1PACIFIC GAS AND ELECTRIC COMPANY2CHAPTER 03INTRODUCTION AND OVERVIEW

4 A. Introduction

5	Pacific Gas and Electric Company (PG&E) presents its application for
6	approval of budgets and programs for the Energy Savings Assistance (ESA),
7	California Alternate Rates for Energy (CARE) and Family Electric Rate
8	Assistance (FERA) Programs, collectively PG&E's primary Income Qualified
9	Programs. These programs have been providing income qualified customers ¹
10	assistance in lowering their energy consumption and costs while increasing their
11	comfort, health, and safety since 1983 and has been providing rate assistance,
12	through a monthly discount, to qualifying customers ² since 1989.
13	Since the inception of these programs, PG&E customers have benefitted
14	from the program achievements as outlined below:
15	 ESA – Since 1983, PG&E has treated approximately 2.14 million homes
16	through the end of 2018. In aggregate since 1983, ESA participants have
17	saved over \$902 million on their energy bills, reduced electric use by over
18	634,117,000 kilowatt-hours (kWh), and reduced natural gas use by over
19	28.8 million therms. ³
20	CARE – Since its inception in 1989, as authorized in Decision (D.)
21	89-07-062 and D.89-09-044 through 2018, customers have received
22	nearly \$9.4 billion in cumulative subsidies, saving an average of 35 percent
23	on their electric bill and 20 percent on the gas portion of their bill. As at the
24	time of filing this application, PG&E has exceeded the California Public
25	Utilities Commission's (Commission) aspirational goal to enroll 90 percent of
26	eligible customers. PG&E's current penetration rate is 95 percent of the
27	estimated eligible population.

¹ Income Qualified also refers to low income.

² Qualifying customers for CARE include: residential single-family households, tenants of sub-metered residential facilities, non-profit group living facilities, agricultural employee housing facilities and migrant farm worker housing centers.

³ PG&E ESA Program 1983-2018 Participation, Energy, Bill Savings Workpaper_2019-06-10rev_10-08.

FERA – provides rate assistance to households of lower to middle-income customers. The FERA program was designed to assist families that are ineligible for the CARE rate because their income level falls slightly above the CARE program income eligibility limit.⁴ Since its inception in 2004, nearly \$65.4 million in cumulative subsidies have been provided to PG&E FERA enrolled customers.

7

B. The Low-Income Qualified Customer

8 The Low-Income qualified customer segment represents a large portion of 9 PG&E's market with over 1.4 million customers.⁵ There is a significant 10 opportunity and responsibility for PG&E to continue to support these customers 11 with financial assistance and energy efficiency programs. PG&E seeks to 12 engage low income customers in opportunities to reduce their bills and provide 13 possible improvements to their health, comfort, and safety, through CARE, 14 FERA, and ESA.

PG&E wants to ensure all customers can engage in smart energy choices regardless of income, financial status, or geographical disadvantages. This goal is supported by PG&E's efforts in collaborating with an ecosystem of stakeholders, all working together on behalf of customers. This ecosystem includes consumer advocates, elected officials, government institutions, local contractors and community-based organizations (CBO).

Of approximately 5.5 million customers in PG&E territory, about 25 percent 21 (over 1.4 million) are estimated as CARE-eligible (or low income) customers.⁶ 22 The percentage of CARE-enrolled customers has remained steady at 23 24 approximately 25-26 percent of the total PG&E residential population since 2014. Income eligible customers live throughout PG&E territory, and in certain counties 25 make up more than 40 percent of the households currently, including Glenn 26 County (47 percent), Merced County (45 percent), Kings Count (42 percent). 27 Kern County (42 percent), and Fresno County (40 percent).⁷ Certain zip codes 28 have as high as 77 percent of total households estimated eligible for CARE/ESA 29

⁴ The FERA program was authorized by D.04-02-057 as the Large Household Program.

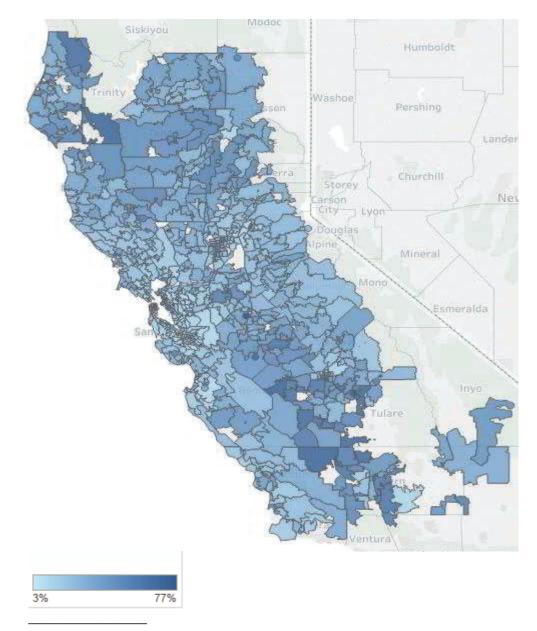

⁵ PG&E Integrated Data Analytics as of September 26, 2019.

⁶ PG&E Integrated Data Analytics as of September 26, 2019.

⁷ See Chapter I of this filing: Energy Savings Assistance Program Plan and Budget.

- 1 as is shown in the map below. An estimated 78 percent of PG&E's low-income
- 2 customers live in non-temperate climates, in extreme heat or cold.⁸

Legend Note: Percentage of PG&E Customers Estimated Eligible by Zip Codes.

⁸ PG&E Integrated Data Analytics as of September 26, 2019.

2		Guiding Principles
3		PG&E has developed guiding principles to support its work in disadvantaged
4		communities and the income qualified programs customer segment and
5		these have helped guide, in addition to the guidance provided in the Guidance
6		Document, ⁹ the program design and implementation plan put forth in
7		this application:
8		PG&E is committed to pursuing access for income qualified programs and
9		energy efficiency programs in Disadvantage Communities. PG&E will
10		actively seek new partnerships and explore cost-effective strategies needed
11		to penetrate hard to reach communities.
12		• PG&E is committed to strong local and regional partnerships to drive cost-
13		effective implementation of programs and infrastructure projects through
14		leveraging CBOs and local/regional partnerships to support current and
15		emerging initiatives.
16		PG&E is committed to providing safe, reliable, and affordable services to
17		low income customers despite geographic challenges.
18	D.	PG&E's Proposals
19		In this application, PG&E presents several proposals to the previously
20		authorized ESA and CARE Programs. PG&E developed its proposals
21		considering the profiles of its target customer segment described above and the
22		needs states that exist among this population as described in Chapter I,
23		Section A.3.b, Table I-6. In addition, PG&E is including FERA program
24		proposals to make significant efforts to increase program enrollment in pursuit of
25		the aspirational goal of 50 percent by the end of 2023, pursuant to the
26		Commission's order in D.18-08-013. ¹⁰ PG&E's proposals are designed to
27		target the following goals:

C. PG&E's Disadvantaged Communities (DACs) and Equity Programs

1	F.	Su	mm	ary of PG&E's Requested Proposals
2		1.	Ch	apter I – ESA Program Summary of Critical Program Elements and
3			Re	quests
4			•	Approve new program design called ESA Plus with three levels: basic,
5				comprehensive and comprehensive plus as well as the virtual energy
6				coach pilot.
7			•	Approve customer self-certification eligibility for ESA Basic which PG&E
8				believes will help overcome one of the barriers of participation.
9			•	Approve the prioritization of CARE enrolled customers who have not
10				participated in ESA previously as well as customers in the five identified
11				need states: high energy users; previously disconnected for non-
12				payment of services; medical baseline; rural, tribal and disadvantaged
13				communities; and wildfire threat zones.
14			•	Approve the various modifications to the program rules designed to
15				increase benefits to the customers for energy savings, health, comfort
16				and safety, such as:
17				 Changes in measure offerings based on new design, including
18				additions, modifications and removal of certain measures. All
19				measure changes are based on their contributions to energy
20				savings, and non-energy benefits.
21				 Solicitation of third-party administration for PG&E's Multi-family
22				Whole Building Program modelled after PG&E's EE third-party
23				solicitation process, as applicable and permission to request policy
24				changes following solicitation.
25			•	Approve key program policy changes including:
26				 Establishing ESA Working Group and Studies Working Group;
27				continuing Multi-family Working Group;
28				 Modifying fund shifting rules;
29				 Tracking gas and electric budget at the portfolio level rather than
30				individual measure level;
31				- Flexibility to file Advice Letters for program modifications as needed;
32				and
33				 Full listing of policy changes included in the Program Policy
34				Changes contained in Appendix B.

1		Approve the Virtual Energy Coach Pilot to evaluate the impact of
2		personalized communications on customer behavior.
3		Approve the Long-Term CARE Customer Pilot to encourage ESA
4		participation for customers on CARE for 10 or more years.
5		Approve Impact, Low-Income Needs Assessment (LINA), Process,
6		Categorical Program and Non-Energy Benefits (NEBS) Studies
7		recommendations.
8		Approve PG&E's proposed Marketing, Education and Outreach plans
9		and corresponding budget request for the new ESA Plus program.
10	2.	Chapter II – CARE Program Summary of Critical Program Elements and
11		Requests
12		PG&E proposes the following CARE program recommendations for the
13		2021-2026 program cycle:
14		 Approve the increase of Capitation Fee from \$20 to \$30;
15		Approve request to permanently revise the filing date of annual
16		estimates to CARE eligible customers from December 31 to February 12
17		of each year for the current year;
18		• Approve change of the certification period for Non-Profit, Agriculture,
19		Migrant Farm Worker Housing Facilities from 2 years to 4 years; and
20		Approve continuation of successful marketing strategies and testing of
21		new strategies to target CARE-eligible customers, including the holistic
22		Community Engagement strategy to promote and educate customers in
23		limited income and vulnerable populations about the various income
24		qualified programs and rate options.
25	3.	Chapter II – FERA Program Summary of Critical Program Elements and
26		Requests
27		PG&E proposes the following FERA program recommendations for the
28		2021-2026 program cycle:
29		Approve CBO compensation for FERA enrollments;
30		Approve the inclusion of the FERA Annual Report goals and budget
31		expenditure with CARE and ESA annual report filed in May of each year
32		for the preceding year commencing 2024 for 2023 progress;
33		Approve request to include the FERA program aspirational goal into the
34		Low Income Proceeding moving forward;

- Approve changes to the FERA Balancing Account;
- Approve marketing and outreach strategies and corresponding budget
 request to continue co-promotion of CARE and FERA via successful
 marketing channels; and
- Approve new FERA-specific Marketing, Education and Outreach and
 corresponding budget request for work to increase FERA program
 awareness and enrollment.

8 G. Conclusion

9 The activities and program proposals in this application support PG&E's ability to continue addressing the needs that exist in PG&E's customer segment 10 with income below 200 percent of the Federal Poverty Level. By providing ESA, 11 12 CARE, and FERA program benefits to PG&E's customers for PY 2021-2026, PG&E expects to reach customers who have not been served in previous cycles 13 or previously treated customers who will receive additional benefits now 14 available through the ESA Plus program. PG&E believes the proposed program 15 designs and outreach approach, including community partners complementing 16 our direct marketing activities, will increase access to underserved populations. 17 18 PG&E's programs assist in reducing the energy burden of this important customer segment. PG&E requests the Commission adopt the program budgets 19 and proposals presented in this testimony because they are reasonable, support 20 PG&E's goal of safely meeting customers' service needs, and effectively 21 22 manage the organization's costs. To prevent any interruption in customer assistance, PG&E respectfully requests a final decision be issued on this 23 application no later than December 31, 2020. 24

PACIFIC GAS AND ELECTRIC COMPANY CHAPTER I

3 ENERGY SAVINGS ASSISTANCE PROGRAM PLAN AND BUDGET

4 I. ESA Program Plan and Budgets

A. ESA Program Context [WITNESS: O'DRAIN]

- History: Provide a brief history of the Energy Savings Assistance (ESA) Program and how it helps low-income households; how it is funded and how the program has changed over the years, including any relevant prior guidance given by the California Public Utilities Commission (CPUC or Commission).
- Pacific Gas and Electric Company (PG&E, the Company, or the 11 Utility) has offered free Energy Efficiency (EE) programs to qualified 12 13 low-income customers in its territory since 1983 through the ESA Program. The ESA Program's objective is to help income-qualified 14 customers reduce their energy consumption and costs while increasing 15 their health, comfort, and safety (HCS). The ESA Program uses a 16 prescriptive, direct install approach to provide free home weatherization, 17 energy efficient appliances, and energy education services to 18 income-qualified PG&E customers throughout PG&E's service area. 19

The ESA Program is ratepayer funded through the Public Purpose Program (PPP) fund. It is available to PG&E customers living in all housing types, regardless of whether they are homeowners or renters. To qualify for the ESA Program, the total customer household income must be equal to or less than 200 percent of the Federal Poverty Level (FPL) Guidelines, with income adjustments for family size.¹

26 Since 1983, PG&E has treated approximately 2.14 million homes 27 through the end of 2018. In aggregate, between 2001 and 2018, ESA 28 participants have saved over \$902 million on their energy bills, reduced

^{1 200} percent FPL income qualification for California Alternate Rates for Energy (CARE) is mandated by California Public Utilities Code (Pub. Util. Code) Sections 718, 739.1, and 2790. The ESA income guidelines at 200 percent FPL are linked to the CARE guidelines through Decision (D.) 05-10-044, Ordering Paragraph (OP) 7. All statutory references refer to the California Pub. Util. Code unless expressly stated otherwise.

electric use by over 634,117,000 kilowatt-hour (kWh), and reduced
 natural gas use by over 28.8 million therms.² Relevant guidance
 documents for PG&E's ESA Program, such as Commission Decisions,
 are included and briefly summarized in Table I-1.

² PG&E ESA Program 1983-2018 Participation, Energy, Bill Savings Workpaper_2019-06-10rev_10-08.

