Light, have rate structures that include volumetric rate designs that allow the opportunity to recover certain costs based on gas usage. Revenues from sales and transportation services are recognized in the same period in which the related volumes are delivered to customers. Revenues from residential and certain commercial and industrial customers are recognized on the basis of scheduled meter readings. Additionally, unbilled revenues are recognized for estimated deliveries of gas not yet billed to these customers, from the last bill date to the end of the accounting period. For other commercial and industrial customers and for all wholesale customers, revenues are based on actual deliveries to the end of the period.

The tariffs for Virginia Natural Gas, Elizabethtown Gas and Chattanooga Gas contain WNAs that partially mitigate the impact of unusually cold or warm weather on customer billings and operating margin. The WNAs have the effect of reducing customer bills when winter weather is colder-than-normal and increasing customer bills when weather is warmer-than-normal. In addition, the tariffs for Virginia Natural Gas, Chattanooga Gas and Elkton Gas contain revenue normalization mechanisms that mitigate the impact of conservation and declining customer usage.

Revenue Taxes We charge customers for gas revenue and gas use taxes imposed on us and remit amounts owed to various governmental authorities. Our policy for gas revenue taxes is to record the amounts charged by us to customers, which for some taxes includes a small administrative fee, as operating revenues, and to record the related taxes imposed on us as operating expenses in our Consolidated Statements of Income. Our policy for gas use taxes is to exclude these taxes from revenue and expense, aside from a small administrative fee that is included in operating revenues as the tax is imposed on the customer. As a result, the amount recorded in operating revenues will exceed the amount recorded in operating expenses by the amount of administrative fees that are retained by the company. Revenue taxes included in operating expenses were $130 million in 2014, $110 million in 2013 and $85 million in 2012.

Retail operations Revenues from natural gas sales and transportation services are recognized in the same period in which the related volumes are delivered to customers. Sales revenues from residential and certain commercial and industrial customers are recognized on the basis of scheduled meter readings. In addition, unbilled revenues are recognized for estimated deliveries of gas not yet billed to these customers, from the most recent meter reading date to the end of the accounting period. For other commercial and industrial customers and for all wholesale customers, revenues are based on actual deliveries during the period.

We recognize revenues on 12-month utility-bill management contracts as the lesser of cumulative earned or cumulative billed amounts. We recognize revenues for warranty and repair contracts on a straight-line basis over the contract term. Revenues for maintenance services are recognized at the time such services are performed.

Wholesale services Revenues from energy and risk management activities are required under authoritative guidance to be netted with the associated costs. Profits from sales between segments are eliminated and are recognized as goods or services sold to end-use customers. Transactions that qualify as derivatives under authoritative guidance related to derivatives and hedging are recorded at fair value with changes in fair value recognized in earnings in the period of change and characterized as unrealized gains or losses. Gains and losses on derivatives held for energy trading purposes are required to be presented net in revenue.

Midstream operations We record operating revenues for storage and transportation services in the period in which volumes are transported and storage services are provided. The majority of our storage services are covered under medium to long-term contracts at fixed market-based rates. We recognize our park and loan revenues ratably over the life of the contract.

Cost of Goods Sold

Distribution operations Excluding Atlanta Gas Light, which does not sell natural gas to end-use customers, we charge our utility customers for natural gas consumed using natural gas cost recovery mechanisms set by the state regulatory agencies. Under these mechanisms, all prudently incurred natural gas costs are passed through to customers without markup, subject to regulatory review. In accordance with the authoritative guidance for rate-regulated entities, we defer or accrue (that is, include as an asset or liability in the Consolidated Statements of Financial Position and exclude from, or include in, the Consolidated Statements of Income, respectively) the difference between the actual cost of goods sold and the amount of commodity revenue earned in a given period, such that no operating margin is recognized related to these costs. The deferred or accrued amount is either billed or refunded to our customers prospectively through adjustments to the commodity rate. Deferred natural gas costs are reflected as regulatory assets and accrued natural gas costs are reflected as regulatory liabilities. For more information, see Note 3.

Retail operations Our retail operations customers are charged for actual or estimated natural gas consumed. Within our cost of goods sold, we also include costs of fuel and lost and unaccounted for gas, adjustments to reduce the value of our inventories to market value and gains and losses associated with certain derivatives. Costs to service our warranty and repair contract claims and costs associated with the installation of HVAC equipment are recorded to cost of goods sold.

Operating Leases

We have certain operating leases with provisions for step rent or escalation payments and certain lease concessions. We account for these leases by recognizing the future minimum lease payments on a straight-line basis over the respective minimum lease terms, in accordance with authoritative guidance related to leases. This accounting treatment does not affect the future annual operating lease cash obligations. For more information, see Note 11.

Other Income

Our other income is detailed in the following table. For more information on our equity investment income, see Note 10.

In millions	2014	2013	2012
Equity investment income	$8	$3	$13
AFUDC - equity	5	12	6
Other, net	1	1	5
Total other income	$14	$16	$24

Earnings Per Common Share

We compute basic earnings per common share attributable to AGL Resources Inc. common shareholders by dividing our net income attributable to AGL Resources Inc. by the daily weighted average number of common shares outstanding. Diluted earnings per common share attributable to AGL Resources Inc. common shareholders reflect the potential reduction in earnings per common share attributable to AGL Resources Inc. common shareholders that occurs when potentially dilutive common shares are added to common shares outstanding.

We derive our potentially dilutive common shares by calculating the number of shares issuable under restricted stock, restricted stock units and stock options award programs. The vesting of certain shares of the restricted stock and restricted stock units depends on the satisfaction of defined performance criteria and/or time-based criteria. The future issuance of shares underlying the outstanding stock options depends on whether the market price of the common shares underlying the options exceeds the respective exercise prices of the stock options.

The following table shows the calculation of our diluted shares attributable to AGL Resources Inc. common shareholders for the periods presented as if performance units currently earned under the plan ultimately vest and as if stock options currently exercisable at prices below the average market prices are exercised.

In millions (except per share amounts)	2014	2013	2012
Income from continuing operations attributable to AGL Resources Inc.	$562	$290	$259
(Loss) income from discontinued operations, net of tax	(80)	5	1
Net income attributable to AGL Resources Inc.	$482	$295	$260
Denominator:			
Basic weighted average number of common shares outstanding (1)	118.8	117.9	117.0
Effect of dilutive securities	0.4	0.4	0.5
Diluted weighted average number of common shares outstanding (2)	119.2	118.3	117.5
Basic earnings per common share			
Continuing operations	$4.73	$2.46	$2.21
Discontinued operations	(0.67)	0.04	0.01
Basic earnings per common share attributable to AGL Resources Inc. common shareholders	$4.06	$2.50	$2.22
Diluted earnings per common share (2)			
Continuing operations	$4.71	$2.45	$2.20
Discontinued operations	(0.67)	0.04	0.01
Diluted earnings per common share attributable to AGL Resources Inc. common shareholders	$4.04	$2.49	$2.21

(1) Daily weighted average shares outstanding.
(2) There were no outstanding stock options excluded from the computation of diluted earnings per common share attributable to AGL Resources Inc. for any of the periods presented because their effect would have been anti-dilutive, as the exercise prices were greater than the average market price.

Sale of Compass Energy

On May 1, 2013, we sold Compass Energy, a non-regulated retail natural gas business supplying commercial and industrial customers, within our wholesale services segment. We received an initial cash payment of $12 million, which resulted in an $11 million pre-tax gain ($5 million net of tax). Under the terms of the purchase and sale agreement, we were eligible to receive contingent cash consideration up to $8 million with a guaranteed minimum receipt of $3 million that was recognized during 2013. The remaining $5 million of contingent cash consideration was to be received from the buyer annually over a five-year earn out period based upon the financial performance of Compass Energy. In the third quarter of 2014, we negotiated with the buyer to settle the future earn-out payments and we received $4 million, resulting in the recognition of a $3 million gain. We have a five-year agreement through April 2018 to supply natural gas to our former customers. As a result of our continued involvement, the sale of Compass Energy did not meet the criteria for treatment as a discontinued operation in 2014. Under the new accounting guidance, which became effective for us on January 1, 2015, the sale of Compass Energy is not considered a strategic shift in operations and would not be reflected as a discontinued operation if we were to terminate our continued involvement in the future.

Non-Wholly Owned Entities

We hold ownership interests in a number of business ventures with varying ownership structures. We evaluate all of our partnership interests and other variable interests to determine if each entity is a variable interest entity (VIE), as defined in the authoritative accounting guidance. If a venture is a VIE for which we are the primary beneficiary, we consolidate the assets, liabilities and results of operations of the entity. We reassess our conclusion as to whether an entity is a VIE upon certain occurrences, which are deemed reconsideration events under the guidance. We have concluded that the only venture that we are required to consolidate as a VIE, as we are the primary beneficiary, is SouthStar. On our Consolidated Statements of Financial Position, we recognize Piedmont's share of the non-wholly owned entity as a separate component of equity entitled "noncontrolling interest." Piedmont's share of current operations is reflected in "net income attributable to the noncontrolling interest" on our Consolidated Statements of Income. The consolidation of SouthStar has no effect on our calculation of basic or diluted earnings per common share amounts, which are based upon net income attributable to AGL Resources Inc.

For entities that are not determined to be VIEs, we evaluate whether we have control or significant influence over the investee to determine the appropriate consolidation and presentation. Generally, entities under our control are consolidated, and entities over which we can exert significant influence, but do not control, are accounted for under the equity method of accounting. However, we also invest in partnerships and limited liability companies that maintain separate ownership accounts. All such investments are required to be accounted for under the equity method unless our interest is so minor that there is virtually no influence over operating and financial policies, as are all investments in joint ventures.

Investments accounted for under the equity method are included in long-term investments on our Consolidated Statements of Financial Position, and the equity income is recorded within other income on our Consolidated Statements of Income and was immaterial for all periods presented. For additional information, see Note 10.

Acquisitions

On January 31, 2013, our retail operations segment acquired approximately 500,000 service contracts and certain other assets from NiSource Inc. for $122 million. These service contracts provide home warranty protection solutions and energy efficiency leasing solutions to residential and small business utility customers and complement the retail business acquired in the Nicor merger. Intangible assets related to this acquisition are primarily customer relationships of $46 million and trade names of $16 million. These intangible assets are being amortized over approximately 14 years for customer relationships and 10 years for trade names. The final allocation of the purchase price to the fair value of assets acquired and liabilities assumed is presented in the following table:

In millions	
Current assets	$3
PP&E	12
Goodwill	51
Intangible assets	62
Current liabilities	(6)
Total purchase price	$122

On June 30, 2013, our retail operations segment acquired approximately 33,000 residential and commercial energy customer relationships in Illinois for $32 million. These customer relationships have been recorded as an intangible asset and are being amortized over 15 years.

Use of Accounting Estimates

The preparation of our financial statements in conformity with GAAP requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses and the related disclosures. Our estimates are based on historical experience and various other assumptions that we believe to be reasonable under the circumstances. Our estimates may involve complex situations requiring a high degree of judgment either in the application and interpretation of existing literature or in the development of estimates that impact our financial statements. The most significant estimates relate to our rate-regulated subsidiaries, uncollectible accounts and other allowances for contingent losses, goodwill and other intangible assets, retirement plan benefit obligations, derivative and hedging activities and provisions for income taxes. We evaluate our estimates on an ongoing basis and our actual results could differ from our estimates.

Accounting Developments

In April 2014, the FASB issued authoritative guidance related to reporting discontinued operations. The guidance generally raises the threshold for disposals to qualify as discontinued operations and requires new disclosures of both discontinued operations and certain other material disposals that do not meet the definition of a discontinued operation. The guidance was effective for us prospectively beginning January 1, 2015. It had no impact on our accounting for the sale of Tropical Shipping. There was no impact on January 1, 2015, nor is there any reason we would expect this guidance to have a material impact on our consolidated financial statements in the foreseeable future.

In May 2014, the FASB issued an update to authoritative guidance related to revenue from contracts with customers. The update replaces most of the existing guidance with a single set of principles for recognizing revenue from contracts with customers. The guidance will be effective for us beginning January 1, 2017. Early adoption is not permitted. The new guidance must be applied retrospectively to each prior period presented or via a cumulative effect upon the date of initial application. We have not yet determined the impact of this new guidance, nor have we selected a transition method.

In June 2014, the FASB issued an update to authoritative guidance related to accounting for share-based payments when the terms of an award provide that a performance target could be achieved after the requisite service period. The guidance will be effective for us beginning January 1, 2016, and it will have no impact on our consolidated financial statements for our existing share-based plans.

Note 3 – Regulated Operations

Our regulatory assets and liabilities reflected within our Consolidated Statements of Financial Position as of December 31 are summarized in the following table.

In millions	2014	2013
Regulatory assets		
Recoverable ERC	$49	$45
Recoverable pension and retiree welfare benefit costs	12	9
Recoverable seasonal rates	10	10
Deferred natural gas costs	3	1
Other	9	49
Total regulatory assets - current	83	114
Recoverable ERC	326	433
Recoverable pension and retiree welfare benefit costs	110	99
Long-term debt fair value adjustment	74	82
Recoverable regulatory infrastructure program costs	69	55
Other	52	36
Total regulatory assets - long-term	631	705
Total regulatory assets	$714	$819
Regulatory liabilities		
Bad debt over collection	$33	$41
Accrued natural gas costs	27	92
Accumulated removal costs	25	27
Other	27	23
Total regulatory liabilities - current	112	183
Accumulated removal costs	1,520	1,445
Regulatory income tax liability	34	27
Unamortized investment tax credit	22	26
Bad debt over collection	12	17
Other	13	3
Total regulatory liabilities - long-term	1,601	1,518
Total regulatory liabilities	$1,713	$1,701

Base rates are designed to provide the opportunity to recover cost and a return on investment during the period rates are in effect. As such, all of our regulatory assets recoverable through base rates are subject to review by the respective state regulatory commission during future rate proceedings. We are not aware of evidence that these costs will not be recoverable through either rate riders or base rates, and we believe that we will be able to recover such costs consistent with our historical recoveries.

In the event that the provisions of authoritative guidance related to regulated operations were no longer applicable, we would recognize a write-off of regulatory assets that would result in a charge to net income. Additionally, while some regulatory liabilities would be written off, others would continue to be recorded as liabilities, but not as regulatory liabilities.

Although the natural gas distribution industry is competing with alternative fuels, primarily electricity, our utility operations continue to recover their costs through cost-based rates established by the state regulatory commissions. As a result, we believe that the accounting prescribed under the guidance remains appropriate. It is also our opinion that all regulatory assets are recoverable in future rate proceedings, and therefore we have not recorded any regulatory assets that are recoverable but are not yet included in base rates or contemplated in a rate rider or proceeding. The regulatory liabilities that do not represent revenue collected from customers for expenditures that have not yet been incurred are refunded to ratepayers through a rate rider or base rates. If the regulatory liability is included in base rates, the amount is reflected as a reduction to the rate base used to periodically set base rates.

The majority of our regulatory assets and liabilities listed in the preceding table are included in base rates except for the regulatory infrastructure program costs, ERC, bad debt over collection, natural gas costs and energy efficiency costs, which are recovered through specific rate riders on a dollar-for-dollar basis. The rate riders that authorize the recovery of regulatory infrastructure program costs and natural gas costs include both a recovery of cost and a return on investment during the recovery period. Nicor Gas' rate riders for environmental costs and energy efficiency costs provide a return of investment and expense including short-term interest on reconciliation balances. However, there is no interest associated with the under or over collections of bad debt expense.

Nicor Gas' pension and retiree welfare benefit costs have historically been considered in rate proceedings in the same period they are accrued under GAAP. As a regulated utility, Nicor Gas expects to continue rate recovery of the eligible costs of these defined benefit retirement plans and, accordingly, associated changes in the funded status of Nicor Gas' plans have been deferred as a regulatory asset or liability until recognized in net income, instead of being recognized in OCI. The Illinois Commission presently does not allow Nicor Gas the opportunity to earn a return on its recoverable retirement benefit costs. Such costs are expected to be recovered over a period of approximately 10 years. The regulatory assets related to debt are also not included in rate base, but the costs are recovered over the term of the debt through the authorized rate of return component of base rates.

Unrecognized Ratemaking Amounts The following table illustrates our authorized ratemaking amounts that are not recognized in our Consolidated Statements of Financial Position. These amounts are primarily composed of an allowed equity rate of return on assets associated with certain of our regulatory infrastructure programs. These amounts will be recognized as revenues in our financial statements in the periods they are collected in rates from our customers.

In millions	**Atlanta Gas Light**	**Virginia Natural Gas**	**Elizabethtown Gas**	**Total**
December 31, 2014	$113	$12	$2	$127
December 31, 2013	80	12	1	93

Natural Gas Costs We charge our utility customers for natural gas consumed using natural gas cost recovery mechanisms established by the state regulatory agencies. Under these mechanisms, all prudently incurred natural gas costs are passed through to customers without markup, subject to regulatory review. We defer or accrue the difference between the actual cost of gas and the amount of commodity revenue earned in a given period, such that no operating margin is recognized related to these costs. The deferred or accrued amount is either billed or refunded to our customers prospectively through adjustments to the commodity rate. Deferred natural gas costs are reflected as regulatory assets and accrued natural gas costs are reflected as regulatory liabilities.

Environmental Remediation Costs We are subject to federal, state and local laws and regulations governing environmental quality and pollution control that require us to remove or remedy the effect on the environment of the disposal or release of specified substances at our current and former operating sites, substantially all of which is related to our MGP sites. The ERC assets and liabilities are associated with our distribution operations segment and remediation costs are generally recoverable from customers through rate mechanisms approved by regulators. Accordingly, both costs incurred to remediate the former MGP sites, plus the future estimated cost recorded as liabilities, net of amounts previously collected, are recognized as a regulatory asset until recovered from customers.

Our ERC liabilities are estimates of future remediation costs for investigation and cleanup of our current and former operating sites that are contaminated. These estimates are based on conventional engineering estimates and the use of probabilistic models of potential costs when such estimates cannot be made, on an undiscounted basis. These estimates contain various assumptions, which we refine and update on an ongoing basis. These liabilities do not include other potential expenses, such as unasserted property damage claims, personal injury or natural resource damage claims, legal expenses or other costs for which we may be held liable but for which we cannot reasonably estimate an amount.

Our accrued ERC are not regulatory liabilities; however, they are deferred as a corresponding regulatory asset until the costs are recovered from customers. These recoverable ERC assets are a combination of accrued ERC liabilities and recoverable cash expenditures for investigation and cleanup costs. We primarily recover these deferred costs through three rate riders that authorize dollar-for-dollar recovery. We expect to collect $49 million in revenues over the next 12 months, which is reflected as a current regulatory asset. We recovered $51 million in 2014, $24 million in 2013 and $13 million in 2012 from our ERC rate riders. The following table provides more information on the costs related to remediation of our current and former operating sites.

In millions	**# of sites**	**Probabilistic model cost estimates** (1)	**Engineering estimates** (1)	**Amount recorded**	**Expected costs over next 12 months**	**Cost recovery period**
Illinois (2)	26	$205 - $462	$30	$230	$41	As incurred
New Jersey	6	105 - 177	14	118	16	7 years
Georgia and Florida	13	40 - 81	15	56	21	5 years
North Carolina (3)	1	n/a	10	10	9	No recovery
Total	46	$350 - $720	$69	$414 (4)	$87	

(1) The year-end ERC cost estimates were completed as of November 30, 2014. The liability recorded reflects a reduction of these cost estimates for expenses incurred during December.

(2) Nicor Gas is responsible in whole or in part for 26 MGP sites, of which two sites have been remediated and their use is no longer restricted by the environmental condition of the property. Nicor Gas and Commonwealth Edison Company are parties to an agreement to cooperate in cleaning up residue at 23 of the sites listed. Nicor Gas' allocated share of cleanup costs for these sites is 52%.

(3) We have no regulatory recovery mechanism for the site in North Carolina. Therefore, there is no amount included within our regulatory assets and changes in estimated costs are recognized in income in the period of change.

(4) Decrease of $33 million from December 31, 2013 primarily relates to lower engineering cost estimates for work completed during 2014, partially offset by a scope increase required by the Georgia Environmental Protection Division for a site in Georgia and increases at three Illinois sites due to refinement of the assumptions used in the cost method.

In July 2014, we reached a $77 million insurance settlement for environmental claims relating to potential contamination at our MGP sites in New Jersey and North Carolina. The terms of the settlement required the $77 million to be paid in two installments. We received $45 million in the third quarter of 2014 and this payment was primarily recorded as a reduction to our recoverable ERC regulatory asset. The remaining $32 million is due in the third quarter of 2015. We will file for approval with the New Jersey BPU to utilize the insurance proceeds related to the New Jersey sites to reduce the ERC expenditures that otherwise would have been recovered from our customers in future periods. As such, the settlement, once approved, is expected to reduce our recoverable ERC regulatory asset and have a favorable impact on the rates for our Elizabethtown Gas customers.

Bad Debt Rider Nicor Gas' bad debt rider provides for the recovery from, or refund to, customers of the difference between Nicor Gas' actual bad debt experience on an annual basis and a benchmark, as determined by the Illinois Commission in February 2010. The over recovery is recorded as an increase to operating expenses on our Consolidated Statements of Income and a regulatory liability on our Consolidated Statements of Financial Position until refunded to customers. In the period refunded, operating expenses are reduced and the regulatory liability is reversed. The actual bad debt experience and resulting refunds are shown in the following table.

		Actual	Total	Amount refunded in		Amount to be refunded in	
In millions	**Benchmark**	**bad debt**	**refund**	**2013**	**2014**	**2015**	**2016**
2014	$63	$35	$28	$-	$-	$16	$12
2013	63	21	42	-	25	17	-
2012	63	23	40	24	16	-	-

Accumulated Removal Costs In accordance with regulatory treatment, our depreciation rates are comprised of two cost components - historical cost and the estimated cost of removal, net of estimated salvage, of certain regulated properties. We collect these costs in base rates through straight-line depreciation expense, with a corresponding credit to accumulated depreciation. Because the accumulated estimated removal costs are not a generally accepted component of depreciation, but meet the requirements of authoritative guidance related to regulated operations, we have reclassified them from accumulated depreciation to the accumulated removal cost regulatory liability in our Consolidated Statements of Financial Position. In the rate setting process, the liability for these accumulated removal costs is treated as a reduction to the net rate base upon which our regulated utilities have the opportunity to earn their allowed rate of return.

Regulatory Infrastructure Programs We have infrastructure improvement programs at several of our utilities. Descriptions of these are as follows.

Nicor Gas In 2013, Illinois enacted legislation that allows Nicor Gas to provide more widespread safety and reliability enhancements to its distribution system. The legislation stipulates that rate increases to customer bills as a result of any infrastructure investments shall not exceed an annual average of 4.0% of base rate revenues. In July 2014, the Illinois Commission approved our new regulatory infrastructure program, Investing in Illinois (previously known as Qualified Infrastructure Plant), for which we may implement rates under the program effective in March 2015.

Atlanta Gas Light Our STRIDE program is comprised of the Integrated System Reinforcement Program (i-SRP), the Integrated Customer Growth Program (i-CGP), and the Integrated Vintage Plastic Replacement Program (i-VPR).

The purpose of the i-SRP is to upgrade our distribution system and liquefied natural gas facilities in Georgia, improve our peak-day system reliability and operational flexibility, and create a platform to meet long-term forecasted growth. The STRIDE program requires us to file an updated ten-year forecast of infrastructure requirements under i-SRP along with a new construction plan every three years for review and approval by the Georgia Commission. Our i-CGP authorizes Atlanta Gas Light to extend its pipeline facilities to serve customers in areas without pipeline access and create new economic development opportunities in Georgia.

A new $260 million, four-year STRIDE program was approved in December 2013, of which $214 million is for i-SRP related projects and $46 million is for i-CGP related projects. The program will be funded through a monthly rider surcharge per customer of $0.48 beginning in January 2015, which will increase to $0.96 beginning in January 2016 and to $1.43 beginning in January 2017. This surcharge will continue through 2025.

The purpose of the i-VPR program is to replace aging plastic pipe that was installed primarily in the 1960's to the early 1980's. We have identified approximately 3,300 miles of vintage plastic mains in our system that potentially should be considered for replacement over the next 15 - 20 years as it reaches the end of its useful life. In 2013, the Georgia Commission approved the replacement of 756 miles of vintage plastic pipe over four years at an estimated cost of $275 million. Additional reporting requirements and monitoring by the staff of the Georgia Commission were also included in the stipulation, which authorized a phased-in approach to funding the program through a monthly rider surcharge of $0.48 per customer through December 2014. This will increase to $0.96 beginning in January 2015 and to $1.45 beginning in January 2016, which will continue through 2025.

The orders for the STRIDE programs provide for recovery of all prudent costs incurred in the performance of the program. Atlanta Gas Light will recover from end-use customers, through billings to Marketers, the costs related to the programs net of any cost savings from the programs. All such amounts will be recovered through a combination of straight-fixed-variable rates and a STRIDE revenue rider surcharge. The regulatory asset represents recoverable incurred costs related to the programs that will be collected in future rates charged to customers through the rate riders. The future expected costs to be recovered through rates related to allowed, but not incurred costs, are recognized in an unrecognized ratemaking amount that is not reflected within our Consolidated Statements of Financial Position. This allowed cost consists primarily of the equity return on the capital investment under the program.

Atlanta Gas Light capitalizes and depreciates the capital expenditure costs incurred from the STRIDE programs over the life of the assets. Operation and maintenance costs are expensed as incurred. Recoveries, which are recorded as revenue, are based on a formula that allows Atlanta Gas Light to recover operation and maintenance costs in excess of those included in its current base rates, depreciation expense and an allowed rate of return on capital expenditures. However, Atlanta Gas Light is allowed the recovery of carrying costs on the under-recovered balance resulting from the timing difference.

Elizabethtown Gas In 2009, the New Jersey BPU approved the enhanced infrastructure program for Elizabethtown Gas, which was created in response to the New Jersey Governor's request for utilities to assist in the economic recovery by increasing infrastructure investments. In May 2011, the New Jersey BPU approved Elizabethtown Gas' request to spend an additional $40 million under this program before the end of 2012. Costs associated with the investment in this program are recovered through periodic adjustments to base rates that are approved by the New Jersey BPU. In August 2013, the New Jersey BPU approved the recovery of investments under this program through a permanent adjustment to base rates.

Additionally, in August 2013, we received approval from the New Jersey BPU for an extension of the accelerated infrastructure replacement program, which allows for infrastructure investment of $115 million over four years, effective as of September 1, 2013. Carrying charges on the additional capital expenditures will be deferred at a WACC of 6.65%, of which 4.27% will be within an unrecognized ratemaking amounts and will be recognized in future periods when recovered through rates. Unlike the previous program, there will be no adjustment to base rates for the investments under the extended program until Elizabethtown Gas files its next rate case. We agreed to file a general rate case by September 2016.

In September 2013, Elizabethtown Gas filed for a Natural Gas Distribution Utility Reinforcement Effort (ENDURE), a program designed to improve our distribution system's resiliency against coastal storms and floods. Under the proposed plan, Elizabethtown Gas is investing $15 million in infrastructure and related facilities and communication planning over a one year period that began in January 2014. In July 2014, the New Jersey BPU approved a modified ENDURE plan that allows for Elizabethtown Gas to increase its base rates effective November 1, 2015 for investments made under the program.

Virginia Natural Gas In 2012, the Virginia Commission approved SAVE, an accelerated infrastructure replacement program, which is expected to be completed over a five-year period. The program permits a maximum capital expenditure of $25 million per year, not to exceed $105 million in total. SAVE is subject to annual review by the Virginia Commission. We began recovering program costs through a rate rider that was effective August 1, 2012. The second year performance rate update was approved by the Virginia Commission in July 2014 and became effective as of August 2014.

Energy Smart Plan In May 2014, the Illinois Commission approved Nicor Gas' Energy Smart Plan, which outlines energy efficiency program offerings and therm reduction goals with spending of $93 million over a three-year period that began in June 2014. Nicor Gas' first energy efficiency program ended in May 2014.

Investment Tax Credits Deferred investment tax credits associated with distribution operations are included as a regulatory liability in our Consolidated Statements of Financial Position. These investment tax credits are being amortized over the estimated lives of the related properties as credits to income tax expense.

Regulatory Income Tax Liability For our regulated utilities, we measure deferred income tax assets and liabilities using enacted income tax rates. Thus, when the statutory income tax rate declines before a temporary difference has fully reversed, the deferred income tax liability must be reduced to reflect the newly enacted income tax rates. However, the amount of the reduction is transferred to our regulatory income tax liability, which we are amortizing over the lives of the related properties as the temporary differences reverse over approximately 30 years.

Other Regulatory Assets and Liabilities Our recoverable pension and retiree welfare benefit plan costs for our utilities other than Nicor Gas are expected to be recovered through base rates over the next 2 to 21 years, based on the remaining recovery periods as designated by the applicable state regulatory commissions. This category also includes recoverable seasonal rates, which reflect the difference between the recognition of a portion of Atlanta Gas Light's residential base rates revenues on a straight-line basis as compared to the collection of the revenues over a seasonal pattern. These amounts are fully recoverable through base rates within one year.

Note 4 - Fair Value Measurements

Retirement benefit plans assets

The assets of the AGL Resources Inc. Retirement Plan (AGL Plan), the Employees' Retirement Plan of NUI Corporation (NUI Plan), and the Health and Welfare Plan for Retirees and Inactive Employees of AGL Resources Inc. (AGL Welfare Plan) were allocated approximately 71% equity and 29% fixed income at December 31, 2014 and 74% equity and 26% fixed income at December 31, 2013 compared to our targets of 70% to 95% equity, 5% to 20% fixed income, and up to 10% cash for both periods. The plans' investment policies provide for some variation in these targets. The actual asset allocations of our retirement plans are presented in the following table by Level within the fair value hierarchy.

(1) Includes $9 million at December 31, 2014 and December 31, 2013 of medical benefit (health and welfare) component for 401h accounts to fund a portion of the other retirement benefits.
(2) Includes funds that invest primarily in U.S. common stocks.
(3) Includes funds that invest primarily in foreign equity and equity-related securities.
(4) Includes funds that invest primarily in common stocks of emerging markets.
(5) Includes funds that invest primarily in investment grade debt and fixed income securities.
(6) Includes funds that invest in limited / general partnerships, managed accounts, and other investment entities issued by non-traditional firms or "hedge funds."
(7) Includes funds that invest primarily in investment vehicles and commodity pools as a "fund of funds."

(8) Includes funds that invest in private equity and small buyout funds, partnership investments, direct investments, secondary investments, directly / indirectly in real estate and may invest in equity securities of real estate related companies, real estate mortgage loans, and real estate mezzanine loans.

The following is a reconciliation of our retirement plan assets in Level 3 of the fair value hierarchy.

	Fair value measurements using significant unobservable inputs - Level 3 (1)			
In millions	**Global hedged equity**	**Absolute return**	**Private capital**	**Total**
Balance at December 31, 2012	$38	$36	$23	$97
Actual return on plan assets	5	3	4	12
Sales	-	-	(5)	(5)
Balance at December 31, 2013	$43	$39	$22	$104
Actual return on plan assets	1	3	2	6
Sales	(15)	-	(4)	(19)
Balance at December 31, 2014	$29	$42	$20	$91

(1) There were no transfers out of Level 3, or between Level 1 and Level 2 for any of the periods presented.

Derivative Instruments

The following table summarizes, by level within the fair value hierarchy, our derivative assets and liabilities that were carried at fair value on a recurring basis in our Consolidated Statements of Financial Position as of December 31.

	2014		2013	
In millions	**Assets** (1)	**Liabilities**	**Assets** (1)	**Liabilities**
Natural gas derivatives				
Quoted prices in active markets (Level 1)	$58	$(80)	$6	$(79)
Significant other observable inputs (Level 2)	174	(94)	67	(79)
Netting of cash collateral	52	81	43	78
Total carrying value (2) (3)	$284	$(93)	$116	$(80)

(1) Balances of $3 million at December 31, 2014 and 2013 associated with certain weather derivatives have been excluded, as they are accounted for based on intrinsic value rather than fair value.
(2) There were no significant unobservable inputs (Level 3) for any of the dates presented.
(3) There were no significant transfers between Level 1, Level 2, or Level 3 for any of the dates presented.

Debt

Our long-term debt is recorded at amortized cost, with the exception of Nicor Gas' first mortgage bonds, which are recorded at their acquisition-date fair value. We amortize the fair value adjustment of Nicor Gas' first mortgage bonds over the lives of the bonds. The following table presents the carrying amount and fair value of our long-term debt as of December 31.

In millions	**2014**	**2013**
Long-term debt carrying amount	$3,802	$3,813
Long-term debt fair value (1)	4,231	3,956

(1) Fair value determined using Level 2 inputs.

Note 5 - Derivative Instruments

Our risk management activities are monitored by our Risk Management Committee, which consists of members of senior management and is charged with reviewing our risk management activities and enforcing policies. Our use of derivative instruments, including physical transactions, is limited to predefined risk tolerances associated with pre-existing or anticipated physical natural gas sales and purchases and system use and storage. We use the following types of derivative instruments and energy-related contracts to manage natural gas price, interest rate, weather, automobile fuel price and foreign currency risks when deemed appropriate:

- forward, futures and options contracts;
- financial swaps;
- treasury locks;
- weather derivative contracts;
- storage and transportation capacity contracts; and
- foreign currency forward contracts

Certain of our derivative instruments contain credit-risk-related or other contingent features that could require us to post collateral in the normal course of business when our financial instruments are in net liability positions. As of December 31, 2014 and 2013, for agreements with such features, derivative instruments with liability fair values totaled $93 million and $80 million, respectively, for which we had posted no collateral to our counterparties. The maximum collateral that could be required with these features is $14 million. For more information, see "Energy Marketing Receivables and Payables" in Note 2, which also have credit risk-related contingent features. Our derivative instrument activities are included within operating cash flows as an increase (decrease) to net income of $(155) million, $66 million and $72 million for the periods ended December 31, 2014, 2013 and 2012, respectively.

The following table summarizes the various ways in which we account for our derivative instruments and the impact on our consolidated financial statements:

Accounting Treatment	Recognition and Measurement	
	Statements of Financial Position	**Income Statements**
Cash flow hedge	Derivative carried at fair value	Ineffective portion of the gain or loss realized and unrealized on the derivative instrument is recognized in earnings
	Effective portion of the gain or loss on the derivative instrument is reported initially as a component of accumulated OCI (loss)	Effective portion of the gain or loss realized and unrealized on the derivative instrument is reclassified out of accumulated OCI (loss) and into earnings when the hedged transaction affects earnings
Fair value hedge	Derivative carried at fair value	Gains or losses realized and unrealized on the derivative instrument and the hedged item are recognized in earnings. As a result, to the extent the hedge is effective, the gains or losses will offset and there is no impact on earnings. Any hedge ineffectiveness will impact earnings
	Changes in fair value of the hedged item are recorded as adjustments to the carrying amount of the hedged item	
Not designated as hedges	Derivative carried at fair value	Gains or losses realized and unrealized on the derivative instrument are recognized in earnings
	Distribution operations' gains and losses on derivative instruments are deferred as regulatory assets or liabilities until included in cost of goods sold	Gains or losses realized and unrealized on these derivative instruments are ultimately included in billings to customers and are recognized in cost of goods sold in the same period as the related revenues

Quantitative Disclosures Related to Derivative Instruments

As of the dates presented, our derivative instruments were comprised of both long and short natural gas positions. A long position is a contract to purchase natural gas, and a short position is a contract to sell natural gas. As of December 31, we had a net long natural gas contracts position outstanding in the following quantities:

In Bcf (1)	**2014** (2)	**2013**
Cash flow hedges	9	6
Not designated as hedges	75	183
Total volumes	84	189
Short position – cash flow hedges	(4)	(6)
Short position – not designated as hedges	(2,828)	(2,616)
Long position – cash flow hedges	16	12
Long position – not designated as hedges	2,900	2,799
Net long position	84	189

(1) Volumes related to Nicor Gas exclude variable-priced contracts, which are carried at fair value, but whose fair values are not directly impacted by changes in commodity prices.
(2) Approximately 100% of these contracts have durations of two years or less and less than 1% expire between two and five years.

Derivative Instruments in our Consolidated Statements of Financial Position

In accordance with regulatory requirements, gains and losses on derivative instruments used to hedge natural gas purchases for customer use at distribution operations are reflected in accrued natural gas costs within our Consolidated Statements of Financial Position until billed to customers. The following amounts deferred as a regulatory asset or liability on our Consolidated Statements of Financial Position represent the net realized gains (losses) related to these natural gas cost hedges for the years ended December 31.

In millions	2014	2013
Nicor Gas	$10	$4
Elizabethtown Gas	2	(6)

The following table presents the fair values and Consolidated Statements of Financial Position classifications of our derivative instruments as of December 31:

		2014		2013	
In millions	**Classification**	**Assets**	**Liabilities**	**Assets**	**Liabilities**
Designated as cash flow or fair value hedges					
Natural gas contracts	Current	$6	$(11)	$3	$(1)
Natural gas contracts	Long-term	-	(1)	-	-
Total designated as cash flow or fair value hedges		$6	$(12)	$3	$(1)
Not designated as hedges					
Natural gas contracts	Current	$1,061	$(1,020)	$691	$(761)
Natural gas contracts	Long-term	145	(119)	206	(220)
Total not designated as hedges		$1,206	$(1,139)	$897	$(981)
Gross amount of recognized assets and liabilities (1) (2)		1,212	(1,151)	900	(982)
Gross amounts offset in our Consolidated Statements of Financial Position (2)		(925)	1,058	(781)	902
Net amounts of assets and liabilities presented in our Consolidated Statements of Financial Position (3)		$287	$(93)	$119	$(80)

(1) The gross amounts of recognized assets and liabilities are netted within our Consolidated Statements of Financial Position to the extent that we have netting arrangements with the counterparties.

(2) As required by the authoritative guidance related to derivatives and hedging, the gross amounts of recognized assets and liabilities above do not include cash collateral held on deposit in broker margin accounts of $133 million as of December 31, 2014 and $121 million as of December 31, 2013. Cash collateral is included in the “Gross amounts offset in our Consolidated Statements of Financial Position” line of this table.

(3) At December 31, 2014 and 2013, we held letters of credit from counterparties that would offset, under master netting arrangements, an insignificant portion of these assets.

Derivative Instruments on the Consolidated Statements of Income

The following table presents the impacts of our derivative instruments in our Consolidated Statements of Income for the years ended December 31.

In millions	2014	2013	2012
Designated as cash flow or fair value hedges			
Natural gas contracts – net gain (loss) reclassified from OCI into cost of goods sold	$4	$(1)	$(5)
Natural gas contracts – net gain reclassified from OCI into operation and maintenance expense	1	-	-
Interest rate swaps – net loss reclassified from OCI into interest expense	-	(3)	(4)
Income tax (expense)/benefit	(2)	1	3
Total designated as cash flow or fair value hedges, net of tax	$3	$(3)	$(6)
Not designated as hedges (1)			
Natural gas contracts - net gain (loss) recorded in operating revenues	$149	$(90)	$34
Natural gas contracts - net gain (loss) recorded in cost of goods sold (2)	(7)	2	(4)
Income tax (expense)/benefit	(54)	34	(11)
Total not designated as hedges, net of tax	$88	$(54)	$19
Total gains (losses) on derivative instruments, net of tax	$91	$(57)	$13

(1) Associated with the fair value of derivative instruments held at December 31, 2014, 2013 and 2012.

(2) Excludes losses recorded in cost of goods sold associated with weather derivatives of $7 million, $5 million and $14 million for the years ended December 31, 2014, 2013 and 2012, respectively.

Any amounts recognized in operating income related to ineffectiveness or due to a forecasted transaction that is no longer expected to occur were immaterial for the years ended December 31, 2014, 2013 and 2012. Our expected gains to be reclassified from OCI into cost of goods sold, operation and maintenance expense, interest expense and operating revenues and recognized in our Consolidated Statements of Income over the next 12 months are $7 million. These deferred gains are related to natural gas derivative contracts associated with retail operations’ and Nicor Gas’ system use.

The expected gains are based upon the fair values of these financial instruments at December 31, 2014. The effective portion of gains and losses on derivative instruments qualifying as cash flow hedges that were recognized in OCI during the periods is presented on our Consolidated Statements of Income. See Note 9 for these amounts.

Note 6 - Employee Benefit Plans

Investment Policies, Strategies and Oversight of Plans

The Retirement Plan Investment Committee (the Committee) appointed by our Board of Directors is responsible for overseeing the investments of our defined benefit retirement plans. Further, we have an Investment Policy (the Policy) for our pension and welfare benefit plans whose goal is to preserve these plans' capital and maximize investment earnings in excess of inflation within acceptable levels of capital market volatility. To accomplish this goal, the plans' assets are managed to optimize long-term return while maintaining a high standard of portfolio quality and diversification.

In developing our allocation policy for the pension and welfare plan assets we examined projections of asset returns and volatility over a long-term horizon. In connection with this analysis, we evaluated the risk and return tradeoffs of alternative asset classes and asset mixes given long-term historical relationships as well as prospective capital market returns. We also conducted an asset-liability study to match projected asset growth with projected liability growth to determine whether there is sufficient liquidity for projected benefit payments. We developed our asset mix guidelines by incorporating the results of these analyses with an assessment of our risk posture, and taking into account industry practices. We periodically evaluate our investment strategy to ensure that plan assets are sufficient to meet the benefit obligations of the plans. As part of the ongoing evaluation, we may make changes to our targeted asset allocations and investment strategy.

Our investment strategy is designed to meet the following objectives:

- Generate investment returns that, in combination with our funding contributions, provide adequate funding to meet all current and future benefit obligations of the plans.
- Provide investment results that meet or exceed the assumed long-term rate of return, while maintaining the funded status of the plans at acceptable levels.
- Improve funded status over time.
- Decrease contribution and expense volatility as funded status improves.

To achieve these investment objectives, our investment strategy is divided into two primary portfolios of return seeking and liability hedging assets. Return seeking assets are intended to provide investment returns in excess of liability growth and reduce deficits in the funded status of the plans, while liability hedging assets are intended to reflect the sensitivity of the liabilities to changes in discount rates.

See Note 4 for a detailed listing of the investment types, amounts and percentages allocated to the plans. We will continue to diversify retirement plan investments to minimize the risk of large losses in a single asset class. We do not have a concentration of assets in a single entity, industry, country, commodity or class of investment fund. The Policy's permissible investments include domestic and international equities (including convertible securities and mutual funds), domestic and international fixed income securities (corporate and government obligations), cash and cash equivalents and other suitable investments.

Equity market performance and corporate bond rates have a significant effect on our reported funded status. Changes in the projected benefit obligation (PBO) and accumulated postretirement benefit obligation (APBO) are mainly driven by the assumed discount rate. Additionally, equity market performance has a significant effect on our market-related value of plan assets (MRVPA), which is used by the AGL Plan to determine the expected return on the plan assets component of net annual pension cost. The MRVPA is a calculated value. Gains and losses on plan assets are spread through the MRVPA based on the five-year smoothing weighted average methodology.

Pension Benefits

We sponsor the AGL Plan, which is a tax-qualified defined benefit retirement plan for our eligible employees. A defined benefit plan specifies the amount of benefits an eligible participant eventually will receive using information about the participant, including information related to the participant's earnings history, years of service and age. In 2012, we also sponsored two other tax-qualified defined benefit retirement plans for our eligible employees, a Nicor plan and a NUI plan. Effective as of December 31, 2012, the NUI plan and the Nicor plan were merged into the AGL Plan. The participants of the former Nicor and NUI plans are now being offered their benefits, as described below, through the AGL Plan.

We generally calculate the benefits under the AGL Plan based on age, years of service and pay. The benefit formula for the AGL Plan is currently a career average earnings formula. Participants who were employees as of July 1, 2000 and who were at least 50 years of age as of that date earned benefits until December 31, 2010 under a final average pay formula. Participants who were employed as of July 1, 2000, but did not satisfy the age requirement to continue under the final average earnings formula, transitioned to the career average earnings formula on July 1, 2000.

Effective January 1, 2012, the AGL Plan was frozen with respect to participation for non-union employees hired on or after that date. Effective January 1, 2013, the AGL Plan was frozen with respect to participation for union employees hired on or after that date. Such employees are entitled to employer provided benefits under their defined contribution plan that exceed defined contribution benefits for employees who participate in the defined benefit plan.

Participants in the former Nicor plan receive noncontributory defined pension benefits. These benefits cover substantially all employees of Nicor Gas and its affiliates that adopted the Nicor plan hired prior to 1998. Pension benefits are based on years of service and the highest average annual salary for management employees and job level for collectively bargained employees (referred to as pension bands). The benefit obligation related to collectively bargained benefits reflects the most recent collective bargained agreement terms with regards to the benefit increases.

Participants in the former NUI plan included substantially all of NUI Corporation's employees who were employed on or before December 31, 2005. Florida City Gas union employees, who until February 2008 participated in a union-sponsored multiemployer plan, became eligible to participate in the AGL Plan in February 2008. The AGL Plan provides pension benefits to NUI participants based on years of credited service and final average compensation as of the plan freeze date. Effective December 31, 2005, participation and benefit accrual under the NUI Plan were frozen. As of January 1, 2006, former participants in that plan became eligible to participate in the AGL Plan.

Welfare Benefits

Until December 31, 2012, we sponsored two defined benefit retiree health care plans for our eligible employees – the AGL Welfare Plan and the Nicor Welfare Benefit Plan (Nicor Welfare Plan). Eligibility for these benefits is based on age and years of service. Effective December 31, 2012, the Nicor Welfare Plan was terminated and as of January 1, 2013, all participants under that plan became eligible to participate in the AGL Welfare Plan. This change in plan participation eligibility did not affect the benefit terms. The Nicor Welfare Plan benefits described below are now being offered to such participants under the AGL Welfare Plan. Effective March 18, 2014, the Nicor Welfare Plan was closed to participation for all Nicor employees hired on or after that date.

The AGL Welfare Plan includes medical coverage for all eligible AGL Resources employees who were employed as of June 30, 2002, if they reach the plan's retirement age while working for us. In addition, the AGL Welfare Plan provides life insurance for all employees if they have ten years of service at retirement. Effective March 18, 2014, the life insurance coverage is not available to new employees hired on or after that date. The state regulatory commissions have approved phase-in plans that defer a portion of the related benefits expense for future recovery. The AGL Welfare Plan terms include a limit on the employer share of costs at limits based on the coverage tier, plan elected and salary level of the employee at retirement.

Medicare eligible retirees covered by the AGL Welfare Plan, including all of those at least age 65, receive benefits through our contribution to a retiree health reimbursement arrangement account. Additionally, on the pre-65 medical coverage of the AGL Welfare Plan, our expected cost is determined by a retiree premium schedule based on salary level and years of service. Due to the cost limits, there is no impact on our periodic benefit cost or on our accumulated projected benefit obligation for a change in the assumed healthcare cost trend rate for this portion of the plan.

The plan provisions that are applicable to prior participants in the Nicor Welfare Plan include health care and life insurance benefits to eligible retired employees and include a limit on the employer share of cost for employees hired after 1982.

The Medicare Prescription Drug, Improvement and Modernization Act of 2003 provides for a prescription drug benefit under Medicare Part D, as well as a federal subsidy to sponsors of retiree health care benefit plans that provide a benefit that is at least actuarially equivalent to Medicare Part D. Prescription drug coverage for the Nicor Gas Medicare-eligible population changed effective January 1, 2013 from an employer-sponsored prescription drug plan with the Retiree Drug Subsidy to an Employer Group Waiver Plan (EGWP). The EGWP replaces the employer sponsored prescription drug plan.

We also have a separate unfunded supplemental retirement health care plan that provides health care and life insurance benefits to employees of discontinued businesses. This plan is noncontributory with defined benefits. Net plan expenses were immaterial in 2014 and 2013. The APBO associated with this plan was $2 million at December 31, 2014 and $2 million at December 31, 2013.

Assumptions

We considered a variety of factors in determining and selecting our assumptions for the discount rate at December 31. We based our discount rates separately for each plan on an above-mean yield curve provided by our actuaries that is derived from a portfolio of high quality (rated AA or better) corporate bonds with a yield higher than the regression mean curve and the equivalent annuity cash flows.

The components of our pension and welfare costs are set forth in the following table.

Dollars in millions	Pension plans 2014	Pension plans 2013	Pension plans 2012	Welfare plans 2014	Welfare plans 2013	Welfare plans 2012
Service cost	$24	$29	$28	$2	$3	$4
Interest cost	47	43	44	15	14	16
Expected return on plan assets	(65)	(62)	(64)	(7)	(6)	(5)
Net amortization of prior service cost	(2)	(2)	(2)	(3)	(5)	(3)
Recognized actuarial loss	22	35	34	6	8	9
Net periodic benefit cost	$26	$43	$40	$13	$14	$21
Assumptions used to determine benefit costs						
Discount rate (1)	5.0%	4.2%	4.6%	4.7%	4.0%	4.5%
Expected return on plan assets (1)	7.8%	7.8%	8.4%	7.8%	7.8%	8.5%
Rate of compensation increase (1)	3.7%	3.7%	3.7%	3.7%	3.8%	3.8%
Pension band increase (2)	2.0%	2.0%	2.0%	n/a	n/a	n/a

(1) Rates are presented on a weighted average basis.
(2) Only applicable to the Nicor Gas union employees. The pension bands for the former Nicor Plan have been updated to reflect the new negotiated rates for 2015 and 2016, of 2.0% and 0%, respectively, as indicated in the union agreement dated March 2014.

The following tables present details about our pension and welfare plans.

Dollars in millions	Pension plans 2014	Pension plans 2013	Welfare plans 2014	Welfare plans 2013
Change in plan assets				
Fair value of plan assets, January 1,	$907	$837	$93	$77
Actual return on plan assets	68	134	5	16
Employee contributions	-	-	2	3
Employer contributions	1	1	17	19
Benefits paid	(70)	(65)	(19)	(23)
Medicare Part D reimbursements	-	-	1	1
Fair value of plan assets, December 31,	$906	$907	$99	$93
Change in benefit obligation				
Benefit obligation, January 1,	$960	$1,046	$326	$354
Service cost	24	29	2	3
Interest cost	47	43	15	14
Actuarial loss (gain)	137	(93)	8	(26)
Medicare Part D reimbursements	-	-	1	1
Benefits paid	(70)	(65)	(19)	(23)
Employee contributions	-	-	1	3
Benefit obligation, December 31,	$1,098	$960	$334	$326
Funded status at end of year	$(192)	$(53)	$(235)	$(233)
Amounts recognized in the Consolidated Statements of Financial Position consist of				
Long-term asset (2)	$97	$117	$-	$-
Current liability	(2)	(2)	-	-
Long-term liability	(287)	(168)	(235)	(233)
Net liability at December 31,	$(192)	$(53)	$(235)	$(233)
Accumulated benefit obligation (1)	$1,027	$902	n/a	n/a
Assumptions used to determine benefit obligations				
Discount rate	4.2%	5.0%	4.0%	4.7%
Rate of compensation increase	3.7%	3.7%	3.7%	3.7%
Pension band increase (3)	2.0%	2.0%	n/a	n/a

(1) APBO differs from the projected benefit obligation in that APBO excludes the effect of salary and wage increases.
(2) As a result of historically having multiple plans, a portion of our obligation is in an asset position.
(3) Only applicable to the Nicor Gas union employees.

A portion of the net benefit cost or credit related to these plans has been capitalized as a cost of constructing gas distribution facilities and the remainder is included in operation and maintenance expense.

Assumptions used to determine the health care benefit cost for the AGL Welfare Plan were as follows:

	2014	2013
Health care cost trend rate assumed for next year	8.1%	8.4%
Ultimate rate to which the cost trend rate is assumed to decline	4.5%	4.5%
Year that reaches ultimate trend rate	2030	2030

Assumed health care cost trend rates can have a significant effect on the amounts reported for the health care plans. A one percentage point change in the assumed health care cost trend rates for the AGL Welfare Plan would have the following effects on our benefit obligation and there was no effect on our service and interest cost.

In millions	Effect on benefit obligation
1% Health care cost trend rate increase	$15
1% Health care cost trend rate decrease	(13)

As a result of a cap on expected cost for the AGL Welfare Plan, a one percentage point increase or decrease in the assumed health care trend does not materially affect the Plan's periodic benefit cost or accumulated benefit obligation.

The following table presents the amounts not yet reflected in net periodic benefit cost and included in net regulatory assets and accumulated OCI as of December 31, 2014 and 2013:

	Net regulatory assets		Accumulated OCI		Total	
In millions	Pension plans	Welfare plans	Pension plans	Welfare plans	Pension plans	Welfare plans
December 31, 2014:						
Prior service credit	$-	$(18)	$(6)	$-	$(6)	$(18)
Net loss	76	57	307	36	383	93
Total	$76	$39	$301	$36	$377	$75
December 31, 2013:						
Prior service credit	$-	$(20)	$(9)	$-	$(9)	$(20)
Net loss	61	60	210	30	271	90
Total	$61	$40	$201	$30	$262	$70

The 2015 estimated amortizations out of regulatory assets or accumulated OCI for these plans are set forth in the following table.

	Net regulatory assets		Accumulated OCI		Total	
In millions	Pension plans	Welfare plans	Pension plans	Welfare plans	Pension plans	Welfare plans
Amortization of prior service credit	$-	$(3)	$(2)	$-	$(2)	$(3)
Amortization of net loss	9	3	20	2	29	5

We recorded regulatory assets for anticipated future cost recoveries of $122 million and $108 million as of December 31, 2014 and 2013, respectively.

The following table presents the gross benefit payments expected for the years ended December 31, 2015 through 2024 for our pension and welfare plans. There will be benefit payments under these plans beyond 2024.

In millions	Pension plans	Welfare plans
2015	$61	$19
2016	64	20
2017	67	20
2018	70	21
2019	72	22
2020-2024	374	115

Contributions

Our employees generally do not contribute to our pension and welfare plans; however, Nicor Gas and pre-65 AGL retirees make nominal contributions to their health care plan. We fund the qualified pension plans by contributing at least the minimum amount required by applicable regulations and as recommended by our actuary. However, we may also contribute in excess of the minimum required amount. As required by The Pension Protection Act of 2006 (the Act), we calculate the minimum amount of funding using the traditional unit credit cost method.

The Act contained new funding requirements for single-employer defined benefit pension plans and established a 100% funding target (over a 7-year amortization period) for plan years beginning after December 31, 2007. In 2014 and 2013, we had no required contributions to the merged AGL Plan.

Employee Savings Plan Benefits

We sponsor defined contribution retirement benefit plans that allow eligible participants to make contributions to their accounts up to specified limits. Under these plans, our matching contributions to participant accounts were $17 million in 2014, $14 million in 2013 and $12 million in 2012.

Note 7 – Stock-Based Compensation

General

The AGL Resources Inc. Omnibus Performance Incentive Plan, as amended and restated, and the Long-Term Incentive Plan (1999) provide for the grant of incentive and nonqualified stock options, stock appreciation rights, shares of restricted stock, restricted stock units, performance cash awards and other stock-based awards to officers and key employees. Under the Omnibus Performance Incentive Plan, as of December 31, 2014, the number of shares issuable upon exercise of outstanding stock options, warrants and rights is 587,292 shares. Under the Long-Term Incentive Plan (1999) as of December 31, 2014, the number of shares issuable upon exercise of outstanding stock options, warrants and rights is 436,400 shares. The maximum number of shares available for future issuance under the Omnibus Performance Incentive Plan is 3,962,335 shares, which includes 1,551,040 shares previously available under the Nicor Inc. 2006 Long-Term Incentive Plan, as amended, pursuant to NYSE rules. No further grants will be made from the Long-Term Incentive Plan (1999) except for reload options that may be granted pursuant to the terms of certain outstanding options.

Accounting Treatment and Compensation Expense

We measure and recognize stock-based compensation expense for our stock-based awards over the requisite service period in our financial statements based on the estimated fair value at the date of grant for our stock-based awards using the modified prospective method. These stock awards include:

- stock options;
- stock and restricted stock awards; and
- performance units (restricted stock units, performance share units and performance cash units).

Performance-based stock awards and performance units contain market and performance conditions. Stock options, restricted stock awards and performance units also contain a service condition.

We estimate forfeitures over the requisite service period when recognizing compensation expense. These estimates are adjusted to the extent that actual forfeitures differ, or are expected to materially differ, from such estimates. The authoritative guidance requires excess tax benefits to be reported as a financing cash inflow. The difference between the proceeds from the exercise of our stock-based awards and the par value of the stock is recorded within additional paid-in capital.

We have granted incentive and nonqualified stock options with a strike price equal to the fair market value on the date of the grant. Fair market value is defined under the terms of the applicable plans as the closing price per share of AGL Resources common stock for the trading day immediately preceding the grant date, as reported in *The Wall Street Journal*. Stock options generally have a three-year vesting period.

The following table provides additional information related to our cash and stock-based compensation awards.

In millions	2014	2013	2012
Compensation costs (1)	$24	$22	$9
Income tax benefits (1)	1	1	1
Excess tax benefits (2)	-	-	1

(1) Recorded in our Consolidated Statements of Income.
(2) Recorded in our Consolidated Statements of Financial Position.

Incentive and Nonqualified Stock Options

The stock options we granted generally expire 10 years after the date of grant. Participants realize value from option grants only to the extent that the fair market value of our common stock on the date of exercise of the option exceeds the fair market value of the common stock on the date of the grant.

As of December 31, 2014 and 2013, we had no unrecognized compensation costs related to stock options. Cash received from stock option exercises for 2014 and 2013 were $9 million and $21 million, respectively, and the income tax benefit from stock option exercises was immaterial for both years. The following tables summarize activity related to stock options for key employees and non-employee directors. As used in the table, intrinsic value for options means the difference between the current market value and the grant price.

Stock Options

	Number of options	Weighted average exercise price	Weighted average remaining life (in years)	Aggregate intrinsic value (in millions)
Outstanding - December 31, 2011	1,823,154	$35.61		
Granted	-	-		
Exercised	(234,844)	32.07		
Forfeited	(59,720)	37.34		
Outstanding - December 31, 2012(1)	1,528,590	$36.09		
Granted	-	-		
Exercised	(617,358)	35.37		
Forfeited	(12,500)	38.36		
Outstanding - December 31, 2013 (1)	898,732	$36.55	3.0	$10
Granted	-	-	-	
Exercised	(267,182)	36.84	1.7	
Forfeited	(4,000)	39.71	2.7	
Outstanding - December 31, 2014 (1) (2)	627,550	$36.41	2.2	$11

(1) All options outstanding at December 31, 2014, 2013 and 2012 were exercisable.
(2) The range of exercise prices for the options outstanding at December 31, 2014 was $31.09 to $43.54.

We measure compensation cost related to stock options based on the fair value of these awards at their date of grant using the Black-Scholes option-pricing model. There were no options granted in 2014, 2013 and 2012. We use shares purchased under our 2006 share repurchase program to satisfy exercises to the extent that repurchased shares are available. Otherwise, we issue new shares from our authorized common stock.

Performance Units

In general, a performance unit is an award of the right to receive (i) an equal number of shares of our common stock, which we refer to as a restricted stock unit or (ii) cash, subject to the achievement of certain pre-established performance criteria, which we refer to as a performance cash unit. Performance units are subject to certain transfer restrictions and forfeiture upon termination of employment. The compensation cost of restricted stock unit awards is equal to the grant date fair value of the awards, recognized over the requisite service period, determined according to the authoritative guidance related to stock compensation. The compensation cost of performance cash unit awards is equal to the grant date fair value of the awards measured against progress towards the performance measure, recognized over the requisite service period. No other assumptions are used to value these awards.

Restricted Stock Units In general, a restricted stock unit is an award that represents the opportunity to receive a specified number of shares of our common stock, subject to the achievement of certain pre-established performance criteria. In 2014, we granted 44,272 restricted stock units (including dividends) to certain employees, all of which were outstanding as of December 31, 2014. These restricted stock units had a performance measurement period that ended December 31, 2014. The performance measure, which related to earnings before interest, income tax, depreciation and amortization, was met. As such, the related restricted stock awards will occur in 2015 and are subject to a three year service condition.

Performance Share Unit Awards A performance share unit award represents the opportunity to receive cash and shares subject to the achievement of certain pre-established performance criteria. In 2012, 2013 and 2014, we granted performance share unit awards to certain officers. These awards have a performance measure that relates to the company's relative total shareholder return relative to a group of peer companies. The recorded liability and maximum potential liability related to the 2014, 2013 and 2012 grants are as follows:

In millions	Measurement period end date	Fair value accrued at December 31, 2014	Maximum aggregate payout
Granted in 2012	December 31, 2014 (1)	$8	$20
Granted in 2013	December 31, 2015	7	21
Granted in 2014	December 31, 2016	4	24

(1) The actual liability is $8 million, and the maximum amount that could have been paid was $20 million.

Stock and Restricted Stock Awards

The compensation cost of both stock awards and restricted stock awards is equal to the grant date fair value of the awards, recognized over the requisite service period. No other assumptions are used to value the awards. We refer to restricted stock as an award of our common stock that is subject to time-based vesting or achievement of performance measures. Prior to vesting, restricted stock awards are subject to certain transfer restrictions and forfeiture upon termination of employment.

Stock Awards - ***Non-Employee Directors*** Non-employee director compensation may be paid in shares of our common stock in connection with initial election, the annual retainer, and chair retainers, as applicable. Stock awards for non-employee directors are 100% vested and non-forfeitable as of the date of grant. During 2014, we issued 21,903 shares with a weighted average fair value of $52.97 to our non-employee directors.

Restricted Stock Awards - ***Employees*** The following table summarizes the restricted stock awards activity for our employees during the last three years.

	Shares of restricted stock	Weighted average remaining vesting period (in years)	Weighted average fair value
Outstanding - December 31, 2011 (1)	477,354		$34.40
Issued	268,840		40.08
Forfeited	(28,829)		39.07
Vested	(214,274)		36.45
Outstanding - December 31, 2012 (1)	503,091		$39.44
Issued	175,935		42.41
Forfeited	(33,352)		40.64
Vested	(204,421)		38.71
Outstanding - December 31, 2013 (1)	441,253	1.8	$40.82
Issued	262,235	4.4	47.03
Forfeited	(14,895)	2.4	43.41
Vested	(225,683)	-	42.31
Outstanding - December 31, 2014 (1)	462,910	1.8	$43.54

(1) Subject to restriction.

Employee Stock Purchase Plan (ESPP)

We have a nonqualified, broad based ESPP for all eligible employees. As of December 31, 2014, there were 422,564 shares available for future issuance under this plan. Employees may purchase shares of our common stock in quarterly intervals at 85% of fair market value, and we record an expense for the 15% purchase price discount. Employee ESPP contributions may not exceed $25,000 per employee during any calendar year.

	2014	2013	2012
Shares purchased on the open market	100,199	97,734	103,589
Average per-share purchase price	$51.60	$42.96	$38.96
Total purchase price discount	$739,598	$628,358	$591,855

Note 8 - Debt and Credit Facilities

Our financing activities, including long-term and short-term debt, are subject to customary approval or review by state and federal regulatory bodies. Our wholly owned subsidiary, AGL Capital, was established to provide for our ongoing financing needs through a commercial paper program, the issuance of various debt and hybrid securities and other financing arrangements. We fully and unconditionally guarantee all debt issued by AGL Capital. Nicor Gas is not permitted by regulation to make loans to affiliates or utilize AGL Capital for its financing needs. The following table provides maturity dates, year-to-date weighted average interest rates and amounts outstanding for our various debt securities and facilities that are included in our Consolidated Statements of Financial Position.

		December 31, 2014		December 31, 2013	
Dollars in millions	Year(s) due	Weighted average interest rate (1)	Outstanding	Weighted average interest rate (1)	Outstanding
Short-term debt					
Commercial paper - AGL Capital (2)	2015	0.3%	$590	0.4%	$857
Commercial paper - Nicor Gas (2)	2015	0.2	585	0.3	314
Total short-term debt		0.3%	$1,175	0.4%	$1,171
Current portion of long-term debt	2015	5.0%	$200	-%	$-
Long-term debt - excluding current portion					
Senior notes	2016-2043	5.0%	$2,625	5.0%	$2,825
First mortgage bonds	2016-2038	5.6	500	5.6	500
Gas facility revenue bonds	2022-2033	0.9	200	1.0	200
Medium-term notes	2017-2027	7.8	181	7.8	181
Total principal long-term debt		4.9%	$3,506	4.9%	$3,706
Fair value adjustment of long-term debt (3)	2016-2038	n/a	80	n/a	91
Unamortized debt premium, net	n/a	n/a	16	n/a	16
Total non-principal long-term debt		n/a	96	n/a	107
Total long-term debt			$3,602		$3,813
Total debt			$4,977		$4,984

(1) Interest rates are calculated based on the daily weighted average balance outstanding for the 12 months ended December 31, 2014 and 2013.
(2) As of December 31, 2014, the effective interest rates on our commercial paper borrowings were 0.5% for AGL Capital and 0.4% for Nicor Gas.
(3) See Note 4 for additional information on our fair value measurements.

Short-term Debt

Our short-term debt at December 31, 2014 and 2013 was comprised of borrowings under our commercial paper programs.

Commercial Paper Programs We maintain commercial paper programs at AGL Capital and at Nicor Gas that consist of short-term, unsecured promissory notes used in conjunction with cash from operations to fund our seasonal working capital requirements. Working capital needs fluctuate during the year and are highest during the injection period in advance of the Heating Season. The Nicor Gas commercial paper program supports working capital needs at Nicor Gas, while all of our other subsidiaries and SouthStar participate in the AGL Capital commercial paper program. During 2014, our commercial paper maturities ranged from 1 to 108 days, and at December 31, 2014, remaining terms to maturity ranged from 2 to 70 days. During 2014, total borrowings and repayments netted to a borrowing of $4 million. For commercial paper issuances with original maturities over three months, borrowings and repayments were $50 million and $195 million, respectively. During 2014, we utilized a portion of the approximately $225 million in proceeds and distributions from the sale of Tropical Shipping to reduce our commercial paper borrowings.

Credit Facilities At December 31, 2014 and 2013, there were no outstanding borrowings under either the AGL Capital or Nicor Gas credit facilities. In 2013, the AGL Credit Facility and Nicor Gas Credit Facility maturity dates were extended to November 10, 2017 and December 15, 2017, respectively. The terms, conditions and pricing under the agreements remain unchanged.

Current Portion of Long-term Debt The current portion of our long-term debt at December 31, 2014 is composed of the portion of our long-term debt due within the next 12 months.

Long-term Debt

Our long-term debt at December 31, 2014 and 2013 consisted of medium-term notes: Series A, Series B, and Series C, which we issued under an indenture dated December 1, 1989; senior notes; first mortgage bonds; and gas facility revenue bonds. Some of these issuances were completed in the private placement market. In determining that those specific bonds qualify for exemption from registration under Section 4(2) of the Securities Act of 1933, we relied on the facts that the bonds were offered only to a limited number of large institutional investors and each institutional investor that purchased the bonds represented that it was purchasing the bonds for its own account and not with a view to distribute them. We fully and unconditionally guarantee all of our senior notes and gas facility revenue bonds. Additionally, substantially all of Nicor Gas' properties are subject to the lien of the indenture securing its first mortgage bonds.

The majority of our long-term debt matures after fiscal year 2019. The annual maturities of our long-term debt for the next five years and thereafter are as follows:

Year	Amount (in millions)
2015	$200
2016	545
2017	22
2018	155
2019	350
Thereafter	2,434
Total	$3,706

Senior Notes There were no senior note issuances in 2014; however, during the fourth quarter of 2014, $120 million of senior notes that were issued to help fund the Nicor merger converted from a 1.9% fixed rate to a LIBOR-based floating rate. In 2013, we issued $500 million in 30-year senior notes with a fixed interest rate of 4.4%. The net proceeds were used to repay a portion of AGL Capital's commercial paper.

On January 23, 2015, we executed $800 million in notional value of 10 year and 30 year fixed-rate forward-starting interest rate swaps to hedge potential interest rate volatility prior to anticipated issuances of senior notes during 2015 and 2016. These debt issuances will be used to reduce our commercial paper for the amount that was borrowed to repay our senior notes that matured in January 2015 and to fund upcoming debt maturities as well as capital expenditures associated with increased utility investment and construction of our new pipeline projects. We have designated the forward-starting interest rate swaps, which will be settled on the debt issuance dates, as cash flow hedges.

First Mortgage Bonds We acquired the first mortgage bonds of Nicor Gas, which were issued through the public and private placement markets, as a result of the 2011 merger.

Gas Facility Revenue Bonds We are party to a series of loan agreements with the New Jersey Economic Development Authority and Brevard County, Florida under which a series of gas facility revenue bonds has been issued. These revenue bonds are issued by state agencies or counties to investors, and proceeds from the issuance are then loaned to us.

During 2013, we refinanced $200 million of our outstanding tax-exempt gas facility revenue bonds, which involved a combination of the issuance of $60 million of refunding bonds to, and the purchase of $140 million of existing bonds by, a syndicate of banks. We had no cash receipts or payments in connection with the refinancing. The letters of credit providing credit support for the outstanding revenue bonds along with other related agreements were terminated as a result of the refinancing.

Financial and Non-Financial Covenants

The AGL Credit Facility and the Nicor Gas Credit Facility each include a financial covenant that requires us to maintain a ratio of total debt to total capitalization of no more than 70% at the end of any fiscal month; however, our goal is to maintain these ratios at levels between 50% and 60%. These ratios, as calculated in accordance with the debt covenants, include standby letters of credit and surety bonds and exclude accumulated OCI items related to non-cash pension adjustments, welfare benefits liability adjustments and accounting adjustments for cash flow hedges. Adjusting for these items, the following table contains our debt-to-capitalization ratios as of December 31, which are below the maximum allowed.

	AGL Resources		Nicor Gas	
	2014	2013	2014	2013
Debt-to-capitalization ratio	55%	57%	62%	55%

The credit facilities contain certain non-financial covenants that, among other things, restrict liens and encumbrances, loans and investments, acquisitions, dividends and other restricted payments, asset dispositions, mergers and consolidations and other matters customarily restricted in such agreements.

Default Provisions

Our credit facilities and other financial obligations include provisions that, if not complied with, could require early payment or similar actions. The most important default events include the following:

- a maximum leverage ratio
- insolvency events and/or nonpayment of scheduled principal or interest payments
- acceleration of other financial obligations
- change of control provisions

We have no triggering events in our debt instruments that are tied to changes in our specified credit ratings or our stock price and have not entered into any transaction that requires us to issue equity based on credit ratings or other triggering events. We were in compliance with all existing debt provisions and covenants, both financial and non-financial, as of December 31, 2014 and 2013.

Note 9 - Equity

Treasury Shares

Our Board of Directors authorized us to purchase up to 8 million treasury shares through our repurchase plan, which expired on January 31, 2011. This plan was used to offset shares issued under our employee and non-employee director incentive compensation plans and our dividend reinvestment and stock purchase plans. Stock purchases under this plan were made in the open market or in private transactions at times and in amounts that we deemed appropriate. We held the purchased shares as treasury shares and accounted for them using the cost method. We purchased no treasury shares in 2014 or 2013.

Preferred Securities

At December 31, 2014 and 2013, we had 10 million shares of authorized, unissued Class A junior participating preferred stock, no par value, and 10 million shares of authorized, unissued preferred stock, no par value.

Dividends

Our common shareholders may receive dividends when declared at the discretion of our Board of Directors. Dividends may be paid in cash, stock or other form of payment, and payment of future dividends will depend on our future earnings, cash flow, financial requirements and other factors.

Additionally, we derive a substantial portion of our consolidated assets, earnings and cash flow from the operation of regulated utility subsidiaries, whose legal authority to pay dividends or make other distributions to us is subject to regulation. As with most other companies, the payment of dividends is restricted by laws in the states where we conduct business. In certain cases, our ability to pay dividends to our common shareholders is limited by (i) our ability to pay our debts as they become due in the usual course of business and satisfy our obligations under certain financing agreements, including our debt-to-capitalization covenant, (ii) our ability to maintain total assets below total liabilities, and (iii) our ability to satisfy our obligations to any preferred shareholders.

Accumulated Other Comprehensive Loss

Our share of comprehensive income includes net income plus OCI (loss), which includes changes in fair value of certain derivatives designated as cash flow hedges, certain changes in pension and welfare benefit plans and reclassifications for amounts included in net income less net income, and OCI attributable to the noncontrolling interest. For more information on our derivative instruments, see Note 5. For more information on our pensions and retirement benefit obligations, see Note 6. Our OCI (loss) amounts are aggregated within accumulated other comprehensive loss on our Consolidated Statement of Financial Position. The following table provides changes in the components of our accumulated other comprehensive loss balances net of the related income tax effects.

In millions (1)	Cash flow hedges	Retirement benefit plans	Total
Balance as of December 31, 2011	$(7)	$(210)	$(217)
Other comprehensive income (loss)	4	(5)	(1)
Balance as of December 31, 2012	(3)	(215)	(218)
Other comprehensive income, before reclassifications	1	66	67
Amounts reclassified from accumulated other comprehensive loss	3	12	15
Balance as of December 31, 2013	1	(137)	(136)
Other comprehensive loss, before reclassifications	(6)	(71)	(77)
Amounts reclassified from accumulated other comprehensive loss	(1)	8	7
Balance as of December 31, 2014	$(6)	$(200)	$(206)

(1) All amounts are net of income taxes. Amounts in parentheses indicate debits to accumulated other comprehensive loss.

The following table provides details of the reclassifications out of accumulated other comprehensive loss for the years ended December 31, 2014 and 2013 and the ultimate unfavorable impact on net income.

	December 31,	
In millions (1)	2014	2013
Cash flow hedges		
Cost of goods sold (natural gas contracts)	$4	$(1)
Operation and maintenance expense (natural gas contracts)	1	-
Interest expense (interest rate contracts)	-	(3)
Total before income tax	5	(4)
Income tax (expense)/benefit	(2)	1
Cash flow hedges net of income tax	3	(3)
Less noncontrolling interest	2	-
Total cash flow hedges net of income tax	1	(3)
Retirement benefit plans		
Operation and maintenance expense (actuarial losses)(2)	(15)	(25)
Operation and maintenance expense (prior service credits) (2)	2	5
Total before income tax	(13)	(20)
Income tax benefit	5	8
Total retirement benefit plans	(8)	(12)
Total reclassification	$(7)	$(15)

(1) Amounts in parentheses indicate reductions to our net income and to accumulated other comprehensive loss. Except for retirement benefit plan amounts, the net income impacts are immediate.
(2) Amortization of these accumulated other comprehensive loss components is included in the computation of net periodic benefit cost. See Note 6 for additional details about net periodic benefit cost.

Note 10 - Non-Wholly Owned Entities

Variable Interest Entities

On a quarterly basis, we evaluate our variable interests in other entities, primarily ownership interests, to determine if they represent a variable interest entity (VIE) as defined by the authoritative accounting guidance on consolidation, and if so, which party is the primary beneficiary. We have determined that SouthStar, a joint venture owned by us and Piedmont, is our only VIE for which we are the primary beneficiary. This requires us to consolidate its assets, liabilities and Statements of Income. Our conclusion that SouthStar is a VIE resulted from our equal voting rights with Piedmont not being proportional to our economic obligation to absorb 85% of losses or residual returns from the joint venture. We account for our ownership of SouthStar in accordance with authoritative accounting guidance, which is described within Note 2.

SouthStar markets natural gas and related services under the trade name Georgia Natural Gas to customers in Georgia, and under various other trade names to customers in Illinois, Ohio, Florida, Maryland, Michigan and New York. Following are additional factors we considered in determining that we have the power to direct SouthStar's activities that most significantly impact its performance.

Operations

Our wholly owned subsidiaries Nicor Gas and Atlanta Gas Light provide the following services, which affect SouthStar's operations:

- meter reading for SouthStar's customers in Illinois and Georgia
- maintenance and expansion of the natural gas infrastructure in Illinois and Georgia

- assignment of storage and transportation capacity used in delivering natural gas to SouthStar's customers

Liquidity and capital resources

- guarantees of SouthStar's activities with, and its credit exposure to, its counterparties and to certain natural gas suppliers in support of SouthStar's payment obligations
- support of SouthStar's daily cash management activities and assistance ensuring SouthStar has adequate liquidity and working capital resources by allowing SouthStar to utilize the AGL Capital commercial paper program for its liquidity and working capital requirements in accordance with our services agreement

Back office functions

- accounting, information technology, legal, human resources, credit and internal controls services in accordance with our services agreement

SouthStar's earnings are allocated entirely in accordance with the ownership interests and are seasonal in nature, with the majority occurring during the first and fourth quarters of each year. SouthStar's current assets consist primarily of natural gas inventory, derivative instruments and receivables from its customers. SouthStar also has receivables from us due to its participation in AGL Capital's commercial paper program. SouthStar's current liabilities consist primarily of accrued natural gas costs, other accrued expenses, customer deposits, derivative instruments and payables to us from its participation in AGL Capital's commercial paper program.

SouthStar's contractual commitments and obligations, including operating leases and agreements with third-party providers, do not contain terms that would trigger material financial obligations in the event that such contracts were terminated. As a result, our maximum exposure to a loss at SouthStar is considered to be immaterial. SouthStar's creditors have no recourse to our general credit beyond our corporate guarantees that we have provided to SouthStar's counterparties and natural gas suppliers. We have provided no financial or other support that was not previously contractually required. With the exception of our corporate guarantees and the aforementioned limited protections related to goodwill and intangible assets, we have not entered into any arrangements that could require us to provide financial support to SouthStar.

Price and volume fluctuations of SouthStar's natural gas inventories can cause significant variations in our working capital and cash flow from operations. Changes in our operating cash flows are also attributable to SouthStar's working capital changes resulting from the impact of weather, the timing of customer collections, payments for natural gas purchases and cash collateral amounts that SouthStar maintains to facilitate its derivative instruments.

Cash flows used in our investing activities include capital expenditures for SouthStar for the year ended December 31, of $7 million for 2014, $3 million for 2013 and $1 million for 2012. Cash flows used in our financing activities include SouthStar's distribution to Piedmont for its portion of SouthStar's annual earnings from the previous year. Generally, this distribution occurs in the first quarter of each fiscal year. For the years ended December 31, 2014, 2013 and 2012, SouthStar distributed $17 million, $17 million and $14 million to Piedmont, respectively.

On September 1, 2013, we contributed to SouthStar our Illinois retail energy businesses with approximately 108,000 customers. Additionally, Piedmont contributed to SouthStar $22.5 million in cash to maintain its 15% ownership in the joint venture. In connection with the contribution of our Illinois retail energy businesses, we provided certain limited protections to Piedmont regarding the value of the contributed businesses related to goodwill and other intangible assets. Piedmont's contribution is reflected as an increase to the noncontrolling interest on our Consolidated Statements of Financial Position and a financing activity on our Consolidated Statements of Cash Flows. These funds were used to reduce our commercial paper borrowings. The following table provides additional information on SouthStar's assets and liabilities as of December 31, which are consolidated within our Consolidated Statements of Financial Position.

	2014			2013		
In millions	**Consolidated**	**SouthStar** (1)	**%** (2)	**Consolidated**	**SouthStar** (1)	**%** (2)
Current assets	$2,890	$238	8%	$2,895	$264	9%
Goodwill and other intangible assets	1,952	125	6	1,972	133	7
Long-term assets and other deferred debits	10,067	17	-	9,683	13	-
Total assets	$14,909	$380	3%	$14,550	$410	3%
Current liabilities	$3,219	$71	2%	$3,118	$95	3%
Long-term liabilities and other deferred credits	7,862	-	-	7,819	-	-
Total liabilities	11,081	71	1	10,937	95	1
Equity	3,828	309	8	3,613	315	9
Total liabilities and equity	$14,909	$380	3%	$14,550	$410	3%

(1) These amounts reflect information for SouthStar and exclude intercompany eliminations and the balances of our wholly owned subsidiary with an 85% ownership interest in SouthStar.
(2) SouthStar's percentage of the amount on our Consolidated Statements of Financial Position.

The following table provides information on SouthStar's operating revenues and operating expenses for the years ended December 31, which are consolidated within our Consolidated Statements of Income.

In millions	2014	2013
Operating revenues	$866	$687
Operating expenses		
Cost of goods sold	645	491
Operation and maintenance	87	72
Depreciation and amortization	11	7
Taxes other than income taxes	1	1
Total operating expenses	744	571
Operating income	$122	$116

Equity Method Investments

Triton We have an investment in Triton, a cargo container leasing company, which is included within our "other" non-reportable segment. Container equipment that is acquired by Triton is accounted for in tranches as defined in Triton's operating agreement, and investors make capital contributions to Triton to invest in each of the tranches. As of December 31, 2014, we had invested in seven tranches established by Triton.

Horizon Pipeline We own a 50% interest in a joint venture with Natural Gas Pipeline Company of America that is regulated by the FERC and is included within our midstream operations segment. Horizon Pipeline operates an approximate 70-mile natural gas pipeline from Joliet, Illinois to near the Wisconsin/Illinois border. Nicor Gas typically contracts for 70% to 80% of the total capacity.

Sawgrass Storage We own a 50% interest in Sawgrass Storage, a joint venture between us and a privately held energy exploration and production company for the development of an underground natural gas storage facility in Louisiana with 30 Bcf of working gas capacity and is included within our midstream operations segment. In December 2013, the joint venture decided to terminate the development of this facility and recognized an impairment loss of $16 million, which reduced the carrying amount of the joint venture's long-lived assets to fair value. Consequently, we recognized our 50% interest in the loss during the fourth quarter of 2013, resulting in an $8 million ($5 million net of tax) charge to operating income.

The carrying amounts of our investments that are accounted for under the equity method at December 31 were as follows:

In millions	2014	2013
Triton	$62	$70
Horizon Pipeline	14	15
Other (1)	4	1
Total	$80	$86

(1) Includes our current investment in PennEast Pipeline of $1 million and Atlantic Coast pipeline of $2 million as of December 31, 2014.

Income from our equity method investments is classified as other income in our Consolidated Statements of Income. The following table provides the income from our equity method investments for the years ended December 31. The majority of our net equity investment income is attributable to our investment in Triton. For more information on our other income, see Note 2. During 2014 and 2013, we received distributions of $17 million from our equity investees.

In millions	2014	2013	2012
Triton	$6	$9	$11
Horizon Pipeline	2	2	2
Other	-	(8)	-
Total	$8	$3	$13

In 2014, we entered into two interstate pipeline joint ventures within our midstream operations segment as described below. Our investments in these joint ventures were immaterial in 2014. The capacity from these joint ventures will further enhance system reliability as well as provide access to a more diverse supply of natural gas. We have concluded that, at present, both are VIEs. We are not considered the primary beneficiary and, therefore, we have not consolidated the financial statements for these joint ventures in our consolidated financial statements because we share in the ability to direct the activities that most significantly impact their economic performance with their other member companies. We have accounted for our investment in these joint ventures using the equity method of accounting, and we have classified the investments in other noncurrent assets in our Consolidated Statements of Financial Position.

PennEast Pipeline On August 11, 2014, we entered into a joint venture in which we hold a 20% ownership interest to develop and operate a 108-mile natural gas pipeline between New Jersey and Pennsylvania with initial transportation capacity of 1 Bcf per day, which may be expanded to 1.2 Bcf per day. Subject to FERC approval, construction is expected to begin in the first quarter of 2017 with a targeted completion date in the fourth quarter of 2017.

Atlantic Coast Pipeline On September 2, 2014, we entered into a joint venture in which we hold a 5% ownership interest to develop and operate a 550-mile natural gas pipeline in North Carolina, Virginia, and West Virginia with initial transportation capacity of 1.5 Bcf per day, which may be expanded to 2.0 Bcf per day. Subject to FERC approval, construction is expected to begin in the second half of 2016 with a targeted completion date in the second half of 2018.

Note 11 - Commitments, Guarantees and Contingencies

We have incurred various contractual obligations and financial commitments in the normal course of our operating and financing activities that are reasonably likely to have a material effect on liquidity or the availability of capital resources. Contractual obligations include future cash payments required under existing contractual arrangements, such as debt and lease agreements. These obligations may result from both general financing activities and from commercial arrangements that are directly supported by related revenue-producing activities. In 2014, we entered into several unconditional purchase obligations in the ordinary course of business. These include capacity and supply agreements related to the Dalton Pipeline, PennEast Pipeline, Atlantic Coast Pipeline and wholesale services, which are reflected in the table below. The following table illustrates our expected future contractual payments under our obligations and other commitments as of December 31, 2014.