Line No.	Date	Key Decisions (D.)/Guidance	Summary
-	1983-2000	Various Decisions	Low-Income Energy Efficiency (LIEE) Program was marketed to customers as the Energy Partners program. It provided free home weatherization, energy efficient appliances, and energy education services to income-qualified PG&E customers throughout PG&E's service area.
2	2001-2003	D. 01-05-033	Instituted a "rapid deployment" strategy to mitigate the impacts of rate increases and energy burden on low-income customers during the energy crisis. Appliances were introduced into LIEE.
ю	2004-2006:	D.03-11-020	LIEE Program coordination and standardization among the investor-owned utilities (IOU) ^{ID)} expanded. LIEE Program cost effectiveness tests that included non-energy benefits (NEB) were developed and authorized.
4	2007-2014:	D.07-12-051	Directed the development of a Strategic Plan for LIEE programs through 2020. Established that the program goal (or "Strategic Initiative") should be to provide all eligible customers the opportunity to participate in LIEE programs and to offer participants all cost-effective EE measures in their residences by 2020.
2	July 2008	California Long-Term EE Strategic Plan ^(a)	Commission's blueprint for achieving maximum energy ongoing, statewide strategic planning effort.
9	2015-2017	D.14-08-030	Guidance for 2015-2017 ESA-CARE Applications
			PG&E's Low-income/ESA Application filed in November 2014 for 2015-2017.
			Bridge funding extended the ESA and CARE programs in 2016 and 2016 as additional years in the 2012-2014 program cycle due to a delay of a final decision.
7	2017-2020:	D.16-11-022	Issued on November 21, 2016.
			Program cycle extended to include the entire final segment of the low-income Strategic Initiative-2017 through 2020.
			Included significant program changes e.g., removing restrictions on re-treating customer homes that had been treated since 2002, removing the 3-measure minimum requirement for participation in ESA, establishing the common area measure initiative for qualifying deed-restricted multi-family buildings, and leveraging data sharing goals with the California Department of Community Services and Development (CSD)'s low-income programs.
ω	April 3, 2017 (and Suppl June 20, 2017)	PG&E Conforming Advice Letter (AL) 3830-G/5043-E and 3830-G-A/5043-E-A	D.16-11-022 required filing a Conforming AL to submit budgets for all decision directives not included in IOU 2015-2017 proposals. New requirements were budgeted from 2009-2016 unspent ESA funds per D.16-11-022.
თ	December 21, 2017	Conforming AL Resolution PG&E G-3531	Resolution authorized an additional \$155,248,408 in unspent funds in order to implement D. 16-11-022 directives, including: additional measures, in-home energy education only, Multi-family (MF) Single Point of Contact (SPOC), EE Goals and Potential Study, MF Common Area Measures (CAM), leveraging activities (incl: Marin Clean Energy Low Income Families and Tenants pilot and CSD Low-Income Newtherization Program (LIWP)), general admin (My Account enrollment page, Multi-family Working Group (MFWG) facilitation, tribal outreach). Regulatory Compliance for 2017 Audit and Energy Division (ED) Data Transfer reeds.
9	December 2017	D.17-12-009 (Petition For Modification (PFM) of D.16-11-022)	Addressed IOU's PFM D.16.11-022 regarding facilitating IOU-CSD customer data exchange. clarifying the requirement for an IOU CSD statewide database, removing the 8 percent unspent funds reporting trigger, calification on additional data byoand SPOC reporting, clarifying that Terr 1 power stips are still allowed, approxing High Effection-Forced Att Unitron Burmout scenarios, moditing Southern California Edison Company's (SCE) air Conditioning (AC) replacement policy, evaporative cooler replacement policy, evaporative cooler representent policy, organized proceeding that are to california Edison Company's (SCE) air Conditioning (AC) replacement policy, evaporative cooler replacement policy, correction to refrigerator policy, correction to CPT 79(0), reporting of jointly treated households, correction to OP 79 (household reatment gata table), correction to reference of adoption of firming of Programmable Communicating Thermositat (PCT) pilot, reporting of coordination efforts, clarification of CARE Information Technology (T) budget, cooling center funding correction, removing CARE expansion efforts, correction to CPT 200, technology (T) budget, cooling center funding correction, removing CARE expansion efforts, clarification of reation and end-use profile and outcountes, correction to CARE information Technology (T) budget, cooling center funding correction, removing CARE expansion efforts, clarification of marketing and outcount profiles. Request for Proposal (RFP) for 2019 Low-income Needs Assessment (LIA) Study, to deed-restricted MF Properties, correction to CARE budget calification, allowing monthly and Annual reporting in evaluation are and use to a stoch marketing and outreexch development to a develop applications, clarification of marketing and outreexch deadline for filing plans, RFPs for remote load monitoring a
	July 16, 2018 (and Supplemental September 14, 2018, and October 8, 2018)	PG&E Mid-Cycle AL 3990-G/5229-E, 3990-G-A/5229-E-B 3990-G-B/5329-E-B	D 17-12-009 required filing a Mid-Cycle AL to: adjust energy savings targets; propose, retire and refine new measures: update penetration goals; update cost effectiveness test results; describe expanded water leveraging plans; describe the model optimes; describe expanded water leveraging plans; describe tribal penetration plans; describe to and consultation plans; describe CSD coordination; propose edits to the Statewide ESA Policy and Procedures Manual; request budget for the Statewide End-Use Load Profile vandor and internal IT statr-up costs; describe CSD coordination; propose edits to the Statewide ESA Policy and Procedures Manual; request budget for the Statewide End-Use Load Profile vandor and internal IT statr-up costs; describe CSD coordination; propose edits to the Statewide Est address the necessity of changing the CARE Green Tariff Shared Renewables (GTSR) program; propose modifications to authorized budgets; and change the ESA electric/gas revenue allocation.
12	January 4, 2019	Non-Standard Disposition Letter (NSDL)	On July 16, 2018 PG&E filed AL 3990-G/5329-E pursuant to D. 16-11-022 detailing out the Mid-Cycle update. The AL provided updated budgets, new measures, recalculations of cost-effectiveness and energy savings, leveraging plans and other program elements for the 2018-2020 ESA and CARE Program Years (PY). On September 14, 2018 PG&E filed supplemental AL 3990-G-4/5329-E-A to correct errors and sumitted a second supplemental AL 3990-G-B/5329-E-B on October 8th, 2018 pursuant to D. 18-08-013. The ED approved PG&E AL 3990-G/5329-E-B filed pursuant to authority granted in D.16-11-022, in part, with the modifications to home treatment goals, program measures, and 900-G-4/5329-E-A and AL 3990-G-B/5329-E-B filed pursuant to authority granted in D.16-11-022, in part, with the modifications to home treatment goals, program budgets, program measures, and energy savings streates, effective January 4, 2019.
(a) [(b) 1	D.08-09-040. Individually, the four Califor	mia IOUs are: PG&E, SCE, Southern C.	D.08-09-040. Individually, the four California IOUs are: PG&E, SCE, Southern California Gas Company (SoCalGas), and San Diego Gas & Electric Company (SDG&E).

TABLE I-1 PG&E'S ESA PROGRAM

<u>~</u>

1	2.	Accomplishments and Challenges: Provide a status update on the
2		household treatment numbers and whether you are on track to meet the
3		household treatment goal for the PY 2017-2020 cycle. Provide a status
4		update on portfolio metrics such as percent of authorized budget spent,
5		gross annual energy savings, etc. Clearly identify any unmet PY
6		2017-2020 annual targets and briefly explain the challenges or barriers.
7		(More detail is required later in the guidance).
8		PG&E's ESA treatment goals for PY 2017-2020 are shown in
9		Table I-2. These goals were based on the primary objective to achieve
10		the Commission's Programmatic Initiative as adopted in D.07-12-051,
11		D.08-11-031, and the Commission's Long-Term EE Strategic Plan.

TABLE I-2 PG&E'S ESA HOUSEHOLD TREATMENT GOAL

Line No.		2017	2018	2019	2020	Total
1	Households	90,030	94,532	99,258	104,221	388,041

D.17-12-009, Attachment 1 (Modifying D.16-11-022), p.276 and Non-Standard Disposition partially approving PG&E AL 3990-G/5329-E, 3990-G-A/5329-E-A, and 3990-G-B/5329-E-B, January 4, 2019.

PG&E is on track to meet the PY 2017-2020 household treatment goal. See Table I-3 below.

14	In addition, PG&E is on track to meet the 2020 Programmatic
15	Initiative (also called the Strategic Initiative). The 2020 Programmatic
16	Initiative includes all low-income customers living in homes that have not
17	been treated by ESA since 2002 as eligible to count towards the 2020
18	goal. ³ In addition to establishing the Programmatic Initiative baseline,
19	D.08-11-031 also established that a percent of customers that were
20	unwilling or infeasible to treat could be deducted from counting towards
21	the total for the 2020 Programmatic Initiative, and also allowed the
22	IOUs ⁴ to deduct the number of customers treated by the CSD's

³ D.08-11-031 established 2002 as the baseline for the 2020 Programmatic Initiative.

⁴ Individually, the four California IOUs are: PG&E, SCE, SoCalGas, and SDG&E.

weatherization programs since 2002.⁵ PG&E has treated
 1,381,162 households from 2002 through the end of 2018, and is on
 track to meet the final 2020 Programmatic Initiative to provide ESA
 services to all eligible and willing customers for which treatment is
 feasible by the end of 2020.⁶
 Table I-3 shows the status towards PG&E's 2017-2020
 portfolio metrics.

⁵ D.08-11-031, p. 111.

⁶ In D.08-11-031, Section 12.3.2, the Commission established 2002 as the baseline for the 2020 Programmatic Initiative, thus including all low-income customers living in homes that have not been treated by ESA since 2002 as eligible to count towards the 2020 goal. D.08-11-031 also established that a percent of customers that were unwilling or infeasible to treat could be deducted from the total, and also allowed the IOUs to deduct the number of customers treated by CSD's weatherization programs since 2002. The percent of customers deemed unwilling to participate was updated to 40 percent in D.16-11-022 (as modified in D.17-12-009).

TABLE I-32017-2020 ESA EXPENDITURES, HOMES TREATED, AND ENERGY SAVINGS

Line					2019	2020	
No.			2017 Actual ^(a)	2018 Actual ^(a)	Forecasted ^(b)	Forecasted ^(b)	Total

		% of Target	85%	100%	(21%)	(20%)	36%

(a) 2017 and 2018 actuals are from 2017 and 2018 ESA Annual Reports (filed on May 21, 2018 and May 21, 2019); 2017 and 2018 authorized budgets, targets and goals are from D.17-12-009, Attachment 1 (Modifying D.16-11-022), pp. 49-50 and p. 276, and does not include 2009-2016 unspent funding authorized.

(b) 2019 and 2020 authorized budgets, homes treated goals, and energy savings targets are from the Non-Standard Disposition partially approving PG&E AL 3990-G/5329-E, 3990-G-A/5329-E-A, and 3990-G-B/5329-E-B, January 4, 2019 and does not include 2009-2016 unspent funding authorized. 2019 authorized budget also includes carryover from 2017, and fund shifting per AL 3977-G/5298-E. The 2020 Authorized budget does not include benefits burden. 2019 and 2020 forecasts are from PG&E AL 3990-G-A/5329-E-A (Supplemental filing replacing AL 399-G/5329-E), filed September 14, 2018. PG&E's energy savings forecasts were based on the 2015-2017 ESA Impact Evaluation preliminary results, and PG&E proposed them even though it knew the differences were much greater than the maximum 5 percent plus/minus target adjustments Energy Division was authorized to approve in D.17-12-009.

1	As shown in Table I-3, there are several unmet annual targets
2	relating to budgets, homes treated, and therms as discussed
3	further below.
4	Budgets
5	As shown in Table I-3 above, PG&E's actual expense budget did not
6	meet its authorized budget for 2017 and 2018.
7	The 2017 underspend was due to multiple factors. For instance,
8	one factor was the delayed receipt of the final decision regarding
9	PG&E's 2015-2017 Low-income Application as shown in Table I-1
10	above. ⁷ This decision was issued in November 2016, which provided

7 D.16-11-022.

no transition time to begin the roll out of any new ESA Program
 measures and initiatives before 2017. Typical transition activities
 include, but are not limited to, updating databases, preparing installation
 specifications, and training contractors.

5 Second, D.16-11-022 included many new directives that were not contemplated in PG&E's 2015-2017 ESA Application. The decision also 6 directed the IOUs to file a Conforming AL to propose budgets for the 7 new directives in April 2017⁸ and also directed PG&E to use the 8 uncommitted unspent 2009-2016 funds to budget for all new ESA 9 activities in its Conforming AL.⁹ The updated ESA budgets proposed in 10 PG&E's Conforming AL filings were not authorized until December 21, 11 2017.¹⁰ Not having all ESA funding authorized until the end of 2017 12 contributed to PG&E's underspend for that year. 13

Additionally, PG&E and the other IOUs filed a Joint PFM of 14 D.16-11-022 on March 24, 2017 to clarify, correct, and modify program 15 components as described in Table I-1.¹¹ The PFM was not resolved 16 until December 2017, in D.17-12-009.12 PG&E was unable to begin 17 work on various ESA Program initiatives (i.e., the multi-family common 18 area initiative) while awaiting resolution of the PFM and Conforming AL. 19 The assumptions used in determining the measure counts for the ESA 20 EE budget over-forecasted for the year. Finally, PG&E's transition to a 21 new program database, which moved spend from 2017-2018, began in 22 2017 and was completed in 2018 also contributed to the lower spend in 23 2017. 24

The 2018 underspend was primarily due to requirements for planning and contractor selection prior to implementation. These planning activities related to the initiation of multi-family common area

- 8 D.16-11-022, pp. 37-38.
- **9** D.16-11-022, p. 39.
- **10** PG&E G-3531 Final Resolution, dated December 21, 2017.

12 D.17-12-009, issued on December 20, 2017.

¹¹ PG&E's (U 39 M), SDG&E's (U902M), SCE's (U 338-E), and SoCalGas' (U 904G) Joint PFM of D.16-11-022, March 24, 2017. This was resolved in D.17-12-009, issued on December 20, 2017.

1	initiatives, PCT/Smart Thermostat Time-of-Use (TOU) pilots, and remote
2	disaggregation/non-obtrusive load monitoring.
3	As required in D.17-12-009, PG&E filed a Mid-Cycle AL in July 2018
4	to assess and adjust energy savings targets, budgets, measures, and
5	other program parameters. ¹³ The Commission's NSDL was not issued
6	until January 2019, further delaying some program activities expected to
7	begin in 2018. ¹⁴ Also, the assumptions used in determining the
8	measure counts for the ESA EE budget over-forecasted the budget
9	requirements.
10	Homes Treated
11	As shown in Table I-2 above, PG&E's actual number of homes
12	treated did not meet its goals for 2017 and 2018 ("shortfall"). PG&E is
13	currently on track to meet its 2019 homes treated goal.
14	PG&E's 2017 shortfall is immaterial because PG&E achieved almost
15	97 percent of its stated goal. Nevertheless, the variance was due to a
16	slow ramp-up as contractors transitioned to implement the new ESA
17	rules authorized in D.16-11-022.15
18	PG&E's 2018 shortfall was mainly due to the implementation of a
19	new program database. There were several challenges to
20	implementation which included: user set up, data capture, data
21	migration, staff and contractor training, and modification of existing
22	reporting processes.

15 D.16-11-022.

PG&E Mid-Cycle AL 3990-G/5329-E (July 16, 2018), 3990-G-A/5329-E-A (September 14, 2018), and 3990-G-B/5329-E-B (October 8, 2018). D.17-12-009 required the IOUs to file these Mid-Cycle ALs to: adjust energy savings targets; propose, retire and refine new measures; update penetration goals; update cost effectiveness test results; describe expanded water leveraging plans; describe tribal penetration and consultation plans; describe CSD coordination; propose edits to the Statewide ESA Policy and Procedures Manual; request budget for the Statewide End-Use Load Profile vendor and internal IT start-up costs; describe California LifeLine data sharing plans; discuss the merit of adding common area meters of deed-restricted multi-family properties to the CARE rate; address the necessity of changing the CARE GTSR; propose modifications to authorized budgets; and change the ESA electric/gas revenue allocation.

¹⁴ NSDL, partially approving PG&E Mid-Cycle AL 3990-G/5329-E, 3990-G-A/5329-E-A, and 3990-G-B/5329-E-B, January 4, 2019.

1	To address the cycle shortfall before the end of 2020, PG&E
2	continues to address and make updates to the following:
3	 Identify and implement key improvements to the program database
4	system to influence production and streamline processes;
5	 Expand the ESA workforce by increasing ESA contractor
6	headcount;
7	Offer additional training classes for new hires to perform work in the
8	field in a safe and timely manner; and
9	Update analysis tools and reporting to monitor production data more
10	closely to track performance progress against forecasts.
11	Energy Savings
12	PG&E's therm savings realized in 2017 and 2018 did not meet the
13	target set in D.16-11-022. ¹⁶ In its Mid-Cycle AL, PG&E filed new
14	energy savings forecasts for 2019 and 2020 based on updated savings
15	values from the preliminary results of the 2015-2017 ESA Impact
16	Evaluation. ¹⁷ However, D.16-11-022 only authorized Energy Division to
17	adjust the energy savings targets by 5 percent. ¹⁸ Accordingly, Energy
18	Division increased PG&E's previously adopted annual electric energy
19	savings targets by 5 percent and decreased gas savings by 5 percent. ¹⁹
20	PG&E does not anticipate making up this difference in 2019 or 2020, as
21	the therm savings used to calculate and report current ESA impacts are
22	much lower than previous savings, as described in Section B.2.a. The
23	therm savings currently realized are lower than the savings from the
24	previous 2011 ESA Impact Evaluation that were used to forecast
25	savings for PG&E's 2015-2017 ESA Program Application, and are much
26	lower than the 2015-2017 ESA Impact Evaluation savings, which were
27	used to update the 2019-2020 ESA targets in its MCAL. These

16 D.16-11-022, OP 4.

18 D.16-11-022, OP 5.

¹⁷ PG&E Mid-Cycle AL 3990-G-A/5329-E-A (Supplemental), filed September 14, 2018, p. 6.

¹⁹ NSDL, partially approving PG&E Mid-Cycle AL 3990-G/5329-E, 3990-G-A/5329-E-A, and 3990-G-B/5329-E-B, January 4, 2019, Table 1, p. 1.

1		markedly decreased energy savings are also seen in the energy savings
2		projected for the portfolio proposed in this application.
3	3.	Looking Forward: [WITNESS: LEIVA JUNGBLUTH] Summarize:
4		(a) the significant need ²⁰ (deeper energy savings, treatment goals, etc.)
5		for low-income energy efficiency services beyond 2020 in your service
6		territory, taking into consideration both the cost-effectiveness of the
7		services and the policy of reducing the hardships facing low-income
8		households, and (b) your overarching proposed strategy given the
9		historic and projected accomplishments, the remaining opportunity
10		areas for addressing a significant need, and (c) the appropriate Program
11		design and structure to effectively provide services and comply with
12		statute. (More detail is required later in the guidance.)
13		a. The significant need (deeper energy savings, treatment goals, etc.)
14		for low-income energy efficiency services beyond 2020 in your
15		service territory, taking into consideration both the cost-
16		effectiveness of the services and the policy of reducing the
17		hardships facing low-income households.
18		PG&E's data analysis shows that there is a significant need for
19		income-qualified EE services beyond 2020 for CARE customers
20		who (1) have not been treated by ESA or (2) would miss out on
21		getting treated if the program did not exist. ²¹ PG&E's
22		newly-designed ESA Plus Program aims to more effectively impact
23		household hardship by (1) identifying certain conditions of hardship,
24		(2) better aligning measures to address those conditions, and
25		(3) more precisely targeting the individual households that could
26		benefit from ESA services.
27		As shown in Table I-4 below, at the end of June 2019, out of the
28		approximate 1,311,000 individually-metered PG&E CARE
29		customers, about 833,000 (64 percent) of CARE customers were
30		not treated by ESA. Based on their CARE-enrolled status, PG&E

²⁰ Section 2790(a) states that the Commission is to consider cost effectiveness of services and the policy of reducing the hardships facing low-income households when determining "significant need."

²¹ Table I-4 below, and CARE Chapter II, Section B.3.

assumes this population is eligible for ESA. PG&E intends to
primarily target this population to overcome any barriers to servicing
these households. For example, under the new ESA Program
design, PG&E would prioritize the longer tenured CARE customers
for personalized, relevant outreach using custom energy reports
created from their load disaggregated profile. (See Section B.2.L.
Load Disaggregation Project).

TABLE I-4CARE CUSTOMERS NOT TREATED BY ESADATA AS OF JULY 1, 2018 – JUNE 30, 2019

Years on CARE	Non-ESA Participants
< 1 Year	195,783
1	132,824
2	95,964
3	72,908
4	65,228
5	44,317
6	36,570
7	36,964
8	28,297
9	29,939
10	18,660
11	12,353
12	8,280
13	11,600
14	7,775
15	7,766
16	9,723
17	17,938
18	1,415
Total	833,604

8 As part of PG&E's new ESA Plus Program design, PG&E is	also
9 proposing a pilot for customers enrolled in CARE for 10 or more	1
10 years must agree to receive ESA treatment or provide a valid	
11 reason for not participating. ²² PG&E plans to contact the custo	mer
12 multiple times. If the customer does not respond, the customer	risks
13 removal from the CARE Program. PG&E proposes to pilot this	

²² Similar to High-Use Post-Enrollment Verification requirements, valid reasons for not participating in ESA could include: landlord refusal, newly-constructed or renovated home, previously treated home under a different customer name.

proposal with a test group of customers not to exceed 10,000 to assess the impact on CARE attrition, as well as the cost associated with communications and outreach. The goal is to get long-term CARE discount recipients participating in ESA to maximize the EE of their homes. This pilot is discussed in Section D.10.c.

22 23

24

Looking at the forecast for new CARE customers in the CARE Chapter II, Section B.3., the expectation for newly-enrolled CARE customers on an annual basis is estimated at 255,000. These new CARE customers should be targeted for participation in ESA Plus services.

11 There is still significant need for low income energy efficiency services post-2020, and PG&E's new proposed program design will 12 include new resource and non-resource measures. These new 13 measures are expected to allow the program to treat households 14 where specific hardship situations exist and provide further relief 15 while keeping cost effectiveness in check. The new measures go 16 through evaluation as part of the ESA Cost Effectiveness Test, 17 which is performed on the entire portfolio to ensure overall costs 18 19 remain reasonable. The proposed ESA design can help improve customers' EE and in-home environment, while working towards 20 21 California's environmental goals.

> b. Your overarching proposed strategy given the historic and projected accomplishments, the remaining opportunity areas for addressing a significant need.

PG&E's overarching proposed strategy for the next program 25 26 cycle considers (1) the opportunity for first time treatments in 27 relation to PG&E's progress in meeting the 2020 homes treated goal; and (2) the hardship or need states of PG&E's low-income 28 29 customer population, who continues to struggle with affordability of 30 energy bills. To that end, PG&E's ESA Plus Program proposes to (1) overcome barriers to treatment for those existing and 31 32 newly-enrolled CARE customers, and (2) increase customers' energy affordability while reducing hardship with more customized 33

I-12

measures and complete solutions based on their need state and
 load profile.

The first part of PG&E's overarching proposed strategy is to 3 target CARE customers who have not participated and attempt to 4 5 overcome the barriers to their participation. The reasons for non-participation are summarized in Table I-5 below, which shows 6 data from the 2018 ESA Annual Report. Most of the untreated 7 8 households are classified as unwilling or unavailable. PG&E will propose new ways to address these barriers in the Program Design, 9 Section D. 10

TABLE I-5 ESA HOMES UNWILLING/UNABLE TO PARTICIPATE PROGRAM YEAR 2018

		ESA Program

Households that did not qualify or declined to participate at the time of the physical home assessment are not included.

The second part of PG&E's new program strategy identifies 1 customers who have significant needs or hardships and provides 2 them with both standard EE measures and more specific measures 3 aimed at addressing their hardship or need state. It will not matter if 4 5 these customers had been previously treated by ESA since there will be new measures available to them that provide 6 additional benefits. 7 8 PG&E reviewed available data in customer records from July 1,

2018 through June 30, 2019 and determined there were five need
states indicative of hardship. PG&E then identified where ESA
measures or services could contribute to reducing hardship.
See Table I-6.

TABLE I-6 PG&E NEED STATES

Line No.		High Usage	Medical Baseline	Disconnections	Disadvantaged Communities (DAC)/ Tribal/ Rural	Wildfire Threat
1	Problem	Level of usage incurs surcharge	Device or condition requires extra energy	Payments are missed and power is turned off	Environmental conditions impact energy use	Power shut-off is likely
2	Possible Solution Measures	Additional enclosure measures to reduce use, referral to solar program	Additional Heating, Ventilation and Air Conditioning (HVAC) measures to reduce hardship, possible air purifier	Education on tools to help control use/cost and payment reminders	Increase in home repair to allow for more energy efficient measure installation	Cold Storage Unit for longer duration
3	Customer Counts ^(a)	48,000	88,000	55,000	697,000	67,000
(a) Approximate, as of June 30, 2019.						

13 For the identified need state of high usage, HVAC tends to be

14 15 the primary driver of energy use and more intensive enclosure

measures may help reduce HVAC needs. However, in some

circumstances, the best solution may be a referral to a solar 1 2 program for low-income customers to reduce the utility bill and avoid the high usage surcharge on the bill. 3 There are two solar programs available. They are: 4 5 Single-Family Affordable Single Homes (SASH) and Disadvantaged Communities Single-Family Affordable Single Homes (DAC-SASH). 6 A customer on the Medical Baseline Program may have a 7 8 medical condition that requires equipment or needs device(s) that use extra energy. For certain cooling requirements, there may be 9 HVAC options to assist in reducing energy use or providing health 10 11 and comfort benefits. In other cases, in-home appliances like air purifiers could help improve air quality and provide NEBs. 12 A customer who has experienced energy utility disconnections 13 may need education or access to tools to assist with energy 14 management to lower their bill. 15 A customer residing in a geographic area designated as a DAC, 16 Tribal, or Rural community may need more home repair services 17 before EE products may be installed. 18 19 And lastly, a customer living in a high wildfire threat area, especially those with medical and/or functional needs may benefit 20 21 from a cold storage unit to help keep food items or medication from spoiling. 22 c. The appropriate program design and structure to effectively provide 23 services and comply with statute. 24 For PG&E, the appropriate design and structure to effectively 25 26 provide services and comply with statute is one that builds on past 27 successes and modifies the rules of operation to more effectively address the goals of decreasing energy consumption and reducing 28 29 household hardship. Beginning in August 2018, PG&E dedicated 30 resources to assessing opportunities for an appropriate program design by holding discussions with numerous stakeholders 31

1	(including contractors) and soliciting comments and feedback about					
2	PG&E's current ESA Program and changes for the future. ²³					
3	In addition to stakeholder meetings, PG&E conducted					
4	ethnographic research with ESA customers in their homes,					
5	benchmarked with other utilities across the United States (U.S.), and					
6	collaborated with the other California IOUs.					
7	Based on PG&E's analysis and discussions, the key themes					
8	influencing changes to the program design were:					
9	1) Increasing the eligible customer base;					
10	2) Targeting and treating customers with the greatest need;					
11	3) Providing deeper measures for targeted households to realize					
12	greater savings; and					
13	4) Testing the use of incentives or rewards for increased					
14	customer engagement.					
15	PG&E used these four themes to help develop the new design					
16	for submission in this application. The changes proposed for the					
17	new design consist of:					
18	1) Overcoming trust issues by partnering ESA more closely with					
19	the CARE Program in ways not done in previous efforts. This					
20	would make ESA the next step in the CARE customer's energy					
21	journey with PG&E					
22	2) Easing enrollment requirements by allowing self-certification as					
23	CARE for the basic ESA Program;					
24	3) Removing the property owner approval requirement for					
25	installation of simple measures (e.g., LED A-lamps and					
26	power strips);					
27	4) Focusing outreach on those who have not participated in ESA					
28	and newly-enrolled CARE customers;					
29	5) Targeting low-income, high usage customers to help achieve					
30	greater savings potential;					
31	6) Offering unique measures for customer groups that have the					
32	greatest need for hardship reduction; and					

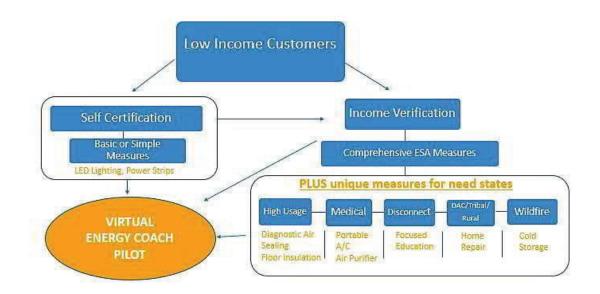

²³ See Appendix A for list of stakeholders.

1	7) Producing load disaggregation profiles that include customized
2	solutions around energy, such as rate plans, other savings
3	programs, behavioral tips, and EE measures.
4	PG&E recognizes there is opportunity for energy and bill
5	savings if customers more fully understand the tools and programs
6	available to them to help make their home more energy efficient.
7	Customers also need education and encouragement to adjust their
8	usage behavior. Therefore, PG&E is proposing a "virtual energy
9	coach" pilot to test customized energy management solutions
10	delivered with consistent and frequent communications to help
11	customers make the appropriate decisions about their own EE.24
12	B. ESA Program Proposal Summary
13	In the ESA Proposal Summary section of the application include:
14	1. Proposal Summary: Provide a concise description of the proposed
15	ESA Program, not to extend beyond 2026, including a brief
16	description of:
17	A concise description of the proposed ESA Plus Program is shown
18	in the Figure I-1.

_

²⁴ Attachment A, Virtual Energy Coach Pilot Implementation Plan.

FIGURE I-1 CONCISE DESCRIPTION OF PG&E'S PROPOSED ESA PLUS PROGRAM FOR PY 2021-2026

4	Priof Description:
1	Brief Description:
2	a. New program strategy (e.g., deeper energy savings and
3	reduced hardships);
4	The new program strategy proposes the following to deliver on
5	both energy savings and reduced hardships in the most
6	cost-effective ways:
7	1) Maximize participation for homes previously not treated. It is
8	presumed a non-treated home is likely to be less efficient and
9	poses greater energy savings opportunities;
10	2) A focused effort to reach and treat high energy usage
11	households, assuming a high usage household has greater
12	savings potential;
13	3) Needs-based approach to customer segmentation to identify
14	those with the greatest hardship and offer an extended number
15	of unique measures that address the specific needs states; and
16	4) Test a "virtual energy coach" where customized energy
17	management solutions are delivered with consistent and
18	frequent communications with the intent to help customers
19	improve their household EE and ease their burden.

1	b. Ne	ew program goals and metrics for evaluating success;
2		Program goals and metrics for evaluating success should center
3	ar	ound how well the ESA Program is delivering energy savings and
4	re	ducing hardship for those with the greatest need in the most cost
5	ef	ective way. Details can be found in Chapter IV Table A-5
6	Po	ortfolio Goals and Target Populations. This table shows Savings,
7	Ha	ardship Reduction, Resource and Non-Resource Measures, and
8	Pa	articipation Goals by Targeted Populations.
9	с. А	description of the participants receiving services due to their
10	sig	gnificant need, and;
11		As listed in Table I-6 above, the participants receiving services
12	du	e to their significant need are comprised of five groups:
13	1)	High Usage: CARE customers whose electricity usage exceeds
14		400 percent of baseline and have received a High Usage
15		Surcharge on their bill, or a CARE customer who has gas usage
16		exceeding 300 percent in any one month;
17	2)	Medical Baseline: Customers with a medical condition that
18		requires device(s) using extra energy. These devices are
19		validated by a doctor and typically increase energy usage;
20	3)	Disconnections: Customers who, despite receiving the CARE
21		discount, continue to have difficulty paying their energy utility bill
22		and have had their service turned off for non-payment within the
23		past 12 months;
24	4)	Geographic Areas: Customers who reside in areas such as
25		Disadvantaged, Tribal, and Rural communities. It is anticipated
26		these households may need more home repair before certain
27		EE measures can be installed; and
28	5)	High Wildfire Threat Zone: Customers residing in areas defined
29		as extreme danger zones $^{f 25}$ and are most likely to be turned off
30		in the event of high fire danger.
31		It is possible that a customer may fall into more than one of the
32	fi∨	e need states. PG&E would classify that customer as having the

²⁵ CPUC Fire Threat maps available at: <u>https://www.cpuc.ca.gov/FireThreatMaps/</u>.