In millions	**Total**	**2015**	**2016**	**2017**	**2018**	**2019**	**2020 & thereafter**
Recorded contractual obligations:							
Long-term debt (1)	$3,706	$200	$545	$22	$155	$350	$2,434
Short-term debt	1,175	1,175	-	-	-	-	-
Environmental remediation liabilities (2)	414	87	93	55	47	37	95
Total	$5,295	$1,462	$638	$77	$202	$387	$2,529
Unrecorded contractual obligations and commitments (3) (8):							
Pipeline charges, storage capacity and gas supply (4)	$4,303	$805	$457	$280	$234	$222	$2,305
Interest charges (5)	2,762	179	171	147	146	141	1,978
Operating leases (6)	188	33	31	24	17	18	65
Asset management agreements (7)	32	9	10	7	4	2	-
Standby letters of credit, performance/surety bonds (8)	50	49	1	-	-	-	-
Other	8	3	3	1	1	-	-
Total	$7,343	$1,078	$673	$459	$402	$383	$4,348

(1) Excludes the $75 million step up to fair value of first mortgage bonds, $16 million unamortized debt premium and $5 million interest rate swaps fair value adjustment. Includes our current portion of long-term debt of $200 million, which matured in January 2015.
(2) Includes charges recoverable through base rates or rate rider mechanisms.
(3) In accordance with GAAP, these items are not reflected in our Consolidated Statements of Financial Position.
(4) Includes charges recoverable through a natural gas cost recovery mechanism or alternatively billed to marketers and demand charges associated with Sequent. The gas supply balance includes amounts for Nicor Gas and SouthStar gas commodity purchase commitments of 51 Bcf at floating gas prices calculated using forward natural gas prices as of December 31, 2014, and is valued at $142 million. As we do for other subsidiaries, we provide guarantees to certain gas suppliers for SouthStar in support of payment obligations.
(5) Floating rate interest charges are calculated based on the interest rate as of December 31, 2014 and the maturity date of the underlying debt instrument. As of December 31, 2014, we have $53 million of accrued interest on our Consolidated Statements of Financial Position that will be paid in 2015.
(6) We have certain operating leases with provisions for step rent or escalation payments and certain lease concessions. We account for these leases by recognizing the future minimum lease payments on a straight-line basis over the respective minimum lease terms, in accordance with GAAP. However, this lease accounting treatment does not affect the future annual operating lease cash obligations as shown herein. Our operating leases are primarily for real estate.
(7) Represent fixed-fee minimum payments for Sequent's affiliated asset management agreements.
(8) We provide guarantees to certain municipalities and other agencies and certain gas suppliers of SouthStar in support of payment obligations.

Contingencies and Guarantees

Contingent financial commitments, such as financial guarantees, represent obligations that become payable only if certain predefined events occur. We have certain subsidiaries that enter into various financial and performance guarantees and indemnities providing assurance to third parties. We believe the likelihood of payment under our guarantees is remote. No liability has been recorded for such guarantees and indemnifications as the fair value was inconsequential at inception.

Financial guarantees AGL Equipment Leasing Inc. (AEL), a wholly owned subsidiary, holds our interest in Triton and has an obligation to restore to zero any deficit in its equity account for income tax purposes in the unlikely event that Triton is liquidated and a deficit balance remains. This obligation was not impacted by the 2014 sale of Tropical Shipping and continues for the life of the Triton partnerships. Any payment is effectively limited to the net assets of AEL, which were less than $1 million at December 31, 2014. We believe the likelihood of any such payment by AEL is remote and as such no liability has been recorded for this obligation.

Indemnities In certain instances, we have undertaken to indemnify current property owners and others against costs associated with the effects and/or remediation of contaminated sites for which we may be responsible under applicable federal or state environmental laws, generally with no limitation as to the amount. These indemnifications relate primarily to ongoing coal tar cleanup, as discussed in Environmental Matters. We believe that the likelihood of payment under our other environmental indemnifications is remote. No liability has been recorded for such indemnifications as the fair value was inconsequential at inception.

Regulatory Matters

In December 2012, Atlanta Gas Light filed a petition with the Georgia Commission for approval to resolve a volumetric imbalance of natural gas related to Atlanta Gas Light's use of retained storage assets to operationally balance the system for the benefit of the natural gas market. In September 2014, we filed a stipulation that was entered between us, staff of the Georgia Commission and several Marketers that included a resolution of the 4.6 Bcf imbalance over a five-year period from January 1, 2015 through December 31, 2019. The Georgia Commission approved the stipulation in December 2014. Over the five-year period, discretionary funds available to the Universal Service Fund, which is controlled by the Georgia Commission, will be used to resolve 25% of the imbalance, or approximately 1.15 Bcf of natural gas. Atlanta Gas Light is obligated to resolve 25% and we have recorded a reserve in our Consolidated Statements of Financial Position representing the future estimated cost to purchase the approximately 1.15 Bcf of natural gas. The cost to resolve the remaining difference of approximately 2.3 Bcf of natural gas will be recovered from all certificated Marketers through charges for system retained storage gas as it is used by the certificated Marketers.

On August 7, 2014, staff of the Illinois Commission and the Citizens Utility Board (CUB) filed testimony in the 2003 gas cost prudence review disputing certain gas loan transactions offered by Nicor Gas under its Chicago Hub services requesting refunds of $18 million and $22 million, respectively. We filed surrebuttal testimony in December 2014 in this proceeding disputing that any refund is due, as Nicor Gas was authorized to enter into these transactions and revenues associated with such transactions reduced rate payers' costs as either credits to the purchased gas adjustment (PGA) or reductions to base rates consistent with then-current Illinois Commission orders governing these activities. We believe these claims engage in hindsight speculation, which is expressly prohibited in a prudence review examination, and we intend to vigorously defend against these claims. Evidentiary hearings are scheduled for March 2015. Similar gas loan transactions were provided in other open review years. The resolution will ultimately be decided by the Illinois Commission. We are currently unable to predict the ultimate outcome and have recorded no liability for this matter.

Environmental Matters

We are subject to federal, state and local laws and regulations governing environmental quality and pollution control that require us to remove or remedy the effect on the environment of the disposal or release of specified substances at current and former operating sites. See Note 3 for additional information.

We are involved in an investigation by the EPA regarding the applicable regulatory requirements for polychlorinated biphenyl in the Nicor Gas distribution system. While we are unable to predict the outcome of this matter or to reasonably estimate our potential exposure related thereto, if any, and have not recorded a liability associated with this contingency, the final disposition of this matter is not expected to have a material adverse impact on our liquidity or financial condition.

Litigation

We are involved in litigation arising in the normal course of business. Although in some cases we are unable to estimate the amount of loss reasonably possible in addition to any amounts already recognized, it is possible that the resolution of these contingencies, either individually or in aggregate, will require us to take charges against, or will result in reductions in, future earnings. Management believes that while the resolution of these contingencies, whether individually or in aggregate, could be material to earnings in a particular period, they will not have a material adverse effect on our consolidated financial position, results of operations or cash flows.

PBR Proceeding Nicor Gas' PBR plan was a regulatory plan that provided economic incentives based on natural gas cost performance. The PBR plan went into effect in 2000 and was terminated effective January 1, 2003, following allegations that Nicor Gas acted improperly in connection with the plan. Under this plan, Nicor Gas' total gas supply costs were compared to a market-sensitive benchmark. Savings and losses relative to the benchmark were determined annually and shared equally with sales customers. Since 2002, the amount of the savings and losses required to be shared has been disputed by the CUB and others, with the Illinois Attorney General (IAG) intervening, and subject to extensive contested discovery and other regulatory proceedings before administrative law judges and the Illinois Commission. In 2009, the staff of the Illinois Commission, IAG and CUB requested refunds of $85 million, $255 million and $305 million, respectively.

In February 2012, we committed to a stipulation with the staff of the Illinois Commission for a resolution of the dispute through credits to Nicor Gas customers of $64 million. On November 5, 2012, the Administrative Law Judges issued a proposed order for a refund of $72 million to ratepayers. In the fourth quarter of 2012, we increased our accrual for this dispute by $8 million for a total of $72 million as a result of these developments and their effect on the estimated liability.

On June 7, 2013, the Illinois Commission issued an order requiring us to refund $72 million to current Nicor Gas customers through our PGA mechanism based upon natural gas throughput over 12 months beginning on July 1, 2013. Approximately $43 million was refunded during the first half of 2014, which resulted in the completion of all refunds. On February 28, 2014, the CUB appealed the Illinois Commission's order requesting refunds consistent with its 2009 request to the appellate court in Illinois and Nicor Gas filed its response brief on July 25, 2014. The CUB filed its reply brief on October 17, 2014. There is no set time frame for a final ruling by the appellate court.

Other In addition to the matters set forth above, we are involved with legal or administrative proceedings before various courts and agencies with respect to general claims, taxes, environmental, gas cost prudence reviews and other matters. We are unable to determine the ultimate outcome of these other contingencies. We believe that these amounts are appropriately reflected in our consolidated financial statements, including the recording of appropriate liabilities when reasonably estimable.

Note 12 - Income Taxes

Income Tax Expense

The relative split between current and deferred taxes is due to a variety of factors, including true ups of prior year tax returns, and most importantly, the timing of our property-related deductions. Components of income tax expense in the Consolidated Statements of Income are shown in the following table.

In millions	2014	2013	2012
Current income taxes			
Federal	$113	$164	$8
State	38	35	4
Deferred income taxes			
Federal	184	(8)	128
State	17	(11)	20
Amortization of investment tax credits	(2)	(3)	(3)
Total income tax expense	$350	$177	$157

The reconciliations between the statutory federal income tax rate of 35%, the effective rate and the related amount of income tax expense for the years ended December 31, in our Consolidated Statements of Income are presented in the following table.

In millions	2014	2013	2012
Computed tax expense at statutory rate	$325	$165	$151
State income tax, net of federal income tax benefit	36	20	19
Tax effect of net income attributable to the noncontrolling interest	(7)	(7)	(6)
Amortization of investment tax credits	(2)	(3)	(3)
Affordable housing credits	(2)	(2)	(2)
Flexible dividend deduction	(2)	(2)	(2)
Sale of Compass Energy	-	6	-
Other	2	-	-
Total income tax expense on Consolidated Statements of Income	$350	$177	$157

Accumulated Deferred Income Tax Assets and Liabilities

We report some of our assets and liabilities differently for financial accounting purposes than we do for income tax purposes. We report the tax effects of the differences in those items as deferred income tax assets or liabilities in our Consolidated Statements of Financial Position. We measure the assets and liabilities using income tax rates that are currently in effect. The current portion of our deferred income taxes is recognized within current assets in our Consolidated Statements of Financial Position. We have provided a valuation allowance for some of these items that reduce our net deferred tax assets to amounts we believe are more likely than not to be realized in future periods. With respect to our continuing operations, we have net operating losses in various jurisdictions. Components that give rise to the net current and long-term accumulated deferred income tax liability are as follows.

	As of December 31,	
In millions	2014	2013
Current accumulated deferred income tax liabilities		
Mark-to-market	$33	$-
Inventory	26	18
Total current accumulated deferred income tax liabilities	59	18
Current accumulated deferred income tax assets		
Compensation accruals	30	19
Lower of cost or market	26	-
Allowance for doubtful accounts	12	10
Mark-to-market	-	24
Other	21	16
Total current accumulated deferred income tax assets	89	69
Valuation allowances (1)	(6)	(8)
Total current accumulated deferred income tax assets, net of valuation allowance	83	61
Net current accumulated deferred income tax asset	$24	$43

Long-term accumulated deferred income tax liabilities		
Property - accelerated depreciation and other property-related items	$1,801	$1,608
Investments in partnerships	16	18
Acquisition intangibles	14	11
Mark-to-market	12	-
Undistributed earnings of foreign subsidiaries	-	26
Other	85	97
Total long-term accumulated deferred income tax liabilities	1,928	1,760
Long-term accumulated deferred income tax assets		
Unfunded pension and retiree welfare benefit obligation	117	92
Deferred investment tax credits	6	7
Mark-to-market	-	3
Other	95	44
Total long-term accumulated deferred income tax assets	218	146
Valuation allowances (1)	(14)	(14)
Total long-term accumulated deferred income tax assets, net of valuation allowance	204	132
Net long-term accumulated deferred income tax liability	$1,724	$1,628

(1) The total valuation allowance in 2014 and 2013 is $20 million and $22 million respectively. For 2014 the total is comprised of $1 million due to net operating losses of a former non-operating facility that are not allowed in New Jersey and $19 million related to our investment in Triton. For 2013 the total is comprised of $3 million due to net operating losses in New Jersey of a former non-operating facility that are not allowed in New Jersey and $19 million related to our investment in Triton. New Jersey net operating losses expired in 2014, resulting in the reduction of the valuation allowance.

Tax Benefits

As of December 31, 2014, and December 31, 2013, we did not have a liability for unrecognized tax benefits. Based on current information, we do not anticipate that this will change materially in 2015. As of December 31, 2014, we did not have a liability recorded for payment of interest or penalties associated with uncertain tax positions nor did we have any such interest or penalties during 2014 or 2013.

We file a U.S. federal consolidated income tax return and various state income tax returns. We are no longer subject to income tax examinations by the Internal Revenue Service or in any state for years before 2011.

Note 13 - Segment Information

Our reportable segments comprise revenue-generating components of our company for which we produce separate financial information internally that we regularly use to make operating decisions and assess performance. Our determination of reportable segments considers the strategic operating units under which we manage sales of various products and services to customers in differing regulatory environments. We manage our businesses through four reportable segments - distribution operations, retail operations, wholesale services, midstream operations. Our non-reportable segments are combined and presented as “other segments”.

Effective September 1, 2014, we closed on the sale of Tropical Shipping, which historically operated within our cargo shipping segment. The assets and liabilities of these businesses are classified as held for sale on the Consolidated Statements of Financial Position, and the financial results of these businesses as of December 31, 2013 are reflected as discontinued operations on the Consolidated Statements of Income. Amounts shown in this note, unless otherwise indicated, exclude assets held for sale and discontinued operations. Cargo shipping also included our investment in Triton, which was not part of the sale and has been reclassified to a non-reportable segment. See Note 14 for additional information.

Our distribution operations segment is the largest component of our business and includes natural gas local distribution utilities in seven states. These utilities construct, manage, and maintain intrastate natural gas pipelines and distribution facilities. Although the operations of our distribution operations segment are geographically dispersed, the operating subsidiaries within the distribution operations segment are regulated utilities, with rates determined by individual state regulatory commissions. These natural gas distribution utilities have similar economic and risk characteristics.

We are also involved in several related and complementary businesses. Our retail operations segment includes retail natural gas marketing to end-use customers primarily in Georgia and Illinois. Additionally, retail operations provides home protection products and services. Our wholesale services segment engages in natural gas storage and gas pipeline arbitrage and related activities. Additionally, they provide natural gas asset management and/or related logistics services for each of our utilities except Nicor Gas, as well as for non-affiliated companies. Our midstream operations segment includes our non-utility storage and pipeline operations, including the operation of high-deliverability natural gas storage assets. Our “other” non-reportable segments include subsidiaries that individually are not significant on a stand-alone basis and that do not fit into one of our reportable segments.

The chief operating decision maker of the company is the Chairman, President and Chief Executive Officer, who utilizes EBIT as the primary measure of profit and loss in assessing the results of each segment’s operations. EBIT includes operating income and other income and expenses. Items we do not include in EBIT are income taxes and financing costs, including interest expense, each of which we evaluate on a consolidated basis. Summarized Statements of Income, Statements of Financial Position and capital expenditure information by segment as of and for the years ended December 31, 2014, 2013 and 2012 are shown in the following tables.

2014

In millions	**Distribution operations**	**Retail operations**	**Wholesale services** (1)	**Midstream operations**	**Other segments** (2)	**Intercompany eliminations**	**Consolidated**
Operating revenues from external parties	$3,802	$994	$578	$88	$7	$(84)	$5,385

Identifiable and total assets (3)	$11,634	$685	$1,163	$713	$10,160	$(10,088)	$14,267
Capital expenditures	$684	$9	$2	$12	$24	$-	$731

2012

In millions	Distribution operations	Retail operations	Wholesale services (1)	Midstream operations	Other segments (2)	Intercompany eliminations	Consolidated
Operating revenues from external parties	$2,691	$733	$88	$78	$7	$(35)	$3,562
Intercompany revenues	167	2	-	-	-	(169)	-
Total operating revenues	2,858	735	88	78	7	(204)	3,562
Operating expenses							
Cost of goods sold	1,221	488	38	32	-	(196)	1,583
Operation and maintenance	642	114	48	19	1	(8)	816
Depreciation and amortization	347	18	2	14	13	-	394
Nicor merger expenses (4)	-	-	-	-	20	-	20
Taxes other than income taxes	140	4	4	5	6	-	159
Total operating expenses	2,350	624	92	70	40	(204)	2,972
Operating income (loss)	508	111	(4)	8	(33)	-	590
Other income	9	-	1	2	12	-	24
EBIT	$517	$111	$(3)	$10	$(21)	$-	$614
Identifiable and total assets (3)	$11,256	$506	$1,218	$720	$9,848	$(9,769)	$13,779
Capital expenditures	$649	$8	$3	$62	$53	$-	$775

(1) The revenues for wholesale services are netted with costs associated with its energy and risk management activities. A reconciliation of our operating revenues and our intercompany revenues for the years ended December 31, are shown in the following table. Wholesale services 2014 operating revenues are related to colder-than-normal weather and extreme volatility and are not indicative of future performance.

In millions	Third party gross revenues	Intercompany revenues	Total gross revenues	Less gross gas costs	Operating revenues
2014	$10,709	$718	$11,427	$10,849	$578
2013	7,681	417	8,098	8,038	60
2012	6,089	350	6,439	6,351	88

(2) Our other non-reportable segments now also include our investment in Triton, which was part of our cargo shipping segment that is classified as discontinued operations. For more information, see Note 14.

(3) Identifiable assets are those used in each segment's operations and exclude assets held for sale.

(4) Transaction expenses associated with the Nicor merger are shown separately to better compare year-over-year results.

Note 14 - Discontinued Operations

On September 1, 2014, we closed on the sale of Tropical Shipping to an unrelated third party. The after-tax cash proceeds and distributions from the transaction were approximately $225 million. We determined that the cumulative foreign earnings of Tropical Shipping would no longer be indefinitely reinvested offshore. Accordingly, we recognized income tax expense of $60 million, of which $31 million was recorded in the first quarter of 2014, and the remaining $29 million was recorded in the third quarter of 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded, resulting in our repatriation of $86 million in cash.

During the first quarter of 2014, based upon the negotiated sales price, we also recorded a goodwill impairment charge of $19 million, for which there is no income tax benefit. Additionally, we recognized a total of $7 million charge in the second and third quarters of 2014 related to the suspension of depreciation and amortization for assets that we were not compensated for by the buyer.

The assets and liabilities of Tropical Shipping classified as held for sale on the Consolidated Statements of Financial Position are as follows:

In millions	**December 31, 2013**
Current assets	
Cash and cash equivalents	$24
Short-term investments	1
Receivables	36
Inventories	9
Other	1
Total current assets	71
Long-term assets and other deferred debits	
Property, plant and equipment, net	124
Goodwill	61
Intangible assets	19
Other	8
Total long-term assets and other deferred debits	212
Total assets held for sale	$283
Current liabilities	
Accrued expenses	$7
Other accounts payable - trade	11
Other	22
Total liabilities held for sale	$40

The financial results of these businesses are reflected as discontinued operations, and all prior periods presented have been recast to reflect the discontinued operations. The components of discontinued operations recorded on the Consolidated Statements of Income as of December 31, are as follows:

In millions	**2014**	**2013**	**2012**
Operating revenues	$243	$365	$342
Operating expenses			
Cost of goods sold	149	222	208
Operation and maintenance (1)	75	110	106
Depreciation and amortization (2)	5	19	22
Taxes other than income taxes	5	6	6
Loss on sale and goodwill impairment (3)	28	-	-
Total operating expenses	262	357	342
Operating (loss) income	(19)	8	-
(Loss) income before income taxes	(19)	8	-
Income tax expense (4)	(61)	3	(1)
(Loss) income from discontinued operations, net of tax	$(80)	$5	$1

(1) Includes $1 million for another business not related to Tropical Shipping that we discontinued in 2014 and was included in our "other" non-reportable segment.

(2) We ceased depreciating and amortizing Tropical Shipping's assets on April 4, 2014, as a result of entering into an agreement to sell this business and the assets were classified as held for sale.

(3) Primarily relates to the suspension of depreciation and amortization during 2014 totaling $7 million, and $19 million of goodwill attributable to Tropical Shipping that was impaired as of March 31, 2014, based on the negotiated sales price.

(4) Includes $60 million that was recorded in 2014 related to the cumulative foreign earnings for which no tax liabilities had been previously recorded.

Note 15 - Selected Quarterly Financial Data (Unaudited)

The variance in our quarterly earnings is primarily the result of the seasonal nature of the distribution of natural gas to customers, the volatility within our wholesale services segment and the sale of our cargo shipping segment in 2014. During the Heating Season, natural gas usage and operating revenues are generally higher at our distribution operations and retail operations segments as more customers are connected to our distribution systems and natural gas usage is higher in periods of colder weather. However, our base operating expenses, excluding cost of goods sold, interest expense and certain incentive compensation costs, are incurred relatively uniformly over any given year. Thus, our operating results can vary significantly from quarter to quarter as a result of seasonality.

Our 2014 operating revenues and operating income were higher than 2013, primarily as a result of significantly colder-than-normal weather in 2014, volatility in the natural gas market and transportation constraints in the Northeast and Midwest. Our quarterly financial data for 2014 and 2013 are summarized below.

In millions, except per share amounts	**March 31**	**June 30**	**September 30**	**December 31**
2014				
Operating revenues	$2,462	$889	$589	$1,445
Operating income	592	139	78	286
EBIT	595	141	81	292
Income from continuing operations	346	59	23	152
Income from continuing operations attributable to AGL Resources Inc.	334	57	23	148
(Loss) income from discontinued operations, net of tax	(50)	1	(31)	-
Net income (loss) attributable to AGL Resources Inc.	284	58	(8)	148
Basic earnings (loss) per common share:				
Continuing operations	2.82	0.48	0.19	1.24
Discontinued operations	(0.43)	0.01	(0.25)	-
Diluted earnings (loss) per common share:				
Continuing operations	2.81	0.48	0.19	1.24
Discontinued operations	(0.43)	0.01	(0.25)	-
2013				
Operating revenues	$1,612	$805	$574	$1,218
Operating income	290	113	70	166
EBIT	295	119	77	164
Income from continuing operations	159	45	24	80
Income from continuing operations attributable to AGL Resources Inc.	149	44	24	73
Income (loss) from discontinued operations, net of tax	1	(1)	1	4
Net income attributable to AGL Resources Inc.	150	43	25	77
Basic earnings (loss) per common share:				
Continuing operations	1.27	0.38	0.20	0.61
Discontinued operations	0.01	(0.01)	0.01	0.03
Diluted earnings (loss) per common share:				
Continuing operations	1.26	0.38	0.20	0.61
Discontinued operations	0.01	(0.01)	0.01	0.03

Our basic and diluted earnings per common share are calculated based on the weighted daily average number of common shares and common share equivalents outstanding during the quarter. Those totals differ from the basic and diluted earnings per common share attributable to AGL Resources Inc. common shareholders shown in the Consolidated Statements of Income, which are based on the weighted average number of common shares and common share equivalents outstanding during the entire year.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None

ITEM 9A. CONTROLS AND PROCEDURES

Conclusions Regarding the Effectiveness of Disclosure Controls and Procedures

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934, as amended (the Exchange Act), as of December 31, 2014. No system of controls, no matter how well-designed and operated, can provide absolute assurance that the objectives of the system of controls are met, and no evaluation of controls can provide assurance that the system of controls has operated effectively in all cases. Our disclosure controls and procedures, however, are designed to provide reasonable assurance that the objectives of disclosure controls and procedures are met.

Based on this evaluation and considering the remediation efforts described below, our principal executive officer and our principal financial officer concluded that our disclosure controls and procedures were effective as of December 31, 2014. Our disclosure controls and procedures are designed to ensure that information we are required to disclose in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods in SEC rules and forms and that such information is accumulated and communicated to our management, including our principal executive officer and our principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Remediation of Previously Disclosed Material Weakness in Internal Control Over Financial Reporting

As previously disclosed in our Quarterly Report on Form 10-Q for the quarterly period ended September 30, 2014, we did not maintain effective controls to appropriately apply the accounting guidance related to the recognition of allowed versus incurred costs. Specifically, the Company did not have controls to address the recognition of allowed versus incurred costs, primarily related to an allowed equity return, applied to the accounting for our regulated infrastructure programs and related disclosures that operated at a level of precision to prevent or detect potential material misstatements to the Company's consolidated financial statements. Our principal executive officer and our principal financial officer concluded that our disclosure controls and procedures were not effective as of September 30, 2014 because of the material weakness.

We revised our consolidated financial statements for the years ended December 31, 2013, 2012 and 2011, for each of the quarterly periods during the year ended December 31, 2013, and for the quarters ended March 31, 2014 and June 30, 2014 to reflect certain accounting adjustments. We amended our Annual Report on Form 10-K/A for the year ended December 31, 2013, and our Quarterly Reports on Form 10-Q/A for the quarterly periods ending March 31, 2014 and June 30, 2014, to reflect those adjustments and the conclusions by our principal executive officer and our principal financial officer that our disclosure controls and procedures were not effective and by our management that our internal control over financial reporting were not effective as of December 31, 2013. Refer to "Management's Annual Report on Internal Control over Financial Reporting" within Item 8 and Item 9A Controls and Procedures in our Annual Report on Form 10-K/A for the year ended December 31, 2013, for further discussion of our material weakness in internal control over financial reporting.

We committed to remediating the material weakness and, as such, implemented changes to our internal control over financial reporting. We implemented additional procedures to address the underlying causes of the material weakness prior to filing our amended 2013 Annual Report on Form 10-K/A, and continued to implement changes and improvements in our internal control over financial reporting to remediate the control deficiency that caused the material weakness. During the fourth quarter of 2014, the following actions have been implemented:

- Completed training for all appropriate personnel regarding the applicable accounting guidance and requirements through internal training meetings and training by an outside expert to employees in technical, general and regulatory accounting functions, internal audit, and management positions.
- Reviewed all regulatory programs to ensure the proper evaluation of deferral components and proper treatment of allowed versus incurred costs pursuant to the relevant accounting guidance.
- Created a process and designed controls to capture and calculate allowed versus incurred costs and to record appropriate amounts in the consolidated financial statements. We identified appropriate processes, reviews and other controls to ensure accurate amounts were appropriately reflected in our consolidated financial statements.
- Conducted a review of our organization structure, reporting relationships and adequacy of staffing levels and made specific staffing changes as a result of our review.

- The procedures described above have been implemented and controls have been successfully tested.

Management is committed to a strong internal control environment. With full implementation and testing of the design and operating effectiveness of the newly implemented and revised controls, the actions described above successfully remediated the material weakness in our internal control over financial reporting and our principal executive officer and principal financial officer concluded that our disclosure controls and procedures were effective and our management concluded that our internal control over financial reporting were effective as of December 31, 2014.

Changes in Internal Control over Financial Reporting

The changes in the aforementioned remediation efforts were changes in our internal control over financial reporting that occurred during the quarter ended December 31, 2014, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Reports of Management and Independent Registered Public Accounting Firm on Internal Control Over Financial Reporting

Management has assessed, and our independent registered public accounting firm, PricewaterhouseCoopers LLP, has audited, our internal control over financial reporting as of December 31, 2014. The unqualified reports of management and PricewaterhouseCoopers LLP are included in Item 8 of this Annual Report on Form 10-K and are incorporated by reference herein.

ITEM 9B. OTHER INFORMATION

None

PART III

Exhibit 6

Southern Company 2014 Summary Annual Report

Doing Energy Better

MAKING It Better

Southern Company is committed to the development of the full portfolio of fuel sources for energy generation: New nuclear, 21st century coal, natural gas and renewables such as wind and solar, deployed in tandem with an emphasis on energy efficiency. By utilizing a variety of technologies and abundant natural resources, this environmentally responsible approach ensures that our subsidiaries' ability to produce clean, safe, reliable and affordable energy is not reliant upon any single source of generation.

[See Page 6]

Mark Rauckhorst, Construction Vice President (left), and Vanderian Floyd, Performance Improvement Manager (right), assess construction of Vogtle units 3 and 4 at Georgia Power's Plant Vogtle.

MOVING It Better

We take great pride in our ability to deliver electricity throughout our system with industry-leading reliability. Southern Company has invested nearly $7 billion in smart grid technology that gives us the means to both predict and adapt to the variable energy needs of customers. No less important are the dedicated line crews who work diligently through all kinds of weather conditions to maintain the transmission and distribution network.

[See Page 12]

So Customers Can USE It Better

Everything we do to make and move energy better is ultimately for the benefit of customers. But generating electricity cleanly, safely and efficiently and delivering it to the grid is only part of our mission. We work hard to maintain exceptional reliability and to keep rates affordable. Our traditional operating companies also work directly with customers to help them find better ways to manage their energy consumption more efficiently.

[See Page 18]

Contents

Thomas A. Fanning

Chairman, President & CEO
Southern Company

Dear Fellow Shareholders,

Southern Company's franchise operations have never performed better than they did in 2014. We continued to provide the most outstanding customer service in our industry. In terms of system reliability, we continued to set–and raise–the bar. We grew our portfolio of wholesale renewable assets and made significant progress on major construction projects.

In these and many other areas, Southern Company's franchise business continues to lead the way as we strengthen existing operations and seek new opportunities to grow and expand our reach for the benefit of the customers and communities we serve.

As evidenced throughout this report, we are steadfastly committed to 'doing energy better.' This speaks to our goal to make, move and help customers use energy more efficiently than anyone else in our industry. With that mission in mind, we have sharpened our focus on innovation.

Innovation has been a hallmark of Southern Company since its inception, and in 2014 we were very intentional in our efforts to leverage the creativity of our workforce. In May, we announced an internal competition to tap into that creative energy and surface fresh ideas. Known as SO Prize, the competition was designed to recognize system employees who devised the most inventive solutions to address the various challenges of the electric utility industry, and to position Southern Company for continued success in the years to come.

The response was overwhelming, with more than 500 individuals and cross-functional teams submitting nearly 1,000 ideas. From among those, we identified six in particular as having transformative potential. Their stories are detailed elsewhere in this report, and I am confident that you will be extremely impressed with the depth and breadth of thinking represented.

The complete story of 2014 is perhaps best told through a brief review of progress on each of our five strategic priorities:

Excel at the Fundamentals

Nothing is more fundamental to our business than customer service. Southern Company and its four traditional operating companies occupied the top five spots in the most recent Customer Value Benchmark survey, our annual peer comparison of U.S. electric utilities. Those of our traditional operating companies that were rated in the J.D. Power and Associates American Customer Satisfaction Survey all ranked either first or second in their respective categories. Alabama Power was also named the Most Trusted Residential Electric Utility in America by Lifestory Research, an independent research firm.

Our transmission and distribution businesses performed superbly, setting all-time record lows for the frequency and duration of transmission outages, as well as an all-time system record for distribution outage frequency. And these results are just the latest in a 12-year trend of improved performance.

Achieve Success with Major Construction Projects

Work continues on Georgia Power's Vogtle units 3 and 4, where our focus continues to be on safety and quality, with construction of the two nuclear islands as our critical path going forward. Milestones achieved in 2014 include the placement of the Unit 4 containment vessel bottom head, the Unit 3 lower ring and the CA20 critical module, which houses plant components and the used fuel storage area.

Vogtle construction has not been without its challenges. We received a revised forecast from our contractor that reflects an 18-month delay from previously estimated in-service dates. It is significant to note, however, that the proposed schedule does not change the range of the expected customer rate impact. The forecasted effect on customer rates is still less than originally anticipated, with the overall impact projected to be 6 to 8 percent, compared with 12 percent when certified by the Georgia Public Service Commission in 2009. These new units will fuel a growing Georgia for at least 60 years, resulting in significant lifecycle savings. Building them safely–and correctly–is far more important than building them quickly.

At Mississippi Power's Integrated Gasification Combined Cycle project in Kemper County, Mississippi, construction is nearly complete and we have completed the first firing of the facility's gasifier burners, which functioned as expected. We anticipate our first syngas production in the third quarter of 2015. Operational training and control systems validation, as well as start-up and commissioning activities, are all underway and progressing well.

Support the Building of a National Energy Policy

We continue to advocate for a common sense national energy policy that embraces the full energy portfolio and places a premium on energy innovation and the restoration of America's financial integrity. Our vision for the full energy portfolio includes new nuclear, 21st century coal, natural gas and renewables such as wind and solar, together with an emphasis on energy efficiency.

Promote Energy Innovation

We continue to produce and purchase power from a variety of renewable energy sources. Our traditional operating companies have the flexibility to serve customers with that generated energy, or sell some or all of it–or the associated renewable energy credits–to third parties.

In 2014, we continued to grow our wholesale renewable portfolio through our Southern Power subsidiary, which added three new solar facilities in California and New Mexico. Southern Power is also developing a 131-megawatt solar plant in Taylor County, Georgia, and has acquired two other solar projects in Georgia that will provide an additional 99 megawatts. Along with the expansion of its solar assets, Southern Power has also entered into an agreement to acquire the 299-megawatt Kay Wind project in Oklahoma.

Upon completion of these facilities, Southern Power is expected to own more than 970 megawatts of renewable energy generating capacity, and is clearly becoming an industry leader in the advancement and operation of renewable energy technologies.

In addition, Gulf Power has filed for approval to purchase power from Kingfisher Wind in Oklahoma, and Georgia Power is evaluating wind turbines on Skidaway Island, Georgia.

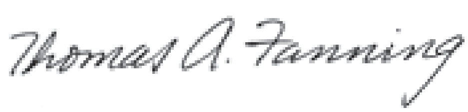
Value and Develop Our People

Fortune magazine recently named Southern Company to its "World's Most Admired Companies" list as a top utility worldwide for the sixth consecutive year, and we were cited as one of the 40 Best Companies for Diversity by Black Enterprise magazine. G.I. Jobs magazine ranked Southern Company first among utilities in its Top 100 Military Friendly Employers, the eighth consecutive year we have received the top ranking. In 2014, we completed 481 transfers of employees between our various subsidiaries, broadening their experience and knowledge of our industry and business operations.

These and many other accomplishments are the direct result of an unwavering focus on the core values that have shaped our company's identity since its inception. Going forward, we remain anchored in those values. In particular, our customer-focused business model will continue to be the guiding principle for all that we do. As we turn our attention to the future, I am confident that the opportunities we encounter will give rise to even greater creativity and innovation throughout our organization, even as we remain rooted in this firm foundation.

Thank you for your continued confidence in Southern Company. Our management and employees remain diligent in their efforts to provide exceptional shareholder value. It is an honor to serve you.

Sincerely,



Thomas A. Fanning
March 26, 2015

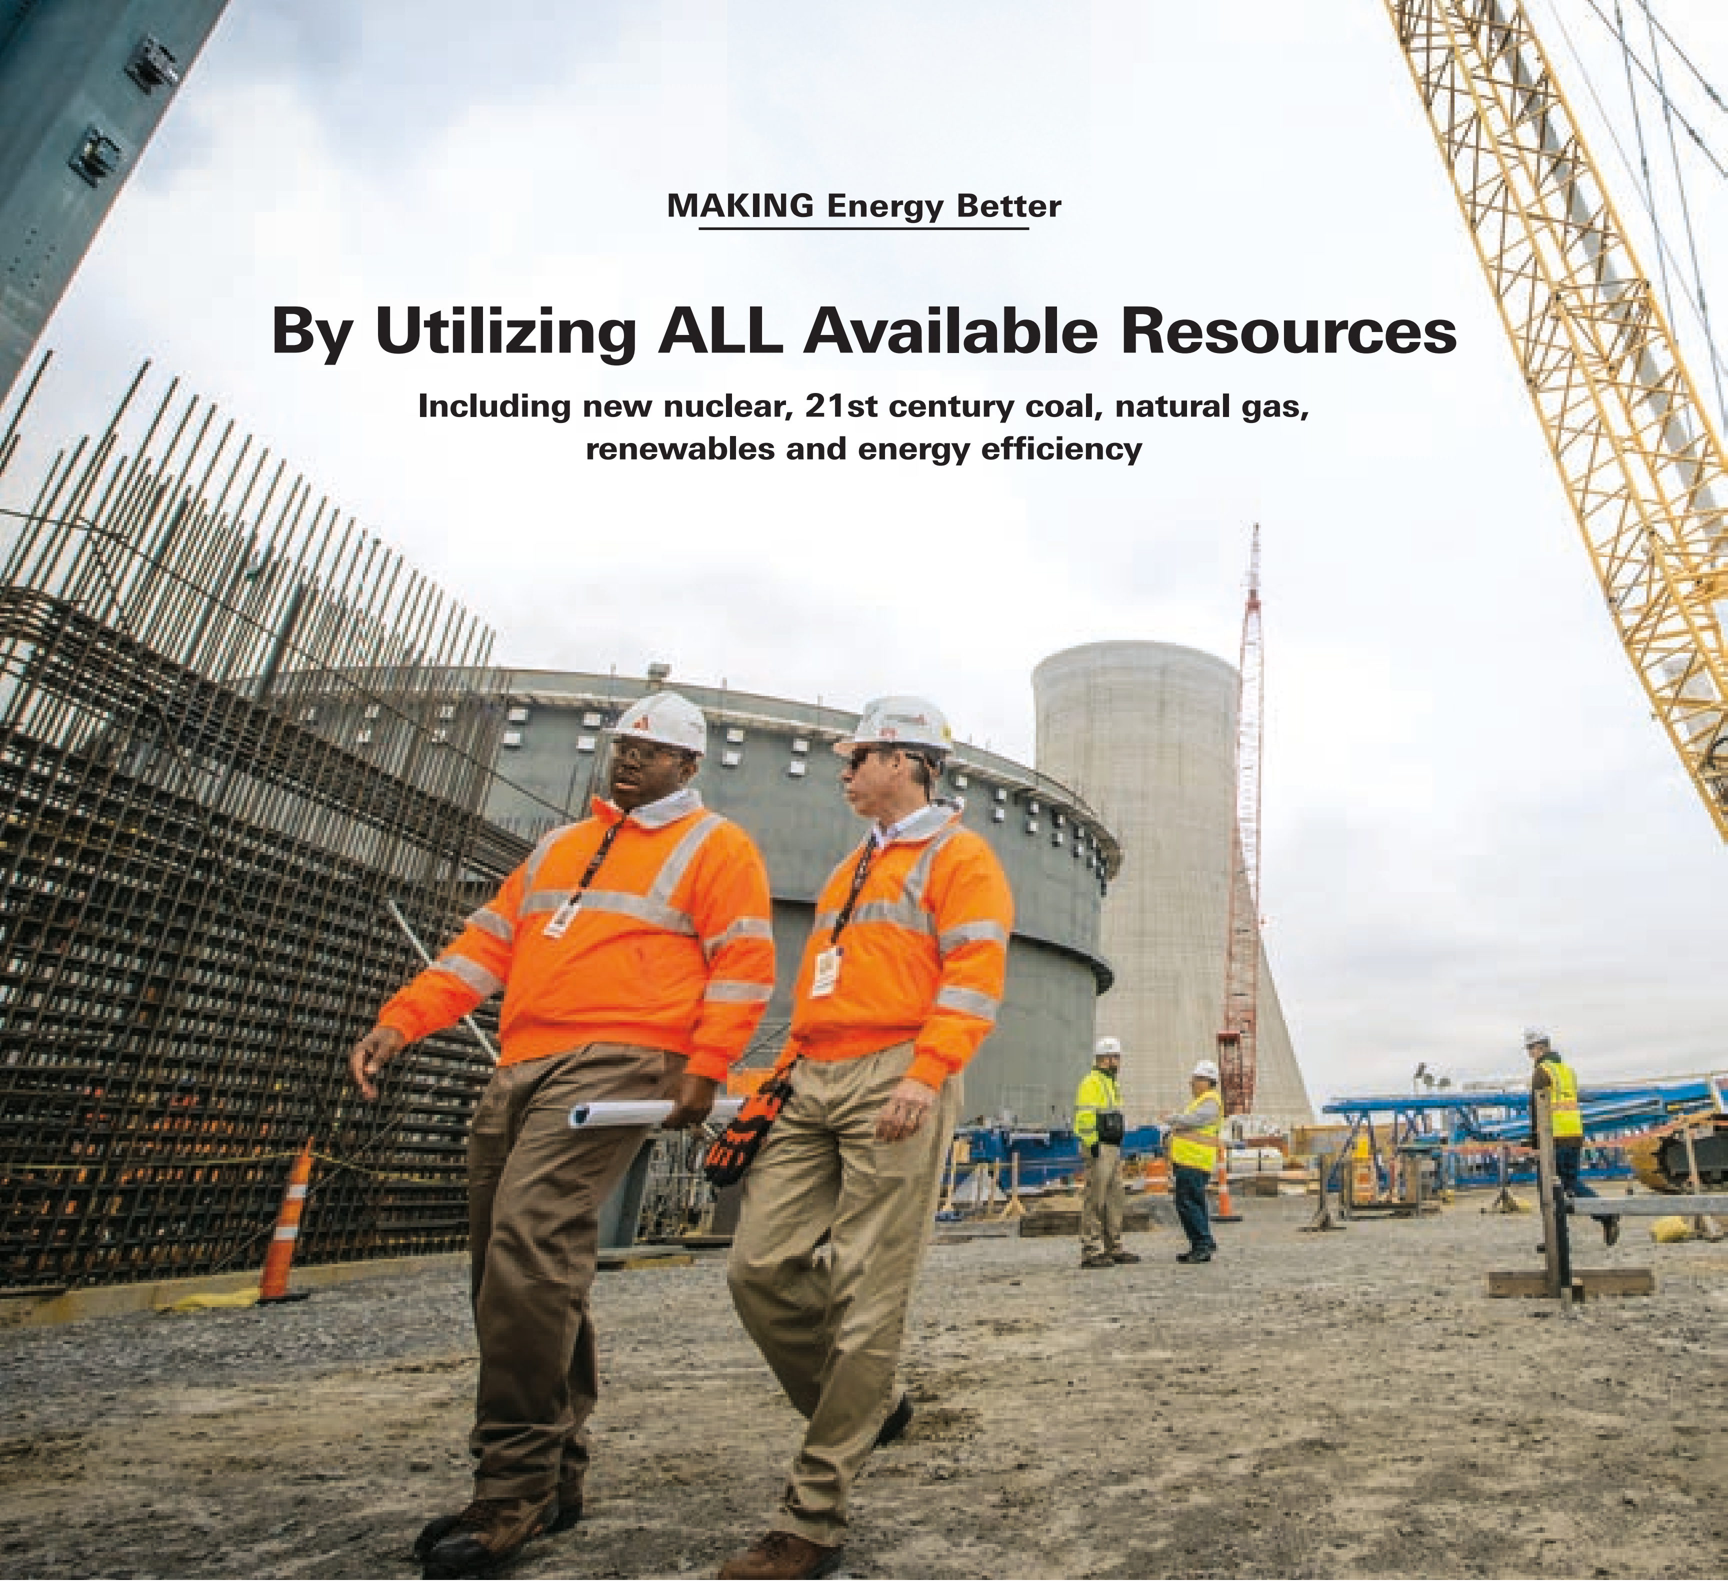
MAKING Energy Better

By Utilizing ALL Available Resources

Including new nuclear, 21st century coal, natural gas, renewables and energy efficiency



(Above) The construction of Vogtle units 3 and 4 is the largest job-producing project in the state of Georgia, employing more than 5,500 people in construction, and is expected to create 800 permanent jobs once the units go on line. Upon completion of the new units, Plant Vogtle is expected to generate more electricity than any other U.S. nuclear facility; **(Left)** Construction nears completion at the Kemper County, Mississippi, coal gasification facility; **(Middle)** Plant Franklin, a natural gas facility in Smiths, Alabama; **(Right)** Cimarron Solar Facility, part of the Southern Company system's growing renewable energy portfolio

Just as an astute investor understands the importance of a diversified investment portfolio, Southern Company is committed to a diversified portfolio of options for power generation that makes use of a wide range of available fuel sources. This approach allows for flexibility in choosing the most economical and efficient means of providing clean, safe, reliable and affordable electricity to customers throughout the Southeast.

As a starting point, we believe nuclear must be a dominant solution in a carbon-constrained world. The Southern Company system is pursuing the newest generation of nuclear technology in the world today, and we are leading the nuclear renaissance with the construction of new units at Plant Vogtle in Georgia.

Because coal remains such an abundant domestic resource, we have invested considerable time and energy exploring ways to use it in a more environmentally responsible manner. We have developed our own technology for coal gasification, and Mississippi Power is constructing a facility designed to use this traditional natural resource in an innovative way that will significantly reduce emissions.

With advances in drilling technology, we are now able to obtain affordable supplies of natural gas that were previously unobtainable. As a result, natural gas represented 40 percent of our fuel mix in 2014, and the Southern Company system has become the third-largest consumer of natural gas in the United States.

The Southern Company system is one of the largest owners of solar photovoltaic facilities in the U.S., generating energy that can be used to serve customers or sold by our traditional operating companies to third parties, with or without the associated renewable energy credits.

The benefit of this flexible, full portfolio strategy was apparent during the winter of 2014, when uncharacteristically cold temperatures across the Southeast and other parts of the nation resulted in an accelerated demand for natural gas, as well as a corresponding increase in the cost to purchase it. In response, we were able to seamlessly turn to other fuel sources for power generation to help keep costs low, even as we addressed increased customer demand.

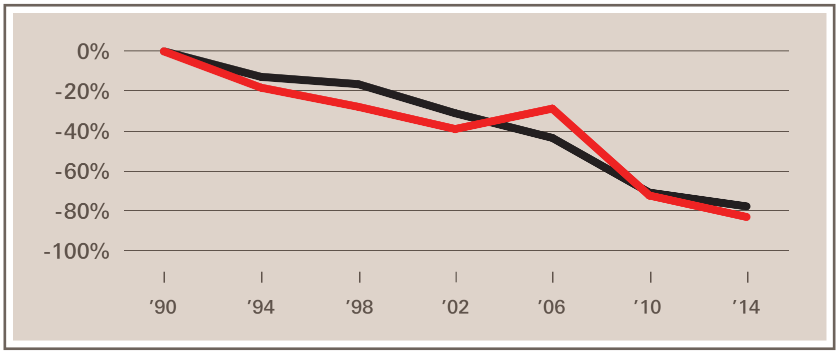
Fuel Flexibility *(Percent, GWHs of Energy)**

			2020 Range**	
	2000	2014	Low Gas Price	High Gas Price
Coal	78	40	21	49
Gas	4	40	55	27
Nuclear	16	16	18	18
Hydro/Other	2	4	6	6

** Includes purchased power. ** Illustrative ranges based on assumed natural gas prices of $2/mmBtu (Low Gas Price) and $14/mmBtu (High Gas Price). Assumptions have been selected to illustrate the Southern Company system's fuel flexibility and do not represent actual forecasts of future system fuel mix or natural gas prices.*

By Advancing Smarter Technologies
that Generate Cleaner Energy

With new nuclear, 21st century coal and a rapidly growing portfolio of renewables, the Southern Company system leads the way in clean power generation.



Southern Company System Emissions Trends
(Percent Change Since 1990 Levels)
• SULFUR DIOXIDE • • NITROGEN OXIDES •

The Southern Company system continues to develop and utilize the very latest in technological innovations to produce electricity more cleanly and efficiently. Since 1990, we have reduced major emissions by 80 percent, even as generating capacity increased by as much as 40 percent.

At Plant Vogtle, Georgia Power is building the first new nuclear reactors in the United States in 30 years, using the latest in nuclear technology. With virtually no emissions, nuclear power is one of the cleanest forms of generation available.

The Southern Company system is leading the way in coal gasification technology with our Transport Reactor Integrated Gasification process, or TRIG™. This process is currently being implemented at Mississippi Power's new coal-fired facility in Kemper County, Mississippi, where construction is nearing completion. When the facility is finished, Mississippi Power will take an otherwise unused natural resource–native Mississippi lignite–remove much of the CO_2 and generate electricity with a carbon footprint comparable to that of a similarly sized natural gas facility.

In Wilsonville, Alabama, we operate the National Carbon Capture Center on behalf of the U.S. Department of Energy. The center provides facilities for testing new technologies for flue gas and coal-derived syngas, helping to accelerate the development of cost-effective CO_2 capture technologies.

We continue to produce and purchase thousands of megawatt-hours from renewable projects, with the flexibility to serve the customers of our traditional operating companies with the generated energy, or sell some or all of the power or the associated renewable energy credits to third parties. Georgia Power has plans to build 30-megawatt solar installations at the Kings Bay Naval Submarine Base near St. Mary's, Georgia, and at three U.S. Army bases: Fort Stewart, near Savannah; Fort Benning, near Columbus; and Fort Gordon, near Augusta. Gulf Power is partnering with the U.S. Navy and U.S. Air Force to build solar farms at three different military installations in northwest Florida, and Alabama Power, Georgia Power and Gulf Power all have contracts to purchase power from wind facilities in Kansas and Oklahoma.

Meanwhile, Southern Power has been cleared to construct a 900-acre, 131-megawatt solar farm in Taylor County, Georgia and announced the acquisition of an additional 99 megawatts of generating capacity associated with two other Georgia facilities. With the completion of these and other projects, Southern Power is expected to own more than 970 megawatts of renewable energy generating capacity that is either already in operation or under development.

Construction nears completion at Mississippi Power's new integrated gasification combined cycle (IGCC) facility in Kemper County, Mississippi. When completed, this 21st century coal facility will utilize native Mississippi lignite to generate electricity with a carbon footprint comparable to a similarly sized natural gas facility.

SO PRIZE

Doing Energy Better

By Harnessing the Power of Innovation and Collaboration

In May of 2014, we announced an internal competition for system employees that aimed to harness the power of innovation and collaboration. The goal was to help the company "look around the corners of the future" and position itself for continued success.

Known as SO Prize, the competition was designed to recognize employees who devised the most inventive solutions to the various challenges faced by Southern Company and the electric utility industry, and to stimulate fresh ideas that could potentially drive future growth for years to come.

More than 500 individuals and teams submitted nearly 1,000 ideas. Many teams were made up of employees from different operating companies and subsidiaries, collaborating across geographic and business unit lines.

In October, six SO Prize winners were announced. The winning teams and individuals, along with a synopsis of their proposals, are highlighted throughout the pages of this publication. Pilot programs have been approved for all six concepts as the company continues to explore and evaluate the possibilities of each.

SO PRIZE

The Hydrogen Alternative

Chethan Acharya and Todd Wall envision a plan for using existing power plants to make hydrogen, which could be transported by liquid carriers to fuel stations using existing oil pipeline infrastructure. The gas could then be used to power proton-exchange membrane fuel cell vehicles on the open road or in industrial settings. Such a scenario could ultimately pave the way for a carbon-free hydrogen economy, with Southern Company positioned as the leading supplier of hydrogen for this market.

Team Members:
Chethan Acharya (SCS), Todd Wall (SCS)

SO PRIZE

Water, Water Everywhere

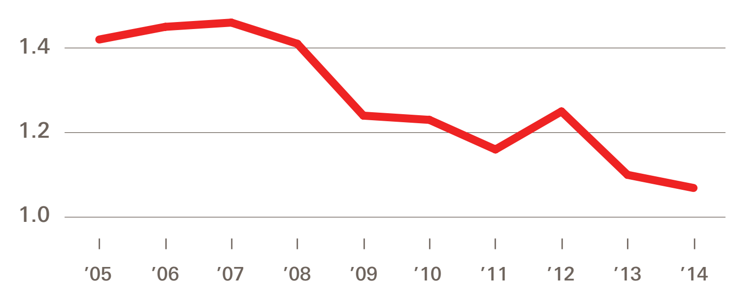
With 400 miles of coastal access and 27,000 miles of transmission line rights-of-way in the Southern Company system, Ray Smith envisions a grid of pipelines that move water to where it is needed. Desalination plants could be constructed to convert coastal seawater to fresh water and then pump it through pipelines along transmission rights-of-way. Providing the Southeast with a virtually unlimited source of water could help alleviate ongoing discussions between states over the current limited supply, and address local communities' concerns regarding droughts and water rationing.

Team Member:
Ray W. Smith (SCS)

As Proven by

Our Industry-Leading Reliability

The Southern Company system's Power Coordination Center, dedicated line crews and innovative technologies combine to ensure excellence in transmission and distribution.



SAIFI Performance

(In Number of Outages Per Customer)

System Average Interruption Frequency Index (SAIFI) is the standard industry index for measuring the number of outages experienced by an average customer in a year. Our 2014 SAIFI was 1.069 events, the best in Southern Company history.

You might say that Todd Lucas is an expert in keeping the lights on. As general manager of bulk power operations, Todd oversees the Power Coordination Center (PCC), which is responsible for maintaining a reliable and efficient transfer of energy throughout the system. PCC staff members work around the clock 365 days a year to monitor activity on the grid, and they oversee the transmission and distribution system at the highest level.

Throughout the Southeast, the diligent efforts of our traditional operating companies' line crews cannot be over-emphasized. In 2014, crews worked tirelessly to restore power to customers after outages caused by tornadoes and winter storms.

These dedicated men and women know that reliability is of critical importance to customers. Businesses require a high level of power quality in order to prevent incremental fluctuations in the flow of energy that might disrupt sophisticated electronic systems or industrial operations. And, of course, having a consistent and reliable source of energy is no less important to residential customers and their families.

Thanks to the efforts of these and many other system associates, 2014 saw yet another all-time record established for reliability on our transmission and distribution system, continuing a long-term positive trend of more than a decade.

On the technology front, we've been busy testing innovative power flow control technologies that improve the utilization of existing grid infrastructure at significant savings compared with traditional transmission line upgrades.

Ultimately, the combined impact of these individuals and deployed technologies converge to help maintain the industry-leading reliability that customers demand.

Todd Lucas (center), general manager of bulk power operations, consults with team members at the Southern Company system's state-of-the-art Power Coordination Center in Alabama.

MOVING Energy Better

Putting Customers First Makes For
Sweet Satisfaction

Southern Company's customer-focused business model is the linchpin of our success.

Andra Hall is laser-focused on keeping her customers satisfied. Of course, with friendly service and succulent confections like 'The Elvis' cupcake, it's hard to envision how patrons of CamiCakes Cupcakes could ever be anything less than satisfied. Named for Andra's daughter Camille (nicknamed "Cami"), CamiCakes offers dedicated fans throughout metro Atlanta a unique selection of baked delights.

Likewise, Georgia Power sales and efficiency representatives work hard to keep customers satisfied in their role as company liaisons with businesses like Andra's. They consult with local businesses to provide an analysis of their energy consumption, and make recommendations for more energy-efficient operations and potential dollar savings. For example, Andra's representative suggested that she operate the ovens in her production facility during off-peak hours for significant reductions in cost and usage.

Elsewhere, Georgia Power's new state-of-the-art Customer Resource Center (CRC) enhances customer satisfaction by catering to residential, commercial and industrial customers in a variety of innovative ways. The CRC offers information and demonstrations on electric transportation, comfort systems and cooking technologies, as well as manufacturing applications for industry and energy efficient ideas for the home, all under one roof.

CamiCakes Cupcakes owner Andra Hall and her employees adjust a display of delicious treats prior to the morning opening of one of her Atlanta stores. Georgia Power consults with Ms. Hall to help achieve optimal efficiency in energy consumption in her retail locations and production center.

SO PRIZE

Line Inspections Using UAVs

Today, aerial inspections of power lines are performed with manned aircraft. Paul Schneider and his team propose flight-based data collections by unmanned aerial vehicles (UAVs). UAVs are more cost-effective than helicopters and winged aircraft, and they enable closer inspection with less environmental impact. UAVs could also dramatically reduce the time between data collection flights that require air support. This proposal estimates that outages could be shortened by an average of 1.5 hours per outage through the use of UAVs—eliminating almost 11 days of outages every year.

Team Members:

Paul Schneider (GPC; pictured), Matt Clarkson (APC), Dexter Lewis (SCS), Drew McGuire (SCS), Patrick Norris (SCS), Ranato Salvaleon (GPC)

SO PRIZE

Dynamic Data

Alabama Power's James Young and his colleagues are convinced that the key to increasing customer satisfaction, loyalty and revenue lies in better understanding what individual customers want and treating them accordingly. The idea: Use data to identify customer priorities and proactively provide individualized solutions. Data analytics could provide actionable insights that enable the delivery of the right message to the right customer at the right time—or assist in the development of new product and service offerings while identifying the most cost-effective manner in which to implement them.

Team Members:

James Young (APC; pictured), **Noel Black** (SCS), **Chris Blake** (APC), **Stoney Burke** (SCS), **Hannah Flint** (SCS), **Joe Massari** (SCS), **Todd Perkins** (APC), **Tom Schmaeling** (APC), **Nick Sellers** (APC), **John Smola** (APC), **George Stegall** (APC), **Jeanne Wolak** (SCS)

By Delivering Reliable Service at Affordable Rates,
We're Providing Customers with Peace of Mind

Industry-leading reliability, energy-efficient homes and rates below the national average prove to be a winning combination.

Atlanta homeowner Larry Cummings and his wife, Cia, appreciate Georgia Power's reliable service and affordable rates. And as the owners of an almost totally rebuilt home, they also appreciate the energy-efficient features that their builder included on the advice of Georgia Power's energy consultants.

"We have great confidence in the reliability of the service we get from Georgia Power," says Larry. "We don't really have to think about it. That's not always the case with other utility providers. And when we first moved into our new home, we were able to establish service with just a single point of contact. For our family, that's really more important than the savings."

Southern Company's traditional operating companies work diligently to maintain transmission and distribution reliability, and to minimize service down time. But when the occasional planned or weather-related power outage occurs, customers are kept apprised of the latest outage status by a variety of means, including mobile apps, outage alerts, interactive outage maps and social media.

Of course, lower power bills don't hurt, either. According to Larry, "Affordable rates are important because our three children can consume a lot of energy. But because we've enjoyed consistently predictable rates, we've been able to budget in such a way as to direct household cash flow to other family priorities."

LED

76

USING Energy Better

Through Smarter Choices

Simple, common-sense choices can result in significant savings.

Since 2000, energy-efficiency programs have helped the Southern Company system reduce peak demand by 4,382 megawatts and avoid over 2.6 billion kilowatt-hours of energy use. That's enough electricity to power the cities of Birmingham, Alabama, Montgomery, Alabama and Savannah, Georgia for a year.

Pensacola, Florida, homebuilder Kevin Russell understands the value of energy efficiency in home construction, both for his own home and the homes he builds for his customers.

When building a home, Kevin works hand-in-glove with his Gulf Power residential energy consultant, Heather Madison, even before construction begins. Heather meets with Kevin and his team to consult on HVAC, insulation and other aspects of the home-building process, and she continues to visit the job site to assess the energy fitness of the home as construction progresses. She also counsels Kevin on options for the most efficient lighting fixtures, heat pumps, water heaters and other appliances that will work within his customers' budgets.

In his own home, Kevin uses energy-efficient lighting fixtures and appliances. Kevin appreciates the fact that energy efficiency helps keep his monthly power bill low. As part of Gulf Power's EarthCents program, Gulf Power residential energy consultants also work directly with homeowners like Kevin to help them assess and better control energy usage in their homes. Residential energy consultants in Southern Company's traditional operating companies are available to perform energy audits, conduct new home inspections and discuss incentive programs.

At the end of the day, our goal is to help customers like Kevin use energy better by making smarter and more energy-efficient choices both in new home construction and in existing homes.

(Above) Homeowner–and homebuilder–Kevin Russell installs an energy-efficient light-emitting diode (LED) light bulb; **(Left)** An electric charger for plug-in electrical vehicles (PEVs); some 10,000 PEVs are registered in the Southern Company service territory; **(Middle)** An energy-efficient programmable thermostat can help lower energy costs; **(Right)** An ENERGY STAR-rated clothes washer uses about 20 percent less energy than regular washers.

SO PRIZE

Empowering Customers with More Choices

Gulf Power's Lisa Roddy believes customers should have more options, similar to the customized cell phone plans offered by wireless carriers. For example, customers might pay a set amount for unlimited usage or pay only for what they use. They could potentially purchase charging stations for electric vehicles or surge protection at a fixed price. Lisa envisions that customers might even be able to purchase blocks of renewable energy or select options to finance solar power for their homes.

Team Member:
Lisa Roddy (Gulf)

SO PRIZE

Fueling the PEV Revolution

Bryan Coley, John Socha and their team envision a comprehensive effort to accelerate the adoption of plug-in electric vehicles (PEVs). The team proposes the creation of a pre-sale education and awareness program, PEV sales and leasing facilitation, post-sale customer service and a network of charging stations throughout the Southeast. This vision includes the establishment of strategic concierge locations for hands-on driving experiences and the opportunity to purchase PEVs through a network of dealer partners.

Delivers Long-Term Shareholder Value

Customer-Focused Strategy Underpins Consistent Financial Performance

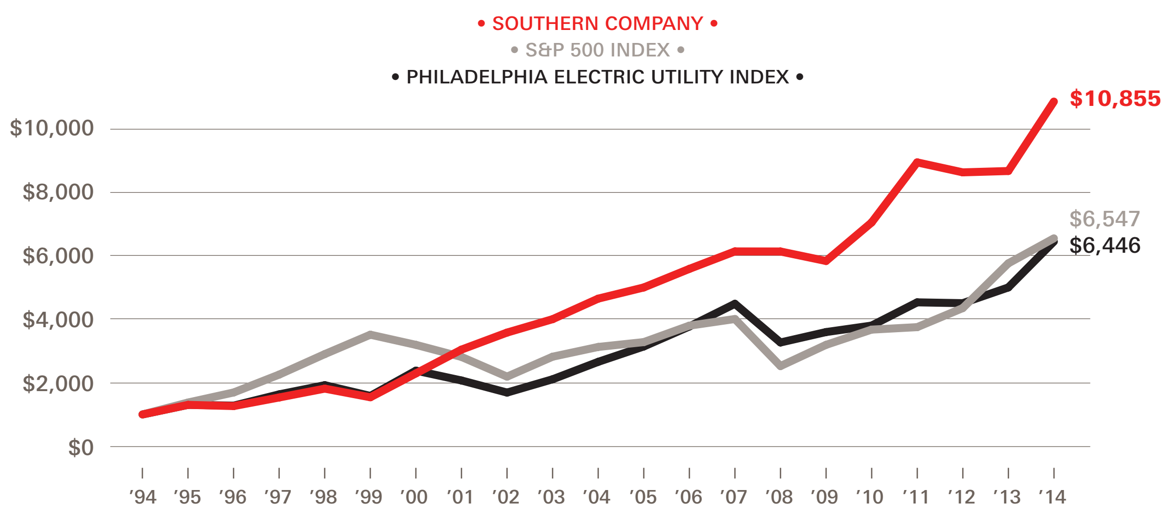
Throughout the 103-year history of Southern Company, customers have remained at the center of all we do. We believe our focus on customers translates to value creation for investors, and this is borne out in the results we have delivered over time.

Over the long term, Southern Company has proved to be an outstanding investment, outperforming the S&P 500 over the 10-, 20- and 30-year periods ending December 31, 2014. Our dividend–an important part of that performance–increased for the 13th consecutive year in 2014, and we have paid shareholder dividends every quarter since 1948. That's 269 consecutive quarters.

At year-end, Southern Company's dividend yield was 4.2 percent, compared with approximately 1.9 percent for the S&P 500. Over the past 20 years, dividends and dividend reinvestment have accounted for approximately 69 percent of the increase in our shareholder value, compared with approximately 37 percent of the increase in shareholder value for the S&P 500.

As we've shared in years past, dividends do more than simply provide cash to shareholders; they help shape a company's approach to risk. Once again, the proof is in the numbers. In 2014, Southern Company was the least volatile stock in the Philadelphia Electric Utility Index. Stocks with low volatility tend to be less prone to price swings during times of market stress, and are therefore considered more stable.

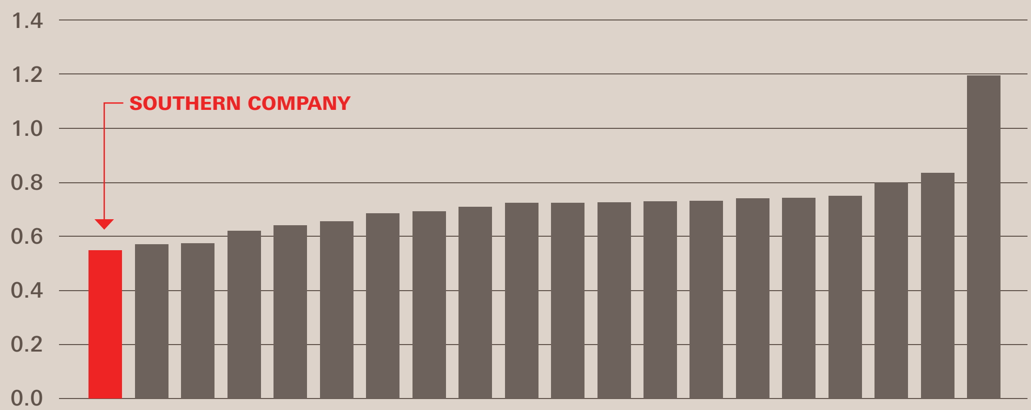
Keeping customers first–along with industry-leading reliability and prices below the national average–has enabled us to sustain operational success, reinforcing our reputation for providing exceptional shareholder value.



Value of $1,000 Invested Over 20 Years

This performance graph compares the cumulative return on Southern Company (SO) common stock with the Philadelphia Electric Utility Index and the Standard & Poor's (S&P) 500 Index for the past 20 years. The average annualized return during the 20-year period is 12.7 percent for Southern Company, compared to 9.8 percent for the UTY and 9.8 percent for the S&P 500. The graph assumes that $1,000 was invested in Southern Company common stock and each of the above indices on December 31, 1994, and that all dividends were reinvested. A five-year performance graph is included in Appendix D to the Proxy Statement.

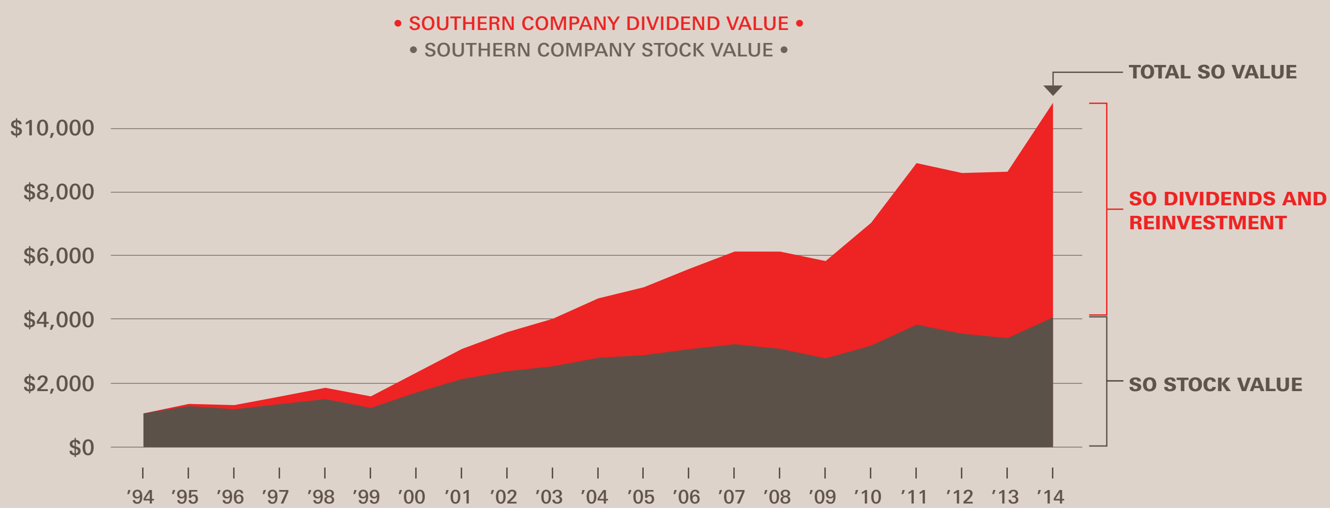
See Glossary on page 36 for information on total shareholder return.
Source: *FactSet and Bloomberg*



Value Added by Low Volatility Relative to the Market

This chart shows the volatility of each of the 20 utilities in the Philadelphia Electric Utility Index (UTY). Volatility refers to the tendency of a stock to react to swings in the market. Southern Company had the lowest level of volatility in the UTY Index and one of lowest in the S&P 500.

See Glossary on page 36 for information on beta.
***Source:** FactSet and Bloomberg, five-year beta as of December 31, 2014*



Value Created by Dividend and Price Performance

This chart shows the power of Southern Company's dividend. Over the last 20 years, a $1,000 investment in SO grew to $10,855. Increases in the value of SO stock contributed $3,047 and dividends, with reinvestment, accounted for an increase of $6,808, or approximately 69 percent of the gain in value. The graph assumes that $1,000 was invested in Southern Company common stock on December 31, 1994, and that all dividends were reinvested.

See Glossary on page 36 for information on total shareholder return.
***Source:** Bloomberg*

Cautionary Statement Regarding Forward-Looking Statements

Southern Company's 2014 Summary Annual Report contains forward-looking statements. Forward-looking statements include, among other things, statements concerning future sources of generation, completion of acquisitions and construction projects and the anticipated benefits thereof, expected retail rates and the potential benefits of possible innovations. In some cases, forward-looking statements can be identified by terminology such as "may," "will," "could," "should," "expects," "plans," "anticipates," "believes," "estimates," "projects," "predicts," "potential," or "continue" or the negative of these terms or other similar terminology. There are various factors that could cause actual results to differ materially from those suggested by the forward-looking statements; accordingly, there can be no assurance that such indicated results will be realized. These factors include:

- the impact of recent and future federal and state regulatory changes, including legislative and regulatory initiatives regarding deregulation and restructuring of the electric utility industry, environmental laws including regulation of water, coal combustion residuals, and emissions of sulfur, nitrogen, CO_2, soot, particulate matter, hazardous air pollutants, including mercury, and other substances, and also changes in tax and other laws and regulations to which Southern Company and its subsidiaries are subject, as well as changes in application of existing laws and regulations;
- current and future litigation, regulatory investigations, proceedings, or inquiries, including pending Environmental Protection Agency civil actions against certain Southern Company subsidiaries, Federal Enegy Regulatory Commission matters, and Internal Revenue Service and state tax audits;
- the effects, extent, and timing of the entry of additional competition in the markets in which Southern Company's subsidiaries operate;
- variations in demand for electricity, including those relating to weather, the general economy and recovery from the last recession, population and business growth (and declines), the effects of energy conservation and efficiency measures, including from the development and deployment of alternative energy sources such as self-generation and distributed generation technologies, and any potential economic impacts resulting from federal fiscal decisions;
- available sources and costs of fuels;
- effects of inflation;
- the ability to control costs and avoid cost overruns during the development and construction of facilities, which include the development and construction of generating facilities with designs that have not been finalized or previously constructed, including changes in labor costs and productivity, adverse weather conditions, shortages and inconsistent quality of equipment, materials, and labor, contractor or supplier delay, non-performance under construction or other agreements, operational readiness, including specialized operator training and required site safety programs, unforeseen engineering or design problems, start-up activities (including major equipment failure and system integration), and/or operational performance (including additional costs to satisfy any operational parameters ultimately adopted by any Public Service Commission);
- the ability to construct facilities in accordance with the requirements of permits and licenses, to satisfy any operational and environmental performance standards, including any Public Service Commission requirements and the requirements of tax credits and other incentives, and to integrate facilities into the Southern Company system upon completion of construction;
- investment performance of Southern Company's employee and retiree benefit plans and the Southern Company system's nuclear decommissioning trust funds;
- advances in technology;
- state and federal rate regulations and the impact of pending and future rate cases and negotiations, including rate actions relating to fuel and other cost recovery mechanisms;
- legal proceedings and regulatory approvals and actions related to Plant Vogtle units 3 and 4, including Georgia Public Service Commission approvals and NRC actions and related legal proceedings involving the commercial parties;
- actions related to cost recovery for the Kemper IGCC project, including actions relating to proposed securitization, Mississippi Public Service Commission approval of a rate recovery plan, including the ability to complete the proposed sale of an interest in the Kemper IGCC project to South Mississippi Electric Power Association, the ability to utilize bonus depreciation, which currently requires that assets be placed in service in 2015, and satisfaction of requirements to utilize ITCs and grants;
- Mississippi Public Service Commission review of the prudence of Kemper IGCC project costs;
- the ultimate outcome and impact of the February 2015 decision of the Mississippi Supreme Court and any further legal or regulatory proceedings regarding any settlement agreement between MPC and the Mississippi Public Service Commission, the March 2013 rate order regarding retail rate increases, or the Baseload Act;
- the ability to successfully operate the electric utilities' generating, transmission, and distribution facilities and the successful performance of necessary corporate functions;
- the inherent risks involved in operating and constructing nuclear generating facilities, including environmental, health, regulatory, natural disaster, terrorism, or financial risks;
- the performance of projects undertaken by the non-utility businesses and the success of efforts to invest in and develop new opportunities;
- internal restructuring or other restructuring options that may be pursued;
- potential business strategies, including acquisitions or dispositions of assets or businesses, which cannot be assured to be completed or beneficial to Southern Company or its subsidiaries;
- the ability of counterparties of Southern Company and its subsidiaries to make payments as and when due and to perform as required;
- the ability to obtain new short- and long-term contracts with wholesale customers;
- the direct or indirect effect on the Southern Company system's business resulting from cyber intrusion or terrorist incidents and the threat of terrorist incidents;
- interest rate fluctuations and financial market conditions and the results of financing efforts;
- changes in Southern Company's or any of its subsidiaries' credit ratings, including impacts on interest rates, access to capital markets, and collateral requirements;
- the impacts of any sovereign financial issues, including impacts on interest rates, access to capital markets, impacts on currency exchange rates, counterparty performance, and the economy in general, as well as potential impacts on the benefits of the Department of Energy loan guarantees;
- the ability of Southern Company's subsidiaries to obtain additional generating capacity at competitive prices;
- catastrophic events such as fires, earthquakes, explosions, floods, hurricanes and other storms, droughts, pandemic health events such as influenzas, or other similar occurrences;
- the direct or indirect effects on the Southern Company system's business resulting from incidents affecting the U.S. electric grid or operation of generating resources;
- the effect of accounting pronouncements issued periodically by standard-setting bodies; and
- other factors discussed elsewhere herein and in other reports, including Southern Company's Annual Report on Form 10-K for the year ended December 31, 2014 (Form 10-K), filed by Southern Company from time to time with the Securities and Exchange Commission.

Southern Company expressly disclaims any obligation to update any forward-looking information.

Financial Information

The following condensed financial presentation should not be considered a substitute for the full financial statements, inclusive of footnotes and Management's Discussion and Analysis of Financial Condition and Results of Operations, provided to all shareholders in Appendix D to the Company's 2015 Proxy Statement and included in the Form 10-K as filed with the Securities and Exchange Commission. Appendix D to the Proxy Statement and the Form 10-K also contain detailed discussions of major uncertainties, contingencies, risks, and other issues the Company faces. A copy of the Form 10-K and/or the Proxy Statement, when available, including the full financial statements, can be obtained by calling Shareowner Services at 1-800-554-7626 or by accessing it online at **http://investor.southerncompany.com**.

Management's Report On Internal Control Over Financial Reporting

The management of The Southern Company is responsible for establishing and maintaining an adequate system of internal control over financial reporting as required by the Sarbanes-Oxley Act of 2002 and as defined in Exchange Act Rule 13a-15(f). A control system can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

Under management's supervision, an evaluation of the design and effectiveness of Southern Company's internal control over financial reporting was conducted based on the framework in Internal Control — Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, management concluded that Southern Company's internal control over financial reporting was effective as of December 31, 2014.

Deloitte & Touche LLP, an independent registered public accounting firm, as auditors of Southern Company's financial statements, has issued an attestation report on the effectiveness of Southern Company's internal control over financial reporting as of December 31, 2014. Deloitte & Touche LLP's report on Southern Company's internal control over financial reporting appears in Appendix D to the Proxy Statement and in the Form 10-K as filed with the Securities and Exchange Commission.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Stockholders of Southern Company

We have audited the consolidated balance sheets and consolidated statements of capitalization of Southern Company and Subsidiary Companies (the Company) as of December 31, 2014 and 2013, and the related consolidated statements of income, comprehensive income, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2014. We have also audited the effectiveness of the Company's internal control over financial reporting as of December 31, 2014. Such consolidated financial statements, management's assessment of the effectiveness of the Company's internal control over financial reporting, and our report on the consolidated financial statements and internal control over financial reporting dated March 2, 2015, expressing an unqualified opinion (which is not included herein) are included in Appendix D to the proxy statement for the 2015 annual meeting of stockholders. The accompanying condensed consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on such condensed consolidated financial statements in relation to the complete consolidated financial statements.

In our opinion, the information set forth in the accompanying condensed consolidated balance sheets as of December 31, 2014 and 2013, and the related condensed consolidated statements of income and of cash flows for each of the three years in the period ended December 31, 2014, is fairly stated in all material respects in relation to the consolidated financial statements from which it has been derived.

Deloitte & Touche LLP

Management Council

1. Art P. Beattie
Executive Vice President and Chief Financial Officer

Beattie, 60, joined the company in 1976 as a junior accountant with Alabama Power. He has held his current position since August 2010. Beattie is responsible for the company's accounting, finance, tax, investor relations, treasury and risk management functions. He also serves as chief risk officer. Previously, Beattie served in several executive accounting and finance positions at Alabama Power, including chief financial officer, treasurer and comptroller.

2. W. Paul Bowers
Executive Vice President
Chairman, President and CEO, Georgia Power

Bowers, 58, joined the company as a residential sales representative with Gulf Power in 1979. He has held his current position since January 2011. Previously, Bowers served as chief financial officer for Southern Company. He also served as president of Southern Company Generation, president and CEO of Southern Power, president and CEO of Southern Company's former United Kingdom subsidiary and senior vice president and chief marketing officer for Southern Company.

3. Stan W. Connally, Jr.
President and CEO, Gulf Power

Connally, 45, joined the company in 1989 as a co-op student at Georgia Power. He has held his current position since July 2012. Previously, he served as senior vice president and senior production officer for Georgia Power. He has served as plant manager at plants Watson, Daniel and Barry. He has also worked in customer operations and sales and marketing.

4. Mark A. Crosswhite
Executive Vice President
Chairman, President and CEO, Alabama Power

Crosswhite, 52, joined the company in 2004 as senior vice president and general counsel for Southern Company Generation. He has held his current position since March 2014. He was previously executive vice president and chief operating officer for Southern Company, president and CEO of Gulf Power and executive vice president of external affairs and senior vice president and general counsel at Alabama Power. Prior to joining the company, he was a partner in the law firm of Balch & Bingham LLP in Birmingham, Alabama, where he practiced for 17 years.

5. Thomas A. Fanning
Chairman, President and CEO

Fanning, 58, joined the company as a financial analyst in 1980. He has held his current position since December 2010. Previously, Fanning served as executive vice president and chief operating officer for Southern Company, president and CEO of Gulf Power and chief financial officer for Southern Company, Georgia Power and Mississippi Power.

6. Kimberly S. Greene
Executive Vice President and
Chief Operating Officer

Greene, 48, has held her current role since March 2014. Previously, she was president and CEO of Southern Company Services. Prior to that, she was employed by TVA, where she served as chief financial officer, group president of strategy and external relations and chief generation officer. Prior to her time at TVA, she served as senior vice president of finance and treasurer for Southern Company and has held various positions with Mirant, including chief commercial officer, South Region.

7. G. Edison Holland, Jr.
Executive Vice President
Chairman, President and CEO, Mississippi Power

Holland, 62, joined the company as vice president and corporate counsel for Gulf Power in 1992. He was named to his current position in May 2013. Previously, he was executive vice president, general counsel and corporate secretary of Southern Company, president and CEO of Savannah Electric and vice president of power generation and transmission at Gulf Power.

8. James Y. Kerr II
Executive Vice President and General Counsel

Kerr, 51, assumed his current role in March 2014. Previously, he was a partner with McGuireWoods LLP and a senior advisor at McGuireWoods Consulting LLC. He also served as co-chairman of McGuireWoods' energy industry team with focus in the areas of energy transactions and finance, energy regulation, energy policy and energy litigation. Prior to joining McGuireWoods, Kerr served as a Commissioner on the North Carolina Utilities Commission and was the former president of the National Association of Regulatory Utility Commissioners.

9. Stephen E. Kuczynski
Chairman, President and CEO, Southern Nuclear

Kuczynski, 52, joined the company in July 2011 as chairman, president and CEO of Southern Nuclear. Previously, he was senior vice president of engineering and technical services for Exelon Nuclear. He also served as senior vice president of Exelon Nuclear's Midwest operations, senior vice president of operations support and plant manager and later site vice president of Exelon's Byron Nuclear Station.

10. Mark S. Lantrip
Executive Vice President
Chairman, President and CEO,
Southern Company Services, Inc.

Lantrip, 60, joined the company in 1981 as an analyst in Gulf Power's corporate planning department. He assumed his current position in March 2014. Previously, Lantrip was executive vice president of finance and treasurer of Southern Company Services and treasurer of Southern Company, with responsibility for financial planning and analysis, enterprise risk management, trust finance, capital markets and treasury.

11. Christopher C. Womack
Executive Vice President and President
of External Affairs

Womack, 57, joined the company in 1988 as a governmental affairs representative for Alabama Power. He has held his current position since January 2009. Previously, Womack was executive vice president of external affairs for Georgia Power. He has also served as senior vice president of human resources and chief people officer for Southern Company as well as senior vice president and senior production officer of Southern Company Generation.

APC
Abbreviation for Alabama Power Company.

Basic Earnings Per Share Excluding Kemper IGCC Impacts, Leveraged Lease Restructure Charge, And MC Asset Recovery Insurance Settlements
Basic earnings per share in 2014 of $2.19 plus an excluded 59-cent charge related to Mississippi Power's construction of the Kemper integrated gasification combined cycle project and plus an excluded 2-cents related to the reversal of previously recognized revenues recorded in 2014 and 2013 and the recognition of carrying costs associated with the 2015 Mississippi Supreme Court decision which reversed the Mississippi Public Service Commission's March 2013 rate order related to the Kemper IGCC project; basic earnings per share in 2013 of $1.88 plus an excluded 83-cent charge related to Mississippi Power's construction of the Kemper IGCC project, plus an excluded 2-cent charge related to the restructuring of a leveraged lease investment, and minus an excluded MC Asset Recovery insurance settlement of 2 cents; and basic earnings per share in 2012 of $2.70 minus an excluded MC Asset Recovery insurance settlement of 2 cents.

Beta
A measure of the volatility of a stock in comparison to the market as a whole. Beta can be described as the tendency of a security's returns to respond to swings in the market.

Book Value
A company's common stock equity as it appears on a balance sheet, equal to total assets minus liabilities, preferred and preference stock and intangible assets such as good will. Book value per share refers to the book value of a company divided by the number of shares outstanding.

CO_2
Abbreviation for carbon dioxide.

Coal Gasification
A process in which the energy stored in coal is converted to gas, making it available for use in refineries for the synthesis of chemicals or in gas-fired power plants as a fuel.

Desalination
The process of removing salt, especially from sea water, so that it can be used for drinking or irrigation.

Diluted Earnings Per Share
A company's earnings per share calculated by using fully diluted shares outstanding, including the impact of stock option grants and convertible bonds that can be converted into shares of stock in the issuing company.

Dividend Yield
The annual dividend income per share received from a company divided by its current stock price.

Earnings Per Share
Net income divided by the average number of shares of common stock outstanding.

Energy Audit
An onsite inspection in which recommendations are made for improving the energy efficiency of a home or business.

GPC
Abbreviation for Georgia Power Company.

Gulf
Abbreviation for Gulf Power Company.

Integrated Gasification Combined Cycle (IGCC)
A technology that uses a gasifier to turn coal and other carbon-based fuels into synthesis gas (syngas). It then removes impurities from the syngas before it is combusted. This results in lower emissions of sulfur dioxide, particulates and mercury.

HVAC
Abbreviation for heating, ventilation and air conditioning.

Kilowatt-Hour
A unit of electricity equal to 1,000 watt-hours, delivered by an electric utility steadily for one hour.