1		greatest need and PG&E would offer the customer the opportunity
2		to receive the greatest number of services.
3	d.	Proposed changes to the ESA Program design and delivery.
4		PG&E's proposed changes to the ESA Program design and
5		delivery include:
6		1) Self-certification of income to enroll in the ESA Program for
7		basic measures only, if the customer is already enrolled
8		in CARE;
9		2) Simultaneous enrollment of a targeted, interested ESA
10		customer for ESA and CARE;
11		3) Redefine "getting started" as a free home assessment, energy
12		education, and simple measure installation. This is the Basic
13		level of ESA;
14		4) Remove Property Owner Authorization (POA) requirement for
15		"getting started" in the ESA Program;
16		5) Revise the ESA home assessment form to a more whole home
17		approach that includes the additional measures and services
18		available for a customer who is within a particular need state.
19		This is the Comprehensive Plus level of ESA;
20		6) Update the ESA Workforce Education & Training (WE&T)
21		program administered by PG&E's Technical Specialists for ESA
22		contractors with requirements for new measures, customer
23		need states and customer education;
24		7) Update contractor job skills to complete the new assessment
25		form with need states and perform installation of simple
26		measures during the first visit;
27		8) Improve contractor efficiency, such as bundling contractor visits
28		with crews who can perform as much of the work as possible in
29		one visit;
30		9) Produce quarterly load disaggregation usage profiles with
31		customized energy savings solutions for every CARE customer.
32		The profile would be available for contractors and customers;
33		10) Include the offer of a "virtual energy coach" during the Energy
34		Education session with the customer; and

1		11) Pilot the virtual energy coach for 24 months to
2		determine impact. ²⁶
3	2.	Describe most recent available results from the 2015-17 Impact
4		Evaluation; 2019 Potential and Goals Study; 2016 LINA; preliminary
5		2019 LINA results; 2019 Non Energy Benefits Study; recommendations
6		of the LIOB and the Cost Effectiveness, Mid-Cycle and Multi-family
7		Working Groups; historical tracking efforts (such as the IOUs' monthly
8		and annual reports); and general observations about challenges and
9		successes in meeting ESA Program goals. Explain how these results
10		and observations led to the changes proposed. [WITNESS: O'DRAIN]
11		PG&E is an active participant in ESA studies and ESA working
12		groups. As part of the most recent ESA studies and working groups,
13		PG&E highlights the available results below.
14		a. 2015-17 Impact Evaluation: Results, Observations, and Changes
15		Proposed
16		In 2017, under the direction of the Energy Division, the IOUs
17		began a statewide impact evaluation of the 2015-2017 ESA
18		Program Years. Det Norske Veritas – Germanischer Lloyd
19		(DNV-GL) conducted the Study, which was completed in 2019. ²⁷
20		This evaluation used a billing analysis approach to assess ESA
21		Program impacts for the 2015-2017 PYs and followed standard
22		evaluation protocols while maintaining the fundamental requirement
23		of billing analysis: weather normalization and a comparison group to
24		account for non-program related change over time. The evaluation
25		was divided into two phases. Phase 1 used program data from
26		2014-2016. The Phase 1 results established the modeling
27		framework and provided results for use in the IOU's ESA mid-cycle
28		program update AL filings submitted in the summer of 2018 (and
29		discussed in Section A.2). Phase 2 incorporated the first six months
30		of 2017 program data into the model and refined the modeling

²⁶ See Attachment A, Virtual Energy Coach Pilot Implementation Plan.

²⁷ DNV-GL. ESA Program Impact Evaluation PY 2015-2017 Phase 2, Final Results. April 26, 2019. See: <u>https://pda.energydataweb.com/#!/documents/2173/view</u>.

approach. Phase 2 results are used for determining energy savings in this application.

The Phase 2 evaluation produced results at the household level 3 across the years evaluated but did not allocate savings at the 4 5 measure level. The ex-ante savings estimates, based on prior 2011 impact evaluation results from the 2009-2011 cycle, were higher 6 than the evaluated (ex-post) savings for all four IOUs. PG&E's 7 8 evaluated electric savings ranged from 90 kWh to 149 kWh per household (a 24-38 percent savings per household as a percentage 9 of ex-ante estimates). PG&E's evaluated gas savings ranged from 10 11 7 therms to 9 therms per household (a 28-39 percent savings per household as a percentage of ex-ante estimates). 12

1 2

The reported energy savings consisted of positive energy 13 savings, as well as negative energy savings from program 14 treatments. The impact evaluation did not attribute causes for the 15 specific negative values realized, and some of the measure results 16 were not clear or logical: for example, attributing negative savings 17 values for duct repair measures that do not draw load. However, 18 19 other negative energy savings may result from ESA equipment repairs leading participating households to use services that they 20 21 were not using before, thus generating more energy usage. Negative savings resulting from equipment repairs may also 22 23 promote and produce favorable HCS benefits for the program participants. 24

Key recommendations in this report were for the IOUs to refine 25 26 program planning assumptions and improve program tracking data. 27 The report recommended that ESA Program planners fully account for potential consumption-increase assumptions for measures that 28 29 are installed for non-energy related benefits. For example, flagging 30 fixes to heating or cooling units where the unit was not working or not used prior to the visit would segregate off installations that 31 32 increased consumption and improve overall program savings projections. ESA Program administrators were encouraged to use 33 standardized data fields such that information readily rolls up to 34

1program totals and matches the values reported to the CPUC and to2better align program data, definitions and requirements with billing3information. Because the evaluation methodology did not produce4consistent savings at the measure level, the evaluation5recommended that program administrators explore other statistical6methods to understand program savings in the next evaluation.

PG&E worked with the other IOUs to allocate savings at the 7 8 measure level as required for program reporting and planning. The lower realized savings affects PG&E's ability to meet 9 2017-2020 ESA Program savings targets (discussed previously in 10 11 Section A.2). It also makes it more challenging to design and propose a cost-effective program (discussed in Section D.6). PG&E 12 plans to explore other protocol-compliant evaluation methods that 13 may provide more consistent results at the measure and household 14 level to use for the next ESA Impact Evaluation. 15

Both the Impact Evaluation and the Potential and Goals (P&G) 16 Study (discussed below) show decreasing opportunities for energy 17 savings. PG&E's proposed ESA Program addresses this challenge 18 19 by changing the balance of benefits between energy savings and hardship reduction (other than financial). The program proposed in 20 21 this application explores new opportunities to achieve energy savings in addition to providing valuable NEBs for participating 22 customers. 23

> b. 2019 Potential and Goals Study Results, Observations, and Changes Proposed

24

25

For the first time, low-income energy potential was included in the 2019 P&G Study conducted by Navigant.²⁸ Aligning with the decreased ESA energy savings identified through the Impact Evaluation, the 2019 P&G study identified fairly low ESA savings potential. PG&E believes the estimates of energy savings potential identified for the low-income sector in the 2019 P&G Study may not

²⁸ Navigant. 2019 Energy Efficiency P&G Study, Final Public Report. Prepared for CPUC. July 1, 2019. Adopted August 23, 2019. (See: <u>https://www.cpuc.ca.gov/General.aspx?id=6442461220</u>.)

1	accurately reflect the ESA Program's potential given some of the	
2	inputs and calculations used do not apply to the low-income market	
3	or policies and methodologies required by the CPUC for	
4	delivering ESA.	
5	However, since PG&E is proposing changes to ESA Program	
6	design, delivery and measures offered, savings potential forecasted	ł
7	in the 2019 Navigant P&G Study may not be relevant for 2021-2026	3
8	ESA Plus planning. PG&E looks forward to working with Energy	
9	Division's research Consultant further on low-income specific issue	S
10	in the next P&G study.	
11	c. 2016 and 2019 LINA Studies: Results, Observations, and Changes	3
12	Proposed	
13	Assembly Bill (AB) 327 (incorporated into Section 382(d))	
14	mandated the completion of a LINA Study every three years. ²⁹ Th	е
15	purpose of the study is to broadly assess: the effectiveness of ESA	
16	and CARE measures and services, the specific needs of low-incom	е
17	customers, and how CARE and ESA Programs can better meet	
18	customer needs. ³⁰	
19	The LINA studies have been designed to accommodate	
20	changing markets and implementation strategies by allowing each	
21	study to examine low-income needs and key research questions	
22	aligned with Section 382 that are both timely and relevant to	
23	evolving program and policy needs.	
24	d. 2016 LINA Study: Results, Observations, and Changes Proposed	
25	The 2016 LINA study was completed in December 2016. This	
26	Study, conducted by Evergreen Economics, included several key	
27	objectives associated with understanding customers' energy burder	٦
28	and insecurity, identifying beneficial EE measures, and assessing	
29	potential participation barriers including the need to provide income	
30	documentation.	

29 California (CA) Pub. Util. Code Section 382(d).

³⁰ CA Pub. Util. Code Section 382(d).

1	The 2016 Study assessed energy burden using the common
2	metric which calculates burden as a ratio of household income to
3	energy costs, as well as several additional metrics. These included:
4	1) Modified Energy Burden: Includes estimates of non-cash
5	government assistance in conjunction with reported
6	household income;
7	2) Energy Insecurity: Reflecting customers' self-reported
8	challenges paying energy bills; and
9	3) Material Hardship: Which reflects overall household financial
10	challenges (independent of the energy bill).
11	As measured by the ratio of reported household income to
12	energy bill, the 2016 Study found that California's low-income
13	customers' mean average burden (total energy bills/income) is
14	5.6 percent, with a median burden of 3.9 percent. These results are
15	low compared to energy burden across the U.S. ³¹
16	The research also found different levels of burden across and
17	between various subgroups of the low-income population depending
18	on the metric and calculation used. For example, when several
19	non-cash benefits (housing, medical and food subsidies) are
20	considered with reported income, the energy burden for some
21	groups of low-income households, such as the very poor and
22	multi-family dwellers drops significantly, thus highlighting the role
23	other subsidies play in reducing energy burden.
24	The 2016 Study also found that households that consistently
25	engage in low cost energy saving practices are less likely to be
26	delinquent in payments or to receive disconnection notices. This
27	suggests there is opportunity for more educational and behavioral
28	interventions to assist customers in reducing their energy burden,
29	results PG&E considered in designing its 2021-2026
30	program proposals.

³¹ Ariel Drehobl and Lauren Ross. Lifting the High Energy Burden in America's Largest Cities: How Energy Efficiency Can Improve Low-income and Underserved Communities. ACEEE and Energy Efficiency for All. April 2016. Figures 1, 4, 5, and E7 all show California cities have the lowest average median energy burden on average and by sectors.

The 2016 Study results broadened PG&E's understanding of 1 hardship and burden among low-income households. PG&E's 2 2021-2026 ESA Program proposes customized approaches to meet 3 unique and unmet needs of the low-income customers, as described 4 5 in this application. e. 2019 LINA Study: Results, Observations, and Changes Proposed 6 The 2019 LINA study will be the fourth study to be completed. 7 8 Research Into Action (now merged with Opinion Dynamics) was selected and began to conduct research in January 2018. The draft 9 report was completed in October 2019, and a public workshop has 10 11 been scheduled for November 14, 2019 to review the results and solicit stakeholder input. The 2019 LINA study will be completed in 12 December 2019. Given the potential value of the results for the 13 design and planning of the new 2021-2026 CARE and ESA 14 Programs, PG&E reviewed preliminary results to provide timely 15 results-based suggestions regarding program design and strategy. 16 The preliminary 2019 Study offered some insights on conditions, 17 processes, and measures that are relevant to ESA Program NEBs. 18 19 For example, the preliminary 2019 Study found that households that received (or recall receiving) HCS advice from ESA contractors 20 reported having received relatively more benefits with respect to 21 HCS from ESA Programs.³² This finding was consistent with the 22 in-home customer interviews done by PG&E.³³ It also appears 23 those who receive these targeted measures (e.g., heating and 24 cooling measures) tend to have higher energy burden, greater 25 26 health hardships, and lower incomes than those who do not participate in ESA.34 27 PG&E is using these preliminary results and insights on 28 29 hardship, energy burden, and customer values to help design the

³² Opinion Dynamics. 2019 CA Low-income Needs Assessment, Draft Report, Vol. 1 (October 2019), Section 6.2.

³³ Travis Research. PG&E ESA Report of In-Home Customer Interviews, October 2018.

³⁴ Opinion Dynamics. 2019 CA Low-income Needs Assessment, Draft Report, Vol. 1 (October 2019), Section 6.2.

new customized program delivery strategies proposed in this 1 application that better address customer need states and barriers 2 to participation. 3 f. ESA Non-Energy Benefits Study: Results, Observations, and 4 5 Changes Proposed Negative energy/bill savings in the ESA Program are offset with 6 an increase in savings from other areas of the customers' total 7 8 household expense budget and by greater understanding of energy management or usage behaviors. This effect of the ESA Program 9 has been recognized since 2002, when guantified NEBs were first 10 included in ESA Program cost effectiveness testing.³⁵ The purpose 11 of this statewide study was to: update the current NEB estimates 12 used in ESA cost effectiveness tests; recommend new NEBs 13 appropriate for ESA and missing from the current framework; and 14 design workbook of spreadsheets to calculate NEBs. 15 The scope of work for the ESA 2019 NEBs Update Study 16 (NEBs 2.0) was developed in consultation with the ESA Cost 17 Effectiveness Working Group in 2017, as directed in D.16-11-022.36 18 Skumatz Economic Research Associates, Inc. (SERA) was chosen 19 as the study contractor. The draft report was posted on July 26, 20 21 2019 and a public webinar was held on August 2, 2019 to share the draft study findings, recommendations with stakeholders, and to 22 gather feedback on the results. The Final NEBs 2.0 Study was 23 completed on August 30, 2019.37 24 The study provided modifications to the calculations of the 25 26 existing ESA NEBs. These modifications include input values taken 27 from secondary research (e.g., an estimated percentage of a reduced hardship or cost which the program is expected to provide) 28

³⁵ D.02-08-034 adopted cost effectiveness tests for LIEE programs that included non-energy benefits weighted from the participant and no-participant perspectives.

³⁶ D.16-11-022, Section 3.10.2.