LED (Light-Emitting Diodes)
Semiconductor devices that produce visible light when an electrical current is passed through them. LED lighting can be more efficient, durable and longer lasting.

Megawatt
A measurement of electricity equal to 1,000 kilowatts and typically used when describing large amounts of generating capacity.

mmBtu
Abbreviation for Million British thermal units.

MPC
Abbreviation for Mississippi Power Company.

Proton-Exchange Membrane Fuel Cell Vehicles
Vehicles that are powered by proton exchange membrane fuel cells, a type of fuel cell being developed for transport applications as well as for stationary and portable fuel cell applications.

Reliability
As pertains to electric networks, the extent to which supply is available to meet demand.

Renewable Energy
Energy generated directly from natural resources such as sunlight, wind, water, biomass, ocean tides and geothermal heat.

SCS
Abbreviation for Southern Company Services, Inc.

System Average Interruption Frequency Index (SAIFI)
SAIFI is the average number of times that a system customer experiences an outage during a year (or some particular time period under study). The SAIFI is found by dividing the total number of customers interrupted by the total number of customers served.

Total Shareholder Return
Stock Price appreciation plus reinvested dividends. (The distribution of shares of Mirant Corporation stock to Southern Company shareholders is treated as a special dividend for the purposes of calculating Southern Company shareholder return.)

TVA
Abbreviation for Tennessee Valley Authority.

Exhibit 7

SOUTHERN COMPANY

NOTICE OF 2015 ANNUAL MEETING OF STOCKHOLDERS, PROXY STATEMENT AND 2014 ANNUAL REPORT

TABLE OF CONTENTS

* To be voted on at the meeting.

Thomas A. Fanning
Chairman, President, and
Chief Executive Officer

Dear Fellow Stockholder:

You are invited to attend the 2015 Annual Meeting of Stockholders at 10 a.m. ET on Wednesday, May 27, 2015, at The Lodge Conference Center at Callaway Gardens, Pine Mountain, Georgia.

Your vote is important. Whether or not you plan to attend the meeting, please review the proxy material and vote by internet, phone, or mail as soon as possible.

At the annual meeting, I will report on our accomplishments from 2014, as well as our plans for 2015 and beyond. We will also elect our Board of Directors and vote on the other matters described in this Proxy Statement.

Throughout the entire 103-year history of The Southern Company, customers have always been at the center of all we do. This customer-focused business model continues to inform the decisions we make as we consider how our actions will potentially benefit the families, businesses, and communities we serve. Going forward, we will remain grounded in this core value.

This Proxy Statement includes Appendix D, the 2014 Annual Report with The Southern Company's audited financial statements and management's discussion and analysis of results of operation and financial condition.

We look forward to seeing you on May 27th. Thank you for your continued support of The Southern Company.

Thomas A. Fanning

Thomas A. Fanning

NOTICE OF ANNUAL MEETING OF STOCKHOLDERS OF THE SOUTHERN COMPANY

DATE: Wednesday, May 27, 2015

TIME: 10:00 a.m., ET

PLACE: The Lodge Conference Center at Callaway Gardens
Highway 18
Pine Mountain, Georgia 31822

DIRECTIONS: ***From Atlanta, Georgia*** — Take I-85 south to I-185 (Exit 21). From I-185 south, take Exit 34, Georgia Highway 18. Take Georgia Highway 18 east to Callaway.

From Birmingham, Alabama — Take U.S. Highway 280 east to Opelika. Take I-85 north to Georgia Highway 18 (Exit 2). Take Georgia Highway 18 east to Callaway.

Items of Business

1. To elect 15 Directors;

2. To approve The Southern Company Outside Directors Stock Plan;

3. To approve an amendment to the By-Laws related to the ability of stockholders to act by written consent to amend the By-Laws;

4. To approve on a non-binding advisory basis The Southern Company's named executive officers' compensation;

5. To ratify the appointment of Deloitte & Touche LLP as The Southern Company's independent registered public accounting firm for 2015;

6. To consider a stockholder proposal on proxy access;

7. To consider a stockholder proposal on greenhouse gas emissions reduction goals; and

8. To transact any other business properly coming before the meeting or any adjournments thereof.

Record Date

Stockholders of record at the close of business on March 30, 2015 are entitled to attend and vote at the meeting. On that date, there were 908,996,758 shares of common stock (Common Stock) of The Southern Company (Southern Company or the Company) outstanding and entitled to vote.

Annual Report to Stockholders

Appendix D to this Proxy Statement is The Southern Company's 2014 Annual Report.

By Order of the Board of Directors,
Melissa K. Caen, Corporate Secretary,
April 10, 2015

VOTING INFORMATION

Even if you plan to attend the meeting in person, please provide your voting instructions as soon as possible by internet, by phone using the toll-free number, or by mail by marking, signing, dating, and returning the proxy form in the enclosed, postage-paid envelope.

Voting by the internet or by phone is fast and convenient, and your vote is immediately confirmed and tabulated.

PROXY VOTING OPTIONS

YOUR VOTE IS IMPORTANT!

Voting early will ensure the presence of a quorum at the meeting and may save The Southern Company the expense and extra work of additional solicitation.

Important Notice Regarding the Availability of Proxy Materials for the 2015 Annual Meeting of Stockholders to be held on May 27, 2015:

The Company's 2015 Proxy Statement, which includes the 2014 Annual Report as an appendix, is also available free of charge on the Company's website at http://investor.southerncompany.com/proxy.

The Company's 2014 Annual Report filed with the Securities and Exchange Commission (SEC) on Form 10-K will be provided without charge upon written request to Melissa K. Caen, Corporate Secretary, Southern Company, 30 Ivan Allen Jr. Boulevard NW, Atlanta, Georgia 30308.

PROXY SUMMARY

This summary highlights information contained elsewhere in this Proxy Statement. This summary does not contain all of the information that you should consider, and you should read the entire Proxy Statement carefully before voting.

Meeting Agenda

Stockholders are being asked to vote on the following matters at the 2015 Annual Meeting of Stockholders (2015 Annual Meeting):

	The Board's Recommendation
Item 1. Election of 15 Directors (page 1) Each nominee holds or has held senior executive positions, maintains the highest degree of integrity and ethical standards, and complements the needs of the Company. Through their positions, responsibilities, skills, and perspectives, which span various industries and organizations, these nominees represent a Board that is diverse and possesses appropriate collective knowledge and experience in accounting, finance, leadership, business operations, risk management, corporate governance, and the Company's industry and subsidiaries' service territories.	For each Director nominee
Item 2. Approve The Southern Company Outside Directors Stock Plan (page 9) The Board of Directors has adopted effective June 1, 2015, subject to stockholder approval, the Outside Directors Stock Plan for Directors of The Southern Company and its Subsidiaries. The purpose of the Outside Directors Stock Plan is to provide a mechanism for non-employee Directors to automatically increase their ownership of Common Stock and thereby further align their interests with those of the Company's stockholders.	For
Item 3. Approve Amendment to the By-Laws Related to the Ability of Stockholders to Act by Written Consent to Amend the By-Laws (page 9) The Board of Directors has determined that it is in the best interests of the Company and its stockholders to amend the Company's By-Laws to permit stockholders to take action to amend the By-Laws without a meeting by the written consent of holders of not less than the minimum number of the issued and outstanding shares that would be necessary to take such action at a meeting at which all shares entitled to vote thereon were present and voted.	For
Item 4. Advisory Vote on Named Executive Officers' Compensation (page 24) The Company believes its compensation program provides the appropriate mix of fixed and short- and long-term performance-based compensation that rewards achievement of the Company's financial success, business unit financial and operational success, and total shareholder return. The Company seeks a non-binding advisory vote from its stockholders to approve the compensation of its named executive officers.	For
Item 5. Ratification of Independent Auditor for 2015 (page 71) The Audit Committee has appointed Deloitte & Touche LLP (Deloitte & Touche) as the Company's independent registered public accounting firm for 2015. This appointment is being submitted to stockholders for ratification, and the Audit Committee and the Board of Directors believe that the continued retention of Deloitte & Touche to serve as the Company's independent registered public accounting firm is in the best interests of the Company and its stockholders.	For
Item 6. Stockholder Proposal on Proxy Access, if properly presented (page 73) Proxy access is an untested governance feature for U.S. companies and it should not be implemented in the absence of a compelling rationale. The proponent's proxy access proposal does not seek to remedy any specific governance or performance deficiency at the Company. The Company already has significant corporate governance practices that protect stockholder rights and interests. Implementing proxy access on the terms of this proposal could negatively affect the Company's corporate governance.	Against
Item 7. Stockholder Proposal on Greenhouse Gas Emissions Reduction Goals, if properly presented (page 76) The Board of Directors does not believe it is in the best interests of the Company or its stockholders to independently establish at this time voluntary, absolute quantitative goals for reducing total greenhouse gas emissions from the Southern Company system's operations. A separate report as requested in the proposal regarding plans to achieve such goals would not be an efficient use of additional Company resources or add value to the Company's current efforts in this area.	Against

Questions and Answers About the 2015 Annual Meeting

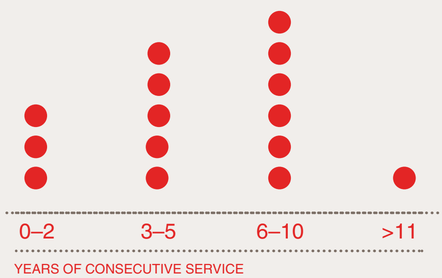
Please review "Frequently Asked Questions" on page 79 for answers to common questions about the 2015 Annual Meeting.

Key Corporate Governance Features

Southern Company seeks to establish corporate governance standards and practices that will be of value to long-term stockholders and create positive influences in the governance of the Company. Several of our key governance standards and practices include:

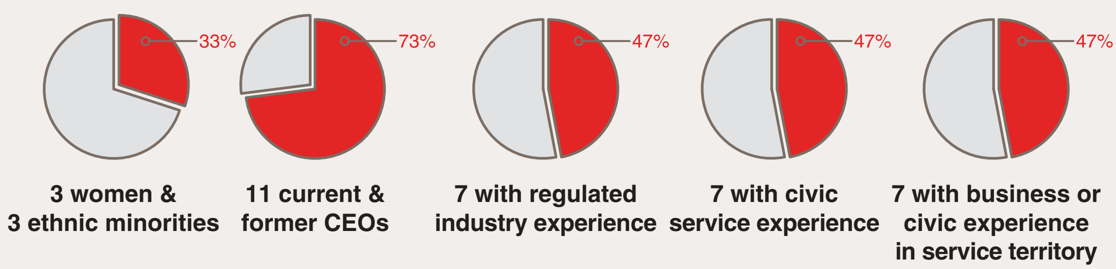
- Annual election of Directors
- Majority voting for Directors, with a Director resignation policy
- 10% threshold for stockholders to request a special meeting
- 14 of 15 Directors are independent
- Strong Lead Independent Director
- Annual Board and committee self-evaluations
- Proactive stockholder engagement

BOARD TENURE IN YEARS



INDEPENDENCE

BOARD DIVERSITY



Recent Governance Enhancements

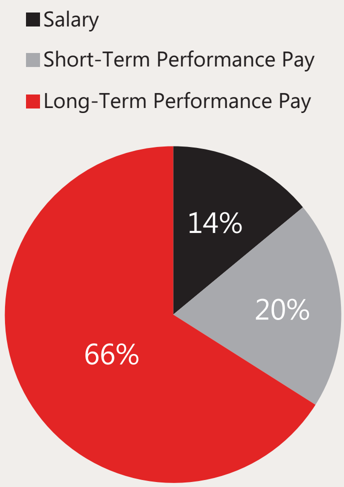
- Established Business Security Subcommittee of the Board...see page 20
- Increased Stakeholder Engagement Efforts...see page 12
- Added Former U.S. Deputy Attorney General Larry D. Thompson to the Board...see page 8
- Added Alabama Business and Civic Leader John D. Johns to the Board...see page 6
- Enhanced the Responsibilities of the Lead Independent Director...see page 15
- Refreshed the Composition of Key Board Committees...see pages 16 to 20

Executive Compensation Summary

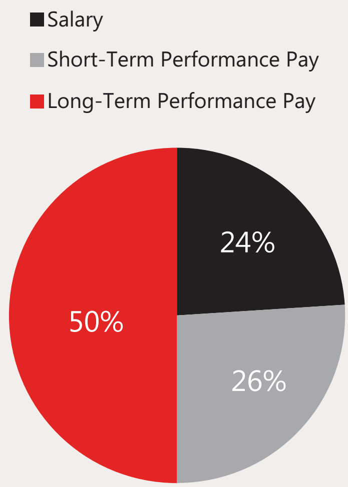
Performance and Pay

Performance-based pay represents a substantial portion of the total direct compensation paid or granted to the named executive officers for 2014.

Chief Executive Officer (1)



Other Named Executive Officers (1)



(1) Salary is the actual amount paid in 2014, Short-Term Performance Pay is the actual amount earned in 2014 based on performance, and Long-Term Performance Pay is the value on the grant date of stock options and performance shares granted in 2014. See the Summary Compensation Table for the amounts of all elements of reportable compensation described in the Compensation Discussion and Analysis. Information is provided for named executive officers serving at the end of 2014.

Compensation and Benefit Beliefs and Practices

The Company's compensation and benefit program is based on the following beliefs:

- Employees' commitment and performance have a significant impact on achieving business results;
- Compensation and benefits offered must attract, retain, and engage employees and must be financially sustainable;
- Compensation should be consistent with performance: higher pay for higher performance and lower pay for lower performance; and
- Both business drivers and culture should influence the compensation and benefit program.

Based on these beliefs, the Compensation Committee believes that the Company's executive compensation program should:

- Be competitive with the Company's industry peers;
- Motivate and reward achievement of the Company's goals;
- Be aligned with the interests of the Company's stockholders and its subsidiaries' customers; and
- Not encourage excessive risk-taking.

Executive compensation is targeted at the market median of industry peers, but actual compensation is primarily determined by achievement of the Company's business goals. The Company believes that focusing on the customer drives achievement of financial objectives and delivery of a premium, risk-adjusted total shareholder return for the Company's stockholders. Therefore, short-term performance pay is based on achievement of the Company's operational and financial performance goals, with one-third determined by operational performance, such as safety, reliability, and customer satisfaction; one-third determined by business unit financial performance; and one-third determined by Company earnings per share performance. Long-term performance pay is tied to stockholder value, with 40% of the target value awarded in stock options, which reward stock price appreciation, and 60% awarded in performance shares, which reward total shareholder return performance relative to that of industry peers and stock price appreciation.

Key Compensation Practices

WHAT WE DO

Annual pay risk assessment

Independent compensation consultant

Claw-back provision

Strong stock ownership requirements

WHAT WE DON'T DO

"No-hedging" provision in insider trading policy

No excise tax gross-ups on change-in-control severance arrangements

Limited ongoing perquisites

Item No. 1 — Election of Directors

Nominees for Election as Directors

The Proxies named on the proxy form will vote, unless otherwise instructed, each properly executed proxy form for the election of the following nominees as Directors. If any named nominee becomes unavailable for election, the Board may substitute another nominee. In that event, the proxy would be voted for the substitute nominee unless instructed otherwise on the proxy form. Each nominee, if elected, will serve until the 2016 Annual Meeting of Stockholders.

The Board of Directors, acting upon the recommendation of the Governance Committee, nominates the following individuals for election to the Southern Company Board of Directors. Each nominee holds or has held senior executive positions, maintains the highest degree of integrity and ethical standards, and complements the needs of the Company. Through their positions, responsibilities, skills, and perspectives, which span various industries and organizations, these nominees represent a Board that is diverse and possesses appropriate collective knowledge and experience in accounting, finance, leadership, business operations, risk management, corporate governance, and the Company's industry and subsidiaries' service territories, as detailed below.

Juanita Powell Baranco

Age: 66

Director since: 2006

Board committee: Audit

Principal occupation: Executive Vice President and Chief Operating Officer of Baranco Automotive Group, automobile sales

Other public company directorships: None (formerly a Director of Cox Radio, Inc. and Georgia Power Company)

Director biography: Ms. Baranco had a successful legal career, which included serving as Assistant Attorney General for the State of Georgia, before she and her husband founded the first Baranco dealership in Atlanta in 1978. She served as a Director of Georgia Power Company (Georgia Power), the largest subsidiary of the Company, from 1997 to 2006. During her tenure on the Georgia Power Board, she was a member of the Controls and Compliance, Diversity, Executive, and Nuclear Operations Overview Committees. She served on the Federal Reserve Bank of Atlanta Board for a number of years and also on the Boards of Directors of John H. Harland Company and Cox Radio, Inc. An active leader in the Atlanta community, she serves on the Board of Trustees for Clark Atlanta University and on the Advisory Council for the Catholic Foundation of North Georgia, the Commerce Club, and the Woodruff Arts Center. She is also past Chair of the Board of Regents for the University System of Georgia and past Board Chair for the Sickle Cell Foundation of Georgia.

The Board has benefited from Ms. Baranco's particular expertise in business operations and her civic involvement.

Jon A. Boscia

Age: 62

Director since: 2007

Board committee: Audit (Chair)

Principal occupation: Founder and President, Boardroom Advisors LLC, board governance consulting firm

Other public company directorships: None (formerly a Director of PHH Corporation, Sun Life Financial Inc., Armstrong World Industries, Lincoln Financial Group, Georgia Pacific Corporation, and The Hershey Company)

Director biography: From September 2008 until March 2011, Mr. Boscia served as President of Sun Life Financial Inc. In this capacity, Mr. Boscia managed a portfolio of the company's operations with ultimate responsibility for the United States, United Kingdom, and Asia business groups and directed the global marketing and investment management functions. Previously, Mr. Boscia served as Chairman of the Board and Chief Executive Officer of Lincoln Financial Group, a diversified financial services organization, until his retirement in 2007. Mr. Boscia became the Chief Executive Officer of Lincoln Financial Group in 1998. During his time at Lincoln Financial Group, the company earned a reputation for its stellar performance in making major acquisitions. Mr. Boscia is a past member of the Board of PHH Corporation, where he was Chair of the Audit Committee and a member of the Regulatory Oversight Committee, past member of the Board of Sun Life Financial Inc., where he was a member of the Investment Oversight Committee and the Risk Review Committee, and past member of the Board of The Hershey Company, where he chaired the Corporate Governance Committee and served on the Executive Committee. In addition, Mr. Boscia has served in leadership positions on other public company boards as well as not-for-profit and industry boards.

Mr. Boscia's extensive background in finance, investment management, information technology, and corporate governance are valuable to the Board.

Henry A. "Hal" Clark III

Age: 65

Director since: 2009

Board committees: Compensation and Management Succession (Chair), Finance

Principal occupation: Senior Advisor of Evercore Partners Inc. (formerly Lexicon Partners, LLC), corporate finance advisory firm, since July 2009

Other public company directorships: None

Director biography: As a Senior Advisor with Evercore Partners Inc. (formerly Lexicon Partners, LLC), Mr. Clark is primarily focused on expanding advisory activities in North America with a particular focus on the power and utilities sectors. With more than 30 years of experience in the global financial and the utility industries, Mr. Clark brings a wealth of experience in finance and risk management to his role as a Director. Prior to joining Evercore Partners Inc., Mr. Clark was Group Chairman of Global Power and Utilities at Citigroup, Inc. from 2001 to 2009. His work experience includes numerous capital markets transactions of debt, equity, bank loans, convertible securities, and securitization, as well as advice in connection with mergers and acquisitions. He also has served as policy advisor to numerous clients on capital structure, cost of capital, dividend strategies, and various financing strategies. He has served as Chair of the Wall Street Advisory Group of the Edison Electric Institute.

Mr. Clark's utility global financial and utility industry expertise as well as his expertise in capital market transactions are valuable to the Board.

Thomas A. Fanning

Age: 58
Director since: 2010
Principal occupation: Chairman of the Board, President, and Chief Executive Officer of the Company since December 2010
Other public company directorships: Vulcan Materials Company

Director biography: Mr. Fanning has held numerous leadership positions across the Southern Company system during his more than 30 years with the Company. He served as Executive Vice President and Chief Operating Officer of the Company from 2008 to 2010, leading the Company's generation and transmission, engineering, and construction services, research and environmental affairs, system planning, and competitive generation business units. He served as the Company's Executive Vice President and Chief Financial Officer from 2007 to 2008 and Executive Vice President, Chief Financial Officer, and Treasurer from 2003 to 2007, where he was responsible for the Company's accounting, finance, tax, investor relations, treasury, and risk management functions. In those roles, he also served as the chief risk officer and had responsibility for corporate strategy. Mr. Fanning is on the Board of Southern Power Company (Southern Power), a subsidiary of Southern Company. Mr. Fanning is also a Director of Vulcan Materials Company, serving as a member of the Audit Committee and the Compensation Committee, and the Federal Reserve Bank of Atlanta, serving as Chairman of the Board. Mr. Fanning served on the Board of The St. Joe Company from 2005 through September 2011.

Mr. Fanning's knowledge of the Company's business and the electric utility industry, understanding of the complex regulatory structure of the industry, and experience in strategy development and execution uniquely qualify him to be the Chairman of the Board.

David J. Grain

Age: 52
Director since: 2012
Board committees: Compensation and Management Succession, Finance
Principal occupation: Founder and Managing Partner, Grain Management, LLC, private equity firm
Other public company directorships: None

Director biography: Mr. Grain is the founding member and managing partner of Grain Management LLC (Grain Management), a private equity firm focused on investments in the media and communications sectors, which he founded in 2006. With offices in Sarasota, Florida and Washington, D.C., the firm manages funds for a number of the country's leading academic institutions, endowments, and public pension funds. Grain Management also builds, owns, and operates wireless infrastructure assets across North America. Mr. Grain also founded and was Chief Executive Officer of Grain Communications Group, Inc. Prior to Grain Management, he served as President of Global Signal, Inc., Senior Vice President of AT&T Broadband's New England Region, and Executive Director in the High Yield Finance Department at Morgan Stanley. Mr. Grain was appointed by President Obama in 2011 to the National Infrastructure Advisory Council. He previously served as chairman of the Florida State Board of Administration Investment Advisory Council as an appointee of the former Governor Charlie Crist. He is currently a Director at Gateway Bank of Southwest Florida, a Trustee of the College of the Holy Cross, and serves on the Investment Committee of the United States Tennis Association.

Mr. Grain's background in finance, investment management, and wireless communications infrastructure, leadership, and civic involvement are valuable to the Board.

Veronica M. Hagen

Age: 69

Director since: 2008; Lead Independent Director since May 28, 2014

Board committees: Compensation and Management Succession, Nuclear/Operations

Other public company directorships: Polymer Group, Inc., Newmont Mining Corporation

Director biography: From 2007 until her retirement in 2013, Ms. Hagen served as Chief Executive Officer of Polymer Group, Inc., where she continues to serve as a Director and Chair of the Nominating and Corporate Governance Committee. Ms. Hagen also served as President of Polymer Group, Inc. from January 2011 until her retirement in 2013. Polymer Group, Inc. is a leading producer and marketer of engineered materials. Prior to joining Polymer Group, Inc., Ms. Hagen was the President and Chief Executive Officer of Sappi Fine Paper, a division of Sappi Limited, the South African-based global leader in the pulp and paper industry, from November 2004 until 2007. She also has served as Vice President and Chief Customer Officer at Alcoa Inc. and owned and operated Metal Sales Associates, a privately-held metal business. Ms. Hagen also serves as the Chair of the Compensation Committee and a member of the Environmental, Social Responsibility, and Safety Committee of the Board of Newmont Mining Corporation.

Ms. Hagen's global operational management experience and commercial business leadership are valuable assets to the Board.

Warren A. Hood, Jr.

Age: 63

Director since: 2007

Board committee: Audit

Principal occupation: Chairman of the Board and Chief Executive Officer of Hood Companies, Inc., packaging and construction products

Other public company directorships: BancorpSouth, Inc. (formerly a Director of Mississippi Power Company)

Director biography: Mr. Hood is the Chairman and Chief Executive Officer of Hood Companies Inc. which he established in 1978. Hood Companies Inc. consists of four separate corporations with 60 manufacturing and distribution sites throughout the United States, Canada, and Mexico. Hood Companies, Inc.'s products are currently marketed in North America, the Caribbean, and Western Europe. Mr. Hood previously served on the Board of the Company's subsidiary, Mississippi Power Company (Mississippi Power), where he was also a member of the Compensation Committee.
Mr. Hood has long been recognized for his leadership role in the State of Mississippi. He serves or has served on numerous corporate, community, and philanthropic boards, including Boy Scouts of America Pine Burr Area Council, Governor Phil Bryant's Mississippi Works Committee, and The Governor's Commission on Rebuilding, Recovery and Renewal, which was formed following Hurricane Katrina in 2005. He serves on the Board of BancorpSouth, Inc., where he is a member of the Audit Committee.

Mr. Hood's business operations, risk management, and financial experience and civic involvement are valuable to the Board.

Linda P. Hudson

Age: 64

Director since: 2014

Board committees: Governance, Nuclear/Operations, Business Security Subcommittee

Principal Occupation: Founder, Chairman, and Chief Executive Officer, The Cardea Group, business management consulting firm

Other public company directorships: BAE Systems, Inc., Bank of America Corporation

Director biography: Ms. Hudson is the Founder, Chairman, and Chief Executive Officer of The Cardea Group, a business management consulting firm she founded in 2014. From October 2009 through February 2014, Ms. Hudson served as the President and Chief Executive Officer of BAE Systems, Inc. (BAE Systems), a U.S.-based global defense, aerospace, and security company. BAE Systems is a wholly-owned subsidiary of London-based BAE Systems plc. Previously, Ms. Hudson served as President of BAE Systems' Land & Armaments operating group, the world's largest military vehicle and equipment business. Before joining BAE Systems in 2006, she served as Vice President of the General Dynamics Corporation and President of General Dynamics Armament and Technical Products. She currently serves as an adviser and outside Director for BAE Systems. She is also a member of Bank of America Corporation's Board of Directors, where she serves on the Compensation and Benefits Committee and the Credit Committee. She is also a Director of the University of Florida Foundation and a Director of the Center for a New American Security.

Ms. Hudson's experience leading a large, highly-regulated, complex business and expertise in engineering, technology, operations, and risk management are valuable to the Board.

Donald M. James

Age: 66

Director since: 1999

Board committees: Governance (Chair), Finance

Other public company directorships: Vulcan Materials Company, Wells Fargo & Company (formerly a Director of Protective Life Corporation)

Director biography: Mr. James retired from his position as Chief Executive Officer of Vulcan Materials Company in July 2014 and Executive Chairman in January 2015. He continues to serve as Chairman of the Board of Directors of Vulcan Materials Company. Mr. James joined Vulcan Materials Company in 1992 as Senior Vice President and General Counsel and then became President of the Southern Division and then Senior Vice President of the Construction Materials Group and President and Chief Executive Officer. Prior to joining Vulcan Materials Company, Mr. James was a partner at the law firm of Bradley, Arant, Rose & White for 10 years. Mr. James is also a Trustee of the UAB Health System and Children's of Alabama, where he serves on the Executive Committee. In addition, he serves on the Finance and the Human Resources Committees of Wells Fargo & Company's Board of Directors.

Mr. James' leadership of a large public company, his legal expertise, and his civic involvement are valuable assets to the Board.

John D. Johns

Age: 63

Director since: 2015

Board committees: Audit

Principal occupation: Chairman, President, and Chief Executive Officer of Protective Life Corporation (Protective Life)

Other public company directorships: Regions Financial Corporation, Genuine Parts Company (formerly a Director of Alabama Power Company)

Director biography: Mr. Johns has served as Chairman, President, and Chief Executive Officer of Protective Life since 2002. He joined Protective Life in 1993 as Executive Vice President and Chief Financial Officer. Before his tenure at Protective Life, Mr. Johns served as general counsel of Sonat, Inc., a diversified energy company. Prior to joining Sonat, Inc., Mr. Johns was a founding partner of the law firm Maynard Cooper & Gale. He previously served on the Board of Directors of Alabama Power Company (Alabama Power) from 2004 to 2015. During his tenure on the Alabama Power Board, he was a member of the Nominating Committee and Executive Committee. Mr. Johns has served on the Executive Committee of the Financial Services Roundtable in Washington, D.C., and is the immediate past chairman of the American Council of Life Insurers. He is a member of the Board of Directors of Regions Financial Corporation, where he serves on the Nominating and Governance and Risk Committees, and Genuine Parts Company, where he serves on the Compensation, Nominating and Governance Committee. Mr. Johns has served as the Chairman of the Business Council of Alabama, the Birmingham Business Alliance, the Greater Alabama Council, Boy Scouts of America, and Innovation Depot, Alabama's leading business and technology incubator.

Mr. Johns' management and leadership experience, his significant familiarity with Alabama Power, and his civic involvement are valuable to the Board.

Dale E. Klein

Age: 67

Director since: 2010

Board committees: Governance, Nuclear/Operations, Business Security Subcommittee (Chair)

Principal occupation: Associate Vice Chancellor of Research of the University of Texas System since 2011 and Associate Director of the Energy Institute at The University of Texas at Austin since 2010

Other public company directorships: Pinnacle West Capital Corporation, Arizona Public Service Company

Director biography: Dr. Klein was Commissioner from 2009 to 2010 and Chairman from 2006 through 2009 of the U.S. Nuclear Regulatory Commission. Dr. Klein also served as Assistant to the Secretary of Defense for Nuclear, Chemical, and Biological Defense Programs from 2001 through 2006. Dr. Klein has more than 35 years of experience in the nuclear energy industry. Dr. Klein began his career at the University of Texas in 1977 as a professor of mechanical engineering which included a focus on the university's nuclear program. He spent nearly 25 years in various teaching and leadership positions including Director of the nuclear engineering teaching laboratory, associate dean for research and administration in the College of Engineering, and vice-chancellor for special engineering programs. He serves on the Audit and Nuclear and Operating Committees of Pinnacle West Capital Corporation, an Arizona energy company, and is a member of the Board of Pinnacle West Capital Corporation's principal subsidiary, Arizona Public Service Company.

Dr. Klein's expertise in nuclear energy regulation and operations, technology, and safety is valuable to the Board.

William G. Smith, Jr.

Age: 61

Director since: 2006

Board committees: Finance (Chair), Compensation and Management Succession

Principal occupation: Chairman of the Board, President, and Chief Executive Officer of Capital City Bank Group, Inc., banking

Other public company directorships: Capital City Bank Group, Inc.

Director biography: Mr. Smith began his career at Capital City Bank in 1978, where he worked in a number of positions of increasing responsibility before being elected President and Chief Executive Officer of Capital City Bank Group, Inc. in January 1989. He was elected Chairman of the Board of the Capital City Bank Group, Inc. in 2003. He is also the Chairman and Chief Executive Officer of Capital City Bank. He previously served on the Board of Directors of the Federal Reserve Bank of Atlanta. He is the former Federal Advisory Council Representative for the Sixth District of the Federal Reserve System and past Chair of both Tallahassee Memorial HealthCare and the Tallahassee Area Chamber of Commerce.

Mr. Smith's experience in finance, business operations, and risk management is valuable to the Board.

Steven R. Specker

Age: 69

Director since: 2010

Board committees: Nuclear/Operations (Chair), Compensation and Management Succession

Other public company directorships: Trilliant Incorporated

Director biography: Dr. Specker served as President and Chief Executive Officer of the Electric Power Research Institute (EPRI) from 2004 until his retirement in 2010. Prior to joining EPRI, Dr. Specker founded Specker Consulting, LLC, a private consulting firm, which provided operational and strategic planning services to technology companies serving the global electric power industry. Dr. Specker also served in a number of leadership positions during his 30-year career at General Electric Company (GE), including serving as President of GE's nuclear energy business, President of GE digital energy, and Vice President of global marketing. Dr. Specker is also a member of the Board of Trilliant Incorporated, a leading provider of Smart Grid communication solutions.

Dr. Specker brings to the Board a keen understanding of the electric industry and valuable insight in innovation and technology development.

Larry D. Thompson

Age: 69

Director since: 2014 (previously served from 2010 to 2012)

Board committee: Audit

Other public company directorships: Franklin, Templeton Series Mutual Funds, Graham Holdings Company (formerly a Director of Cbeyond, Inc.)

Director biography: From 2012 until his retirement in 2014, Mr. Thompson served as Executive Vice President, Government Affairs, General Counsel, and Corporate Secretary for PepsiCo Inc., one of the world's largest packaged food and beverage companies. Prior to that, Mr. Thompson served from 2004 to 2011 as Senior Vice President of Government Affairs, General Counsel, and Corporate Secretary of PepsiCo Inc. In his role at PepsiCo Inc., Mr. Thompson was responsible for PepsiCo Inc.'s worldwide legal function, as well as its government affairs organization, and the company's charitable foundation. His government career includes serving as Deputy Attorney General in the United States Department of Justice and leading the National Security Coordination Council. In 2002, President George W. Bush named Mr. Thompson to head the Department of Justice's Corporate Fraud Task Force. Mr. Thompson is an Independent Trustee of various investment companies in the Franklin Templeton group of mutual funds and a Director and a member of the Compensation Committee of Graham Holdings Company (formerly The Washington Post Company). He also serves as a Director of the PepsiCo Foundation. Mr. Thompson served as a Director of Southern Company from 2010 to 2012 and was a member of the Audit Committee.

Mr. Thompson's government experience and corporate governance and legal expertise are valuable to the Board.

E. Jenner Wood III

Age: 63

Director since: 2012

Board committees: Governance, Nuclear/Operations

Principal occupation: Chairman and Chief Executive Officer of the Atlanta Division of SunTrust Bank and Corporate Executive Vice President of SunTrust Banks, Inc., banking

Other public company directorships: Genuine Parts Company, Oxford Industries, Inc. (formerly a Director of Crawford & Company and Georgia Power)

Director biography: Mr. Wood is currently the Chairman, President, and Chief Executive Officer of the Atlanta Division of SunTrust Bank, a position he has held since April 2014, where he is responsible for managing retail, commercial, and private wealth banking in the Greater Atlanta area. He also has served as an Executive Vice President of SunTrust Banks, Inc. since July 2005. From April 2010 through January 2013, he was Chairman of the Board, President, and Chief Executive Officer of the Atlanta/Georgia Division of SunTrust Bank and from January 2013 through March 2014 he was Chairman of the Board, President, and Chief Executive Officer of the Georgia/North Florida Division of SunTrust Bank. From 2002 through 2010, he served as Chairman, President, and Chief Executive Officer of SunTrust Bank Central Group with responsibility over Georgia and Tennessee. He served as a member of the Board of Georgia Power from 2002 until May 2012. During his tenure on the Georgia Power Board, he served as a member of the Compensation, Executive, and Finance Committees. Mr. Wood is a Director of Oxford Industries, Inc., where he serves as Presiding Director and as a member of the Executive Committee, and a Director of Genuine Parts Company, where he serves on the Audit Committee. He is active in numerous civic and community organizations, serving as a Trustee of the Robert W. Woodruff Foundation, The Sartain Lanier Family Foundation, Camp-Younts Foundation, the Jesse Parker Williams Foundation, and the William I. H. and Lula E. Pitts Foundation.

Mr. Wood's leadership experience and extensive background in finance as well as his involvement in the community are beneficial to the Board.

Each nominee has served in his or her present position for at least the past five years, unless otherwise noted.

The affirmative vote of a majority of the votes cast is required for the election of Directors at any meeting for the election of Directors at which a quorum is present. A majority of the votes cast means that the number of shares voted "FOR" the election of a Director must exceed the number of votes cast "AGAINST" the election of that Director.

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "FOR" THE NOMINEES LISTED IN ITEM NO. 1.

ITEM NO. 2 — APPROVAL OF THE COMPANY'S OUTSIDE DIRECTORS STOCK PLAN

The Board of Directors has adopted effective June 1, 2015, subject to stockholder approval, the Outside Directors Stock Plan for Directors of The Southern Company and its Subsidiaries (Plan). The purpose of the Plan is to provide a mechanism for non-employee Directors to automatically increase their ownership of Common Stock and thereby further align their interests with those of the Company's stockholders.

The Plan will be administered by the Company's Governance Committee.

The Plan provides for the payment to non-employee Directors of a portion of their annual retainer fee in unrestricted shares of Common Stock. For the subsidiary company participants, the equity-based annual retainer fee that will be payable under the Plan in Common Stock ranges from $19,500 to $30,000 per year. See "Director Compensation" in this Proxy Statement for a description of the equity-based annual retainer fee paid to the Company's Directors. Additionally, the Plan permits participants to elect to receive a greater portion — up to all — of their Director compensation in Common Stock. For the Company's Directors, the receipt of Common Stock under the Plan is deferred until departure from the Board of Directors. Other subsidiary company participants may elect to defer receipt of all or a portion of Common Stock paid under the Plan until departure from their respective Board of Directors. The Company expects that there will be approximately 55 Company and subsidiary company Directors initially participating in the Plan.

The maximum amount of Common Stock that may be granted under the Plan is 1,000,000 shares.

The Board of Directors of the Company may amend or terminate the Plan at any time, subject to any required stockholder approval. The maximum amount of Common Stock that may be granted under the Plan may not be increased without stockholder approval.

The estimated amount to be paid to the Company's non-executive Directors as a group under the Plan in 2015 is $3.5 million. The actual number of shares of Common Stock to be received will be dependent upon the market price of the Common Stock on the date of grant. No amounts will be paid to executive officers or other employees under the Plan.

The text of the Plan is included as Appendix A to this Proxy Statement.

The affirmative vote of a majority of the votes cast is required for approval of the Plan.

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "FOR" ITEM NO. 2.

ITEM NO. 3 — AMENDMENT TO THE COMPANY'S BY-LAWS RELATED TO THE ABILITY OF STOCKHOLDERS TO ACT BY WRITTEN CONSENT TO AMEND THE BY-LAWS

The Board of Directors has determined that it is in the best interests of the Company and its stockholders to amend the provision contained in Section 46 of the Company's By-Laws (By-Laws) relating to the ability of stockholders to act by written consent to amend the By-Laws. The proposed amendment would amend the By-Laws to permit stockholders to take action to amend the By-Laws without a meeting by the written consent of holders of not less than the minimum number of the issued and outstanding shares that would be necessary to take such action at a meeting at which all shares entitled to vote thereon were present and voted.

Background of This Item

The Board of Directors is committed to implementing and maintaining effective corporate governance policies and practices which seek to ensure that the Company is governed with high standards of ethics, integrity, and accountability and in the best interest of the Company's stockholders. A written consent right generally affords stockholders a means of acting between annual meetings other than by calling a special meeting. Under Section 228(a) of the Delaware General Corporation Law (DGCL), any action that may be taken at a meeting of stockholders may be taken without a meeting "by the holders of outstanding stock having not less than the minimum number of votes that would be necessary to authorize or take such action at a meeting at which all shares entitled to vote thereon were present and voted," unless otherwise provided in the certificate of incorporation. The Company's Certificate of Incorporation permits the Company's stockholders to act by written consent because it does not restrict that right. The only provision in the By-Laws that concerns stockholders' ability to act by written consent is contained in Section 46, which provides that stockholders may amend the By-Laws without a meeting but only by unanimous written consent. The Board of Directors has determined that revising this provision in the By-Laws to make it consistent with Section 228(a) of the DGCL and the Company's Certificate of Incorporation is in the best interests of the Company and its stockholders.

As a result, the Board of Directors voted to approve, and to recommend to the Company's stockholders that they approve, a proposal to amend Section 46 of the By-Laws to permit stockholders to take action to amend the By-Laws without a meeting by the written consent of holders of not less than the minimum number of the issued and outstanding shares of capital stock of the Company having voting powers that would be necessary to take such action at a meeting at which all shares entitled to vote thereon were present and voted. Under the By-Laws, the proposed amendment to Section 46 of the By-Laws requires stockholder approval in order to become effective.

Amendment

The proposed amendment to Section 46 of the By-Laws would revise the provision that relates to the ability of stockholders to act by written consent to amend the By-Laws. If approved, this proposed amendment would conform Section 46 of the By-Laws to Section 228 of the DGCL and the Company's Certificate of Incorporation to make clear that the standard set forth in Section 228(a) of the DGCL governs the ability of the Company's stockholders to act by written consent.

The text of the proposed amendment, marked to show changes to the current Section 46 of the By-Laws, is included as Appendix B to this Proxy Statement.

The affirmative vote of a majority of the shares represented in person or by proxy and entitled to vote at the annual meeting is required for approval of the proposed amendment to Section 46 of the By-Laws as presented in this Item No. 3.

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "FOR" ITEM NO. 3.

Company Organization

Southern Company is a holding company managed by a core group of officers and governed by a Board of Directors that is currently comprised of 15 members.

At the 2015 Annual Meeting, stockholders will elect 15 Directors. The nominees for election as Directors consist of 14 non-employees and one executive officer of the Company.

The Board of Directors has adopted and operates under a set of Corporate Governance Guidelines which are available on the Company's website at www.southerncompany.com under Information for Investors/Corporate Governance.

Corporate Governance Website

In addition to the Company's Corporate Governance Guidelines (which include Board independence criteria), other information relating to corporate governance of the Company is available on the Company's Corporate Governance webpage at www.southerncompany.com under Information for Investors/Corporate Governance.

Director Independence

No Director will be deemed to be independent unless the Board of Directors affirmatively determines that the Director has no material relationship with the Company directly or as an officer, stockholder, or partner of an organization that has a relationship with the Company. The Board of Directors has adopted categorical guidelines which provide that a Director will not be deemed to be independent if within the preceding three years:

- The Director was employed by the Company or the Director's immediate family member was an executive officer of the Company.
- The Director has received, or the Director's immediate family member has received, during any 12-month period, direct compensation from the Company of more than $120,000, other than Director and committee fees. (Compensation received by an immediate family member for service as a non-executive employee of the Company need not be considered.)
- The Director was affiliated with or employed by, or the Director's immediate family member was affiliated with or employed in a professional capacity by, a present or former external auditor of the Company and personally worked on the Company's audit.
- The Director was employed, or the Director's immediate family member was employed, as an executive officer of a company where any member of the Company's present executive officers at the same time served on that company's compensation committee.
- The Director is a current employee, or the Director's immediate family member is a current executive officer, of a company that has made payments to, or received payments from, the Company for property or services in an amount which, in any year, exceeds the greater of $1,000,000 or two percent of that company's consolidated gross revenues.
- The Director or the Director's spouse serves as an executive officer of a charitable organization to which the Company made discretionary contributions which, in any year, exceeds the greater of $1,000,000 or two percent of the organization's consolidated gross revenues.

At least annually, the Board receives a report on all commercial, consulting, legal, accounting, charitable, or other business relationships that a Director or the Director's immediate family members have with the Company. This report specifically includes all ordinary course transactions with entities with which the Directors are associated. The Board determined that the Company and its subsidiaries followed the Company's procurement policies and procedures, that the amounts reported were well under the thresholds contained in the Director independence requirements, and that no Director had a direct or indirect material interest in the transactions. See Other Information — Certain Relationships and Related Transactions for a discussion of related party transactions identified by the Company.

The Board reviewed all contributions made by the Company and its subsidiaries to charitable organizations with which the Directors are associated. The Board determined that the contributions were consistent with other contributions by the Company and its subsidiaries to charitable organizations and none were approved outside the Company's normal procedures.

At least annually, the Board also reviews Director independence. The Board considers transactions, if any, identified in the review of the report discussed above that affect Director independence, including any transactions in which the amounts reported were above the threshold contained in the Director independence requirements and in which a Director had a direct or indirect material interest. No such transactions were identified and, as a result, no such transactions were considered by the Board. In determining independence, the Board also considered that, in the ordinary course of the Southern Company system's business, electricity is provided to some Directors and entities with which the Directors are associated on the same terms and conditions as provided to other customers of the Southern Company system.

As a result of its review of Director independence, the Board affirmatively determined that none of the following persons who are currently serving as Directors or who served during 2014 or who are nominees for election as Directors has a material relationship with the Company and, as a result, such persons are determined to be independent: Juanita Powell Baranco, Jon A. Boscia, Henry A. Clark III, David J. Grain, H. William Habermeyer, Jr., Veronica M. Hagen, Warren A. Hood, Jr., Linda P. Hudson, Donald M. James, John D. Johns, Dale E. Klein, William G. Smith, Jr., Steven R. Specker, Larry D. Thompson, and E. Jenner Wood III. Thomas A. Fanning, a current Director, is Chairman of the Board, President, and Chief Executive Officer of the Company and is not independent.

Communicating with the Board

Interested parties may communicate directly with the Company's Board or specified Directors, including the Lead Independent Director. Communications may be sent to the Company's Board or to specified Directors, including the Lead Independent Director, by regular mail or electronic mail. Regular mail should be sent to the attention of Melissa K. Caen, Corporate Secretary, Southern Company, 30 Ivan Allen Jr. Boulevard NW, Atlanta, Georgia 30308. The electronic mail address is CORPGOV@southerncompany.com. The electronic mail address also can be accessed from the Corporate Governance webpage located under Information for Investors/ Corporate Governance on the Company's website at www.southerncompany.com, under the link entitled Governance Inquiries. With the exception of commercial solicitations, all communications directed to the Board or to specified Directors will be relayed to them.

Stakeholder Engagement

The Company places great importance on consistent dialogue with its stakeholders, including customers, investors, and employees as well as with the financial community generally. The Company also regularly engages in discussions with, and provides comprehensive information for, its constituents interested in the Southern Company system's citizenship, stewardship, and environmental compliance. As part of these efforts, in 2014, the Company began a more systematic approach to investor outreach and involved members of its senior management and the Board of Directors. These efforts included a specific focus on the Company's corporate governance philosophy and practices and its desire to hear about the governance topics of specific interest to its stockholders. Moving forward, the Company will continue to take an active, inclusive, and flexible approach to stakeholder engagement.

Majority Voting for Directors

Since 2010, the Company has had a majority vote standard for Director elections, which requires that a nominee for Director in an uncontested election receive a majority of the votes cast at a stockholder meeting in order to be elected to the Board. The Board believes this standard for uncontested elections is a more equitable standard than a plurality vote standard. A plurality vote standard guarantees the election of a Director in an uncontested election; however, a majority vote standard means that nominees in uncontested elections are only elected if a majority of the votes cast are voted in their favor. The Board believes that the majority vote standard in uncontested Director elections strengthens the Director nomination process and enhances Director accountability.

The Company also has a resignation policy, which requires any nominee for election as a Director to submit an irrevocable letter of resignation as a condition to being named as such nominee, which would be tendered in the event that nominee fails to receive the affirmative vote of a majority of the votes cast in an uncontested election at a meeting of stockholders. Such resignation would be considered by the Board, and the Board would be required to either accept or reject such resignation within 90 days from the certification of the election results.

Political Contributions Policy

The Board reviews the Company's political contributions and its policies and procedures regarding political contributions. Any corporate political contributions or independent expenditures made by the Company and its subsidiaries in connection with elections for public office, as well as any payments made by the Company and its subsidiaries to other organizations that are designated for their use in making political contributions or independent expenditures, are reviewed at least annually with the Board. Any corporate contributions to ballot initiative campaign committees also are reviewed annually with the Board.

Director Compensation

Only non-employee Directors of the Company are compensated for service on the Board of Directors. During 2014, the pay components for non-employee Directors were:

Annual retainers:

- $100,000 cash retainer
- Additional $20,000 cash retainer if serving as a chair of a committee of the Board
- Additional $20,000 cash retainer if serving as the Lead Independent Director of the Board

Annual equity grant:

- $120,000 in deferred Common Stock units until Board membership ends

Meeting fees:

- Meeting fees are not paid for participation in the initial eight meetings of the Board in a calendar year. If more than eight meetings of the Board are held in a calendar year, $2,500 will be paid for participation in each meeting of the Board beginning with the ninth meeting.
- Meeting fees are not paid for participation in a meeting of a committee of the Board.

On December 8, 2014, the Board of Directors created a Business Security Subcommittee of the Nuclear/Operations Committee and approved an additional $12,500 annual cash retainer for serving on such subcommittee.

Director Deferred Compensation Plan

The annual equity grant is required to be deferred in shares of Common Stock under the Deferred Compensation Plan for Outside Directors of The Southern Company, as amended and restated effective January 1, 2008 (Director Deferred Compensation Plan), and invested in Common Stock units which earn dividends as if invested in Common Stock. Earnings are reinvested in additional stock units. Upon leaving the Board, distributions are made in Common Stock or cash.

In addition, Directors may elect to defer up to 100% of their remaining compensation in the Director Deferred Compensation Plan until membership on the Board ends. Such deferred compensation may be invested as follows, at the Director's election:

- in Common Stock units which earn dividends as if invested in Common Stock and are distributed in shares of Common Stock or cash upon leaving the Board; or
- at the prime interest rate which is paid in cash upon leaving the Board.

All investments and earnings in the Director Deferred Compensation Plan are fully vested and, at the election of the Director, may be distributed in a lump-sum payment, or in up to 10 annual distributions after leaving the Board. The Company has established a grantor trust that primarily holds Common Stock that funds the Common Stock units that are distributed in shares of Common Stock. Directors have voting rights in the shares held in the trust attributable to these units.

Director Compensation Table

The following table reports all compensation to the Company's non-employee Directors during 2014, including amounts deferred in the Director Deferred Compensation Plan. Non-employee Directors do not receive Option Awards or Non-Equity Incentive Plan Compensation, and there is no pension plan for non-employee Directors. Mr. Johns, who was elected to the Board effective February 9, 2015, is not included in this table.

Name	Fees Earned or Paid in Cash ($) (1)	Stock Awards ($) (2)	Option Awards ($)	Non-Equity Incentive Plan Compensation ($)	Change in Pension Value and Nonqualified Deferred Compensation Earnings ($)	All Other Compensation ($) (3)	Total ($)
Juanita Powell Baranco	116,667	120,000	—	—	—	1,502	238,169
Jon A. Boscia	120,000	120,000	—	—	—	1,499	241,499
Henry A. Clark III	111,667	120,000	—	—	—	1,723	233,390
David J. Grain	100,001	120,000	—	—	—	1,310	221,311
H. William Habermeyer, Jr. (4)	50,000	50,000	—	—	—	280	100,280
Veronica M. Hagen	120,000	120,000	—	—	—	1,453	241,453
Warren A. Hood, Jr.	100,001	120,000	—	—	—	1,443	221,444
Linda P. Hudson (5)	75,001	90,000	—	—	—	1,301	166,302
Donald M. James	111,667	120,000	—	—	—	1,647	233,314
Dale E. Klein	100,001	120,000	—	—	—	1,175	221,176
William G. Smith, Jr.	120,000	120,000	—	—	—	1,175	241,175
Steven R. Specker	111,667	120,000	—	—	—	1,559	233,226
Larry D. Thompson (6)	8,333	10,000	—	—	—	1,077	19,410
E. Jenner Wood III	100,001	120,000	—	—	—	1,675	221,676

(1) Includes amounts voluntarily deferred in the Director Deferred Compensation Plan.
(2) Represents the grant date fair market value of deferred Common Stock units.
(3) Consists of tax reimbursements for taxes on imputed income associated with gifts and activities provided to attendees at Company-sponsored events.
(4) Mr. Habermeyer retired from the Board effective May 28, 2014.
(5) Ms. Hudson was elected to the Board effective March 1, 2014.
(6) Mr. Thompson was elected to the Board effective December 1, 2014.

Director Stock Ownership Guidelines

Under the Company's Corporate Governance Guidelines, non-employee Directors are required to beneficially own, within five years of their initial election to the Board, Common Stock equal to at least five times the annual Director cash retainer fee. Also, as described in the Director Compensation section above, the annual equity grant received as a part of the annual compensation for non-employee Directors is required to be deferred until Board membership ends. All non-employee Directors either meet the stock ownership guideline or are expected to meet the guideline within the allowed timeframe.

Board Leadership Structure

The Board believes that its current leadership structure, which has a combined role of Chief Executive Officer and Chairman counterbalanced by a strong independent Board led by a Lead Independent Director, is most suitable for the Company at this time. The combined role of Chief Executive Officer and Chairman is held by Mr. Fanning who is the Director most familiar with the Company's business and industry, including the regulatory structure and other industry-specific matters, as well as being most capable of effectively identifying strategic priorities and leading discussion and execution of strategy. Independent Directors and management have different perspectives and roles in strategy development. The Chief Executive Officer brings Company-specific experience and expertise, while the Company's independent Directors bring experience, oversight, and expertise from outside the Company and its industry. The Board believes that the combined role of Chief Executive Officer and Chairman promotes the development and execution of the Company's strategy and facilitates the flow of information between management and the Board, which is essential to effective corporate governance.

The Board believes the combined role of Chief Executive Officer and Chairman, together with a strong Lead Independent Director having the duties described below, is in the best interest of stockholders because it provides the optimal balance between independent oversight of management and unified leadership.

Lead Independent Director

The Lead Independent Director is elected every two years by the independent Directors. Non-management Directors meet, without management, on each regularly-scheduled Board meeting date, and at other times as deemed appropriate by the Lead Independent Director or two or more other independent Directors.

The Lead Independent Director has the following powers and responsibilities:

- approving the agenda and schedule for Board meetings and information sent to the Board;
- calling and chairing executive sessions of the non-management Directors;
- chairing Board meetings in the absence of the Chairman;
- meeting regularly with the Chairman;
- acting as the principal liaison between the Chairman and the non-management Directors (however, each Director has direct and complete access to the Chairman at any time);
- serving as the primary contact Director for stockholders and other interested parties; and
- communicating any sensitive issues to the Directors.

Ms. Veronica M. Hagen currently serves as the Company's Lead Independent Director. Mr. William G. Smith, Jr. served as the Company's Presiding Director effective May 23, 2012 until May 28, 2014. In February 2014, Ms. Hagen was appointed to serve as the Presiding Director effective May 28, 2014 until the Company's 2016 Annual Meeting of Stockholders. On July 21, 2014, the Board of Directors approved an amendment to the Company's Corporate Governance Guidelines changing the Presiding Director's title to "Lead Independent Director" and enhancing the Lead Independent Director's responsibilities, including noting that the Lead Independent Director approves the agenda and schedule for Board meetings and information sent to the Board.

Meetings of Non-Management Directors

Non-management Directors meet in executive session without any members of the Company's management present on each regularly-scheduled Board meeting date. These executive sessions promote an open discussion of matters in a manner that is independent of the Chairman and Chief Executive Officer. The Lead Independent Director chairs each of these executive sessions.

Committees of the Board

Charters for each of the five standing committees can be found at the Company's website — www.southerncompany.com under Information for Investors/Corporate Governance.

Audit Committee

Jon A. Boscia
Chair

- Current members are Mr. Boscia *(Chair)*, Ms. Baranco,[(1)] Mr. Hood, Mr. Johns,[(2)] and Mr. Thompson.[(1)]
- Met ten times in 2014
- The Audit Committee's duties and responsibilities, which are described in its charter, include the following:
  - Oversee the Company's financial reporting, audit processes, internal controls, and legal, regulatory, and ethical compliance.
  - Appoint the Company's independent registered public accounting firm, approve its services and fees, and establish and review the scope and timing of its audits.
  - Review and discuss the Company's financial statements with management, the internal auditors, and the independent registered public accounting firm, including critical accounting policies and practices, material alternative financial treatments within generally accepted accounting principles, proposed adjustments, control recommendations, significant management judgments and accounting estimates, new accounting policies, changes in accounting principles, any disagreements with management, and other material written communications between the internal auditors and/or the independent registered public accounting firm and management.
  - Recommend the filing of the Company's and its registrant subsidiaries' annual financial statements with the SEC.

The Board has determined that the members of the Audit Committee are independent as defined by the New York Stock Exchange (NYSE) corporate governance rules within its listing standards and rules of the SEC promulgated pursuant to the Sarbanes-Oxley Act of 2002. The Board has determined that Mr. Boscia qualifies as an "audit committee financial expert" as defined by the SEC.

(1) Ms. Baranco and Mr. Thompson were appointed as members of the Audit Committee effective December 1, 2014.
(2) Mr. Johns was appointed a member of the Audit Committee effective March 1, 2015.

Compensation and Management Succession Committee (Compensation Committee)

Henry A. "Hal" Clark III
Chair

- Current members are Mr. Clark *(Chair)*, Mr. Grain,[(1)] Ms. Hagen, Mr. Smith, and Dr. Specker.[(2)]
- Met seven times in 2014
- The Compensation Committee's duties and responsibilities, which are described in its charter, include the following:
  - Evaluate performance of executive officers and establish their compensation, administer executive compensation plans, and review management succession plans.
  - Annually review a tally sheet of all components of the executive officers' compensation and take actions required of it under the Pension Plan for employees of the Company's subsidiaries.

The Board has determined that each member of the Compensation Committee is independent.

(1) Mr. Grain was appointed as a member of the Compensation Committee effective December 1, 2014.
(2) Dr. Specker was appointed a member of the Compensation Committee effective May 28, 2014.

Committee Governance

During 2014, the Compensation Committee's governance practices included:

- Considering compensation for the named executive officers in the context of all of the components of total compensation;
- Considering annual adjustments to pay over the course of two meetings and requiring more than one meeting to make other important decisions;
- Receiving meeting materials several days in advance of meetings;
- Having regular executive sessions of Compensation Committee members only;
- Having direct access to independent compensation consultants;
- Conducting a performance/payout analysis versus peer companies for the performance-based compensation program to provide a check on the Company's goal-setting process; and
- Reviewing a compensation risk assessment through a process developed by its independent compensation consultant.

Role of Executive Officers

The Chief Executive Officer, with input from the Company's Human Resources staff, recommends to the Compensation Committee: base salary, target performance-based compensation levels, actual performance-based compensation payouts, and long-term performance-based grants for the Company's executive officers (other than the Chief Executive Officer). The Compensation Committee considers, discusses, modifies as appropriate, and takes action on such recommendations.

Role of Compensation Consultant

The Compensation Committee, which has authority to retain independent advisors, including compensation consultants, at the Company's expense, engaged Pay Governance LLC (Pay Governance) to provide an independent assessment of the current executive compensation program and any management-recommended changes to that program and to work with Company management to ensure that the executive compensation program is designed and administered consistent with the Compensation Committee's requirements. The Compensation Committee also expected Pay Governance to advise on executive compensation and related corporate governance trends.

Pay Governance is engaged solely by the Compensation Committee and does not provide any services directly to management unless authorized to do so by the Compensation Committee. In connection with its engagement of Pay Governance, the Compensation Committee reviewed Pay Governance's independence including (1) the amount of fees received by Pay Governance from the Company as a percentage of Pay Governance's total revenue; (2) its policies and procedures designed to prevent conflicts of interest; and (3) the existence of any business or personal relationships, including Common Stock ownership, that could impact independence. After reviewing these and other factors, the Compensation Committee determined that Pay Governance is independent and the engagement did not present any conflicts of interest. Pay Governance also determined that it was independent from management, which was confirmed in a written statement delivered to the Compensation Committee.

During 2014, Pay Governance assisted the Compensation Committee with analyzing comprehensive market data and its implications for pay at the Company and its affiliates and various other governance, design, and compliance matters.

Finance Committee

William G. Smith, Jr.
Chair

- Current members are Mr. Smith (*Chair*), Mr. Clark, Mr. Grain,(1) and Mr. James
- Met seven times in 2014
- The Finance Committee's duties and responsibilities, which are described in its charter, include the following:
  - Review the Company's financial matters and recommend actions such as dividend philosophy and financial plan approval to the Board.
  - Provide input to the Compensation Committee regarding the Company's financial plan and associated financial goals.

The Board has determined that each member of the Finance Committee is independent.

(1) Mr. Grain was appointed a member of the Finance Committee effective December 1, 2014.

Governance Committee

Donald M. James
Chair

- Current members are Mr. James (*Chair*), Ms. Hudson,(1) Dr. Klein, and Mr. Wood
- Met six times in 2014
- The Governance Committee's duties and responsibilities, which are described in its charter, include the following:
  - Recommend Board size and membership criteria and identify, evaluate, and recommend Director candidates.
  - Oversee and make recommendations regarding the composition of the Board and its committees.
  - Review and make recommendations regarding total compensation for non-employee Directors.
  - Periodically review and recommend updates to the Corporate Governance Guidelines and Board committee charters.
  - Coordinate the performance evaluations of the Board and its committees.
  - Review stock ownership of non-employee Directors annually to ensure compliance with the Company's Director stock ownership guidelines.

The Board has determined that each member of the Governance Committee is independent.

(1) Ms. Hudson was appointed as a member of the Governance Committee effective December 1, 2014.

Nominees for Election to the Board

The Governance Committee, comprised entirely of independent Directors, is responsible for identifying, evaluating, and recommending nominees for election to the Board. The Governance Committee solicits recommendations for candidates for consideration from its current Directors and is authorized to engage third-party advisers to assist in the identification and evaluation of candidates for consideration. Any stockholder may make recommendations to the Governance Committee by sending a written statement describing the candidate's qualifications, relevant biographical information, and signed consent to serve. These materials should be submitted in writing to the Company's Corporate Secretary and received by that office by December 12, 2015 for consideration by the Governance Committee as a nominee for election at the Annual Meeting of Stockholders to be held in 2016. Any stockholder recommendation is reviewed in the same manner as candidates identified by the Governance Committee or recommended to the Governance Committee.

While the Company's Corporate Governance Guidelines do not prescribe diversity standards, such Guidelines mandate that the Board as a whole should be diverse. At least annually, the Governance Committee evaluates the expertise and needs of the Board to determine the proper membership and size. As part of this evaluation, the Governance Committee considers aspects of diversity, such as diversity of age, race, gender, education, industry, business background, and civic service, in the selection of candidates to serve on the Board. In addition, the Governance Committee also seeks to identify candidates with the capacity to bring relevant experience, relationships, and perspectives regarding the service territories of the Company's traditional operating subsidiaries, which are primarily in the

Southeastern United States. Accordingly, the Company uniquely benefits from the experience of Directors who have previously served on the boards of the Company's subsidiary companies. These operating company boards provide an opportunity for Director candidates to cultivate significant relevant experience with the Company's business.

The Governance Committee only considers candidates with the highest degree of integrity and ethical standards. The Governance Committee evaluates a candidate's independence from management, ability to provide sound and informed judgment, history of achievement reflecting superior standards, willingness to commit sufficient time, financial literacy, number of other board memberships, genuine interest in the Company and a recognition that, as a member of the Board, one is accountable to the stockholders of the Company, not to any particular interest group. The Board as a whole should also have collective knowledge and experience in accounting, finance, leadership, business operations, risk management, corporate governance, and the Company's industry and service territories.

The Governance Committee recommends candidates to the Board for consideration as nominees. Final selection of the nominees is within the sole discretion of the Board.

Messrs. Larry D. Thompson and John D. Johns were recommended by the Governance Committee for election to the Board and were elected as a Director effective December 1, 2014 and February 9, 2015, respectively. Messrs. Thompson and Johns were identified jointly by members of the Board and management.

Nuclear/Operations Committee

Steven R. Specker
Chair

- Current members are Dr. Specker (Chair), Ms. Hagen, Ms. Hudson,(1) Dr. Klein, and Mr. Wood
- Met five times in 2014
- The Nuclear/Operations Committee's duties and responsibilities, which are described in its charter, include the following:
  - Oversee information, activities, and events relative to significant operations of the Southern Company system including nuclear and other power generation facilities, transmission and distribution, fuel, and information technology initiatives.
  - Oversee the Southern Company system's management of significant construction projects.
  - Provide input to the Compensation Committee on the Southern Company system's key operational goals and metrics.

The Board has determined that each member of the Nuclear/Operations Committee is independent.

(1) Ms. Hudson was appointed a member of the Nuclear/Operations Committee effective December 1, 2014.

Business Security Subcommittee

In 2014, the Board established a Business Security Subcommittee of the Nuclear/Operations Committee, comprised of Dr. Klein (Chair) and Ms. Hudson. The Business Security Subcommittee's responsibilities include oversight of management's efforts to establish and continuously improve enterprise-wide security policies, programs, standards, and controls and oversight of management's efforts to monitor significant security events and operational and compliance activities.

Board Risk Oversight

The Board and its committees have both general and specific risk oversight responsibilities. The Board has broad responsibility to provide oversight of significant risks to the Company primarily through direct engagement with Company management and through delegation of ongoing risk oversight responsibilities to the committees. The charters of the committees as approved by the Board and the committees' checklists of agenda items define the areas of risk for which each committee is responsible for providing ongoing oversight.

Each committee annually provides ongoing oversight for each of the Company's most significant risks designated to it as described in its charter or otherwise assigned by the Board, reports to the Board on their oversight activities, and elevates review of risk issues to the Board as appropriate.

For each committee, the Chief Executive Officer of the Company has designated a member of executive management as the primary responsible officer for providing information and updates related to the significant risks. These officers ensure that all significant risks identified on the Company's risk profile are reviewed with the Board and/or the appropriate committee(s) at least annually.

In addition to oversight of its designated risks, the Audit Committee is also responsible for reviewing the adequacy of the risk oversight process and for reviewing documentation that appropriate risk management and oversight are occurring. In order to fulfill this duty, a report is made to the Audit Committee at least annually. This report documents which significant risk reviews have occurred and the committee(s) reviewing such risks. In addition, an overview is provided at least annually of the risk assessment and profile process conducted by Company management. At least annually, the Board and the Audit Committee review the Company's risk profile to ensure that oversight of each risk is properly designated to an appropriate committee or the full Board. Additionally, the Audit Committee receives regular updates from Internal Auditing, as needed, and quarterly updates as part of the disclosure controls process.

The Company believes that its leadership structure supports the risk oversight function of the Board. While the Company has a combined role of Chairman and Chief Executive Officer, an independent Director chairs each committee responsible for providing ongoing oversight of certain areas of risk. Also, there is open communication between the Company's management and the Directors and all Directors are actively involved in the risk oversight function.

Director Attendance

The Board of Directors met seven times in 2014. Average Director attendance at all applicable Board and committee meetings was 98%. No nominee attended less than 75% of applicable meetings.

All Director nominees are expected to attend the Annual Meeting of Stockholders. All the members of the Board of Directors serving on May 28, 2014, the date of the 2014 Annual Meeting of Stockholders, attended the meeting.

Stock Ownership of Directors, Nominees, and Executive Officers

The following table shows the number of shares of Common Stock beneficially owned by Directors, nominees, and executive officers as of February 28, 2015. The shares owned by all Directors, nominees, and executive officers as a group constitute less than one percent of the total number of shares of Common Stock outstanding.

		Shares Beneficially Owned Include:		
Directors, Nominees, and Executive Officers	Shares Beneficially Owned (1)	Deferred Common Stock Units (2)	Shares Individuals Have Rights to Acquire within 60 Days (3)	Shares Held by Family Member (4)
Juanita Powell Baranco	70,407	69,748	—	—
Art P. Beattie	523,200	—	507,587	51
Jon A. Boscia	80,918	21,918	—	—
W. Paul Bowers	1,169,695	—	1,108,858	—
Henry A. Clark III	15,587	15,587	—	—
Thomas A. Fanning	1,461,568	—	1,415,361	—
David J. Grain	20,793	10,002	—	—
Kimberly S. Greene	299,603	—	299,603	—
Veronica M. Hagen	37,138	37,138	—	—
Warren A. Hood, Jr.	47,524	46,863	—	—
Linda P. Hudson	2,696	2,696	—	—
Donald M. James	98,581	98,581	—	—
John D. Johns (5)	22,365	21,915	—	450
Dale E. Klein	12,690	12,690	—	—
Stephen E. Kuczynski	629,919	—	619,320	—
William G. Smith, Jr.	64,331	57,535	—	862
Steven R. Specker	11,937	11,937	—	—
Larry D. Thompson (6)	13,347	1,120	—	—
E. Jenner Wood III	24,204	19,204	—	—
Directors, Nominees, and Executive Officers as a Group (25 people) (7)	6,513,643	426,935	5,774,784	1,363

(1) "Beneficial ownership" means the sole or shared power to vote, or to direct the voting of, a security, or investment power with respect to a security, or any combination thereof.

(2) Indicates the number of deferred Common Stock units held under the Director Deferred Compensation Plan that are payable in Common Stock or cash upon departure from the Board. Shares indicated are included in the Shares Beneficially Owned column.

(3) Indicates shares of Common Stock that certain executive officers have the right to acquire within 60 days. Shares indicated are included in the Shares Beneficially Owned column.

(4) Each Director disclaims any interest in shares held by family members. Shares indicated are included in the Shares Beneficially Owned column.

(5) Mr. Johns was elected to the Board effective February 9, 2015.

(6) Mr. Thompson was elected to the Board effective December 1, 2014.

(7) This item includes all executive officers serving as of February 28, 2015.

Stock Ownership of Certain Other Beneficial Owners

According to a Schedule 13G/A filed with the SEC on February 9, 2015 by Blackrock, Inc., a schedule 13G filed with the SEC on February 12, 2015 by State Street Corporation, and a Schedule 13G/A filed with the SEC on February 11, 2015 by The Vanguard Group (collectively, the Ownership Reports), the following reported beneficial ownership of more than 5% of the outstanding shares of Common Stock:

Title of Class	Name and Address	Shares Beneficially Owned (1)	Percentage of Class Owned (2)
Common Stock	Blackrock, Inc. 55 East 52nd Street New York, NY 10022	52,684,667	5.79
Common Stock	State Street Corporation One Lincoln Street Boston, MA 02111	46,254,789	5.08
Common Stock	The Vanguard Group 100 Vanguard Blvd. Malvern, PA 19355	51,373,414	5.65

(1) According to the Ownership Reports, Blackrock Inc. and State Street Corporation each held all of its shares as a parent holding company or control person in accordance with Rule 13(d)-1(b)(1)(ii)(G) and The Vanguard Group held all of its shares as an investment advisor in accordance with Rule 13(d)-1(b)(1)(ii)(E). According to the Ownership Reports, Blackrock Inc. has sole voting power with respect to 44,684,178 of its shares and sole dispositive power with respect to all 52,684,667 of its shares; State Street Corporation has shared voting and dispositive power with respect to all 46,254,789 of its shares; and The Vanguard Group has sole voting power with respect to 1,603,512 of its shares, sole dispositive power with respect to 49,912,177 of its shares, and shared dispositive power with respect to 1,461,237 of its shares.

(2) Calculated based on 909,877,898 shares outstanding as of January 31, 2015.

ITEM NO. 4 — ADVISORY VOTE ON NAMED EXECUTIVE OFFICERS' COMPENSATION

(the Say-on-Pay vote)

At the 2014 Annual Meeting of Stockholders, the Company provided stockholders with the opportunity to cast an advisory vote regarding the compensation of the named executive officers as disclosed in the 2014 Proxy Statement for the 2014 Annual Meeting of Stockholders. At the meeting, stockholders strongly approved the proposal, with more than 94% of the votes cast voting in favor of the proposal. At the 2011 Annual Meeting, stockholders were asked how frequently the Company should hold a say-on-pay vote — whether every one, two, or three years. Consistent with the recommendation of the Board of Directors, stockholders indicated their preference to hold a say-on-pay vote annually. In light of the Board of Directors' recommendation and the strong support of the Company's stockholders, the Board of Directors determined to hold a say-on-pay vote annually.

As described in the Compensation Discussion and Analysis (CD&A) in this Proxy Statement, the Compensation Committee has structured the Company's executive compensation program based on the belief that executive compensation should:

- Be competitive with the Company's industry peers;
- Motivate and reward achievement of the Company's goals;
- Be aligned with the interests of the Company's stockholders and its subsidiaries' customers; and
- Not encourage excessive risk-taking.

The Company believes these objectives are accomplished through a compensation program that provides the appropriate mix of fixed and short- and long-term performance-based compensation that rewards achievement of the Company's financial success, business unit financial and operational success, and total shareholder return. The Company's financial and operational achievement in 2014 resulted in performance-based awards that were aligned with performance.

All decisions concerning the compensation of the Company's named executive officers are made by the Compensation Committee, an independent Board committee, with the advice and counsel of an independent executive compensation consultant, Pay Governance.

The Company encourages stockholders to read the Executive Compensation section of this Proxy Statement which includes the CD&A, the Summary Compensation Table, and other related compensation tables, including the information accompanying these tables.

Although it is non-binding on the Board of Directors, the Compensation Committee will review and consider the vote results when making future decisions about the Company's executive compensation program.

The affirmative vote of a majority of the votes cast is required for approval of the following resolution:

"RESOLVED, that the Company's stockholders approve, on an advisory basis, the compensation of the Company's named executive officers, as disclosed in the Proxy Statement for the 2015 Annual Meeting of Stockholders pursuant to the compensation disclosure rules of the Securities and Exchange Commission, including the Compensation Discussion and Analysis, the 2014 Summary Compensation Table, and the other related tables and accompanying narrative set forth in the Proxy Statement."

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "FOR" ITEM NO. 4.

Index to Executive Compensation

This section describes the compensation program for the Company's Chief Executive Officer and Chief Financial Officer in 2014, as well as the compensation program for each of the Company's other three most highly compensated executive officers serving at the end of the year. Also described is the compensation of Alabama Power's former President and Chief Executive Officer, Charles D. McCrary, who retired effective May 1, 2014. Collectively, these officers are referred to as the named executive officers.

Thomas A. Fanning	Chairman of the Board, President, and Chief Executive Officer
Art P. Beattie	Executive Vice President and Chief Financial Officer
W. Paul Bowers	Executive Vice President of the Company and Chairman, President, and Chief Executive Officer of Georgia Power
Kimberly S. Greene (1)	Executive Vice President and Chief Operating Officer of the Company
Stephen E. Kuczynski	President and Chief Executive Officer of Southern Nuclear Operating Company (Southern Nuclear)
Charles D. McCrary	Former Executive Vice President of the Company and former Chairman, President, and Chief Executive Officer of Alabama Power

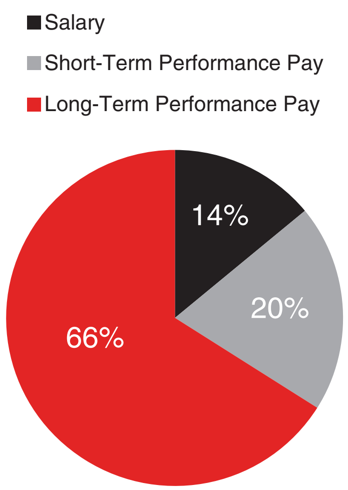
(1) Prior to becoming Executive Vice President and Chief Operating Officer of the Company in March 2014, Ms. Greene served as Executive Vice President of the Company and President and Chief Executive Officer of Southern Company Services, Inc. (SCS).

Executive Summary

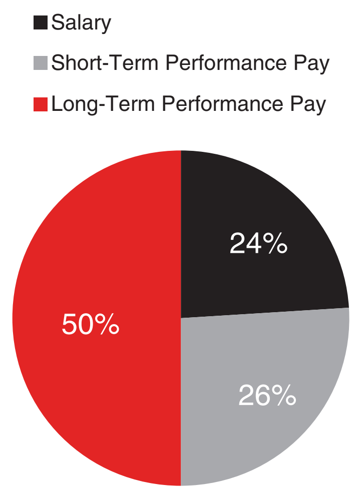
Performance and Pay

Performance-based pay represents a substantial portion of the total direct compensation paid or granted to the named executive officers for 2014. Performance-based pay includes both short-term compensation payable in cash on an annual basis (Performance Pay Program) and long-term, equity-based compensation (performance shares and stock options). Both short-term and long-term pay ultimately depend on the financial and operational performance of the Company and its business units.

Chief Executive Officer (1)



Other Named Executive Officers (1)



(1) Salary is the actual amount paid in 2014, Short-Term Performance Pay is the actual amount earned in 2014 based on performance, and Long-Term Performance Pay is the value on the grant date of stock options and performance shares granted in 2014. See the Summary Compensation Table for the amounts of all elements of reportable compensation described in this CD&A. Information is provided for named executive officers serving at the end of 2014.

Short-term performance pay is based on achievement of financial and operational goals that include Company earnings per share (EPS) and business unit financial and operational goals. Company EPS and business unit financial and operational achievement results for 2014, as adjusted and further described in this CD&A, are shown below:

	EPS	Alabama Power Net Income	Georgia Power Net Income	Gulf Power Net Income	Mississippi Power Net Income	Southern Power Net Income	Equity-Weighted Average Net Income
Financial Achievement Results	176%	176%	167%	100%	124%	193%	163%

	Customer Satisfaction	Reliability	Availability	Nuclear Plant Operations	Safety	Plant Vogtle Units 3 and 4 and Kemper IGCC	Culture	Aggregate Corporate Performance
Corporate Operational Achievement Results	200%	195%	190%	150%	167%	Plant Vogtle: 175% Kemper IGCC: 75%	150%	172%

These performance levels resulted in a composite corporate performance score of 170% of target under the short-term Performance Pay Program.

Long-term performance pay includes stock options and performances shares, which are granted annually but do not vest until a later date. Stock options vest over a three-year period, while performance shares vest based on Company total shareholder return relative to peers at the end of a three-year performance period. For stock options granted in 2014, the year-end stock price exceeded the grant price by 19%. Performance shares vested on December 31, 2014 for the 2012 through 2014 performance period at 14% of target value, reflecting the Company's lower total shareholder return relative to the performance share peer groups.

Compensation and Benefit Beliefs and Practices

The Company's compensation and benefit program is based on the following beliefs:

- Employees' commitment and performance have a significant impact on achieving business results;
- Compensation and benefits offered must attract, retain, and engage employees and must be financially sustainable;
- Compensation should be consistent with performance: higher pay for higher performance and lower pay for lower performance; and
- Both business drivers and culture should influence the compensation and benefit program.

Based on these beliefs, the Compensation Committee believes that the Company's executive compensation program should:

- Be competitive with the Company's industry peers;
- Motivate and reward achievement of the Company's goals;
- Be aligned with the interests of the Company's stockholders and its subsidiaries' customers; and
- Not encourage excessive risk-taking.

Executive compensation is targeted at the market median of industry peers, but actual compensation is primarily determined by achievement of the Company's business goals. The Company believes that focusing on the customer drives achievement of financial objectives and delivery of a premium, risk-adjusted total shareholder return for the Company's stockholders. Therefore, short-term performance pay is based on achievement of the Company's operational and financial performance goals, with one-third determined by operational performance, such as safety, reliability, and customer satisfaction; one-third determined by business unit financial performance; and one-third determined by EPS performance. Long-term performance pay is tied to stockholder value, with 40% of the target value awarded in stock options, which reward stock price appreciation, and 60% awarded in performance shares, which reward total shareholder return performance relative to that of industry peers and stock price appreciation.

Key Compensation Practices

- **Annual pay risk assessment** required by the Compensation Committee charter.
- Retention by the Compensation Committee of an **independent compensation consultant**, Pay Governance, that provides no other services to the Company.
- Inclusion of a **claw-back provision** that permits the Compensation Committee to recoup performance pay from any employee if determined to have been based on erroneous results, and requires recoupment from an executive officer in the event of a material financial restatement due to fraud or misconduct of the executive officer.
- **No excise tax gross-up** on change-in-control severance arrangements.
- Provision of **limited ongoing perquisites** with no income tax gross-ups, except on certain relocation-related benefits
- "**No-hedging**" provision in the Company's insider trading policy that is applicable to all employees.
- **Strong stock ownership requirements** that are being met by all named executive officers.

Establishing Executive Compensation

The Compensation Committee establishes the executive compensation program. In doing so, the Compensation Committee uses information from others, principally Pay Governance. The Compensation Committee also relies on information from the Company's Human Resources staff and, for individual executive officer performance, from the Company's Chief Executive Officer. The role and information provided by each of these sources is described throughout this CD&A.

Consideration of Advisory Vote on Executive Compensation

The Compensation Committee considered the stockholder vote on the Company's executive compensation at the 2014 Annual Meeting of Stockholders. In light of the significant support of the stockholders (94% of votes cast voting in favor of the proposal) and the actual payout levels of the performance-based compensation program, the Compensation Committee continues to believe that the Company's executive compensation program is competitive, aligned with the Company's financial and operational performance, and in the best interests of the Company, its stockholders, and its subsidiaries' customers.

Executive Compensation Focus

The executive compensation program places significant focus on rewarding performance. The program is performance-based in several respects:

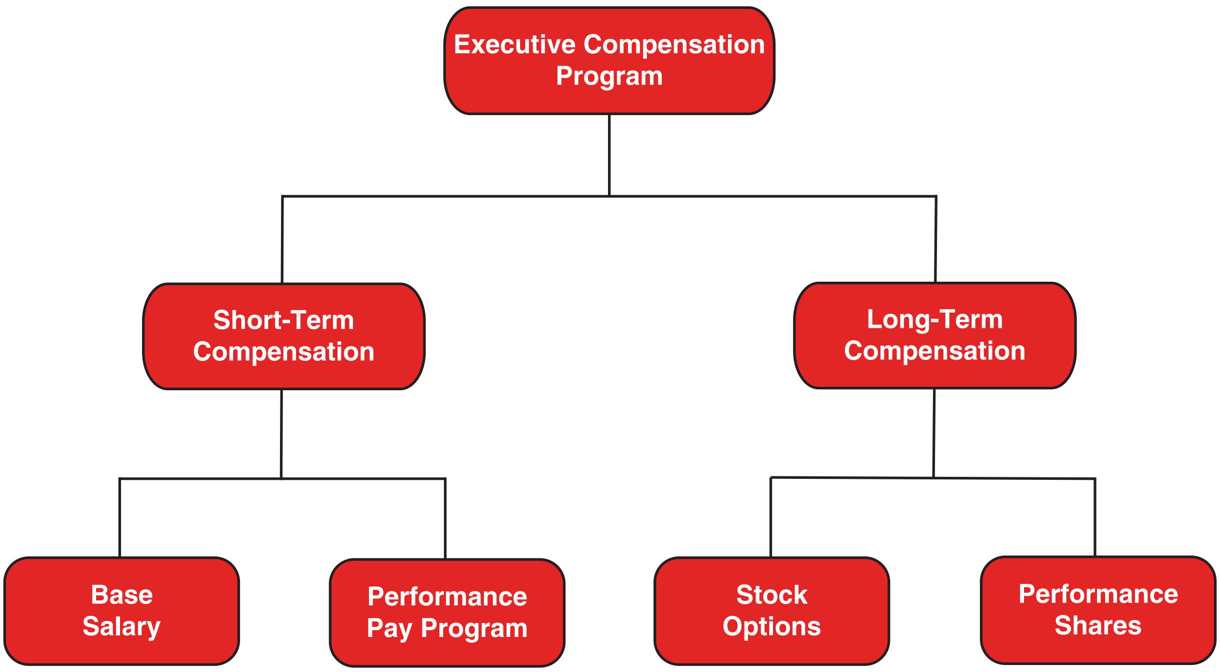
- Company EPS and business unit financial and operational performance, based on actual results compared to target performance levels established early in the year, determine the actual payouts under the short-term (annual) performance-based compensation program (Performance Pay Program).
- Common Stock price changes result in higher or lower ultimate values of stock options.
- Total shareholder return compared to those of industry peers leads to higher or lower payouts under the Performance Share Program (performance shares).

In support of this performance-based pay philosophy, the Company has no general employment contracts or guaranteed severance with the named executive officers, except upon a change in control.

The pay-for-performance principles apply not only to the named executive officers but to thousands of employees. The Performance Pay Program covers almost all of the more than 26,000 employees of the Southern Company system. Stock options and performance shares were granted to approximately 3,800 employees of the Southern Company system. These programs engage employees, which ultimately is good not only for them, but also for the Company and its stockholders.

Overview of Executive Compensation Components

The primary components of the 2014 executive compensation program are shown below:



The Company's executive compensation program consists of a combination of short-term and long-term components. Short-term compensation includes base salary and the Performance Pay Program. Long-term performance-based compensation includes stock options, performance shares, and, in some cases, restricted stock units. The performance-based compensation components are linked to the Company's financial and operational performance, Common Stock performance, and total shareholder return. The executive compensation program is approved by the Compensation Committee, which consists entirely of independent Directors. The Compensation Committee believes that the executive compensation program is a balanced program that provides market-based compensation and motivates and rewards performance.

Establishing Market-Based Compensation Levels

Pay Governance develops and presents to the Compensation Committee competitive market-based compensation levels for each of the named executive officers. The market-based compensation levels are developed from a size-appropriate energy services executive compensation survey database. The survey participants, listed below, are utilities with revenues greater than $6 billion. The Compensation Committee reviews the data and uses it in establishing market-based compensation levels for the named executive officers.

American Electric Power Company, Inc.	GDF SUEZ North America
Bg US Services, Inc.	Kinder Morgan, Inc.
Calpine Corporation	National Grid USA
CenterPoint Energy, Inc.	NextEra Energy, Inc.
CMS Energy Corporation	NRG Energy, Inc.
Consolidated Edison, Inc.	PG&E Corporation
Dominion Resources, Inc.	PPL Corporation
DTE Energy Company	Public Service Enterprise Group Inc.
Duke Energy Corporation	Sempra Energy
Edison International	Tennessee Valley Authority
Energy Transfer Partners, L.P.	The AES Corporation
Entergy Corporation	The Williams Companies, Inc.
Eversource Energy	UGI Corporation
Exelon Corporation	Xcel Energy Inc.
First Energy Corp.	

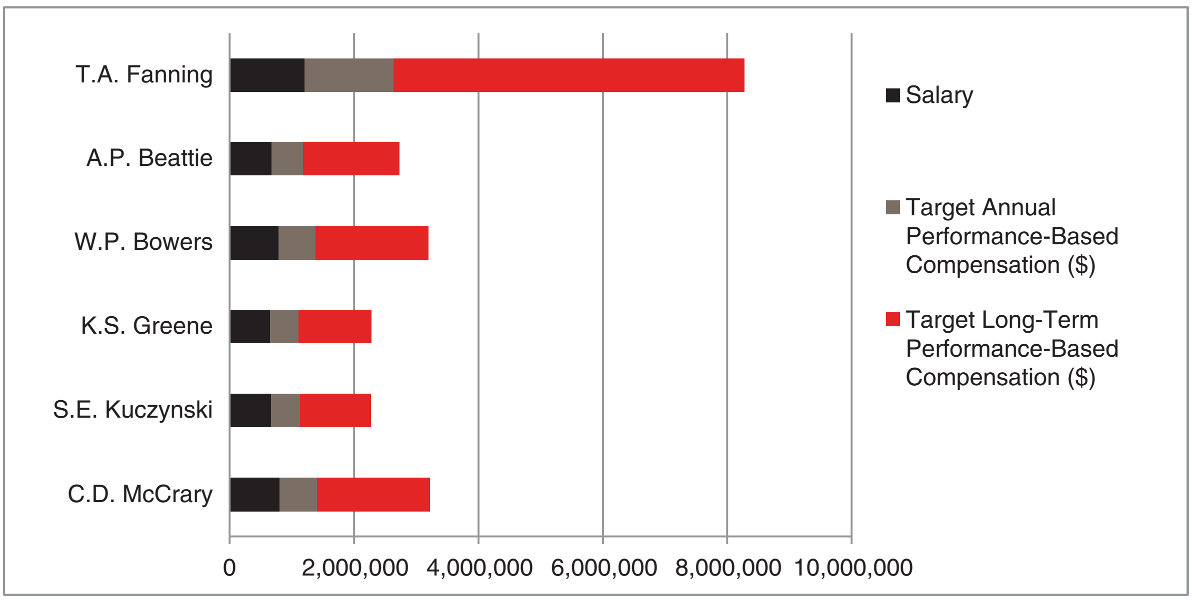
The Company is one of the largest utility holding companies in the United States based on revenues and market capitalization, and its largest business units are some of the largest in the industry as well. For that reason, Pay Governance uses size-appropriate survey market data in order to fit it to the scope of the Company's business.

Market data for the Chief Executive Officer position and other positions in terms of scope of responsibilities that most closely resemble the positions held by the named executive officers is reviewed with the Compensation Committee. When appropriate, the market data is size-adjusted, up or down, to accurately reflect comparable scopes of responsibilities. Based on that data, a total target compensation opportunity is established for each named executive officer. Total target compensation opportunity is the sum of base salary, annual performance-based compensation at a target performance level, and long-term performance-based compensation (stock options and performance shares) at a target value. Actual compensation paid may be more or less than the total target compensation opportunity based on actual performance above or below target performance levels. As a result, the compensation program is designed to result in payouts that are market-appropriate given the Company's performance for the year or period.

A specified weight was not targeted for base salary or annual or long-term performance-based compensation as a percentage of total target compensation opportunities, nor did amounts realized or realizable from prior compensation serve to increase or decrease 2014 compensation amounts. Total target compensation opportunities for senior management as a group, including the named executive officers, are managed to be at the median of the market for companies of similar size in the electric utility industry. Therefore, some executives may be paid above and others below market. This practice allows for differentiation based on time in the position, scope of responsibilities, and individual performance. The differences in the total pay opportunities for each named executive officer are based almost exclusively on the differences indicated by the market data for persons holding similar positions. Because of the use of market data from a large number of industry peer companies for positions that are not identical in terms of scope of responsibility from company to company, differences are not considered to be material and the compensation program is believed to be market-appropriate, as long as senior management as a group is within an appropriate range. Generally, compensation is considered to be within an appropriate range if it is not more or less than 15% of the applicable market data.

The Compensation Committee, working with Pay Governance, annually reviews the mix of key compensation components to assess the effectiveness of the executive compensation program in providing the appropriate levels of fixed and at-risk performance-based pay that is aligned with the Company's short- and long-term business strategies.

Based on this assessment, the Compensation Committee established the total target compensation opportunity in early 2014 for each named executive officer. The Compensation Committee believes that the compensation for the Company's officers, particularly the Chief Executive Officer and the other named executive officers, should be strongly tied to performance. As the chart below depicts, the fixed pay (base salary) for Mr. Fanning is only 14% of his total target compensation opportunity and ranges from 25% to 28% for the other named executive officers. Variable (at-risk) performance-based compensation is 86% for Mr. Fanning and 72% to 75% for the other named executive officers.



The salary levels shown above were not effective until March 2014. Therefore, the salary amounts reported in the Summary Compensation Table are different than the amounts shown above because that table reports actual amounts paid in 2014. The total target compensation opportunity amount shown for Mr. McCrary represents the full amount had he been employed the entire year by Alabama Power. However, the actual amounts Mr. McCrary received for salary and annual performance-based compensation were prorated based on the amount of time he was employed at Alabama Power in 2014. Additionally, the ultimate number of performance shares earned by Mr. McCrary will be prorated based on the time he was employed during the performance period. See the Summary Compensation Table and Grants of Plan-Based Awards in 2014 for more information on the actual compensation amounts Mr. McCrary received.

For purposes of comparing the value of the compensation program to the market data, stock options are valued at $2.20 per option and performance shares at $37.54 per unit. These values represent risk-adjusted present values on the date of grant and are consistent with the methodologies used to develop the market data. The mix of stock options and performance shares granted was 40% and 60%, respectively, of the long-term value shown above.

In 2013, Pay Governance analyzed the level of actual payouts for 2012 performance under the annual Performance Pay Program made to the named executive officers relative to performance versus peer companies to provide a check on the goal-setting process, including goal levels and associated performance-based pay opportunities. The findings from the analysis were used in establishing performance goals and the associated range of payouts for goal achievement for 2014. That analysis was updated in 2014 by Pay Governance for 2013 performance, and those findings were used in establishing goals for 2015.

Description of Key Compensation Components

2014 Base Salary

Base salary amounts for each of the named executive officers were recommended in 2014 for the Compensation Committee's approval by Mr. Fanning, except for his own salary. Those recommendations took into account the market data provided by Pay Governance, as well as the need to retain an experienced team, internal equity, time in position, and individual performance. Individual performance includes the degree of competence and initiative exhibited and the individual's relative contribution to the achievement of financial and operational goals in prior years. Based on these factors, most of the named executive officers received base salary increases in 2014, ranging from 1% to 4%, consistent with increases for most other employees.

2014 Performance-Based Compensation

This section describes performance-based compensation for 2014.

Achieving Operational and Financial Performance Goals — The Guiding Principle for Performance-Based Compensation

The Southern Company system's number one priority is to continue to provide customers outstanding reliability and superior service at reasonable prices while achieving a level of financial performance that benefits the Company's stockholders in the short and long term. Operational excellence and business unit and Company financial performance are integral to the achievement of business results that benefit customers and stockholders.

Therefore, in 2014, the Company strove for and rewarded:

- Continuing industry-leading reliability and customer satisfaction, while maintaining reasonable retail prices;
- Meeting energy demand with the best economic and environmental choices;
- Dividend growth;
- Long-term, risk-adjusted total shareholder return;
- Achieving net income goals to support the Southern Company financial plan and dividend growth; and
- Financial integrity — an attractive risk-adjusted return and sound financial policy.

The performance-based compensation program is designed to encourage achievement of these goals.

Mr. Fanning, with the assistance of the Company's Human Resources staff, recommended to the Compensation Committee the program design and award amounts for senior management, including the named executive officers (other than Mr. Fanning).

2014 Annual Performance-Based Pay Program

Annual Performance Pay Program Highlights

- Rewards achievement of annual performance goals:
  - EPS
  - Business unit net income
  - Business unit operational performance
- Goals are weighted one-third each
- Performance results range from 0% to 200% of target, based on level of goal achievement
- Performance summary (as adjusted and described below): exceeded target performance
  - EPS: 176% of target
  - Corporate equity-weighted average net income result: 163% of target
  - Corporate weighted-average operational results: 172% of target

Overview of Program Design

Almost all employees of the Southern Company system, including the named executive officers, are participants.

The performance goals are set at the beginning of each year by the Compensation Committee and include financial and operational goals. In setting the goals for pay purposes, the Compensation Committee relies on information on financial and operational goals from the Finance Committee and the Nuclear/Operations Committee, respectively. For more information on these committees' responsibilities, see the committee descriptions in this Proxy Statement.

- **Company Financial Goal: EPS**
  EPS is defined as the Company's net income from ongoing business activities divided by average shares outstanding during the year. The EPS performance measure is applicable to all participants in the Performance Pay Program.

- **Business Unit Financial Goal: Net Income**
  For the traditional operating companies (Alabama Power, Georgia Power, Gulf Power Company (Gulf Power), and Mississippi Power) and Southern Power, the business unit financial goal is net income. There is no separate net income goal set for the Company as a whole or for Southern Nuclear. Overall corporate performance is determined by the equity-weighted average of the business unit net income goal payouts. Payment for Southern Nuclear performance is based on the net income achievement of Alabama Power (50%) and Georgia Power (50%).

- **Business Unit Operational Goals: Varies by business unit**
  For most business units at the Company, including the traditional operating companies, operational goals are safety, customer satisfaction, plant availability, transmission and distribution system reliability, major projects (Georgia Power and Mississippi Power), and culture. Southern Nuclear operational goals focus on safety, plant operations, major projects, and culture. Southern Power operational goals include safety, plant availability, and culture. Each of these operational goals is explained in more detail under Goal Details below. The level of achievement for each operational goal is determined according to the respective performance schedule, and the total operational goal performance is determined by the weighted average result.

The Compensation Committee may make adjustments, both positive and negative, to goal achievement for purposes of determining payouts. For the financial goals, such adjustments typically include the impact of items considered non-recurring or outside of normal operations or not anticipated in the business plan when the financial goals were established and of sufficient magnitude to warrant recognition. As reported in the Company's 2014 Proxy Statement, the Compensation Committee did not follow its usual practice, and the charges taken in 2013 related to

Mississippi Power's construction of the integrated coal gasification combined cycle facility in Kemper County (Kemper IGCC) were not excluded from goal achievement results. Because the charges were not excluded, the payout levels for all employees, including the named executive officers, were reduced significantly in 2013. In 2014, the Company recorded pre-tax charges to earnings of $868 million ($536 million after-tax, or $0.59 per share) (2014 Kemper IGCC Charges) due to estimated probable losses relating to the Kemper IGCC. Additionally, Southern Company adjusted its 2014 net income by $17 million after-tax (or $0.02 per share) relating to the reversal of previously recognized revenues recorded in 2014 and 2013 and the recognition of carrying costs associated with the 2015 Mississippi Supreme Court decision that reversed the Mississippi Public Service Commission's March 2013 rate order associated with the Kemper IGCC (together with the 2014 Kemper IGCC Charges, 2014 Kemper IGCC Charges and Adjustments). The Compensation Committee reviewed the impact of the 2014 Kemper IGCC Charges and Adjustments on goal achievement and payout levels for all Southern Company system employees, including the named executive officers. The Compensation Committee determined that, given the action taken last year and the high levels of achievement of other performance goals in 2014, it was not appropriate to reduce payouts earned in 2014 under the broad-based program applicable to all participating employees. Therefore, the Compensation Committee made an adjustment to exclude the impact of the 2014 Kemper IGCC Charges and Adjustments ($0.61 per share) from earnings as it relates to the EPS goal payout for most Southern Company system employees.

As described in greater detail below in Calculating Payouts, Ms. Greene and Messrs. Fanning and Beattie are paid based on the equity-weighted average of the business unit net income results, which includes the net income goal achievement for Mississippi Power. Due to the 2014 Kemper IGCC Charges and Adjustments described above, Mississippi Power recorded a net loss of $328.7 million, resulting in below-threshold performance and would have resulted in no payout associated with the Mississippi Power portion of the net income goal for thousands of employees across the Southern Company system, including Ms. Greene and Messrs. Fanning and Beattie, as well as no payout at all for the business unit financial goal for all Mississippi Power employees. With the adjustment made by the Compensation Committee, Mississippi Power's net income for purposes of calculating goal achievement was $224 million. The adjusted net income resulted in a higher payout for the net income goal for all Mississippi Power employees as well as a higher payout associated with the overall equity-weighted average net income results for several thousand other employees across the Southern Company system whose payouts are determined by the equity-weighted average of the business unit net income results, including Ms. Greene and Messrs. Fanning and Beattie.

As described above, the adjustment to earnings as it relates to the EPS goal payout applied to employees across the entire Southern Company system, and the adjustment to Mississippi Power's net income goal achievement affected thousands of employees across the Southern Company system, including certain named executive officers. However, because the strategic goals related to the Kemper IGCC were not fully executed in 2014, the Compensation Committee determined that the final payout for certain executive officers most accountable for high-level strategic decisions concerning the Kemper IGCC, including some of the named executive officers, should be reduced from the amount they would have otherwise received. The Compensation Committee reduced payouts for Ms. Greene (25%) and Messrs. Fanning (30%), Beattie (10%), and Bowers (10%). See Calculating Payouts in this CD&A for a full description of how payouts were calculated for all of the named executive officers.

Under the terms of the program, no payout can be made if events occur that impact the Company's financial ability to fund the Common Stock dividend. The 2014 Kemper IGCC Charges and Adjustments described above did not have that effect.

Goal Details and 2014 Performance Results

Financial Performance Goals	Description	Why It Is Important
EPS	The Company's net income from ongoing business activities divided by average shares outstanding during the year.	Supports commitment to provide stockholders solid, risk-adjusted returns.
Business Unit Net Income	For the traditional operating companies and Southern Power, the business unit financial performance goal is net income after dividends on preferred and preference stock.	Supports delivery of stockholder value and contributes to the Company's sound financial policies and stable credit ratings.

The range of EPS and net income goals for 2014 is shown below. Overall corporate performance is determined by the equity-weighted average of the business unit net income goal payouts.

	EPS ($) (1)	Alabama Power ($, in millions)	Georgia Power ($, in millions)	Gulf Power ($, in millions)	Mississippi Power ($, in millions) (2)	Southern Power ($, in millions)	Corporate Equity-Weighted Average (2) (%)
Maximum	2.90	774.0	1,258.0	153.0	240.7	175.0	200
Target	2.76	717.0	1,160.0	140.2	218.6	135.0	100
Threshold	2.62	661.0	1,063.0	127.4	196.4	95.0	***
Results	2.80	760.6	1,225.0	140.2	224.0	172.3	163

(1) The EPS result shown in the table excludes the 2014 Kemper IGCC Charges and Adjustments ($0.61 per share) as described above. Therefore, payouts were determined using an EPS performance result that differed from the results reported in the Company's financial statements in the 2014 Annual Report attached as Appendix D to this Proxy Statement (Financial Statements). EPS, as determined in accordance with generally accepted accounting principles in the United States (GAAP) and as reported in the Financial Statements, was $2.19 per share.

(2) The corporate net income result is the equity-weighted average of the business unit net income results, including the net income result for Mississippi Power. Mississippi Power's net income result for this purpose was impacted by the adjustment for the 2014 Kemper IGCC Charges and Adjustments ($553 million on an after-tax basis). Therefore, payouts were determined using a net income performance result that differed from the results reported in the Financial Statements. Mississippi Power recorded a net loss, as determined in accordance with GAAP, of $328.7 million.

Operational Goals	Description	Why It Is Important
Customer Satisfaction	Customer satisfaction surveys evaluate performance. The survey results provide an overall ranking for each traditional operating company, as well as a ranking for each customer segment: residential, commercial, and industrial.	Customer satisfaction is key to operations. Performance of all operational goals affects customer satisfaction.
Reliability	Transmission and distribution system reliability performance is measured by the frequency and duration of outages. Performance targets for reliability are set internally based on recent historical performance.	Reliably delivering power to customers is essential to operations.
Availability	Peak season equivalent forced outage rate is an indicator of availability and efficient generation fleet operations during the months when generation needs are greatest. Availability is measured as a percentage of the hours of forced outages out of the total generation hours.	Availability of sufficient power during peak season fulfills the obligation to serve and provide customers with the least cost generating resources.
Nuclear Plant Operations	Nuclear plant performance is evaluated by measuring nuclear safety as rated by independent industry evaluators, as well as by a quantitative score comprised of various plant performance indicators. Plant reliability and operational availability are measured as a percentage of time the nuclear plant is operating. The reliability and availability metrics take generation reductions associated with planned outages into consideration.	Safe and efficient operation of the nuclear fleet is important for delivering clean energy at a reasonable price.
Major Projects – Plant Vogtle Units 3 and 4 and Kemper IGCC	The Southern Company system is committed to the safe, compliant, and high-quality construction and licensing of two new nuclear generating units under construction at Georgia Power's Plant Vogtle (Plant Vogtle Units 3 and 4) and the Kemper IGCC, as well as excellence in transition to operations and prudent decision-making related to these two major projects. An executive review committee is in place for each project to assess progress. A combination of subjective and objective measures is considered in assessing the degree of achievement. Final assessments for each project are approved by either the Company's Chief Executive Officer or the Company's Chief Operating Officer and confirmed by the Nuclear/Operations Committee.	Strategic projects enable the Southern Company system to expand capacity to provide clean, affordable energy to customers across the region.
Safety	The Company's Target Zero program is focused on continuous improvement in having a safe work environment. The performance is measured by the applicable company's ranking, as compared to peer utilities in the Southeastern Electric Exchange.	Essential for the protection of employees, customers, and communities.
Culture	The culture goal seeks to improve the Company's inclusive workplace. This goal includes measures for work environment (employee satisfaction survey), representation of minorities and females in leadership roles (subjectively assessed), and supplier diversity.	Supports workforce development efforts and helps to assure diversity of suppliers.

The ranges of performance levels established for the primary operational goals are detailed below, along with actual corporate results for 2014 performance.

Level of Performance	Customer Satisfaction	Reliability	Availability	Nuclear Plant Operations	Safety	Plant Vogtle Units 3 and 4 and Kemper IGCC	Culture
Maximum	Top quartile for all customer segments and overall	Significantly exceed targets	Industry best	Significantly exceed targets	Greater than 90th percentile or 5-year Company best	Significantly exceed targets	Significant improvement
Target	Top quartile overall	Meet targets	Top quartile	Meet targets	60th percentile	Meet targets	Improvement
Threshold	2nd quartile overall	Significantly below targets	2nd quartile	Significantly below targets	40th percentile	Significantly below targets	Significantly below expectations
Corporate Achievement	200%	195%	190%	150%	167%	Plant Vogtle: 175% Kemper IGCC: 75%	150%

The Compensation Committee approves specific objective performance schedules to calculate performance between the threshold, target, and maximum levels for each of the operational goals. If goal achievement is below threshold, there is no payout associated with the applicable goal.

Actual 2014 operational goal achievement is shown in the following tables.

Corporate (Ms. Greene and Messrs. Fanning and Beattie)

Company Corporate/Aggregate Goal	Achievement Percentage
Customer Satisfaction	200
Reliability	195
Availability	190
Safety	167
Culture	150
Major Projects – Plant Vogtle Units 3 and 4 Assessment	175
Major Projects – Kemper IGCC Assessment	75
Total Operational Goal Performance Factor	172

Alabama Power (Mr. McCrary)

Goal	Achievement Percentage
Customer Satisfaction	200
Reliability	177
Availability	200
Safety	165
Culture	130
Total Operational Goal Performance Factor	176

Georgia Power (Mr. Bowers)

Goal	Achievement Percentage
Customer Satisfaction	200
Reliability	172
Availability	200
Safety	80
Major Projects – Plant Vogtle Units 3 and 4 Assessment	175
Culture	137
Total Operational Goal Performance Factor	162

Southern Nuclear (Mr. Kuczynski)

Goal	Achievement Percentage
Nuclear Safety	0
Plant Operations	150
Major Projects – Plant Vogtle Units 3 and 4 Assessment	175
Culture	131
Total Operational Goal Performance Factor	123

Calculating Payouts

Each named executive officer had a target Performance Pay Program opportunity, based on his or her position, set by the Compensation Committee at the beginning of 2014. Targets are set as a percentage of base salary.

All of the named executive officers are paid based on EPS performance. The business unit goals that determine payout levels vary based on the named executive officer's leadership role. For Ms. Greene and Messrs. Fanning and Beattie, payout is based on the equity-weighted average net income payout results for the traditional operating companies and Southern Power and the system-wide operational goal results. For Messrs. Bowers and McCrary, payout is based on achievement of the net income and operational goals of Georgia Power and Alabama Power, respectively. Mr. McCrary's payout is prorated based on the amount of time he was employed at Alabama Power during 2014. Mr. Kuczynski's payout is based on the achievement percentages of the net income goals of Alabama Power (50%) and Georgia Power (50%) and the Southern Nuclear operational goal results.

A total performance factor is determined by adding the EPS and applicable business unit financial and operational goal performance results and dividing by three. The total performance factor is multiplied by the target Performance Pay Program opportunity to determine the payout for each named executive officer. The table below shows the calculation of the total performance factor for each of the named executive officers, based on results shown above.

	Southern Company EPS Result (%) 1/3 weight (1)	Business Unit Financial Goal Result (%) 1/3 weight (1)	Business Unit Operational Goal Result (%) 1/3 weight	Total Performance Factor (%)
T. A. Fanning	176	163	172	170
A. P. Beattie	176	163	172	170
W. P. Bowers	176	166	162	168
K. S. Greene	176	163	172	170
S. E. Kuczynski	176	171	123	157
C. D. McCrary	176	176	176	176

(1) Excluding impact of the 2014 Kemper IGCC Charges and Adjustments.

The table below shows the pay opportunity at target-level performance and the actual payout based on the actual performance shown above.

	Target Annual Performance Pay Program Opportunity (%)	Target Annual Performance Pay Program Opportunity ($)	Total Performance Factor (%) (1)	Actual Annual Performance Pay Program Payout ($) (2)
T. A. Fanning	120	1,440,000	170	1,713,600
A. P. Beattie	75	505,123	170	772,839
W. P. Bowers	75	590,503	168	892,841
K. S. Greene	70	455,000	170	580,125
S. E. Kuczynski	70	467,875	157	734,564
C. D. McCrary (3)	75	602,435	176	333,990

(1) Shown as modified and described above.

(2) As described above, the Compensation Committee reduced the final payouts for Ms. Greene (25%) and Messrs. Fanning (30%), Beattie (10%), and Bowers (10%) after the adjustments to performance results in connection with the 2014 Kemper IGCC Charges and Adjustments.

(3) Mr. McCrary retired from Alabama Power effective May 1, 2014; therefore, his Performance Pay Program payout was prorated based on the amount of time he was employed in 2014. The target amount shown is his full target opportunity as if he had been employed for the entire year. The actual amount shown is the prorated amount Mr. McCrary received.

Long-Term Performance-Based Compensation

2014 Long-Term Pay Program Highlights

- Stock Options:
  - Reward long-term Common Stock price appreciation
  - Represent 40% of long-term target value
  - Vest over three years
  - Ten-year term
- Performance Shares:
  - Reward total shareholder return relative to industry peers and stock price appreciation
  - Represent 60% of long-term target value
  - Three-year performance period
  - Performance results can range from 0% to 200% of target
  - Paid in Common Stock at end of performance period
- Restricted Stock Units
  - Used to promote retention of key employees or to attract key employees by replacing award values forfeited upon leaving a former employer
  - Continued employment until vesting date(s) is required
  - Paid in Common Stock upon vesting
- Performance Summary:
  - Stock options: for options granted in 2014, year-end stock price exceeded option exercise price by nearly 19%
  - Performance shares: paid out at 14% of target
  - Restricted stock units: one new grant in 2014 to Mr. Kuczynski

Long-term performance-based awards are intended to promote long-term success and increase stockholder value by directly tying a substantial portion of the named executive officers' total compensation to the interests of stockholders. Long-term performance-based awards also benefit the Southern Company system's customers by providing competitive compensation that allows the Southern Company system to attract, retain, and engage employees who provide focus on serving customers and delivering safe and reliable electric service.

Stock options represent 40% of the long-term performance target value, and performance shares represent the remaining 60%. The Compensation Committee elected this mix because it concluded that doing so represented an appropriate balance between incentives. Stock options only generate value if the price of the stock appreciates after the grant date, and performance shares reward employees based on Southern Company's total shareholder return relative to industry peers, as well as Common Stock price. The Compensation Committee also awards restricted stock units occasionally, typically as retention awards or to attract key employees by replacing the value of awards that are forfeited upon leaving a former employer.

The following table shows the grant date fair value of the long-term performance-based awards granted in 2014, except restricted stock units.

	Value of Options ($)	Value of Performance Shares ($)	Total Long-Term Value ($)
T. A. Fanning	2,255,999	3,383,968	5,639,967
A. P. Beattie	619,617	929,415	1,549,032
W. P. Bowers	724,350	1,086,520	1,810,870
K. S. Greene	467,999	701,998	1,169,997
S. E. Kuczynski	454,507	681,726	1,136,233
C. D. McCrary	722,920	1,084,380	1,807,300

Stock Options

Stock options granted have a 10-year term, vest over a three-year period, fully vest upon retirement or termination of employment following a change in control, and expire at the earlier of five years from the date of retirement or the end of the 10-year term. For the grants made in 2014, unvested options are forfeited if the named executive officer retires from the Southern Company system and accepts a position with a peer company within two years of retirement. The grants made to Mr. McCrary in 2014 vested upon his retirement; however, he will forfeit those options that vested upon retirement if he accepts a position with a peer company within two years of his retirement. The value of each stock option was derived using the Black-Scholes stock option pricing model. The assumptions used in calculating that amount are discussed in Note 8 to the Financial Statements. For 2014, the Black-Scholes value on the grant date was $2.20 per stock option, and the exercise price is $41.28.

Performance Shares

2014-2016 Grant

Performance shares are denominated in units, meaning no actual shares are issued on the grant date. A grant date fair value per unit was determined. For the grant made in 2014, the value per unit was $37.54. See the Summary Compensation Table and the information accompanying it for more information on the grant date fair value. The total target value for performance share units is divided by the value per unit to determine the number of performance share units granted to each participant, including the named executive officers. Each performance share unit represents one share of Common Stock.

At the end of the three-year performance period (January 1, 2014 through December 31, 2016), the number of units will be adjusted up or down (0% to 200%) based on the Company's total shareholder return relative to that of its peers in a custom peer group. While in previous years the Company's total shareholder return was measured relative to two peer groups (a custom peer group and the Philadelphia Utility Index), the Compensation Committee decided to streamline the performance share peer group for the 2014 grant by eliminating the Philadelphia Utility Index and establishing one custom peer group. The companies in the custom peer group are those that are believed to be most similar to the Company in both business model and investors, creating a peer group that is even more aligned with the Company's strategy. For performance shares granted in previous years using the dual peer group structure, the final result will be measured using both peer groups as approved by the Compensation Committee at the time of the grant. The custom peer group varies from the Market Data peer group discussed previously due to the timing and criteria of the peer selection process; however, there is significant overlap. The number of performance share units earned will be paid in Common Stock at the end of the three-year performance period. No dividends or dividend equivalents will be paid or earned on the performance share units.

The companies in the custom peer group on the grant date are listed in the following table.

Alliant Energy Corporation	Integrys Energy Group
Ameren Corporation	Pepco Holdings, Inc.
American Electric Power Company, Inc.	PG&E Corporation
CMS Energy Corporation	Pinnacle West Capital Corporation
Consolidated Edison, Inc.	PPL Corporation
DTE Energy Company	SCANA Corporation
Duke Energy Corporation	Wisconsin Energy Corporation
Edison International	Xcel Energy Inc.
Eversource Energy	

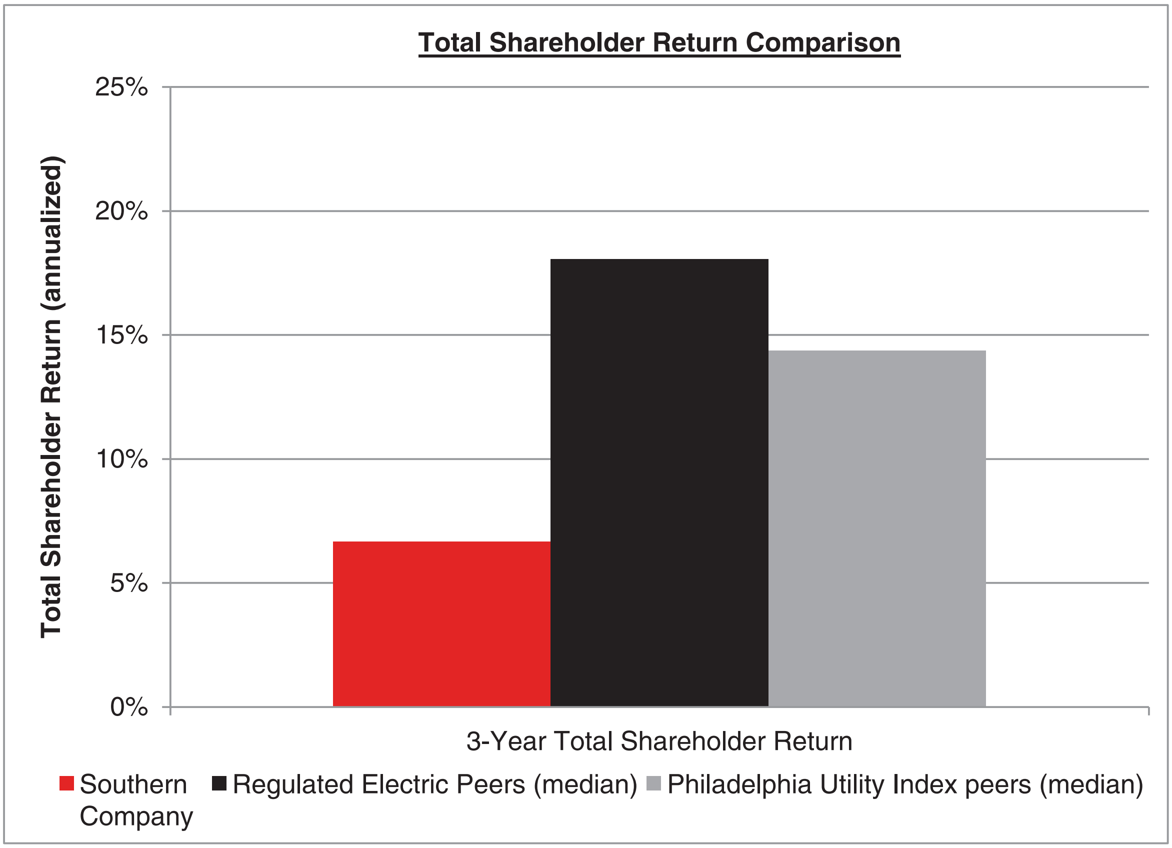
The scale below will determine the number of units paid in Common Stock following the last year of the performance period, based on the 2014 through 2016 performance period. Payout for performance between points will be interpolated on a straight-line basis.

Performance vs. Peer Group	Payout (% of Each Performance Share Unit Paid)
90th percentile or higher (Maximum)	200
50th percentile (Target)	100
10th percentile (Threshold)	0

Performance shares are not earned until the end of the three-year performance period. A participant who terminates, other than due to retirement or death, forfeits all unearned performance shares. Participants who retire or die during the performance period only earn a prorated number of units, based on the number of months they were employed during the performance period.

2012-2014 Payouts

Performance share grants were made in 2012 with a three-year performance period that ended on December 31, 2014. Based on the Company's total shareholder return achievement relative to that of the Philadelphia Utility Index (28% payout) and the custom peer group (0% payout) as shown in the chart below, the payout percentage was 14% of target, which is the average of the two peer groups.



The following table shows the target and actual awards of performance shares for the named executive officers. Actual payouts were significantly below the target grant value due to lower relative total shareholder return.

	Target Performance Shares (#)	Target Value of Performance Shares ($)	Performance Shares Earned (#)	Value of Performance Shares Earned ($)
T. A. Fanning	72,338	3,037,473	10,127	497,337
A. P. Beattie	18,417	773,330	2,578	126,606
W. P. Bowers	23,906	1,003,813	3,347	164,371
K. S. Greene (1)	0	0	0	0
S. E. Kuczynski	14,717	617,967	2,060	101,167
C. D. McCrary (2)	25,121	1,054,831	2,735	134,316

(1) Ms. Greene was not employed by the Southern Company system when the Compensation Committee granted performance shares in 2012.

(2) The number of performance shares earned by Mr. McCrary is prorated based on the time he was employed by Alabama Power during the performance period.

Restricted Stock Units

In limited situations, restricted stock units are granted to address specific needs, including retention. These awards serve two primary purposes. They further align the recipient's interests with those of the Company's stockholders, and they provide strong retention value. For information on treatment upon termination or change in control, see Potential Payments Upon Termination or Change-in-Control.

In October 2014, the Compensation Committee granted Mr. Kuczynski restricted stock units valued at $1,000,016 on the grant date that will vest in October 2017 if he remains employed with the Southern Company system through the vesting date. The Compensation Committee believes that, given Mr. Kuczynski's expertise and the competitiveness of the nuclear labor market, there is a retention risk and, therefore, providing a retention award was in the best interest of the Company. The Compensation Committee sought advice from Pay Governance in determining market practice and the appropriate value of the award.

Restricted stock units were granted to Ms. Greene in 2013 and will vest incrementally each year starting April 1, 2015 and ending April 1, 2018 if she remains employed with the Southern Company system.

Restricted stock units were granted to Mr. McCrary in 2012 with a vesting date of December 31, 2014 in order to retain Mr. McCrary until his successor was named and expiration of an appropriate transition period. Mr. McCrary's successor was announced in February 2014, and Mr. McCrary retired effective May 1, 2014. The Compensation Committee modified the vesting date to April 30, 2014.

See the Summary Compensation Table, the Grants of Plan-Based Awards table, the Outstanding Equity Awards at 2014 Fiscal Year End table, and accompanying information for more information on restricted stock unit awards.

Timing of Performance-Based Compensation

As discussed above, the 2014 annual Performance Pay Program goals and the total shareholder return goals applicable to performance shares were established early in the year by the Compensation Committee. Annual stock option grants also were made by the Compensation Committee. The establishment of performance-based compensation goals and the granting of equity awards were not timed with the release of material, non-public information. This procedure is consistent with prior practices. Stock option grants are made to new hires or newly-eligible participants on preset, regular quarterly dates that were approved by the Compensation Committee. The exercise price of options granted to employees in 2014 was the closing price of the Common Stock on the grant date or the last trading day before the grant date, if the grant date was not a trading day.

Retirement and Severance Benefits

Certain post-employment compensation is provided to employees, including the named executive officers, consistent with the Company's goal of providing market-based compensation and benefits.

Retirement Benefits

Generally, all full-time employees of the Southern Company system participate in the funded Pension Plan after completing one year of service. Normal retirement benefits become payable when participants attain age 65 and complete five years of participation. The Company also provides unfunded benefits that count salary and annual Performance Pay Program payouts that are ineligible to be counted under the Pension Plan. See the Pension Benefits table and accompanying information for more pension-related benefits information.

The Company also provides the Deferred Compensation Plan, which is an unfunded plan that permits participants to defer income as well as certain federal, state, and local taxes until a specified date or their retirement, disability, death, or other separation from service. Up to 50% of base salary and up to 100% of performance-based non-equity compensation may be deferred at the election of eligible employees. All of the named executive officers are eligible to participate in the Deferred Compensation Plan. See the Nonqualified Deferred Compensation table and accompanying information for more information about the Deferred Compensation Plan.

Change-in-Control Protections

Change-in-control protections, including severance pay and, in some situations, vesting or payment of long-term performance-based awards, are provided upon a change in control of the Company coupled with an involuntary termination not for cause or a voluntary termination for "Good Reason." This means there is a "double trigger" before severance benefits are paid; *i.e.*, there must be both a change in control and a termination of employment. Severance payment amounts are two times salary plus target Performance Pay Program opportunity for the named executive officers, except for Mr. Fanning whose severance payment amount is three times salary plus Performance Pay Program target opportunity. No excise tax gross-up would be provided. Change-in-control protections allow executive officers to focus on potential transactions that are in the best interest of shareholders. More information about severance arrangements is included under Potential Payments upon Termination or Change-in-Control.

Perquisites

The Company provides limited ongoing perquisites to its executive officers, including the named executive officers, consistent with the Company's goal of providing market-based compensation and benefits. The perquisites provided in 2014, including amounts, are described in detail in the information accompanying the Summary Compensation Table. No tax assistance is provided on perquisites, except on certain relocation-related benefits.

Performance-Based Compensation Program Changes for 2015

In early 2015, the Compensation Committee made several changes to the Company's performance-based compensation programs, impacting 2015 compensation. These changes affect both the annual Performance Pay Program as well as the long-term performance-based compensation program and are described below.

Annual Performance-Based Pay Program

Beginning in 2015, the annual performance-based pay program will incorporate individual goals for all executive officers of the Company. Currently, the goals are equally weighted between the EPS goal, the applicable business unit net income goal, and the applicable business unit operational goals. Starting with the 2015 annual Performance Pay Program goals, the Compensation Committee eliminated the business unit net income goal for the Chief Executive Officer (CEO) and the Chief Financial Officer (CFO), added an individual goal component, and changed the weights for the EPS goal and operational goals. All other executive officers will now have four goals: EPS, business unit net income, business unit operational goals, and their individual goals. The table below outlines the new weights for each goal.

	EPS	Net Income	Operational	Individual
CEO and CFO	40%	0%	30%	30%
All other executive officers	30%	30%	30%	10%

Long-Term Performance-Based Compensation

Since 2010, the Company's long-term performance-based compensation program has included two components: stock options and performance shares. After reviewing current market practices with Pay Governance, the Compensation Committee decided to modify the Company's long-term performance-based compensation program to further align the Company's compensation program with its peers in the utility industry and create better alignment of pay with long-term Company performance. Beginning with long-term performance-based equity grants made in early 2015, the long-term performance-based program consists exclusively of performance shares. The new structure maintains the three-year performance cycle described earlier in this CD&A for performance shares but expands the performance metrics from one (relative total shareholder return) to three metrics. The new program now includes relative total shareholder return (50%), cumulative EPS from ongoing operations over a three-year period (25%), and equity-weighted return on equity (ROE) (25%). Under the new program, dividends will accrue on performance shares throughout the performance period, and eligible new hires and newly promoted employees will receive interim prorated grants of performance shares instead of stock options.

The continued use of relative total shareholder return as a metric in the long-term performance program maintains consistency with the previous program as well as allows the Company to measure its performance against a custom group of regulated peers. The new EPS goal measures cumulative EPS from ongoing operations over a three-year period and motivates ongoing earnings growth to support the Company's dividend and achievement of strategic financial objectives. The new equity-weighted ROE goal measures traditional operating company performance from ongoing operations over a three-year period and is set to encourage top quartile ROE performance. Both the EPS and ROE goals are subject to a gateway goal focused on the Company's credit ratings. If the Company fails to meet the credit rating requirements established by the Compensation Committee, there will be no payout associated with the EPS and ROE goals.

Executive Stock Ownership Requirements

Officers of the Company and its subsidiaries that are in a position of Vice President or above are subject to stock ownership requirements. All of the named executive officers are covered by the requirements. Ownership requirements further align the interest of officers and stockholders by promoting a long-term focus and long-term share ownership.

The types of ownership arrangements counted toward the requirements are shares owned outright, those held in Company-sponsored plans, and Common Stock accounts in the Deferred Compensation Plan and the Supplemental Benefit Plan. One-third of vested stock options may be counted, but, if so, the ownership requirement is doubled. The ownership requirement is reduced by one-half at age 60. Mr. Beattie is 60.

The requirements are expressed as a multiple of base salary as shown below.

	Multiple of Salary without Counting Stock Options	Multiple of Salary Counting 1/3 of Vested Options
T. A. Fanning	5 Times	10 Times
A. P. Beattie	1.5 Times	3 Times
W. P. Bowers	3 Times	6 Times
K. S. Greene	3 Times	6 Times
S. E. Kuczynski	3 Times	6 Times

Newly-elected officers have approximately five years from the date of their election to meet the applicable ownership requirement. Newly-promoted officers have approximately five years from the date of their promotion to meet the increased ownership requirement. All of the named executive officers are meeting their respective ownership requirements. Mr. McCrary retired and is therefore no longer subject to stock ownership requirements.

Impact of Accounting and Tax Treatments on Compensation

Section 162(m) of the Internal Revenue Code of 1986, as amended (Code), limits the tax deductibility of the compensation of the named executive officers, except Messrs. Beattie and McCrary, that exceeds $1 million per year unless the compensation is paid under a performance-based plan as defined in the Code that has been approved by stockholders. The Company has obtained stockholder approval of the Omnibus Incentive Compensation Plan, under which most of the performance-based compensation is paid. Because the Company's policy is to maximize long-term stockholder value, as described fully in this CD&A, tax deductibility is not the only factor considered in setting compensation. The Compensation Committee has the discretion to award compensation that may not be tax deductible.

The Compensation Committee approved a formula in February 2014 that represented a maximum annual performance-based compensation amount payable to the affected named executive officers. For 2014 performance, the Compensation Committee used negative discretion from the approved formula amount to determine the actual payouts for the affected named executive officers under the annual performance-based compensation program pursuant to the methodologies described above.

Policy on Recovery of Awards

The Company's Omnibus Incentive Compensation Plan provides that, if the Company is required to prepare an accounting restatement due to material noncompliance as a result of misconduct, and if an executive officer of the Company knowingly or grossly negligently engaged in or failed to prevent the misconduct or is subject to automatic forfeiture under the Sarbanes-Oxley Act of 2002, the executive officer must repay the Company the amount of any payment in settlement of awards earned or accrued during the 12-month period following the first public issuance or filing that was restated.

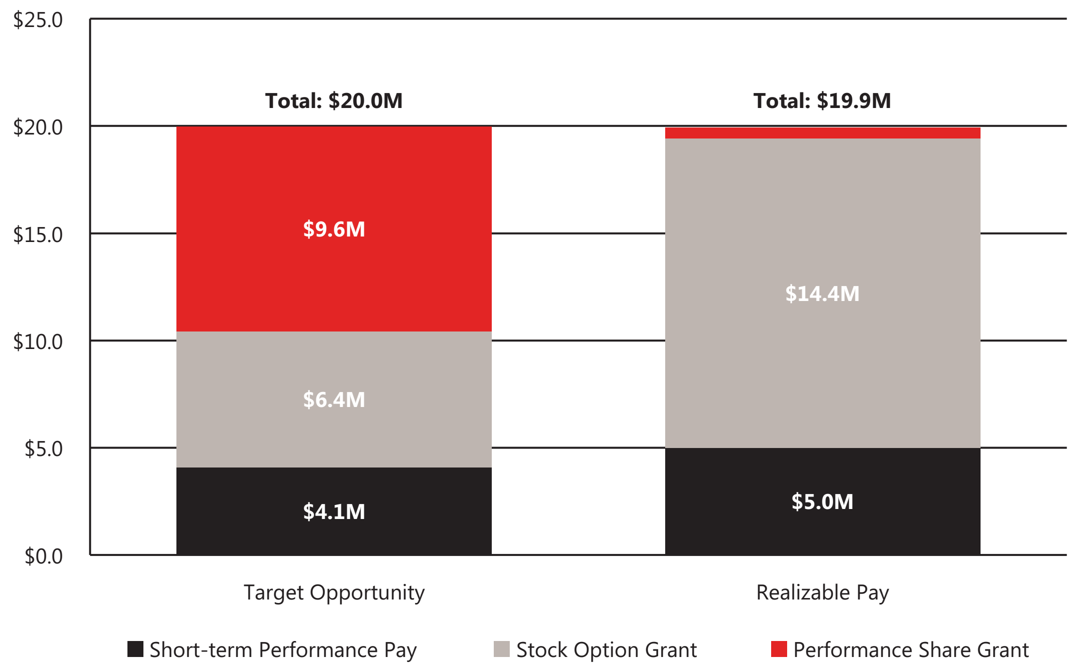
Policy Regarding Hedging the Economic Risk of Stock Ownership

The Company's policy is that employees and outside Directors will not trade Company options on the options market and will not engage in short sales.

Realizable Performance-Based Compensation Analysis

The SEC has promulgated rules regarding how total compensation is calculated in the Summary Compensation Table. These rules include accounting assumptions that affect the value reported for equity grants. However, as the Company's performance changes over time, the Common Stock price can fluctuate, affecting the value of equity grants made to the named executive officers. The Compensation Committee believes it is important to look at those changes to fully understand the value of the compensation received because the reported value is only realized if the Company meets certain performance criteria. In order to supplement the SEC-required disclosure, the chart below compares the target or grant date value of performance-based compensation granted to Mr. Fanning in 2012, 2013, and 2014 with the value actually received or as measured on December 31, 2014.

CEO Target vs. Realizable Pay



The realizable amount shown for short-term performance pay includes the actual amount paid to Mr. Fanning for 2012, 2013, and 2014 under the Performance Pay Program.

The realizable amount shown for stock options includes the intrinsic value of all stock options granted to Mr. Fanning in 2012, 2013, and 2014 calculated using the Common Stock closing price on December 31, 2014. This amount is subject to change based on changes in the Common Stock price.

The realizable amount shown for performance shares includes the value Mr. Fanning received based on the payout of the performance shares granted in 2012 for the 2012 through 2014 performance period as well as the projected amounts based on performance levels relative to peers as of December 31, 2014 for the 2013 and 2014 grants. This amount is subject to change based on the Company's performance relative to its peers at the end of the applicable three-year performance period. See Performance Shares in this CD&A for a description of the Company's performance share peer group.

COMPENSATION AND MANAGEMENT SUCCESSION COMMITTEE REPORT

The Compensation Committee met with management to review and discuss the CD&A. Based on such review and discussion, the Compensation Committee recommended to the Board of Directors that the CD&A be included in the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2014 and in this Proxy Statement. The Board of Directors approved that recommendation.

Members of the Compensation Committee:

Henry A. Clark III, Chair
David J. Grain
Veronica M. Hagen
William G. Smith, Jr.
Steven R. Specker

SUMMARY COMPENSATION TABLE

The Summary Compensation Table shows the amount and type of compensation received or earned in 2012, 2013, and 2014 by the named executive officers, except as noted below.

Name and Principal Position (a)	Year (b)	Salary ($) (c)	Bonus ($) (d)	Stock Awards ($) (e)	Option Awards ($) (f)	Non-Equity Incentive Plan Compensation ($) (g)	Change in Pension Value and Nonqualified Deferred Compensation Earnings ($) (h)	All Other Compensation ($) (i)	Total ($) (j)
Thomas A. Fanning	2014	1,192,067	—	3,383,968	2,255,999	1,713,600	2,899,537	70,822	11,515,993
Chairman, President,	2013	1,152,389	—	3,128,625	2,085,747	1,199,307	805,738	66,485	8,438,291
and Chief Executive Officer	2012	1,114,846	—	3,037,473	2,025,000	2,078,158	4,712,413	67,458	13,035,348
Art P. Beattie	2014	668,516	—	929,415	619,617	772,839	1,396,842	37,293	4,424,522
Executive Vice	2013	644,039	—	796,514	531,025	437,126	402,101	122,037	2,932,842

Chairman, President,	2013	760,482	—	1,031,940	687,964	498,775	—	44,375	3,023,536
and Chief Executive Officer, Georgia Power	2012	739,587	42	1,003,813	669,227	1,013,366	2,024,578	50,830	5,501,443
Kimberly S. Greene	2014	650,000	—	701,998	467,999	580,125	326,334	605,315	3,331,771
Executive Vice President and Chief Operating Officer	2013	475,000	—	2,000,005	1,039,997	310,811	212,666	656,035	4,694,514
Stephen E. Kuczynski	2014	667,120	—	1,681,742	454,507	734,564	217,633	39,117	3,794,683
President and Chief	2013	658,378	—	635,283	423,534	426,183	126,714	42,692	2,312,784
Executive Officer, Southern Nuclear	2012	640,289	—	617,967	411,997	619,288	77,727	101,886	2,469,154
Charles D. McCrary Former Chairman,	2014	389,266	—	2,896,902	722,920	333,990	923,064	96,937	5,363,079
President, and	2013	799,124	—	1,084,347	722,922	650,630	414,103	45,396	3,716,522
Chief Executive Officer, Alabama Power	2012	777,167	—	3,054,840	703,232	1,028,204	2,437,448	44,722	8,045,613

Column (a)

Ms. Greene was not an executive officer of the Company prior to 2013.

Column (d)

This amount shown for Mr. Bowers reflects the value of a non-cash safety award for Mr. Bowers. All employees of Georgia Power with a perfect individual safety record in 2014 received the award.

Column (e)

This column does not reflect the value of stock awards that were actually earned or received in 2014. Rather, as required by applicable rules of the SEC, this column reports the aggregate grant date fair value of performance shares granted in 2014. The value reported is based on the probable outcome of the performance conditions as of the grant date, using a Monte Carlo simulation model. No amounts will be earned until the end of the three-year performance period on December 31, 2016. The value then can be earned based on performance ranging from 0 to 200%, as established by the Compensation Committee. The aggregate grant date fair value of the performance shares granted in 2014 to Ms. Greene and Messrs. Fanning, Beattie, Bowers, and Kuczynski, assuming that the highest level of performance is achieved, is $1,403,996, $6,767,936, $1,858,830, $2,173,040, and $1,363,453, respectively (200% of the amount shown in the table). Because Mr. McCrary retired from Alabama Power effective May 1, 2014, the maximum amount he could earn is $241,007, which is prorated based on the number of months he was employed during the performance period. The amount reflected in column (e) for Mr. McCrary also includes the incremental fair value related to the modification of the vesting date of the restricted stock units granted to Mr. McCrary in 2012 and discussed in the CD&A. See Note 8 to the Financial Statements for a discussion of the assumptions used in calculating these amounts.

Column (f)

This column reports the aggregate grant date fair value of stock options granted in the applicable year. See Note 8 to the Financial Statements for a discussion of the assumptions used in calculating these amounts.

Column (g)

The amounts in this column are the payouts under the annual Performance Pay Program. The amount reported for the Performance Pay Program is for the one-year performance period that ended on December 31, 2014. The Performance Pay Program is described in detail in the CD&A.

Column (h)

This column reports the aggregate change in the actuarial present value of each named executive officer's accumulated benefit under the Pension Plan and the supplemental pension plans (collectively, Pension Benefits) as of December 31, 2012, 2013, and 2014. Because Mr. McCrary retired in 2014, the amount reported for him in 2014 reflects the actual benefits expected to be paid after the measurement date. The Pension Benefits as of each measurement date are based on the named executive officer's age, pay, and service accruals and the plan provisions applicable as of the measurement date. The actuarial present values as of each measurement date reflect the assumptions the Company selected for cost purposes as of that measurement date; however, the named executive officers were assumed to remain employed at the Company or any Company subsidiary until their benefits commence at the pension plans' stated normal retirement date, generally age 65. As a result, the amounts in column (h) related to Pension Benefits represent the combined impact of several factors: growth in the named executive officer's Pension Benefits over the measurement year; impact on the total present values of one year shorter discounting period due to the named executive officer being one year closer to normal retirement; impact on the total present values attributable to changes in assumptions from measurement date to measurement date; and impact on the total present values attributable to plan changes between measurement dates. In general, pension values increased for all named executive officers due to a decrease in discount rates and updated mortality rates.

For more information about the Pension Benefits and the assumptions used to calculate the actuarial present value of accumulated benefits as of December 31, 2014, see the information following the Pension Benefits table. The key differences between assumptions used for the actuarial present values of accumulated benefits calculations as of December 31, 2013 and December 31, 2014 are:

- Discount rate for the Pension Plan was decreased to 4.20% as of December 31, 2014 from 5.05% as of December 31, 2013;
- Discount rate for the supplemental pension plans was decreased to 3.75% as of December 31, 2014 from 4.50% as of December 31, 2013; and
- Mortality rates for all plans were updated due to the release of new mortality tables.

This column also reports above-market earnings on deferred compensation under the Deferred Compensation Plan (DCP). However, there were no above-market earnings on deferred compensation in the years reported.

Column (i)

This column reports the following items: perquisites; tax reimbursements on certain relocation-related benefits and retirement-related financial planning assistance; employer contributions in 2014 to the Southern Company Employee Savings Plan (ESP), which is a tax-qualified defined contribution plan intended to meet requirements of Section 401(k) of the Code; and contributions in 2014 under the Southern Company Supplemental Benefit Plan (Non-Pension Related) (SBP). The SBP is described more fully in the information following the Nonqualified Deferred Compensation table.

The amounts reported for 2014 are itemized below.

	Perquisites ($)	Tax Reimbursements ($)	ESP ($)	SBP ($)	Total ($)
T. A. Fanning	10,023	—	13,260	47,539	70,822
A. P. Beattie	5,022	—	11,437	20,834	37,293
W. P. Bowers	7,464	—	12,853	26,669	46,986
K. S. Greene	400,708	171,457	13,260	19,890	605,315
S. E. Kuczynski	9,241	—	9,113	20,763	39,117
C. D. McCrary	84,345	—	11,199	1,393	96,937

Description of Perquisites

Personal Financial Planning is provided for most officers of the Company, including all of the named executive officers. The Company pays for the services of a financial planner on behalf of the officers, up to a maximum amount of $8,700 per year, after the initial year that the benefit is provided. In the initial year, the allowed amount is $15,000. The Company also provides a five-year allowance of $6,000 for estate planning and tax return preparation fees.

Relocation Benefits are provided to cover the costs associated with geographic relocation. In 2014, Ms. Greene received relocation-related benefits in the amount of $363,155 in connection with her 2014 relocation from Atlanta, Georgia to Birmingham, Alabama. This amount was for the shipment of household goods, incidental expenses related to her move, and home sale and home repurchase assistance. Also, as provided in the Company's relocation policy, tax assistance is provided on the taxable relocation benefits. If Ms. Greene terminates within two years of her relocation, these amounts must be repaid.

Personal Use of Corporate Aircraft. The Southern Company system has aircraft that are used to facilitate business travel. All flights on these aircraft must have a business purpose, except limited personal use that is associated with business travel is permitted. The amount reported for such personal use is the incremental cost of providing the benefit, primarily fuel costs. Also, if seating is available, the Company permits a spouse or other family member to accompany an employee on a flight. However, because in such cases the aircraft is being used for a business purpose, there is no incremental cost associated with the family travel, and no amounts are included for such travel. Any additional expenses incurred that are related to family travel are included. The perquisite amount shown above for Mr. Bowers includes $1,664 for approved personal use of corporate aircraft. In connection with Ms. Greene's relocation, the Compensation Committee approved personal use of the corporate aircraft for weekly round-trip flights between Atlanta and Birmingham for the first twelve months following her relocation to Birmingham. The perquisite amount shown above for Ms. Greene includes $32,379 for this approved personal use of corporate aircraft.

Other Miscellaneous Perquisites. The amount included reflects the full cost to the Company of providing the following items: personal use of Company-provided tickets for sporting and other entertainment events and gifts distributed to and activities provided to attendees at Company-sponsored events.

GRANTS OF PLAN-BASED AWARDS IN 2014

This table provides information on stock option grants made and goals established for future payouts under the performance-based compensation programs during 2014 by the Compensation Committee.

Name (a)	Grant Date (b)	Estimated Future Payouts Under Non-Equity Incentive Plan Awards			Estimated Future Payouts Under Equity Incentive Plan Awards			All Other Stock Awards: Number of Shares of Stock or Units (#) (i)	All Other Option Awards: Number of Securities Underlying Options (#) (j)	Exercise or Base Price of Option Awards ($/Sh) (k)	Grant Date Fair Value of Stock and Option Awards ($) (l)
		Threshold ($) (c)	Target ($) (d)	Maximum ($) (e)	Threshold (#) (h)	Target (#) (g)	Maximum (#) (h)

	2/10/2014				288	28,886	57,772				1,084,380
	2/10/2014								328,600	41.28	722,920
	2/10/2014							43,908			1,812,522

Columns (c), (d), and (e)

These columns reflect the annual Performance Pay Program opportunity granted to the named executive officers in 2014 as described in the CD&A. The information shown as "Threshold," "Target," and "Maximum" reflects the range of potential payouts established by the Compensation Committee. The actual amounts earned are disclosed in the Summary Compensation Table. The amounts shown for Mr. McCrary are prorated based on the amount of time he was employed at Alabama Power in 2014.

Columns (f), (g), and (h)

These columns reflect the performance shares granted to the named executive officers in 2014, as described in the CD&A. The information shown as "Threshold," "Target," and "Maximum" reflects the range of potential payouts established by the Compensation Committee. Earned performance shares will be paid out in Common Stock following the end of the 2014 through 2016 performance period, based on the extent to which the performance goals are achieved. Any shares not earned are forfeited.

The number of shares shown for Mr. McCrary reflects the full grant he received in February

2014. However, since Mr. McCrary retired in May 2014, the ultimate number of performance shares he will receive will be prorated based on the number of months he was employed by Alabama Power during the performance period.

Column (i)

This column reflects the number of restricted stock units granted to Mr. Kuczynski on the grant date as described in the CD&A. This column also reflects the restricted stock units granted to Mr. McCrary in 2012 and modified by the Compensation Committee in February 2014, as described in the CD&A.

Columns (j) and (k)

Column (j) reflects the number of stock options granted to the named executive officers in 2014, as described in the CD&A, and column (k) reflects the exercise price of the stock options, which was the closing price on the grant date.

Column (l)

This column reflects the aggregate grant date fair value of the performance shares, stock options, and restricted stock units granted in 2014. This column also reflects the incremental fair value of the restricted stock units granted to Mr. McCrary in 2012 and modified in February 2014. For performance shares, the value is based on the probable outcome of the performance conditions as of the grant date using a Monte Carlo simulation model. For stock options, the value is derived using the Black-Scholes stock option pricing model. For the restricted stock units granted to Mr. Kuczynski, the value is based on the closing price of Common Stock on the grant date. According to SEC rules, the incremental fair value of the restricted stock units granted to Mr. McCrary in 2012 and modified in February 2014 is reported using the value on the modification date. The assumptions used in calculating these amounts are discussed in Note 8 to the Financial Statements.

OUTSTANDING EQUITY AWARDS AT 2014 FISCAL YEAR-END

This table provides information pertaining to all outstanding stock options and stock awards (performance shares and restricted stock units) held by or granted to the named executive officers as of December 31, 2014.

	Option Awards				Stock Awards			
Name (a)	Number of Securities Underlying Unexercised Options Exercisable (#) (b)	Number of Securities Underlying Unexercised Options Unexercisable (#) (c)	Option Exercise Price ($) (d)	Option Expiration Date (e)	Number of Shares or Units of Stock That Have Not Vested (#) (f)	Market Value of Shares or Units of Stock That Have Not Vested ($) (g)	Equity Incentive Plan Awards: Number of Unearned Shares, Units, or Other Rights That Have Not Vested (#) (h)	Equity Incentive Plan Awards: Market or Payout Value of Unearned Shares, Units, or Other Rights That Have Not Vested ($) (i)

Columns (b), (c), (d), and (e)

Stock options vest one-third per year on the anniversary of the grant date. Options granted from 2007 through 2011 with expiration dates from 2017 through 2021 were fully vested as of December 31, 2014. The options granted in 2012, 2013, and 2014 become fully vested as shown below.

Year Option Granted	Expiration Date	Date Fully Vested
2012	February 13, 2022	February 13, 2015
2013	February 11, 2023	February 11, 2016
2014	February 10, 2024	February 10, 2017

Options also fully vest upon death, total disability, or retirement and expire three years following death or total disability or five years following retirement, or on the original expiration date if earlier. Please see Potential Payments upon Termination or Change-in-Control for more information about the treatment of stock options under different termination and change-in-control events.

Columns (f) and (g)

These columns reflect the number of restricted stock units, including the deemed reinvestment of dividends, held as of December 31, 2014. The value in column (g) is based on the Common Stock closing price on December 31, 2014 ($49.11). The restricted stock units for Ms. Greene vest incrementally each year starting April 1, 2015 and ending April 1, 2018 if she remains employed with the Southern Company system. The restricted stock units for Mr. Kuczynski vest on December 31, 2017 if he remains employed with the Southern Company system on the vesting date. See further discussion of restricted stock units in the CD&A. See also Potential Payments upon Termination or Change-in-Control for more information about the treatment of restricted stock units under different termination and change-in-control events.

Columns (h) and (i)

In accordance with SEC rules, column (h) reflects the target number of performance shares that can be earned at the end of each three-year performance period (December 31, 2015 and 2016) that were granted in 2013 and 2014, respectively. The performance shares granted for the 2012 through 2014 performance period vested on December 31, 2014 and are shown in the Option Exercises and Stock Vested in 2014 table below.

The value in column (i) is derived by multiplying the number of shares in column (h) by the Common Stock closing price on December 31, 2014 ($49.11). The ultimate number of shares earned, if any, will be based on the actual performance results at the end of each respective performance period. The ultimate number of shares earned by Mr. McCrary will be prorated based on the number of months he was employed by Alabama Power during the performance periods. See further discussion of performance shares in the CD&A. See also Potential Payments upon Termination or Change-in-Control for more information about the treatment of performance shares under different termination and change-in-control events.

OPTION EXERCISES AND STOCK VESTED IN 2014

Name (a)	Option Awards: Number of Shares Acquired on Exercise (#) (b)	Option Awards: Value Realized on Exercise ($) (c)	Stock Awards: Number of Shares Acquired on Vesting (#) (d)	Stock Awards: Value Realized on Vesting ($) (e)
T. A. Fanning	1,049,185	10,336,745	10,127	497,337
A. P. Beattie	57,983	547,091	2,578	126,606
W. P. Bowers	128,093	1,628,963	3,347	164,371
K. S. Greene	—	—	—	—
S. E. Kuczynski	—	—	2,060	101,167
C. D. McCrary	452,498	4,169,084	50,311	2,314,724

Columns (b) and (c)

Column (b) reflects the number of shares acquired upon the exercise of stock options during 2014, and column (c) reflects the value realized. The value realized is the difference in the market price over the exercise price on the exercise date.

Columns (d) and (e)

Column (d) includes the performance shares awarded for the 2012 through 2014 performance period that vested on December 31, 2014. The value reflected in column (e) is derived by multiplying the number of shares that vested by the market value of the underlying shares on the vesting date ($49.11).

Because Ms. Greene was not an employee of the Southern Company system when performance shares were awarded in 2012, column (d) does not reflect any vested performance shares for her.

Certain restricted stock units with reinvested dividends vested on April 30, 2014 and are reflected in column (d) for Mr. McCrary. The value of the restricted stock units as shown in column (e) is derived by multiplying the number of restricted stock units and reinvested dividends that vested (47,576) by the market value of the underlying shares on the vesting date ($45.83).

PENSION BENEFITS AT 2014 FISCAL YEAR-END

Name (a)	Plan Name (b)	Number of Years Credited Service (#) (c)	Present Value of Accumulated Benefit ($) (d)	Payments During Last Fiscal Year ($) (e)

C. D. McCrary	Pension Plan	39.33	1,931,424	77,806
	Supplemental Benefit Plan (Pension-Related)	39.33	8,522,909	920,251
	Supplemental Executive Retirement Plan	39.33	2,688,067	290,241

Pension Plan

The Pension Plan is a tax-qualified, funded plan. It is the Company's primary retirement plan. Generally, all full-time Southern Company system employees participate in this plan after one year of service. Normal retirement benefits become payable when participants attain age 65 and complete five years of participation. The plan benefit equals the greater of amounts computed using a "1.7% offset formula" and a "1.25% formula," as described below. Benefits are limited to a statutory maximum.

The 1.7% offset formula amount equals 1.7% of final average pay times years of participation less an offset related to Social Security benefits. The offset equals a service ratio times 50% of the anticipated Social Security benefits in excess of $4,200. The service ratio adjusts the offset for the portion of a full career that a participant has worked. The highest three rates of pay out of a participant's last 10 calendar years of service are averaged to derive final average pay. The rates of pay considered for this formula are the base salary rates with no adjustments for voluntary deferrals after 2008. A statutory limit restricts the amount considered each year; the limit for 2014 was $260,000.

The 1.25% formula amount equals 1.25% of final average pay times years of participation. For this formula, the final average pay computation is the same as above, but annual performance-based compensation earned each year is added to the base salary rates.

Early retirement benefits become payable once plan participants have, during employment, attained age 50 and completed 10 years of participation. Participants who retire early from active service receive benefits equal to the amounts computed using the same formulas employed at normal retirement. However, a 0.3% reduction applies for each month (3.6% for each year) prior to normal retirement that participants elect to have their benefit payments commence. For example, 64% of the formula benefits are payable starting at age 55. As of December 31, 2014, all of the named executive officers are retirement-eligible except Ms. Greene and Mr. Kuczynski.

The Pension Plan's benefit formulas produce amounts payable monthly over a participant's post-retirement lifetime. At retirement, plan participants can choose to receive their benefits in one of seven alternative forms of payment. All forms pay benefits monthly over the lifetime of the retiree or the joint lifetimes of the retiree and a spouse. A reduction applies if a retiring participant chooses a payment form other than a single life annuity. The reduction makes the value of the benefits paid in the form chosen comparable to what it would have been if benefits were paid as a single life annuity over the retiree's life.

Participants vest in the Pension Plan after completing five years of service. As of December 31, 2014, all of the named executive officers are vested in their Pension Plan benefits except Mr. Kuczynski. Ms. Greene received years of credited service for her previous employment with the Southern Company system. Participants who terminate employment after vesting can elect to have their pension benefits commence at age 50 if they participated in the Pension Plan for 10 years. If such an election is made, the early retirement reductions that apply are actuarially determined factors and are larger than 0.3% per month.

If a participant dies while actively employed and is either age 50 or vested in the Pension Plan as of date of death, benefits will be paid to a surviving spouse. A survivor's benefit equals 45% of the monthly benefit that the participant had earned before his or her death. Payments to a surviving spouse of a participant who could have retired will begin immediately. Payments to a survivor of a participant who was not retirement-eligible will begin when the deceased participant would have attained age 50. After commencing, survivor benefits are payable monthly for the remainder of a survivor's life. Participants who are eligible for early retirement may opt to have an 80% survivor benefit paid if they die; however, there is a charge associated with this election.

If participants become totally disabled, periods that Social Security or employer-provided disability income benefits are paid will count as service for benefit calculation purposes. The crediting of this additional service ceases at the point a disabled participant elects to commence retirement payments. Outside of this extra service crediting, the normal Pension Plan provisions apply to disabled participants.

The Southern Company Supplemental Benefit Plan (Pension-Related) (SBP-P)

The SBP-P is an unfunded retirement plan that is not tax qualified. This plan provides high-paid employees any benefits that the Pension Plan cannot pay due to statutory pay/benefit limits. The SBP-P's vesting and early retirement provisions mirror those of the Pension Plan. Its disability provisions mirror those of the Pension Plan but cease upon a participant's separation from service.

The amounts paid by the SBP-P are based on the additional monthly benefit that the Pension Plan would pay if the statutory limits and pay deferrals were ignored. When a SBP-P participant separates from service, vested monthly benefits provided by the benefit formulas are converted into a single sum value. It equals the present value of what would have been paid monthly for an actuarially determined average post-retirement lifetime. The discount rate used in the calculation is based on the 30-year U.S. Treasury yields for the September preceding the calendar year of separation, but not more than six percent.

Vested participants terminating prior to becoming eligible to retire will be paid their single sum value as of September 1 following the calendar year of separation. If the terminating participant is retirement-eligible, the single sum value will be paid in 10 annual installments starting shortly after separation. The unpaid balance of a retiree's single sum will be credited with interest at the prime rate published in *The Wall Street Journal*. If the separating participant is a "key man" under Section 409A of the Code, the first installment will be delayed for six months after the date of separation.

If a SBP-P participant dies after becoming vested in the Pension Plan, the spouse of the deceased participant will receive the installments the participant would have been paid upon retirement. If a vested participant's death occurs prior to age 50, the installments will be paid to a spouse as if the participant had survived to age 50.

The Southern Company Supplemental Executive Retirement Plan (SERP)

The SERP is also an unfunded retirement plan that is not tax qualified. This plan provides high-paid employees additional benefits that the Pension Plan and the SBP-P would pay if the 1.7% offset formula calculations reflected a portion of annual performance-based compensation. To derive the SERP benefits, a final average pay is determined reflecting participants' base rates of pay and their annual performance-based compensation amounts, whether or not deferred, to the extent they exceed 15% of those base rates (ignoring statutory limits). This final average pay is used in the 1.7% offset formula to derive a gross benefit. The Pension Plan and the SBP-P benefits are subtracted from the gross benefit to calculate the SERP benefit. The SERP's early retirement, survivor benefit, disability, and form of payment provisions mirror the SBP-P's provisions. However, except upon a change in control, SERP benefits do not vest until participants retire, so no benefits are paid if a participant terminates prior to becoming retirement-eligible. More information about vesting and payment of SERP benefits following a change in control is included under Potential Payments upon Termination or Change-in-Control.

Pension Benefit Assumptions

The following assumptions were used in the present value calculations for all pension benefits:

- Discount rate — 4.20% Pension Plan and 3.75% supplemental plans as of December 31, 2014,
- Retirement date — Normal retirement age (65 for all named executive officers),
- Mortality after normal retirement — RP-2014 mortality tables with generational projections,
- Mortality, withdrawal, disability, and retirement rates prior to normal retirement — None,
- Form of payment for Pension Benefits:
    - Male retirees: 25% single life annuity; 25% level income annuity; 25% joint and 50% survivor annuity; and 25% joint and 100% survivor annuity
    - Female retirees: 75% single life annuity; 15% level income annuity; 5% joint and 50% survivor annuity; and 5% joint and 100% survivor annuity
- Spouse ages — Wives two years younger than their husbands,
- Annual performance-based compensation earned but unpaid as of the measurement date — 130% of target opportunity percentages times base rate of pay for year amount is earned, and
- Installment determination — 3.75 % discount rate for single sum calculation and 4.25% prime rate during installment payment period.

For all of the named executive officers, the number of years of credited service is one year less than the number of years of employment. The number of years of credited service for Ms. Greene reflects her previous employment with the Southern Company system.

Columns (d) and (e)

For Mr. McCrary, who retired effective May 1, 2014, column (d) reflects the actual benefits expected to be paid, and column (e) reflects the actual amount paid under the Pension Plan in 2014, as described above.

NONQUALIFIED DEFERRED COMPENSATION AS OF 2014 FISCAL YEAR-END

Name (a)	Executive Contributions in Last FY ($) (b)	Employer Contributions in Last FY ($) (c)	Aggregate Earnings in Last FY ($) (d)	Aggregate Withdrawals/ Distributions ($) (e)	Aggregate Balance at Last FYE ($) (f)
T. A. Fanning	239,141	47,539	337,542	—	3,360,041
A. P. Beattie	—	20,834	53,350	—	554,209
W. P. Bowers	149,632	26,669	650,324	—	4,510,207
K. S. Greene	—	19,890	4,795	—	35,944
S. E. Kuczynski	—	20,763	11,919	—	71,858
C. D. McCrary	—	1,393	113,931	1,709,936	3,967

The Company provides the DCP, which is designed to permit participants to defer income as well as certain federal, state, and local taxes until a specified date or their retirement or other separation from service. Up to 50% of base salary and up to 100% of performance-based non-equity compensation may be deferred at the election of eligible employees. All of the named executive officers are eligible to participate in the DCP.

Participants have two options for the deemed investments of the amounts deferred — the Stock Equivalent Account and the Prime Equivalent Account. Under the terms of the DCP, participants are permitted to transfer between investments at any time.

The amounts deferred in the Stock Equivalent Account are treated as if invested at an equivalent rate of return to that of an actual investment in Common Stock, including the crediting of dividend equivalents as such are paid by Southern Company from time to time. It provides participants with an equivalent opportunity for the capital appreciation (or loss) and income of that of a Company stockholder. During 2014, the rate of return in the Stock Equivalent Account was 25.27%.

Alternatively, participants may elect to have their deferred compensation deemed invested in the Prime Equivalent Account, which is treated as if invested at a prime interest rate compounded monthly, as published in *The Wall Street Journal* as the base rate on corporate loans posted as of the last business day of each month by at least 75% of the United States' largest banks. The interest rate earned on amounts deferred during 2014 in the Prime Equivalent Account was 3.25%.

Column (b)

This column reports the actual amounts of compensation deferred under the DCP by each named executive officer in 2014. The amount of salary deferred by the named executive officers, if any, is included in the Salary column in the Summary Compensation Table. The amounts of performance-based compensation deferred in 2014 were the amounts that were earned as of December 31, 2013 but were not payable until the first quarter of 2014. These amounts are not reflected in the Summary Compensation Table because that table reports performance-based compensation that was earned in 2014 but not payable until early 2015. These deferred amounts may be distributed in a lump sum or in up to 10 annual installments at termination of employment or in a lump sum at a specified date, at the election of the participant.

Column (c)

This column reflects contributions under the SBP. Under the Code, employer-matching contributions are prohibited under the ESP on employee contributions above stated limits in the ESP, and, if applicable, above legal limits set forth in the Code. The SBP is a nonqualified deferred compensation plan under which contributions are made that are prohibited from being made in the ESP. The contributions are treated as if invested in Common Stock and are payable in cash upon termination of employment in a lump sum or in up to 20 annual installments, at the election of the participant. The amounts reported in this column also were reported in the All Other Compensation column in the Summary Compensation Table.

Column (d)

This column reports earnings or losses on both compensation the named executive officers elected to defer and on employer contributions under the SBP.

Column (f)

This column includes amounts that were deferred under the DCP and contributions under the SBP in prior years. The following chart shows the amounts previously reported.

	Amounts Deferred under the DCP prior to 2014 and previously reported ($)	Employer Contributions under the SBP prior to 2014 and previously reported ($)	Total ($)
T. A. Fanning	1,936,157	368,900	2,305,057
A. P. Beattie	34,781	61,314	96,095
W. P. Bowers	1,981,253	143,292	2,124,545
K. S. Greene	0	11,220	11,220
S. E. Kuczynski	0	19,905	19,905
C. D. McCrary	489,924	376,220	866,144

POTENTIAL PAYMENTS UPON TERMINATION OR CHANGE-IN-CONTROL

This section describes and estimates payments that could be made to the named executive officers serving as of December 31, 2014 under different termination and change-in-control events. The estimated payments would be made under the terms of Southern Company's compensation and benefit program or the change-in-control severance program. All of the named executive officers are participants in Southern Company's change-in-control severance program for officers. The amount of potential payments is calculated as if the triggering events occurred as of December 31, 2014 and assumes that the price of Common Stock is the closing market price on December 31, 2014.

Description of Termination and Change-in-Control Events

The following charts list different types of termination and change-in-control events that can affect the treatment of payments under the compensation and benefit programs. No payments are made under the change-in-control severance program unless, within two years of the change in control, the named executive officer is involuntarily terminated or voluntarily terminates for Good Reason. (See the description of Good Reason below.)

Traditional Termination Events

- Retirement or Retirement-Eligible — Termination of a named executive officer who is at least 50 years old and has at least 10 years of credited service.
- Resignation — Voluntary termination of a named executive officer who is not retirement-eligible.
- Lay Off — Involuntary termination of a named executive officer who is not retirement-eligible not for cause.
- Involuntary Termination — Involuntary termination of a named executive officer for cause. Cause includes individual performance below minimum performance standards and misconduct, such as violation of the Company's Drug and Alcohol Policy.
- Death or Disability — Termination of a named executive officer due to death or disability.

Change-in-Control-Related Events

At the Company or the subsidiary company level:

- Company Change-in-Control I — Consummation of an acquisition by another entity of 20% or more of Common Stock or, following consummation of a merger with another entity, the Company's stockholders own 65% or less of the entity surviving the merger.
- Company Change-in-Control II — Consummation of an acquisition by another entity of 35% or more of Common Stock or, following consummation of a merger with another entity, the Company's stockholders own less than 50% of the Company surviving the merger.
- Company Termination — Consummation of a merger or other event and the Company is not the surviving company or Common Stock is no longer publicly traded.
- Subsidiary Company Change-in-Control — Consummation of an acquisition by another entity, other than another subsidiary of the Company, of 50% or more of the stock of any of the Company's subsidiaries, consummation of a merger with another entity and the Company's subsidiary is not the surviving company, or the sale of substantially all the assets of any of the Company's subsidiaries.

At the employee level:

Involuntary Change-in-Control Termination or Voluntary Change-in-Control Termination for Good Reason — Employment is terminated within two years of a change in control, other than for cause, or the employee voluntarily terminates for Good Reason. Good Reason for voluntary termination within two years of a change in control generally is satisfied when there is a material reduction in salary, performance-based compensation opportunity or benefits, relocation of over 50 miles, or a diminution in duties and responsibilities.

The following chart describes the treatment of different pay and benefit elements in connection with the Traditional Termination Events as described above.

Program	Retirement/ Retirement-Eligible	Lay Off (Involuntary Termination Not For Cause)	Resignation	Death or Disability	Involuntary Termination (For Cause)
Pension Benefits Plans	Benefits payable as described in the notes following the Pension Benefits table.	Same as Retirement.	Same as Retirement.	Same as Retirement.	Same as Retirement.
Annual Performance Pay Program	Prorated if retire before 12/31.	Same as Retirement.	Forfeit.	Same as Retirement.	Forfeit.
Stock Options	Vest; expire earlier of original expiration date or five years.	Vested options expire in 90 days; unvested are forfeited.	Same as Lay Off.	Vest; expire earlier of original expiration date or three years.	Forfeit.
Performance Shares	Prorated if retire prior to end of performance period.	Forfeit.	Forfeit.	Same as Retirement.	Forfeit.
Restricted Stock Units	Forfeit.	Vest.	Forfeit.	Vest.	Forfeit.
Financial Planning Perquisite	Continues for one year.	Terminates.	Terminates.	Same as Retirement.	Terminates.
DCP	Payable per prior elections (lump sum or up to 10 annual installments).	Same as Retirement.	Same as Retirement.	Payable to beneficiary or participant per prior elections. Amounts deferred prior to 2005 can be paid as a lump sum per the benefit administration committee's discretion.	Same as Retirement.
SBP – non-pension related	Payable per prior elections (lump sum or up to 20 annual installments).	Same as Retirement.	Same as Retirement.	Same as the DCP	Same as Retirement.

The following chart describes the treatment of payments under compensation and benefit programs under different change-in-control events, except the Pension Plan. The Pension Plan is not affected by change-in-control events.

Program	Company Change-in-Control I	Company Change-in-Control II	Company Termination or Subsidiary Company Change-in-Control	Involuntary Change-in-Control-Related Termination or Voluntary Change-in-Control-Related Termination for Good Reason
Nonqualified Pension Benefits	All SERP-related benefits vest if participants vested in tax-qualified pension benefits; otherwise, no impact. SBP - pension-related benefits vest for all participants and single sum value of benefits earned to change-in-control date paid following termination or retirement.	Benefits vest for all participants and single sum value of benefits earned to the change-in-control date paid following termination or retirement.	Same as Company Change-in-Control II.	Based on type of change-in-control event.
Annual Performance Pay Program	If no program termination, paid at greater of target or actual performance. If program terminated within two years of change-in-control, prorated at target performance level.	Same as Company Change-in-Control I.	Prorated at target performance level.	If not otherwise eligible for payment, if the program is still in effect, prorated at target performance level.
Stock Options	Not affected by change-in-control events.	Not affected by change-in-control events.	Vest and convert to surviving company's securities; if cannot convert, pay spread in cash.	Vest.
Performance Shares	Not affected by change-in-control events.	Not affected by change-in-control events.	Vest and convert to surviving company's securities; if cannot convert, pay spread in cash.	Vest.
RSUs	Not affected by change-in-control events.	Not affected by change-in-control events.	Vest and convert to surviving company's securities; if cannot convert, pay spread in cash.	Vest.
DCP	Not affected by change-in-control events.	Not affected by change-in-control events.	Not affected by change-in-control events.	Not affected by change-in-control events.
SBP	Not affected by change-in-control events.	Not affected by change-in-control events.	Not affected by change-in-control events.	Not affected by change-in-control events.
Severance Benefits	Not applicable.	Not applicable.	Not applicable.	Two or three times base salary plus target annual performance-based pay.
Healthcare Benefits	Not applicable.	Not applicable.	Not applicable.	Up to five years participation in group healthcare plan plus payment of two or three years' premium amounts.
Outplacement Services	Not applicable.	Not applicable.	Not applicable.	Six months.

Potential Payments

This section describes and estimates payments that would become payable to the named executive officers upon a termination or change in control as of December 31, 2014.

Pension Benefits

The amounts that would have become payable to the named executive officers if the Traditional Termination Events occurred as of December 31, 2014 under the Pension Plan, the SBP-P, and the SERP are itemized in the following chart. The amounts shown under the Retirement column are amounts that would have become payable to the named executive officers that were retirement-eligible on December 31, 2014 and are the monthly Pension Plan benefits and the first of 10 annual installments from the SBP-P and the SERP. The amounts shown under the Resignation or Involuntary Termination column are the amounts that would have become payable to the named executive officers who were not retirement-eligible on December 31, 2014 and are the monthly Pension Plan benefits that would become payable as of the earliest possible date under the Pension Plan and the single sum value of benefits earned up to the termination date under the SBP-P, paid as a single payment rather than in 10 annual installments. Benefits under the SERP would be forfeited. The amounts shown that are payable to a spouse in the event of the death of the named executive officer are the monthly amounts payable to a spouse under the Pension Plan and the first of 10 annual installments from the SBP-P and the SERP. The amounts in this chart are very different from the pension values shown in the Summary Compensation Table and the Pension Benefits table. Those tables show the present values of all the benefit amounts anticipated to be paid over the lifetimes of the named executive officers and their spouses. Those plans are described in the notes following the Pension Benefits table. Of the named executive officers, Ms. Greene and Mr. Kuczynski were not retirement-eligible on December 31, 2014.

		Retirement ($)	Resignation or Involuntary Termination	Death (payments to a spouse) ($)
T. A. Fanning	Pension	8,207	treated as retiring	4,998
	SBP-P	1,239,797	treated as retiring	1,239,797
	SERP	506,098	treated as retiring	506,098
A. P. Beattie	Pension	10,689	treated as retiring	5,740
	SBP-P	568,034	treated as retiring	568,034
	SERP	219,450	treated as retiring	219,450
W. P. Bowers	Pension	8,737	treated as retiring	5,256
	SBP-P	640,352	treated as retiring	640,352
	SERP	210,117	treated as retiring	210,117
K. S. Greene	Pension	—	628	1,031
	SBP-P	—	192,311	22,072
	SERP	—	—	29,307
S. E. Kuczynski	Pension	—	—	406
	SBP-P	—	—	—
	SERP	—	—	—

As described in the Change-in-Control chart, the only change in the form of payment, acceleration, or enhancement of the pension benefits is that the single sum value of benefits earned up to the change-in-control date under the SBP-P and the SERP could be paid as a single payment rather than in 10 annual installments. Also, the SERP benefits vest for participants who are not retirement-eligible upon a change in control. Estimates of the single sum payment that would have been made to the named executive officers, assuming termination as of December 31, 2014 following a change-in-control-related event, other than a Company Change-in-Control I (which does not impact how pension benefits are paid), are itemized below. These amounts would be paid instead of the benefits shown in the Traditional Termination Events chart above; they are not paid in addition to those amounts.

	SBP-P ($)	SERP ($)	Total ($)
T. A. Fanning	12,397,974	5,060,983	17,458,957
A. P. Beattie	5,680,337	2,194,503	7,874,840
W. P. Bowers	6,403,519	2,101,171	8,504,690
K. S. Greene	188,182	249,865	438,047
S. E. Kuczynski	—	—	—

The pension benefit amounts in the tables above were calculated as of December 31, 2014 assuming payments would begin as soon as possible under the terms of the plans. Accordingly, appropriate early retirement reductions were applied. Any unpaid annual performance-based compensation was assumed to be paid at 1.30 times the target level. Pension Plan benefits were calculated assuming each named executive officer chose a single life annuity form of payment, because that results in the greatest monthly benefit. The single sum values were based on a 3.79% discount rate.