³⁷ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019. (See: <u>https://pda.energydataweb.com/#!/documents/2295/view.</u>)

and, in some cases, modified calculation structure (e.g., the addition 1 of new input values not previously used).³⁸ In doing this work, the 2 study exposed the limitations of secondary research to provide 3 updated values relevant to the ESA Program. In many cases, the 4 most recent estimated values found were from studies over ten 5 vears old, and in some cases 15 years old.³⁹ Furthermore, many of 6 these studies involved programs in states with different climates 7 8 (e.g., Wisconsin, Connecticut) or different measure mixes that diminished their relevancy for the ESA Program. 9 The NEBs 2.0 Study added 24 new NEBs into an updated 10 11 NEBs 2.0 model, and eliminated six NEBs from the 2001 NEBs 1.0 model.⁴⁰ The updated NEB 2.0 model discussed in the NEBs 12 Study consists of 46 NEBs for consideration for IOU calculations. 13 The newly-created NEB concepts require additional research and 14 verification to ensure accuracy, reliability, and confidence. After 15 review, a total of 20 were accepted for inclusion in the NEB 2.0 16 model, as shown in Table I-7.41 The 20 accepted NEBs are 17 described in Table I-8.42 ESACET does not include Societal NEBs. 18 thus the societal water savings values were not included in PG&E's 19 2021-2026 ESACET. 20

³⁸ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019, Section 2.4, pp. 27-28. (See: <u>https://pda.energydataweb.com/#!/documents/2295/view</u>.)

³⁹ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019, Section 4.1, Figure 4.1, p. 62.

⁴¹ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019, Figure 2.12, pp. 45. (See: <u>https://pda.energydataweb.com/#!/documents/2295/view</u>.)

⁴² SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019, Figure 2.14, pp. 46-47. (See: <u>https://pda.energydataweb.com/#!/documents/2295/view.</u>)

TABLE I-7COUNT OF NEBS REVIEWED IN NEBS 2.0

Line No.	NEB Туре	Number of NEBs in Inventory	Included in ESA 2001 NEB 1.0 Model	Accepted for Inclusion in C/E 2001 NEB 1.0 Calculations	Included for Modeling in ESA NEB 2.0	Accepted for Inclusion in NEB 2.0
1	Utility NEBs	32	11	8	9	4
2	Societal NEBs	32	4	_	10	1
3	Participant NEBs	72	12	11	27	15
4	Total NEBs	136	27	19	46	20

TABLE I-8	NEBS 2.0 FOR INCLUSION IN ESACET
-----------	----------------------------------

Line. No.	NEB	Description
-	Utility NEBs	
2	Reduced Carrying Cost on Arrearages (Interest)	The utility and its ratepayers have lower revenue requirements because the carrying cost on arrearages is lower when the program achieves (bill) savings and improves bill payment behavior by participants.
б	Fewer Shutoffs	The utility and its ratepayers have lower revenue requirements because the carrying cost on arrearages is lower when the program achieves (bill) savings and payment behavior by participants.
4	Fewer Reconnects	The utility and its ratepayers have lower revenue requirements because the reconnection costs are lower when the program achieves (bill) savings and improves bill payment behavior by participants.
ъ	Fewer Notices	The utility and its ratepayers have lower revenue requirements because the cost of issuing notices is lower when the program achieves (bill) savings and improves bill payment behavior by participants.
9	Societal NEBs	
7	Water/Sewer Savings	Measures that are installed under the program save water and energy use. Society receives benefits from deferral of investment in water infrastructure.
8	Participant NEBs	
6	Water/Sewer Savings	Measures that are installed under the program save water and energy use. Participants receive direct savings in water and wastewater bills from the lower water use.
10	Fewer Calls to the Utility	Lower energy bills and associated improvements in bill payments lead to fewer calls to and from the utility on billing issues and lower time spent by participants on these calls, valued at participant value of time.
11	Property Value Benefits	Repairs to the home improve the property value for the household.
12	Fewer Fires	The program's onsite activities and older equipment replacement reduces the risk of fires and associated costs to participants including property damage, injury, and deaths.
13	Indoor Air Quality (Carbon Monoxide (CO)-Related)	The installation of CO monitors reduces the potential for sicknesses or deaths from CO poisonings to household members.
14	Health and Safety (H&S) Asthma Symptoms	The ESA Program installs measures that can improve indoor air quality by controlling the flow of outdoor allergens and particulate matter into the home, resulting in reduced incidences and occurrences of asthma symptoms and resulting out-of-pocket costs for households.
15	H&S Allergy Symptoms	The ESA Program installs measures that can improve indoor air quality by controlling the flow of outdoor allergens and particulate matter into the home, resulting in reduced incidences and occurrences of allergy symptoms and resulting out-of-pocket costs for households.
16	H&S Cold Symptoms	The ESA Program puts measures in place that helps reduce temperature, irritant and low humidity conditions that can increase cold and virus symptoms. Households experience fewer out-of-pocket costs from over-the-counter cold medications, prescriptions, and doctor visits related to colds.
17	H&S Hot Water Scalding	The thermostatic shower valves and water heater temperature checks provided by the program can prevent hot water scalding and reduce out-of-pocket medical costs to households from accidental tap water scalding by children and elderly residents.
18	Thermal Comfort	Program measures improve the conditioning of households and reduce drafts, leaks and improve resident thermal comfort. Residents receive and value benefits from the improved indoor environment from these changes.
19	Noise Internal	New equipment installed by the program may operate more quietly, reducing inside-generated noise. Residents receive and value benefits from the improved indoor environment from these changes.
20	Noise Extemal	Installation of shell / enclosure measures may reduce street noise experienced by residents. Residents receive and value benefits from the improved indoor environment from these changes.
21	Customer Operations and Maintenance	The program installs new measures that presumably have fewer repairs and residents have savings from lower out-of-pocket repair costs than they experienced with the replaced equipment.
22	Aesthetics/Appearance/Ability to Sell	The installation of new equipment provides benefits in equipment and the home looking cleaner, newer, and more fashionable. Residents receive and value benefits from the improved indoor environment from these changes.
23	Reduced Detergent Use	The program installs new high efficiency washers which, in addition to using less water (measured in another NEB), require less detergent per load. These are out-of-pocket savings for the household.

1	The study proposed a new method of allocating NEB results
2	across program measures using a set of factors that relate to how
3	the measures contribute to NEBs (e.g., energy savings,
4	expenditures, etc.). ⁴³ The new method improves the existing
5	allocation method of using energy savings as a basis for allocation
6	since the latter does not control for measures where the average
7	energy savings is not correlated with NEBs.
8	The study highlighted the need for additional work to improve
9	the reliability, validity, and relevance of the estimates and the
10	usability of the model.44 In particular, additional research was
11	recommended for all NEBs to strengthen the calculations and to
12	establish linkages to the ESA Program. ⁴⁵
13	IOUs used the current NEB model (NEB 1.0) with selected
14	updates from this NEBs 2.0 Study and additional updates from
15	utility-specific data in the ESACET in this application. Follow-up
16	research to adapt the NEB 2.0 Study's model for use will occur in
17	late 2019-2020.
18	A California specific NEBs study is proposed for the 2021-2026
19	cycle. (See Section D.10.c.) In addition to conducting California
20	specific primary research, this proposed NEBs 3.0 Study will
21	consider and address 2019 NEBs 2.0 Study recommendations.
22	The updated values from the NEBs 2.0 Study have a major
23	impact on the overall cost effectiveness of the ESA Program. With
24	cost effectiveness tied to energy savings and energy savings
25	decreasing, the expectation is that cost effectiveness of the ESA
26	Program will also decrease to unacceptable levels without NEBs

⁴³ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019, Figure ES.2, p. 2 and Section 3.2. (See: https://pda.energydataweb.com/#!/documents/2295/view.)

⁴⁴ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019, pp. 4-5. (See: <u>https://pda.energydataweb.com/#!/documents/2295/view</u>)

⁴⁵ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019, pp. 4-5. (See: <u>https://pda.energydataweb.com/#!/documents/2295/view</u>)

1		factored into the equation. This Study reexamines prior NEBs and
2		attempts to better define and quantify them. NEBs are becoming
3		more valuable to the ESA Program portfolio, and PG&E's program
4		portfolio balances energy savings measures with measures
5		providing HCS benefits.
6	g.	Recommendations of the LIOB: Results, Observations, and
7		Changes Proposed
8		The Low-Income Oversight Board (LIOB) ESA subcommittee
9		identified areas of primary focus to guide the drafting of ESA
10		post-2020 goals; these were discussed and affirmed by the LIOB at
11		the December 6, 2018 meeting and documented in an LIOB White
12		Paper, sent to the Commission on December 20, 2018. ⁴⁶ LIOB
13		recommendations include: stepping away from a "template-oriented
14		energy saving program effort" and developing a more flexible
15		"need-based" formula to maximize low-income energy program
16		efficiency opportunities that may also help customers with the
17		highest need in reducing or better managing their energy bills;
18		minimize disconnections and foster affordable energy rates enabled
19		by increased energy education and demand side management
20		technologies.47
21		PG&E's 2021-2026 program proposed in this application
22		addresses many of the LIOB's key initiatives: ⁴⁸
23		1) Identify and help low-income customers who are overburdened
24		by high energy bill costs.
25		PG&E identifies and targets customers with the greatest
26		needs using hardship indicators discussed in Section B. This
27		includes: customers that have never participated in ESA before,
28		customers with high energy usage, and customers with specific

⁴⁶ LIOB ESA Post-2020 Letter to Commissioner Rechtschaffen and Commission, with Draft White Paper Attachment. Sent December 20, 2018.

⁴⁷ LIOB ESA Post-2020 Letter to Commissioner Rechtschaffen and Commission, with Draft White Paper Attachment. Sent December 20, 2018.

⁴⁸ LIOB ESA Post-2020 Letter to Commissioner Rechtschaffen and Commission, with Draft White Paper Attachment. Sent December 20, 2018.

1		needs states. PG&E's proposed ESA Program design simplifies
2		eligibility and enrollment requirements to make it easier for
3		customers to participate, proposes new energy savings and
4		HCS safety measures, and a virtual energy coach pilot
5		delivering customized energy management solutions to help
6		customers improve their household energy efficiency and ease
7		their energy burden.
8	2)	Reduce Greenhouse Gas Emissions.
9		The ESA Program mandate is to increase EE opportunities
10		for low-income customers and provide HCS benefits. Although
11		greenhouse gas (GHG) reduction is not a primary ESA directive,
12		increased EE contributes to GHG reductions.
13	3)	Develop a "needs-based" approach to maximize low-income
14		energy program efficiency opportunities with customers
15		experiencing the greatest need.
16		PG&E's proposed ESA Plus prioritizes five groups of
17		customers based on their need states that may require
18		additional assistance. PG&E is also proposing a "virtual energy
19		coach" pilot to help customers reduce and better manage bills,
20		minimize disconnections, improve energy affordability.
21	4)	Determine who has not been served by ESA and how new
22		program designs and approaches could better reach them.
23		PG&E plans to target new CARE customers and CARE
24		customers that have not been previously treated by ESA.
25	5)	Identify more health, comfort, safety, and resilience objectives
26		and guidelines.
27		PG&E's proposals include both resource and non-resource
28		measures. Non-resource measures provide HCS benefits.
29		Updated NEBs from the 2019 NEBs Study increase the value of
30		non-resource measure benefits in the ESA portfolio, increasing
31		its overall cost-effectiveness.
32	6)	Introduce high-value energy saving measures.
33		PG&E has explored the addition of potential measures,
34		including changing criteria and climate zones on existing

1	measures. PG&E's proposed program portfolio adds m	easures
2	that have more potential for energy savings and cost	
3	effectiveness. For example, PG&E is adding pool pump	os and
4	removing the household minimum occupancy for second	d
5	refrigerators. In addition, PG&E is proposing floor insula	ation
6	and diagnostic air sealing as a new measure provided to	С
7	qualifying customers in the high usage needs state.	
8	(See Section C.3.).	
9	7) Low-income multi-family housing: innovation, holistic de	əsign.
10	PG&E proposes to issue an RFP for the administrat	ion of
11	ESA multi-family, and plans to solicit innovative proposa	als and
12	new perspectives. (See Section D.9.)	
13	8) Educate communities and building owners about energy	y use
14	and energy assistance programs available to them.	
15	PG&E proposes to request in its Multi-family Whole	Building
16	(MFWB) Program solicitation that bidders include in thei	ir
17	proposals how they will integrate offering existing dema	nd
18	response tools, technology or education to help multi-fa	mily
19	households shift load to off-peak times in their MFWB P	rogram.
20	(See Section D.9.c.i.)	
21	9) Encourage local workforce development opportunities the	hat
22	promote hiring from within local communities.	
23	ESA contracts encourage contractors to hire locally	and
24	require contractors to provide advance notice of job	
25	opportunities in local communities. Other workforce stra	ategies
26	are discussed in Section D.2.d.i.	
27	10) Streamline income eligibility and expand categorical en	rollment
28	through partnerships with other need-based state progra	ams.
29	Ensure income eligibility, especially for multi-family hous	sing—
30	which currently has separate regulations for common ar	rea and
31	in-unit programs, is simplified and aligned with other	
32	assistance programs.	
33	IOUs are proposing a new study to update Categori	cal
34	Eligible Programs. (See Section D.10.c.)	

1	11) Measures and policies that reduce utility costs.
2	PG&E's proposals include the cost-effective measures
3	providing energy savings and NEBs, and leveraging referrals
4	to programs providing smart technologies and solar.
5	(See Sections D.5 and D.6.)
6	12) Health, safety and comfort provisions (deliverables) within the
7	statute must be made more effective and clearer. Ambiguity
8	leaves unacceptable living and health conditions in place.
9	Create clear goals here to address deferred maintenance issues
10	through referrals, partnerships, cost-sharing, or other
11	mechanisms.
12	PG&E has included measures providing both resource and
13	non-resource benefits in its ESA portfolio, and describes its
14	household hardship indicator in Section C.1.
15	h. Working Groups:
16	D.16-11-022 re-convened the Cost Effectiveness and Mid-Cycle
17	Working Groups (MCWG) ⁴⁹ and convened a new Multi-family
18	Working Group. Working Group activity is summarized below.
19	i. Cost Effectiveness Working Group: Results, Observations, and
20	Changes Proposed
21	D.16-11-022 instructed the Cost Effectiveness Working Group
22	(CEWG) to reconvene and provide recommendations on remaining
23	ESA cost effectiveness issues required to inform the next program
24	cycle. ⁵⁰ The members participating in this Working Group included
25	representatives from the following organizations: CPUC Energy
26	Division, Public Advocates Office at the California Public Utilities
27	Commission (Cal Advocates), Natural Resources Defense Council
28	(NRDC), The Utility Reform Network, The East Los Angeles
29	Community Union (TELACU)/Association of California Community

The Cost Effectiveness and MCWGs were originally authorized by D.12-08-044 to make recommendations for refinements to improve, wherever possible, the design, administration, delivery and ultimate success of the ESA and CARE Programs.

D.16-11-022, OPs 54-57, and Section 3.10.