Annual Performance Pay Program

The amount payable if a change in control had occurred on December 31, 2014 is the greater of target or actual performance. Because actual payouts for 2014 performance were above the target level for all of the named executive officers, the amount that would have been payable was the actual amount paid as reported in the CD&A and the Summary Compensation Table.

Stock Options, Performance Shares, and Restricted Stock Units (Equity Awards)

Equity Awards would be treated as described in the Termination and Change-in-Control charts above. Under a Southern Company Termination, all Equity Awards vest. In addition, if there is an Involuntary Change-in-Control Termination or Voluntary Change-in-Control Termination for Good Reason, Equity Awards vest. There is no payment associated with Equity Awards unless there is a Southern Company Termination and the participants' Equity Awards cannot be converted into surviving company awards. In that event, the value of outstanding Equity Awards would be paid to the named executive officers. For stock options, the value is the excess of the exercise price and the closing price of Common Stock on December 31, 2014. The value of performance shares and restricted stock units is calculated using the closing price of Common Stock on December 31, 2014. The chart below shows the number of stock options for which vesting would be accelerated under a Southern Company Termination and the amount that would be payable under a Southern Company Termination if there were no conversion to the surviving company's stock options. It also shows the number and value of performance shares and restricted stock units that would be paid.

	Number of Equity Awards with Accelerated Vesting (#)			Total Number of Equity Awards Following Accelerated Vesting (#)			Total Payable in Cash without Conversion of Equity Awards ($)
	Stock Options	Performance Shares	Restricted Stock Units	Stock Options	Performance Shares	Restricted Stock Units	
T. A. Fanning	1,700,767	167,393	—	2,337,096	167,393	—	22,658,723
A. P. Beattie	453,576	44,425	—	755,968	44,425	—	7,582,510
W. P. Bowers	552,123	54,423	—	1,406,893	54,423	—	17,029,625
K. S. Greene	432,135	18,700	46,425	541,840	18,700	46,425	5,643,939
S. E. Kuczynski	343,802	33,846	30,931	805,398	33,846	30,931	9,081,360

DCP and SBP

The aggregate balances reported in the Nonqualified Deferred Compensation table would be payable to the named executive officers as described in the Traditional Termination and Change-in-Control-Related Events charts above. There is no enhancement or acceleration of payments under these plans associated with termination or change-in-control events, other than the lump-sum payment opportunity described in the above charts. The lump sums that would be payable are those that are reported in the Nonqualified Deferred Compensation table.

Healthcare Benefits

All of the named executive officers, except Ms. Greene and Mr. Kuczynski, are retirement-eligible. Healthcare benefits are provided to retirees, and there is no incremental payment associated with the termination or change-in-control events, except in the case of a change-in-control-related termination, as described in the Change-in-Control-Related Events chart. The estimated cost of providing healthcare insurance premiums for up to a maximum of three years is $44,826 for Ms. Greene and $45,975 for Mr. Kuczynski.

Financial Planning Perquisite

An additional year of the financial planning perquisite, which is set at a maximum of $8,700 per year, will be provided after retirement for retirement-eligible named executive officers.

There are no other perquisites provided to the named executive officers under any of the traditional termination or change-in-control-related events.

Severance Benefits

The named executive officers are participants in a change-in-control severance plan. The plan provides severance benefits, including outplacement services, if within two years of a change in control, they are involuntarily terminated, not for cause, or they voluntarily terminate for Good Reason. The severance benefits are not paid unless the named executive officer releases the employing company from any claims he or she may have against the employing company.

The estimated cost of providing the six months of outplacement services is $6,000 per named executive officer. The severance payment is three times the base salary and target payout under the annual Performance Pay Program for Mr. Fanning and two times the base salary and target payout under the annual Performance Pay Program for the other named executive officers. If any portion of the severance amount constitutes an "excess parachute payment" under Section 280G of the Code and is therefore subject to an excise tax, the severance amount will be reduced unless the after-tax "unreduced amount" exceeds the after-tax "reduced amount." Excise tax gross-ups will not be provided on change-in-control severance payments.

The table below estimates the severance payments that would be made to the named executive officers if they were terminated as of December 31, 2014 in connection with a change in control.

	Severance Amount ($)
T. A. Fanning	7,920,000
A. P. Beattie	2,357,242
W. P. Bowers	2,755,683
K. S. Greene	2,210,000
S.E. Kuczynski	2,272,536

COMPENSATION RISK ASSESSMENT

The Company reviewed its compensation policies and practices and concluded that excessive risk-taking is not encouraged. This conclusion was based on an assessment of the mix of pay components and performance goals, the annual pay/performance analysis by the Compensation Committee's independent consultant, stock ownership requirements, compensation governance practices, and the claw-back provision. The assessment was reviewed with the Compensation Committee.

COMPENSATION COMMITTEE INTERLOCKS AND INSIDER PARTICIPATION

The Compensation Committee is made up of independent Directors of the Company who have never served as executive officers of the Company. During 2014, none of the Company's executive officers served on the Board of Directors of any entities whose executive officers serve on the Compensation Committee.

EQUITY COMPENSATION PLAN INFORMATION

The following table provides information as of December 31, 2014 concerning shares of Common Stock authorized for issuance under Southern Company's existing non-qualified equity compensation plans.

Plan category	Number of securities to be issued upon exercise of outstanding options, warrants, and rights (a)	Weighted-average exercise price of outstanding options, warrants, and rights (b)	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)) (c)
Equity compensation plans approved by security holders	39,929,319	$40.55	15,179,865(1)
Equity compensation plans not approved by security holders	n/a	n/a	n/a

(1) Represents shares available for future issuance under the Omnibus Incentive Compensation Plan.

Item No. 5 — Ratification of Appointment of Independent Registered Public Accounting Firm

The Audit Committee of the Board of Directors is directly responsible for the appointment, retention, and oversight of the independent registered public accounting firm retained to audit the Company's financial statements, including the compensation of such firm and the related audit fee negotiations.

Deloitte & Touche has served as the Company's independent registered public accounting firm since 2002. To ensure continuing independence, the Audit Committee periodically considers whether there should be a change in the independent registered public accounting firm. The Audit Committee and its Chair also participate in the selection of Deloitte & Touche's lead engagement partner in connection with the mandatory rotation requirements of the SEC.

The Audit Committee has appointed Deloitte & Touche as the Company's independent registered public accounting firm for 2015. This appointment is being submitted to stockholders for ratification, and the Audit Committee and the Board of Directors believe that the continued retention of Deloitte & Touche to serve as the Company's independent registered public accounting firm is in the best interests of the Company and its stockholders.

Representatives of Deloitte & Touche will be present at the 2015 Annual Meeting to respond to appropriate questions from stockholders and will have the opportunity to make a statement if they desire to do so.

The affirmative vote of a majority of the votes cast is required for ratification of the appointment of the independent registered public accounting firm.

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "FOR" ITEM NO. 5.

Audit Committee Report

The Audit Committee oversees the Company's financial reporting process on behalf of the Board of Directors. Management has the primary responsibility for establishing and maintaining adequate internal controls over financial reporting, including disclosure controls and procedures, and for preparing the Company's consolidated financial statements. In fulfilling its oversight responsibilities, the Audit Committee reviewed the audited consolidated financial statements of the Company and its subsidiaries and management's report on the Company's internal control over financial reporting in the 2014 Annual Report to Stockholders attached hereto as Appendix D with management. The Audit Committee also reviews the Company's quarterly and annual reporting on Forms 10-Q and 10-K prior to filing with the SEC. The Audit Committee's review process includes discussions of the quality, not just the acceptability, of the accounting principles, the reasonableness of significant judgments and estimates, and the clarity of disclosures in the financial statements.

The independent registered public accounting firm is responsible for expressing opinions on the conformity of the consolidated financial statements with accounting principles generally accepted in the United States and the effectiveness of the Company's internal control over financial reporting with the criteria established in "Internal Control — Integrated Framework (2013)" issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Audit Committee has discussed with the independent registered public accounting firm the matters that are required to be discussed by the Public Company Accounting Oversight Board (PCAOB) Auditing Standard No. 16, *Communications with Audit Committees* and SEC Rule 2-07 of Regulation S-X, *Communications with Audit Committees*. In addition, the Audit Committee has discussed with the independent registered public accounting firm its independence from management and the Company as required under rules of the PCAOB and has received the written disclosures and letter from the independent registered public accounting firm required by the rules of the PCAOB. The Audit Committee also has considered whether the independent registered public accounting firm's provision of non-audit services to the Company is compatible with maintaining the firm's independence.

The Audit Committee discussed the overall scope and plans with the Company's internal auditors and independent registered public accounting firm for their respective audits. The Audit Committee meets with the internal auditors and the independent registered public accounting firm, with and without management present, to discuss the results of their audits, evaluations by management and the independent registered public accounting firm of the Company's internal control over financial reporting, and the overall quality of the Company's financial reporting. The Audit Committee also meets privately with the Company's compliance officer. The Audit Committee held ten meetings during 2014.

In reliance on the reviews and discussions referred to above, the Audit Committee recommended to the Board of Directors (and the Board approved) that the audited consolidated financial statements be included in the Company's Annual Report on Form 10-K for the year ended December 31, 2014 and filed with the SEC. The Audit Committee also reappointed Deloitte & Touche as the Company's independent registered public accounting firm for 2015. Stockholders will be asked to ratify that selection at the 2015 Annual Meeting.

Members of the Audit Committee as of December 31, 2014:

Jon A. Boscia, Chair
Juanita Powell Baranco
Warren A. Hood, Jr.
Larry D. Thompson

Principal Independent Registered Public Accounting Firm Fees

The following represents the fees billed to the Company for the two most recent fiscal years by Deloitte & Touche — the Company's principal independent registered public accounting firm for 2014 and 2013.

	2014	2013
	(in thousands)	
Audit Fees (1)	$11,794	$11,704
Audit-Related Fees (2)	126	110
Tax Fees	—	50
All Other Fees (3)	191	29
Total	$12,111	$11,893

(1) Includes services performed in connection with financing transactions.

(2) Includes non-statutory audit services in both 2014 and 2013.

(3) Represents registration fees for attendance at Deloitte & Touche-sponsored education seminars in 2013 and 2014, subscription fees for Deloitte & Touche's technical accounting research tool in 2013 and 2014, information technology consulting services related to general ledger software of the Company in 2014, and travel expenses for Deloitte & Touche's training facilitator in 2013.

The Audit Committee has adopted a Policy on Engagement of the Independent Auditor for Audit and Non-Audit Services (see Appendix C) that includes requirements for the Audit Committee to pre-approve services provided by Deloitte & Touche. This policy was initially adopted in July 2002 and, since that time, all services included in the chart above have been pre-approved by the Audit Committee.

ITEM NO. 6 — STOCKHOLDER PROPOSAL ON PROXY ACCESS

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "AGAINST" ITEM NO. 6

The Company has been advised that a stockholder proposes to submit the following resolution at the 2015 Annual Meeting. The name, address, and beneficial ownership of such stockholder are available upon request.

"RESOLVED: Shareholders of The Southern Company (the "Company") ask the board of directors (the "Board") to adopt, and present for shareholder approval, a "proxy access" bylaw. Such a bylaw shall require the Company to include in proxy materials prepared for a shareholder meeting at which directors are to be elected the name, Disclosure and Statement (as defined herein) of any person nominated for election to the board by a shareholder or group (the "Nominator") that meets the criteria established below. The Company shall allow shareholders to vote on such nominee on the Company's proxy card.

"The number of shareholder-nominated candidates appearing in proxy materials shall not exceed one quarter of the directors then serving. This bylaw, which shall supplement existing rights under Company bylaws, should provide that a Nominator must:

a) have beneficially owned 3% or more of the Company's outstanding common stock continuously for at least three years before submitting the nomination;

b) give the Company, within the time period identified in its bylaws, written notice of the information required by the bylaws and any Securities and Exchange Commission rules about (i) the nominee, including consent to being named in the proxy materials and to serving as director if elected; and (ii) the Nominator, including proof it owns the required shares (the "Disclosure"); and

c) certify that (i) it will assume liability stemming from any legal or regulatory violation arising out of the Nominator's communications with the Company shareholders, including the Disclosure and Statement; (ii) it will comply with all applicable laws and regulations if it uses soliciting material other than the Company's proxy materials; and (c) to the best of its knowledge, the required shares were acquired in the ordinary course of business and not to change or influence control at the Company.

"The Nominator may submit with the Disclosure a statement not exceeding 500 words in support of the nominee (the "Statement"). The Board shall adopt procedures for promptly resolving disputes over whether notice of a nomination was timely, whether the Disclosure and Statement satisfy the bylaw and applicable federal regulations, and the priority to be given to multiple nominations exceeding the one-quarter limit.

SUPPORTING STATEMENT

"We believe proxy access is a fundamental shareholder right that will make directors more accountable and contribute to increased shareholder value. The CFA Institute's 2014 assessment of pertinent academic studies and the use of proxy access in other markets similarly concluded that proxy access:

- Would "benefit both the markets and corporate boardrooms, with little cost or disruption."

- Has the potential to raise overall US market capitalization by up to $140.3 billion if adopted market-wide. (http://www.cfapubs.org/doi/pdf/10.2469/ccb.v2014.n9.1)

"The proposed bylaw terms enjoy strong investor support — votes for similar shareholder proposals averaged 55% from 2012 through September 2014 — and similar bylaws have been adopted by companies of various sizes across industries, including Chesapeake Energy, Hewlett-Packard, Western Union and Verizon.

"We urge shareholders to vote FOR this proposal."

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "AGAINST" ITEM NO. 6 FOR THE FOLLOWING REASONS:

Proxy access, which refers to the ability of stockholders holding a small percentage of the Company's shares to require the Company to undertake the effort and expense of including their Director nominees in the Company's proxy materials and thus trigger a proxy contest, is an untested governance feature for U.S. companies. The Board of Directors continually evaluates the Company's governance profile and believes that proxy access should not be implemented in the absence of a compelling rationale. The proponent's proxy access proposal does not seek to remedy any specific governance or performance deficiency at the Company; in fact, it appears the Company was targeted with this proposal solely because its business involves the consumption of fossil fuels and not because of any development related to proxy access.

The Company's stockholders already have significant and meaningful corporate governance rights. This includes the ability to recommend Director candidates for independent consideration by the Governance Committee and the ability to register disapproval of individual Directors or the full Board, on an annual basis, by means of the Company's majority voting standard and Director resignation policy. In addition, stockholders holding as few as 10% of the outstanding shares of Common Stock have the right to request a special meeting of stockholders.

Southern Company has consistently created value for its stockholders and there is no need for proxy access.

- The most recent dividend, paid March 6, 2015, marks the 269th consecutive quarter the Company has paid a dividend equal to or higher than the previous quarter.
- The Southern Company generation system's Equivalent Forced Outage Rate is at industry-leading levels (1.9% compared to five-year national average of approximately 9.0%).
- The Company and its four traditional operating company subsidiaries occupied the top five spots for customer satisfaction for all customer classes combined in the customer value benchmark survey, an annual peer comparison of U.S. electric utilities.
- With respect to compensation matters, the Company has received stockholder support in its annual say-on-pay vote of in excess of 94% of votes cast since the vote was first held in 2011.

Southern Company stockholders already have access to robust and effective procedures to communicate with and influence the Board of Directors and hold it accountable.

- The full Board of Directors is elected annually and the Company has a majority voting standard in uncontested Director elections, combined with a resignation policy for candidates who fail to receive a majority of votes cast (see page 13).
- Management proactively engages with stockholders on corporate governance issues (see page 12).
- The Company holds an annual say-on-pay vote on executive compensation (see page 24).

- The Board of Directors has established a mechanism for stockholders to directly communicate with the Board or with specified Directors (see page 12).
- The Company regularly engages with stockholders and other concerned parties on environmental issues and has provided significant voluntary disclosure.

Southern Company already has significant corporate governance practices that protect stockholder rights and interests.

- The Company has a threshold of just 10% of outstanding shares for stockholders to request a special meeting.
- Stockholders must approve amendments to the Company's certificate of incorporation and By-Laws, so the Board of Directors cannot unilaterally take away any rights granted to stockholders in the Company's governing documents.
- The Company has not adopted a "poison pill" stockholder rights plan and the Board of Directors does not have the authority to issue "blank check" preferred stock.
- If Proposal No. 3 is approved by stockholders, the Company's certificate of incorporation and By-Laws will not restrict stockholders' ability to act by written consent to the fullest extent allowed by applicable Delaware law (see page 9).

The Board of Directors is already highly-qualified, diverse, and independent.

All members of the Board of Directors, other than the Chief Executive Officer, are independent of management and the Board has a strong Lead Independent Director to provide a source of independent leadership (see page 15). The Board periodically refreshes its membership to ensure it adds helpful experience and fresh perspectives and maintains appropriate diversity. Since the beginning of 2014, the Board of Directors has added three new members – Ms. Hudson and Messrs. Thompson and Johns, which means the Board now includes three female members and three ethnic minorities. The Board's commitment to refreshment is reflected in its overall average Board tenure, which is less than six years.

Implementing proxy access could negatively affect the Company's corporate governance.

Bypassing the independent Governance Committee process for nominations.

Implementing proxy access would provide a small percentage of stockholders, who do not have a fiduciary obligation to other stockholders and who may have a narrow agenda, the right to include Director nominees in the Company's proxy statement, bypassing the Company's independent nomination process. Currently, absent a proxy contest, all nominees are recommended to the full Board of Directors for nomination by the Governance Committee. Stockholders may participate in this process by submitting recommendations of candidates for consideration by the Governance Committee (see page 19). The Governance Committee is composed entirely of independent Directors, and the Board and the Governance Committee each have a fiduciary duty to make nominations that are in the best interests of all stockholders. The Board of Directors and the Governance Committee are in the best position to evaluate Director candidates, in light of the need for a full Board that is composed of a group of Directors with complementary skills, experience, and perspectives and that meets the unique needs of the Company.

Increasing the influence of special interests and fragmenting the Board of Directors.

If proxy access were implemented, a small minority of stockholders could nominate Director candidates to further a special interest agenda that may not be in the best interest of the Company as a whole. Opposing such candidates in a contested election would be time-consuming and costly for the

Company. Accordingly, even if special interest Directors were not elected, such stockholders could still attempt to use proxy access to extract concessions from the Company related to their special interests. Moreover, the election of Directors nominated by a small percentage of stockholders with special interests could also result in the creation of factions on the Board of Directors, making it more difficult for the Board to reach consensus on behalf of all stockholders, thereby delaying important decision-making.

Proxy access could lead to continually contested elections, which would impose costs on the Company, divert management's and the Board's attention, and potentially discourage highly-qualified Directors from serving.

Providing proxy access for a group of stockholders owning just 3% of the Company's outstanding shares could make contested elections much more commonplace. Currently, stockholders seeking to nominate Director candidates must, like the Company, bear their own costs of soliciting votes for their proposed nominees. This existing system helps ensure that a stockholder is serious about its intention to nominate Directors, because the stockholder must bear the cost of its own solicitation. Proxy access would shift this cost to the Company, at no risk to the stockholder. In addition, the prospect of having to stand in a contested election routinely could cause highly-qualified Directors to be reluctant to serve on the Board of Directors.

The vote needed to pass the proponent's resolution is the affirmative vote of a majority of the votes cast.

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "AGAINST" ITEM NO. 6.

Item no. 7 — Greenhouse Gas Emissions Reduction Goals 2015

THE BOARD OF DIRECTORS RECOMMENDS A VOTE "AGAINST" ITEM NO. 7.

The Company has been advised that a stockholder, together with multiple co-filers, proposes to submit the following resolution at the 2015 Annual Meeting. The names, addresses, and beneficial ownership of such stockholder and co-filers are available upon request.

RESOLVED:
"Shareholders request that Southern Company adopt absolute, quantitative time-bound goals for reducing total greenhouse gas (GHG) emissions from operations and report to shareholders by November 1, 2015 on its plans to achieve these goals (omitting proprietary information and prepared at reasonable cost.)"

WHEREAS:
"The 2014 *Synthesis Report* of the Intergovernmental Panel on Climate Change (IPCC) warns that continued greenhouse gas (GHG) emissions and subsequent global warming will have "severe, pervasive and irreversible impacts for people and ecosystems." The *Risky Business* report forecasts significant economic costs to agriculture, labor productivity, and property.

"To mitigate the worst impacts of climate change and limit warming to below 2°C, as agreed in the Copenhagen Accord, the IPCC estimates that a fifty percent reduction in GHG emissions globally is needed by 2050, relative to 1990 levels.

"Our country's fleet of fossil fueled power plants is the single largest source of carbon pollution in the U.S., accounting for over one-third of total carbon emissions, according to the Environmental Protection Agency (EPA.) Plans for increased regulation of GHG emissions are already underway, posing regulatory risk to the company. President Obama committed to reduce emissions by 26-28 percent by 2025. The EPA's Clean Power Plan would strengthen emissions standards for power plants, seeking an overall 30 percent reduction of CO2 emissions by 2030. With the fourth highest power generation from burning coal in the country and the third highest level of carbon emissions of U.S. power producers, compliance with this rule will likely require substantial adjustments to Southern facilities, entailing emissions reductions, increased use of renewable energy and deployment of energy efficiency. Meanwhile, Southern has publicly stated that it does not support this regulation.

"Southern Company has made significant investments in renewable energy, efficiencies, and a more diversified energy mix. Setting clear proactive goals to manage greenhouse gas emissions at Southern Company and its operating companies would enable the Company to manage climate risk and align with a growing global commitment to contain emissions. Sixty percent of Fortune 100 companies have set GHG reduction goals or renewable energy targets. Southern lags behind peers including American Electric Power, CMS Energy, Exelon and Duke Energy which have set absolute and/or intensity carbon reduction goals. NRG Energy announced its aim to reduce its carbon emissions 50 percent by 2030 and 90 percent by 2050.

SUPPORTING STATEMENT:
"A disciplined business strategy to cut emissions includes setting goals, striving to meet them and reporting on progress. Leading practices for electric utilities to manage carbon across the enterprise include pursuing all cost-effective energy efficiency opportunities, deploying large-scale and distributed renewable energy, utilizing smart grid technologies for consumer and system benefit, and serving as a systems integrator providing services to meet varying customer needs; and conducting robust and transparent resource planning. Two commonly used options for setting GHG targets are GHG "intensity" or "absolute" targets. Absolute GHG reduction goals compare total GHG emissions in the goal year to those in a base year."

X THE BOARD OF DIRECTORS RECOMMENDS A VOTE "AGAINST" ITEM NO. 7 FOR THE FOLLOWING REASONS:

The Board of Directors does not believe it is in the best interests of the Company or its stockholders at this time to establish voluntary, absolute quantitative goals for reducing total greenhouse gas (GHG) emissions from the Southern Company system's operations. Independently establishing these types of goals would not add value to the Company's already robust research, development, and deployment efforts relating to new technology to reduce GHG emissions, would be premature given the Environmental Protection Agency's (EPA) proposed regulations relating to GHG emissions from new and existing sources, and would not be an efficient use of additional Company resources given the ongoing reporting and significant policy engagement by the Company in this area.

The Southern Company system is committed to a diverse energy mix. With a strong base of natural gas, coal, nuclear, hydro, and growing renewable generating capacity, the Southern Company system's fleet is flexible, allowing it to choose the most cost effective fuel source to best serve customers with clean, safe, reliable, and affordable energy. The Southern Company system is dedicated to a full portfolio of resources for the United States' energy future — twenty-first century coal, natural gas, renewables, new nuclear, and energy efficiency.

Currently, the EPA is in the process of promulgating carbon dioxide regulations that will affect new, existing, and modified and reconstructed power plants. Final emission standards for new sources and for modified and reconstructed sources and final emission reduction guidelines for existing sources are expected this year from the EPA. Independently establishing reduction goals without the benefit of these final rules is premature. Even absent regulations, the Southern Company system's GHG emissions in 2014 were almost 20% lower than 2005 levels.

The Southern Company system is a leader in the industry in developing technologies to reduce GHG emissions in the generation of electric energy and has committed substantial financial and human resources to research, develop, and deploy such technologies. This leadership is best evidenced by the Southern Company system's efforts to develop carbon capture and storage. The Southern Company system was selected by the U.S. Department of Energy (DOE) to manage and operate the DOE's National Carbon Capture Center in Alabama, a focal point of national efforts to reduce GHG emissions from coal-based power plants through technological innovation. Additionally, the Company has joined the DOE and other partners to demonstrate carbon capture and storage at a coal-based power plant in Alabama. The Company and its partners have developed an advanced coal gasification technology known as Transport Integrated Gasification (TRIG™) designed to produce less carbon dioxide emissions than the current fleet of existing coal plants. The Company's subsidiary, Mississippi Power, is constructing the Kemper IGCC using TRIG™ technology, which is designed to include the capture and sequestration (via enhanced oil recovery) of at least 65 percent of the carbon dioxide produced by the Kemper IGCC during operations.

Additionally, as nuclear power re-emerges as a viable way to meet new demand for electricity, with the added benefit of no emissions of GHG, Southern Company, through its subsidiary Georgia Power, is leading the nation's nuclear energy renaissance with the construction of two new nuclear units at Plant Vogtle.

The Company has created a number of reports disclosing its actions related to GHG and other emissions. In 2006, the Company's long-standing Environmental Progress Reports evolved into its *Corporate Responsibility Report*, which includes data on emissions and actions being undertaken to address those emissions. Additionally, the Company has also published for a number of years its climate and carbon disclosure reports, which describe specific current and long-term activities to address GHG emissions. The reports are updated on an annual basis. These reports are available either through the Company's external website at http://www.southerncompany.com/what-doing/corporate-responsibility/home.cshtml or by contacting Melissa K. Caen, Corporate Secretary, Southern Company, 30 Ivan Allen Jr. Boulevard NW, Atlanta, Georgia 30308 and requesting a copy.

For a number of years, the Company also has actively engaged its stakeholders regarding environmental matters affecting the Southern Company system. Since 2011, the Company has held environmental stakeholder forums, webinars, calls, and meetings covering a range of topics from regulatory and policy issues and system risk and planning to renewables, energy efficiency, and GHG issues.

In summary, the Board of Directors does not believe it is in the best interests of the Company or its stockholders to independently establish at this time voluntary, absolute quantitative goals for reducing total GHG emissions from the Southern Company system's operations due to (1) the Southern Company system's already robust research, development, and deployment efforts relating to new technology to reduce GHG emissions, (2) the EPA's pending regulations governing GHG emissions from new and existing sources, which are not yet finalized, and (3) the Company's ongoing practice of reporting emissions data, emission reduction results, investment, and significant policy engagement. A separate report as requested in the proposal regarding plans to achieve such goals would not be an efficient use of additional Company resources or add value to the Company's current efforts in this area.

The vote needed to pass the proponents' resolution is the affirmative vote of a majority of the votes cast.

X THE BOARD OF DIRECTORS RECOMMENDS A VOTE "AGAINST" ITEM NO. 7.

Frequently Asked Questions

Q: When will the Proxy Statement be mailed?

A: The Proxy Statement will be mailed on or about April 10, 2015.

Q: Who is entitled to vote?

A: All stockholders of record at the close of business on the record date of March 30, 2015 may vote.

Q: How do I give voting instructions?

A: You may attend the meeting and give instructions in person or give instructions by internet, by phone, or by mail. Information for giving instructions is on the form of proxy and trustee voting instruction form (proxy form). For those investors whose shares are held by a broker, bank, or other nominee, you must complete and return the voting instruction form provided by your broker, bank, or nominee in order to instruct your broker, bank, or nominee on how to vote. The Proxies, named on the enclosed proxy form, will vote all properly executed proxies that are delivered pursuant to this solicitation and not subsequently revoked in accordance with the instructions given by you.

Q: Why is my vote important?

A: It is the right of every investor to vote on certain matters that affect the Company.

Q: Can I change my vote?

A: Yes. If you are a holder of record, you may revoke your proxy by submitting a subsequent proxy, or by written request received by the Company's Corporate Secretary prior to the meeting, or by attending the meeting and voting your shares. If your shares are held through a broker, bank, or other nominee, you must follow the instructions of your broker, bank, or other nominee to revoke your voting instructions.

Q: How are votes counted?

A: Each share counts as one vote. A quorum is required to transact business at the 2015 Annual Meeting. Stockholders of record holding shares of stock constituting a majority of the shares entitled to be cast shall constitute a quorum. Abstentions that are marked on the proxy form and broker non-votes are included for the purpose of determining a quorum, but shares that otherwise are not voted are not counted toward a quorum. Neither abstentions, broker non-votes, nor shares that otherwise are not voted are counted for or against each of the matters being considered at the 2015 Annual Meeting and thus will not affect the outcome of the vote for these items, except that abstentions will have the same effect as votes "against" Item No. 3.

Q: What are broker non-votes?

A: Broker non-votes occur on a matter up for vote when a broker, bank, or other holder of shares you own in "street name" is not permitted to vote on that particular matter without instructions from you, you do not give such instructions, and the broker, bank, or other nominee indicates on its proxy form, or otherwise notifies the Company, that it does not have authority to vote its shares on that matter. Whether a broker has authority to vote its shares on uninstructed matters is determined by NYSE rules.

Q: What does it mean if I get more than one proxy form?

A: You will receive a proxy form for each account that you have. Please vote proxies for all accounts to ensure that all of your shares are voted. If you wish to consolidate multiple registered accounts, please contact Shareowner Services at Computershare Inc. at (800) 554-7626.

Q: Can the Proxy Statement be accessed from the internet?

A: Yes. You can access the Company's website at **http://investor.southerncompany.com/proxy** to view the Proxy Statement.

Q: How do I attend the 2015 Annual Meeting in person?

A: All attendees need to bring photo identification, such as a driver's license, to gain admission to the 2015 Annual Meeting. If you are a holder of record, the top half of your proxy card is your admission ticket. If you hold your shares in street name, you will need proof of ownership to be admitted to the meeting. Examples of proof of ownership are a recent brokerage statement or a letter from your bank or broker. If you want to vote your shares held in street name, you must get a legal proxy in your name from the broker, bank, or other nominee that holds your shares. Please note that cameras, sound or video recording equipment, cellular telephones, smartphones or other similar equipment, and electronic devices are not permitted to be used during the 2015 Annual Meeting.

Q: Does the Company offer electronic delivery of proxy materials?

A: Yes. Most stockholders can elect to receive an email that will provide an electronic link to the Proxy Statement, which includes the 2014 Annual Report as an appendix. Opting to receive your proxy materials on-line will save the Company the cost of producing and mailing documents and also will give you an electronic link to the proxy voting site.

You may sign up for electronic delivery when you vote your proxy via the internet or by visiting www.icsdelivery.com/so. Once you enroll for electronic delivery, you will receive proxy materials electronically as long as your account remains active or until you cancel your enrollment. If you consent to electronic access, you will be responsible for your usual internet-related charges (e.g., on-line fees and telephone charges) in connection with electronic viewing and printing of the Proxy Statement, which includes the 2014 Annual Report as an appendix. The Company will continue to distribute printed materials to stockholders who do not consent to access these materials electronically.

Q: What is "householding?"

A: Stockholders sharing a single address may receive only one copy of the Proxy Statement, which includes the 2014 Annual Report as an appendix, unless the transfer agent, broker, bank, or other nominee has received contrary instructions from any owner at that address. This practice — known as householding — is designed to reduce printing and mailing costs. If a stockholder of record would like to either participate or cancel participation in householding, he or she may contact Shareowner Services at Computershare Inc. at (800) 554-7626 or by mail at The Southern Company, c/o Computershare, P.O. Box 30170, College Station, TX 77842-3170. If you own indirectly through a broker, bank, or other nominee, please contact your financial institution.

Q: What is the Board's recommendation for the proposals?

A: The Board of Directors recommends votes "FOR" each of Item Nos. 1, 2, 3, 4, and 5 and votes "AGAINST" Item Nos. 6 and 7 in this Proxy Statement.

Q: How many votes are needed to approve each of the items of business?

A: The affirmative vote of a majority of the votes cast is required for approval of each of Item Nos. 1, 2, 4, 5, 6, and 7. For Item No. 3, the affirmative vote of a majority of the shares represented in person or by proxy and entitled to vote at the 2015 Annual Meeting is required for approval.

Q: When are stockholder proposals due for the 2016 Annual Meeting of Stockholders?

A: The deadline for the receipt of stockholder proposals to be considered for inclusion in the Company's proxy materials for the 2016

Annual Meeting of Stockholders is December 12, 2015. Proposals must be submitted in writing to Melissa K. Caen, Corporate Secretary, Southern Company, 30 Ivan Allen Jr. Boulevard NW, Atlanta, Georgia 30308. Additionally, the proxy solicited by the Board of Directors for next year's meeting will confer discretionary authority to vote on any stockholder proposal presented at that meeting that is not included in the Company's proxy materials unless the Company is provided written notice of such proposal no later than February 25, 2016.

Q: Who is soliciting these proxies and who pays the expense of such solicitations?

A: These proxies are being solicited on behalf of the Company's Board of Directors. The Company pays the cost of soliciting proxies. The Company has retained Georgeson Inc. to assist with the solicitation of proxies for a fee of $12,500, plus additional fees for telephone and other solicitation of proxies or other services, if needed, and reimbursement of out-of-pocket expenses. The officers or other employees of the Company or its subsidiaries may solicit proxies to have a larger representation at the meeting. None of these officers or other employees of the Company will receive any additional compensation for these services. Upon request, the Company will reimburse brokerage houses and other custodians, nominees, and fiduciaries for their reasonable out-of-pocket expenses for forwarding solicitation material to the beneficial owners of the Company's common stock.

Section 16(a) Beneficial Ownership Reporting Compliance

Based on the Company's review of Forms 3, 4, and 5 and amendments thereto in the Company's possession and written representations furnished to the Company, the Company believes that no reporting person of the Company failed to file, on a timely basis, the reports required by Section 16(a) of the Securities Exchange Act of 1934, as amended, except for an inadvertent late filing of a Form 4 to disclose one transaction by David J. Grain.

Certain Relationships and Related Transactions

Mr. Donald M. James, a Director of the Company, served as the Chief Executive Officer of Vulcan Materials Company from 1997 to 2014. During 2014, subsidiaries of the Company purchased approximately $2.1 million of goods and services from Vulcan Materials Company and its affiliates, primarily related to on-going construction projects.

Mr. E. Jenner Wood III, a Director of the Company, is Chairman, President, and Chief Executive Officer of the Atlanta Division of SunTrust Bank and Executive Vice President of SunTrust Banks, Inc. During 2014, subsidiaries of the Company made payments of approximately $1.1 million to certain subsidiaries of SunTrust Banks, Inc., substantially related to aircraft leases.

During 2014, certain subsidiaries of SunTrust Banks, Inc. also furnished a number of regular banking services in the ordinary course of business to the Company and its subsidiaries and served as an underwriter for certain securities offerings of the Company and its subsidiaries for which $1.7 million was received by these certain subsidiaries of SunTrust Banks, Inc. The Company and its subsidiaries intend to maintain normal banking relations with SunTrust Banks, Inc. and its subsidiaries in the future.

The Company does not have a written policy pertaining solely to the approval or ratification of "related party transactions." The Company has a Code of Ethics as well as a Contract Manual and other formal written procurement policies and procedures that guide the purchase of goods and services, including requiring competitive bids for most transactions above $10,000 or approval based on documented business needs for sole sourcing arrangements. The approval and ratification of any related party transactions would be subject to these written policies and procedures which include a determination of the need for the goods and services; preparation and evaluation of requests for proposals by supply chain management; the writing of contracts; controls and guidance regarding the evaluation of the proposals; and negotiation of contract terms and conditions. As appropriate, these contracts are also reviewed by individuals in the legal, accounting, and/or risk management/ services departments prior to being approved by the responsible individual. The responsible individual will vary depending on the department requiring the goods and services, the dollar amount of the contract, and the appropriate individual within that department who has the authority to approve a contract of the applicable dollar amount.

OUTSIDE DIRECTORS STOCK PLAN FOR THE SOUTHERN COMPANY AND ITS SUBSIDIARIES

Outside Directors Stock Plan for The Southern Company and its Subsidiaries

Article I—Purpose and Adoption of Plan

1.1 Adoption. The Southern Company hereby adopts the Outside Directors Stock Plan for The Southern Company and Its Subsidiaries, effective June 1, 2015 subject to (a) the approval of the Plan by the stockholders of the Company at the annual meeting thereof to be held on May 27, 2015 and (b) registration of the Stock to be issued pursuant to the Plan.

1.2 Purpose. The Plan is designed to more closely align the interests of Directors with the interests of the stockholders of the Company through ownership of Stock.

Article II—Definitions

2.1 "Affiliated Employer" shall mean any corporation which is a member of the controlled group of corporations of which the Company is the common parent corporation.

2.2 "Board of Directors" shall mean either the Southern Board or a System Company Board, as applicable to a Director.

2.3 "Commission" shall mean the Securities and Exchange Commission.

2.4 "Company" shall mean The Southern Company.

2.5 "Company Board" shall mean the Board of Directors of The Southern Company.

2.6 "Director" shall mean any person who is not an active employee of the Company or a System Company and who either serves on the Company Board or a System Company Board.

2.7 "Effective Date" shall mean June 1, 2015.

2.8 "Exchange Act" shall mean the Securities Exchange Act of 1934, as amended.

2.9 "Market Value" shall mean the following:

(a) With respect to Stock that is issued by the Company, the closing price of the Stock, as published in the Wall Street Journal in its report of New York Stock Exchange composite transactions, on the date such Market Value is to be determined, as specified herein.

(b) With respect to Stock that is purchased on the open market, the actual purchase price paid for the Stock on the date purchased.

2.10 "Participant" shall mean each Director who meets the requirements of Section 3.1 of the Plan.

2.11 "Plan" shall mean the Outside Directors Stock Plan for The Southern Company and Its Subsidiaries, as amended from time to time.

2.12 "Plan Administrator" shall mean the Governance Committee of the Company Board.

2.13 "Plan Year" shall mean the calendar year.

2.14 "Retainer Fee" shall mean the annual rate of the fees paid to a Director as determined by the Board of Directors from time-to-time, but excluding reimbursements for expenses and any additional fees or compensation for (a) attendance at the meetings of the Board of Directors or any committee, (b) service on a committee and (c) service at the request of the Board of Directors or a committee.

2.15 "Stock" shall mean the Company's common stock, par value $5.00 per share.

2.16 "System Company" shall mean any Affiliated Employer which adopted the Outside Directors Stock Plan for Directors of The Southern Company and its Subsidiaries that was effective May 26, 2004 and any additional Affiliated Employer the Company Board may from time to time determine to bring under the Plan and which shall adopt the Plan. The System Companies that have adopted the Plan are listed in Schedule A, attached hereto, as such Schedule may be amended from time to time.

2.17 "System Company Board" shall mean the Board of Directors of a System Company.

The masculine pronoun shall be construed to include the feminine pronoun and the singular shall include the plural, where the context so requires.

Article III—Eligibility

3.1 Eligibility Requirements.

(a) Except as provided in Subsection (b), each Director shall become a Participant in the Plan on the first date such Director serves on the Board of Directors.

(b) For purposes of the 2015 Plan Year, a Director who is serving on a Board of Directors as of the Effective Date shall become a Participant in the Plan on the Effective Date.

Article IV—Form and Time of Benefit Distributions

4.1 Stock Grant. Each Participant shall receive a portion of his Retainer Fee in Stock. Any remainder of such Retainer Fee and any meeting attendance fees, in increments elected by the Director in accordance with Section 4.2, may be paid in cash or in Stock. The portion of the Retainer Fee required to be paid in Stock pursuant to this Section 4.1 may be denominated in dollars or a fixed number of shares of Stock and shall be stated in Schedule B, attached hereto, as such Schedule shall be amended from time to time by the Board of Directors.

4.2 Election to Determine Percentage or Amount of Compensation to be Paid in Stock. Prior to the beginning of each Plan Year, each Participant shall have an opportunity to elect to have the non-Stock portion of his Retainer Fee paid in cash or Stock of the Company, or a combination thereof. Each Participant also shall have an opportunity to elect to have a portion of any meeting attendance fees paid in Stock. Nothing contained in this Section 4.2 shall be interpreted in such a manner as would disqualify the Plan from treatment as a "formula plan" under Rule 16b-3, as promulgated by the Commission under the Exchange Act, as that rule may be amended from time to time.

4.3 Amount of Stock Compensation Denominated in Dollars. For Stock compensation that is denominated in dollars, the number of shares of Stock due to a Participant, including any fractional shares, shall be determined by dividing the prescribed dollar amount by the Market Value on the compensation payment date.

4.4 Deferral of Stock Compensation. Any portion of the Retainer Fee that is required to be paid in Stock pursuant to Section 4.1 may be deferred in accordance with the terms of the Deferred Compensation Plan maintained by the Company or System Company for its Directors. Any other Director compensation that a participant may elect to receive in Stock under the Plan may be similarly deferred.

4.5 Death Benefits. No grants of Stock shall be made to any beneficiary of a Participant following a Participant's death.

Article V—Administration of Plan

5.1 Administrator. The general administration of the Plan shall be the responsibility of the Plan Administrator.

5.2 Powers. The Plan Administrator shall administer the Plan

(a) The Plan Administrator shall administer the Plan in accordance with its terms and shall have all powers necessary to carry out the provisions of the Plan. It shall interpret the Plan and shall have the discretion to determine all questions arising in the administration, interpretation and application of the Plan, including any ambiguities contained herein or any questions of fact. Any such determination by it shall be conclusive and binding on all persons. It may adopt such procedures as it deems desirable for the conduct of its affairs. It may appoint such accountants, counsel, actuaries, specialists and other persons as it deems necessary or desirable in connection with the administration of the Plan, and shall be the agent for the service of process.

(b) The Plan Administrator may delegate to such officers, employees or departments of the Company or an affiliate of the Company, such authority, duties and responsibilities of the Plan Administrator as it, in its sole discretion, considers necessary or appropriate for the proper and efficient operation of the Plan, including, without limitation, interpretation of the Plan and establishment of procedures for administration of the Plan.

5.3 Indemnification. The System Companies and the Company shall indemnify the Plan Administrator against any and all claims, losses, damages, expenses and liability arising from any action or failure to act, except when the same is finally judicially determined to be due to gross negligence or willful misconduct. The System Companies and the Company may purchase at their own expense sufficient liability insurance for the Plan Administrator to cover any and all claims, losses, damages and expenses arising from any action or failure to act in connection with the execution of the duties as Plan Administrator.

Article VI—Miscellaneous

6.1 Assignment. Neither the Participant nor his legal representative shall have any rights to sell, assign, transfer or otherwise convey the right to receive the payment of any benefit due hereunder, which payment and the right thereto are expressly declared to be nonassignable and nontransferable. Any attempt to assign or transfer the right to payment under the Plan shall be null and void and of no effect.

6.2 Amendment and Termination. The Plan may be wholly or partially amended or otherwise modified, suspended or terminated at any time by the Company Board or by its Governance Committee with the approval of the Company Board, upon execution of a duly authorized written document; provided, however, that, without the approval of the stockholders of the Company entitled to vote thereon, no amendment may be made which would, absent such stockholder approval, disqualify the Plan for coverage under Rule 16b-3, as promulgated by the Commission under the Exchange Act, as that rule may be amended from time to time. Notwithstanding the foregoing, no such amendment or termination shall impair any rights to payments to which a Participant may be entitled prior to the effective date of such amendment or termination.

6.3 No Guarantee of Continued or Future Service on a Board of Directors. Participation hereunder shall not be construed as creating a right in any Director to continued service or future service on the Board of Directors. Participation hereunder does not constitute an employment contract between any Director and any System Company or the Company as the case may be.

6.4 Construction. This Plan shall be construed in accordance with and governed by the laws of the State of Georgia, to the extent such laws are not otherwise superseded by the laws of the United States.

IN WITNESS WHEREOF, the Company Board, through its duly authorized officers, has adopted this Outside Directors Stock Plan for The Southern Company and Its Subsidiaries this 9th day of February, 2015, to be effective as provided herein.

THE SOUTHERN COMPANY:

By:____________________________________
Its: Secretary

Attest:

By:____________________________________
Its: Assistant Secretary

Schedule A

The System Companies as of May 27, 2015 are:

Alabama Power Company
Georgia Power Company
Gulf Power Company
Mississippi Power Company

Schedule B

As of June 1, 2015

The portion of a Participant's Retainer Fee required to be distributed in Stock shall be determined in accordance with the following schedule:

Company	Dollar Amount of Required Stock Distribution
Southern Company	$105,000
Alabama Power Company	$30,000
Georgia Power Company	$30,000
Gulf Power Company	$19,500
Mississippi Power Company	$19,500

Proposed Amendment to Section 46 of the Company's By-laws

The text of the proposed amendment to Section 46 of the Company's By-Laws, marked to show changes to the current Section 46, is set forth as follows:

46. The By-Laws of the Corporation may be altered, amended or repealed (a) at any meeting of the Board of Directors by the vote of a majority of the entire Board then in office, or (b) by the vote of the holders of a majority of that part of the capital stock of the Corporation having voting powers which is represented in person or by proxy at any annual meeting of stockholders or at any special meeting called for that purpose (provided that a lawful quorum of stockholders be there represented in person or by proxy), or (c) without a meeting by the written consent of the holders of ~~all of~~ not less than the minimum number of the issued and outstanding shares of capital stock of the Corporation having voting powers that would be necessary to take such action at a meeting at which all shares entitled to vote thereon were present and voted; provided, however, that the Board of Directors shall not have power to alter, amend or repeal the provisions of Sections 5, 44 or 46 of the By-Laws and provided, further, that an alteration, amendment or repeal of any other provision of the By-Laws by the Board of Directors shall cease to be effective unless submitted to and ratified or approved at the next annual or special meeting at which a lawful quorum of stockholders is represented in person or by proxy by the vote of the holders of a majority of that part of the capital stock of the Corporation having voting powers which is represented in person or by proxy at such meeting.

Policy on Engagement of the Independent Auditor for Audit and Non-Audit Services

A. Southern Company (including its subsidiaries) will not engage the independent auditor to perform any services that are prohibited by the Sarbanes-Oxley Act of 2002. It shall further be the policy of the Company not to retain the independent auditor for non-audit services unless there is a compelling reason to do so and such retention is otherwise pre-approved consistent with this policy. Non-audit services that are prohibited include:

1. Bookkeeping and other services related to the preparation of accounting records or financial statements of the Company or its subsidiaries.
2. Financial information systems design and implementation.
3. Appraisal or valuation services, fairness opinions, or contribution-in-kind reports.
4. Actuarial services.
5. Internal audit outsourcing services.
6. Management functions or human resources.
7. Broker or dealer, investment adviser, or investment banking services.
8. Legal services or expert services unrelated to financial statement audits.
9. Any other service that the Public Company Accounting Oversight Board determines, by regulation, is impermissible.

B. Effective January 1, 2003, officers of the Company (including its subsidiaries) may not engage the independent auditor to perform any personal services, such as personal financial planning or personal income tax services.

C. All audit services (including providing comfort letters and consents in connection with securities issuances) and permissible non-audit services provided by the independent auditor must be pre-approved by the Southern Company Audit Committee.

D. Under this Policy, the Audit Committee's approval of the independent auditor's annual arrangements letter shall constitute pre-approval for all services covered in the letter.

E. By adopting this Policy, the Audit Committee hereby pre-approves the engagement of the independent auditor to provide services related to the issuance of comfort letters and consents required for securities sales by the Company and its subsidiaries and services related to consultation on routine accounting and tax matters. The actual amounts expended for such services each calendar quarter shall be reported to the Committee at a subsequent Committee meeting.

F. The Audit Committee also delegates to its Chairman the authority to grant pre-approvals for the engagement of the independent auditor to provide any permissible service up to a limit of $50,000 per engagement. Any engagements pre-approved by the Chairman shall be presented to the full Committee at its next scheduled regular meeting.

G. The Southern Company Comptroller shall establish processes and procedures to carry out this Policy.

Approved by the Southern Company Audit Committee
December 9, 2002

Fourth Quarter	42.94	40.03	0.5075

FIVE-YEAR CUMULATIVE PERFORMANCE GRAPH

This performance graph compares the cumulative total shareholder return on the Company's common stock with the Standard & Poor's Electric Utility Index and the Standard & Poor's 500 index for the past five years. The graph assumes that $100 was invested on December 31, 2009 in the Company's common stock and each of the above indices and that all dividends were reinvested. The stockholder return shown below for the five-year historical period may not be indicative of future performance.

	2009	2010	2011	2012	2013	2014
S&P 500	100	115	117	136	180	205
S&P Electrics	100	103	125	124	134	176
Southern	100	121	153	148	149	186

TWENTY-YEAR CUMULATIVE PERFORMANCE GRAPH

This performance graph compares the cumulative total shareholder return on the Company's common stock with the Standard & Poor's Electric Utility Index and the Standard & Poor's 500 index for the past 20 years. The graph assumes that $100 was invested on December 31, 1994 in the Company's common stock and each of the above indices and that all dividends were reinvested. The distribution of shares of Mirant Corporation stock to the Company's stockholders in 2001 is treated as a special dividend for purposes of calculating the Company's shareholder return. The stockholder return shown below for the twenty-year historical period may not be indicative of future performance.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING
Southern Company and Subsidiary Companies 2014 Annual Report

The management of The Southern Company (Southern Company) is responsible for establishing and maintaining an adequate system of internal control over financial reporting as required by the Sarbanes-Oxley Act of 2002 and as defined in Exchange Act Rule 13a-15(f). A control system can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

Under management's supervision, an evaluation of the design and effectiveness of Southern Company's internal control over financial reporting was conducted based on the framework in *Internal Control—Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, management concluded that Southern Company's internal control over financial reporting was effective as of December 31, 2014.

Deloitte & Touche LLP, an independent registered public accounting firm, as auditors of Southern Company's financial statements, has issued an attestation report on the effectiveness of Southern Company's internal control over financial reporting as of December 31, 2014. Deloitte & Touche LLP's report on Southern Company's internal control over financial reporting is included herein.

Thomas A. Fanning
Chairman, President, and Chief Executive Officer

Art P. Beattie
Executive Vice President and Chief Financial Officer

March 2, 2015

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
The Southern Company

We have audited the accompanying consolidated balance sheets and consolidated statements of capitalization of The Southern Company and Subsidiary Companies (the Company) as of December 31, 2014 and 2013, and the related consolidated statements of income, comprehensive income, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2014. We also have audited the Company's internal control over financial reporting as of December 31, 2014, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting (page D-1). Our responsibility is to express an opinion on these financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements (pages D-36 to D-101) referred to above present fairly, in all material respects, the financial position of Southern Company and Subsidiary Companies as of December 31, 2014 and 2013, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2014, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on the criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

Deloitte & Touche LLP

Atlanta, Georgia
March 2, 2015

DEFINITIONS

Term	Meaning
2012 MPSC CPCN Order	A detailed order issued by the Mississippi PSC in April 2012 confirming the CPCN originally approved by the Mississippi PSC in 2010 authorizing acquisition, construction, and operation of the Kemper IGCC
2013 ARP	Alternative Rate Plan approved by the Georgia PSC for Georgia Power for the years 2014 through 2016
AFUDC	Allowance for funds used during construction
Alabama Power	Alabama Power Company
APA	Asset purchase agreement
ASC	Accounting Standards Codification
Baseload Act	State of Mississippi legislation designed to enhance the Mississippi PSC's authority to facilitate development and construction of baseload generation in the State of Mississippi
CCR	Coal combustion residuals
Clean Air Act	Clean Air Act Amendments of 1990
CO_2	Carbon dioxide
CPCN	Certificate of public convenience and necessity
CWIP	Construction work in progress
DOE	U.S. Department of Energy
EPA	U.S. Environmental Protection Agency
FERC	Federal Energy Regulatory Commission
FFB	Federal Financing Bank
GAAP	Generally accepted accounting principles
Georgia Power	Georgia Power Company
Gulf Power	Gulf Power Company
IGCC	Integrated coal gasification combined cycle
IRS	Internal Revenue Service
ITC	Investment tax credit
Kemper IGCC	IGCC facility under construction in Kemper County, Mississippi
KWH	Kilowatt-hour
LIBOR	London Interbank Offered Rate
Mirror CWIP	A regulatory liability account for use in mitigating future rate impacts for customers
Mississippi Power	Mississippi Power Company
mmBtu	Million British thermal units
Moody's	Moody's Investors Service, Inc.
MPUS	Mississippi Public Utilities Staff
MW	Megawatt
NCCR	Georgia Power's Nuclear Construction Cost Recovery
NDR	Alabama Power's Natural Disaster Reserve
NRC	U.S. Nuclear Regulatory Commission
OCI	Other comprehensive income
Plant Vogtle Units 3 and 4	Two new nuclear generating units under construction at Plant Vogtle
power pool	The operating arrangement whereby the integrated generating resources of the traditional operating companies and Southern Power Company are subject to joint commitment and dispatch in order to serve their combined load obligations
PPA	Power purchase agreement
PSC	Public Service Commission
Rate CNP	Alabama Power's Rate Certificated New Plant
Rate CNP Environmental	Alabama Power's Rate Certificated New Plant Environmental
Rate CNP PPA	Alabama Power's Rate Certificated New Plant Power Purchase Agreement
Rate ECR	Alabama Power's rate energy cost recovery
Rate NDR	Alabama Power's natural disaster reserve rate
Rate RSE	Alabama Power's rate stabilization and equalization plan
ROE	Return on equity
S&P	Standard and Poor's Rating Services, a division of The McGraw Hill Companies, Inc.
SCS	Southern Company Services, Inc. (the Southern Company system service company)
SEC	U.S. Securities and Exchange Commission
SEGCO	Southern Electric Generating Company

DEFINITIONS (continued)

Term	Meaning
SMEPA	South Mississippi Electric Power Association
Southern Company system	The Southern Company, the traditional operating companies, Southern Power, SEGCO, Southern Nuclear, SCS, SouthernLINC Wireless, and other subsidiaries
SouthernLINC Wireless	Southern Communications Services, Inc.
Southern Nuclear	Southern Nuclear Operating Company, Inc.
Southern Power	Southern Power Company and its subsidiaries
traditional operating companies	Alabama Power, Georgia Power, Gulf Power, and Mississippi Power

OVERVIEW

Business Activities

The Southern Company (Southern Company or the Company) is a holding company that owns all of the common stock of the Southern Company system, which consists of the traditional operating companies, Southern Power, and other direct and indirect subsidiaries. The primary business of the Southern Company system is electricity sales by the traditional operating companies and Southern Power. The four traditional operating companies are vertically integrated utilities providing electric service in four Southeastern states. Southern Power constructs, acquires, owns, and manages generation assets, including renewable energy projects, and sells electricity at market-based rates in the wholesale market.

Many factors affect the opportunities, challenges, and risks of the Southern Company system's electricity business. These factors include the traditional operating companies' ability to maintain a constructive regulatory environment, to maintain and grow energy sales, and to effectively manage and secure timely recovery of costs. These costs include those related to projected long-term demand growth, increasingly stringent environmental standards, reliability, fuel, capital expenditures, including new plants, and restoration following major storms. Subsidiaries of Southern Company are constructing Plant Vogtle Units 3 and 4 and the Kemper IGCC. Georgia Power has a 45.7% ownership interest in Plant Vogtle Units 3 and 4, each with approximately 1,100 MWs, and Mississippi Power is ultimately expected to hold an 85% ownership interest in the 582-MW Kemper IGCC.

Each of the traditional operating companies has various regulatory mechanisms that operate to address cost recovery. Effectively operating pursuant to these regulatory mechanisms and appropriately balancing required costs and capital expenditures with customer prices will continue to challenge the Southern Company system for the foreseeable future. See Note 3 to the financial statements under "Retail Regulatory Matters" and "Integrated Coal Gasification Combined Cycle" for additional information.

Another major factor is the profitability of the competitive market-based wholesale generating business. Southern Power's strategy is to acquire, construct, and sell power plants, including renewable energy projects, and to enter into PPAs primarily with investor-owned utilities, independent power producers, municipalities, and electric cooperatives.

Southern Company's other business activities include investments in leveraged lease projects and telecommunications. Management continues to evaluate the contribution of each of these activities to total shareholder return and may pursue acquisitions and dispositions accordingly.

Key Performance Indicators

In striving to achieve superior risk-adjusted returns while providing cost-effective energy to more than four million customers, the Southern Company system continues to focus on several key performance indicators. These indicators include customer satisfaction, plant availability, system reliability, execution of major construction projects, and earnings per share (EPS). Southern Company's financial success is directly tied to customer satisfaction. Key elements of ensuring customer satisfaction include outstanding service, high reliability, and competitive prices. Management uses customer satisfaction surveys and reliability indicators to evaluate the results of the Southern Company system.

Peak season equivalent forced outage rate (Peak Season EFOR) is an indicator of fossil/hydro plant availability and efficient generation fleet operations during the months when generation needs are greatest. The rate is calculated by dividing the number of hours of forced outages by total generation hours. The Southern Company system's fossil/hydro 2014 Peak Season EFOR was better than the target. Transmission and distribution system reliability performance is measured by the frequency and duration of outages. Performance targets for reliability are set internally based on historical performance. The Southern Company system's performance for 2014 was better than the target for these reliability measures. Primarily as a result of charges for estimated probable losses related to construction of the Kemper IGCC, Southern Company's EPS for 2014 did not meet the target on a GAAP basis. See RESULTS OF OPERATIONS – "Estimated Loss on Kemper IGCC" and Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for additional information.

Excluding the charges for estimated probable losses related to construction of the Kemper IGCC and the 2015 Mississippi Supreme Court decision, Southern Company's 2014 results compared with its targets for some of these key indicators are reflected in the following chart:

Key Performance Indicator	2014 Target Performance	2014 Actual Performance
System Customer Satisfaction	Top quartile in customer surveys	Top quartile
Peak Season System EFOR — fossil/hydro	5.51% or less	1.93%
Basic EPS — As Reported	$2.72-$2.80	$2.19
Kemper IGCC Impacts		$0.61
EPS, excluding items*		$2.80

* Does not reflect EPS as calculated in accordance with GAAP. The non-GAAP measure of EPS, excluding estimated probable losses relating to Mississippi Power's construction of the Kemper IGCC and the 2015 Mississippi Supreme Court decision, is calculated by excluding from EPS, as

determined in accordance with GAAP, the following items: (1) estimated probable losses of $536 million after-tax, or $0.59 per share, relating to Mississippi Power's construction of the Kemper IGCC and (2) an aggregate of $17 million after-tax, or $0.02 per share, relating to the reversal of previously recognized revenues recorded in 2014 and 2013 and the recognition of carrying costs associated with the 2015 Mississippi Supreme Court decision which reversed the Mississippi PSC's March 2013 rate order related to the Kemper IGCC. The estimated probable losses relating to the construction of the Kemper IGCC significantly impacted the presentation of EPS in the table above, and any similar charges are items that may occur with uncertain frequency in the future. In addition, neither the estimated probable losses relating to the construction of the Kemper IGCC nor the 2015 Mississippi Supreme Court decision were anticipated or incorporated in the assumptions used to develop the EPS target performance for 2014 reflected in the table above. See RESULTS OF OPERATIONS – "Estimated Loss on Kemper IGCC" and Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for additional information on the estimated probable losses relating to the Kemper IGCC and the 2015 Mississippi Supreme Court decision. Southern Company management uses the non-GAAP measure of EPS, excluding these items, to evaluate the performance of Southern Company's ongoing business activities and its 2014 performance on a basis consistent with the assumptions used in developing the 2014 performance targets and to compare certain results to prior periods. Southern Company believes this presentation is useful to investors by providing additional information for purposes of evaluating the performance of Southern Company's business activities. This presentation is not meant to be considered a substitute for financial measures prepared in accordance with GAAP.

See RESULTS OF OPERATIONS herein for additional information on the Company's financial performance.

Earnings

Southern Company's net income after dividends on preferred and preference stock of subsidiaries was $2.0 billion in 2014, an increase of $319 million, or 19.4%, from the prior year. The increase was primarily related to an increase in retail revenues due to retail base rate increases, as well as colder weather in the first quarter 2014 and warmer weather in the second and third quarters 2014 as compared to the corresponding periods in 2013. The increase in net income was also the result of lower pre-tax charges of $868 million ($536 million after tax) recorded in 2014 compared to pre-tax charges of $1.2 billion ($729 million after tax) recorded in 2013 for revisions of estimated costs expected to be incurred on Mississippi Power's construction of the Kemper IGCC. These increases were partially offset by increases in non-fuel operations and maintenance expenses.

Southern Company's net income after dividends on preferred and preference stock of subsidiaries was $1.6 billion in 2013, a decrease of $706 million, or 30.0%, from the prior year. The decrease was primarily the result of pre-tax charges of $1.2 billion ($729 million after-tax) for revisions of estimated costs expected to be incurred on Mississippi Power's construction of the Kemper IGCC. Also contributing to the decrease in net income were increases in depreciation and amortization and non-fuel operations and maintenance expenses, partially offset by increases in retail revenues and AFUDC.

Basic EPS was $2.19 in 2014, $1.88 in 2013, and $2.70 in 2012. Diluted EPS, which factors in additional shares related to stock-based compensation, was $2.18 in 2014, $1.87 in 2013, and $2.67 in 2012. EPS for 2014 was negatively impacted by $0.06 per share as a result of an increase in the average shares outstanding. See FINANCIAL CONDITION AND LIQUIDITY – "Financing Activities" herein for additional information.

Dividends

Southern Company has paid dividends on its common stock since 1948. Dividends paid per share of common stock were $2.0825 in 2014, $2.0125 in 2013, and $1.9425 in 2012. In January 2015, Southern Company declared a quarterly dividend of 52.50 cents per share. This is the 269th consecutive quarter that Southern Company has paid a dividend equal to or higher than the previous quarter. For 2014, the actual dividend payout ratio was 95%, while the payout ratio of net income excluding estimated probable losses relating to Mississippi Power's construction of the Kemper IGCC and the 2015 Mississippi Supreme Court decision was 74%.

RESULTS OF OPERATIONS

Discussion of the results of operations is divided into two parts – the Southern Company system's primary business of electricity sales and its other business activities.

	Amount		
	2014	2013	2012
		(in millions)	
Electricity business	**$ 1,969**	$ 1,652	$ 2,321
Other business activities	**(6)**	(8)	29
Net Income	**$ 1,963**	$ 1,644	$ 2,350

Electricity Business

Southern Company's electric utilities generate and sell electricity to retail and wholesale customers in the Southeast.

A condensed statement of income for the electricity business follows:

	Amount	Increase (Decrease) from Prior Year	
	2014	**2014**	2013
		(in millions)	
Electric operating revenues	**$ 18,406**	**$ 1,371**	$ 557
Fuel	**6,005**	**495**	453
Purchased power	**672**	**211**	(83)
Other operations and maintenance	**4,259**	**481**	83
Depreciation and amortization	**1,929**	**43**	114
Taxes other than income taxes	**979**	**47**	20
Estimated loss on Kemper IGCC	**868**	**(312)**	1,180
Total electric operating expenses	**14,712**	**965**	1,767
Operating income	**3,694**	**406**	(1,210)
Allowance for equity funds used during construction	**245**	**55**	47
Interest income	**18**	**—**	(4)
Interest expense, net of amounts capitalized	**794**	**6**	(32)
Other income (expense), net	**(73)**	**(18)**	2
Income taxes	**1,053**	**118**	(465)
Net income	**2,037**	**319**	(668)
Dividends on preferred and preference stock of subsidiaries	**68**	**2**	1
Net income after dividends on preferred and preference stock of subsidiaries	**$ 1,969**	**$ 317**	$ (669)

Electric Operating Revenues

Electric operating revenues for 2014 were $18.4 billion, reflecting a $1.4 billion increase from 2013. Details of electric operating revenues were as follows:

	Amount	
	2014	2013
	(in millions)	
Retail — prior year	**$ 14,541**	$ 14,187
Estimated change resulting from —		
Rates and pricing	**300**	137
Sales growth (decline)	**35**	(2)
Weather	**236**	(40)
Fuel and other cost recovery	**438**	259
Retail — current year	**15,550**	14,541
Wholesale revenues	**2,184**	1,855
Other electric operating revenues	**672**	639
Electric operating revenues	**$ 18,406**	$ 17,035
Percent change	**8.0%**	3.4%

Retail revenues increased $1.0 billion, or 6.9%, in 2014 as compared to the prior year. The significant factors driving this change are shown in the preceding table. The increase in rates and pricing in 2014 was primarily due to increased revenues at Georgia Power related to base tariff increases effective January 1, 2014, as approved by the Georgia PSC in the 2013 ARP, and increases in collections for financing costs related to the construction of Plant Vogtle Units 3 and 4 through the NCCR tariff, as well as higher contributions from market-driven rates from commercial and industrial customers. Also contributing to the increase were increased revenues at Alabama Power associated with Rate CNP Environmental primarily resulting from the inclusion of pre-2005 environmental assets and increased revenues at Gulf Power primarily resulting from a retail base rate increase and an increase in the environmental cost recovery clause rate, both effective January 2014, as approved by the Florida PSC.

Retail revenues increased $354 million, or 2.5%, in 2013 as compared to the prior year. The significant factors driving this change are shown in the preceding table. The increase in rates and pricing in 2013 was primarily due to base tariff increases at Georgia Power effective April 1, 2012 and January 1, 2013, as approved by the Georgia PSC, related to placing new generating units at Plant McDonough-Atkinson in service and collecting financing costs related to the construction of Plant Vogtle Units 3 and 4 through the NCCR tariff, as well as higher contributions from market-driven rates from commercial and industrial customers.

See Note 3 to the financial statements of Southern Company under "Retail Regulatory Matters – Alabama Power – Rate CNP," "– Georgia Power – Rate Plans," and "– Gulf Power – Retail Base Rate Case" and "Integrated Coal Gasification Combined Cycle – Rate Recovery of Kemper IGCC Costs – 2015 Mississippi Supreme Court Decision" for additional information. Also see "Energy Sales" below for a discussion of changes in the volume of energy sold, including changes related to sales growth (decline) and weather.

Electric rates for the traditional operating companies include provisions to adjust billings for fluctuations in fuel costs, including the energy component of purchased power costs. Under these provisions, fuel revenues generally equal fuel expenses, including the energy component of purchased power costs, and do not affect net income. The traditional operating companies may also have one or more regulatory mechanisms to recover other costs such as environmental, storm damage, new plants, and PPAs.

Wholesale revenues consist of PPAs with investor-owned utilities and electric cooperatives and short-term opportunity sales. Wholesale revenues from PPAs (other than solar PPAs) have both capacity and energy components. Capacity revenues reflect the recovery of fixed costs and a return on investment. Energy revenues will vary depending on fuel prices, the market prices of wholesale energy compared to the Southern Company system's generation, demand for energy within the Southern Company system's service territory, and the availability of the Southern Company system's generation. Increases and decreases in energy revenues that are driven by fuel prices are accompanied by an increase or decrease in fuel costs and do not have a significant impact on net income. Wholesale revenues at Mississippi Power include FERC-regulated municipal and rural association sales as well as market-based sales. Short-term opportunity sales are made at market-based rates that generally provide a margin above the Southern Company system's variable cost to produce the energy.

Wholesale revenues from power sales were as follows:

	2014	2013	2012
		(in millions)	
Capacity and other	**$ 974**	$ 971	$ 899
Energy	**1,210**	884	776
Total	**$ 2,184**	$ 1,855	$ 1,675

In 2014, wholesale revenues increased $329 million, or 17.7%, as compared to the prior year due to a $326 million increase in energy revenues and a $3 million increase in capacity revenues. The increase in energy revenues was primarily related to increased revenue under existing contracts as well as new solar PPAs and requirements contracts primarily at Southern Power, increased demand resulting from colder weather in the first quarter 2014 as compared to the corresponding period in 2013, and an increase in the average cost of natural gas. The increase in capacity revenues was primarily due to wholesale base rate increases at Mississippi Power, partially offset by a decrease in capacity revenues primarily due to lower customer demand and the expiration of certain requirements contracts at Southern Power.

In 2013, wholesale revenues increased $180 million, or 10.7%, as compared to the prior year due to a $108 million increase in energy revenues and a $72 million increase in capacity revenues. The increase in energy revenues was primarily related to an increase in the average price of energy and new solar contracts served by Southern Power's Plants Campo Verde and Spectrum, which began in 2013, partially offset by a decrease in volume related to milder weather as compared to the prior year. The increase in capacity revenues was primarily due to a new PPA served by Southern Power's Plant Nacogdoches, which began in June 2012, and an increase in capacity revenues under existing PPAs.

Other Electric Revenues

Other electric revenues increased $33 million, or 5.2%, and $23 million, or 3.7%, in 2014 and 2013, respectively, as compared to the prior years. The 2014 increase was primarily due to increases in open access transmission tariff revenues and transmission service revenues primarily at Alabama Power and Georgia Power, an increase in co-generation steam revenues at Alabama Power, increases in outdoor lighting and solar application fee revenues at Georgia Power, as well as an increase in franchise fees at Gulf Power. The 2013 increase in other electric revenues was primarily a result of increases in transmission revenues related to the open access transmission tariff and rents from electric property related to pole attachments.

Energy Sales

Changes in revenues are influenced heavily by the change in the volume of energy sold from year to year. KWH sales for 2014 and the percent change from the prior year were as follows:

	Total KWHs	Total KWH Percent Change		Weather-Adjusted Percent Change	
	2014	**2014**	2013	**2014**	2013*
	(in billions)				
Residential	**53.4**	**5.5%**	0.2%	**—%**	(0.3)%
Commercial	**53.2**	**1.3**	(0.9)	**(0.4)**	(0.1)
Industrial	**54.1**	**3.3**	1.5	**3.3**	1.5
Other	**0.9**	**0.9**	(1.8)	**0.7**	(1.9)
Total retail	**161.6**	**3.3**	0.3	**0.9%**	0.4%
Wholesale	**32.8**	**21.7**	(2.2)		
Total energy sales	**194.4**	**6.0%**	(0.1)%		

* In the first quarter 2012, Georgia Power began using new actual advanced meter data to compute unbilled revenues. The weather-adjusted KWH sales variances shown above reflect an adjustment to the estimated allocation of Georgia Power's unbilled January 2012 KWH sales among customer classes that is consistent with the actual allocation in 2013. Without this adjustment, 2013 weather-adjusted residential KWH sales decreased 0.5% as compared to 2012 while 2013 weather-adjusted commercial KWH sales increased 0.2% as compared to 2012.

Changes in retail energy sales are generally the result of changes in electricity usage by customers, changes in weather, and changes in the number of customers. Retail energy sales increased 5.2 billion KWHs in 2014 as compared to the prior year. This increase was primarily the result of colder weather in the first quarter 2014 and warmer weather in the second and third quarters 2014 as compared to the corresponding periods in 2013 and customer growth, partially offset by a decrease in customer usage. The increase in industrial KWH energy sales was primarily due to increased sales in the primary metals, chemicals, paper, non-manufacturing, transportation, and stone, clay, and glass sectors. Weather-adjusted commercial KWH energy sales decreased primarily due to decreased customer usage, partially offset by customer growth. Weather-adjusted residential KWH energy sales were flat compared to the prior year as a result of customer growth offset by decreased customer usage. Household income, one of the primary drivers of residential customer usage, was flat in 2014.

Retail energy sales increased 403 million KWHs in 2013 as compared to the prior year. This increase was primarily the result of customer growth, partially offset by milder weather and a decrease in customer usage. Weather-adjusted residential and commercial energy sales remained relatively flat compared to the prior year with a decrease in customer usage, offset by customer growth. The increase in industrial energy sales was primarily due to increased demand in the paper, primary metals, and stone, clay, and glass sectors.

Wholesale energy sales increased 5.8 billion KWHs in 2014 as compared to the prior year. The increase was primarily related to higher natural gas prices and increased energy sales as a result of colder weather in the first quarter 2014 and warmer weather in the second and third quarters 2014 as compared to the corresponding periods in 2013. Wholesale energy sales decreased 619 million KWHs in 2013 as compared to the prior year. The decrease was primarily related to lower customer demand resulting from milder weather as compared to the prior year.

Fuel and Purchased Power Expenses

Fuel costs constitute the single largest expense for the electric utilities. The mix of fuel sources for generation of electricity is determined primarily by demand, the unit cost of fuel consumed, and the availability of generating units. Additionally, the electric utilities purchase a portion of their electricity needs from the wholesale market.

Details of the Southern Company system's generation and purchased power were as follows:

	2014	2013	2012
Total generation *(billions of KWHs)*	**191**	179	175
Total purchased power *(billions of KWHs)*	**12**	12	16
Sources of generation *(percent)* —			
Coal	**42**	39	38
Nuclear	**16**	17	18
Gas	**39**	40	42
Hydro	**3**	4	2
Cost of fuel, generated *(cents per net KWH)* —			
Coal	**3.81**	4.01	3.96
Nuclear	**0.87**	0.87	0.83
Gas	**3.63**	3.29	2.86
Average cost of fuel, generated *(cents per net KWH)*	**3.25**	3.17	2.93
Average cost of purchased power *(cents per net KWH)**	**7.13**	5.27	4.45

* Average cost of purchased power includes fuel purchased by the Southern Company system for tolling agreements where power is generated by the provider.

In 2014, total fuel and purchased power expenses were $6.7 billion, an increase of $706 million, or 11.8%, as compared to the prior year. The increase was primarily the result of a $422 million increase in the volume of KWHs generated primarily due to increased demand resulting from colder weather in the first quarter 2014 and warmer weather in the second and third quarters 2014 as compared to the corresponding periods in 2013 and a $286 million increase in the average cost of fuel and purchased power primarily due to higher natural gas prices.

In 2013, total fuel and purchased power expenses were $6.0 billion, an increase of $370 million, or 6.6%, as compared to the prior year. This increase was primarily the result of a $446 million increase in the average cost of fuel and purchased power primarily due to higher natural gas prices and a $113 million increase in the volume of KWHs generated, partially offset by a $189 million decrease in the volume of KWHs purchased as the marginal cost of generation available was lower than the market cost of available energy.

Fuel and purchased power energy transactions at the traditional operating companies are generally offset by fuel revenues and do not have a significant impact on net income. See FUTURE EARNINGS POTENTIAL – "Retail Regulatory Matters – Retail Fuel Cost Recovery" herein for additional information. Fuel expenses incurred under Southern Power's PPAs are generally the responsibility of the counterparties and do not significantly impact net income.

Fuel

In 2014, fuel expense was $6.0 billion, an increase of $495 million, or 9.0%, as compared to the prior year. The increase was primarily due to a 12.7% increase in the volume of KWHs generated by coal, a 10.3% increase in the average cost of natural gas per KWH generated, and a 30.7% decrease in the volume of KWHs generated by hydro facilities resulting from less rainfall, partially offset by a 5.0% decrease in the average cost of coal per KWH generated.

In 2013, fuel expense was $5.5 billion, an increase of $453 million, or 9.0%, as compared to the prior year. The increase was primarily due to a 15.0% increase in the average cost of natural gas per KWH generated, partially offset by a 125.9% increase in the volume of KWHs generated by hydro facilities resulting from greater rainfall.

Purchased Power

In 2014, purchased power expense was $672 million, an increase of $211 million, or 45.8%, as compared to the prior year. The increase was primarily due to a 35.3% increase in the average cost per KWH purchased.

In 2013, purchased power expense was $461 million, a decrease of $83 million, or 15.3%, as compared to the prior year. The decrease was primarily due to a 25.9% decrease in the volume of KWHs purchased as the marginal cost of generation available was lower than the market cost of available energy, partially offset by an 18.4% increase in the average cost per KWH purchased.

Energy purchases will vary depending on demand for energy within the Southern Company system's service territory, the market prices of wholesale energy as compared to the cost of the Southern Company system's generation, and the availability of the Southern Company system's generation.

Other Operations and Maintenance Expenses

Other operations and maintenance expenses increased $481 million, or 12.7%, in 2014 as compared to the prior year. The increase was primarily related to increases of $149 million in scheduled outage costs at generation facilities, $103 million in other generation expenses primarily related to commodity and labor costs, $103 million in transmission and distribution costs primarily related to overhead line maintenance, $42 million in net employee compensation and benefits including pension costs, and $31 million in customer accounts, service, and sales costs primarily related to customer incentive and demand-side management programs.

Other operations and maintenance expenses increased $83 million, or 2.2%, in 2013 as compared to the prior year. Other operations and maintenance expenses in 2013 were significantly below normal levels as a result of cost containment efforts undertaken primarily at Georgia Power to offset the impact of significantly milder than normal weather conditions. Administrative and general expenses increased $63 million primarily as a result of an increase in pension costs. Transmission and distribution expenses increased $27 million primarily due to increases at Georgia Power in transmission system load expense resulting from billing adjustments with integrated transmission system owners.

Production expenses and transmission and distribution expenses fluctuate from year to year due to variations in outage and maintenance schedules and normal changes in the cost of labor and materials.

Depreciation and Amortization

Depreciation and amortization increased $43 million, or 2.3%, in 2014 as compared to the prior year primarily due to increases in depreciation rates related to environmental assets and the amortization of certain regulatory assets at Alabama Power and the completion of the amortization of certain regulatory liabilities at Georgia Power. Also contributing to the increase were increases at Southern Power in plant in service related to the addition of solar facilities in 2013 and 2014, an increase related to equipment retirements resulting from accelerated outage work, and additional component depreciation as a result of increased production. These increases were largely offset by the amortization of $120 million of the regulatory liability for other cost of removal obligations at Alabama Power. See Note 3 to the financial statements under "Retail Regulatory Matters – Alabama Power – Rate CNP" and "– Cost of Removal Accounting Order" for additional information.

Depreciation and amortization increased $114 million, or 6.4%, in 2013 as compared to the prior year primarily due to additional plant in service related to the completion of Georgia Power's Plant McDonough-Atkinson Units 5 and 6 in April 2012 and October 2012, respectively, and six Southern Power plants between June 2012 and October 2013, certain coal unit retirement decisions (with respect to the portion of such units dedicated to wholesale service) at Georgia Power, and additional transmission and distribution projects. See FUTURE EARNINGS POTENTIAL – "Retail Regulatory Matters – Georgia Power – Integrated Resource Plans" for additional information on Georgia Power's unit retirement decisions. These increases were partially offset by a net reduction in amortization primarily related to amortization of a regulatory liability for state income tax credits at Georgia Power and by the deferral of certain expenses under an accounting order at Alabama Power. See Note 3 to the financial statements under "Retail Regulatory Matters – Alabama Power – Compliance and Pension Cost Accounting Order" for additional information on Alabama Power's accounting order.

See Note 1 to the financial statements under "Regulatory Assets and Liabilities" and "Depreciation and Amortization" for additional information.

Taxes Other Than Income Taxes

Taxes other than income taxes increased $47 million, or 5.0%, in 2014 as compared to the prior year primarily due to increases of $34 million in municipal franchise fees related to higher retail revenues in 2014 and $16 million in payroll taxes primarily related to higher employee benefits.

Taxes other than income taxes increased $20 million, or 2.2%, in 2013 as compared to the prior year primarily due to increases in property taxes.

Estimated Loss on Kemper IGCC

In 2014 and 2013, estimated probable losses on the Kemper IGCC of $868 million and $1.2 billion, respectively, were recorded at Southern Company. These losses reflect revisions of estimated costs expected to be incurred on Mississippi Power's construction of the Kemper IGCC in excess of the $2.88 billion cost cap established by the Mississippi PSC, net of $245 million of grants awarded to the project by the DOE under the Clean Coal Power Initiative Round 2 (DOE Grants) and excluding the cost of the lignite mine and equipment, the cost of the CO_2 pipeline facilities, AFUDC, and certain general exceptions, including change of law, force majeure, and beneficial capital (which exists when Mississippi Power demonstrates that the purpose and effect of the construction cost increase is to produce efficiencies that will result in a neutral or favorable effect on customers relative to the original proposal for the CPCN) (Cost Cap Exceptions). See FUTURE EARNINGS POTENTIAL – "Construction Program" herein and Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for additional information.

Allowance for Equity Funds Used During Construction

AFUDC equity increased $55 million, or 28.9%, in 2014 as compared to the prior year primarily due to additional capital expenditures at the traditional operating companies, primarily related to environmental and transmission projects, as well as Mississippi Power's Kemper IGCC.

AFUDC equity increased $47 million, or 32.9%, in 2013 as compared to the prior year primarily due to an increase in CWIP related to Mississippi Power's Kemper IGCC and increased capital expenditures at Alabama Power, partially offset by the completion of Georgia Power's Plant McDonough-Atkinson Units 5 and 6 in 2012.

See Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for additional information regarding the Kemper IGCC.

Interest Expense, Net of Amounts Capitalized

Interest expense, net of amounts capitalized increased $6 million, or 0.8%, in 2014 as compared to the prior year primarily due to a higher amount of outstanding long-term debt and an increase in interest expense resulting from the deposits received by Mississippi Power in January and October 2014 related to SMEPA's pending purchase of an undivided interest in the Kemper IGCC, partially offset by a decrease in interest expense related to the refinancing of long-term debt at lower rates and an increase in capitalized interest. See Note 6 to the financial statements for additional information.

Interest expense, net of amounts capitalized decreased $32 million, or 3.9%, in 2013 as compared to the prior year primarily due to lower interest rates, the timing of issuances and redemptions of long-term debt, an increase in capitalized interest primarily resulting from AFUDC debt associated with Mississippi Power's Kemper IGCC, and an increase in capitalized interest associated with the construction of Southern Power's Plants Campo Verde and Spectrum. These decreases were partially offset by a decrease in capitalized interest resulting from the completion of Southern Power's Plants Nacogdoches and Cleveland, a reduction in AFUDC debt due to the completion of Georgia Power's Plant McDonough-Atkinson Units 5 and 6, and the conclusion of certain state and federal tax audits in 2012.

Other Income (Expense), Net

Other income (expense), net decreased $18 million, or 32.7%, in 2014 as compared to the prior year primarily due to an $8 million decrease in wholesale operating fee revenue at Georgia Power and $7 million associated with Mississippi Power's settlement with the Sierra Club. See Note 3 to the financial statements under "Other Matters – Sierra Club Settlement Agreement" for additional information.

Income Taxes

Income taxes increased $118 million, or 12.6%, in 2014 as compared to the prior year primarily due to higher pre-tax earnings, partially offset by an increase in non-taxable AFUDC equity and an increase in tax benefits related to federal ITCs.

Income taxes decreased $465 million, or 33.2%, in 2013 as compared to the prior year primarily due to lower pre-tax earnings, an increase in tax benefits recognized from ITCs at Southern Power, and a net increase in non-taxable AFUDC equity, partially offset by a decrease in state income tax credits, primarily at Georgia Power.

Other Business Activities

Southern Company's other business activities include the parent company (which does not allocate operating expenses to business units), investments in leveraged lease projects, and telecommunications. These businesses are classified in general categories and may comprise one or both of the following subsidiaries: Southern Company Holdings, Inc. (Southern Holdings) invests in various projects, including leveraged lease projects, and SouthernLINC Wireless provides digital wireless communications for use by Southern Company and its subsidiary companies and also markets these services to the public and provides fiber cable services within the Southeast.

A condensed statement of income for Southern Company's other business activities follows:

	Amount	Increase (Decrease) from Prior Year	
	2014	2014	2013
		(in millions)	
Operating revenues	$ 61	$ 9	$ (7)
Other operations and maintenance	95	27	(9)
Depreciation and amortization	16	1	—
Taxes other than income taxes	2	—	—
Total operating expenses	113	28	(9)
Operating income (loss)	(52)	(19)	2
Interest income	1	—	(17)
Other income (expense), net	10	36	(45)
Interest expense	41	5	(3)
Income taxes	(76)	10	(20)
Net income (loss)	$ (6)	$ 2	$ (37)

Operating Revenues

Southern Company's non-electric operating revenues for these other business activities increased $9 million, or 17.3%, in 2014 as compared to the prior year. The increase was primarily related to higher operating revenues at Southern Holdings, partially offset by decreases in revenues at SouthernLINC Wireless related to lower average per subscriber revenue and fewer subscribers due to continued competition in the industry. Non-electric operating revenues for these other businesses decreased $7 million, or 11.9%, in 2013 as compared to the prior year. The decrease was primarily the result of decreases in revenues at SouthernLINC Wireless related to lower average per subscriber revenue and fewer subscribers due to continued competition in the industry.

Other Operations and Maintenance Expenses

Other operations and maintenance expenses for these other business activities increased $27 million, or 39.7%, in 2014 as compared to the prior year. The increase was primarily due to insurance proceeds received in 2013 related to a litigation settlement with MC Asset Recovery, LLC and higher operating expenses at Southern Holdings. Other operations and maintenance expenses for these other business activities decreased $9 million, or 11.7%, in 2013 as compared to the prior year. The decrease was primarily related to lower operating expenses at SouthernLINC Wireless and decreases in consulting and legal fees, partially offset by higher operating expenses at Southern Holdings and a decrease in the amount of insurance proceeds received in 2013 related to a litigation settlement with MC Asset Recovery, LLC as compared to the amount received in 2012. See Note 3 to the financial statements under "Insurance Recovery" for additional information related to the litigation settlement with MC Asset Recovery, LLC.

Interest Income

Interest income for these other business activities decreased $17 million in 2013 as compared to the prior year primarily due to the conclusion of certain federal income tax audits in 2012.

Other Income (Expense), Net

Other income (expense), net for these other business activities increased $36 million in 2014 as compared to the prior year. The increase was primarily due to the restructuring of a leveraged lease investment in the first quarter of 2013 and a decrease in charitable contributions in 2014. Other income (expense), net for these other business activities decreased $45 million in 2013 as compared to the prior year. The decrease was primarily due to the restructuring of a leveraged lease investment and an increase in charitable contributions.

Southern Company has several leveraged lease agreements which relate to international and domestic energy generation, distribution, and transportation assets. Southern Company receives federal income tax deductions for depreciation and amortization, as well as interest on long-term debt related to these investments. See Note 1 under "Leveraged Leases" for additional information.

Interest Expense

Interest expense for these other business activities increased $5 million, or 13.9%, in 2014 as compared to the prior year. The increase was primarily due to a higher amount of outstanding long-term debt, partially offset by the refinancing of long-term debt at lower rates.

Income Taxes

Income taxes for these other business activities increased $10 million, or 11.6%, in 2014 and decreased $20 million, or 30.3%, in 2013 as compared to the prior year primarily as a result of changes in pre-tax earnings (losses).

Effects of Inflation

The traditional operating companies are subject to rate regulation that is generally based on the recovery of historical and projected costs. The effects of inflation can create an economic loss since the recovery of costs could be in dollars that have less purchasing power. Southern Power is party to long-term contracts reflecting market-based rates, including inflation expectations. Any adverse effect of inflation on Southern Company's results of operations has not been substantial in recent years.

FUTURE EARNINGS POTENTIAL

General

The four traditional operating companies operate as vertically integrated utilities providing electricity to customers within their service areas in the Southeast. Prices for electricity provided to retail customers are set by state PSCs under cost-based regulatory principles. Prices for wholesale electricity sales, interconnecting transmission lines, and the exchange of electric power are regulated by the FERC. Retail rates and earnings are reviewed and may be adjusted periodically within certain limitations. Southern Power continues to focus on long-term capacity contracts, optimized by limited energy trading activities. See ACCOUNTING POLICIES – "Application of Critical Accounting Policies and Estimates – Electric Utility Regulation" herein and Note 3 to the financial statements for additional information about regulatory matters.

The results of operations for the past three years are not necessarily indicative of future earnings potential. The level of Southern Company's future earnings depends on numerous factors that affect the opportunities, challenges, and risks of the Southern Company system's primary business of selling electricity. These factors include the traditional operating companies' ability to maintain a constructive regulatory environment that continues to allow for the timely recovery of prudently-incurred costs during a time of increasing costs and the completion and subsequent operation of the Kemper IGCC and Plant Vogtle Units 3 and 4 as well as other ongoing construction projects. Other major factors include the profitability of the competitive wholesale business and successfully expanding investments in renewable energy projects. Future earnings for the electricity business in the near term will depend, in part, upon maintaining and growing sales which are subject to a number of factors. These factors include weather, competition, new energy contracts with other utilities and other wholesale customers, energy conservation practiced by customers, the use of alternative energy sources by customers, the price of electricity, the price elasticity of demand, and the rate of economic growth or decline in the service territory. In addition, the level of future earnings for the wholesale business also depends on numerous factors including creditworthiness of customers, total generating capacity available and related costs, future acquisitions and construction of generating facilities, including the impact of ITCs, and the successful remarketing of capacity as current contracts expire. Changes in regional and global economic conditions may impact sales for the traditional operating companies and Southern Power, as the pace of the economic recovery remains uncertain. The timing and extent of the economic recovery will impact growth and may impact future earnings.

As part of its ongoing effort to adapt to changing market conditions, Southern Company continues to evaluate and consider a wide array of potential business strategies. These strategies may include business combinations, partnerships, and acquisitions involving other utility or non-utility businesses or properties, disposition of certain assets, internal restructuring, or some combination thereof. Furthermore, Southern Company may engage in new business ventures that arise from competitive and regulatory changes in the utility industry. Pursuit of any of the above strategies, or any combination thereof, may significantly affect the business operations, risks, and financial condition of Southern Company.

Environmental Matters

Compliance costs related to federal and state environmental statutes and regulations could affect earnings if such costs cannot continue to be fully recovered in rates on a timely basis or through market-based contracts. Environmental compliance spending over the next several years may differ materially from the amounts estimated. The timing, specific requirements, and estimated costs could change as environmental statutes and regulations are adopted or modified. Further, higher costs that are recovered through regulated rates could contribute to reduced demand for electricity, which could negatively affect results of operations, cash flows, and financial condition. See Note 3 to the financial statements under "Environmental Matters" for additional information.

New Source Review Actions

As part of a nationwide enforcement initiative against the electric utility industry which began in 1999, the EPA brought civil enforcement actions in federal district court against Alabama Power and Georgia Power alleging violations of the New Source Review provisions of the Clean Air Act at certain coal-fired electric generating units, including units co-owned by Gulf Power and Mississippi Power. An adverse outcome could require substantial capital expenditures that cannot be determined at this time and could possibly require payment of substantial penalties. See Note 3 to the financial statements under "Environmental Matters – New Source Review Actions" for additional information. The ultimate outcome of these matters cannot be determined at this time.

Environmental Statutes and Regulations

General

The electric utilities' operations are subject to extensive regulation by state and federal environmental agencies under a variety of statutes and regulations governing environmental media, including air, water, and land resources. Applicable statutes include the Clean Air Act; the Clean Water Act; the Comprehensive Environmental Response, Compensation, and Liability Act; the Resource Conservation and Recovery Act; the Toxic Substances Control Act; the Emergency Planning & Community Right-to-Know Act; the Endangered Species Act; and related federal and state regulations. Compliance with these environmental requirements involves significant capital and operating costs, a major portion of which is expected to be recovered through existing ratemaking provisions. Through 2014, the traditional operating companies had invested approximately $10.6 billion in environmental capital retrofit projects to comply with these requirements, with annual totals of approximately $1.1 billion, $0.7 billion, and $0.3 billion for 2014, 2013, and 2012, respectively. The Southern Company system expects that capital expenditures to comply with environmental statutes and regulations will total approximately $2.1 billion from 2015 through 2017, with annual totals of approximately $1.0 billion, $0.5 billion, and $0.6 billion for 2015, 2016, and 2017, respectively. These estimated expenditures do not include any potential compliance costs that may arise from the EPA's proposed rules that would limit CO_2 emissions from new, existing, and modified or reconstructed fossil-fuel-fired electric generating units. See "Global Climate Issues" for additional information.

The Southern Company system's ultimate environmental compliance strategy, including potential unit retirement and replacement decisions, and future environmental capital expenditures will be affected by the final requirements of new or revised environmental regulations and regulations relating to global climate change that are promulgated, including the proposed environmental regulations described below; the outcome of any legal challenges to the environmental rules; the cost, availability, and existing inventory of emissions allowances; and the fuel mix of the electric utilities. Compliance costs may arise from existing unit retirements, installation of additional environmental controls, upgrades to the transmission system, closure and monitoring of CCR facilities, and adding or changing fuel sources for certain existing units. The ultimate outcome of these matters cannot be determined at this time. See "Retail Regulatory Matters – Alabama Power – Environmental Accounting Order" and "Retail Regulatory Matters – Georgia Power – Integrated Resource Plans" herein and Note 3 to the financial statements under "Other Matters – Sierra Club Settlement Agreement" for additional information on planned unit retirements and fuel conversions at Alabama Power, Georgia Power, and Mississippi Power.

Compliance with any new federal or state legislation or regulations relating to air quality, water, CCR, global climate change, or other environmental and health concerns could significantly affect the Company. Although new or revised environmental legislation or regulations could affect many areas of the electric utilities' operations, the full impact of any such changes cannot be determined at this time. Additionally, many of the electric utilities' commercial and industrial customers may also be affected by existing and future environmental requirements, which for some may have the potential to ultimately affect their demand for electricity.

Air Quality

Compliance with the Clean Air Act and resulting regulations has been and will continue to be a significant focus for the Southern Company system. Since 1990, the electric utilities have spent approximately $9.5 billion in reducing and monitoring emissions pursuant to the Clean Air Act. Additional controls are currently planned or under consideration to further reduce air emissions, maintain compliance with existing regulations, and meet new requirements.

In 2012, the EPA finalized the Mercury and Air Toxics Standards (MATS) rule, which imposes stringent emissions limits for acid gases, mercury, and particulate matter on coal- and oil-fired electric utility steam generating units. Compliance for existing sources is required by April 16, 2015 up to April 16, 2016 for affected units for which extensions have been granted. On November 25, 2014, the U.S. Supreme Court granted a petition for review of the final MATS rule.

The EPA regulates ground level ozone concentrations through implementation of an eight-hour ozone National Ambient Air Quality Standard (NAAQS). In 2008, the EPA adopted a more stringent eight-hour ozone NAAQS, which it began to implement in 2011. In 2012, the EPA published its final determination of nonattainment areas based on the 2008 eight-hour ozone NAAQS. The only area within the traditional operating companies' service territory designated as an ozone nonattainment area is a 15-county area within metropolitan Atlanta. On December 17, 2014, the EPA published a proposed rule to further reduce the current eight-hour ozone standard. The EPA is required by federal court order to complete this rulemaking by October 1, 2015. Finalization of a lower eight-hour ozone standard could result in the designation of new ozone nonattainment areas within the traditional operating companies' service territory.

The EPA regulates fine particulate matter concentrations on an annual and 24-hour average basis. All areas within the traditional operating companies' service territory have achieved attainment with the 1997 and 2006 particulate matter NAAQS and, with the exception of the Atlanta area, the EPA has officially redesignated former nonattainment areas within the service territory as attainment for these standards. A redesignation request for the Atlanta area is pending with the EPA. In 2012, the EPA issued a final rule that increases the stringency of the annual fine particulate matter standard. The EPA promulgated final designations for the 2012 annual standard on December 18, 2014, and no new nonattainment areas were designated within the traditional operating companies' service territory. The EPA has, however, deferred designation decisions for certain areas in Alabama, Florida, and Georgia, so future nonattainment designations in these areas are possible.

Final revisions to the NAAQS for sulfur dioxide (SO_2), which established a new one-hour standard, became effective in 2010. No areas within the Southern Company system's service territory have been designated as nonattainment under this rule. However, the EPA has announced plans to make additional designation decisions for SO_2 in the future, which could result in nonattainment designations for areas within the Southern Company system's service territory. Implementation of the revised SO_2 standard could require additional reductions in SO_2 emissions and increased compliance and operational costs.

On February 13, 2014, the EPA proposed to delete from the Alabama State Implementation Plan (SIP) the Alabama opacity rule that the EPA approved in 2008, which provides operational flexibility to affected units. In March 2013, the U.S. Court of Appeals for the Eleventh Circuit ruled in favor of Alabama Power and vacated an earlier attempt by the EPA to rescind its 2008 approval. The EPA's latest proposal characterizes the proposed deletion as an error correction within the meaning of the Clean Air Act. Alabama Power believes this interpretation of the Clean Air Act to be incorrect. If finalized, this proposed action could affect unit availability and result in increased operations and maintenance costs for affected units, including units owned by Alabama Power, units co-owned with Mississippi Power, and units owned by SEGCO, which is jointly owned by Alabama Power and Georgia Power.

Each of the states in which the Southern Company system has fossil generation is subject to the requirements of the Cross State Air Pollution Rule (CSAPR). CSAPR is an emissions trading program that limits SO_2 and nitrogen oxide emissions from power plants in 28 states in two phases, with Phase I beginning in 2015 and Phase II beginning in 2017. In 2012, the U.S. Court of Appeals for the District of Columbia Circuit vacated CSAPR in its entirety, but on April 29, 2014, the U.S. Supreme Court overturned that decision and remanded the case back to the U.S. Court of Appeals for the District of Columbia Circuit for further proceedings. The U.S. Court of Appeals for the District of Columbia Circuit granted the EPA's motion to lift the stay of the rule, and the first phase of CSAPR took effect on January 1, 2015.

The EPA finalized the Clean Air Visibility Rule (CAVR) in 2005, with a goal of restoring natural visibility conditions in certain areas (primarily national parks and wilderness areas) by 2064. The rule involves the application of best available retrofit technology to certain sources, including fossil fuel-fired generating facilities, built between 1962 and 1977 and any additional emissions reductions necessary for each designated area to achieve reasonable progress toward the natural visibility conditions goal by 2018 and for each 10-year period thereafter.

In 2012, the EPA published proposed revisions to the New Source Performance Standard (NSPS) for Stationary Combustion Turbines (CTs). If finalized as proposed, the revisions would apply the NSPS to all new, reconstructed, and modified CTs (including CTs at combined cycle units), during all periods of operation, including startup and shutdown, and alter the criteria for determining when an existing CT has been reconstructed.

In February 2013, the EPA proposed a rule that would require certain states to revise the provisions of their SIPs relating to the regulation of excess emissions at industrial facilities, including fossil fuel-fired generating facilities, during periods of startup, shut-down, or malfunction (SSM). The EPA proposed to supplement the 2013 proposed rule on September 17, 2014, making it more stringent. The EPA has entered into a settlement agreement requiring it to finalize the proposed rule by May 22, 2015. The proposed rule would require states subject to the rule (including Alabama, Florida, Georgia, Mississippi, and North Carolina) to revise their SSM provisions within 18 months after issuance of the final rule.

The Southern Company system has developed and continually updates a comprehensive environmental compliance strategy to assess compliance obligations associated with the current and proposed environmental requirements discussed above. As part of this strategy, certain of the traditional operating companies have developed a compliance plan for the MATS rule which includes reliance on existing emission control technologies, the construction of baghouses to provide an additional level of control on the emissions of mercury and particulates from certain generating units, the use of additives or other injection technology, the use of existing or additional natural gas capability, and unit retirements. Additionally, certain transmission system upgrades are required. The impacts of the eight-hour ozone, fine particulate matter and SO_2 NAAQS, the Alabama opacity rule, CSAPR, CAVR, the MATS rule, the NSPS for CTs, and the SSM rule on the Southern Company system cannot be determined at this time and will depend on the specific provisions of the proposed and final rules, the resolution of pending and future legal challenges, and/or the development and implementation of rules at the state level. These regulations could result in significant additional compliance costs that could affect future unit retirement and replacement decisions and results of operations, cash flows, and financial condition if such costs are not recovered through regulated rates.

In addition to the federal air quality laws described above, Georgia Power is also subject to the requirements of the 2007 State of Georgia Multi-Pollutant Rule. The Multi-Pollutant Rule, as amended, is designed to reduce emissions of mercury, SO_2, and nitrogen oxide state-wide by requiring the installation of specified control technologies at certain coal-fired generating units by specific dates between December 31, 2008 and April 16, 2015. A companion rule requires a 95% reduction in SO_2 emissions from the controlled units on the same or similar timetable. Through December 31, 2014, Georgia Power had installed the required controls on 14 of its coal-fired generating units with two additional projects to be completed before the unit-specific installation deadlines.

Water Quality

The EPA's final rule establishing standards for reducing effects on fish and other aquatic life caused by new and existing cooling water intake structures at existing power plants and manufacturing facilities became effective on October 14, 2014. The effect of this final rule will depend on the results of additional studies and implementation of the rule by regulators based on site-specific factors. The ultimate impact of this rule will also depend on the outcome of ongoing legal challenges and cannot be determined at this time.

In June 2013, the EPA published a proposed rule which requested comments on a range of potential regulatory options for addressing revised technology-based limits for certain wastestreams from steam electric power plants and best management practices for CCR surface impoundments. The EPA has entered into a consent decree requiring it to finalize revisions to the steam electric effluent guidelines by September 30, 2015. The ultimate impact of the rule will also depend on the specific technology requirements of the final rule and the outcome of any legal challenges and cannot be determined at this time.

On April 21, 2014, the EPA and the U.S. Army Corps of Engineers jointly published a proposed rule to revise the regulatory definition of waters of the U.S. for all Clean Water Act (CWA) programs, which would significantly expand the scope of federal jurisdiction under the CWA. In addition, the rule as proposed could have significant impacts on economic development projects which could affect customer demand growth. The ultimate impact of the proposed rule will depend on the specific requirements of the final rule and the outcome of any legal challenges and cannot be determined at this time. If finalized as proposed, this rule could significantly increase permitting and regulatory requirements and costs associated with the siting of new facilities and the installation, expansion, and maintenance of transmission and distribution lines.

These proposed and final water quality regulations could result in significant additional capital expenditures and compliance costs that could affect future unit retirement and replacement decisions. Also, results of operations, cash flows, and financial condition could be significantly impacted if such costs are not recovered through regulated rates or through PPAs.

Coal Combustion Residuals

The traditional operating companies currently manage CCR at onsite storage units consisting of landfills and surface impoundments (CCR Units) at 22 electric generating plants. In addition to on-site storage, the traditional operating companies also sell a portion of their CCR to third parties for beneficial reuse. Individual states regulate CCR and the states in the Southern Company system's service territory each have their own regulatory requirements. Each traditional operating company has an inspection program in place to assist in maintaining the integrity of its coal ash surface impoundments.

On December 19, 2014, the EPA issued the Disposal of Coal Combustion Residuals from Electric Utilities final rule (CCR Rule), but has not yet published it in the Federal Register. The CCR Rule will regulate the disposal of CCR, including coal ash and gypsum, as non-hazardous solid waste in CCR Units at active generating power plants. The CCR Rule does not mandate closure of CCR Units, but includes minimum criteria for active and inactive surface impoundments containing CCR and liquids, lateral expansions of existing units, and active landfills. Failure to meet the minimum criteria can result in the mandated closure of a CCR Unit. Although the EPA does not require individual states to adopt the final criteria, states have the option to incorporate the federal criteria into their state solid waste management plans in order to regulate CCR in a manner consistent with federal standards. The EPA's final rule continues to exclude the beneficial use of CCR from regulation.

The ultimate impact of the CCR Rule cannot be determined at this time and will depend on the traditional operating companies' ongoing review of the CCR Rule, the results of initial and ongoing minimum criteria assessments, and the outcome of legal challenges. The cost and timing of potential ash pond closure and ongoing monitoring activities that may be required in connection with the CCR Rule is also uncertain; however, Southern Company has developed a preliminary nominal dollar estimate of costs associated with closure and groundwater monitoring of ash ponds in place of approximately $860 million and ongoing post-closure care of approximately $140 million. Certain of the traditional operating companies have previously recorded asset retirement obligations (ARO) associated with ash ponds of $506 million, or $468 million on a nominal dollar basis, based on existing state requirements. During 2015, the traditional operating companies will record AROs for any incremental estimated closure costs resulting from acceleration in the timing of any currently planned closures and for differences between existing state requirements and the requirements of the CCR Rule. Southern Company's results of operations, cash flows, and financial condition could be significantly impacted if such costs are not recovered through regulated rates.

Environmental Remediation

The Southern Company system must comply with other environmental laws and regulations that cover the handling and disposal of waste and releases of hazardous substances. Under these various laws and regulations, the Southern Company system could incur substantial costs to clean up properties. The traditional operating companies conduct studies to determine the extent of any required cleanup and the Company has recognized in its financial statements the costs to clean up known impacted sites. Amounts for cleanup and ongoing monitoring costs were not material for any year presented. The traditional operating companies have each received authority from their respective state PSCs to recover approved environmental compliance costs through regulatory mechanisms. These rates are adjusted annually or as necessary within limits approved by the state PSCs. The traditional operating companies may be liable for some or all required cleanup costs for additional sites that may require environmental remediation. See Note 3 to the financial statements under "Environmental Matters – Environmental Remediation" for additional information.

Global Climate Issues

In 2014, the EPA published three sets of proposed standards that would limit CO_2 emissions from new, existing, and modified or reconstructed fossil-fuel-fired electric generating units. On January 8, 2014, the EPA published proposed standards for new units, and, on June 18, 2014, the EPA published proposed standards governing existing units, known as the Clean Power Plan, and separate standards governing CO_2 emissions from modified and reconstructed units. The EPA's proposed Clean Power Plan establishes guidelines for states to develop plans to address CO_2 emissions from existing fossil fuel-fired electric generating units. The EPA's proposed guidelines establish state-specific interim and final CO_2 emission rate goals to be achieved between 2020 and 2029 and in 2030 and thereafter. The proposed guidelines and standards could result in operational restrictions and material compliance costs, including capital expenditures, which could affect future unit retirement and replacement decisions. Southern Company's results of operations, cash flows, and financial condition could be significantly impacted if such costs are not recovered through regulated rates or through market-based contracts.

The Southern Company system filed comments on the EPA's proposed Clean Power Plan on December 1, 2014. These comments addressed legal and technical issues in addition to providing a preliminary estimated cost of complying with the proposed guidelines utilizing one of the EPA's compliance scenarios. Costs associated with this proposal could be significant to the utility industry and the Southern Company system. However, the ultimate financial and operational impact of the proposed Clean Power Plan on the Southern Company system cannot be determined at this time and will depend upon numerous known and unknown factors. Some of the unknown factors include: the structure, timing, and content of the EPA's final guidelines; individual state implementation of these guidelines, including the potential that state plans impose different standards; additional rulemaking activities in response to legal challenges and related court decisions; the impact of future changes in generation and emissions-related technology and costs; the impact of future decisions regarding unit retirement and replacement, including the type and amount of any such replacement capacity; and the time periods over which compliance will be required.

Over the past several years, the U.S. Congress has also considered many proposals to reduce greenhouse gas emissions, mandate renewable or clean energy, and impose energy efficiency standards. Such proposals are expected to continue to be considered by the U.S. Congress. International climate change negotiations under the United Nations Framework Convention on Climate Change are also continuing.

The EPA's greenhouse gas reporting rule requires annual reporting of CO_2 equivalent emissions in metric tons for a company's operational control of facilities. Based on ownership or financial control of facilities, the Southern Company system's 2013 greenhouse gas emissions were approximately 102 million metric tons of CO_2 equivalent. The preliminary estimate of the Southern Company system's 2014 greenhouse gas emissions on the same basis is approximately 112 million metric tons of CO_2 equivalent. The level of greenhouse gas emissions from year to year will depend on the level of generation, the mix of fuel sources, and other factors.

Retail Regulatory Matters

Alabama Power

Alabama Power's revenues from regulated retail operations are collected through various rate mechanisms subject to the oversight of the Alabama PSC. Alabama Power currently recovers its costs from the regulated retail business primarily through Rate RSE, Rate CNP, Rate ECR, and Rate NDR. In addition, the Alabama PSC issues accounting orders to address current events impacting Alabama Power. See Note 3 to the financial statements under "Retail Regulatory Matters – Alabama Power" for additional information regarding Alabama Power's rate mechanisms and accounting orders.

Rate RSE

Alabama Power's Rate RSE adjustments are based on forward-looking information for the applicable upcoming calendar year. Rate adjustments for any two-year period, when averaged together, cannot exceed 4.0% and any annual adjustment is limited to 5.0%. If Alabama Power's actual retail return is above the allowed weighted cost of equity (WCE) range, customer refunds will be required; however, there is no provision for additional customer billings should the actual retail return fall below the WCE range.

On December 1, 2014, Alabama Power submitted the required annual filing under Rate RSE to the Alabama PSC. The Rate RSE increase was 3.49%, or $181 million annually, effective January 1, 2015. The revenue adjustment includes the performance based adder of 0.07%. Under the terms of Rate RSE, the maximum increase for 2016 cannot exceed 4.51%.

Rate CNP

Alabama Power's retail rates, approved by the Alabama PSC, provide for adjustments to recognize the placing of new generating facilities into retail service under Rate CNP. Alabama Power may also recover retail costs associated with certificated PPAs under Rate CNP PPA. On March 4, 2014, the Alabama PSC issued a consent order that Alabama Power leave in effect the current Rate CNP PPA factor for billings for the period April 1, 2014 through March 31, 2015. It is anticipated that no adjustment will be made to Rate CNP PPA in 2015.

Alabama Power has elected the normal purchase normal sale (NPNS) scope exception under the derivative accounting rules for its two wind PPAs, which total approximately 400 MWs. The NPNS exception allows the PPAs to be recorded at a cost, rather than fair value, basis. The industry's application of the NPNS exception to certain physical forward transactions in nodal markets was previously under review by the SEC at the request of the electric utility industry. In June 2014, the SEC requested the Financial Accounting Standards Board to address the issue through the Emerging Issues Task Force (EITF). Any accounting decisions will now be subject to EITF deliberations. The outcome of the EITF's deliberations cannot be determined at this time. If Alabama Power is ultimately required to record these PPAs at fair value, an offsetting regulatory asset or regulatory liability will be recorded.

Rate CNP Environmental allows for the recovery of Alabama Power's retail costs associated with environmental laws, regulations, or other such mandates. Rate CNP Environmental is based on forward-looking information and provides for the recovery of these costs pursuant to a factor that is calculated annually. Environmental costs to be recovered include operations and maintenance expenses, depreciation, and a return on certain invested capital. The Rate CNP Environmental increase effective January 1, 2015 is 1.5%, or $75 million annually, based upon projected billings.

Environmental Accounting Order

Based on an order from the Alabama PSC, Alabama Power is allowed to establish a regulatory asset to record the unrecovered investment costs, including the unrecovered plant asset balance and the unrecovered costs associated with site removal and closure associated with future unit retirements caused by environmental regulations. These costs would be amortized over the affected unit's remaining useful life, as established prior to the decision regarding early retirement. See "Environmental Matters – Environmental Statutes and Regulations" herein for additional information regarding environmental regulations.

As part of its environmental compliance strategy, Alabama Power plans to retire Plant Gorgas Units 6 and 7. These units represent 200 MWs of Alabama Power's approximately 12,200 MWs of generating capacity. Alabama Power also plans to cease using coal at Plant Barry Units 1 and 2 (250 MWs), but such units will remain available on a limited basis with natural gas as the fuel source. Additionally, Alabama Power expects to cease using coal at Plant Barry Unit 3 (225 MWs) and Plant Greene County Units 1 and 2 (300 MWs) and begin operating those units solely on natural gas. These plans are expected to be effective no later than April 2016.

In accordance with an accounting order from the Alabama PSC, Alabama Power will transfer the unrecovered plant asset balances to a regulatory asset at their respective retirement dates. The regulatory asset will be amortized through Rate CNP Environmental over the remaining useful lives, as established prior to the decision for retirement. As a result, these decisions will not have a significant impact on Southern Company's financial statements.

Cost of Removal Accounting Order

In accordance with an accounting order issued on November 3, 2014 by the Alabama PSC, at December 31, 2014, Alabama Power fully amortized the balance of $123 million in certain regulatory asset accounts, and offset this amortization expense with the amortization of $120 million of the regulatory liability for other cost of removal obligations. The regulatory asset account balances amortized as of December 31, 2014 represented costs previously deferred under a compliance and pension cost accounting order as well as a non-nuclear outage accounting order, which were approved by the Alabama PSC in 2012 and August 2013, respectively. Approximately $95 million of non-nuclear outage costs and $28 million of compliance and pension costs were fully amortized at December 31, 2014.

The cost of removal accounting order also required Alabama Power to terminate, as of December 31, 2014, the regulatory asset accounts created pursuant to the compliance and pension cost accounting order and the non-nuclear outage accounting order. Consequently, Alabama Power will not defer any expenditures in 2015, 2016, and 2017 related to critical electric infrastructure and domestic nuclear facilities, as allowed under the previous orders.

Non-Environmental Federal Mandated Costs Accounting Order

On December 9, 2014, pending the development of a new cost recovery mechanism, the Alabama PSC issued an accounting order authorizing the deferral as a regulatory asset of up to $50 million of costs associated with non-environmental federal mandates that would otherwise impact rates in 2015.

On February 17, 2015, Alabama Power filed a proposed modification to Rate CNP Environmental with the Alabama PSC to include compliance costs for both environmental and non-environmental mandates. The non-environmental costs that would be recovered through the revised mechanism concern laws, regulations, and other mandates directed at the utility industry involving the security, reliability, safety, sustainability, or similar considerations impacting Alabama Power's facilities or operations. If approved as requested, the effective date for the revised mechanism would be March 20, 2015, upon which the regulatory asset balance would be reclassified to the under recovered balance for Rate CNP Environmental, and the related customer rates would not become effective before January 2016. The ultimate outcome of this matter cannot be determined at this time.

Georgia Power

Georgia Power's revenues from regulated retail operations are collected through various rate mechanisms subject to the oversight of the Georgia PSC. Georgia Power currently recovers its costs from the regulated retail business through the 2013 ARP, which includes traditional base tariff rates, Demand-Side Management (DSM) tariffs, Environmental Compliance Cost Recovery (ECCR) tariffs, and Municipal Franchise Fee (MFF) tariffs. In addition, financing costs related to the construction of Plant Vogtle Units 3 and 4 are being collected through the NCCR tariff and fuel costs are collected through separate fuel cost recovery tariffs. See Note 3 to the financial statements under "Retail Regulatory Matters – Georgia Power" for additional information.

Rate Plans

In December 2013, the Georgia PSC voted to approve the 2013 ARP. The 2013 ARP reflects the settlement agreement among Georgia Power, the Georgia PSC's Public Interest Advocacy Staff, and 11 of the 13 intervenors, which was filed with the Georgia PSC in November 2013.

On January 1, 2014, in accordance with the 2013 ARP, Georgia Power increased its tariffs as follows: (1) traditional base tariff rates by approximately $80 million; (2) ECCR tariff by approximately $25 million; (3) DSM tariffs by approximately $1 million; and (4) MFF tariff by approximately $4 million, for a total increase in base revenues of approximately $110 million.

On February 19, 2015, in accordance with the 2013 ARP, the Georgia PSC approved adjustments to traditional base, ECCR, DSM, and MFF tariffs effective January 1, 2015 as follows:

- Traditional base tariffs by approximately $107 million to cover additional capacity costs;
- ECCR tariff by approximately $23 million;
- DSM tariffs by approximately $3 million; and
- MFF tariff by approximately $3 million to reflect the adjustments above.

The sum of these adjustments resulted in a base revenue increase of approximately $136 million in 2015.

The 2016 base rate increase, which was approved in the 2013 ARP, will be determined through a compliance filing expected to be filed in late 2015, and will be subject to review by the Georgia PSC.

Under the 2013 ARP, Georgia Power's retail ROE is set at 10.95% and earnings are evaluated against a retail ROE range of 10.00% to 12.00%. Two-thirds of any earnings above 12.00% will be directly refunded to customers, with the remaining one-third retained by Georgia Power. There will be no recovery of any earnings shortfall below 10.00% on an actual basis. However, if at any time during the term of the 2013 ARP, Georgia Power projects that its retail earnings will be below 10.00% for any calendar year, it may petition the Georgia PSC for implementation of the Interim Cost Recovery (ICR) tariff that would be used to adjust Georgia Power's earnings back to a 10.00% retail ROE. The Georgia PSC would have 90 days to rule on Georgia Power's request. The ICR tariff will expire at the earlier of January 1, 2017 or the end of the calendar year in which the ICR tariff becomes effective. In lieu of requesting implementation of an ICR tariff, or if the Georgia PSC chooses not to implement the ICR tariff, Georgia Power may file a full rate case. In 2014, Georgia Power's retail ROE exceeded 12.00%, and Georgia Power expects to refund to retail customers approximately $13 million in 2015, subject to review and approval by the Georgia PSC.

Except as provided above, Georgia Power will not file for a general base rate increase while the 2013 ARP is in effect. Georgia Power is required to file a general rate case by July 1, 2016, in response to which the Georgia PSC would be expected to determine whether the 2013 ARP should be continued, modified, or discontinued.

Integrated Resource Plans

See "Environmental Matters – Environmental Statutes and Regulations – Air Quality," "– Water Quality," "– Coal Combustion Residuals," and "– Global Climate Issues," and "Rate Plans" herein for additional information regarding proposed and final EPA rules and regulations, including the MATS rule for coal- and oil-fired electric utility steam generating units, revisions to effluent limitations guidelines for steam electric power plants, and additional regulations of CCR and CO_2; the State of Georgia's Multi-Pollutant Rule; and Georgia Power's analysis of the potential costs and benefits of installing the required controls on its fossil generating units in light of these regulations.

In July 2013, the Georgia PSC approved Georgia Power's latest triennial Integrated Resource Plan (2013 IRP) including Georgia Power's request to decertify 16 coal- and oil-fired units totaling 2,093 MWs. Several factors, including the cost to comply with existing and future environmental regulations, recent and forecasted economic conditions, and lower natural gas prices, contributed to the decision to close these units.

Plant Branch Units 3 and 4 (1,016 MWs), Plant Yates Units 1 through 5 (579 MWs), and Plant McManus Units 1 and 2 (122 MWs) will be decertified and retired by April 16, 2015, the compliance date of the MATS rule. The decertification date of Plant Branch Unit 1 (250 MWs) was extended from December 31, 2013 as specified in the final order in the 2011 Integrated Resource Plan Update (2011 IRP Update) to coincide with the decertification date of Plant Branch Units 3 and 4. The decertification and retirement of Plant Kraft Units 1 through 4 (316 MWs) were also approved and will be effective by April 16, 2016, based on a one-year extension of the MATS rule compliance date that was approved by the State of Georgia Environmental Protection Division in September 2013 to allow for necessary transmission system reliability improvements. In July 2013, the Georgia PSC approved the switch to natural gas as the primary fuel for Plant Yates Units 6 and 7. In September 2013, Plant Branch Unit 2 (319 MWs) was retired as approved by the Georgia PSC in the 2011 IRP Update in order to comply with the State of Georgia's Multi-Pollutant Rule.

In the 2013 ARP, the Georgia PSC approved the amortization of the CWIP balances related to environmental projects that will not be completed at Plant Branch Units 1 through 4 and Plant Yates Units 6 and 7 over nine years beginning in January 2014 and the amortization of any remaining net book values of Plant Branch Unit 2 from October 2013 to December 2022, Plant Branch Unit 1 from May 2015 to December 2020, Plant Branch Unit 3 from May 2015 to December 2023, and Plant Branch Unit 4 from May 2015 to December 2024. The Georgia PSC deferred a decision regarding the appropriate recovery period for the costs associated with unusable materials and supplies remaining at the retiring plants to Georgia Power's next base rate case, which Georgia Power expects to file in 2016 (2016 Rate Case). In the 2013 IRP, the Georgia PSC also deferred decisions regarding the recovery of any fuel related costs that could be incurred in connection with the retirement units to be addressed in future fuel cases.

On July 1, 2014, the Georgia PSC approved Georgia Power's request to cancel the proposed biomass fuel conversion of Plant Mitchell Unit 3 (155 MWs) because it would not be cost effective for customers. Georgia Power expects to request decertification of Plant Mitchell Unit 3 in connection with the triennial Integrated Resource Plan to be filed in 2016. Georgia Power plans to continue to operate the unit as needed until the MATS rule becomes effective in April 2015.

The decertification of these units and fuel conversions are not expected to have a material impact on Southern Company's financial statements; however, the ultimate outcome depends on the Georgia PSC's order in the 2016 Rate Case and future fuel cases and cannot be determined at this time.

Retail Fuel Cost Recovery

The traditional operating companies each have established fuel cost recovery rates approved by their respective state PSCs. Fuel cost recovery revenues are adjusted for differences in actual recoverable fuel costs and amounts billed in current regulated rates. Accordingly, changes in the billing factor will not have a significant effect on Southern Company's revenues or net income, but will affect cash flow. The traditional operating companies continuously monitor their under or over recovered fuel cost balances. On January 20, 2015, the Georgia PSC approved the deferral of Georgia Power's next fuel case filing until at least June 30, 2015.

See Note 1 to the financial statements under "Revenues" and Note 3 to the financial statements under "Retail Regulatory Matters – Alabama Power – Rate ECR" and "Retail Regulatory Matters – Georgia Power – Fuel Cost Recovery" for additional information.

Construction Program

The subsidiary companies of Southern Company are engaged in continuous construction programs to accommodate existing and estimated future loads on their respective systems. The Southern Company system intends to continue its strategy of developing and constructing new generating facilities, as well as adding or changing fuel sources for certain existing units, adding environmental control equipment, and expanding the transmission and distribution systems. For the traditional operating companies, major generation construction projects are subject to state PSC approval in order to be included in retail rates. While Southern Power generally constructs and acquires generation assets covered by long-term PPAs, any uncontracted capacity could negatively affect future earnings. The construction programs of the traditional operating companies and Southern Power are currently estimated to include an investment of approximately $6.7 billion, $5.4 billion, and $4.3 billion for 2015, 2016, and 2017, respectively.

The two largest construction projects currently underway in the Southern Company system are Plant Vogtle Units 3 and 4 and the Kemper IGCC. Georgia Power has a 45.7% ownership interest in Plant Vogtle Units 3 and 4, each with approximately 1,100 MWs, and Mississippi Power is ultimately expected to hold an 85% ownership interest in the 582-MW Kemper IGCC. See Note 3 to the financial statements under "Retail Regulatory Matters – Georgia Power – Nuclear Construction" and "Integrated Coal Gasification Combined Cycle" for additional information.

From 2013 through December 31, 2014, the Company recorded pre-tax charges totaling $2.05 billion ($1.26 billion after-tax) for revisions of estimated costs expected to be incurred on Mississippi Power's construction of the Kemper IGCC above the $2.88 billion cost cap established by the Mississippi PSC, net of the DOE Grants and excluding the Cost Cap Exceptions. In subsequent periods, any further changes in the estimated costs to complete construction of the Kemper IGCC subject to the $2.88 billion cost cap, net of the DOE Grants and excluding the Cost Cap Exceptions, will be reflected in the Company's statements of income and these changes could be material.

On January 29, 2015, Georgia Power announced that it was notified by the consortium consisting of Westinghouse Electric Company LLC and Stone & Webster, Inc., a subsidiary of The Shaw Group Inc., which was acquired by Chicago Bridge & Iron Company N.V. (collectively, Contractor) of the Contractor's revised forecast for completion of Plant Vogtle Units 3 and 4, which would incrementally delay the previously disclosed estimated in-service dates by 18 months (from the fourth quarter of 2017 to the second quarter of 2019 for Unit 3 and from the fourth quarter of 2018 to the second quarter of 2020 for Unit 4).

While Georgia Power has not agreed to any change to the guaranteed substantial completion dates (April 2016 for Unit 3 and April 2017 for Unit 4) included in the engineering, procurement, and construction agreement relating to Plant Vogtle Units 3 and 4, Georgia Power's twelfth Vogtle Construction Monitoring (VCM) report, filed February 27, 2015, includes a requested amendment to the Plant Vogtle Units 3 and 4 certificate to reflect the Contractor's revised forecast, to include the estimated owner's costs associated with the proposed 18-month Contractor delay, and to increase the estimated in-service capital cost of Plant Vogtle Units 3 and 4 from $4.4 billion to $5.0 billion. No Contractor costs related to the Contractor's proposed 18-month delay are included in the twelfth VCM report. The twelfth VCM report estimates total associated financing costs during the construction period to be approximately $2.5 billion.

Additionally, there are certain risks associated with the construction program in general and certain risks associated with the licensing, construction, and operation of nuclear generating units in particular, including potential impacts that could result from a major incident at a nuclear facility anywhere in the world. The ultimate outcome of these events cannot be determined at this time.

See FINANCIAL CONDITION AND LIQUIDITY – "Capital Requirements and Contractual Obligations" for additional information.

Income Tax Matters

See Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for additional information about the Kemper IGCC. The ultimate outcome of these tax matters cannot be determined at this time.

Bonus Depreciation

On December 19, 2014, the Tax Increase Prevention Act of 2014 (TIPA) was signed into law. The TIPA retroactively extended several tax credits through 2014 and extended 50% bonus depreciation for property placed in service in 2014 (and for certain long-term production-period projects to be placed in service in 2015). The extension of 50% bonus depreciation will have a positive impact on Southern Company's cash flows and, combined with bonus depreciation allowed under the American Taxpayer Relief Act of 2012 (ATRA), will result in approximately $630 million of positive cash flows. Additionally, the estimated cash flow benefit impact of bonus depreciation for long-term production-period projects to be placed in service in 2015 related to TIPA is expected to be approximately $220 million to $240 million for the 2015 tax year.

Tax Credits

The IRS allocated $279 million (Phase II) of Internal Revenue Code of 1986, as amended (Internal Revenue Code) Section 48A tax credits to Mississippi Power in connection with the Kemper IGCC. Through December 31, 2014, Southern Company had recorded tax benefits totaling $276 million for the Phase II credits, of which approximately $210 million had been utilized through that date. These credits will be amortized as a reduction to depreciation and amortization over the life of the Kemper IGCC and are dependent upon meeting the IRS certification requirements, including an in-service date no later than April 19, 2016 and the capture and sequestration (via enhanced oil recovery) of at least 65% of the CO_2 produced by the Kemper IGCC during operations in accordance with the Internal Revenue Code. Mississippi Power currently expects to place the Kemper IGCC in service in the first half of 2016. In addition, a portion of the Phase II tax credits will be subject to recapture upon completion of SMEPA's proposed purchase of an undivided interest in the Kemper IGCC.

In 2009, President Obama signed into law the American Recovery and Reinvestment Act of 2009 (ARRA). Major tax incentives in the ARRA included renewable energy incentives. In January 2013, the ATRA was signed into law. The ATRA retroactively extended several renewable energy incentives through 2013, including extending federal ITCs for biomass projects which began construction before January 1, 2014. The current law provides for a 30% federal ITC for solar facilities placed in service through 2016 and, unless extended, will adjust to 10% for solar facilities placed in service thereafter. The Company has received ITCs in connection with Southern Power's investments in solar and biomass facilities. See Note 1 to the financial statements under "Income and Other Taxes" for additional information regarding credits amortized and the tax benefit related to basis differences in 2014, 2013, and 2012.

Additionally, the TIPA extended the production tax credit for wind and certain other renewable sources of electricity to facilities for which construction had commenced by the end of 2014.

Section 174 Research and Experimental Deduction

Southern Company reduced tax payments for 2014 and included in its 2013 consolidated federal income tax return deductions for research and experimental expenditures related to the Kemper IGCC. Due to the uncertainty related to this tax position, Southern Company recorded an unrecognized tax benefit of approximately $160 million as of December 31, 2014. See Note 5 to the financial statements under "Unrecognized Tax Benefits" for additional information.

Other Matters

Southern Company and its subsidiaries are involved in various other matters being litigated and regulatory matters that could affect future earnings. In addition, Southern Company and its subsidiaries are subject to certain claims and legal actions arising in the ordinary course of business. The business activities of Southern Company's subsidiaries are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements, such as air quality and water standards, has occurred throughout the U.S. This litigation has included claims for damages alleged to have been caused by CO_2 and other emissions, CCR, and alleged exposure to hazardous materials, and/or requests for injunctive relief in connection with such matters.

The ultimate outcome of such pending or potential litigation against Southern Company and its subsidiaries cannot be predicted at this time; however, for current proceedings not specifically reported herein or in Note 3 to the financial statements, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Southern Company's financial statements. See Note 3 to the financial statements for a discussion of various other contingencies, regulatory matters, and other matters being litigated which may affect future earnings potential.

ACCOUNTING POLICIES

Application of Critical Accounting Policies and Estimates

Southern Company prepares its consolidated financial statements in accordance with GAAP. Significant accounting policies are described in Note 1 to the financial statements. In the application of these policies, certain estimates are made that may have a material impact on Southern Company's results of operations and related disclosures. Different assumptions and measurements could produce estimates that are significantly different from those recorded in the financial statements. Senior management has reviewed and discussed the following critical accounting policies and estimates with the Audit Committee of Southern Company's Board of Directors.

Electric Utility Regulation

Southern Company's traditional operating companies, which comprised approximately 94% of Southern Company's total operating revenues for 2014, are subject to retail regulation by their respective state PSCs and wholesale regulation by the FERC. These regulatory agencies set the rates the traditional operating companies are permitted to charge customers based on allowable costs, including a reasonable return on equity. As a result, the traditional operating companies apply accounting standards which require the financial statements to reflect the effects of rate regulation. Through the ratemaking process, the regulators may require the inclusion of costs or revenues in periods different than when they would be recognized by a non-regulated company. This treatment may result in the deferral of expenses and the recording of related regulatory assets based on anticipated future recovery through rates or the deferral of gains or creation of liabilities and the recording of related regulatory liabilities. The application of the accounting standards has a further effect on the Company's financial statements as a result of the estimates of allowable costs used in the ratemaking process. These estimates may differ from those actually incurred by the traditional operating companies; therefore, the accounting estimates inherent in specific costs such as depreciation, AROs, and pension and postretirement benefits have less of a direct impact on the Company's results of operations and financial condition than they would on a non-regulated company.

As reflected in Note 1 to the financial statements, significant regulatory assets and liabilities have been recorded. Management reviews the ultimate recoverability of these regulatory assets and any requirement to refund these regulatory liabilities based on applicable regulatory guidelines and GAAP. However, adverse legislative, judicial, or regulatory actions could materially impact the amounts of such regulatory assets and liabilities and could adversely impact the Company's financial statements.

Contingent Obligations

Southern Company is subject to a number of federal and state laws and regulations, as well as other factors and conditions that subject it to environmental, litigation, income tax, and other risks. See FUTURE EARNINGS POTENTIAL herein and Note 3 to the financial statements for more information regarding certain of these contingencies. Southern Company periodically evaluates its exposure to such risks and, in accordance with GAAP, records reserves for those matters where a non-tax-related loss is considered probable and reasonably estimable and records a tax asset or liability if it is more likely than not that a tax position will be sustained. The adequacy of reserves can be significantly affected by external events or conditions that can be unpredictable; thus, the ultimate outcome of such matters could materially affect Southern Company's financial position, results of operations, or cash flows.

Pension and Other Postretirement Benefits

Southern Company's calculation of pension and other postretirement benefits expense is dependent on a number of assumptions. These assumptions include discount rates, healthcare cost trend rates, expected long-term return on plan assets, mortality rates, expected salary and wage increases, and other factors. Components of pension and other postretirement benefits expense include interest and service cost on the pension and other postretirement benefit plans, expected return on plan assets, and amortization of certain unrecognized costs and obligations. Actual results that differ from the assumptions utilized are accumulated and amortized over future periods and, therefore, generally affect recognized expense and the recorded obligation in future periods. While the Company believes that the assumptions used are appropriate, differences in actual experience or significant changes in assumptions would affect its pension and other postretirement benefits costs and obligations.

Key elements in determining Southern Company's pension and other postretirement benefit expense in accordance with GAAP are the expected long-term return on plan assets and the discount rate used to measure the benefit plan obligations and the periodic benefit plan expense for future periods. The expected long-term return on postretirement benefit plan assets is based on Southern Company's investment strategy, historical experience, and expectations for long-term rates of return that consider external actuarial advice. Southern Company determines the long-term return on plan assets by applying the long-term rate of expected returns on various asset classes to Southern Company's target asset allocation. Southern Company discounts the future cash flows related to its postretirement benefit plans using a single-point discount rate for each plan developed from the weighted average of market-observed yields for high quality fixed income securities with maturities that correspond to expected benefit payments.

For purposes of its December 31, 2014 measurement date, the Company adopted new mortality tables for its pension plans and retiree life and medical plans, which reflect increased life expectancies in the U.S. The adoption of new mortality tables increased the projected benefit obligations for the Company's pension plans and other postretirement benefit plans by approximately $636 million and $92 million, respectively. The adoption of new mortality tables will increase net periodic costs related to the Company's pension plans and other postretirement benefit plans in 2015 by $86 million and $10 million, respectively.

The following table illustrates the sensitivity to changes in Southern Company's long-term assumptions with respect to the assumed discount rate, the assumed salaries, and the assumed long-term rate of return on plan assets:

Change in Assumption	Increase/(Decrease) in Total Benefit Expense for 2015	Increase/(Decrease) in Projected Obligation for Pension Plan at December 31, 2014	Increase/(Decrease) in Projected Obligation for Other Postretirement Benefit Plans at December 31, 2014
		(in millions)	
25 basis point change in discount rate	$36/$(34)	$409/$(385)	$64/$(61)
25 basis point change in salaries	$19/$(18)	$103/$(99)	$–/$–
25 basis point change in long-term return on plan assets	$24/$(24)	N/A	N/A

N/A – Not applicable

Kemper IGCC Estimated Construction Costs, Project Completion Date, and Rate Recovery

During 2014, Mississippi Power further extended the scheduled in-service date for the Kemper IGCC to the first half of 2016 and revised its cost estimate to complete construction and start-up of the Kemper IGCC to an amount that exceeds the $2.88 billion cost cap, net of the DOE Grants and excluding the Cost Cap Exceptions. Mississippi Power does not intend to seek any rate recovery or any joint owner contributions for any costs related to the construction of the Kemper IGCC that exceed the $2.88 billion cost cap, net of the DOE Grants and excluding the Cost Cap Exceptions.

As a result of the revisions to the cost estimate, Southern Company recorded total pre-tax charges to income for the estimated probable losses on the Kemper IGCC of $70.0 million ($43.2 million after tax) in the fourth quarter 2014, $418.0 million ($258.1 million after tax) in the third quarter 2014, $380.0 million ($234.7 million after tax) in the first quarter 2014, $40.0 million ($24.7 million after tax) in the fourth quarter 2013, $150.0 million ($92.6 million after tax) in the third quarter 2013, $450.0 million ($277.9 million after tax) in the second quarter 2013, and $540.0 million ($333.5 million after tax) in the first quarter 2013. In the aggregate, Southern Company has incurred charges of $2.05 billion ($1.26 billion after tax) as a result of changes in the cost estimate for the Kemper IGCC through December 31, 2014.

Mississippi Power has experienced, and may continue to experience, material changes in the cost estimate for the Kemper IGCC. In subsequent periods, any further changes in the estimated costs to complete construction and start-up of the Kemper IGCC subject to the $2.88 billion cost cap, net of the DOE Grants and excluding the Cost Cap Exceptions, will be reflected in Southern Company's statements of income and these changes could be material. Any further cost increases and/or extensions of the in- service date with respect to the Kemper IGCC may result from factors including, but not limited to, labor costs and productivity, adverse weather conditions, shortages and inconsistent quality of equipment, materials, and labor, contractor or supplier delay, non-performance under construction or other agreements, operational readiness, including specialized operator training and required site safety programs, unforeseen engineering or design problems, start-up activities for this first-of-a-kind technology (including major equipment failure and system integration), and/or operational performance (including additional costs to satisfy any operational parameters ultimately adopted by the Mississippi PSC).

Mississippi Power's revised cost estimate includes costs through March 31, 2016. Any further extension of the in-service date is currently estimated to result in additional base costs of approximately $25 million to $30 million per month, which includes maintaining necessary levels of start-up labor, materials, and fuel, as well as operational resources required to execute start-up and commissioning activities. Any further extension of the in-service date with respect to the Kemper IGCC would also increase costs for the Cost Cap Exceptions, which are not subject to the $2.88 billion cost cap established by the Mississippi PSC. These costs include AFUDC, which is currently estimated to total approximately $13 million per month, as well as carrying costs and operating expenses on Kemper IGCC assets placed in service and consulting fees and legal fees which are being deferred as regulatory assets and are estimated to total approximately $7 million per month.

Given the significant judgment involved in estimating the future costs to complete construction and start-up, the project completion date, the ultimate rate recovery for the Kemper IGCC, and the potential impact on Southern Company's results of operations, Southern Company considers these items to be critical accounting estimates. See Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for additional information.

Recently Issued Accounting Standards

On May 28, 2014, the Financial Accounting Standards Board issued ASC 606, Revenue from Contracts with Customers. ASC 606 revises the accounting for revenue recognition and is effective for fiscal years beginning after December 15, 2016. Southern Company continues to evaluate the requirements of ASC 606. The ultimate impact of the new standard has not yet been determined.

FINANCIAL CONDITION AND LIQUIDITY

Overview

Earnings in 2014 and 2013 were negatively affected by revisions to the cost estimate for the Kemper IGCC; however, Southern Company's financial condition remained stable at December 31, 2014 and December 31, 2013. Through December 31, 2014, Southern Company has incurred non-recoverable cash expenditures of $1.3 billion and is expected to incur approximately $702 million in additional non-recoverable cash expenditures through completion of the Kemper IGCC. Southern Company's cash requirements primarily consist of funding ongoing operations, common stock dividends, capital expenditures, and debt maturities. The Southern Company system's capital expenditures and other investing activities include investments to meet projected long-term demand requirements, to comply with environmental regulations, and for restoration following major storms. Operating cash flows provide a substantial portion of the Southern Company system's cash needs. For the three-year period from 2015 through 2017, Southern Company's projected common stock dividends, capital expenditures, and debt maturities are expected to exceed operating cash flows. The Southern Company system's projected capital expenditures in that period include investments to build new generation facilities, to maintain existing generation facilities, to add environmental equipment for existing generating units, to add or change fuel sources for certain existing units, and to expand and improve transmission and distribution facilities. Southern Company plans to finance future cash needs in excess of its operating cash flows primarily by accessing borrowings from financial institutions and through debt and equity issuances in the capital markets. Southern Company intends to continue to monitor its access to short-term and long-term capital markets as well as its bank credit arrangements to meet future capital and liquidity needs. See "Sources of Capital," "Financing Activities," and "Capital Requirements and Contractual Obligations" herein for additional information.

Southern Company's investments in the qualified pension plan and the nuclear decommissioning trust funds increased in value as of December 31, 2014 as compared to December 31, 2013. In December 2014, certain of the traditional operating companies and other subsidiaries voluntarily contributed an aggregate of $500 million to the qualified pension plan. No mandatory contributions to the qualified pension plan are anticipated for the year ending December 31, 2015. See "Contractual Obligations" herein and Notes 1 and 2 to the financial statements under "Nuclear Decommissioning" and "Pension Plans," respectively, for additional information.

Net cash provided from operating activities in 2014 totaled $5.8 billion, a decrease of $282 million from 2013. Significant changes in operating cash flow for 2014 as compared to 2013 include $500 million of voluntary contributions to the qualified pension plan and an increase in receivables due to under recovered fuel costs, partially offset by an increase in accrued compensation. Net cash provided from operating activities in 2013 totaled $6.1 billion, an increase of $1.2 billion from 2012. The most significant change in operating cash flow for 2013 as compared to 2012 was a decrease in fossil fuel stock due to an increase in KWH generation.

Net cash used for investing activities in 2014, 2013, and 2012 totaled $6.4 billion, $5.7 billion, and $5.2 billion, respectively. The cash used for investing activities in each of these years was primarily due to gross property additions for installation of equipment to comply with environmental standards, construction of generation, transmission, and distribution facilities, acquisitions of solar facilities, and purchases of nuclear fuel.

Net cash provided from financing activities totaled $644 million in 2014 due to issuances of long-term debt and common stock, partially offset by common stock dividend payments, redemptions of long-term debt, and a reduction in short-term debt. Net cash used for financing activities totaled $324 million in 2013 due to redemptions of long-term debt and payments of common stock dividends, partially offset by issuances of long-term debt and common stock and an increase in notes payable. Fluctuations in cash flow from financing activities vary from year to year based on capital needs and the maturity or redemption of securities.

Significant balance sheet changes in 2014 included an increase of $3.7 billion in total property, plant, and equipment for the installation of equipment to comply with environmental standards and construction of generation, transmission, and distribution facilities and a $1.8 billion increase in other regulatory assets, deferred related to pension and other postretirement benefits. Other significant changes included a $2.9 billion increase in short-term debt primarily related to debt maturing within the next year and borrowings to fund the Southern Company subsidiaries' continuous construction programs, a $1.2 billion increase in stockholders' equity, a $1.0 billion increase in accumulated deferred income taxes primarily as a result of bonus depreciation, and a $971 million increase in employee benefit obligations primarily as a result of changes in actuarial assumptions. See Note 2 and Note 5 to the financial statements for additional information regarding retirement benefits and deferred income taxes, respectively.

At the end of 2014, the market price of Southern Company's common stock was $49.11 per share (based on the closing price as reported on the New York Stock Exchange) and the book value was $21.98 per share, representing a market-to-book value ratio of 223%, compared to $41.11, $21.43, and 192%, respectively, at the end of 2013.

Sources of Capital

Southern Company intends to meet its future capital needs through operating cash flow, short-term debt, term loans, and external security issuances. Equity capital can be provided from any combination of the Company's stock plans, private placements, or public offerings. The amount and timing of additional equity capital to be raised in 2015, as well as in subsequent years, will be contingent on Southern Company's investment opportunities and the Southern Company system's capital requirements.

Except as described herein, the traditional operating companies and Southern Power plan to obtain the funds required for construction and other purposes from operating cash flows, external security issuances, term loans, short-term borrowings, and equity contributions or loans from Southern Company. However, the amount, type, and timing of any future financings, if needed, will depend upon prevailing market conditions, regulatory approval, and other factors.

On February 20, 2014, Georgia Power and the DOE entered into a loan guarantee agreement (Loan Guarantee Agreement), pursuant to which the DOE agreed to guarantee borrowings to be made by Georgia Power under a multi-advance credit facility (FFB Credit Facility) among Georgia Power, the DOE, and the FFB. Georgia Power is obligated to reimburse the DOE for any payments the DOE is required to make to the FFB under the guarantee. Georgia Power's reimbursement obligations to the DOE are full recourse and also are secured by a first priority lien on (i) Georgia Power's 45.7% ownership interest in Plant Vogtle Units 3 and 4 (primarily the units under construction, the related real property, and any nuclear fuel loaded in the reactor core) and (ii) Georgia Power's rights and obligations under the principal contracts relating to Plant Vogtle Units 3 and 4. Under the FFB Credit Facility, Georgia Power may make term loan borrowings through the FFB. Proceeds of borrowings made under the FFB Credit Facility will be used to reimburse Georgia Power for a portion of certain costs of construction relating to Plant Vogtle Units 3 and 4 that are eligible for financing under the Loan Guarantee Agreement (Eligible Project Costs). Aggregate borrowings under the FFB Credit Facility may not exceed the lesser of (i) 70% of Eligible Project Costs or (ii) approximately $3.46 billion. See Note 6 to the financial statements under "DOE Loan Guarantee Borrowings" for additional information regarding the Loan Guarantee Agreement and Note 3 to the financial statements under "Retail Regulatory Matters – Georgia Power – Nuclear Construction" for additional information regarding Plant Vogtle Units 3 and 4.

Eligible Project Costs incurred through December 31, 2014 would allow for borrowings of up to $2.1 billion under the FFB Credit Facility. Through December 31, 2014, Georgia Power had borrowed $1.2 billion under the FFB Credit Facility, leaving $0.9 billion of currently available borrowing ability.

Mississippi Power received $245 million of DOE Grants in prior years that were used for the construction of the Kemper IGCC. An additional $25 million of DOE Grants is expected to be received for the commercial operation of the Kemper IGCC. See Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for information regarding legislation related to the securitization of certain costs of the Kemper IGCC.

The issuance of securities by the traditional operating companies is generally subject to the approval of the applicable state PSC. The issuance of all securities by Mississippi Power and Southern Power and short-term securities by Georgia Power is generally subject to regulatory approval by the FERC. Additionally, with respect to the public offering of securities, Southern Company and certain of its subsidiaries file registration statements with the SEC under the Securities Act of 1933, as amended (1933 Act). The amounts of securities authorized by the appropriate regulatory authorities, as well as the securities registered under the 1933 Act, are continuously monitored and appropriate filings are made to ensure flexibility in the capital markets.

Southern Company, each traditional operating company, and Southern Power obtain financing separately without credit support from any affiliate. See Note 6 to the financial statements under "Bank Credit Arrangements" for additional information. The Southern Company system does not maintain a centralized cash or money pool. Therefore, funds of each company are not commingled with funds of any other company in the Southern Company system.

As of December 31, 2014, Southern Company's current liabilities exceeded current assets by $2.6 billion, primarily due to long-term debt of the traditional operating companies and Southern Power that is due within one year of $3.3 billion. To meet short-term cash needs and contingencies, Southern Company has substantial cash flow from operating activities and access to capital markets and financial institutions.

At December 31, 2014, Southern Company and its subsidiaries had approximately $710 million of cash and cash equivalents. Committed credit arrangements with banks at December 31, 2014 were as follows:

	Expires						Executable Term Loans		Due Within One Year	
Company	**2015**	**2016**	**2017**	**2018**	**Total**	**Unused**	**One Year**	**Two Years**	**Term Out**	**No Term Out**
					(in millions)		*(in millions)*		*(in millions)*	
Southern Company	$ —	$ —	$ —	$ 1,000	$ 1,000	$ 1,000	$ —	$ —	$ —	$ —
Alabama Power	228	50	—	1,030	1,308	1,308	58	—	58	170
Georgia Power	—	150	—	1,600	1,750	1,736	—	—	—	—
Gulf Power	80	165	30	—	275	275	50	—	50	30
Mississippi Power	135	165	—	—	300	300	25	40	65	70
Southern Power	—	—	—	500	500	488	—	—	—	—
Other	70	—	—	—	70	70	20	—	20	50
Total	$ 513	$ 530	$30	$ 4,130	$ 5,203	$ 5,177	$ 153	$ 40	$ 193	$ 320

See Note 6 to the financial statements under "Bank Credit Arrangements" for additional information.

A portion of the unused credit with banks is allocated to provide liquidity support to the traditional operating companies' variable rate pollution control revenue bonds and commercial paper programs. The amount of variable rate pollution control revenue bonds outstanding requiring liquidity support as of December 31, 2014 was approximately $1.8 billion. In addition, at December 31, 2014, the traditional operating companies had $476 million of fixed rate pollution control revenue bonds outstanding that were required to be remarketed within the next 12 months. As of December 31, 2014, $98 million of certain pollution control revenue bonds of Georgia Power were reclassified to securities due within one year in anticipation of their redemption in connection with unit retirement decisions.

Subject to applicable market conditions, Southern Company and its subsidiaries expect to renew their bank credit arrangements as needed, prior to expiration.

Most of these bank credit arrangements contain covenants that limit debt levels and contain cross default provisions to other indebtedness (including guarantee obligations) that are restricted only to the indebtedness of the individual company. Such cross default provisions to other indebtedness would trigger an event of default if the applicable borrower defaulted on indebtedness or guarantee obligations over a specified threshold. Southern Company, the traditional operating companies, and Southern Power are currently in compliance with all such covenants. None of the bank credit arrangements contain material adverse change clauses at the time of borrowings.

Southern Company, the traditional operating companies, and Southern Power make short-term borrowings primarily through commercial paper programs that have the liquidity support of the committed bank credit arrangements described above. Southern Company, the traditional operating companies, and Southern Power may also borrow through various other arrangements with banks. Commercial paper and short-term bank term loans are included in notes payable in the balance sheets.

Details of short-term borrowings were as follows:

	Short-term Debt at the End of the Period		Short-term Debt During the Period (a)		
	Amount Outstanding	Weighted Average Interest Rate	Average Outstanding	Weighted Average Interest Rate	Maximum Amount Outstanding
	(in millions)		*(in millions)*		*(in millions)*
December 31, 2014:					
Commercial paper	**$ 803**	**0.3%**	**$ 754**	**0.2%**	**$ 1,582**
Short-term bank debt	**—**	**—%**	**98**	**0.8%**	**400**
Total	**$ 803**	**0.3%**	**$ 852**	**0.3%**	
December 31, 2013:					
Commercial paper	$ 1,082	0.2%	$ 993	0.3%	$ 1,616
Short-term bank debt	400	0.9%	107	0.9%	400
Total	$ 1,482	0.4%	$ 1,100	0.3%	
December 31, 2012:					
Commercial paper	$ 820	0.3%	$ 550	0.3%	$ 938
Short-term bank debt	—	—%	116	1.2%	300
Total	$ 820	0.3%	$ 666	0.5%	

(a) Average and maximum amounts are based upon daily balances during the twelve-month periods ended December 31, 2014, 2013, and 2012.

The Company believes the need for working capital can be adequately met by utilizing commercial paper programs, lines of credit, bank notes, and cash from operations.

Financing Activities

During 2014, Southern Company issued approximately 20.8 million shares of common stock (including approximately 5.0 million treasury shares) for approximately $806 million through the employee and director stock plans and the Southern Investment Plan. The Company may satisfy its obligations with respect to the plans in several ways, including through using newly issued shares or treasury shares or acquiring shares on the open market through the independent plan administrators.

From August 2013 through December 2014, Southern Company used shares held in treasury, to the extent available, and newly issued shares to satisfy the requirements under the Southern Investment Plan and the employee savings plan. Beginning in January 2015, Southern Company ceased issuing additional shares under the Southern Investment Plan and the employee savings plan. All sales under these plans are now being funded with shares acquired on the open market by the independent plan administrators.

Beginning in 2015, Southern Company expects to repurchase shares of common stock to offset all or a portion of the incremental shares issued under its employee and director stock plans, including through stock option exercises. The Southern Company Board of Directors has approved the repurchase of up to 20 million shares of common stock for such purpose until December 31, 2017. Repurchases may be made by means of open market purchases, privately negotiated transactions, or accelerated or other share repurchase programs, in accordance with applicable securities laws.

The following table outlines the long-term debt financing activities for Southern Company and its subsidiaries for the year ended December 31, 2014:

Company	Senior Note Issuances	Senior Note Maturities	Revenue Bond Issuances and Remarketings of Purchased Bonds[(a)]	Revenue Bond Redemptions	Other Long-Term Debt Issuances	Other Long-Term Debt Redemptions[(b)] and Maturities
			(in millions)			
Southern Company	$ 750	$ 350	$ —	$ —	$ —	$ —
Alabama Power	400	—	254	254	—	—
Georgia Power	—	—	40	37	1,200	5
Gulf Power	200	75	42	29	—	—
Mississippi Power	—	—	—	—	493	256
Southern Power	—	—	—	—	10	10
Other	—	—	—	—	—	19
Elimination[(c)]	—	—	—	—	(220)	(220)
Total	$ 1,350	$ 425	$ 336	$ 320	$ 1,483	$ 70

(a) Includes remarketing by Gulf Power of $13 million aggregate principal amount of revenue bonds previously purchased and held by Gulf Power since December 2013 and remarketing by Georgia Power of $40 million aggregate principal amount of revenue bonds previously purchased and held by Georgia Power since 2010.

(b) Includes reductions in capital lease obligations resulting from cash payments under capital leases.

(c) Intercompany loan from Southern Company to Mississippi Power eliminated in Southern Company's Consolidated Financial Statements. This loan was repaid on September 29, 2014.

In May 2014, Southern Company's $350 million aggregate principal amount of its Series 2009A 4.15% Senior Notes due May 15, 2014 matured.

In August 2014, Southern Company issued $400 million aggregate principal amount of Series 2014A 1.30% Senior Notes due August 15, 2017 and $350 million aggregate principal amount of Series 2014B 2.15% Senior Notes due September 1, 2019. The proceeds were used to pay a portion of Southern Company's outstanding short-term indebtedness and for other general corporate purposes.

Southern Company's subsidiaries used the proceeds of the debt issuances shown in the table above for the redemptions and maturities shown in the table above, to repay short-term indebtedness, and for general corporate purposes, including their respective continuous construction programs.

In addition to the amounts reflected in the table above, in June 2014, Southern Company entered into a 90-day floating rate bank loan bearing interest based on one-month LIBOR. This short-term loan was for $250 million aggregate principal amount and the proceeds were used for working capital and other general corporate purposes, including the investment by Southern Company in its subsidiaries. This bank loan was repaid in August 2014.

In addition to the amounts reflected in the table above, in January 2014 and October 2014, Mississippi Power received an additional $75 million and $50 million, respectively, of interest-bearing refundable deposits from SMEPA to be applied to the sale price for the pending sale of an undivided interest in the Kemper IGCC. See Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle – Proposed Sale of Undivided Interest to SMEPA" for additional information.

Georgia Power's "Other Long-Term Debt Issuances" reflected in the table above include borrowings under the FFB Credit Facility in an aggregate principal amount of $1.0 billion on February 20, 2014 and $200 million on December 11, 2014. The interest rate applicable to $500 million of the initial advance under the FFB Credit Facility is 3.860% for an interest period that extends to 2044 and the interest rate applicable to the remaining $500 million is 3.488% for an interest period that extends to 2029 and is expected to be reset from time to time thereafter through 2044. The interest rate applicable to the $200 million advance in December 2014 is 3.002% for an interest period that extends to 2044. The final maturity date for all advances under the FFB Credit Facility is February 20, 2044. The proceeds of the borrowings in 2014 under the FFB Credit Facility were used to reimburse Georgia Power for Eligible Project Costs relating to the construction of Plant Vogtle Units 3 and 4. In connection with its entry into the agreements with the DOE and the FFB, Georgia Power incurred issuance costs of approximately $66 million, which are being amortized over the life of the borrowings under the FFB Credit Facility.

Under the Loan Guarantee Agreement, Georgia Power is subject to customary events of default, as well as cross-defaults to other indebtedness and events of default relating to any failure to make payments under the engineering, procurement, and construction contract, as amended, relating to Plant Vogtle Units 3 and 4 or certain other agreements providing intellectual property rights for Plant Vogtle Units 3 and 4. The Loan Guarantee Agreement also includes events of default specific to the DOE loan guarantee program, including the failure of Georgia Power or Southern Nuclear to comply with requirements of law or DOE loan guarantee program requirements. See Note 6 to the financial statements under "DOE Loan Guarantee Borrowings" for additional information.

In February 2014, Georgia Power repaid three four-month floating rate bank loans in an aggregate principal amount of $400 million.

During 2014, Alabama Power entered into forward-starting interest rate swaps to hedge exposure to interest rate changes related to an anticipated debt issuance. The notional amount of the swaps totaled $200 million.

In October 2014, Georgia Power entered into interest rate swaps to hedge exposure to interest rate changes related to existing debt. The notional amount of the swaps totaled $900 million.

In November and December 2014, Georgia Power entered into forward-starting interest rate swaps to hedge exposure to interest rate changes related to anticipated borrowings under the FFB Credit Facility in 2015. The notional amount of the swaps totaled $700 million.

Subsequent to December 31, 2014, Alabama Power announced the redemption of $250 million aggregate principal amount of its Series DD 5.65% Senior Notes due March 15, 2035, which will occur on March 16, 2015.

In addition to any financings that may be necessary to meet capital requirements and contractual obligations, Southern Company and its subsidiaries plan to continue, when economically feasible, a program to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit.

Credit Rating Risk

Southern Company and its subsidiaries do not have any credit arrangements that would require material changes in payment schedules or terminations as a result of a credit rating downgrade.

There are certain contracts that could require collateral, but not accelerated payment, in the event of a credit rating change of certain subsidiaries to BBB and Baa2, or BBB- and/or Baa3 or below. These contracts are for physical electricity purchases and sales, fuel purchases, fuel transportation and storage, energy price risk management, interest rate derivatives, and construction of new generation at Plant Vogtle Units 3 and 4.

The maximum potential collateral requirements under these contracts at December 31, 2014 were as follows:

Credit Ratings	Maximum Potential Collateral Requirements
	(in millions)
At BBB and Baa2	$ 9
At BBB- and/or Baa3	435
Below BBB- and/or Baa3	2,305

Subsequent to December 31, 2014, Moody's affirmed the senior unsecured debt rating of Mississippi Power and revised the ratings outlook for Mississippi Power from stable to negative.

Generally, collateral may be provided by a Southern Company guaranty, letter of credit, or cash. Additionally, any credit rating downgrade could impact the ability of Southern Company and its subsidiaries to access capital markets, particularly the short-term debt market and the variable rate pollution control revenue bond market.

Market Price Risk

The Southern Company system is exposed to market risks, primarily commodity price risk and interest rate risk. The Southern Company system may also occasionally have limited exposure to foreign currency exchange rates. To manage the volatility attributable to these exposures, the applicable company nets the exposures, where possible, to take advantage of natural offsets and enters into various derivative transactions for the remaining exposures pursuant to the applicable company's policies in areas such as counterparty exposure and risk management practices. The Southern Company system's policy is that derivatives are to be used primarily for hedging purposes and mandates strict adherence to all applicable risk management policies. Derivative positions are monitored using techniques including, but not limited to, market valuation, value at risk, stress testing, and sensitivity analysis.

To mitigate future exposure to a change in interest rates, Southern Company and certain of its subsidiaries enter into derivatives that have been designated as hedges. Derivatives outstanding at December 31, 2014 have a notional amount of $2.1 billion and are related to fixed and floating rate obligations. The weighted average interest rate on $3.4 billion of long-term variable interest rate exposure at January 1, 2015 was 0.94%. If Southern Company sustained a 100 basis point change in interest rates for all long-term variable interest rate exposure, the change would affect annualized interest expense by approximately $34 million at January 1, 2015. See Note 1 to the financial statements under "Financial Instruments" and Note 11 to the financial statements for additional information.

Due to cost-based rate regulation and other various cost recovery mechanisms, the traditional operating companies continue to have limited exposure to market volatility in interest rates, foreign currency, commodity fuel prices, and prices of electricity. In addition, Southern Power's exposure to market volatility in commodity fuel prices and prices of electricity is limited because its long-term sales contracts shift substantially all fuel cost responsibility to the purchaser. However, Southern Power has been and may continue to be exposed to market volatility in energy-related commodity prices as a result of uncontracted generating capacity. To mitigate residual risks relative to movements in electricity prices, the traditional operating companies enter into physical fixed-price contracts for the purchase and sale of electricity through the wholesale electricity market and, to a lesser extent, financial hedge contracts for natural gas purchases. The traditional operating companies continue to manage fuel-hedging programs implemented per the guidelines of their respective state PSCs. Southern Company had no material change in market risk exposure for the year ended December 31, 2014 when compared to the year ended December 31, 2013.

The changes in fair value of energy-related derivative contracts are substantially attributable to both the volume and the price of natural gas. For the years ended December 31, the changes in fair value of energy-related derivative contracts, the majority of which are composed of regulatory hedges, were as follows:

	2014 Changes	2013 Changes
	Fair Value	
	(in millions)	
Contracts outstanding at the beginning of the period, assets (liabilities), net	**$ (32)**	$ (85)
Contracts realized or settled:		
Swaps realized or settled	**(9)**	43
Options realized or settled	**6**	19
Current period changes[(a)]:		
Swaps	**(131)**	2
Options	**(22)**	(11)
Contracts outstanding at the end of the period, assets (liabilities), net	**$ (188)**	$ (32)

(a) Current period changes also include the changes in fair value of new contracts entered into during the period, if any.

The net hedge volumes of energy-related derivative contracts for the years ended December 31 were as follows:

	2014	2013
	mmBtu Volume	
	(in millions)	
Commodity – Natural gas swaps	**200**	216
Commodity – Natural gas options	**44**	59
Total hedge volume	**244**	275

The weighted average swap contract cost above market prices was approximately $0.84 per mmBtu as of December 31, 2014 and $0.10 per mmBtu as of December 31, 2013. The change in option fair value is primarily attributable to the volatility of the market and the underlying change in the natural gas price. The majority of the natural gas hedge gains and losses are recovered through the traditional operating companies' fuel cost recovery clauses.

At December 31, 2014 and 2013, substantially all of the Southern Company system's energy-related derivative contracts were designated as regulatory hedges and were related to the applicable company's fuel-hedging program. Therefore, gains and losses are initially recorded as regulatory liabilities and assets, respectively, and then are included in fuel expense as they are recovered through the energy cost recovery clause. Certain other gains and losses on energy-related derivatives, designated as cash flow hedges, are initially deferred in OCI before being recognized in income in the same period as the hedged transaction. Gains and losses on energy-related derivative contracts that are not designated or fail to qualify as hedges are recognized in the statements of income as incurred and were not material for any year presented.

Southern Company uses over-the-counter contracts that are not exchange traded but are fair valued using prices which are market observable, and thus fall into Level 2. See Note 10 to the financial statements for further discussion of fair value measurements. The maturities of the energy-related derivative contracts, which are all Level 2 of the fair value hierarchy, at December 31, 2014 were as follows:

	Fair Value Measurements December 31, 2014			
	Total Fair Value	Maturity Year 1	Maturity Years 2&3	Maturity Years 4&5
	(in millions)			
Level 1	$ —	$ —	$ —	$ —
Level 2	(188)	(109)	(76)	(3)
Level 3	—	—	—	—
Fair value of contracts outstanding at end of period	$ (188)	$ (109)	$ (76)	$ (3)

Southern Company is exposed to market price risk in the event of nonperformance by counterparties to energy-related and interest rate derivative contracts. Southern Company only enters into agreements and material transactions with counterparties that have investment grade credit ratings by Moody's and S&P, or with counterparties who have posted collateral to cover potential credit exposure. Therefore, Southern Company does not anticipate market risk exposure from nonperformance by the counterparties. For additional information, see Note 1 to the financial statements under "Financial Instruments" and Note 11 to the financial statements.

Southern Company performs periodic reviews of its leveraged lease transactions, both domestic and international, and the creditworthiness of the lessees, including a review of the value of the underlying leased assets and the credit ratings of the lessees. Southern Company's domestic lease transactions generally do not have any credit enhancement mechanisms; however, the lessees in its international lease transactions have pledged various deposits as additional security to secure the obligations. The lessees in the Company's international lease transactions are also required to provide additional collateral in the event of a credit downgrade below a certain level.

Capital Requirements and Contractual Obligations

The Southern Company system's construction program is currently estimated to be $6.7 billion for 2015, $5.4 billion for 2016, and $4.3 billion for 2017, which includes expenditures related to the construction and start-up of the Kemper IGCC of $801 million for 2015 and $132 million for 2016. The amounts related to the construction and start-up of the Kemper IGCC exclude SMEPA's proposed acquisition of a 15% ownership share of the Kemper IGCC for approximately $596 million (including construction costs for all prior periods relating to its proposed ownership interest). Capital expenditures to comply with environmental statutes and regulations included in these estimated amounts are $1.0 billion, $0.5 billion, and $0.6 billion for 2015, 2016, and 2017, respectively. The Southern Company system's amounts include capital expenditures related to contractual purchase commitments for nuclear fuel and capital expenditures covered under long-term service agreements. These estimated expenditures do not include any potential compliance costs that may arise from the EPA's proposed rules that would limit CO_2 emissions from new, existing, and modified or reconstructed fossil-fuel-fired electric generating units. See FUTURE EARNINGS POTENTIAL – "Environmental Matters – Global Climate Issues" for additional information.

See FUTURE EARNINGS POTENTIAL – "Environmental Matters – Environmental Statutes and Regulations" herein for additional information.

The construction programs are subject to periodic review and revision, and actual construction costs may vary from these estimates because of numerous factors. These factors include: changes in business conditions; changes in load projections; changes in environmental statutes and regulations; the outcome of any legal challenges to the environmental rules; changes in generating plants, including unit retirements and replacements and adding or changing fuel sources at existing units, to meet regulatory requirements; changes in FERC rules and regulations; PSC approvals; changes in the expected environmental compliance program; changes in legislation; the cost and efficiency of construction labor, equipment, and materials; project scope and design changes; storm impacts; and the cost of capital. In addition, there can be no assurance that costs related to capital expenditures will be fully recovered. Additionally, planned expenditures for plant acquisitions may vary due to market opportunities and Southern Power's ability to execute its growth strategy. See Note 3 to the financial statements under "Retail Regulatory Matters – Georgia Power – Nuclear Construction" and "Integrated Coal Gasification Combined Cycle" for information regarding additional factors that may impact construction expenditures.

In addition, the construction program includes the development and construction of new generating facilities with designs that have not been finalized or previously constructed, including first-of-a-kind technology, which may result in revised estimates during construction. The ability to control costs and avoid cost overruns during the development and construction of new facilities is subject to a number of factors, including, but not limited to, labor costs and productivity, adverse weather conditions, shortages and inconsistent quality of equipment, materials, and labor, contractor or supplier delay, non-performance under construction or other agreements, operational readiness, including specialized operator training and required site safety programs, unforeseen engineering or design problems, start-up activities (including major equipment failure and system integration), and/or operational performance (including additional costs to satisfy any operational parameters ultimately adopted by any PSC).

As a result of NRC requirements, Alabama Power and Georgia Power have external trust funds for nuclear decommissioning costs; however, Alabama Power currently has no additional funding requirements. For additional information, see Note 1 to the financial statements under "Nuclear Decommissioning."

In addition, as discussed in Note 2 to the financial statements, Southern Company provides postretirement benefits to substantially all employees and funds trusts to the extent required by the traditional operating companies' respective regulatory commissions.

Other funding requirements related to obligations associated with scheduled maturities of long-term debt, as well as the related interest, derivative obligations, preferred and preference stock dividends, leases, and other purchase commitments are detailed in the contractual obligations table that follows. See Notes 1, 2, 5, 6, 7, and 11 to the financial statements for additional information.

Contractual Obligations

	2015	2016-2017	2018-2019	After 2019	Total
			(in millions)		
Long-term debt[(a)] —					
Principal	$ 3,302	$ 3,345	$ 2,050	$ 15,282	$ 23,979
Interest	857	1,563	1,355	11,379	15,154
Preferred and preference stock dividends[(b)]	68	136	136	—	340
Financial derivative obligations[(c)]	138	76	3	—	217
Operating leases[(d)]	100	154	73	248	575
Capital leases[(d)]	31	25	22	81	159
Unrecognized tax benefits[(e)]	170	—	—	—	170
Purchase commitments —					
Capital[(f)]	6,222	8,899	—	—	15,121
Fuel[(g)]	4,012	5,155	3,321	9,869	22,357
Purchased power[(h)]	327	738	761	3,892	5,718
Other[(i)]	233	476	378	1,369	2,456
Trusts —					
Nuclear decommissioning[(j)]	5	11	11	110	137
Pension and other postretirement benefit plans[(k)]	112	224	—	—	336
Total	$ 15,577	$ 20,802	$ 8,110	$ 42,230	$ 86,719

(a) All amounts are reflected based on final maturity dates. Southern Company and its subsidiaries plan to continue, when economically feasible, to retire higher-cost securities and replace these obligations with lower-cost capital if market conditions permit. Variable rate interest obligations are estimated based on rates as of January 1, 2015, as reflected in the statements of capitalization. Fixed rates include, where applicable, the effects of interest rate derivatives employed to manage interest rate risk. Long-term debt excludes capital lease amounts (shown separately).

(b) Represents preferred and preference stock of subsidiaries. Preferred and preference stock do not mature; therefore, amounts are provided for the next five years only.

(c) Includes derivative liabilities related to cash flow hedges of forecasted debt, as well as energy-related derivatives. For additional information, see Notes 1 and 11 to the financial statements.

(d) Excludes PPAs that are accounted for as leases and included in purchased power.

(e) See Note 5 to the financial statements under "Unrecognized Tax Benefits" for additional information.

(f) The Southern Company system provides estimated capital expenditures for a three-year period, including capital expenditures and compliance costs associated with environmental regulations. Estimates related to the construction and start-up of the Kemper IGCC exclude SMEPA's proposed acquisition of a 15% ownership share of the Kemper IGCC. See Note 3 to the financial statements under "Integrated Coal Gasification Combined Cycle" for additional information. These amounts exclude contractual purchase commitments for nuclear fuel and capital expenditures covered under long-term service agreements which are reflected separately. At December 31, 2014, significant purchase commitments were outstanding in connection with the construction program. See FUTURE EARNINGS POTENTIAL – "Environmental Matters – Environmental Statutes and Regulations" herein for additional information.

(g) Primarily includes commitments to purchase coal, nuclear fuel, and natural gas, as well as the related transportation and storage. In most cases, these contracts contain provisions for price escalation, minimum purchase levels, and other financial commitments. Natural gas purchase commitments are based on various indices at the time of delivery. Amounts reflected for natural gas purchase commitments have been estimated based on the New York Mercantile Exchange future prices at December 31, 2014.

(h) Estimated minimum long-term obligations for various PPA purchases from gas-fired, biomass, and wind-powered facilities. A total of $1.1 billion of biomass PPAs is contingent upon the counterparties meeting specified contract dates for commercial operation and may change as a result of regulatory action. See FUTURE EARNINGS POTENTIAL – "Retail Regulatory Matters – Georgia Power – Renewables Development" for additional information.