1	and Energy Services (ACCES)/Maravilla, Synergy Companies,
2	SCE, PG&E, SoCalGas, and SDG&E.
3	Cost effectiveness issues remaining to be addressed by the
4	CEWG included:
5	1) Identify measures to include/exclude in the adjusted
6	ESACET; ⁵¹
7	2) Determine how to exclude administrative costs and NEBs
8	associated with excluded measures from the adjusted ESACET
9	including program costs not tied to a specific measure;52
10	3) Determine how to allocate administrative costs and NEBs
11	across program measures; ⁵³
12	4) Determine how to incorporate revised NEB values into the
13	adjusted ESACET;54
14	5) Determine if and how to incorporate into the ESACET benefits
15	and costs for ESA investment in other programs such as
16	demand response; ⁵⁵ and
17	 Work with the IOUs who will be conducting a NEB study.⁵⁶
18	The CEWG met regularly in June 2018. Final recommendations
19	were submitted by e-mail to all parties on the Application 14-11-007,
20	et al. service list on June 13, 2018. The CEWG's recommendations
21	are summarized below: ⁵⁷
22	 Not to adopt the Adjusted ESACET, as it has minimal value
23	beyond the already adopted ESACET;
24	 Change the name of the Resource TRC test to the Resource
25	Test and excluding from it non-resource measures which
26	include those having less than 1 kWh or 1 therm of annual
27	energy savings;

- D.16-11-022, OPs 54, 56, and 57, and p. 219.
- D.16-11-022, OPs 54, 56, and 57, and p. 219.
- D.16-11-022, OPs 54, 56, and 57, and p. 219.
- D.16-11-022, OP 54, 56, and 57, and p. 219.
- D.16-11-022, OP 54, 56, and 57, and p. 219.
- D.16-11-022,OP 55, and p. 221.
- Recommendations of the ESA Program CEWG, June 1, 2018, p. 9.

1	Provide the results of the allocation exercise for NEBs and
2	administrative costs to the 2018 NEB study and that the study is
3	tasked with recommending an allocation method and the results
4	of this exercise will inform that effort;
5	• Not to include any potential net benefit for providing enrollment
6	leads to other programs in the cost effectiveness calculations at
7	this time; and
8	Continue the HCS Evaluation periodically as needed to inform
9	program planning and NEB updates. (The HCS Evaluation is
10	discussed in Section D.6.b.)
11	The CEWG also discussed and provided guidance for the NEB
12	Study (described above). The 2018 NEB study included the
13	following CEWG objectives: ⁵⁸
14	 Review and update the current set of NEBs;
15	Evaluate which NEBs can be estimated directly and which can
16	be a function of energy savings or an alternate adder;
17	 Review and assess the results of the HCS Evaluation;
18	 Recommend any missing NEBs or negative non-energy
19	impacts (NEI);
20	• Provide a set of calculations in a workbook that can replace the
21	current workbook used to calculate NEBs and be easily updated
22	in future program cycles;
23	 Include sensitivity analysis around the calculations;
24	Recommend an allocation method for NEBs and administrative
25	costs to the measure level; and
26	• Recommend an approach for updating NEBs in the future.
27	Finally, the CEWG recommended that membership and
28	participation protocols for the CEWG be reviewed and refined in the
29	event that future work is assigned to this group. ⁵⁹

Recommendations of the ESA Program CEWG, June 1, 2018, p. 9.

Recommendations of the ESA Program CEWG, June 1, 2018, p. 9.

1	j.	Mid-Cycle Working Group: Results, Observations, and
2		Changes Proposed
3		D.16-11-022 tasked the MCWG with four deliverables: ⁶⁰
4		1) Make recommendations for updates to the ESA Statewide
5		Policy and Procedure Manual, California Installation Standards
6		Manual, and monthly and annual reporting criteria to align it with
7		D.16-11-022;
8		2) Provide recommendations on the adoption of online data
9		reporting systems (ODRS) for the ESA Program to help the
10		IOUs and Commission better understand how these systems
11		collect and report workforce data. This assessment should help
12		determine the value of adopting ODRS for the ESA Program
13		into IOU operations, its cost benefits, and identify any
14		administrative burdens to implement by either contractor
15		or utility;
16		3) Make recommendations for the household retreatment
17		prioritization models, implementation and outreach strategies,
18		and other aspects of the ESA Program; and
19		4) Investigate and make recommendations on how the ESA
20		Program may be used to deploy tools to enable greater EE and
21		Demand Response participation by CARE and ESA participants
22		in recognition of the increased state goals detailed in SB 350.
23		MCWG member organizations were: CPUC Energy Division,
24		Cal Advocates, California Housing Partnership Corporation (CHPC),
25		SCE, PG&E, SoCalGas, SDG&E, Energy Efficiency Council,
26		TELACU, and Proteus.
27		The Working Group submitted initial recommendations on
28		April 3, 2017. A public webinar on updating the ESA manuals and
29		reporting criteria was held on January 31, 2018. The MCWG Interim
30		Report was submitted on March 19, 2018, providing the MCWG's
31		recommendations for updates to the ESA Statewide Policy and
32		Procedure Manual, California Installation Standards Manual, and

⁶⁰ D.16-11-022, OPs 67 and 137, and Section 3.13.2., p. 241.

1	monthly and annual reporting criteria to align it with Modified
2	Decision (Task A). These changes were adopted in Administrative
3	Law Judge Colbert's Ruling on May 8, 2018.
4	The MCWG filed its final recommendations on the remaining
5	deliverables (Tasks B-D) on June 29, 2018. These
6	recommendations are summarized below:
7	<u>Task B</u> : Based on the research conducted and MCWG
8	participant discussions, the MCWG does not recommend the
9	implementation of ODRS for the ESA Program for the reasons
10	identified above.
11	 <u>Task C</u>: MCWG participants updated their ESA household
12	retreatment prioritization models presented to the MCWG in
13	April 2017. Following presentation and review of these initial
14	proposals, the MCWG found that significant variations in
15	retreatment prioritization models relate to best practices within
16	each service territory, and the specific measures offered by
17	each utility. Rather than developing a new retreatment
18	prioritization model, there was consensus within the MCWG for
19	the utilities to continue to prioritize ESA retreatments following
20	their current models, document best practices and challenges,
21	and update their retreatment prioritization proposals as needed
22	in their Mid-Cycle Update ALs, due in July 2018.
23	<u>Task D</u> : MCWG participants reviewed current utility Demand
24	Response offerings, and discussed how to integrate these
25	offerings into the ESA Program. Parties were encouraged to
26	provide additional recommendations for best practices to enable
27	greater EE and Demand Response participation in response to
28	the IOU's July 2018 Mid Cycle Update ALs.
29	PG&E proposes a working group similar to the MCWG as part
30	of an ongoing process to address updates to the ESA Installation
31	Standards and Policies and Procedures Manuals, revise Monthly
32	and Annual ESA-CARE Reporting criteria, and discuss other
33	program modifications, adjustments, and technical issues

1		throughout the program cycle. This new working group is discussed
2		in Section E.4
	k.	
3	κ.	Multi-family Working Group: Results, Observations, and
4		Changes Proposed
5		The MFWG was established to support the integration of CAMs
6		for deed-restricted MF properties into the ESA Program and other
7		MF directives as specified in D.16-11-022, and modified by
8		D.17-12-009.61 PG&E participated in the MFWG throughout 2017
9		to date.
10		MFWG member organizations include: CPUC Energy Division,
11		Cal Advocates, SCE, PG&E, SoCalGas, SDG&E, CHPC, NRDC,
12		National Consumer Law Center, Community Housing Opportunities
13		Corporation, TELACU, and Proteus.
14		The MFWG detailed its 2018 activities in the MFWG 2018
15		Annual Report. ⁶²
16	Ι.	Load Disaggregation Project: Results, Observations, and
17		Changes Proposed
18		Per D.17-12-009, OP 94-98, a statewide load disaggregation
19		project began in 2019 ⁶³ . Phase one of the project included taking a
20		sample of CARE customers from each electric IOU and producing a
21		segmentation schema based on load profiles and Advanced
22		Metering Infrastructure (AMI) usage data.64 Each of the segments
23		should have a specific set of recommendations unique to the
24		disaggregated load profiles.
25		Recommendations will include EE measures, other program
26		participation, rate plans, and behavioral changes.
27		PG&E anticipates the IOUs will need to validate the schema,
28		solicit stakeholder comments, and provide feedback on the

⁶¹ D.16-11-022, OP 45 and Section 3.9.3. (p. 194), and D.17-12-009, OPs 41.a, 62, 63, 64, and (p. 187).

⁶² MFWG – 2018 Multi-family Working Group Annual Report (January 2019). Available at: <u>https://pda.energydataweb.com/#!/documents/2120/view</u>.

1	recommendations before assessing whether to continue with Phase
2	Two or to revise the Phase Two scope based on lessons learned
3	and usability of results from phase one.
4	Phase Two will continue the project with the following tasks and
5	is expected to be completed through 2020:
6	 Continue to produce load disaggregation profiles and
0 7	segmentation reports for remaining eligible CARE and ESA
	eligible customers. The frequency will be determined at the
8	
9	beginning of phase two;
10	 Discuss how to best incorporate results into marketing and
11	outreach plans;
12	Integrate the results into online platform(s) accessible by
13	customers and ESA contractors;
14	Augment the results with additional educational
15	recommendations for customers;
16	 Aggregate results into a format appropriate to provide to
17	potential DRAM bidders in 2019. However, due to unanticipated
18	delays with data processing requirements and data transfer, the
19	IOUs have submitted a Request for Extension to provide
20	aggregated results to DRAM bidders in 2020; 65 and
21	 Provide a final project report detailing overall results, lessons
22	learned, and recommendations for continued work.
23	While the results of the statewide program are still outstanding,
24	PG&E is proposing to extend and enhance the use of these load
25	profiles in a Pilot called virtual energy coach during the 2021-2026
26	program cycle with CARE and ESA customers. The Pilot will test
27	the impact of the personal profile information on driving energy
28	savings, residential rate selection, participation in other programs
29	and changes in behavior.
30	m. Programmable Communicating Thermostat (PCT)/Smart
31	Thermostat Time-of-Use (TOU) Pilot: Results, Observations, and
32	Changes Proposed

⁶⁵ Approval for Extension was granted October 29, 2019.

The PCT/Smart Thermostat TOU Pilot was required in 1 D.16-11-022 as modified by D.17-12-009,66 and will not be 2 completed until 2020. This Pilot utilizes treatment and control 3 groups to assess if PCTs are a valuable tool to help low-income 4 5 customers adjust to TOU rates. Both groups were moved onto the TOU rate in the beginning of 2019, and the treatment group 6 received a PCT and education on how to use it. 7 8 The first of three surveys was distributed in December 2018 and January 2019. This survey was intended to provide a baseline to 9 assess whether having a PCT changes the way that low-income 10 11 customers react to the TOU rates. Two additional surveys are anticipated. 12 Several issues created challenges for the Pilot: fewer customers 13 than anticipated were recruited to participate despite incentive 14 payments offered, and PCT equipment defects resulted in data 15 collection issues. 16 Initial results of the Pilot highlighted a few issues associated 17 with implementing smart technologies in the low-income customer 18 segment, including: 19 Customers were generally disinterested in the device 20 21 contributing to lower participation than anticipated; acceptance and satisfaction were found to be lower than expected; and 22 23 Low-income housing stock and equipment tend to be older than • those found in the general population, making installation 24 feasibility and device compatibility challenging. 25 26 These factors need to be taken into careful consideration for 27 future technology offerings. In addition, smart technologies have yet to prove they deliver 28 29 robust energy savings. As a result, PG&E is not proposing to add 30 any additional smart technology devices other than Smart Thermostats to the ESA portfolio at this time. (See Section D.6.d.i.) 31

⁶⁶ D.17-12-009 (Attachment 1 modifying D.16-11-022), OP 147.

1	n.	Historical tracking efforts (such as the IOUs' monthly and
2		annual reports)
3		PG&E worked with Energy Division and the MCWG to revise
4		monthly and annual reporting templates to better represent new
5		decision goals and compliance reporting requirements.
6	0.	General observations about challenges and successes in meeting
7		ESA Program goals
8		Successes and challenges meeting the 2020 and portfolio cycle
9		goals are described in Section A.2.
10	р.	CEC SB 350 Barriers Study
11		The California Energy Commission (CEC) completed the
12		Barriers Report required by SB 350 in 2016.67 This study identified
13		and discussed barriers limiting access to clean energy for
14		low-income customers, including structural barriers inherent to the
15		conditions of poverty in California and barriers stemming from policy
16		and program decisions. Structural barriers discussed included:
17		low home ownership rates; complex needs, ownership, and financial
18		arrangements for low-income multi-family housing; insufficient
19		access to capital; building age; and remote or underserved
20		communities. Policy and program barriers include: market delivery
21		methods; program integration; data limitations; and
22		unrecognized NEBs.
23		Many of the solutions identified in the study have already been
24		included in PG&E's ESA and CARE programs. For example, PG&E
25		currently coordinates with other programs providing services to
26		low-income customers to increase collaboration, standardization,
27		streamlining, integration, and co-funding opportunities with other
28		programs. PG&E works with the other IOUs to share best practices,
29		better align the ESA Program to make it easier for customers to
30		participate, and report metrics and goals in standardized,

⁶⁷ CEC. Low-Income Barriers Study, Part A: Overcoming Barriers to Energy Efficiency and Renewables for Low-Income Customers and Small Business Contracting Opportunities in Disadvantaged Communities. Final Report. December 2016. CEC-300-2016-009-CMF.

1	comparable reports. Together with the other IOUs, PG&E has
2	established common definitions of NEBs to include in ESA cost
3	effectiveness testing and developed standards to measure them.
4	PG&E has been working with CSD to leverage ESA with the Low
5	Income Home Energy Assistance Program (LIHEAP) and LIWP
6	programs throughout the current 2017-2020 cycle. PG&E continues
7	to leverage with water agencies in its service area to provide water
8	savings measures to income qualifying customers. These
9	successful strategies were refined and included in this application.
10	(See Sections B.2.a.; D.5.e.; D.5.f; E.4a.i.)
11	C. ESA Program Goals and Budgets [WITNESS: LEIVA JUNGBLUTH]
12	Goals are necessary to set expectations for the measurable and
13	meaningful benefits to the customer and society obtained from the ratepayer
14	funded ESA Program. In the ESA Program Goals section of the application,
15	describe the goals including a brief description of how they are achievable
16	and linked to the CPUC's 2019 Potential and Goals Study. At a minimum
17	your goals should include the following:
18	Depth of Energy Savings Goal: Propose two quantitative goals per
19	household; 1) average annual Resource ⁶⁸ measures energy savings per
20	household; and 2) another quantitative goal to reflect benefit to customer's
21	health, comfort, and safety resulting from Non-Resource measures. These
22	two goals aim to encourage deep energy savings per household through
23	Resource measures, while also encouraging the installation of
24	Non-Resource measures that promote health, comfort and safety. IOUs will
25	meet the two goals on average across the IOU's ESA portfolio of
26	households treated. On an individual basis, households may fall above or
27	below the Resources measure energy savings goals or the Non-Resource
28	quantitative goal. IOUs may desire to subdivide the two goals by housing

⁶⁸ The terms "Resource" and "Non-Resource" have a different meaning under income qualified ESA Program vs. the general Energy Efficiency programs, where in ESA, Resource references measures that are offered for the purpose of saving the customer energy, and Non-Resource references measures that are offered for purpose of reducing customer hardship by improving HCS.

1	type or by customer segment, for example by the Multi-family Sector, ⁶⁹
2	Disadvantaged Communities, 70 Tribal Communities, and Hard-to-Reach
3	customers.71
4	Before proposing two quantitative goals per household based on a
5	distinction of Resource Measures providing energy savings and
6	Non-Resource Measures providing HCS benefits, PG&E clarifies that
7	Resource Measures in some instances, can provide both energy savings
8	and HCS benefits. See Table I-9 below.

TABLE I-9 RESOURCE/NON-RESOURCE MEASURE ALIGNMENT WITH HCS BENEFITS

Line No.	Category	Energy Savings only	Energy and HCS Benefits	HCS Benefits only
1	Resource	Some Resource Measures such as LED lighting	Others, such as, water heater repair and replacement	N/A
2	Non-Resource	N/A	N/A	All Non-Resource measures fall here

Non-Resource Measures have clear HCS benefits. However, Resource 9 Measures, while installed for the purposes of energy savings, may also have 10 HCS benefits. This fact is taken into consideration with the NEBs Study. 11 which applies a dollar value to all benefits, regardless of the 12 Resource/Non-Resource designation for measures. 13 PG&E's proposal for goals consists of: (1) average annual energy 14 savings per household from Resource measures displayed as bill savings in 15 dollars, and (2) additional benefits to customers from the NEBs results, also 16 displayed in dollars. The NEBs results in this case would be the sum of 17 the current NEB values and would not include societal benefits. 18 These two monetary values work together to demonstrate how PG&E's 19 ESA Program encourages energy savings through resource measures, 20

⁶⁹ For the purposes of this application, consider a multi-family building has at a minimum five or more attached units.

⁷⁰ As designated by California Environmental Protection Agency using their CalEnviroScreen Tool.

⁷¹ For the application filing only use the definition of "Hard-to-Reach" found in D.18-05-041.

while also encouraging the installation of measures that promote HCS and 1 other NEBs. These two values can quantify both energy and NEBs that help 2 to reduce household hardship. 3 Based on the forecasted installation of measures submitted in this 4 5 application, Table I-10 provides an example of possible goals for (1) average annual Resource Measures energy savings per household and 6 (2) quantitative reflection of benefit to customer's HCS resulting from 7 Non-Resource Measures: 8

TABLE I-10 EXAMPLE OF AVERAGE ANNUAL GOAL PER HOUSEHOLD

Line No.	GOALS	PY 1 (2021)	PY 2 (2022)	PY 3 (2023)	PY 4 (2024)	PY 5 (2025)	PY 6 (2026)
1	Resource Measure: HH Savings	\$923.54	\$1019.30	\$1070.49	\$1069.38	\$1069.46	\$1073.44
2	Non-Resource Measure: Value from NEBs	\$95.13	\$89.78	\$91.36	\$93.80	\$96.02	\$98.15

9	More detailed information is available in Chapter IV Table A-4, Planning
10	Assumptions and Table A-5, Portfolio Goals and Target Populations
11	1. Household Hardship Reduction Indicator: ⁷² Propose a per
12	household metric ⁷³ that accounts for both Resource and Non-Resource
13	measures installed in that it reflects overall net benefit or hardship
14	reduction to the customer, for example average annual net energy
15	savings and average annual bill savings.
16	Provide as applicable:
17	a. The methodology that identified the metric's baseline quantity for the
18	household metric
19	b. The potential for customer household hardship reduction (estimated
20	opportunity improvement over baseline per this proposed metric.)

⁷² The term "indicator" here is similar to general EE programs where it refers to a unit of measures that is tracked but does not have threshold goals or targets associated with the unit of measure, the indicator simply means the value is tracked and reported.

⁷³ The term "metric" here refers to the common definition as simply a unit of measure, and not the connotation of general Energy Efficiency programs, where metric implies a threshold target is set for the unit of measure.

1PG&E's proposal for a per household metric that accounts for both2Resource and Non-Resource measures installed and reflects the overall3net benefit or hardship reduction is reflected in the following table:

TABLE I-11 PER HOUSEHOLD METRIC FOR RESOURCE AND NON-RESOURCE MEASURE INSTALLATIONS

Line No.	Area	Quantitative Indicator	Method for Determining Quantitative Indicator	Baseline
1	Depth of Energy Savings Goal	 Average annual energy savings per household treated 	Reduced annual energy usage associated with ESA treatment during reporting year (and bill savings in \$) ^(a)	2021 values could be used as the baseline for the new program
		(2) HCS benefits per treated household	NEBs Option for consideration: isolate sub-set of participant NEBs that directly address HCS (in \$) ^(a)	2021 values could be used as the baseline for the new program
 (a) The household hardship reduction indicator (HHRI) would be the average household value from the valuation of (1) and (2) above, i.e., the dollar (\$) value from the two indicators. 				

4	PG&E proposes use of the current total NEB value to quantify
5	additional benefits received by customers (above and beyond reducing
6	energy bills). This approach uses existing data that is available to the
7	program team. PG&E will consider isolating the participant benefits
8	(removing utility and societal benefits) to understand HCS benefits to
9	ESA households.74 The benefits captured within both NEB participant
10	and utility values have the potential to reduce hardship for ESA
11	customers.
12	NEBs are reported as a dollar value (similar to bill savings).
13	As such, the monetary value of the NEBs can be combined with the bill
14	savings to provide a total benefit value. This total benefit value can
15	serve as an indicator for HHRI when measured on an average annual
16	basis, year-over-year (YOY).

⁷⁴ PG&E plans to include participant and utility NEBs for both Non-Resource and Resource measures. Societal benefits are not included due to limitations of the existing model, but may be in the future.

		PG&E notes that the IOUs are proposing to conduct additional NEB
2		research that could be used to refine this indicator in the future, based
3		on updated measures, benefit values and model construct.
4		a) Addressing Baseline Quantity and Baseline Methodology
5		PG&E proposes to calculate the value of the indicators as
6		described above in 2021 to serve as a baseline quantity for the new
7		ESA Plus Program. This timing allows for the NEBs model to be
8		updated before being committed to use. As the NEBs values
9		change and are updated, the baseline may need to be adjusted
10		accordingly.
11		b) Addressing Potential or Estimated Opportunity
12		The potential for household hardship reduction (estimated
13		opportunity improvement over baseline) will be the difference
14		between the YOY forecasts for deployment of measures or
15		installation rates of each, with the associated savings and benefits
16		broken out by the number of participants from the targeted
17		populations.
18	2.	Participation Goals: Briefly summarize the proposed criteria and
19		process to identify and prioritize households, such as by building type,

Additional detail can be found in Chapter IV Table A-5, Portfolio
 Goals and Target Populations.

The new program design and approaches identify and serve households not yet served by ESA and/or where a significant need for services exist are as follows:

- For those not yet served by ESA, PG&E extracted the list of CARE
 customers who did not have an ESA participation flag on their
 record. Given the eligibility criteria is the same for both programs,
 this group is a primary target for participation.
- For those not yet enrolled in ESA or CARE, PG&E proposes to
 continue to conduct outreach to the areas with the highest
 propensity for enrollment. The outreach effort should leverage both
 CARE and ESA offers together.

143)For those where a significant need exists, PG&E identified the15indicators that represent a greater need and developed the list for16targeting with messaging and outreach. The ESA Program has also17added new measures specifically to address the need states.

For each of the three target segments above, PG&E proposes modifications to the outreach approach and enrollment processes that makes it easier for qualified customers to participate. Like CARE that allows for self-certification of income, PG&E proposes ESA follow the same self-certification for simple measures—which will not require a renter to get approval from the property owner either. These changes are expected to make ESA enrollment faster, easier, and less
 intimidating. ESA customer outreach could partner with the CARE
 Program and enrollment would mirror the CARE approach to get the
 best results.

3. Portfolio Energy Savings Goal: Propose annual energy savings goals 5 based on impact evaluation results, the proposed measure portfolio, 6 budget, and participation projections. Include guantitative analysis of 7 8 the opportunity for savings to support the proposed goal and differentiate, as appropriate, the savings for the Multi-family Sector, 9 Disadvantaged Communities, Tribal Communities, and Hard-to-Reach 10 11 customers. Discuss alignment with California's Greenhouse Gas Emission Reduction targets. In ESA tables A-1 and A-1a provide 12 estimated energy savings with avoided greenhouse gas emissions, 13 kWh, therms, and combination of electric and gas savings in equivalent 14 BTUs for the applicable years (Attachment B). Summarize the 15 connections between the energy savings from different Program 16 elements with your Program goals, for example which activities result in 17 the highest savings or where savings are less assured. 18

19Annual energy savings goals can be found in Chapter IV, Table A-5,20Portfolio Goals and Target Populations.

Quantitative analysis of the opportunity for savings to support the 21 proposed goal starts with a review of the results of the most recent 22 Impact Evaluation, EE Workpapers, and manufacturer estimates of 23 savings to determine the best possible options for products or measures 24 that can produce energy savings. Once potential products/measures 25 are selected, the costs are taken into consideration along with 26 installation requirements and the level of difficulty. Customer 27 acceptance and satisfaction is also assessed. 28

After the measures savings and costs are finalized—including any values from NEBs—the ESACET score is calculated and the total annual savings goal can be determined.

The alignment with California's GHG Emission Reduction targets is an important by-product of the ESA Program. Any EE Resource Measure will positively contribute to a reduction in GHG, but the

Non-Resource Measures may not. In the name of HCS, some
 Non-Resource measures may have negative savings which will reduce
 the extent of GHG reduction. However, the ESA Program's goal is to
 manage a portfolio of measures that when taken as a whole, will provide
 overall energy savings and therefore a reduction in GHG.

6

7

8

18 19

20

21

The connections between energy savings from ESA Program elements with ESA Program goals, and the activities for savings are explained further.

The sources for ESA energy savings are: (1) savings validated from 9 ESA Impact Evaluations, (2) workpapers validating the opportunity for 10 11 deemed savings, or (3) engineering or manufacturer savings estimates. Measures having any energy savings are marked as Resource 12 Measures and PG&E considers these to be the priority for the ESA 13 Program. However, installation rates for those measures impact the 14 15 total savings opportunity due to feasibility requirements. The measures and savings values are listed in Chapter IV, Table A-4, 16 Planning Assumptions. 17

In the new ESA Plus Program design, the expectation is energy savings will be realized for both the Basic and the Comprehensive level of services due to the degree of Resource Measures available. (See details in Section 6, ESA Measures and Portfolio Composition.)

For the Comprehensive Plus package, the savings may not be as 22 great, depending on what is installed for the need state. For example, 23 the high usage need state customers will have access to two new 24 Resource Measures: Diagnostic Driven Air Sealing and Floor Insulation. 25 These Resource Measures are being proposed based on the energy 26 savings opportunity with this need state. It is anticipated this group has 27 the greatest savings potential due to the level of usage. If EE measures 28 29 cannot impact their savings based on lifestyle choices, the next step 30 would be to leverage the income-qualified solar program.

There are new Non-Resource measures in the ESA Plus packages for which no savings or negative savings are associated, such as the cold storage units for customers in the high wildfire threat zones. This measure mitigates the hardship of loss of food and medication requiring

refrigeration for the customers most likely to have their power shut-off, but does not provide any energy savings.

1 2

With air purifiers for customers on the Medical Baseline Program or living in DAC/Rural/Tribal areas, there may be negative savings associated with the product since it is a new plug load item. However, the value the air purifier brings in the way of improved in-home air can help offset the use of other plug load items these customers may have been using, such as fans, humidifiers, etc. The next LINA study and Impact Evaluation can help validate this theory.

PG&E is proposing to offer a Portable A/C as a Non-Resource
measure, as it has the potential to increase energy use. The Portable
A/C will be available if the existing central A/C is inoperable or a central
A/C is not installed to help address HCS issues with customers in the
Medical, DAC, Rural or Tribal need states in climate zones with high
cooling degree days; climate zones 11-14.

Minor Home Repair PLUS will allow for additional budget and repair work on a premise and is being proposed as a Non-Resource Measure only for DAC, Rural, and Tribal Communities based on the issues presumably facing these customers regarding premise feasibility. See Table I-4 in Section A.3.b., ESA Homes Unwilling or Unable to Participate.

A Non-Resource Measure being proposed and assumed to provide no savings is Furnace Repair/Replacement for renters. The assumption is once the equipment is repaired or replaced, energy usage will increase and no savings will be gained. PG&E considers these Non-Resource Measures: (1) as having a positive impact on HCS, and (2) supports their deployment in addressing a hardship situation.

With LED lightbulbs—which are a Resource Measure—PG&E is proposing a limit on the number offered to a household, due to a 93 percent reduction of energy savings in moving the baseline for replacement from incandescent to Compact Fluorescent Lamps (CFL). This reduced savings amount negatively impacts the cost effectiveness of the portfolio and should be mitigated.

1		The other activity assumed to have a positive impact on savings and
2		hardship is the energy education session utilizing the custom energy
3		solutions reports generated from the Load Disaggregation Project. It is
4		anticipated that customers will take action on the personalized
5		recommendations for rate plans, demand response programs, other
6		savings opportunities and behavioral tips.
7	4.	Additional Metrics: Discuss whether goals associated with additional
8		metrics such as energy burden, ⁷⁵ public health indicators or climate
9		change for the ESA Program are worthwhile. Why or Why not?
10		For each proposed additional metric, provide as applicable:
11		a. the methodology that identifies the metric's baseline quantity for the
12		targeted participant population,
13		b. the potential for customer and/or societal benefit (estimated
14		opportunity improvement over baseline per this proposed metric),
15		and
16		c. evaluation of tradeoffs, i.e., consideration of the cost to ratepayers
17		to realize the potential benefits.
18		PG&E does not believe goals associated with additional metrics
19		such as energy burden, public health indicators, or climate change are
20		worthwhile at this time for the reasons discussed below.
21		Regarding energy burden, which is defined as the percent of the
22		household's income spent on energy bills, the ESA Program influences
23		one part of the equation. ESA attempts to install efficient products and
24		services designed to help reduce energy use which should lead to a
25		reduction in bills. However, as mentioned in the Studies section and
26		Lessons Learned, the savings from ESA measures is declining which
27		means the positive financial impact is lessening. In addition, PG&E's
28		new proposed ESA Plus Program includes more Non-Resource
29		Measures that help with overall hardship, not necessarily with energy
30		costs; therefore, in some cases, may increase use and drive negative

⁷⁵ For these purposes, we define "energy burden" as the percentage of household income spent on energy bills.