(i) Includes long-term service agreements and contracts for the procurement of limestone. Long-term service agreements include price escalation based on inflation indices.

(j) Projections of nuclear decommissioning trust fund contributions for Plant Hatch and Plant Vogtle Units 1 and 2 are based on the 2013 ARP for Georgia Power. Alabama Power also has external trust funds for nuclear decommissioning costs; however, Alabama Power currently has no additional funding requirements. See Note 1 to the financial statements under "Nuclear Decommissioning" for additional information.

(k) The Southern Company system forecasts contributions to the pension and other postretirement benefit plans over a three-year period. Southern Company anticipates no mandatory contributions to the qualified pension plan during the next three years. Amounts presented represent estimated benefit payments for the nonqualified pension plans, estimated non-trust benefit payments for the other postretirement benefit plans, and estimated contributions to the other postretirement benefit plan trusts, all of which will be made from corporate assets of Southern Company's subsidiaries. See Note 2 to the financial statements for additional information related to the pension and other postretirement benefit plans, including estimated benefit payments. Certain benefit payments will be made through the related benefit plans. Other benefit payments will be made from corporate assets of Southern Company's subsidiaries.

Cautionary Statement Regarding Forward-Looking Statements

Southern Company's 2014 Annual Report contains forward-looking statements. Forward-looking statements include, among other things, statements concerning retail rates, the strategic goals for the wholesale business, economic recovery, fuel and environmental cost recovery and other rate actions, current and proposed environmental regulations and related compliance plans and estimated expenditures, access to sources of capital, projections for the qualified pension plan, postretirement benefit plan, and nuclear decommissioning trust fund contributions, financing activities, completion dates of acquisitions and construction projects, filings with state and federal regulatory authorities, impact of the TIPA, estimated sales and purchases under power sale and purchase agreements, and estimated construction and other plans and expenditures. In some cases, forward-looking statements can be identified by terminology such as "may," "will," "could," "should," "expects," "plans," "anticipates," "believes," "estimates," "projects," "predicts," "potential," or "continue" or the negative of these terms or other similar terminology. There are various factors that could cause actual results to differ materially from those suggested by the forward-looking statements; accordingly, there can be no assurance that such indicated results will be realized. These factors include:

- the impact of recent and future federal and state regulatory changes, including legislative and regulatory initiatives regarding deregulation and restructuring of the electric utility industry, environmental laws including regulation of water, CCR, and emissions of sulfur, nitrogen, CO_2, soot, particulate matter, hazardous air pollutants, including mercury, and other substances, and also changes in tax and other laws and regulations to which Southern Company and its subsidiaries are subject, as well as changes in application of existing laws and regulations;
- current and future litigation, regulatory investigations, proceedings, or inquiries, including pending EPA civil actions against certain Southern Company subsidiaries, FERC matters, and IRS and state tax audits;
- the effects, extent, and timing of the entry of additional competition in the markets in which Southern Company's subsidiaries operate;
- variations in demand for electricity, including those relating to weather, the general economy and recovery from the last recession, population and business growth (and declines), the effects of energy conservation and efficiency measures, including from the development and deployment of alternative energy sources such as self-generation and distributed generation technologies, and any potential economic impacts resulting from federal fiscal decisions;
- available sources and costs of fuels;
- effects of inflation;
- the ability to control costs and avoid cost overruns during the development and construction of facilities, which include the development and construction of generating facilities with designs that have not been finalized or previously constructed, including changes in labor costs and productivity, adverse weather conditions, shortages and inconsistent quality of equipment, materials, and labor, contractor or supplier delay, non-performance under construction or other agreements, operational readiness, including specialized operator training and required site safety programs, unforeseen engineering or design problems, start-up activities (including major equipment failure and system integration), and/or operational performance (including additional costs to satisfy any operational parameters ultimately adopted by any PSC);
- the ability to construct facilities in accordance with the requirements of permits and licenses, to satisfy any operational and environmental performance standards, including any PSC requirements and the requirements of tax credits and other incentives, and to integrate facilities into the Southern Company system upon completion of construction;

- investment performance of Southern Company's employee and retiree benefit plans and the Southern Company system's nuclear decommissioning trust funds;
- advances in technology;
- state and federal rate regulations and the impact of pending and future rate cases and negotiations, including rate actions relating to fuel and other cost recovery mechanisms;
- legal proceedings and regulatory approvals and actions related to Plant Vogtle Units 3 and 4, including Georgia PSC approvals and NRC actions and related legal proceedings involving the commercial parties;
- actions related to cost recovery for the Kemper IGCC, including actions relating to proposed securitization, Mississippi PSC approval of a rate recovery plan, including the ability to complete the proposed sale of an interest in the Kemper IGCC to SMEPA, the ability to utilize bonus depreciation, which currently requires that assets be placed in service in 2015, and satisfaction of requirements to utilize ITCs and grants;
- Mississippi PSC review of the prudence of Kemper IGCC costs;
- the ultimate outcome and impact of the February 2015 decision of the Mississippi Supreme Court and any further legal or regulatory proceedings regarding any settlement agreement between Mississippi Power and the Mississippi PSC, the March 2013 rate order regarding retail rate increases, or the Baseload Act;
- the ability to successfully operate the electric utilities' generating, transmission, and distribution facilities and the successful performance of necessary corporate functions;
- the inherent risks involved in operating and constructing nuclear generating facilities, including environmental, health, regulatory, natural disaster, terrorism, or financial risks;
- the performance of projects undertaken by the non-utility businesses and the success of efforts to invest in and develop new opportunities;
- internal restructuring or other restructuring options that may be pursued;
- potential business strategies, including acquisitions or dispositions of assets or businesses, which cannot be assured to be completed or beneficial to Southern Company or its subsidiaries;
- the ability of counterparties of Southern Company and its subsidiaries to make payments as and when due and to perform as required;
- the ability to obtain new short- and long-term contracts with wholesale customers;
- the direct or indirect effect on the Southern Company system's business resulting from cyber intrusion or terrorist incidents and the threat of terrorist incidents;
- interest rate fluctuations and financial market conditions and the results of financing efforts;
- changes in Southern Company's or any of its subsidiaries' credit ratings, including impacts on interest rates, access to capital markets, and collateral requirements;
- the impacts of any sovereign financial issues, including impacts on interest rates, access to capital markets, impacts on currency exchange rates, counterparty performance, and the economy in general, as well as potential impacts on the benefits of the DOE loan guarantees;
- the ability of Southern Company's subsidiaries to obtain additional generating capacity at competitive prices;
- catastrophic events such as fires, earthquakes, explosions, floods, hurricanes and other storms, droughts, pandemic health events such as influenzas, or other similar occurrences;
- the direct or indirect effects on the Southern Company system's business resulting from incidents affecting the U.S. electric grid or operation of generating resources;
- the effect of accounting pronouncements issued periodically by standard-setting bodies; and
- other factors discussed elsewhere herein and in other reports (including the Form 10-K) filed by Southern Company from time to time with the SEC.

Southern Company expressly disclaims any obligation to update any forward-looking statements.

Index to the Notes to Financial Statements

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

General

The Southern Company (Southern Company or the Company) is the parent company of four traditional operating companies, Southern Power, SCS, SouthernLINC Wireless, Southern Company Holdings, Inc. (Southern Holdings), Southern Nuclear, and other direct and indirect subsidiaries. The traditional operating companies – Alabama Power, Georgia Power, Gulf Power, and Mississippi Power – are vertically integrated utilities providing electric service in four Southeastern states. Southern Power constructs, acquires, owns, and manages generation assets, including renewable energy projects, and sells electricity at market-based rates in the wholesale market. SCS, the system service company, provides, at cost, specialized services to Southern Company and its subsidiary companies. SouthernLINC Wireless provides digital wireless communications for use by Southern Company and its subsidiary companies and also markets these services to the public and provides fiber cable services within the Southeast. Southern Holdings is an intermediate holding company subsidiary, primarily for Southern Company's investments in leveraged leases. Southern Nuclear operates and provides services to the Southern Company system's nuclear power plants.

The financial statements reflect Southern Company's investments in the subsidiaries on a consolidated basis. The equity method is used for entities in which the Company has significant influence but does not control and for variable interest entities where the Company has an equity investment, but is not the primary beneficiary. All material intercompany transactions have been eliminated in consolidation.

The traditional operating companies, Southern Power, and certain of their subsidiaries are subject to regulation by the FERC, and the traditional operating companies are also subject to regulation by their respective state PSCs. The companies follow GAAP in the U.S. and comply with the accounting policies and practices prescribed by their respective commissions. The preparation of financial statements in conformity with GAAP requires the use of estimates, and the actual results may differ from those estimates. Certain prior years' data presented in the financial statements have been reclassified to conform to the current year presentation.

Recently Issued Accounting Standards

On May 28, 2014, the Financial Accounting Standards Board issued ASC 606, Revenue from Contracts with Customers. ASC 606 revises the accounting for revenue recognition and is effective for fiscal years beginning after December 15, 2016. Southern Company continues to evaluate the requirements of ASC 606. The ultimate impact of the new standard has not yet been determined.

Regulatory Assets and Liabilities

The traditional operating companies are subject to the provisions of the Financial Accounting Standards Board in accounting for the effects of rate regulation. Regulatory assets represent probable future revenues associated with certain costs that are expected to be recovered from customers through the ratemaking process. Regulatory liabilities represent probable future reductions in revenues associated with amounts that are expected to be credited to customers through the ratemaking process.

Regulatory assets and (liabilities) reflected in the balance sheets at December 31 relate to:

	2014	2013	Note
	(in millions)		
Retiree benefit plans	**$ 3,469**	$ 1,760	(a,p)
Deferred income tax charges	**1,458**	1,376	(b)
Loss on reacquired debt	**267**	293	(c)
Fuel-hedging-asset	**202**	58	(d,p)
Deferred PPA charges	**185**	180	(e,p)
Vacation pay	**177**	171	(f,p)
Under recovered regulatory clause revenues	**157**	70	(g)
Kemper IGCC regulatory assets	**148**	76	(h)
Asset retirement obligations-asset	**119**	145	(b,p)
Nuclear outage	**99**	78	(g)
Property damage reserves-asset	**98**	37	(i)
Cancelled construction projects	**67**	70	(j)
Environmental remediation-asset	**64**	62	(k,p)
Deferred income tax charges — Medicare subsidy	**57**	65	(l)
Other regulatory assets	**195**	222	(m)
Other cost of removal obligations	**(1,229)**	(1,289)	(b)
Kemper regulatory liability (Mirror CWIP)	**(271)**	(91)	(h)
Deferred income tax credits	**(192)**	(203)	(b)
Property damage reserves-liability	**(181)**	(191)	(n)
Asset retirement obligations-liability	**(130)**	(139)	(b,p)
Other regulatory liabilities	**(95)**	(126)	(o)
Total regulatory assets (liabilities), net	**$ 4,664**	$ 2,624	

Note: The recovery and amortization periods for these regulatory assets and (liabilities) are as follows:

(a) Recovered and amortized over the average remaining service period which may range up to 15 years. See Note 2 for additional information.

(b) Asset retirement and removal assets and liabilities are recorded, deferred income tax assets are recovered, and deferred income tax liabilities are amortized over the related property lives, which may range up to 70 years. Asset retirement and removal assets and liabilities will be settled and trued up following completion of the related activities. At December 31, 2014, other cost of removal obligations included $29 million that will be amortized over the two-year period from January 2015 through December 2016 in accordance with Georgia Power's 2013 ARP. See Note 3 under "Retail Regulatory Matters – Georgia Power – Rate Plans" for additional information. At December 31, 2014, other cost of removal obligations included $8.4 million recorded as authorized by the Florida PSC in the Settlement Agreement approved in December 2013 (Gulf Power Settlement Agreement).

(c) Recovered over either the remaining life of the original issue or, if refinanced, over the remaining life of the new issue, which may range up to 50 years.

(d) Recorded over the life of the underlying hedged purchase contracts, which generally do not exceed five years. Upon final settlement, actual costs incurred are recovered through the energy cost recovery clause.

(e) Recovered over the life of the PPA for periods up to nine years.

(f) Recorded as earned by employees and recovered as paid, generally within one year. This includes both vacation and banked holiday pay.

(g) Recorded and recovered or amortized as approved or accepted by the appropriate state PSCs over periods not exceeding 10 years.

(h) For additional information, see Note 3 under "Integrated Coal Gasification Combined Cycle – Rate Recovery of Kemper IGCC Costs – Regulatory Assets and Liabilities."

(i) Recorded and recovered or amortized as approved or accepted by the appropriate state PSCs over periods generally not exceeding eight years.

(j) Costs associated with construction of environmental controls that will not be completed as a result of unit retirements being amortized as approved by the Georgia PSC over periods not exceeding nine years or through 2022.

(k) Recovered through the environmental cost recovery clause when the remediation is performed.

(l) Recovered and amortized as approved by the appropriate state PSCs over periods not exceeding 15 years.

(m) Comprised of numerous immaterial components including property taxes, generation site selection/evaluation costs, demand side management cost deferrals, regulatory deferrals, building leases, net book value of retired generating units, Plant Daniel Units 3 and 4 regulatory assets, and other miscellaneous assets. These costs are recorded and recovered or amortized as approved by the appropriate state PSC over periods generally not exceeding 10 years or, as applicable, over the remaining life of the asset but not beyond 2031.

(n) Recovered as storm restoration and potential reliability-related expenses are incurred as approved by the appropriate state PSCs.

(o) Comprised of numerous immaterial components including over-recovered regulatory clause revenues, fuel-hedging liabilities, mine reclamation and remediation liabilities, PPA credits, nuclear disposal fees, and other liabilities that are recorded and recovered or amortized as approved by the appropriate state PSCs generally over periods not exceeding 10 years.

(p) Not earning a return as offset in rate base by a corresponding asset or liability.

In the event that a portion of a traditional operating company's operations is no longer subject to applicable accounting rules for rate regulation, such company would be required to write off to income or reclassify to accumulated OCI related regulatory assets and liabilities that are not specifically recoverable through regulated rates. In addition, the traditional operating company would be required to determine if any impairment to other assets, including plant, exists and write down the assets, if impaired, to their fair values. All regulatory assets and liabilities are to be reflected in rates. See Note 3 under "Retail Regulatory Matters – Alabama Power," "Retail Regulatory Matters – Georgia Power," and "Integrated Coal Gasification Combined Cycle" for additional information.

Revenues

Wholesale capacity revenues from PPAs are recognized either on a levelized basis over the appropriate contract period or the amount billable under the contract terms. Energy and other revenues are recognized as services are provided. Unbilled revenues related to retail sales are accrued at the end of each fiscal period. Electric rates for the traditional operating companies include provisions to adjust billings for fluctuations in fuel costs, fuel hedging, the energy component of purchased power costs, and certain other costs. Revenues are adjusted for differences between these actual costs and amounts billed in current regulated rates. Under or over recovered regulatory clause revenues are recorded in the balance sheets and are recovered or returned to customers through adjustments to the billing factors.

Southern Company's electric utility subsidiaries have a diversified base of customers. No single customer or industry comprises 10% or more of revenues. For all periods presented, uncollectible accounts averaged less than 1% of revenues.

Fuel Costs

Fuel costs are expensed as the fuel is used. Fuel expense generally includes fuel transportation costs and the cost of purchased emissions allowances as they are used. Fuel expense also includes the amortization of the cost of nuclear fuel and a charge, based on nuclear generation, for the permanent disposal of spent nuclear fuel.

Income and Other Taxes

Southern Company uses the liability method of accounting for deferred income taxes and provides deferred income taxes for all significant income tax temporary differences. Taxes that are collected from customers on behalf of governmental agencies to be remitted to these agencies are presented net on the statements of income.

In accordance with regulatory requirements, deferred federal ITCs for the traditional operating companies are amortized over the average lives of the related property with such amortization normally applied as a credit to reduce depreciation in the statements of income. Credits amortized in this manner amounted to $22 million in 2014, $16 million in 2013, and $23 million in 2012. At December 31, 2014, all ITCs available to reduce federal income taxes payable had not been utilized. The remaining ITCs will be carried forward and utilized in future years. Additionally, several subsidiaries have state ITCs, which are recognized in the period in which the credit is claimed on the state income tax return. A portion of the state ITCs available to reduce state income taxes payable was not utilized currently and will be carried forward and utilized in future years.

Under the American Recovery and Reinvestment Act of 2009 and the American Taxpayer Relief Act of 2012 (ATRA), certain projects at Southern Power are eligible for federal ITCs or cash grants. Southern Power has elected to receive ITCs. The credits are recorded as a deferred credit and are amortized to income tax expense over the life of the asset. Credits amortized in this manner amounted to $11.4 million in 2014, $5.5 million in 2013, and $2.6 million in 2012. Also, Southern Power received cash related to federal ITCs under the renewable energy incentives of $74 million, $158 million, and $45 million for the years ended December 31, 2014, 2013, and 2012, respectively, which had a material impact on cash flows. Furthermore, the tax basis of the asset is reduced by 50% of the credits received, resulting in a net deferred tax asset. Southern Power has elected to recognize the tax benefit of this basis difference as a reduction to income tax expense in the year in which the plant reaches commercial operation. The tax benefit of the related basis differences reduced income tax expense by $48 million in 2014, $31 million in 2013, and $8 million in 2012.

In accordance with accounting standards related to the uncertainty in income taxes, Southern Company recognizes tax positions that are "more likely than not" of being sustained upon examination by the appropriate taxing authorities. See Note 5 under "Unrecognized Tax Benefits" for additional information.

Property, Plant, and Equipment

Property, plant, and equipment is stated at original cost less any regulatory disallowances and impairments. Original cost includes: materials; labor; minor items of property; appropriate administrative and general costs; payroll-related costs such as taxes, pensions, and other benefits; and the interest capitalized and cost of equity funds used during construction.

The Southern Company system's property, plant, and equipment in service consisted of the following at December 31:

	2014	2013
	(in millions)	
Generation	**$ 37,892**	$ 35,360
Transmission	**9,884**	9,289
Distribution	**17,123**	16,499
General	**4,198**	3,958
Plant acquisition adjustment	**123**	123
Utility plant in service	**69,220**	65,229
Information technology equipment and software	**244**	242
Communications equipment	**439**	437
Other	**110**	113
Other plant in service	**793**	792
Total plant in service	**$ 70,013**	$ 66,021

The cost of replacements of property, exclusive of minor items of property, is capitalized. The cost of maintenance, repairs, and replacement of minor items of property is charged to other operations and maintenance expenses as incurred or performed with the exception of nuclear refueling costs, which are recorded in accordance with specific state PSC orders. Alabama Power and Georgia Power defer and amortize nuclear refueling costs over the unit's operating cycle. The refueling cycles for Alabama Power's Plant Farley and Georgia Power's Plants Hatch and Vogtle Units 1 and 2 range from 18 to 24 months, depending on the unit.

Assets acquired under a capital lease are included in property, plant, and equipment and are further detailed in the table below:

	Asset Balances at December 31,	
	2014	2013
	(in millions)	
Office building	**$ 61**	$ 61
Nitrogen plant	**83**	83
Computer-related equipment	**60**	62
Gas pipeline	**6**	6
Less: Accumulated amortization	**(49)**	(48)
Balance, net of amortization	**$ 161**	$ 164

The amount of non-cash property additions recognized for the years ended December 31, 2014, 2013, and 2012 was $528 million, $411 million, and $524 million, respectively. These amounts are comprised of construction-related accounts payable outstanding at each year end. Also, the amount of non-cash property additions associated with capitalized leases for the years ended December 31, 2014, 2013, and 2012 was $25 million, $107 million, and $14 million, respectively.

Acquisitions

Southern Power acquires generation assets as part of its overall growth strategy. Southern Power accounts for business acquisitions from non-affiliates as business combinations. Accordingly, Southern Power has included these operations in the consolidated financial statements from the respective date of acquisition. The purchase price, including contingent consideration, if any, of each acquisition was allocated based on the fair value of the identifiable assets and liabilities. Assets acquired that do not meet the definition of a business in accordance with GAAP are accounted for as asset acquisitions. The purchase price of each asset acquisition was allocated based on the relative fair value of assets acquired. Any due diligence or transition costs incurred by Southern Power for successful or potential acquisitions have been expensed as incurred.

Acquisitions entered into or made by Southern Power during 2014 and 2013 are detailed in the table below:

	MW Capacity	Percentage Ownership	Year of Operation	Party Under PPA Contract for Plant Output	PPA Contract Period	Purchase Price
						(millions)
SG2 Imperial Valley, LLC [a]	150	51%	2014	San Diego Gas & Electric Company	25 years	$504.7[c]
Macho Springs Solar LLC [b]	50	90	2014	El Paso Electric Company	20 years	$130.0[d]
Adobe Solar, LLC [b]	20	90	2014	Southern California Edison Company	20 years	$ 96.2[d]
Campo Verde Solar, LLC [b][e]	139	90	2013	San Diego Gas & Electric Company	20 years	$136.6[d]

(a) This acquisition was made by Southern Power through its subsidiaries Southern Renewable Partnerships, LLC and SG2 Holdings, LLC. SG2 Holdings, LLC is jointly-owned by Southern Power and First Solar, Inc.

(b) This acquisition was made by Southern Power and Turner Renewable Energy, LLC through Southern Turner Renewable Energy, LLC.

(c) Reflects Southern Power's portion of the purchase price.

(d) Reflects 100% of the purchase price, including Turner Renewable Energy, LLC's 10% equity contribution.

(e) Under an engineering, procurement, and construction agreement, an additional $355.5 million was paid to a subsidiary of First Solar, Inc. to complete the construction of the solar facility.

Depreciation and Amortization

Depreciation of the original cost of utility plant in service is provided primarily by using composite straight-line rates, which approximated 3.1% in 2014, 3.3% in 2013, and 3.2% in 2012. Depreciation studies are conducted periodically to update the composite rates. These studies are filed with the respective state PSC and the FERC for the traditional operating companies. Accumulated depreciation for utility plant in service totaled $23.5 billion and $22.5 billion at December 31, 2014 and 2013, respectively. When property subject to composite depreciation is retired or otherwise disposed of in the normal course of business, its original cost, together with the cost of removal, less salvage, is charged to accumulated depreciation. For other property dispositions, the applicable cost and accumulated depreciation are removed from the balance sheet accounts, and a gain or loss is recognized. Minor items of property included in the original cost of the plant are retired when the related property unit is retired. Certain of Southern Power's generation assets are now depreciated on a units-of-production basis, using hours or starts, to better match outage and maintenance costs to the usage of and revenues from these assets. Cost, net of salvage value, of these assets is depreciated on an hours or starts units-of-production basis. The book value of plant-in-service as of December 31, 2014 that is depreciated on a units-of-production basis was approximately $470.2 million.

In 2009, the Georgia PSC approved an accounting order allowing Georgia Power to amortize a portion of its regulatory liability related to other cost of removal obligations. Under the terms of Georgia Power's Alternate Rate Plan for the years 2011 through 2013 (2010 ARP), Georgia Power amortized approximately $31 million annually of the remaining regulatory liability related to other cost of removal obligations over the three years ended December 31, 2013. Under the terms of the 2013 ARP, an additional $14 million is being amortized annually by Georgia Power over the three years ending December 31, 2016. See Note 3 under "Retail Regulatory Matters – Georgia Power – Rate Plans" for additional information.

Depreciation of the original cost of other plant in service is provided primarily on a straight-line basis over estimated useful lives ranging from three to 25 years. Accumulated depreciation for other plant in service totaled $533 million and $513 million at December 31, 2014 and 2013, respectively.

Asset Retirement Obligations and Other Costs of Removal

Asset retirement obligations (ARO) are computed as the present value of the ultimate costs for an asset's future retirement and are recorded in the period in which the liability is incurred. The costs are capitalized as part of the related long-lived asset and depreciated over the asset's useful life. Each traditional operating company has received accounting guidance from the various state PSCs allowing the continued accrual of other future retirement costs for long-lived assets that it does not have a legal obligation to retire. Accordingly, the accumulated removal costs for these obligations are reflected in the balance sheets as a regulatory liability.

The liability for AROs primarily relates to the decommissioning of the Southern Company system's nuclear facilities, Plants Farley, Hatch, and Vogtle. In addition, the Southern Company system has retirement obligations related to various landfill sites, ash ponds, asbestos removal, mine reclamation, and disposal of polychlorinated biphenyls in certain transformers. The Southern Company system also has identified retirement obligations related to certain transmission and distribution facilities, certain wireless communication towers, property associated with the Southern Company system's rail lines and natural gas pipelines, and certain structures authorized by the U.S. Army Corps of Engineers. However, liabilities for the removal of these assets have not been recorded because the settlement timing for the retirement obligations related to these assets is indeterminable and, therefore, the fair value of the retirement obligations cannot be reasonably estimated. A liability for these AROs will be recognized when sufficient information becomes available to support a reasonable estimation of the ARO. The Company will continue to recognize in the statements of income allowed removal costs in accordance with regulatory treatment. Any differences between costs recognized in accordance with accounting standards related to asset retirement and environmental obligations and those reflected in rates are recognized as either a regulatory asset or liability, as ordered by the various state PSCs, and are reflected in the balance sheets. See "Nuclear Decommissioning" herein for additional information on amounts included in rates.

Details of the AROs included in the balance sheets are as follows:

	2014	2013
	(in millions)	
Balance at beginning of year	**$ 2,018**	$ 1,757
Liabilities incurred	**18**	6
Liabilities settled	**(17)**	(16)
Accretion	**102**	97
Cash flow revisions	**80**	174
Balance at end of year	**$ 2,201**	$ 2,018

The cash flow revisions in 2014 are primarily related to Alabama Power's and SEGCO's AROs associated with asbestos at their steam generation facilities. The cash flow revisions in 2013 are primarily related to revisions to the nuclear decommissioning ARO based on Alabama Power's updated decommissioning study and Georgia Power's updated estimates for ash ponds in connection with the retirement of certain coal-fired generating units.

On December 19, 2014, the EPA issued the Disposal of Coal Combustion Residuals from Electric Utilities final rule (CCR Rule), but has not yet published it in the Federal Register. The CCR Rule will regulate the disposal of CCR, including coal ash and gypsum, as non-hazardous solid waste in landfills and surface impoundments at active generating power plants. The ultimate impact of the CCR Rule cannot be determined at this time and will depend on the traditional operating companies' ongoing review of the CCR Rule, the results of initial and ongoing minimum criteria assessments, and the outcome of legal challenges. The cost and timing of potential ash pond closure and ongoing monitoring activities that may be required in connection with the CCR Rule is also uncertain; however, Southern Company has developed a preliminary nominal dollar estimate of costs associated with closure and groundwater monitoring of ash ponds in place of approximately $860 million and ongoing post-closure care of approximately $140 million. Certain of the traditional operating companies have previously recorded AROs associated with ash ponds of $506 million, or $468 million on a nominal dollar basis, based on existing state requirements. During 2015, the traditional operating companies will record AROs for any incremental estimated closure costs resulting from acceleration in the timing of any currently planned closures and for differences between existing state requirements and the requirements of the CCR Rule. Southern Company's results of operations, cash flows, and financial condition could be significantly impacted if such costs are not recovered through regulated rates.

Nuclear Decommissioning

The NRC requires licensees of commercial nuclear power reactors to establish a plan for providing reasonable assurance of funds for future decommissioning. Alabama Power and Georgia Power have external trust funds (Funds) to comply with the NRC's regulations. Use of the Funds is restricted to nuclear decommissioning activities. The Funds are managed and invested in accordance with applicable requirements of various regulatory bodies, including the NRC, the FERC, and state PSCs, as well as the IRS. While Alabama Power and Georgia Power are allowed to prescribe an overall investment policy to the Funds' managers, neither Southern Company nor its subsidiaries or affiliates are allowed to engage in the day-to-day management of the Funds or to mandate individual investment decisions. Day-to-day management of the investments in the Funds is delegated to unrelated third party managers with oversight by the management of Southern Company, Alabama Power, and Georgia Power. The Funds' managers are authorized, within certain investment guidelines, to actively buy and sell securities at their own discretion in order to maximize the return on the Funds' investments. The Funds are invested in a tax-efficient manner in a diversified mix of equity and fixed income securities and are reported as trading securities.

Southern Company records the investment securities held in the Funds at fair value, as disclosed in Note 10, as management believes that fair value best represents the nature of the Funds. Gains and losses, whether realized or unrealized, are recorded in the regulatory liability for AROs in the balance sheets and are not included in net income or OCI. Fair value adjustments and realized gains and losses are determined on a specific identification basis.

The Funds at Georgia Power participate in a securities lending program through the managers of the Funds. Under this program, the Funds' investment securities are loaned to institutional investors for a fee. Securities loaned are fully collateralized by cash, letters of credit, and/or securities issued or guaranteed by the U.S. government or its agencies or instrumentalities. As of December 31, 2014 and 2013, approximately $51 million and $32 million, respectively, of the fair market value of the Funds' securities were on loan and pledged to creditors under the Funds' managers' securities lending program. The fair value of the collateral received was approximately $52 million and $33 million at December 31, 2014 and 2013, respectively, and can only be sold by the borrower upon the return of the loaned securities. The collateral received is treated as a non-cash item in the statements of cash flows.

At December 31, 2014, investment securities in the Funds totaled $1.5 billion, consisting of equity securities of $886 million, debt securities of $638 million, and $19 million of other securities. At December 31, 2013, investment securities in the Funds totaled $1.5 billion, consisting of equity securities of $896 million, debt securities of $528 million, and $40 million of other securities. These amounts include the investment securities pledged to creditors and collateral received and exclude receivables related to investment income and pending investment sales and payables related to pending investment purchases and the lending pool.

Sales of the securities held in the Funds resulted in cash proceeds of $913 million, $1.0 billion, and $1.0 billion in 2014, 2013, and 2012, respectively, all of which were reinvested. For 2014, fair value increases, including reinvested interest and dividends and excluding the Funds' expenses, were $98 million, of which $2 million related to realized gains and $19 million related to unrealized gains and losses related to securities held in the Funds at December 31, 2014. For 2013, fair value increases, including reinvested interest and dividends and excluding the Funds' expenses, were $181 million, of which $5 million related to realized gains and $119 million related to unrealized gains related to securities held in the Funds at December 31, 2013. For 2012, fair value increases, including reinvested interest and dividends and excluding the Funds' expenses, were $137 million, of which $4 million related to realized gains and $75 million related to unrealized gains related to securities held in the Funds at December 31, 2012. While the investment securities held in the Funds are reported as trading securities, the Funds continue to be managed with a long-term focus. Accordingly, all purchases and sales within the Funds are presented separately in the statements of cash flows as investing cash flows, consistent with the nature of the securities and purpose for which the securities were acquired.

For Alabama Power, amounts previously recorded in internal reserves are being transferred into the Funds over periods approved by the Alabama PSC. The NRC's minimum external funding requirements are based on a generic estimate of the cost to decommission only the radioactive portions of a nuclear unit based on the size and type of reactor. Alabama Power and Georgia Power have filed plans with the NRC designed to ensure that, over time, the deposits and earnings of the Funds will provide the minimum funding amounts prescribed by the NRC.

At December 31, 2014 and 2013, the accumulated provisions for decommissioning were as follows:

	External Trust Funds		Internal Reserves		Total	
	2014	2013	**2014**	2013	**2014**	2013
			(in millions)			
Plant Farley	**$ 754**	$ 713	**$ 21**	$ 21	**$ 775**	$ 734
Plant Hatch	**496**	469	**—**	—	**496**	469
Plant Vogtle Units 1 and 2	**293**	277	**—**	—	**293**	277

Site study cost is the estimate to decommission a specific facility as of the site study year. The decommissioning cost estimates are based on prompt dismantlement and removal of the plant from service. The actual decommissioning costs may vary from these estimates because of changes in the assumed date of decommissioning, changes in NRC requirements, or changes in the assumptions used in making these estimates. The estimated costs of decommissioning as of December 31, 2014 based on the most current studies, which were performed in 2013 for Alabama Power's Plant Farley and in 2012 for the Georgia Power plants, were as follows for Alabama Power's Plant Farley and Georgia Power's ownership interests in Plant Hatch and Plant Vogtle Units 1 and 2:

	Plant Farley	Plant Hatch	Plant Vogtle Units 1 and 2
Decommissioning periods:			
Beginning year	2037	2034	2047
Completion year	2076	2068	2072
		(in millions)	
Site study costs:			
Radiated structures	$ 1,362	$ 549	$ 453
Spent fuel management	—	131	115
Non-radiated structures	80	51	76
Total site study costs	$ 1,442	$ 731	$ 644

For ratemaking purposes, Alabama Power's decommissioning costs are based on the site study, and Georgia Power's decommissioning costs are based on the NRC generic estimate to decommission the radioactive portion of the facilities and the site study estimate for spent fuel management as of 2012. Under the 2013 ARP, the Georgia PSC approved Georgia Power's annual decommissioning cost through 2016 for ratemaking of $4 million and $2 million for Plant Hatch and Plant Vogtle Units 1 and 2, respectively. Georgia Power expects the Georgia PSC to periodically review and adjust, if necessary, the amounts collected in rates for nuclear decommissioning costs. Significant assumptions used to determine these costs for ratemaking were an inflation rate of 4.5% and 2.4% for Alabama Power and Georgia Power, respectively, and a trust earnings rate of 7.0% and 4.4% for Alabama Power and Georgia Power, respectively.

Amounts previously contributed to the Funds for Plant Farley are currently projected to be adequate to meet the decommissioning obligations. Alabama Power will continue to provide site-specific estimates of the decommissioning costs and related projections of funds in the external trust to the Alabama PSC and, if necessary, would seek the Alabama PSC's approval to address any changes in a manner consistent with NRC and other applicable requirements.

Allowance for Funds Used During Construction and Interest Capitalized

In accordance with regulatory treatment, the traditional operating companies record AFUDC, which represents the estimated debt and equity costs of capital funds that are necessary to finance the construction of new regulated facilities. While cash is not realized currently from such allowance, AFUDC increases the revenue requirement and is recovered over the service life of the plant through a higher rate base and higher depreciation. The equity component of AFUDC is not included in calculating taxable income. Interest related to the construction of new facilities not included in the traditional operating companies' regulated rates is capitalized in accordance with standard interest capitalization requirements. AFUDC and interest capitalized, net of income taxes were 16.0%, 15.0%, and 8.2% of net income for 2014, 2013, and 2012, respectively.

Cash payments for interest totaled $732 million, $759 million, and $803 million in 2014, 2013, and 2012, respectively, net of amounts capitalized of $111 million, $92 million, and $83 million, respectively.

Impairment of Long-Lived Assets and Intangibles

Southern Company evaluates long-lived assets for impairment when events or changes in circumstances indicate that the carrying value of such assets may not be recoverable. The determination of whether an impairment has occurred is based on either a specific regulatory disallowance or an estimate of undiscounted future cash flows attributable to the assets, as compared with the carrying value of the assets. If an impairment has occurred, the amount of the impairment recognized is determined by either the amount of regulatory disallowance or by estimating the fair value of the assets and recording a loss if the carrying value is greater than the fair value. For assets identified as held for sale, the carrying value is compared to the estimated fair value less the cost to sell in order to determine if an impairment loss is required. Until the assets are disposed of, their estimated fair value is re-evaluated when circumstances or events change.

Storm Damage Reserves

Each traditional operating company maintains a reserve to cover or is allowed to defer and recover the cost of damages from major storms to its transmission and distribution lines and generally the cost of uninsured damages to its generation facilities and other property. In accordance with their respective state PSC orders, the traditional operating companies accrued $40 million in 2014 and $28 million in 2013. Alabama Power, Gulf Power, and Mississippi Power also have authority based on orders from their state PSCs to accrue certain additional amounts as circumstances warrant. In 2014 and 2013, there were no such additional accruals. See Note 3 under "Retail Regulatory Matters – Alabama Power – Natural Disaster Reserve" and "Retail Regulatory Matters – Georgia Power – Storm Damage Recovery" for additional information regarding Alabama Power's NDR and Georgia Power's deferred storm costs, respectively.

Leveraged Leases

Southern Company has several leveraged lease agreements, with original terms ranging up to 45 years, which relate to international and domestic energy generation, distribution, and transportation assets. Southern Company receives federal income tax deductions for depreciation and amortization, as well as interest on long-term debt related to these investments. The Company reviews all important lease assumptions at least annually, or more frequently if events or changes in circumstances indicate that a change in assumptions has occurred or may occur. These assumptions include the effective tax rate, the residual value, the credit quality of the lessees, and the timing of expected tax cash flows.

Southern Company's net investment in domestic and international leveraged leases consists of the following at December 31:

	2014	2013
	(in millions)	
Net rentals receivable	**$ 1,495**	$ 1,440
Unearned income	**(752)**	(775)
Investment in leveraged leases	**743**	665
Deferred taxes from leveraged leases	**(299)**	(287)
Net investment in leveraged leases	**$ 444**	$ 378

A summary of the components of income from the leveraged leases follows:

	2014	2013	2012
		(in millions)	
Pretax leveraged lease income (loss)	**$ 24**	$ (5)	$ 21
Income tax expense	**(9)**	2	(8)
Net leveraged lease income (loss)	**$ 15**	$ (3)	$ 13

Cash and Cash Equivalents

For purposes of the financial statements, temporary cash investments are considered cash equivalents. Temporary cash investments are securities with original maturities of 90 days or less.

Materials and Supplies

Generally, materials and supplies include the average cost of transmission, distribution, and generating plant materials. Materials are charged to inventory when purchased and then expensed or capitalized to plant, as appropriate, at weighted average cost when installed.

Fuel Inventory

Fuel inventory includes the average cost of coal, natural gas, oil, transportation, and emissions allowances. Fuel is charged to inventory when purchased and then expensed, at weighted average cost, as used and recovered by the traditional operating companies through fuel cost recovery rates approved by each state PSC. Emissions allowances granted by the EPA are included in inventory at zero cost.

Financial Instruments

Southern Company and its subsidiaries use derivative financial instruments to limit exposure to fluctuations in interest rates, the prices of certain fuel purchases, electricity purchases and sales, and occasionally foreign currency exchange rates. All derivative financial instruments are recognized as either assets or liabilities (included in "Other" or shown separately as "Risk Management Activities") and are measured at fair value. See Note 10 for additional information regarding fair value. Substantially all of the Southern Company system's bulk energy purchases and sales contracts that meet the definition of a derivative are excluded from fair value accounting requirements because they qualify for the "normal" scope exception, and are accounted for under the accrual method. Derivative contracts that qualify as cash flow hedges of anticipated transactions or are recoverable through the traditional operating companies' fuel-hedging programs result in the deferral of related gains and losses in OCI or regulatory assets and liabilities, respectively, until the hedged transactions occur. Any ineffectiveness arising from cash flow hedges is recognized currently in net income. Other derivative contracts that qualify as fair value hedges are marked to market through current period income and are recorded on a net basis in the statements of income. See Note 11 for additional information regarding derivatives.

The Company does not offset fair value amounts recognized for multiple derivative instruments executed with the same counterparty under a master netting arrangement. At December 31, 2014, the amount included in accounts payable in the balance sheets that the Company has recognized for the obligation to return cash collateral arising from derivative instruments was immaterial.

Southern Company is exposed to losses related to financial instruments in the event of counterparties' nonperformance. The Company has established controls to determine and monitor the creditworthiness of counterparties in order to mitigate the Company's exposure to counterparty credit risk.

Comprehensive Income

The objective of comprehensive income is to report a measure of all changes in common stock equity of an enterprise that result from transactions and other economic events of the period other than transactions with owners. Comprehensive income consists of net income, changes in the fair value of qualifying cash flow hedges and marketable securities, certain changes in pension and other postretirement benefit plans, reclassifications for amounts included in net income, and dividends on preferred and preference stock of subsidiaries.

Accumulated OCI (loss) balances, net of tax effects, were as follows:

	Qualifying Hedges	Marketable Securities	Pension and Other Postretirement Benefit Plans	Accumulated Other Comprehensive Income (Loss)
			(in millions)	
Balance at December 31, 2013	$ (36)	$ —	$ (39)	$ (75)
Current period change	(5)	—	(48)	(53)
Balance at December 31, 2014	**$ (41)**	**$ —**	**$ (87)**	**$ (128)**

2014 ANNUAL REPORT

2. RETIREMENT BENEFITS

Southern Company has a defined benefit, trusteed, pension plan covering substantially all employees. This qualified pension plan is funded in accordance with requirements of the Employee Retirement Income Security Act of 1974, as amended (ERISA). In December 2014, certain of the traditional operating companies and other subsidiaries voluntarily contributed an aggregate of $500 million to the qualified pension plan. No mandatory contributions to the qualified pension plan are anticipated for the year ending December 31, 2015. Southern Company also provides certain defined benefit pension plans for a selected group of management and highly compensated employees. Benefits under these non-qualified pension plans are funded on a cash basis. In addition, Southern Company provides certain medical care and life insurance benefits for retired employees through other postretirement benefit plans. The traditional operating companies fund related other postretirement trusts to the extent required by their respective regulatory commissions. For the year ending December 31, 2015, other postretirement trust contributions are expected to total approximately $19 million.

Actuarial Assumptions

The weighted average rates assumed in the actuarial calculations used to determine both the benefit obligations as of the measurement date and the net periodic costs for the pension and other postretirement benefit plans for the following year are presented below. Net periodic benefit costs were calculated in 2011 for the 2012 plan year using discount rates for the pension plans and the other postretirement benefit plans of 4.98% and 4.88%, respectively, and an annual salary increase of 3.84%.

	2014	2013	2012
Discount rate:			
Pension plans	**4.17%**	5.02%	4.26%
Other postretirement benefit plans	**4.04**	4.85	4.05
Annual salary increase	**3.59**	3.59	3.59
Long-term return on plan assets:			
Pension plans	**8.20**	8.20	8.20
Other postretirement benefit plans	**7.15**	7.13	7.29

The Company estimates the expected rate of return on pension plan and other postretirement benefit plan assets using a financial model to project the expected return on each current investment portfolio. The analysis projects an expected rate of return on each of seven different asset classes in order to arrive at the expected return on the entire portfolio relying on each trust's target asset allocation and reasonable capital market assumptions. The financial model is based on four key inputs: anticipated returns by asset class (based in part on historical returns), each trust's target asset allocation, an anticipated inflation rate, and the projected impact of a periodic rebalancing of each trust's portfolio.

For purposes of its December 31, 2014 measurement date, the Company adopted new mortality tables for its pension plans and retiree life and medical plans, which reflect increased life expectancies in the U.S. The adoption of new mortality tables increased the projected benefit obligations for the Company's pension plans and other postretirement benefit plans by approximately $636 million and $92 million, respectively.

An additional assumption used in measuring the accumulated other postretirement benefit obligations (APBO) was a weighted average medical care cost trend rate. The weighted average medical care cost trend rates used in measuring the APBO as of December 31, 2014 were as follows:

	Initial Cost Trend Rate	**Ultimate Cost Trend Rate**	**Year That Ultimate Rate is Reached**
Pre-65	9.00%	4.50%	2024
Post-65 medical	6.00	4.50	2024
Post-65 prescription	6.75	4.50	2024

An annual increase or decrease in the assumed medical care cost trend rate of 1% would affect the APBO and the service and interest cost components at December 31, 2014 as follows:

	1 Percent Increase	**1 Percent Decrease**
	(in millions)	
Benefit obligation	$ 140	$ (117)
Service and interest costs	6	(5)

Pension Plans

The total accumulated benefit obligation for the pension plans was $10.0 billion at December 31, 2014 and $8.1 billion at December 31, 2013. Changes in the projected benefit obligations and the fair value of plan assets during the plan years ended December 31, 2014 and 2013 were as follows:

	2014	2013
	(in millions)	
Change in benefit obligation		
Benefit obligation at beginning of year	**$ 8,863**	$ 9,302
Service cost	**213**	232
Interest cost	**435**	389
Benefits paid	**(382)**	(357)
Actuarial (gain) loss	**1,780**	(703)
Balance at end of year	**10,909**	8,863
Change in plan assets		
Fair value of plan assets at beginning of year	**8,733**	7,953
Actual return on plan assets	**797**	1,098
Employer contributions	**542**	39
Benefits paid	**(382)**	(357)
Fair value of plan assets at end of year	**9,690**	8,733
Accrued liability	**$ (1,219)**	$ (130)

At December 31, 2014, the projected benefit obligations for the qualified and non-qualified pension plans were $10.3 billion and $617 million, respectively. All pension plan assets are related to the qualified pension plan.

Amounts recognized in the balance sheets at December 31, 2014 and 2013 related to the Company's pension plans consist of the following:

	2014	2013
	(in millions)	
Prepaid pension costs	**$ —**	$ 419
Other regulatory assets, deferred	**3,073**	1,651
Other current liabilities	**(42)**	(40)
Employee benefit obligations	**(1,177)**	(509)
Accumulated OCI	**134**	64

Presented below are the amounts included in accumulated OCI and regulatory assets at December 31, 2014 and 2013 related to the defined benefit pension plans that had not yet been recognized in net periodic pension cost along with the estimated amortization of such amounts for 2015.

	Prior Service Cost	Net (Gain) Loss
	(in millions)	
Balance at December 31, 2014:		
Accumulated OCI	**$ 4**	**$ 130**
Regulatory assets	**51**	**3,022**
Total	**$ 55**	**$ 3,152**
Balance at December 31, 2013:		
Accumulated OCI	$ 5	$ 59
Regulatory assets	75	1,575
Total	$ 80	$ 1,634
Estimated amortization in net periodic pension cost in 2015:		
Accumulated OCI	$ 1	$ 9
Regulatory assets	24	206
Total	$ 25	$ 215

The components of OCI and the changes in the balance of regulatory assets related to the defined benefit pension plans for the years ended December 31, 2014 and 2013 are presented in the following table:

	Accumulated OCI	Regulatory Assets
	(in millions)	
Balance at December 31, 2012	$ 125	$ 3,013
Net gain	(52)	(1,145)
Change in prior service costs	—	1
Reclassification adjustments:		
Amortization of prior service costs	(1)	(26)
Amortization of net gain (loss)	(8)	(192)
Total reclassification adjustments	(9)	(218)
Total change	(61)	(1,362)
Balance at December 31, 2013	$ 64	$ 1,651
Net gain	**75**	**1,552**
Change in prior service costs	**—**	**1**
Reclassification adjustments:		
Amortization of prior service costs	**(1)**	**(25)**
Amortization of net gain (loss)	**(4)**	**(106)**
Total reclassification adjustments	**(5)**	**(131)**
Total change	**70**	**1,422**
Balance at December 31, 2014	**$ 134**	**$ 3,073**

Components of net periodic pension cost were as follows:

	2014	2013	2012
		(in millions)	
Service cost	**$ 213**	$ 232	$ 198
Interest cost	**435**	389	393
Expected return on plan assets	**(645)**	(603)	(581)
Recognized net loss	**110**	200	95
Net amortization	**26**	27	30
Net periodic pension cost	**$ 139**	$ 245	$ 135

Net periodic pension cost is the sum of service cost, interest cost, and other costs netted against the expected return on plan assets. The expected return on plan assets is determined by multiplying the expected rate of return on plan assets and the market-related value of plan assets. In determining the market-related value of plan assets, the Company has elected to amortize changes in the market value of all plan assets over five years rather than recognize the changes immediately. As a result, the accounting value of plan assets that is used to calculate the expected return on plan assets differs from the current fair value of the plan assets.

Future benefit payments reflect expected future service and are estimated based on assumptions used to measure the projected benefit obligation for the pension plans. At December 31, 2014, estimated benefit payments were as follows:

	Benefit Payments
	(in millions)
2015	$ 522
2016	450
2017	478
2018	499
2019	524
2020 to 2024	2,962

Other Postretirement Benefits

Changes in the APBO and in the fair value of plan assets during the plan years ended December 31, 2014 and 2013 were as follows:

	2014	2013
	(in millions)	
Change in benefit obligation		
Benefit obligation at beginning of year	**$ 1,682**	$ 1,872
Service cost	**21**	24
Interest cost	**79**	74
Benefits paid	**(102)**	(94)
Actuarial (gain) loss	**300**	(200)
Plan amendments	**(2)**	—
Retiree drug subsidy	**8**	6
Balance at end of year	**1,986**	1,682
Change in plan assets		
Fair value of plan assets at beginning of year	**901**	821
Actual return on plan assets	**54**	129
Employer contributions	**39**	39
Benefits paid	**(94)**	(88)
Fair value of plan assets at end of year	**900**	901
Accrued liability	**$ (1,086)**	$ (781)

Amounts recognized in the balance sheets at December 31, 2014 and 2013 related to the Company's other postretirement benefit plans consist of the following:

	2014	**2013**
	(in millions)	
Other regulatory assets, deferred	**$ 387**	$ 109
Other current liabilities	**(4)**	(4)
Employee benefit obligations	**(1,082)**	(777)
Other regulatory liabilities, deferred	**(21)**	(36)
Accumulated OCI	**8**	1

Presented below are the amounts included in accumulated OCI and net regulatory assets (liabilities) at December 31, 2014 and 2013 related to the other postretirement benefit plans that had not yet been recognized in net periodic other postretirement benefit cost along with the estimated amortization of such amounts for 2015.

	Prior Service Cost	**Net (Gain) Loss**
	(in millions)	
Balance at December 31, 2014:		
Accumulated OCI	**$ —**	**$ 8**
Net regulatory assets (liabilities)	**2**	**364**
Total	**$ 2**	**$ 372**
Balance at December 31, 2013:		
Accumulated OCI	$ —	$ 1
Net regulatory assets (liabilities)	9	64
Total	$ 9	$ 65
Estimated amortization as net periodic postretirement benefit cost in 2015:		
Accumulated OCI	$ —	$ —
Net regulatory assets (liabilities)	4	17
Total	$ 4	$ 17

NOTES (continued)

The components of OCI, along with the changes in the balance of net regulatory assets (liabilities), related to the other postretirement benefit plans for the plan years ended December 31, 2014 and 2013 are presented in the following table:

	Accumulated OCI	Net Regulatory Assets (Liabilities)
	(in millions)	
Balance at December 31, 2012	$ 7	$ 360
Net loss	(6)	(266)
Reclassification adjustments:		
Amortization of transition obligation	—	(5)
Amortization of prior service costs	—	(4)
Amortization of net gain (loss)	—	(12)
Total reclassification adjustments	—	(21)
Total change	(6)	(287)
Balance at December 31, 2013	$ 1	$ 73
Net gain	**7**	**301**
Change in prior service costs	**—**	**(2)**
Reclassification adjustments:		
Amortization of prior service costs	**—**	**(4)**
Amortization of net gain (loss)	**—**	**(2)**
Total reclassification adjustments	**—**	**(6)**
Total change	**7**	**293**
Balance at December 31, 2014	**$ 8**	**$ 366**

Components of the other postretirement benefit plans' net periodic cost were as follows:

	2014	2013	2012
		(in millions)	
Service cost	**$ 21**	$ 24	$ 21
Interest cost	**79**	74	85
Expected return on plan assets	**(59)**	(56)	(60)
Net amortization	**6**	21	20
Net periodic postretirement benefit cost	**$ 47**	$ 63	$ 66

Future benefit payments, including prescription drug benefits, reflect expected future service and are estimated based on assumptions used to measure the APBO for the other postretirement benefit plans. Estimated benefit payments are reduced by drug subsidy receipts expected as a result of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 as follows:

	Benefit Payments	Subsidy Receipts	Total
		(in millions)	
2015	$ 118	$ (10)	$ 108
2016	124	(11)	113
2017	129	(12)	117
2018	132	(13)	119
2019	134	(15)	119
2020 to 2024	670	(79)	591

Benefit Plan Assets

Pension plan and other postretirement benefit plan assets are managed and invested in accordance with all applicable requirements, including ERISA and the Internal Revenue Code of 1986, as amended (Internal Revenue Code). The Company's investment policies for both the pension plan and the other postretirement benefit plans cover a diversified mix of assets, including equity and fixed income securities, real estate, and private equity. Derivative instruments are used primarily to gain efficient exposure to the various asset classes and as hedging tools. The Company minimizes the risk of large losses primarily through diversification but also monitors and manages other aspects of risk.

The composition of the Company's pension plan and other postretirement benefit plan assets as of December 31, 2014 and 2013, along with the targeted mix of assets for each plan, is presented below:

	Target	**2014**	2013
Pension plan assets:			
Domestic equity	26%	**30%**	31%
International equity	25	**23**	25
Fixed income	23	**27**	23
Special situations	3	**1**	1
Real estate investments	14	**14**	14
Private equity	9	**5**	6
Total	100%	**100%**	100%
Other postretirement benefit plan assets:			
Domestic equity	42%	**41%**	40%
International equity	21	**23**	25
Domestic fixed income	24	**26**	24
Global fixed income	4	**3**	4
Special situations	1	**—**	—
Real estate investments	5	**5**	5
Private equity	3	**2**	2
Total	100%	**100%**	100%

The investment strategy for plan assets related to the Company's qualified pension plan is to be broadly diversified across major asset classes. The asset allocation is established after consideration of various factors that affect the assets and liabilities of the pension plan including, but not limited to, historical and expected returns and interest rates, volatility, correlations of asset classes, the current level of assets and liabilities, and the assumed growth in assets and liabilities. Because a significant portion of the liability of the pension plan is long-term in nature, the assets are invested consistent with long-term investment expectations for return and risk. To manage the actual asset class exposures relative to the target asset allocation, the Company employs a formal rebalancing program. As additional risk management, external investment managers and service providers are subject to written guidelines to ensure appropriate and prudent investment practices.

Investment Strategies

Detailed below is a description of the investment strategies for each major asset category for the pension and other postretirement benefit plans disclosed above:

- ***Domestic equity.*** A mix of large and small capitalization stocks with generally an equal distribution of value and growth attributes, managed both actively and through passive index approaches.
- ***International equity.*** A mix of growth stocks and value stocks with both developed and emerging market exposure, managed both actively and through passive index approaches.
- ***Fixed income***. A mix of domestic and international bonds.
- ***Trust-owned life insurance (TOLI).*** Investments of the Company's taxable trusts aimed at minimizing the impact of taxes on the portfolio.
- ***Special situations.*** Investments in opportunistic strategies with the objective of diversifying and enhancing returns and exploiting short-term inefficiencies as well as investments in promising new strategies of a longer-term nature.
- ***Real estate investments.*** Investments in traditional private market, equity-oriented investments in real properties (indirectly through pooled funds or partnerships) and in publicly traded real estate securities.

- ***Private equity.*** Investments in private partnerships that invest in private or public securities typically through privately-negotiated and/or structured transactions, including leveraged buyouts, venture capital, and distressed debt.

Benefit Plan Asset Fair Values

Following are the fair value measurements for the pension plan and the other postretirement benefit plan assets as of December 31, 2014 and 2013. The fair values presented are prepared in accordance with GAAP. For purposes of determining the fair value of the pension plan and other postretirement benefit plan assets and the appropriate level designation, management relies on information provided by the plan's trustee. This information is reviewed and evaluated by management with changes made to the trustee information as appropriate.

Valuation methods of the primary fair value measurements disclosed in the following tables are as follows:

- ***Domestic and international equity.*** Investments in equity securities such as common stocks, American depositary receipts, and real estate investment trusts that trade on a public exchange are classified as Level 1 investments and are valued at the closing price in the active market. Equity investments with unpublished prices (i.e. pooled funds) are valued as Level 2, when the underlying holdings used to value the investment are comprised of Level 1 or Level 2 equity securities.
- ***Fixed income.*** Investments in fixed income securities are generally classified as Level 2 investments and are valued based on prices reported in the market place. Additionally, the value of fixed income securities takes into consideration certain items such as broker quotes, spreads, yield curves, interest rates, and discount rates that apply to the term of a specific instrument.
- ***TOLI.*** Investments in TOLI policies are classified as Level 2 investments and are valued based on the underlying investments held in the policy's separate account. The underlying assets are equity and fixed income pooled funds that are comprised of Level 1 and Level 2 securities.
- ***Real estate investments and private equity.*** Investments in private equity and real estate are generally classified as Level 3 as the underlying assets typically do not have observable inputs. The fund manager values the assets using various inputs and techniques depending on the nature of the underlying investments. In the case of private equity, techniques may include purchase multiples for comparable transactions, comparable public company trading multiples, and discounted cash flow analysis. Real estate managers generally use prevailing market capitalization rates, recent sales of comparable investments, and independent third-party appraisals to value underlying real estate investments. The fair value of partnerships is determined by aggregating the value of the underlying assets.

The fair values of pension plan assets as of December 31, 2014 and 2013 are presented below. These fair value measurements exclude cash, receivables related to investment income, pending investments sales, and payables related to pending investment purchases. Assets that are considered special situations investments, primarily real estate investments and private equities, are presented in the tables below based on the nature of the investment.

	Fair Value Measurements Using			
As of December 31, 2014:	**Quoted Prices in Active Markets for Identical Assets (Level 1)**	**Significant Other Observable Inputs (Level 2)**	**Significant Unobservable Inputs (Level 3)**	**Total**
		(in millions)		
Assets:				
Domestic equity*	$ 1,704	$ 704	$ —	$ 2,408
International equity*	1,070	986	—	2,056
Fixed income:				
U.S. Treasury, government, and agency bonds	—	699	—	699
Mortgage- and asset-backed securities	—	188	—	188
Corporate bonds	—	1,135	—	1,135
Pooled funds	—	514	—	514
Cash equivalents and other	3	660	—	663
Real estate investments	293	—	1,121	1,414
Private equity	—	—	570	570
Total	$ 3,070	$ 4,886	$ 1,691	$ 9,647
Liabilities:				
Derivatives	$ (2)	$ —	$ —	$ (2)
Total	$ 3,068	$ 4,886	$ 1,691	$ 9,645

* Level 1 securities consist of actively traded stocks while Level 2 securities consist of pooled funds. Management believes that the portfolio is well-diversified with no significant concentrations of risk.

As of December 31, 2013:	Fair Value Measurements Using Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total
		(in millions)		
Assets:				
Domestic equity*	$ 1,433	$ 839	$ —	$ 2,272
International equity*	1,101	1,018	—	2,119
Fixed income:				
U.S. Treasury, government, and agency bonds	—	599	—	599
Mortgage- and asset-backed securities	—	156	—	156
Corporate bonds	—	978	—	978
Pooled funds	—	471	—	471
Cash equivalents and other	1	223	—	224
Real estate investments	260	—	1,000	1,260
Private equity	—	—	571	571
Total	$ 2,795	$ 4,284	$ 1,571	$ 8,650
Liabilities:				
Derivatives	$ —	$ (3)	$ —	$ (3)
Total	$ 2,795	$ 4,281	$ 1,571	$ 8,647

* Level 1 securities consist of actively traded stocks while Level 2 securities consist of pooled funds. Management believes that the portfolio is well-diversified with no significant concentrations of risk.

Changes in the fair value measurement of the Level 3 items in the pension plan assets valued using significant unobservable inputs for the years ended December 31, 2014 and 2013 were as follows:

	2014 Real Estate Investments	**2014** Private Equity	2013 Real Estate Investments	2013 Private Equity
		(in millions)		
Beginning balance	**$ 1,000**	**$ 571**	$ 841	$ 593
Actual return on investments:				
Related to investments held at year end	**79**	**51**	74	8
Related to investments sold during the year	**33**	**(16)**	30	51
Total return on investments	**112**	**35**	104	59
Purchases, sales, and settlements	**9**	**(36)**	55	(81)
Ending balance	**$ 1,121**	**$ 570**	$ 1,000	$ 571

The fair values of other postretirement benefit plan assets as of December 31, 2014 and 2013 are presented below. These fair value measurements exclude cash, receivables related to investment income, pending investments sales, and payables related to pending investment purchases. Assets that are considered special situations investments, primarily real estate investments and private equities, are presented in the tables below based on the nature of the investment.

As of December 31, 2014:	Fair Value Measurements Using Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total
		(in millions)		
Assets:				
Domestic equity*	$ 147	$ 56	$ —	$ 203

Related to investments held at year end	**1**	**1**	3	—
Related to investments sold during the year	**—**	**(1)**	1	2
Total return on investments	**1**	**—**	4	2
Purchases, sales, and settlements	**—**	**(1)**	2	(3)
Ending balance	**$ 37**	**$ 19**	$ 36	$ 20

Employee Savings Plan

Southern Company also sponsors a 401(k) defined contribution plan covering substantially all employees. The Company provides an 85% matching contribution on up to 6% of an employee's base salary. Total matching contributions made to the plan for 2014, 2013, and 2012 were $87 million, $84 million, and $82 million, respectively.

3. CONTINGENCIES AND REGULATORY MATTERS

General Litigation Matters

Southern Company and its subsidiaries are subject to certain claims and legal actions arising in the ordinary course of business. In addition, the business activities of Southern Company's subsidiaries are subject to extensive governmental regulation related to public health and the environment, such as regulation of air emissions and water discharges. Litigation over environmental issues and claims of various types, including property damage, personal injury, common law nuisance, and citizen enforcement of environmental requirements such as air quality and water standards, has occurred throughout the U.S. This litigation has included claims for damages alleged to have been caused by CO_2 and other emissions, CCR, and alleged exposure to hazardous materials, and/or requests for injunctive relief in connection with such matters. The ultimate outcome of such pending or potential litigation against Southern Company and its subsidiaries cannot be predicted at this time; however, for current proceedings not specifically reported herein, management does not anticipate that the ultimate liabilities, if any, arising from such current proceedings would have a material effect on Southern Company's financial statements.

Insurance Recovery

Mirant Corporation (Mirant) was an energy company with businesses that included independent power projects and energy trading and risk management companies in the U.S. and other countries. Mirant was a wholly-owned subsidiary of Southern Company until its initial public offering in 2000. In 2001, Southern Company completed a spin-off to its stockholders of its remaining ownership, and Mirant became an independent corporate entity.

In 2003, Mirant and certain of its affiliates filed voluntary petitions for relief under Chapter 11 of the Bankruptcy Code. In 2005, Mirant, as a debtor in possession, and the unsecured creditors' committee filed a complaint against Southern Company. Later in 2005, this complaint was transferred to MC Asset Recovery, LLC (MC Asset Recovery) as part of Mirant's plan of reorganization. In 2009, Southern Company entered into a settlement agreement with MC Asset Recovery to resolve this action. The settlement included an agreement where Southern Company paid MC Asset Recovery $202 million. Southern Company filed an insurance claim in 2009 to recover a portion of this settlement and received payments from its insurance provider of $25 million in June 2012 and $15 million in December 2013. Additionally, legal fees related to these insurance settlements totaled approximately $6 million in 2012 and $4 million in 2013. As a result, the net reduction to expense presented as MC Asset Recovery insurance settlement in the statement of income was approximately $19 million in 2012 and $11 million in 2013.

Environmental Matters

New Source Review Actions

As part of a nationwide enforcement initiative against the electric utility industry which began in 1999, the EPA brought civil enforcement actions in federal district court against Alabama Power and Georgia Power alleging violations of the New Source Review (NSR) provisions of the Clean Air Act at certain coal-fired electric generating units, including units co-owned by Gulf Power and Mississippi Power. These civil actions seek penalties and injunctive relief, including orders requiring installation of the best available control technologies at the affected units. The case against Georgia Power (including claims related to a unit co-owned by Gulf Power) has been administratively closed in the U.S. District Court for the Northern District of Georgia since 2001. The case against Alabama Power (including claims involving a unit co-owned by Mississippi Power) has been actively litigated in the U.S. District Court for the Northern District of Alabama, resulting in a settlement in 2006 of the alleged NSR violations at Plant Miller; voluntary dismissal of certain claims by the EPA; and a grant of summary judgment for Alabama Power on all remaining claims and dismissal of the case with prejudice in 2011. In September 2013, the U.S. Court of Appeals for the Eleventh Circuit affirmed in part and reversed in part the 2011 judgment in favor of Alabama Power, and the case has been transferred back to the U.S. District Court for the Northern District of Alabama for further proceedings.

Southern Company believes the traditional operating companies complied with applicable laws and regulations in effect at the time the work in question took place. The Clean Air Act authorizes maximum civil penalties of $25,000 to $37,500 per day, per violation, depending on the date of the alleged violation. An adverse outcome could require substantial capital expenditures that cannot be determined at this time and could possibly require payment of substantial penalties. Such expenditures could affect future results of operations, cash flows, and financial condition if such costs are not recovered through regulated rates. The ultimate outcome of these matters cannot be determined at this time.

Environmental Remediation

The Southern Company system must comply with environmental laws and regulations that cover the handling and disposal of waste and releases of hazardous substances. Under these various laws and regulations, the Southern Company system could incur substantial costs to clean up properties. The traditional operating companies have each received authority from their respective state PSCs to recover approved environmental compliance costs through regulatory mechanisms. These rates are adjusted annually or as necessary within limits approved by the state PSCs.

Georgia Power's environmental remediation liability as of December 31, 2014 was $22 million. Georgia Power has been designated or identified as a potentially responsible party (PRP) at sites governed by the Georgia Hazardous Site Response Act and/or by the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), including a site in Brunswick, Georgia on the CERCLA National Priorities List. The parties have completed the removal of wastes from the Brunswick site as ordered by the EPA. Additional cleanup and claims for recovery of natural resource damages at this site or for the assessment and potential cleanup of other sites are anticipated.

Georgia Power and numerous other entities have been designated by the EPA as PRPs at the Ward Transformer Superfund site located in Raleigh, North Carolina. In 2011, the EPA issued a Unilateral Administrative Order (UAO) to Georgia Power and 22 other parties, ordering specific remedial action of certain areas at the site. Later in 2011, Georgia Power filed a response with the EPA stating it has sufficient cause to believe it is not a liable party under CERCLA. The EPA notified Georgia Power in 2011 that it is considering enforcement options against Georgia Power and other non-complying UAO recipients. If the EPA pursues enforcement actions and the court determines that a respondent failed to comply with the UAO without sufficient cause, the EPA may also seek civil penalties of up to $37,500 per day for the violation and punitive damages of up to three times the costs incurred by the EPA as a result of the party's failure to comply with the UAO.

In addition to the EPA's action at this site, Georgia Power, along with many other parties, was sued in a private action by several existing PRPs for cost recovery related to the removal action. In February 2013, the U.S. District Court for the Eastern District of North Carolina Western Division granted Georgia Power's summary judgment motion, ruling that Georgia Power has no liability in the private action. In May 2013, the plaintiffs appealed the U.S. District Court for the Eastern District of North Carolina Western Division's order to the U.S. Court of Appeals for the Fourth Circuit.

The ultimate outcome of these matters will depend upon the success of defenses asserted, the ultimate number of PRPs participating in the cleanup, and numerous other factors and cannot be determined at this time; however, as a result of Georgia Power's regulatory treatment for environmental remediation expenses, these matters are not expected to have a material impact on Southern Company's financial statements.

Gulf Power's environmental remediation liability includes estimated costs of environmental remediation projects of approximately $48 million as of December 31, 2014. These estimated costs relate to site closure criteria by the Florida Department of Environmental Protection (FDEP) for potential impacts to soil and groundwater from herbicide applications at Gulf Power substations. The schedule for completion of the remediation projects is subject to FDEP approval. The projects have been approved by the Florida PSC for recovery through Gulf Power's environmental cost recovery clause; therefore, these liabilities have no impact on net income.

The final outcome of these matters cannot be determined at this time. However, based on the currently known conditions at these sites and the nature and extent of activities relating to these sites, management does not believe that additional liabilities, if any, at these sites would be material to the financial statements.

Nuclear Fuel Disposal Costs

Acting through the DOE and pursuant to the Nuclear Waste Policy Act of 1982, the U.S. government entered into contracts with Alabama Power and Georgia Power that require the DOE to dispose of spent nuclear fuel and high level radioactive waste generated at Plants Hatch and Farley and Plant Vogtle Units 1 and 2 beginning no later than January 31, 1998. The DOE has yet to commence the performance of its contractual and statutory obligation to dispose of spent nuclear fuel. Consequently, Alabama Power and Georgia Power pursued and continue to pursue legal remedies against the U.S. government for its partial breach of contract.

As a result of the first lawsuit, Georgia Power recovered approximately $27 million, based on its ownership interests, and Alabama Power recovered approximately $17 million, representing the vast majority of the Southern Company system's direct costs of the expansion of spent nuclear fuel storage facilities at Plants Farley and Hatch and Plant Vogtle Units 1 and 2 from 1998 through 2004. In 2012, Alabama Power credited the award to cost of service for the benefit of customers. Also in 2012, Georgia Power credited the award to accounts where the original costs were charged and used it to reduce rate base, fuel, and cost of service for the benefit of customers.

On December 12, 2014, the Court of Federal Claims entered a judgment in favor of Georgia Power and Alabama Power in the second spent nuclear fuel lawsuit seeking damages for the period from January 1, 2005 through December 31, 2010. Georgia Power was awarded approximately $18 million, based on its ownership interests, and Alabama Power was awarded approximately $26 million. No amounts have been recognized in the financial statements as of December 31, 2014. The final outcome of this matter cannot be determined at this time; however, no material impact on Southern Company's net income is expected.

On March 4, 2014, Alabama Power and Georgia Power filed additional lawsuits against the U.S. government for the costs of continuing to store spent nuclear fuel at Plants Farley and Hatch and Plant Vogtle Units 1 and 2 for the period from January 1, 2011 through December 31, 2013. Damages will continue to accumulate until the issue is resolved or storage is provided. No amounts have been recognized in the financial statements as of December 31, 2014 for any potential recoveries from the additional lawsuits. The final outcome of these matters cannot be determined at this time; however, no material impact on Southern Company's net income is expected.

On-site dry spent fuel storage facilities are operational at all three plants and can be expanded to accommodate spent fuel through the expected life of each plant.

Retail Regulatory Matters

Alabama Power

Rate RSE

Alabama Power's Rate RSE adjustments are based on forward-looking information for the applicable upcoming calendar year. Rate adjustments for any two-year period, when averaged together, cannot exceed 4.0% and any annual adjustment is limited to 5.0%. If Alabama Power's actual retail return is above the allowed weighted cost of equity (WCE) range, customer refunds will be required; however, there is no provision for additional customer billings should the actual retail return fall below the WCE range. Prior to 2014, retail rates remained unchanged when the retail ROE was projected to be between 13.0% and 14.5%.

During 2013, the Alabama PSC held public proceedings regarding the operation and utilization of Rate RSE. In August 2013, the Alabama PSC voted to issue a report on Rate RSE that found that Alabama Power's Rate RSE mechanism continues to be just and reasonable to customers and Alabama Power, but recommended Alabama Power modify Rate RSE as follows:

- Eliminate the provision of Rate RSE establishing an allowed range of ROE.
- Eliminate the provision of Rate RSE limiting Alabama Power's capital structure to an allowed equity ratio of 45%.
- Replace these two provisions with a provision that establishes rates based upon the WCE range of 5.75% to 6.21%, with an adjusting point of 5.98%. If calculated under the previous Rate RSE provisions, the resulting WCE would range from 5.85% to 6.53%, with an adjusting point of 6.19%.
- Provide eligibility for a performance-based adder of seven basis points, or 0.07%, to the WCE adjusting point if Alabama Power (i) has an "A" credit rating equivalent with at least one of the recognized rating agencies or (ii) is in the top one-third of a designated customer value benchmark survey.

Substantially all other provisions of Rate RSE were unchanged.

In August 2013, Alabama Power filed its consent to these recommendations with the Alabama PSC. The changes became effective for calendar year 2014. In November 2013, Alabama Power made its Rate RSE submission to the Alabama PSC of projected data for calendar year 2014; projected earnings were within the specified WCE range and, therefore, retail rates under Rate RSE remained unchanged for 2014. In 2012 and 2013, retail rates under Rate RSE remained unchanged from 2011. Under the terms of Rate RSE, the maximum possible increase for 2015 is 5.00%.

On December 1, 2014, Alabama Power submitted the required annual filing under Rate RSE to the Alabama PSC. The Rate RSE increase was 3.49%, or $181 million annually, effective January 1, 2015. The revenue adjustment includes the performance based adder of 0.07%. Under the terms of Rate RSE, the maximum increase for 2016 cannot exceed 4.51%.

Rate CNP

Alabama Power's retail rates, approved by the Alabama PSC, provide for adjustments to recognize the placing of new generating facilities into retail service under Rate CNP. Alabama Power may also recover retail costs associated with certificated PPAs under Rate CNP PPA. On March 4, 2014, the Alabama PSC issued a consent order that Alabama Power leave in effect the current Rate CNP PPA factor for billings for the period April 1, 2014 through March 31, 2015. It is anticipated that no adjustment will be made to Rate CNP PPA in 2015. As of December 31, 2014, Alabama Power had an under recovered certificated PPA balance of $56 million, of which $27 million is included in under recovered regulatory clause revenues and $29 million is included in deferred under recovered regulatory clause revenues in the balance sheet.

In 2011, the Alabama PSC approved and certificated a PPA of approximately 200 MWs of electricity from wind-powered generating facilities that became operational in 2012. In 2012, the Alabama PSC approved and certificated a second PPA of approximately 200 MWs of electricity from other wind-powered generating facilities which became operational in 2014. The terms of the PPAs permit Alabama Power to use the energy and retire the associated environmental attributes in service of its customers or to sell the environmental attributes, separately or bundled with energy. Alabama Power has elected the normal purchase normal sale (NPNS) scope exception under the derivative accounting rules for its two wind PPAs, which total approximately 400 MWs. The NPNS exception allows the PPAs to be recorded at a cost, rather than fair value, basis. The industry's application of the NPNS exception to certain physical forward transactions in nodal markets was previously under review by the SEC at the request of the electric utility industry. In June 2014, the SEC requested the Financial Accounting Standards Board to address the issue through the Emerging Issues Task Force (EITF). Any accounting decisions will now be subject to EITF deliberations. The outcome of the EITF's deliberations cannot be determined at this time. If Alabama Power is ultimately required to record these PPAs at fair value, an offsetting regulatory asset or regulatory liability will be recorded.

Rate CNP Environmental allows for the recovery of Alabama Power's retail costs associated with environmental laws, regulations, or other such mandates. Rate CNP Environmental is based on forward-looking information and provides for the recovery of these costs pursuant to a factor that is calculated annually. Environmental costs to be recovered include operations and maintenance expenses, depreciation, and a return on certain invested capital. There was no adjustment to Rate CNP Environmental in 2014. In August 2013, the Alabama PSC approved Alabama Power's petition requesting a revision to Rate CNP Environmental that allows recovery of costs related to pre-2005 environmental assets previously being recovered through Rate RSE. The Rate CNP Environmental increase effective January 1, 2015 was 1.5%, or $75 million annually, based upon projected billings. As of December 31, 2014, Alabama Power had an under recovered environmental clause balance of $49 million, of which $47 million is included in under recovered regulatory clause revenues and $2 million is included in deferred under recovered regulatory clause revenues in the balance sheet.

Rate ECR

Alabama Power has established energy cost recovery rates under Alabama Power's Rate ECR as approved by the Alabama PSC. Rates are based on an estimate of future energy costs and the current over or under recovered balance. Revenues recognized under Rate ECR and recorded on the financial statements are adjusted for the difference in actual recoverable fuel costs and amounts billed in current regulated rates. The difference in the recoverable fuel costs and amounts billed give rise to the over or under recovered amounts recorded as regulatory assets or liabilities. Alabama Power, along with the Alabama PSC, continually monitors the over or under recovered cost balance to determine whether an adjustment to billing rates is required. Changes in the Rate ECR factor have no significant effect on net income, but will impact operating cash flows. Currently, the Alabama PSC may approve billing rates under Rate ECR of up to 5.910 cents per KWH. In December 2014, the Alabama PSC issued a consent order that Alabama Power leave in effect for 2015 the energy cost recovery rates which began in 2011. Therefore, the Rate ECR factor as of January 1, 2015 remained at 2.681 cents per KWH. Effective with billings beginning in January 2016, the Rate ECR factor will be 5.910 cents per KWH, absent a further order from the Alabama PSC.

Alabama Power's over recovered fuel costs at December 31, 2014 totaled $47 million as compared to over recovered fuel costs of $42 million at December 31, 2013. At December 31, 2014, $47 million is included in deferred over recovered regulatory clause revenues. These classifications are based on estimates, which include such factors as weather, generation availability, energy demand, and the price of energy. A change in any of these factors could have a material impact on the timing of any recovery or return of fuel costs.

Rate NDR

Based on an order from the Alabama PSC, Alabama Power maintains a reserve for operations and maintenance expenses to cover the cost of damages from major storms to its transmission and distribution facilities. The order approves a separate monthly Rate NDR charge to customers consisting of two components. The first component is intended to establish and maintain a reserve balance for future storms and is an on-going part of customer billing. The second component of the Rate NDR charge is intended to allow recovery of any existing deferred storm-related operations and maintenance costs and any future reserve deficits over a 24-month period. The Alabama PSC order gives Alabama Power authority to record a deficit balance in the NDR when costs of storm damage exceed any established reserve balance. Absent further Alabama PSC approval, the maximum total Rate NDR charge consisting of both components is $10 per month per non-residential customer account and $5 per month per residential customer account. Alabama Power has the authority, based on an order from the Alabama PSC, to accrue certain additional amounts as circumstances warrant. The order allows for reliability-related expenditures to be charged against the additional accruals when the NDR balance exceeds $75 million. Alabama Power may designate a portion of the NDR to reliability-related expenditures as a part of an annual budget process for the following year or during the current year for identified unbudgeted reliability-related expenditures that are incurred. Accruals that have not been designated can be used to offset storm charges. Additional accruals to the NDR will enhance Alabama Power's ability to deal with the financial effects of future natural disasters, promote system reliability, and offset costs retail customers would otherwise bear.

As revenue from the Rate NDR charge is recognized, an equal amount of operations and maintenance expenses related to the NDR will also be recognized. As a result, the Rate NDR charge will not have an effect on net income but will impact operating cash flows.

Environmental Accounting Order

Based on an order from the Alabama PSC, Alabama Power is allowed to establish a regulatory asset to record the unrecovered investment costs, including the unrecovered plant asset balance and the unrecovered costs associated with site removal and closure associated with future unit retirements caused by environmental regulations. These costs would be amortized over the affected unit's remaining useful life, as established prior to the decision regarding early retirement.

As part of its environmental compliance strategy, Alabama Power plans to retire Plant Gorgas Units 6 and 7. These units represent 200 MWs of Alabama Power's approximately 12,200 MWs of generating capacity. Alabama Power also plans to cease using coal at Plant Barry Units 1 and 2 (250 MWs), but such units will remain available on a limited basis with natural gas as the fuel source. Additionally, Alabama Power expects to cease using coal at Plant Barry Unit 3 (225 MWs) and Plant Greene County Units 1 and 2 (300 MWs) and begin operating those units solely on natural gas. These plans are expected to be effective no later than April 2016.

In accordance with an accounting order from the Alabama PSC, Alabama Power will transfer the unrecovered plant asset balances to a regulatory asset at their respective retirement dates. The regulatory asset will be amortized through Rate CNP Environmental over the remaining useful lives, as established prior to the decision for retirement. As a result, these decisions will not have a significant impact on Southern Company's financial statements.

Nuclear Waste Fund Accounting Order

In November 2013, the U.S. District Court for the District of Columbia ordered the DOE to cease collecting spent fuel depositary fees from nuclear power plant operators until such time as the DOE either complies with the Nuclear Waste Policy Act of 1982 or until the U.S. Congress enacts an alternative waste management plan. In accordance with the court's order, the DOE submitted a proposal to the U.S. Congress to change the fee to zero. On March 18, 2014, the U.S. Court of Appeals for the District of Columbia Circuit denied the DOE's request for rehearing of the November 2013 panel decision ordering that the DOE propose the nuclear waste fund fee be changed to zero. The DOE formally set the fee to zero effective May 16, 2014.

On August 5, 2014, the Alabama PSC issued an order to provide for the continued recovery from customers of amounts associated with the permanent disposal of nuclear waste from the operation of Plant Farley. In accordance with the order, effective May 16, 2014, Alabama Power is authorized to recover from customers an amount equal to the prior fee and to record the amounts in a regulatory liability account (approximately $14 million annually). At December 31, 2014, Alabama Power recorded an $8 million regulatory liability which is included in other regulatory liabilities deferred in the balance sheet. Upon the DOE meeting the requirements of the Nuclear Waste Policy Act of 1982 and a new spent fuel depositary fee being put in place, the accumulated balance in the regulatory liability account will be available for purposes of the associated cost responsibility. In the event the balance is later determined to be more than needed, those amounts would be used for the benefit of customers, subject to the approval of the Alabama PSC. The ultimate outcome of this matter cannot be determined at this time.

Compliance and Pension Cost Accounting Order

In 2012, the Alabama PSC approved an accounting order to defer to a regulatory asset account certain compliance-related operations and maintenance expenditures for the years 2013 through 2017, as well as the incremental increase in operations expense related to pension cost for 2013. These deferred costs would have been amortized over a three-year period beginning in January 2015. The compliance related expenditures were related to (i) standards addressing Critical Infrastructure Protection issued by the North American Electric Reliability Corporation, (ii) cyber security requirements issued by the NRC, and (iii) NRC guidance addressing the readiness at nuclear facilities within the U.S. for severe events.

On November 3, 2014, the Alabama PSC issued an accounting order authorizing Alabama Power to fully amortize the balances in certain regulatory asset accounts, including the $28 million of compliance and pension costs accumulated at December 31, 2014. This amortization expense was offset by the amortization of the regulatory liability for other cost of removal obligations. See "Cost of Removal Accounting Order" herein for additional information. The cost of removal accounting order requires

Alabama Power to terminate, as of December 31, 2014, the regulatory asset accounts created pursuant to the compliance and pension cost accounting order. Consequently, Alabama Power will not defer any expenditures in 2015, 2016, and 2017 related to critical electric infrastructure and domestic nuclear facilities under these orders.

Non-Nuclear Outage Accounting Order

In August 2013, the Alabama PSC approved an accounting order to defer to a regulatory asset account certain operations and maintenance expenses associated with planned outages at non-nuclear generation facilities in 2014 and to amortize those expenses over a three-year period beginning in 2015.

On November 3, 2014, the Alabama PSC issued an accounting order authorizing Alabama Power to fully amortize the balances in certain regulatory asset accounts, including the $95 million of non-nuclear outage costs accumulated at December 31, 2014. This amortization expense was reflected in other operations and maintenance and was offset by the amortization of the regulatory liability for other cost of removal obligations. See "Cost of Removal Accounting Order" herein for additional information. The cost of removal accounting order requires Alabama Power to terminate, as of December 31, 2014, the regulatory asset accounts created pursuant to the non-nuclear outage accounting order.

Cost of Removal Accounting Order

In accordance with an accounting order issued on November 3, 2014 by the Alabama PSC, at December 31, 2014, Alabama Power fully amortized the balance of $123 million in certain regulatory asset accounts and offset this amortization expense with the amortization of $120 million of the regulatory liability for other cost of removal obligations. The regulatory asset account balances amortized as of December 31, 2014 represented costs previously deferred under a compliance and pension cost accounting order as well as a non-nuclear outage accounting order, as discussed herein.

Non-Environmental Federal Mandated Costs Accounting Order

On December 9, 2014, pending the development of a new cost recovery mechanism, the Alabama PSC issued an accounting order authorizing the deferral as a regulatory asset of up to $50 million of costs associated with non-environmental federal mandates that would otherwise impact rates in 2015.

On February 17, 2015, Alabama Power filed a proposed modification to Rate CNP Environmental with the Alabama PSC to include compliance costs for both environmental and non-environmental mandates. The non-environmental costs that would be recovered through the revised mechanism concern laws, regulations, and other mandates directed at the utility industry involving the security, reliability, safety, sustainability, or similar considerations impacting Alabama Power's facilities or operations. If approved as requested, the effective date for the revised mechanism would be March 20, 2015, upon which the regulatory asset balance would be reclassified to the under recovered balance for Rate CNP Environmental, and the related customer rates would not become effective before January 2016. The ultimate outcome of this matter cannot be determined at this time.

Georgia Power

Rate Plans

In December 2013, the Georgia PSC voted to approve the 2013 ARP. The 2013 ARP reflects the settlement agreement among Georgia Power, the Georgia PSC's Public Interest Advocacy Staff, and 11 of the 13 intervenors, which was filed with the Georgia PSC in November 2013.

On January 1, 2014, in accordance with the 2013 ARP, Georgia Power increased its tariffs as follows: (1) traditional base tariff rates by approximately $80 million; (2) Environmental Compliance Cost Recovery (ECCR) tariff by approximately $25 million; (3) Demand-Side Management (DSM) tariffs by approximately $1 million; and (4) Municipal Franchise Fee (MFF) tariff by approximately $4 million, for a total increase in base revenues of approximately $110 million.

On February 19, 2015, in accordance with the 2013 ARP, the Georgia PSC approved adjustments to traditional base, ECCR, DSM, and MFF tariffs effective January 1, 2015 as follows:

- Traditional base tariffs by approximately $107 million to cover additional capacity costs;
- ECCR tariff by approximately $23 million;
- DSM tariffs by approximately $3 million; and
- MFF tariff by approximately $3 million to reflect the adjustments above.

The sum of these adjustments resulted in a base revenue increase of approximately $136 million in 2015.

The 2016 base rate increase, which was approved in the 2013 ARP, will be determined through a compliance filing expected to be filed in late 2015, and will be subject to review by the Georgia PSC.

Under the 2013 ARP, Georgia Power's retail ROE is set at 10.95% and earnings are evaluated against a retail ROE range of 10.00% to 12.00%. Two-thirds of any earnings above 12.00% will be directly refunded to customers, with the remaining one-third retained by Georgia Power. There will be no recovery of any earnings shortfall below 10.00% on an actual basis. However, if at any time during the term of the 2013 ARP, Georgia Power projects that its retail earnings will be below 10.00% for any calendar year, it may petition the Georgia PSC for implementation of the Interim Cost Recovery (ICR) tariff that would be used to adjust Georgia Power's earnings back to a 10.00% retail ROE. The Georgia PSC would have 90 days to rule on Georgia Power's request. The ICR tariff will expire at the earlier of January 1, 2017 or the end of the calendar year in which the ICR tariff becomes effective. In lieu of requesting implementation of an ICR tariff, or if the Georgia PSC chooses not to implement the ICR tariff, Georgia Power may file a full rate case. In 2014, Georgia Power's retail ROE exceeded 12.00%, and Georgia Power expects to refund to retail customers approximately $13 million in 2015, subject to review and approval by the Georgia PSC.

Except as provided above, Georgia Power will not file for a general base rate increase while the 2013 ARP is in effect. Georgia Power is required to file a general rate case by July 1, 2016, in response to which the Georgia PSC would be expected to determine whether the 2013 ARP should be continued, modified, or discontinued.

Integrated Resource Plans

In July 2013, the Georgia PSC approved Georgia Power's latest triennial Integrated Resource Plan (2013 IRP) including Georgia Power's request to decertify 16 coal- and oil-fired units totaling 2,093 MWs. Several factors, including the cost to comply with existing and future environmental regulations, recent and forecasted economic conditions, and lower natural gas prices, contributed to the decision to close these units.

Plant Branch Units 3 and 4 (1,016 MWs), Plant Yates Units 1 through 5 (579 MWs), and Plant McManus Units 1 and 2 (122 MWs) will be decertified and retired by April 16, 2015, the compliance date of the Mercury and Air Toxics Standards (MATS) rule. The decertification date of Plant Branch Unit 1 (250 MWs) was extended from December 31, 2013 as specified in the final order in the 2011 Integrated Resource Plan Update (2011 IRP Update) to coincide with the decertification date of Plant Branch Units 3 and 4. The decertification and retirement of Plant Kraft Units 1 through 4 (316 MWs) were also approved and will be effective by April 16, 2016, based on a one-year extension of the MATS rule compliance date that was approved by the State of Georgia Environmental Protection Division in September 2013 to allow for necessary transmission system reliability improvements. In July 2013, the Georgia PSC approved the switch to natural gas as the primary fuel for Plant Yates Units 6 and 7. In September 2013, Plant Branch Unit 2 (319 MWs) was retired as approved by the Georgia PSC in the 2011 IRP Update in order to comply with the State of Georgia's Multi-Pollutant Rule.

In the 2013 ARP, the Georgia PSC approved the amortization of the CWIP balances related to environmental projects that will not be completed at Plant Branch Units 1 through 4 and Plant Yates Units 6 and 7 over nine years beginning in January 2014 and the amortization of any remaining net book values of Plant Branch Unit 2 from October 2013 to December 2022, Plant Branch Unit 1 from May 2015 to December 2020, Plant Branch Unit 3 from May 2015 to December 2023, and Plant Branch Unit 4 from May 2015 to December 2024. The Georgia PSC deferred a decision regarding the appropriate recovery period for the costs associated with unusable materials and supplies remaining at the retiring plants to Georgia Power's next base rate case, which Georgia Power expects to file in 2016 (2016 Rate Case). In the 2013 IRP, the Georgia PSC also deferred decisions regarding the recovery of any fuel related costs that could be incurred in connection with the retirement units to be addressed in future fuel cases.

On July 1, 2014, the Georgia PSC approved Georgia Power's request to cancel the proposed biomass fuel conversion of Plant Mitchell Unit 3 (155 MWs) because it would not be cost effective for customers. Georgia Power expects to request decertification of Plant Mitchell Unit 3 in connection with the triennial Integrated Resource Plan to be filed in 2016. Georgia Power plans to continue to operate the unit as needed until the MATS rule becomes effective in April 2015.

The decertification of these units and fuel conversions are not expected to have a material impact on Southern Company's financial statements; however, the ultimate outcome depends on the Georgia PSC's order in the 2016 Rate Case and future fuel cases and cannot be determined at this time.

Fuel Cost Recovery

Georgia Power has established fuel cost recovery rates approved by the Georgia PSC. The Georgia PSC approved a reduction in Georgia Power's total annual billings of approximately $567 million effective June 1, 2012, with an additional $122 million reduction effective January 1, 2013 through June 1, 2014. Under an Interim Fuel Rider, Georgia Power continues to be allowed to adjust its fuel cost recovery rates prior to the next fuel case if the under or over recovered fuel balance exceeds $200 million. Georgia Power's fuel cost recovery includes costs associated with a natural gas hedging program as revised and approved by the Georgia PSC in February 2013, requiring it to use options and hedges within a 24-month time horizon. See Note 11 under "Energy-Related Derivatives" for additional information. On January 20, 2015, the Georgia PSC approved the deferral of Georgia Power's next fuel case filing until at least June 30, 2015.

Georgia Power's under recovered fuel balance totaled approximately $199 million at December 31, 2014 and is included in current assets and other deferred charges and assets. At December 31, 2013, Georgia Power's over recovered fuel balance totaled approximately $58 million and was included in current liabilities and other deferred credits and liabilities.

Fuel cost recovery revenues as recorded on the financial statements are adjusted for differences in actual recoverable fuel costs and amounts billed in current regulated rates. Accordingly, changes in the billing factor will not have a significant effect on Southern Company's revenues or net income, but will affect cash flow.

Storm Damage Recovery

Georgia Power defers and recovers certain costs related to damages from major storms as mandated by the Georgia PSC. Beginning January 1, 2014, Georgia Power is accruing $30 million annually under the 2013 ARP that is recoverable through base rates. As of December 31, 2014 and December 31, 2013, the balance in the regulatory asset related to storm damage was $98 million and $37 million, respectively, with approximately $30 million included in other regulatory assets, current for both years and approximately $68 million and $7 million included in other regulatory assets, deferred, respectively. Georgia Power expects the Georgia PSC to periodically review and adjust, if necessary, the amounts collected in rates for storm damage costs. As a result of the regulatory treatment, costs related to storms are generally not expected to have a material impact on Southern Company's financial statements.

Nuclear Construction

In 2008, Georgia Power, acting for itself and as agent for Oglethorpe Power Corporation (OPC), the Municipal Electric Authority of Georgia (MEAG Power), and the City of Dalton, Georgia (Dalton), acting by and through its Board of Water, Light, and Sinking Fund Commissioners (collectively, Vogtle Owners), entered into an agreement with a consortium consisting of Westinghouse Electric Company LLC (Westinghouse) and Stone & Webster, Inc., a subsidiary of The Shaw Group Inc., which was acquired by Chicago Bridge & Iron Company N.V. (CB&I) (collectively, Contractor), pursuant to which the Contractor agreed to design, engineer, procure, construct, and test two AP1000 nuclear units (with electric generating capacity of approximately 1,100 MWs each) and related facilities at Plant Vogtle (Vogtle 3 and 4 Agreement). Under the terms of the Vogtle 3 and 4 Agreement, the Vogtle Owners agreed to pay a purchase price that is subject to certain price escalations and adjustments, including fixed escalation amounts and index-based adjustments, as well as adjustments for change orders, and performance bonuses for early completion and unit performance. The Vogtle 3 and 4 Agreement also provides for liquidated damages upon the Contractor's failure to fulfill the schedule and performance guarantees. The Contractor's liability to the Vogtle Owners for schedule and performance liquidated damages and warranty claims is subject to a cap. In addition, the Vogtle 3 and 4 Agreement provides for limited cost sharing by the Vogtle Owners for Contractor costs under certain conditions (which have not occurred), with maximum additional capital costs under this provision attributable to Georgia Power (based on Georgia Power's ownership interest) of approximately $114 million. Each Vogtle Owner is severally (and not jointly) liable for its proportionate share, based on its ownership interest, of all amounts owed to the Contractor under the Vogtle 3 and 4 Agreement. Georgia Power's proportionate share is 45.7%.

Certain payment obligations of Westinghouse and Stone & Webster, Inc. under the Vogtle 3 and 4 Agreement are guaranteed by Toshiba Corporation and CB&I's The Shaw Group Inc., respectively. In the event of certain credit rating downgrades of any Vogtle Owner, such Vogtle Owner will be required to provide a letter of credit or other credit enhancement. The Vogtle Owners may terminate the Vogtle 3 and 4 Agreement at any time for their convenience, provided that the Vogtle Owners will be required to pay certain termination costs. The Contractor may terminate the Vogtle 3 and 4 Agreement under certain circumstances, including certain Vogtle Owner suspension or delays of work, action by a governmental authority to permanently stop work, certain breaches of the Vogtle 3 and 4 Agreement by the Vogtle Owners, Vogtle Owner insolvency, and certain other events.

In 2009, the NRC issued an Early Site Permit and Limited Work Authorization which allowed limited work to begin on Plant Vogtle Units 3 and 4. The NRC certified the Westinghouse Design Control Document, as amended (DCD), for the AP1000 nuclear reactor design, in late 2011, and issued combined construction and operating licenses (COLs) in early 2012. Receipt of the COLs allowed full construction to begin. There have been technical and procedural challenges to the construction and licensing of Plant Vogtle Units 3 and 4, at the federal and state level, and additional challenges are expected as construction proceeds.

In 2009, the Georgia PSC approved inclusion of the Plant Vogtle Units 3 and 4 related CWIP accounts in rate base, and the State of Georgia enacted the Georgia Nuclear Energy Financing Act, which allows Georgia Power to recover financing costs for nuclear construction projects certified by the Georgia PSC. Financing costs are recovered on all applicable certified costs through annual adjustments to the NCCR tariff by including the related CWIP accounts in rate base during the construction period. The Georgia PSC approved increases to the NCCR tariff of approximately $223 million, $35 million, $50 million, and $60 million, effective January 1, 2011, 2012, 2013, and 2014, respectively. On December 16, 2014, the Georgia PSC approved an increase to the NCCR tariff of approximately $27 million effective January 1, 2015.

In 2012, the Vogtle Owners and the Contractor began negotiations regarding the costs associated with design changes to the DCD and the delays in the timing of approval of the DCD and issuance of the COLs, including the assertion by the Contractor that the Vogtle Owners are responsible for these costs under the terms of the Vogtle 3 and 4 Agreement. Also in 2012, Georgia Power and the other Vogtle Owners filed suit against the Contractor in the U.S. District Court for the Southern District of Georgia seeking a declaratory judgment that the Vogtle Owners are not responsible for these costs. In 2012, the Contractor also filed suit against Georgia Power and the other Vogtle Owners in the U.S. District Court for the District of Columbia alleging the Vogtle Owners are responsible for these costs. In August 2013, the U.S. District Court for the District of Columbia dismissed the Contractor's suit, ruling that the proper venue is the U.S. District Court for the Southern District of Georgia. The Contractor appealed the decision to the U.S. Court of Appeals for the District of Columbia Circuit in September 2013. The portion of additional costs claimed by the Contractor in its initial complaint that would be attributable to Georgia Power (based on Georgia Power's ownership interest) is approximately $425 million (in 2008 dollars). The Contractor also asserted it is entitled to extensions of the guaranteed substantial completion dates of April 2016 and April 2017 for Plant Vogtle Units 3 and 4, respectively. On May 22, 2014, the Contractor filed an amended counterclaim to the suit pending in the U.S. District Court for the Southern District of Georgia alleging that (i) the design changes to the DCD imposed by the NRC delayed module production and the impacts to the Contractor are recoverable by the Contractor under the Vogtle 3 and 4 Agreement and (ii) the changes to the basemat rebar design required by the NRC caused additional costs and delays recoverable by the Contractor under the Vogtle 3 and 4 Agreement. The Contractor did not specify in its amended counterclaim the amounts relating to these new allegations; however, the Contractor has subsequently asserted related minimum damages (based on Georgia Power's ownership interest) of $113 million. The Contractor may from time to time continue to assert that it is entitled to additional payments with respect to these allegations, any of which could be substantial. Georgia Power has not agreed to the proposed cost or to any changes to the guaranteed substantial completion dates or that the Vogtle Owners have any responsibility for costs related to these issues. Litigation is ongoing and Georgia Power intends to vigorously defend the positions of the Vogtle Owners. Georgia Power also expects negotiations with the Contractor to continue with respect to cost and schedule during which negotiations the parties may reach a mutually acceptable compromise of their positions.

Georgia Power is required to file semi-annual Vogtle Construction Monitoring (VCM) reports with the Georgia PSC by February 28 and August 31 each year. If the projected certified construction capital costs to be borne by Georgia Power increase by 5% or the projected in-service dates are significantly extended, Georgia Power is required to seek an amendment to the Plant Vogtle Units 3 and 4 certificate from the Georgia PSC. Georgia Power's eighth VCM report filed in February 2013 requested an amendment to the certificate to increase the estimated in-service capital cost of Plant Vogtle Units 3 and 4 from $4.4 billion to $4.8 billion and to extend the estimated in-service dates to the fourth quarter 2017 and the fourth quarter 2018 for Plant Vogtle Units 3 and 4, respectively.

In September 2013, the Georgia PSC approved a stipulation (2013 Stipulation) entered into by Georgia Power and the Georgia PSC staff to waive the requirement to amend the Plant Vogtle Units 3 and 4 certificate, until the completion of Plant Vogtle Unit 3, or earlier if deemed appropriate by the Georgia PSC and Georgia Power. In accordance with the Georgia Integrated Resource Planning Act, any costs incurred by Georgia Power in excess of the certified amount will be included in rate base, provided Georgia Power shows the costs to be reasonable and prudent. In addition, financing costs on any construction-related costs in excess of the certified amount likely would be subject to recovery through AFUDC instead of the NCCR tariff.

The Georgia PSC has approved eleven VCM reports covering the periods through June 30, 2014, including construction capital costs incurred, which through that date totaled $2.8 billion.

On January 29, 2015, Georgia Power announced that it was notified by the Contractor of the Contractor's revised forecast for completion of Plant Vogtle Units 3 and 4, which would incrementally delay the previously disclosed estimated in-service dates by 18 months (from the fourth quarter of 2017 to the second quarter of 2019 for Unit 3 and from the fourth quarter of 2018 to the second quarter of 2020 for Unit 4). Georgia Power has not agreed to any changes to the guaranteed substantial completion dates of April 2016 and April 2017 for Plant Vogtle Units 3 and 4, respectively. Georgia Power does not believe that the Contractor's revised forecast reflects all efforts that may be possible to mitigate the Contractor's delay.

In addition, Georgia Power believes that, pursuant to the Vogtle 3 and 4 Agreement, the Contractor is responsible for the Contractor's costs related to the Contractor's delay (including any related construction and mitigation costs, which could be material) and that the Vogtle Owners are entitled to recover liquidated damages for the Contractor's delay beyond the guaranteed substantial completion dates of April 2016 and April 2017 for Plant Vogtle Units 3 and 4, respectively. Consistent with the Contractor's position in the pending litigation described above, Georgia Power expects the Contractor to contest any claims for liquidated damages and to assert that the Vogtle Owners are responsible for additional costs related to the Contractor's delay.

On February 27, 2015, Georgia Power filed its twelfth VCM report with the Georgia PSC covering the period from July 1 through December 31, 2014, which requests approval for an additional $0.2 billion of construction capital costs incurred during that period and reflects the Contractor's revised forecast for completion of Plant Vogtle Units 3 and 4 as well as additional estimated owner-related costs of approximately $10 million per month expected to result from the Contractor's proposed 18-month delay, including property taxes, oversight costs, compliance costs, and other operational readiness costs. No Contractor costs related to the Contractor's proposed 18-month delay are included in the twelfth VCM report. Additionally, while Georgia Power has not agreed to any change to the guaranteed substantial completion dates, the twelfth VCM report includes a requested amendment to the Plant Vogtle Units 3 and 4 certificate to reflect the Contractor's revised forecast, to include the estimated owner's costs associated with the proposed 18-month Contractor delay, and to increase the estimated total in-service capital cost of Plant Vogtle Units 3 and 4 to $5.0 billion.

Georgia Power will continue to incur financing costs of approximately $30 million per month until Plant Vogtle Units 3 and 4 are placed in service. The twelfth VCM report estimates total associated financing costs during the construction period to be approximately $2.5 billion.

Processes are in place that are designed to assure compliance with the requirements specified in the DCD and the COLs, including inspections by Southern Nuclear and the NRC that occur throughout construction. As a result of such compliance processes, certain license amendment requests have been filed and approved or are pending before the NRC. Various design and other licensing-based compliance issues are expected to arise as construction proceeds, which may result in additional license amendments or require other resolution. If any license amendment requests or other licensing-based compliance issues are not resolved in a timely manner, there may be delays in the project schedule that could result in increased costs either to the Vogtle Owners or the Contractor or to both.

As construction continues, the risk remains that ongoing challenges with Contractor performance including additional challenges in its fabrication, assembly, delivery, and installation of the shield building and structural modules, delays in the receipt of the remaining permits necessary for the operation of Plant Vogtle Units 3 and 4, or other issues could arise and may further impact project schedule and cost. In addition, the IRS allocated production tax credits to each of Plant Vogtle Units 3 and 4, which require the applicable unit to be placed in service before 2021.

Additional claims by the Contractor or Georgia Power (on behalf of the Vogtle Owners) are also likely to arise throughout construction. These claims may be resolved through formal and informal dispute resolution procedures under the Vogtle 3 and 4 Agreement, but also may be resolved through litigation.

The ultimate outcome of these matters cannot be determined at this time.

Gulf Power

Retail Base Rate Case

In December 2013, the Florida PSC voted to approve the Gulf Power Settlement Agreement among Gulf Power and all of the intervenors to the docketed proceeding with respect to Gulf Power's request to increase retail base rates. Under the terms of the Gulf Power Settlement Agreement, Gulf Power (1) increased base rates designed to produce an additional $35 million in annual revenues effective January 2014 and subsequently increased base rates designed to produce an additional $20 million in annual revenues effective January 2015; (2) continued its current authorized retail ROE midpoint (10.25%) and range (9.25% – 11.25%); and (3) will accrue a return similar to AFUDC on certain transmission system upgrades placed into service after January 2014 until Gulf Power's next base rate adjustment date or January 1, 2017, whichever comes first.

The Gulf Power Settlement Agreement also includes a self-executing adjustment mechanism that will increase the authorized ROE midpoint and range by 25 basis points in the event the 30-year treasury yield rate increases by an average of at least 75 basis points above 3.7947% for a consecutive six-month period.

The Gulf Power Settlement Agreement also provides that Gulf Power may reduce depreciation expense and record a regulatory asset that will be included as an offset to the other cost of removal regulatory liability in an aggregate amount up to $62.5 million between January 2014 and June 2017. In any given month, such depreciation expense reduction may not exceed the amount necessary for the ROE, as reported to the Florida PSC monthly, to reach the midpoint of the authorized ROE range then in effect. Recovery of the regulatory asset will occur over a period to be determined by the Florida PSC in Gulf Power's next base rate case or next depreciation and dismantlement study proceeding, whichever comes first. As a result, Gulf Power recognized an $8.4 million reduction in depreciation expense in 2014.

Pursuant to the Gulf Power Settlement Agreement, Gulf Power may not request an increase in its retail base rates to be effective until after June 2017, unless Gulf Power's actual retail ROE falls below the authorized ROE range.

Integrated Coal Gasification Combined Cycle

Kemper IGCC Overview

Construction of Mississippi Power's Kemper IGCC is nearing completion and start-up activities will continue until the Kemper IGCC is placed in service. The Kemper IGCC will utilize an IGCC technology with an output capacity of 582 MWs. The Kemper IGCC will be fueled by locally mined lignite (an abundant, lower heating value coal) from a mine owned by Mississippi Power and situated adjacent to the Kemper IGCC. The mine, operated by North American Coal Corporation, started commercial operation in June 2013. In connection with the Kemper IGCC, Mississippi Power constructed and plans to operate approximately 61 miles of CO_2 pipeline infrastructure for the planned transport of captured CO_2 for use in enhanced oil recovery.

Kemper IGCC Schedule and Cost Estimate

In 2012, the Mississippi PSC issued the 2012 MPSC CPCN Order, a detailed order confirming the CPCN originally approved by the Mississippi PSC in 2010 authorizing the acquisition, construction, and operation of the Kemper IGCC.

The certificated cost estimate of the Kemper IGCC included in the 2012 MPSC CPCN Order was $2.4 billion, net of $245.3 million of grants awarded to the Kemper IGCC project by the DOE under the Clean Coal Power Initiative Round 2 (DOE Grants) and excluding the cost of the lignite mine and equipment, the cost of the CO_2 pipeline facilities, and AFUDC related to the Kemper IGCC. The 2012 MPSC CPCN Order approved a construction cost cap of up to $2.88 billion, with recovery of prudently-incurred costs subject to approval by the Mississippi PSC.

The Kemper IGCC was originally projected to be placed in service in May 2014. Mississippi Power placed the combined cycle and the associated common facilities portion of the Kemper IGCC in service on natural gas on August 9, 2014 and continues to focus on completing the remainder of the Kemper IGCC, including the gasifier and the gas clean-up facilities, for which the in-service date is currently expected to occur in the first half of 2016.

Recovery of the Kemper IGCC cost of the lignite mine and equipment, the cost of the CO_2 pipeline facilities, AFUDC, and certain general exceptions, including change of law, force majeure, and beneficial capital (which exists when Mississippi Power demonstrates that the purpose and effect of the construction cost increase is to produce efficiencies that will result in a neutral or favorable effect on customers relative to the original proposal for the CPCN) (Cost Cap Exceptions) and costs subject to the cost cap remain subject to review and approval by the Mississippi PSC. Mississippi Power's Kemper IGCC 2010 project estimate, current cost estimate (which includes the impacts of the Mississippi Supreme Court's (Court) decision), and actual costs incurred as of December 31, 2014, as adjusted for the Court's decision, are as follows:

Cost Category	2010 Project Estimate[f]	Current Estimate	**Actual Costs at 12/31/2014**
		(in billions)	
Plant Subject to Cost Cap[a]	$ 2.40	$ 4.93	**$ 4.23**
Lignite Mine and Equipment	0.21	0.23	**0.23**
CO_2 Pipeline Facilities	0.14	0.11	**0.10**
AFUDC[b][c]	0.17	0.63	**0.45**
Combined Cycle and Related Assets Placed in Service – Incremental[d]	—	0.02	0.00
General Exceptions	0.05	0.10	**0.07**
Deferred Costs[c][e]	—	0.18	**0.12**
Total Kemper IGCC[a][c]	$ 2.97	$ 6.20	**$ 5.20**

(a) The 2012 MPSC CPCN Order approved a construction cost cap of up to $2.88 billion, net of the DOE Grants and excluding the Cost Cap Exceptions. The Current Estimate and Actual Costs include non-incremental operating and maintenance costs related to the combined cycle and associated common facilities placed in service on August 9, 2014 that are subject to the $2.88 billion cost cap and excludes post-in-service costs for the lignite mine. See "Rate Recovery of Kemper IGCC Costs – 2013 MPSC Rate Order" for additional information.

(b) Mississippi Power's original estimate included recovery of financing costs during construction rather than the accrual of AFUDC. This approach was not approved by the Mississippi PSC in 2012 as described in "Rate Recovery of Kemper IGCC Costs."

(c) Amounts in the Current Estimate reflect estimated costs through March 31, 2016.

(d) Incremental operating and maintenance costs related to the combined cycle and associated common facilities placed in service on August 9, 2014, net of costs related to energy sales. See "Rate Recovery of Kemper IGCC Costs – 2013 MPSC Rate Order" for additional information.

(e) The 2012 MPSC CPCN Order approved deferral of non-capital Kemper IGCC-related costs during construction as described in "Rate Recovery of Kemper IGCC Costs – Regulatory Assets and Liabilities."

(f) The 2010 Project Estimate is the certificated cost estimate adjusted to include the certificated estimate for the CO_2 pipeline facilities which was approved in 2011 by the Mississippi PSC.

Of the total costs, including post-in-service costs for the lignite mine, incurred as of December 31, 2014, $3.04 billion was included in property, plant, and equipment (which is net of the DOE Grants and estimated probable losses of $2.05 billion), $1.8 million in other property and investments, $44.7 million in fossil fuel stock, $32.5 million in materials and supplies, $147.7 million in other regulatory assets, $11.6 million in other deferred charges and assets, and $23.6 million in AROs in the balance sheet, with $1.1 million previously expensed.

Mississippi Power does not intend to seek any rate recovery or joint owner contributions for any costs related to the construction of the Kemper IGCC that exceed the $2.88 billion cost cap, net of the DOE Grants and excluding the Cost Cap Exceptions. Southern Company recorded pre-tax charges to income for revisions to the cost estimate of $868.0 million ($536.0 million after tax) and $1.2 billion ($729 million after tax) in 2014 and 2013, respectively. The increases to the cost estimate in 2014 primarily reflected costs related to extension of the project's schedule to ensure the required time for start-up activities and operational readiness, completion of construction, additional resources during start-up, and ongoing construction support during start-up and commissioning activities. The current estimate includes costs through March 31, 2016. Any further extension of the in-service date is currently estimated to result in additional base costs of approximately $25 million to $30 million per month, which includes maintaining necessary levels of start-up labor, materials, and fuel, as well as operational resources required to execute start-up and commissioning activities. Any further extension of the in-service date with respect to the Kemper IGCC would also increase costs for the Cost Cap Exceptions, which are not subject to the $2.88 billion cost cap established by the Mississippi PSC. These costs include AFUDC, which is currently estimated to total approximately $13 million per month, as well as carrying costs and operating expenses on Kemper IGCC assets placed in service and consulting and legal fees, which are being deferred as regulatory assets and are estimated to total approximately $7 million per month.

Any further cost increases and/or extensions of the in-service date with respect to the Kemper IGCC may result from factors including, but not limited to, labor costs and productivity, adverse weather conditions, shortages and inconsistent quality of equipment, materials, and labor, contractor or supplier delay, non-performance under construction or other agreements, operational readiness, including specialized operator training and required site safety programs, unforeseen engineering or design problems, start-up activities for this first-of-a-kind technology (including major equipment failure and system integration), and/or operational performance (including additional costs to satisfy any operational parameters ultimately adopted by the Mississippi PSC). In subsequent periods, any further changes in the estimated costs to complete construction and start-up of the Kemper IGCC subject to the $2.88 billion cost cap, net of the DOE Grants and excluding the Cost Cap Exceptions, will be reflected in Southern Company's statements of income and these changes could be material.

Rate Recovery of Kemper IGCC Costs

The ultimate outcome of the rate recovery matters discussed herein, including the resolution of legal challenges, determinations of prudency, and the specific manner of recovery of prudently-incurred costs, cannot be determined at this time, but could have a material impact on the Company's results of operations, financial condition, and liquidity.

2012 MPSC CPCN Order

The 2012 MPSC CPCN Order included provisions relating to both Mississippi Power's recovery of financing costs during the course of construction of the Kemper IGCC and Mississippi Power's recovery of costs following the date the Kemper IGCC is placed in service. With respect to recovery of costs following the in-service date of the Kemper IGCC, the 2012 MPSC CPCN Order provided for the establishment of operational cost and revenue parameters based upon assumptions in Mississippi Power's petition for the CPCN. Mississippi Power expects the Mississippi PSC to apply operational parameters in connection with the evaluation of the Rate Mitigation Plan (defined below) and other related proceedings during the operation of the Kemper IGCC. To the extent the Mississippi PSC determines the Kemper IGCC does not meet the operational parameters ultimately adopted by the Mississippi PSC or Mississippi Power incurs additional costs to satisfy such parameters, there could be a material adverse impact on the financial statements.

2013 Settlement Agreement

In January 2013, Mississippi Power entered into a settlement agreement with the Mississippi PSC that, among other things, established the process for resolving matters regarding cost recovery related to the Kemper IGCC (2013 Settlement Agreement). Under the 2013 Settlement Agreement, Mississippi Power agreed to limit the portion of prudently-incurred Kemper IGCC costs to be included in retail rate base to the $2.4 billion certificated cost estimate, plus the Cost Cap Exceptions, but excluding AFUDC, and any other costs permitted or determined to be excluded from the $2.88 billion cost cap by the Mississippi PSC. The 2013 Settlement Agreement also allowed Mississippi Power to secure alternate financing for costs not otherwise recovered in any Mississippi PSC rate proceedings contemplated by the 2013 Settlement Agreement. The Court found the 2013 Settlement Agreement unenforceable due to a lack of public notice for the related proceedings. See "2015 Mississippi Supreme Court Decision" below for additional information.

Legislation to authorize a multi-year rate plan and legislation to provide for alternate financing through securitization of up to $1.0 billion of prudently-incurred costs was enacted into law in February 2013. Mississippi Power's intent under the 2013 Settlement Agreement was to securitize (1) prudently-incurred costs in excess of the certificated cost estimate and up to the $2.88 billion cost cap, net of the DOE Grants and excluding the Cost Cap Exceptions, (2) accrued AFUDC, and (3) other prudently-incurred costs, which include carrying costs from the estimated in-service date until securitization is finalized and other costs not included in the Rate Mitigation Plan as approved by the Mississippi PSC.

The Court's decision did not impact Mississippi Power's ability to utilize alternate financing through securitization, the 2012 MPSC CPCN Order, or the February 2013 legislation. See "2015 Mississippi Supreme Court Decision" below for additional information.

2013 MPSC Rate Order

Consistent with the terms of the 2013 Settlement Agreement, in March 2013, the Mississippi PSC issued the 2013 MPSC Rate Order approving retail rate increases of 15% effective March 19, 2013 and 3% effective January 1, 2014, which collectively were designed to collect $156 million annually beginning in 2014. For the period from March 2013 through December 31, 2014, $257.2 million had been collected primarily to be used to mitigate customer rate impacts after the Kemper IGCC is placed in service.

Because the 2013 MPSC Rate Order did not provide for the inclusion of CWIP in rate base as permitted by the Baseload Act, Mississippi Power continues to record AFUDC on the Kemper IGCC through the in-service date. Mississippi Power will not record AFUDC on any additional costs of the Kemper IGCC that exceed the $2.88 billion cost cap, except for Cost Cap Exception amounts. Mississippi Power will continue to record AFUDC and collect and defer the approved rates through the in-service date until directed to do otherwise by the Mississippi PSC.

On August 18, 2014, Mississippi Power provided an analysis of the costs and benefits of placing the combined cycle and the associated common facilities portion of the Kemper IGCC in service, including the expected accounting treatment. Mississippi Power's analysis requested, among other things, confirmation of Mississippi Power's accounting treatment by the Mississippi PSC of the continued collection of rates as prescribed by the 2013 MPSC Rate Order, with the current recognition as revenue of the related equity return on all assets placed in service and the deferral of all remaining rate collections under the 2013 MPSC Rate Order to a regulatory liability account. See "2015 Mississippi Supreme Court Decision" for additional information regarding the decision of the Court which would discontinue the collection of, and require the refund of, all amounts previously collected under the 2013 MPSC Rate Order.

In addition, Mississippi Power's August 18, 2014 filing with the Mississippi PSC requested confirmation of Mississippi Power's accounting treatment by the Mississippi PSC of the continued accrual of AFUDC through the in-service date of the remainder of the Kemper IGCC and the deferral of operating costs for the combined cycle as regulatory assets. Under Mississippi Power's proposal, non-incremental costs that would have been incurred whether or not the combined cycle was placed in service would be included in a regulatory asset and would continue to be subject to the $2.88 billion cost cap. Additionally, incremental costs that would not have been incurred if the combined cycle had not gone into service would be included in a regulatory asset and would not be subject to the cost cap because these costs are incurred to support operation of the combined cycle. All energy revenues associated with the combined cycle variable operating and maintenance expenses would be credited to this regulatory asset. See "Regulatory Assets and Liabilities" for additional information. Any action by the Mississippi PSC that is inconsistent with the treatment requested by Mississippi Power could have a material impact on the results of operations, financial condition, and liquidity of Southern Company.

2015 Mississippi Supreme Court Decision

On February 12, 2015, the Court issued its decision in the legal challenge to the 2013 MPSC Rate Order filed by Thomas A. Blanton. The Court reversed the 2013 MPSC Rate Order based on, among other things, its findings that (1) the Mirror CWIP rate treatment was not provided for under the Baseload Act and (2) the Mississippi PSC should have determined the prudence of Kemper IGCC costs before approving rate recovery through the 2013 MPSC Rate Order. The Court also found the 2013 Settlement Agreement unenforceable due to a lack of public notice for the related proceedings. The Court's ruling remands the matter to the Mississippi PSC to (1) fix by order the rates that were in existence prior to the 2013 MPSC Rate Order, (2) fix no rate increases until the Mississippi PSC is in compliance with the Court's ruling, and (3) enter an order refunding amounts collected under the 2013 MPSC Rate Order. Through December 31, 2014, Mississippi Power had collected $257.2 million through rates under the 2013 MPSC Rate Order. Any required refunds would also include carrying costs. The Court's decision will become legally effective upon the issuance of a mandate to the Mississippi PSC. Absent specific instruction from the Court, the Mississippi PSC will determine the method and timing of the refund. Mississippi Power is reviewing the Court's decision and expects to file a motion for rehearing which would stay the Court's mandate until either the case is reheard and decided or seven days after the Court issues its order denying Mississippi Power's request for rehearing. Mississippi Power is also evaluating its regulatory options.

Rate Mitigation Plan

In March 2013, Mississippi Power, in compliance with the 2013 MPSC Rate Order, filed a revision to the proposed rate recovery plan with the Mississippi PSC for the Kemper IGCC for cost recovery through 2020 (Rate Mitigation Plan), which is still under review by the Mississippi PSC. The revenue requirements set forth in the Rate Mitigation Plan assume the sale of a 15% undivided interest in the Kemper IGCC to SMEPA and utilization of bonus depreciation, which currently requires that the related long-term asset be placed in service in 2015. In the Rate Mitigation Plan, Mississippi Power proposed recovery of an annual revenue requirement of approximately $156 million of Kemper IGCC-related operational costs and rate base amounts, including plant costs equal to the $2.4 billion certificated cost estimate. The 2013 MPSC Rate Order, which increased rates beginning in March 2013, was integral to the Rate Mitigation Plan, which contemplates amortization of the regulatory liability balance at the in-service date to be used to mitigate customer rate impacts through 2020, based on a fixed amortization schedule that requires approval by the Mississippi PSC. Under the Rate Mitigation Plan, Mississippi Power proposed annual rate recovery to remain the same from 2014 through 2020, with the proposed revenue requirement approximating the forecasted cost of service for the period 2014 through 2020. Under Mississippi Power's proposal, to the extent the actual annual cost of service differs from the approved forecast for certain items, the difference would be deferred as a regulatory asset or liability, subject to accrual of carrying costs, and would be included in the next year's rate recovery calculation. If any deferred balance remains at the end of 2020, the Mississippi PSC would review the amount and, if approved, determine the appropriate method and period of disposition. See "Regulatory Assets and Liabilities" for additional information.

To the extent that refunds of amounts collected under the 2013 MPSC Rate Order are required on a schedule different from the amortization schedule proposed in the Rate Mitigation Plan, the customer billing impacts proposed under the Rate Mitigation Plan would no longer be viable. See "2015 Mississippi Supreme Court Decision" above for additional information.

In the event that the Mirror CWIP regulatory liability is refunded to customers prior to the in-service date of the Kemper IGCC and is, therefore, not available to mitigate rate impacts under the Rate Mitigation Plan, the Mississippi PSC does not approve a refund schedule that facilitates rate mitigation, or Mississippi Power withdraws the Rate Mitigation Plan, Mississippi Power would seek rate recovery through alternate means, which could include a traditional rate case.

In addition to current estimated costs at December 31, 2014 of $6.2 billion, Mississippi Power anticipates that it will incur additional costs after the Kemper IGCC in-service date until the Kemper IGCC cost recovery approach is finalized. These costs include, but are not limited to, regulatory costs and additional carrying costs which could be material. Recovery of these costs would be subject to approval by the Mississippi PSC.

Prudence Reviews

The Mississippi PSC's review of Kemper IGCC costs is ongoing. On August 5, 2014, the Mississippi PSC ordered that a consolidated prudence determination of all Kemper IGCC costs be completed after the entire project has been placed in service and has demonstrated availability for a reasonable period of time as determined by the Mississippi PSC and the MPUS. The Mississippi PSC has encouraged the parties to work in good faith to settle contested issues and Mississippi Power is working to reach a mutually acceptable resolution. As a result of the Court's decision, Mississippi Power intends to request that the Mississippi PSC reconsider its prudence review schedule. See "2015 Mississippi Supreme Court Decision" for additional information.

Regulatory Assets and Liabilities

Consistent with the treatment of non-capital costs incurred during the pre-construction period, the Mississippi PSC issued an accounting order in 2011 granting Mississippi Power the authority to defer all non-capital Kemper IGCC-related costs to a regulatory asset through the in-service date, subject to review of such costs by the Mississippi PSC. Such costs include, but are not limited to, carrying costs on Kemper IGCC assets currently placed in service, costs associated with Mississippi PSC and MPUS consultants, prudence costs, legal fees, and operating expenses associated with assets placed in service.

On August 18, 2014, Mississippi Power requested confirmation by the Mississippi PSC of Mississippi Power's authority to defer all operating expenses associated with the operation of the combined cycle subject to review of such costs by the Mississippi PSC. In addition, Mississippi Power is authorized to accrue carrying costs on the unamortized balance of such regulatory assets at a rate and in a manner to be determined by the Mississippi PSC in future cost recovery mechanism proceedings. As of December 31, 2014, the regulatory asset balance associated with the Kemper IGCC was $147.7 million. The projected balance at March 31, 2016 is estimated to total approximately $269.8 million. The amortization period of 40 years proposed by Mississippi Power for any such costs approved for recovery remains subject to approval by the Mississippi PSC.

The 2013 MPSC Rate Order approved retail rate increases of 15% effective March 19, 2013 and 3% effective January 1, 2014, which collectively were designed to collect $156 million annually beginning in 2014. On February 12, 2015, the Court ordered the Mississippi PSC to refund Mirror CWIP and to fix by order the rates that were in existence prior to the 2013 MPSC Rate Order. Mississippi Power is deferring the collections under the approved rates in the Mirror CWIP regulatory liability until otherwise directed by the Mississippi PSC. Mississippi Power is also accruing carrying costs on the unamortized balance of the Mirror CWIP regulatory liability for the benefit of retail customers. As of December 31, 2014, the balance of the Mirror CWIP regulatory liability, including carrying costs, was $270.8 million.

See "2015 Mississippi Supreme Court Decision" for additional information.

See Note 1 under "Regulatory Assets and Liabilities" for additional information.

Lignite Mine and CO_2 Pipeline Facilities

In conjunction with the Kemper IGCC, Mississippi Power will own the lignite mine and equipment and has acquired and will continue to acquire mineral reserves located around the Kemper IGCC site. The mine started commercial operation in June 2013.

In 2010, Mississippi Power executed a 40-year management fee contract with Liberty Fuels Company, LLC (Liberty Fuels), a wholly-owned subsidiary of The North American Coal Corporation, which developed, constructed, and is operating and managing the mining operations. The contract with Liberty Fuels is effective through the end of the mine reclamation. As the mining permit holder, Liberty Fuels has a legal obligation to perform mine reclamation and Mississippi Power has a contractual obligation to fund all reclamation activities. In addition to the obligation to fund the reclamation activities, Mississippi Power currently provides working capital support to Liberty Fuels through cash advances for capital purchases, payroll, and other operating expenses.

In addition, Mississippi Power has constructed and will operate the CO_2 pipeline for the planned transport of captured CO_2 for use in enhanced oil recovery. Mississippi Power has entered into agreements with Denbury Onshore (Denbury), a subsidiary of Denbury Resources Inc., and Treetop Midstream Services, LLC (Treetop), an affiliate of Tellus Operating Group, LLC and a subsidiary of Tengrys, LLC, pursuant to which Denbury will purchase 70% of the CO_2 captured from the Kemper IGCC and Treetop will purchase 30% of the CO_2 captured from the Kemper IGCC. The agreements with Denbury and Treetop provide termination rights in the event that Mississippi Power does not satisfy its contractual obligation with respect to deliveries of captured CO_2 by May 11, 2015. While Mississippi Power has received no indication from either Denbury or Treetop of their intent to terminate their respective agreements, any termination could result in a material reduction in future chemical product sales revenues but is not expected to have a material financial impact on Southern Company to the extent Mississippi Power is not able to enter into other similar contractual arrangements.

The ultimate outcome of these matters cannot be determined at this time.

Proposed Sale of Undivided Interest to SMEPA

In 2010, Mississippi Power and SMEPA entered into an APA whereby SMEPA agreed to purchase a 17.5% undivided interest in the Kemper IGCC. In 2012, the Mississippi PSC approved the sale and transfer of the 17.5% undivided interest in the Kemper IGCC to SMEPA. Later in 2012, Mississippi Power and SMEPA signed an amendment to the APA whereby SMEPA reduced its purchase commitment percentage from a 17.5% to a 15% undivided interest in the Kemper IGCC. In March 2013, Mississippi Power and SMEPA signed an amendment to the APA whereby Mississippi Power and SMEPA agreed to amend the power supply agreement entered into by the parties in 2011 to reduce the capacity amounts to be received by SMEPA by half (approximately 75 MWs) at the sale and transfer of the undivided interest in the Kemper IGCC to SMEPA. Capacity revenues under the 2011 power supply agreement were \$16.7 million in 2014. In December 2013, Mississippi Power and SMEPA agreed to extend SMEPA's option to purchase through December 31, 2014.

By letter agreement dated October 6, 2014, Mississippi Power and SMEPA agreed in principle on certain issues related to SMEPA's proposed purchase of a 15% undivided interest in the Kemper IGCC. The letter agreement contemplated certain amendments to the APA, which the parties anticipated to be incorporated into the APA on or before December 31, 2014. The parties agreed to further amend the APA as follows: (1) Mississippi Power agreed to cap at \$2.88 billion the portion of the purchase price payable for development and construction costs, net of the Cost Cap Exceptions, title insurance reimbursement, and AFUDC and/or carrying costs through the Closing Commitment Date (defined below); (2) SMEPA agreed to close the purchase within 180 days after the date of the execution of the amended APA or before the Kemper IGCC in-service date, whichever occurs first (Closing Commitment Date), subject only to satisfaction of certain conditions; and (3) AFUDC and/or carrying costs will continue to be accrued on the capped development and construction costs, the Cost Cap Exceptions, and any operating costs, net of revenues until the amended APA is executed by both parties, and thereafter AFUDC and/or carrying costs and payment of interest on SMEPA's deposited money will be suspended and waived provided closing occurs by the Closing Commitment Date. The letter agreement also provided for certain post-closing adjustments to address any differences between the actual and the estimated amounts of post-in-service date costs (both expenses and capital) and revenue credits for those portions of the Kemper IGCC previously placed in service.

By letter dated December 18, 2014, SMEPA notified Mississippi Power that SMEPA decided not to extend the estimated closing date in the APA or revise the APA to include the contemplated amendments; however, both parties agree that the APA will remain in effect until closing or until either party gives notice of termination.

The closing of this transaction is also conditioned upon execution of a joint ownership and operating agreement, the absence of material adverse effects, receipt of all construction permits, and appropriate regulatory approvals, as well as SMEPA's receipt of Rural Utilities Service (RUS) funding. In 2012, SMEPA received a conditional loan commitment from RUS for the purchase.

In 2012, on January 2, 2014, and on October 9, 2014, Mississippi Power received \$150 million, \$75 million, and \$50 million, respectively, of interest-bearing refundable deposits from SMEPA to be applied to the purchase. While the expectation is that these amounts will be applied to the purchase price at closing, Mississippi Power would be required to refund the deposits upon the termination of the APA or within 15 days of a request by SMEPA for a full or partial refund. Given the interest-bearing nature of the deposits and SMEPA's ability to request a refund, the deposits have been presented as a current liability in the balance sheet and as financing proceeds in the statement of cash flow. In July 2013, Southern Company entered into an agreement with SMEPA under which Southern Company has agreed to guarantee the obligations of Mississippi Power with respect to any required refund of the deposits.

The ultimate outcome of these matters cannot be determined at this time.

Baseload Act

In 2008, the Baseload Act was signed by the Governor of Mississippi. The Baseload Act authorizes, but does not require, the Mississippi PSC to adopt a cost recovery mechanism that includes in retail base rates, prior to and during construction, all or a portion of the prudently-incurred pre-construction and construction costs incurred by a utility in constructing a base load electric generating plant. Prior to the passage of the Baseload Act, such costs would traditionally be recovered only after the plant was placed in service. The Baseload Act also provides for periodic prudence reviews by the Mississippi PSC and prohibits the cancellation of any such generating plant without the approval of the Mississippi PSC. In the event of cancellation of the construction of the plant without approval of the Mississippi PSC, the Baseload Act authorizes the Mississippi PSC to make a public interest determination as to whether and to what extent the utility will be afforded rate recovery for costs incurred in connection with such cancelled generating plant. In the 2015 Mississippi Supreme Court decision, the Court declined to rule on the constitutionality of the Baseload Act. See "Rate Recovery of Kemper IGCC Costs" herein for additional information.

Investment Tax Credits and Bonus Depreciation

The IRS allocated $279.0 million (Phase II) of Internal Revenue Code Section 48A tax credits to Mississippi Power in connection with the Kemper IGCC. Through December 31, 2014, Mississippi Power had recorded tax benefits totaling $276.4 million for the Phase II credits, of which approximately $210.0 million had been utilized through that date. These credits will be amortized as a reduction to depreciation and amortization over the life of the Kemper IGCC and are dependent upon meeting the IRS certification requirements, including an in-service date no later than April 19, 2016 and the capture and sequestration (via enhanced oil recovery) of at least 65% of the CO_2 produced by the Kemper IGCC during operations in accordance with the Internal Revenue Code. Mississippi Power currently expects to place the Kemper IGCC in service in the first half of 2016. In addition, a portion of the Phase II tax credits will be subject to recapture upon completion of SMEPA's proposed purchase of an undivided interest in the Kemper IGCC as described above.

On December 19, 2014, the Tax Increase Prevention Act of 2014 (TIPA) was signed into law. The TIPA retroactively extended several tax credits through 2014 and extended 50% bonus depreciation for property placed in service in 2014 (and for certain long-term production-period projects to be placed in service in 2015). The extension of 50% bonus depreciation had a positive impact on Southern Company's cash flows and, combined with bonus depreciation allowed in 2014 under the ATRA, resulted in approximately $130 million of positive cash flows related to the combined cycle and associated common facilities portion of the Kemper IGCC for the 2014 tax year. The estimated cash flow benefit of bonus depreciation related to TIPA is expected to be approximately $45 million to $50 million for the 2015 tax year. See "Rate Recovery of Kemper IGCC Costs – Rate Mitigation Plan" herein for additional information.

The ultimate outcome of these matters cannot be determined at this time.

Section 174 Research and Experimental Deduction

Southern Company reduced tax payments for 2014 and included in its 2013 consolidated federal income tax return deductions for research and experimental (R&E) expenditures related to the Kemper IGCC. Due to the uncertainty related to this tax position, Southern Company recorded an unrecognized tax benefit of approximately $160 million as of December 31, 2014. See Note 5 under "Unrecognized Tax Benefits" for additional information.

Other Matters

Sierra Club Settlement Agreement

On August 1, 2014, Mississippi Power entered into the Sierra Club Settlement Agreement that, among other things, requires the Sierra Club to dismiss or withdraw all pending legal and regulatory challenges of the Kemper IGCC and the flue gas desulfurization system (scrubber) project at Plant Daniel Units 1 and 2. In addition, the Sierra Club agreed to refrain from initiating, intervening in, and/or challenging certain legal and regulatory proceedings for the Kemper IGCC, including, but not limited to, the prudence review, and Plant Daniel for a period of three years from the date of the Sierra Club Settlement Agreement. On August 4, 2014, the Sierra Club filed all of the required motions necessary to dismiss or withdraw all appeals associated with certification of the Kemper IGCC and the Plant Daniel Units 1 and 2 scrubber project, which the applicable courts subsequently granted.

Under the Sierra Club Settlement Agreement, Mississippi Power agreed to, among other things, fund a $15 million grant payable over a 15-year period for an energy efficiency and renewable program and contribute $2 million to a conservation fund. In accordance with the Sierra Club Settlement Agreement, Mississippi Power paid $7 million in 2014, recognized in other income (expense), net in Southern Company's statement of income. In addition, and consistent with Mississippi Power's ongoing evaluation of recent environmental rules and regulations, Mississippi Power agreed to retire, repower with natural gas, or convert to an alternative non-fossil fuel source Plant Sweatt Units 1 and 2 (80 MWs) no later than December 2018. Mississippi Power also agreed that it would cease burning coal and other solid fuel at Plant Watson Units 4 and 5 (750 MWs) and begin operating those units solely on natural gas no later than April 2015, and cease burning coal and other solid fuel at Plant Greene County Units 1 and 2 (200 MWs) and begin operating those units solely on natural gas no later than April 2016.

4. JOINT OWNERSHIP AGREEMENTS

Alabama Power owns an undivided interest in Units 1 and 2 at Plant Miller and related facilities jointly with PowerSouth Energy Cooperative, Inc. Georgia Power owns undivided interests in Plants Vogtle, Hatch, Wansley, and Scherer in varying amounts jointly with one or more of the following entities: OPC, MEAG Power, the City of Dalton, Georgia, Florida Power & Light

Company, and Jacksonville Electric Authority. In addition, Georgia Power has joint ownership agreements with OPC for the Rocky Mountain facilities and with Duke Energy Florida, Inc. for a combustion turbine unit at Intercession City, Florida. Southern Power owns an undivided interest in Plant Stanton Unit A and related facilities jointly with the Orlando Utilities Commission, Kissimmee Utility Authority, and Florida Municipal Power Agency.

At December 31, 2014, Alabama Power's, Georgia Power's, and Southern Power's percentage ownership and investment (exclusive of nuclear fuel) in jointly-owned facilities in commercial operation with the above entities were as follows:

Facility (Type)	Percent Ownership	Plant in Service	Accumulated Depreciation	CWIP
			(in millions)	
Plant Vogtle (nuclear) Units 1 and 2	45.7%	$ 3,420	$ 2,059	$ 46
Plant Hatch (nuclear)	50.1	1,117	559	66
Plant Miller (coal) Units 1 and 2	91.8	1,512	561	14
Plant Scherer (coal) Units 1 and 2	8.4	254	83	1
Plant Wansley (coal)	53.5	856	278	15
Rocky Mountain (pumped storage)	25.4	182	124	2
Intercession City (combustion turbine)	33.3	14	5	—
Plant Stanton (combined cycle) Unit A	65.0	157	47	—

Georgia Power also owns 45.7% of Plant Vogtle Units 3 and 4 that are currently under construction. See Note 3 under "Retail Regulatory Matters – Georgia Power – Nuclear Construction" for additional information.

Alabama Power, Georgia Power, and Southern Power have contracted to operate and maintain the jointly-owned facilities, except for Rocky Mountain and Intercession City, as agents for their respective co-owners. The companies' proportionate share of their plant operating expenses is included in the corresponding operating expenses in the statements of income and each company is responsible for providing its own financing.

5. INCOME TAXES

Southern Company files a consolidated federal income tax return, combined state income tax returns for the States of Alabama, Georgia, and Mississippi, and unitary income tax returns for the States of California, North Carolina, and Texas. Under a joint consolidated income tax allocation agreement, each Southern Company subsidiary's current and deferred tax expense is computed on a stand-alone basis and no subsidiary is allocated more current expense than would be paid if it filed a separate income tax return. In accordance with IRS regulations, each company is jointly and severally liable for the federal tax liability.

Current and Deferred Income Taxes

Details of income tax provisions are as follows:

	2014	2013	2012
		(in millions)	
Federal —			
Current	**$ 175**	$ 363	$ 177
Deferred	**695**	386	1,011
	870	749	1,188
State —			
Current	**93**	(10)	61
Deferred	**14**	110	85
	107	100	146
Total	**$ 977**	$ 849	$ 1,334

Net cash payments for income taxes in 2014, 2013, and 2012 were $272 million, $139 million, and $38 million, respectively.

The tax effects of temporary differences between the carrying amounts of assets and liabilities in the financial statements and their respective tax bases, which give rise to deferred tax assets and liabilities, are as follows:

	2014	2013
	(in millions)	
Deferred tax liabilities —		
Accelerated depreciation	**$ 11,125**	$ 9,710
Property basis differences	**1,332**	1,515
Leveraged lease basis differences	**299**	287
Employee benefit obligations	**613**	491
Premium on reacquired debt	**103**	113
Regulatory assets associated with employee benefit obligations	**1,390**	705
Regulatory assets associated with AROs	**871**	824
Other	**523**	350
Total	**16,256**	13,995
Deferred tax assets —		
Federal effect of state deferred taxes	**430**	421
Employee benefit obligations	**1,675**	1,048
Over recovered fuel clause	**—**	30
Other property basis differences	**453**	157
Deferred costs	**86**	84
ITC carryforward	**480**	121
Unbilled revenue	**67**	116
Other comprehensive losses	**89**	54
AROs	**871**	824
Estimated Loss on Kemper IGCC	**631**	472
Deferred state tax assets	**117**	77
Other	**342**	220
Total	**5,241**	3,624
Valuation allowance	**(49)**	(49)
Total deferred tax assets	**5,192**	3,575
Total deferred tax liabilities, net	**11,064**	10,420
Portion included in current assets/(liabilities), net	**504**	143
Accumulated deferred income taxes	**$ 11,568**	$ 10,563

The application of bonus depreciation provisions in current tax law has significantly increased deferred tax liabilities related to accelerated depreciation.

At December 31, 2014, Southern Company had subsidiaries with State of Georgia net operating loss (NOL) carryforwards totaling $701 million, which could result in net state income tax benefits of $41 million, if utilized. However, the subsidiaries have established a valuation allowance for the entire amount due to the remote likelihood that the tax benefit will be realized. These NOLs expire between 2018 and 2021. Beginning in 2002, the State of Georgia allowed Southern Company to file a combined return, which has prevented the creation of any additional NOL carryforwards.

At December 31, 2014, the tax-related regulatory assets to be recovered from customers were $1.5 billion. These assets are primarily attributable to tax benefits flowed through to customers in prior years, deferred taxes previously recognized at rates lower than the current enacted tax law, and taxes applicable to capitalized interest.

At December 31, 2014, the tax-related regulatory liabilities to be credited to customers were $192 million. These liabilities are primarily attributable to deferred taxes previously recognized at rates higher than the current enacted tax law and to unamortized ITCs.

In accordance with regulatory requirements, deferred federal ITCs are amortized over the life of the related property with such amortization normally applied as a credit to reduce depreciation in the statements of income. Credits amortized in this manner amounted to $22 million in 2014, $16 million in 2013, and $23 million in 2012. At December 31, 2014, Southern Company had a federal ITC carryforward which is expected to result in $379 million of federal income tax benefit. The ITC carryforward expires in 2023, but is expected to be utilized in 2015. Additionally, Southern Company had state ITC carryforwards for the states of Georgia and Mississippi totaling $159 million, which will expire between 2020 and 2024.

Effective Tax Rate

A reconciliation of the federal statutory income tax rate to the effective income tax rate is as follows:

	2014	2013	2012
Federal statutory rate	**35.0%**	35.0%	35.0%
State income tax, net of federal deduction	**2.3**	2.5	2.5
Employee stock plans dividend deduction	**(1.4)**	(1.6)	(1.0)
Non-deductible book depreciation	**1.4**	1.5	0.9
AFUDC-Equity	**(2.9)**	(2.6)	(1.3)
ITC basis difference	**(1.6)**	(1.2)	(0.3)
Other	**(0.3)**	(0.5)	(0.2)
Effective income tax rate	**32.5%**	33.1%	35.6%

Southern Company's effective tax rate is typically lower than the statutory rate due to its employee stock plans' dividend deduction and non-taxable AFUDC equity. The 2014 effective tax rate decrease, as compared to 2013, is primarily due to an increase in non-taxable AFUDC equity and an increase in tax benefits related to federal ITCs. Additionally, the 2013 effective rate decrease, as compared to 2012, is primarily due to an increase in non-taxable AFUDC equity.

Unrecognized Tax Benefits

Changes during the year in unrecognized tax benefits were as follows:

	2014	2013	2012
		(in millions)	
Unrecognized tax benefits at beginning of year	**$ 7**	$ 70	$ 120
Tax positions increase from current periods	**64**	3	13
Tax positions increase from prior periods	**102**	—	7
Tax positions decrease from prior periods	**(3)**	(66)	(56)
Reductions due to settlements	**—**	—	(10)
Reductions due to expired statute of limitations	**—**	—	(4)
Balance at end of year	**$ 170**	$ 7	$ 70

The tax positions increase from current periods and increase from prior periods for 2014 relate primarily to a deduction for R&E expenditures related to the Kemper IGCC. See Note 3 under "Integrated Coal Gasification Combined Cycle – Section 174 Research and Experimental Deduction" for more information. The tax positions decrease from prior periods for 2013 relate primarily to the tax accounting method change for repairs related to generation assets. See "Tax Method of Accounting for Repairs" herein for additional information.

The impact on Southern Company's effective tax rate, if recognized, is as follows:

	2014	2013	2012
		(in millions)	
Tax positions impacting the effective tax rate	**$ 10**	$ 7	$ 5
Tax positions not impacting the effective tax rate	**160**	—	65
Balance of unrecognized tax benefits	**$ 170**	$ 7	$ 70

The tax positions impacting the effective tax rate for 2014, 2013, and 2012 relate to federal and state income tax credits. The tax positions not impacting the effective tax rate for 2014 relate to a deduction for R&E expenditures related to the Kemper IGCC. The tax positions not impacting the effective tax rate for 2012 relate to the tax accounting method change for repairs related to generation assets. These amounts are presented on a gross basis without considering the related federal or state income tax impact.

Southern Company classifies interest on tax uncertainties as interest expense. Accrued interest for unrecognized tax benefits was immaterial for all periods presented. Southern Company did not accrue any penalties on uncertain tax positions.

It is reasonably possible that the amount of the unrecognized tax benefits could change within 12 months. The settlement of federal and state audits could impact the balances significantly. At this time, an estimate of the range of reasonably possible outcomes cannot be determined.

The IRS has finalized its audits of Southern Company's consolidated federal income tax returns through 2012. Southern Company has filed its 2013 federal income tax return and has received a partial acceptance letter from the IRS; however, the IRS has not finalized its audit. Southern Company is a participant in the Compliance Assurance Process of the IRS. The audits for Southern Company's state income tax returns have either been concluded, or the statute of limitations has expired, for years prior to 2008.

Tax Method of Accounting for Repairs

In 2011, the IRS published regulations on the deduction and capitalization of expenditures related to tangible property that generally apply for tax years beginning on or after January 1, 2014. Additionally, in April 2013, the IRS issued Revenue Procedure 2013-24, which provides guidance for taxpayers related to the deductibility of repair costs associated with generation assets. Based on a review of the regulations, Southern Company incorporated provisions related to repair costs for generation assets into its consolidated 2012 federal income tax return and reversed all related unrecognized tax positions. In September 2013, the IRS issued Treasury Decision 9636, "Guidance Regarding Deduction and Capitalization of Expenditures Related to Tangible Property," which are final tangible property regulations applicable to taxable years beginning on or after January 1, 2014. Southern Company continues to review this guidance; however, these regulations are not expected to have a material impact on the Company's financial statements.

6. FINANCING

Long-Term Debt Payable to an Affiliated Trust

Alabama Power has formed a wholly-owned trust subsidiary for the purpose of issuing preferred securities. The proceeds of the related equity investments and preferred security sales were loaned back to Alabama Power through the issuance of junior subordinated notes totaling $206 million as of December 31, 2014 and 2013, which constitute substantially all of the assets of this trust and are reflected in the balance sheets as long-term debt payable. Alabama Power considers that the mechanisms and obligations relating to the preferred securities issued for its benefit, taken together, constitute a full and unconditional guarantee by it of the trust's payment obligations with respect to these securities. At each of December 31, 2014 and 2013, trust preferred securities of $200 million were outstanding.

Securities Due Within One Year

A summary of scheduled maturities and redemptions of securities due within one year at December 31 was as follows:

	2014	2013
	(in millions)	
Senior notes	**$ 2,375**	$ 428
Other long-term debt	**775**	12
Pollution control revenue bonds	**152**	—
Capitalized leases	31	29
Total	**$ 3,333**	$ 469

Maturities through 2019 applicable to total long-term debt are as follows: $3.33 billion in 2015; $1.83 billion in 2016; $1.55 billion in 2017; $862 million in 2018; and $1.21 billion in 2019.

Subsequent to December 31, 2014, Alabama Power announced the redemption of $250 million aggregate principal amount of its Series DD 5.65% Senior Notes due March 15, 2035 that will occur on March 16, 2015.

Bank Term Loans

Southern Company and certain of the traditional operating companies have entered into various floating rate bank term loan agreements for loans bearing interest based on one-month LIBOR. At December 31, 2014, Mississippi Power had outstanding bank term loans totaling $775 million, which are reflected in the statements of capitalization as long-term debt. At December 31, 2013, Mississippi Power had outstanding bank term loans totaling $525 million and Georgia Power had outstanding bank term loans totaling $400 million.

In January 2014, Mississippi Power entered into an 18-month floating rate bank loan bearing interest based on one-month LIBOR. The term loan was for $250 million aggregate principal amount and the proceeds were used for working capital and other general corporate purposes, including Mississippi Power's continuous construction program.

In February 2014, Georgia Power repaid three four-month floating rate bank loans in an aggregate principal amount of $400 million.

In June 2014, Southern Company entered into a 90-day floating rate bank loan bearing interest based on one-month LIBOR. This short-term loan was for $250 million aggregate principal amount and the proceeds were used for working capital and other general corporate purposes, including the investment by Southern Company in its subsidiaries. This bank loan was repaid in August 2014.

The outstanding bank loans as of December 31, 2014, all of which relate to Mississippi Power, have covenants that limit debt levels to 65% of total capitalization, as defined in the agreements. For purposes of these definitions, debt excludes any long-term debt payable to affiliated trusts, other hybrid securities, and any securitized debt relating to the securitization of certain costs of the Kemper IGCC. At December 31, 2014, Mississippi Power was in compliance with its debt limits.

DOE Loan Guarantee Borrowings

Pursuant to the loan guarantee program established under Title XVII of the Energy Policy Act of 2005 (Title XVII Loan Guarantee Program), Georgia Power and the DOE entered into a loan guarantee agreement (Loan Guarantee Agreement) on February 20, 2014, under which the DOE agreed to guarantee the obligations of Georgia Power under a note purchase agreement (FFB Note Purchase Agreement) among the DOE, Georgia Power, and the FFB and a related promissory note (FFB Promissory Note). The FFB Note Purchase Agreement and the FFB Promissory Note provide for a multi-advance term loan facility (FFB Credit Facility), under which Georgia Power may make term loan borrowings through the FFB.

Proceeds of advances made under the FFB Credit Facility will be used to reimburse Georgia Power for a portion of certain costs of construction relating to Plant Vogtle Units 3 and 4 that are eligible for financing under the Title XVII Loan Guarantee Program (Eligible Project Costs). Aggregate borrowings under the FFB Credit Facility may not exceed the lesser of (i) 70% of Eligible Project Costs or (ii) approximately $3.46 billion.

All borrowings under the FFB Credit Facility are full recourse to Georgia Power, and Georgia Power is obligated to reimburse the DOE for any payments the DOE is required to make to the FFB under the guarantee. Georgia Power’s reimbursement obligations to the DOE are full recourse and secured by a first priority lien on (i) Georgia Power’s 45.7% undivided ownership interest in Plant Vogtle Units 3 and 4 (primarily the units under construction, the related real property, and any nuclear fuel loaded in the reactor core) and (ii) Georgia Power’s rights and obligations under the principal contracts relating to Plant Vogtle Units 3 and 4. There are no restrictions on Georgia Power’s ability to grant liens on other property.

Advances may be requested under the FFB Credit Facility on a quarterly basis through 2020. The final maturity date for each advance under the FFB Credit Facility is February 20, 2044. Interest is payable quarterly and principal payments will begin on February 20, 2020. Borrowings under the FFB Credit Facility will bear interest at the applicable U.S. Treasury rate plus a spread equal to 0.375%.

On February 20, 2014, Georgia Power made initial borrowings under the FFB Credit Facility in an aggregate principal amount of $1.0 billion. The interest rate applicable to $500 million of the initial advance under the FFB Credit Facility is 3.860% for an interest period that extends to 2044 and the interest rate applicable to the remaining $500 million is 3.488% for an interest period that extends to 2029, and is expected to be reset from time to time thereafter through 2044. In connection with its entry into the agreements with the DOE and the FFB, Georgia Power incurred issuance costs of approximately $66 million, which will be amortized over the life of the borrowings under the FFB Credit Facility.

On December 11, 2014, Georgia Power made additional borrowings under the FFB Credit Facility in an aggregate principal amount of $200 million. The interest rate applicable to the $200 million advance in December 2014 under the FFB Credit Facility is 3.002% for an interest period that extends to 2044.

Future advances are subject to satisfaction of customary conditions, as well as certification of compliance with the requirements of the Title XVII Loan Guarantee Program, including accuracy of project-related representations and warranties, delivery of updated project-related information, and evidence of compliance with the prevailing wage requirements of the Davis-Bacon Act of 1931, as amended, compliance with the Cargo Preference Act of 1954, and certification from the DOE’s consulting engineer that proceeds of the advances are used to reimburse Eligible Project Costs.

Under the Loan Guarantee Agreement, Georgia Power is subject to customary borrower affirmative and negative covenants and events of default. In addition, Georgia Power is subject to project-related reporting requirements and other project-specific covenants and events of default.

In the event certain mandatory prepayment events occur, the FFB’s commitment to make further advances under the FFB Credit Facility will terminate and Georgia Power will be required to prepay the outstanding principal amount of all borrowings under the FFB Credit Facility over a period of five years (with level principal amortization). Under certain circumstances, insurance proceeds and any proceeds from an event of taking must be applied to immediately prepay outstanding borrowings under the FFB Credit Facility. Georgia Power also may voluntarily prepay outstanding borrowings under the FFB Credit Facility. Under the FFB Promissory Note, any prepayment (whether mandatory or optional) will be made with a make-whole premium or discount, as applicable.

In connection with any cancellation of Plant Vogtle Units 3 and 4 that results in a mandatory prepayment event, the DOE may elect to continue construction of Plant Vogtle Units 3 and 4. In such an event, the DOE will have the right to assume Georgia Power's rights and obligations under the principal agreements relating to Plant Vogtle Units 3 and 4 and to acquire all or a portion of Georgia Power's ownership interest in Plant Vogtle Units 3 and 4.

Senior Notes

Southern Company and its subsidiaries issued a total of $1.4 billion of senior notes in 2014. Southern Company issued $750 million and its subsidiaries issued a total of $600 million. The proceeds of these issuances were used to repay long-term indebtedness, to repay short-term indebtedness, and for other general corporate purposes, including the applicable subsidiaries' continuous construction programs.

At December 31, 2014 and 2013, Southern Company and its subsidiaries had a total of $18.2 billion and $17.3 billion, respectively, of senior notes outstanding. At December 31, 2014 and 2013, Southern Company had a total of $2.2 billion and $1.8 billion, respectively, of senior notes outstanding.

Since Southern Company is a holding company, the right of Southern Company and, hence, the right of creditors of Southern Company (including holders of Southern Company senior notes) to participate in any distribution of the assets of any subsidiary of Southern Company, whether upon liquidation, reorganization or otherwise, is subject to prior claims of creditors and preferred and preference stockholders of such subsidiary.

Pollution Control Revenue Bonds

Pollution control obligations represent loans to the traditional operating companies from public authorities of funds derived from sales by such authorities of revenue bonds issued to finance pollution control and solid waste disposal facilities. In some cases, the pollution control obligations represent obligations under installment sales agreements with respect to facilities constructed with the proceeds of pollution control bonds issued by public authorities. The traditional operating companies had $3.2 billion of outstanding pollution control revenue bonds at December 31, 2014 and 2013. The traditional operating companies are required to make payments sufficient for the authorities to meet principal and interest requirements of such bonds. Proceeds from certain issuances are restricted until qualifying expenditures are incurred.

Plant Daniel Revenue Bonds

In 2011, in connection with Mississippi Power's election under its operating lease of Plant Daniel Units 3 and 4 to purchase the assets, Mississippi Power assumed the obligations of the lessor related to $270 million aggregate principal amount of Mississippi Business Finance Corporation Taxable Revenue Bonds, 7.13% Series 1999A due October 20, 2021, issued for the benefit of the lessor. See "Assets Subject to Lien" herein for additional information.

Other Revenue Bonds

Other revenue bond obligations represent loans to Mississippi Power from a public authority of funds derived from the sale by such authority of revenue bonds issued to finance a portion of the costs of constructing the Kemper IGCC and related facilities.

In November 2013, the MBFC entered into an agreement to issue up to $33.75 million aggregate principal amount of MBFC Taxable Revenue Bonds, Series 2013A (Mississippi Power Company Project) and up to $11.25 million aggregate principal amount of MBFC Taxable Revenue Bonds, Series 2013B (Mississippi Power Company Project) for the benefit of Mississippi Power. In May 2014 and August 2014, the MBFC issued $12.3 million and $10.5 million, respectively, aggregate principal amount of MBFC Taxable Revenue Bonds (Mississippi Power Company Project), Series 2013A for the benefit of Mississippi Power and proceeds were used to reimburse Mississippi Power for the cost of the acquisition, construction, equipping, installation, and improvement of certain equipment and facilities for the lignite mining facility related to the Kemper IGCC. In December 2014, the MBFC Taxable Revenue Bonds (Mississippi Power Company Project), Series 2013A of $22.87 million and Series 2013B of $11.25 million were paid at maturity.

Mississippi Power had $50 million of such obligations outstanding related to tax-exempt revenue bonds at December 31, 2014 and 2013. Mississippi Power had no obligation at December 31, 2014 and $11.3 million of such obligations related to taxable revenue bonds outstanding at December 31, 2013. Such amounts are reflected in the statements of capitalization as long-term senior notes and debt.

Mississippi Power's agreements relating to its taxable revenue bonds include covenants limiting debt levels consistent with those described above under "Bank Term Loans."

Capital Leases

Assets acquired under capital leases are recorded in the balance sheets as utility plant in service and the related obligations are classified as long-term debt.

In September 2013, Mississippi Power entered into a nitrogen supply agreement for the air separation unit of the Kemper IGCC, which resulted in a capital lease obligation at December 31, 2014 of approximately $80 million with an annual interest rate of 4.9%. Amortization of the capital lease asset for the air separation unit will begin when the Kemper IGCC is placed in service.

At December 31, 2014 and 2013, the capitalized lease obligations for Georgia Power's corporate headquarters building were $40 million and $45 million, respectively, with an annual interest rate of 7.9% for both years.

At December 31, 2014 and 2013, Alabama Power had a capitalized lease obligation of $5 million for a natural gas pipeline with an annual interest rate of 6.9%.

At December 31, 2014 and 2013, a subsidiary of Southern Company had capital lease obligations of approximately $34 million and $30 million, respectively, for certain computer equipment including desktops, laptops, servers, printers, and storage devices with annual interest rates that range from 1.4% to 3.2%.

Other Obligations

In 2012, January 2014, and October 2014, Mississippi Power received $150 million, $75 million, and $50 million, respectively, interest-bearing refundable deposits from SMEPA to be applied to the sale price for the pending sale of an undivided interest in the Kemper IGCC. Until the sale is closed, the deposits bear interest at Mississippi Power's AFUDC rate adjusted for income taxes, which was 10.134% per annum for 2014, 9.932% per annum for 2013, and 9.967% per annum for 2012, and are refundable to SMEPA upon termination of the APA related to such purchase or within 15 days of a request by SMEPA for a full or partial refund. In July 2013, Southern Company entered into an agreement with SMEPA under which Southern Company has agreed to guarantee the obligations of Mississippi Power with respect to any required refund of the deposits.

Assets Subject to Lien

Each of Southern Company's subsidiaries is organized as a legal entity, separate and apart from Southern Company and its other subsidiaries. There are no agreements or other arrangements among the Southern Company system companies under which the assets of one company have been pledged or otherwise made available to satisfy obligations of Southern Company or any of its other subsidiaries.

Gulf Power has granted one or more liens on certain of its property in connection with the issuance of certain series of pollution control revenue bonds with an outstanding principal amount of $41 million as of December 31, 2014.

The revenue bonds assumed in conjunction with Mississippi Power's purchase of Plant Daniel Units 3 and 4 are secured by Plant Daniel Units 3 and 4 and certain related personal property. See "Plant Daniel Revenue Bonds" herein for additional information.

See "DOE Loan Guarantee Borrowings" above for information regarding certain borrowings of Georgia Power that are secured by a first priority lien on (i) Georgia Power's 45.7% undivided ownership interest in Plant Vogtle Units 3 and 4 (primarily the units under construction, the related real property, and any nuclear fuel loaded in the reactor core) and (ii) Georgia Power's rights and obligations under the principal contracts relating to Plant Vogtle Units 3 and 4.

Bank Credit Arrangements

At December 31, 2014, committed credit arrangements with banks were as follows:

	Expires						Executable Term Loans		Due Within One Year	
Company	2015	2016	2017	2018	Total	Unused	One Year	Two Years	Term Out	No Term Out
	(in millions)				(in millions)		(in millions)		(in millions)	
Southern Company	$ —	$ —	$ —	$1,000	$ 1,000	$ 1,000	$ —	$ —	$ —	$ —
Alabama Power	228	50	—	1,030	1,308	1,308	58	—	58	170
Georgia Power	—	150	—	1,600	1,750	1,736	—	—	—	—
Gulf Power	80	165	30	—	275	275	50	—	50	30
Mississippi Power	135	165	—	—	300	300	25	40	65	70
Southern Power	—	—	—	500	500	488	—	—	—	—
Other	70	—	—	—	70	70	20	—	20	50
Total	$ 513	$ 530	$ 30	$4,130	$ 5,203	$ 5,177	$ 153	$ 40	$ 193	$ 320

Most of the bank credit arrangements require payment of commitment fees based on the unused portion of the commitments or the maintenance of compensating balances with the banks. Commitment fees average less than $^{1}/_{4}$ of 1% for Southern Company, the traditional operating companies, and Southern Power. Compensating balances are not legally restricted from withdrawal.

Subject to applicable market conditions, Southern Company and its subsidiaries expect to renew their bank credit arrangements as needed, prior to expiration.

Most of these bank credit arrangements contain covenants that limit debt levels to 65% of total capitalization, as defined in the agreements. For purposes of these definitions, debt excludes the long-term debt payable to affiliated trusts and, in certain arrangements, other hybrid securities and, for Mississippi Power, any securitized debt relating to the securitization of certain costs of the Kemper IGCC. At December 31, 2014, Southern Company, the traditional operating companies, and Southern Power were each in compliance with their respective debt limit covenants.

A portion of the $5.2 billion unused credit with banks is allocated to provide liquidity support to the traditional operating companies' variable rate pollution control revenue bonds and commercial paper programs. The amount of variable rate pollution control revenue bonds outstanding requiring liquidity support as of December 31, 2014 was approximately $1.8 billion. In addition, at December 31, 2014, the traditional operating companies had $476 million of fixed rate pollution control revenue bonds outstanding that were required to be remarketed within the next 12 months. As of December 31, 2014, $98 million of certain pollution control revenue bonds of Georgia Power were reclassified to securities due within one year in anticipation of their redemption in connection with unit retirement decisions. See Note 3 under "Retail Regulatory Matters – Georgia Power – Integrated Resource Plans" for additional information.

Southern Company, the traditional operating companies, and Southern Power make short-term borrowings primarily through commercial paper programs that have the liquidity support of the committed bank credit arrangements described above. Southern Company, the traditional operating companies, and Southern Power may also borrow through various other arrangements with banks. Commercial paper and short-term bank term loans are included in notes payable in the balance sheets.

Details of short-term borrowings were as follows:

	Short-term Debt at the End of the Period	
	Amount Outstanding	**Weighted Average Interest Rate**
	(in millions)	
December 31, 2014:		
Commercial paper	**$ 803**	**0.3%**
Short-term bank debt	**—**	**—%**
Total	**$ 803**	**0.3%**
December 31, 2013:		
Commercial paper	$ 1,082	0.2%
Short-term bank debt	400	0.9%
Total	$ 1,482	0.4%

Redeemable Preferred Stock of Subsidiaries

Each of the traditional operating companies has issued preferred and/or preference stock. The preferred stock of Alabama Power and Mississippi Power contains a feature that allows the holders to elect a majority of such subsidiary's board of directors if preferred dividends are not paid for four consecutive quarters. Because such a potential redemption-triggering event is not solely within the control of Alabama Power and Mississippi Power, this preferred stock is presented as "Redeemable Preferred Stock of Subsidiaries" in a manner consistent with temporary equity under applicable accounting standards. The preferred and preference stock at Georgia Power and the preference stock at Alabama Power and Gulf Power do not contain such a provision. As a result, under applicable accounting standards, the preferred and preference stock at Georgia Power and the preference stock at Alabama Power and Gulf Power are presented as "noncontrolling interest," a separate component of "Stockholders' Equity," on Southern Company's balance sheets, statements of capitalization, and statements of stockholders' equity.

There were no changes for the years ended December 31, 2014 and 2013 in redeemable preferred stock of subsidiaries for Southern Company.

7. COMMITMENTS

Fuel and Purchased Power Agreements

To supply a portion of the fuel requirements of the generating plants, the Southern Company system has entered into various long-term commitments for the procurement and delivery of fossil and nuclear fuel which are not recognized on the balance sheets. In 2014, 2013, and 2012, the traditional operating companies and Southern Power incurred fuel expense of $6.0 billion, $5.5 billion, and $5.1 billion, respectively, the majority of which was purchased under long-term commitments. Southern Company expects that a substantial amount of the Southern Company system's future fuel needs will continue to be purchased under long-term commitments.

In addition, the Southern Company system has entered into various long-term commitments for the purchase of capacity and electricity, some of which are accounted for as operating leases or have been used by a third party to secure financing. Total capacity expense under PPAs accounted for as operating leases was $198 million, $157 million, and $171 million for 2014, 2013, and 2012, respectively.

Estimated total obligations under these commitments at December 31, 2014 were as follows:

	Operating Leases (1)	Other
	(in millions)	
2015	$ 230	$ 11
2016	234	11
2017	264	10
2018	270	7
2019	274	6
2020 and thereafter	1,980	50
Total	$ 3,252	$ 95

(1) A total of $1.1 billion of biomass PPAs included under operating leases is contingent upon the counterparties meeting specified contract dates for commercial operation and may change as a result of regulatory action.

Operating Leases

The Southern Company system has operating lease agreements with various terms and expiration dates. Total rent expense was $118 million, $123 million, and $155 million for 2014, 2013, and 2012, respectively. Southern Company includes any step rents, escalations, and lease concessions in its computation of minimum lease payments, which are recognized on a straight-line basis over the minimum lease term.

As of December 31, 2014, estimated minimum lease payments under operating leases were as follows:

	Minimum Lease Payments		
	Barges & Railcars	Other	Total
		(in millions)	
2015	$ 50	$ 50	$ 100
2016	41	48	89
2017	18	47	65
2018	9	35	44
2019	6	23	29
2020 and thereafter	20	228	248
Total	$ 144	$ 431	$ 575

For the traditional operating companies, a majority of the barge and railcar lease expenses are recoverable through fuel cost recovery provisions. In addition to the above rental commitments, Alabama Power and Georgia Power have obligations upon expiration of certain leases with respect to the residual value of the leased property. These leases have terms expiring through 2024 with maximum obligations under these leases of $53 million. At the termination of the leases, the lessee may renew the lease or exercise its purchase option or the property can be sold to a third party. Alabama Power and Georgia Power expect that the fair market value of the leased property would substantially reduce or eliminate the payments under the residual value obligations.

Guarantees

In December 2013, Georgia Power entered into an agreement that requires Georgia Power to guarantee certain payments of a gas supplier for Plant McIntosh for a period up to 15 years. The guarantee is expected to be terminated if certain events occur within one year of the initial gas deliveries in 2017. In the event the gas supplier defaults on payments, the maximum potential exposure under the guarantee is approximately $43 million.

As discussed above under "Operating Leases," Alabama Power and Georgia Power have entered into certain residual value guarantees.

8. COMMON STOCK

Stock Issued

During 2014, Southern Company issued approximately 20.8 million shares of common stock (including approximately 5.0 million treasury shares) for approximately $806 million through the employee and director stock plans and the Southern Investment Plan. The Company may satisfy its obligations with respect to the plans in several ways, including through using newly issued shares or treasury shares or acquiring shares on the open market through the independent plan administrators.

From August 2013 through December 2014, Southern Company used shares held in treasury, to the extent available, and newly issued shares to satisfy the requirements under the Southern Investment Plan and the employee savings plan. Beginning in January 2015, Southern Company ceased issuing additional shares under the Southern Investment Plan and the employee savings plan. All sales under these plans are now being funded with shares acquired on the open market by the independent plan administrators.

Beginning in 2015, Southern Company expects to repurchase shares of common stock to offset all or a portion of the incremental shares issued under its employee and director stock plans, including through stock option exercises. The Southern Company Board of Directors has approved the repurchase of up to 20 million shares of common stock for such purpose until December 31, 2017. Repurchases may be made by means of open market purchases, privately negotiated transactions, or accelerated or other share repurchase programs, in accordance with applicable securities laws.

Shares Reserved

At December 31, 2014, a total of 93 million shares were reserved for issuance pursuant to the Southern Investment Plan, the Employee Savings Plan, the Outside Directors Stock Plan, and the Omnibus Incentive Compensation Plan (which includes stock options and performance shares units as discussed below). Of the total 93 million shares reserved, there were 15 million shares of common stock remaining available for awards under the Omnibus Incentive Compensation Plan as of December 31, 2014.

Stock Options

Southern Company provides non-qualified stock options through its Omnibus Incentive Compensation Plan to a large segment of Southern Company system employees ranging from line management to executives. As of December 31, 2014, there were 5,437 current and former employees participating in the stock option program. The prices of options were at the fair market value of the shares on the dates of grant. These options become exercisable pro rata over a maximum period of three years from the date of grant. Southern Company generally recognizes stock option expense on a straight-line basis over the vesting period which equates to the requisite service period; however, for employees who are eligible for retirement, the total cost is expensed at the grant date. Options outstanding will expire no later than 10 years after the date of grant, unless terminated earlier by the Southern Company Board of Directors in accordance with the Omnibus Incentive Compensation Plan. Stock options held by employees of a company undergoing a change in control vest upon the change in control.

The estimated fair values of stock options granted were derived using the Black-Scholes stock option pricing model. Expected volatility was based on historical volatility of Southern Company's stock over a period equal to the expected term. Southern Company used historical exercise data to estimate the expected term that represents the period of time that options granted to employees are expected to be outstanding. The risk-free rate was based on the U.S. Treasury yield curve in effect at the time of grant that covers the expected term of the stock options.

The following table shows the assumptions used in the pricing model and the weighted average grant-date fair value of stock options granted:

Year Ended December 31	**2014**	2013	2012
Expected volatility	**14.6%**	16.6%	17.7%
Expected term *(in years)*	**5**	5	5
Interest rate	**1.5%**	0.9%	0.9%
Dividend yield	**4.9%**	4.4%	4.2%
Weighted average grant-date fair value	**$2.20**	$2.93	$3.39