1	savings. This would conflict with reducing energy burden. A reduction
2	in energy burden as a goal for ESA could be incomplete and misleading.
3	Public health indicators are beyond the scope of the ESA Program.
4	At its core, ESA is focused on a mix of energy savings and HCS
5	improvements of the customer's home. Some of the ESA measures
6	may have incidental societal impacts for public health. PG&E's ESA
7	Program should balance energy savings and cost effectiveness for all.
8	Climate change or reduction in carbon or GHG is a by-product of the
9	ESA Program. EE products and services will positively contribute to
10	reductions in GHG due to the reduced energy use but to make it a goal
11	would mean changing the focus and implementation model of the
12	ESA Program.
13	In the ESA Program Budget section of the application:
14	[WITNESS: BENASSI]
15	5. Budget: Present and justify detailed budgets in ESA tables A-2, A-2a,
16	A-3, and A-3a for years post-2020 but not beyond 2026 (Attachment B).
17	Describe how the distribution or balance of funding achieves deeper
18	energy savings and hardship reductions for prioritized low-income
19	households.
20	a. The proposed budget must clearly outline the cost of each program
21	and administrative category and break it into specific components.
22	For example, for multi-family households, clearly show what portion
23	will go to whole-building, in-unit, and/or communal areas/shared
24	energy systems.
25	PG&E's proposed budget for 2021-2026 clearly outlines the cost
26	of each program and administrative category and is detailed in
27	Table A-1 in Chapter IV.
28	b. Identify which components of the budget are for services that
29	increase health, comfort and safety (i.e., Non-Resource measures)
30	vs. those that provide quantifiable energy savings
31	(i.e., Resource measures).
32	Components of the budget for measures that increase HCS
33	(i.e., Non-Resource measures) versus those that provide

1		quantifiable energy savings (i.e., Resource measures) are provided
2		in Tables A-8 and A-9 in Chapter IV.
3		c. Include a table on the 2017-2020 authorized budget, comparing the
4		costs with the proposed 2021-2026 budget. List and indicate the
5		reasons for any increase or decrease in proposed allocations for
6		any budget lines that are synonymous between the two cycles.
7		The comparison of PG&E's 2017-2020 authorized budget with
8		PG&E's proposed 2021-2016 budget is provided in Table A-10,
9		Chapter IV, along with reasons for increases or decreases in the
10		proposed for budget lines that are synonymous between the two
11		cycles. As illustrated in Table A-10, PG&E's administrative cost
12		remains under 10 percent for both program cycles.
13	6.	Project Planning and Tracking Program Expenditures [WITNESS:
14		BENASSIJ.
15		- Provide a spend plan, with quarterly expenditure projections. Correlate
16		projected expenditures with performance milestones by clearly stating
17		the targeted date for each performance milestone in a Gantt chart, and
18		the anticipated amount of expenditure required to achieve each
19		performance milestone. Include at least one milestone per year.
20		Include a description of each performance milestone. Include a
21		discussion on requested budget flexibility, including potential fund
22		shifting. The intent of this section is to allow the IOUs to propose
23		enough Program Planning and Tracking practices to allow the
24		Commission oversight beyond 2020 to occur at a higher level
25		(closer to programmatic or portfolio level than at the measure and
26		units treated level).
27		PG&E's Gantt chart illustrating annual performance milestones and
28		quarterly budget is in Attachment D. The Gantt chart indicates contract
29		budget in support of each activity. PG&E tracks labor spend by
30		regulatory budget category, not by activity, and currently does not have
31		systems to track at the activity level. As a result, the quarterly budget
32		provided in the Gantt chart is for the entire General Administration
33		category.
34		Budget flexibility and fund shifting is discussed in Section D.7.

7. Unspent Funds [WITNESS: O'DRAIN]: Discuss unspent funds, and 1 any failure to meet household treatment goals, for each completed year 2 of the prior budget cycle. Explain (1) the reasons for these unspent 3 funds and/or failure to meet goals and (2) how you will track progress in 4 5 a timely manner to meet approved performance and spending milestones. Discuss how these unspent funds, accrued over 6 2017-2020, should be handled. Discuss how you will more accurately 7 8 budget upfront for activities through 2026 and take actions, where necessary, to mitigate performance shortfalls before the end of the 9 annual period to avoid failing to meet annual performance targets. 10

PG&E allocated ESA 2009-2016 unspent funds to cover new ESA 11 2017-2020 activities as directed by D.16-11-022.76 New program costs 12 included: new approved measures that were not in PG&E's application, 13 new penetration goals, and costs for other new directives. PG&E 14 committed \$123.9 million of its unspent funds from the ESA 15 PY2009-2016 to the ESA 2017-2020 program cycle through the 16 Conforming and Mid-Cycle AL authorizations.⁷⁷ By June 30, 2019, 17 \$5.96 million of \$123.9 million funding had been spent leaving 18 19 \$117.9 million for the remaining 2017-2020 ESA Program cycle as shown in Table I-13. These remaining funds are planned to be used for 20 the following 2019-2020 efforts; MF CAM installations, CSD LIWP 21 leveraging, and the introduction of new measures from the 22 Mid-Cycle AL. 23 As of June 30, 2019, PG&E has \$67.3 million remaining 24

uncommitted unspent 2009-2016 funding as shown in Table I-13.

PG&E's remaining uncommitted unspent 2009-2016 funding will be

25

⁷⁶ D.16-11-022, pp. 41-42, p. 392.

⁷⁷ PG&E filed Conforming Advice Letter 3830-G/5043-E on April 3, 2017. PG&E filed a supplemental advice letter (Advice 3830-G-A/5043-E-A) on June 20, 2017 to address additional items requested by Energy Division. PG&E's ESA budgets were approved in Commission Resolution G-3531, issued on December 21, 2017.

PG&E's Mid-Cycle AL3990-G/5329-E (July 16, 2018), AL3990-G/5329-E-A (September 14, 2018), 3990-G/5329-E-B (October 8, 2018). NSDL on AL3990-G/5329-E-A, 3990-G/5329-E-B partially approving PG&E's Mid-cycle requests was issued on January 4, 2019.

1	used to offset collections that would otherwise have been required in the
2	2017-2020 program cycle, as directed by D.17-12-009, OP 137. ⁷⁸
3	PG&E plans to deplete these unspent funds by the end of 2020.

TABLE I-13 ESA PY2009-2016 UNSPENT FUNDING

	Line No.		Total
	1 2 3 4	Authorized Unspent Funding (2017-2020) ^(a) Year-to-Date (YTD) Authorized Unspent Funding Expenditures (2017-2019) ^(b) Remaining Authorized Unspent Funding (2017-2020) Remaining Uncommitted 2009-2016 Unspent Funding ^(c)	\$123,878,724 \$5,957,871 \$117,920,853 \$67,321,717
	(a)	The amount of 2009-2016 unspent funds authorized in Conforming AL Resolution AL Disposition.	and Mid-Cycle
	(b)	2017-2018 expenses from 2017-2018 ESA-CARE Annual Reports, filed May 1, 20 2019 is YTD through June 30, from ESA-CARE Monthly Report for June 2019, file These funds are shown in ESA Table 1A of PG&E's Monthly and Annual ESA-CA	ed July 21, 2019.
	(c)	PG&E's remaining uncommitted unspent 2009-2016 funding will be used to offset would otherwise have been required in this program cycle, as directed by D.17-12 This funding is through June 30, 2019, and includes interest. The average interest January 1-June 30, 2019 was 2.5 percent.	collections that 2-009, OP 137.
4		a. Discuss unspent funds, and any failure to meet househ	old treatment
5		goals, for each completed year of the prior budget cycle	Э.
6		Table I-14 shows ESA 2017-2019 expenditures, thr	ough
7		June 30, 2019. As discussed in Section A.2. above, for	the period
8		of 2017 through 2019, PG&E's authorized ESA budget	was
9		underspent primarily due to: (1) not meeting the total h	omes treated
10		goal in 2017 and 2018, and (2) measure installation rate	es were
11		lower than estimated. PG&E has updated its measure	forecasts
12		based on more recent data. PG&E is working with its ir	mplementers
13		to make up the delta in homes to be treated in 2019 and	d 2020, and
14		is currently on target to meet the ESA Programmatic Ini	itiative
15		household treatment goals by the end of 2020, as discu	issed in
16		Section A.2.	
17		Two main delays contributed to PG&E underspend	ing its
18		2009-2016 unspent funds committed and authorized the	0

⁷⁸ D.17-12-009, OP 137.

1	Conforming and Mid-Cycle ALs. These delays involved the launch
2	of new measures and installation of Multi-Family CAM. These
3	delays were based on: (1) the timing of 2018 Mid-Cycle AL Filing
4	Resolution on January 4, 2019; and (2) transitioning from PG&E's
5	originally authorized modelled savings approach to a deemed
6	measure savings program based on ESA CAM delivery options
7	provided to PG&E by Energy Division. PG&E plans spending in
8	these areas will be shifted across 2019 and 2020.

TABLE I-142017-2019 ESA BUDGETS AND EXPENDITURES

Line		Authorized Budget	Experigitures				
No.	Year ^(c)	(Table 1) ^(a)	(Table 1A) ^(b)	Table 1	Table 1A	Total	%
1	2017	\$154,671,971	\$30,416,596	\$122,778,059	\$2,377,763	\$125,155,822	68%
2	2018	\$142,898,913	\$18,570,833	\$122,110,739	\$2,477,114	\$124,587,853	77%
3	2019 YTD	\$205,483,865	\$47,084,384	\$76,125,243	\$1,102,994	\$77,228,237	31%

(a) Authorized funding in Conforming AL Resolutions, and Mid-Cycle AL Dispositions, not including 2009-2016 unspent funding. This is the amount shown in IOU ESA Table 1 in Monthly and Annual ESA-CARE Reports.

(b) 2009-2016 unspent funds authorized in Conforming AL Resolutions and Mid-Cycle AL Dispositions. This is the amount shown in IOU ESA Table 1A in Monthly and Annual ESA-CARE Reports.

(c) 2017-2018 budgets from 2017-2018 ESA-CARE Annual Reports, filed May 1, 2018 and 2019. 2019 is YTD through June 30, from ESA-CARE Monthly Report for June 2019, filed July 21, 2019.

9	b. Explain 1) the reasons for these unspent funds and/or failure to	
10	meet goals and 2) how you will track progress in a timely manner to	
11	meet approved performance and spending milestones.	
12	1) See discussion in Section A.2. above.	
13	2) To track ongoing progress in a timely manner in the 2021-2026	
14	program cycle, PG&E plans to develop a detailed project plan of	
15	all initiatives and actions approved in the next decision with	
16	assigned accountabilities and interdependencies. PG&E's	
17	proposed holistic project planning and monitoring will be	
18	performed by a project manager included in the budget proposal	
19	for the program cycle. The project manager's role will include	
20	managing progress on deliverables, critical path planning,	
21	interdependencies, proactive problem solving, including	

1	recommendations to program leadership for work and resources
2	reprioritization for any program milestones at risk with the
3	objective of mitigating milestone delays.
4	c. Discuss how these unspent funds, accrued over 2017-2020, should
5	be handled.
6	Unspent authorized 2017-2018 budget has been shifted forward
7	to 2019 and 2020, according to D.17-12-009 fund shifting rules. ⁷⁹
8	In its 2021 6-month bridge funding AL, ⁸⁰ PG&E proposed that any
9	unspent budget remaining at the end of 2020 be used to off-set
10	bridge funding collections. If there is no bridge funding period
11	required, or if any 2017-2020 funds remain after the bridge period,
12	PG&E proposes to use these funds to offset 2021-2026 collections.
13	d. Discuss how you will more accurately budget upfront for activities
14	through 2026 and take actions, where necessary, to mitigate
15	performance shortfalls before the end of the annual period to avoid
16	failing to meet annual performance targets
17	To more accurately budget upfront for activities through 2026
18	and to take actions to mitigate program shortfalls, PG&E expects to
19	rely more heavily on upfront holistic project planning, detailed
20	accountability assignments, and proactive project monitoring as
21	described above in Section C.7.b.2.
22	This project planning will support:
23	 A fundamental change in approach as budget is no longer
24	driven by a homes treated goal;
25	 Planning of activities and interdependencies as new program
26	partners are identified after solicitation;

⁷⁹ Fund shifting is reported in ESA-CARE Program ARs (ESA Table 12), as allowed by ESA fund shifting rules (D.17-12-009, Section 5.1.3.) Carry-forward from 2018-2019 is reported on ESA Tables 1 and 1A of PG&E's ESA-CARE Monthly Report for August 2019 (September 23, 2019), and will be included in PG&E's 2019 Annual Report Table 12 on May 1, 2020. Also see: PG&E AL 3977-G/5298-E (May 21, 2018); Approved by Energy Division as of June 20, 2018. And: PG&E's Mid-Cycle AL 3990-G/5329-E (July 16, 2018), AL3990-G/5329-E-A (September 14, 2018), 3990-G/5329-E-B (October 8, 2018). Approved in Energy Division NSDL on AL3990-G/5329-E-A, 3990-G/5329-E-B, (January 4, 2019).

⁸⁰ PG&E AL 4131-G/5614-E, filed August 12, 2019.

1	 Resource planning and prioritization to understand where
2	capacity constraints exist upfront;
3	 Align budget planning to timing of planned activities;
4	 As instituted in 2019 PY, more frequent forecasting and
5	planning meetings with implementers and program partners as
6	needed; and
7	 More precise forecasting based on measure trend data.
8	D. ESA Program Design and Delivery
9	1. Proposed Program Design [WITNESS: LEIVA JUNGBLUTH]:
10	Describe your approach to reach each of your stated Goals during the
11	2021-2026 program years. Responses to this Section D.1. Proposed
12	Program Design, addressing the overall program structure, and
13	Section D.2. Proposed Program Delivery, addressing the program's
14	execution, can be answered together in your application.
15	PG&E's approach to reaching the stated goals listed below requires
16	a new program design that includes easier entry into the program, new
17	energy savings measures, additional HCS measures, focused outreach
18	efforts, identification of certain populations with hardship considerations,
19	and an improved contractor/customer journey.
20	The changes for the contractor consist of the following during the
21	first visit:
22	 Conducting a home assessment and documenting a detailed
23	feasible measures list for all eligible Comprehensive and
24	Comprehensive Plus measures;
25	 Discussing the eligible feasible measures with the customer to
26	encourage participation in the Comprehensive/Comprehensive Plus
27	levels of ESA; and
28	 Installing feasible simple measures (e.g., smart power strips, and
29	LED lightbulbs).
30	For subsequent measure installation, the new design calls for a
31	contractor crew to visit the customer in one outing to complete the
32	comprehensive and comprehensive plus treatments, where possible.
33	The goal of these changes is to: (1) educate the customer during the
34	first visit on the measures they will receive if they decide to enroll for

1	the comprehensive measures, and (2) reduce the number of
2	customer visits.
3	See Figure I-2 below for a summary of changes to design
4	and delivery.

		Proposed Prop	gram – ESA Plus	
		Summary	of Changes	
	Basic Simple Start	Comprehensive Standard Program	Comprehensive Plus Targeted Segments	Virtual Energy Coach Pilot
Objective	Provide simple, easy way to get started with basic services; reduce barrier of unwillingness	Provide offers/services for low – moderate energy users to help reduce use and increase health, safety and comfort	Provide unique offers/services to target segments with greatest need	Test concept of "virtual coach" to drive savings via behavioral changes with education and incentives
Customer Opportunity	Current CARE customers, not ESA treated New CARE enrollments annually	Current CARE Customers, not ESA treated New CARE enrollments annually	NEED STATES High Usage Electric/Gas Medical Baseline Disconnections DAC/Tribal/Rural Wildfire	10,000 sample
Income Verification	Self-Certification of Income	Requires Income Verification	Requires Income Verification	No Income Verification Required
PO Approval	No Property Owner Approval	Needs Property Owner Approval	Needs Property Owner Approval	No Property Owner Approval Required
Measures	Simple Energy Savings Measures	Energy Savings Measures and Health/Comfort/Safety Measures	Comprehensive Measures PLUS unique measures for need states	ESA Measures, Rate Plans, Other Programs, Behavioral Tips, Feedback Loop
Installation Effort	Low - Medium	Medium - High	Medium – High	Low - High

FIGURE I-2
SUMMARY OF CHANGES FOR PROPOSED ESA PROGRAM

5	
6	

Goals and Approach:

PG&E's first goal of its 2021-2026 ESA Program is to achieve energy savings in the most cost effective way possible. PG&E's 7 proposed approach to meet this goal is to: (1) increase the participation 8 of new CARE households that have not been previously ESA treated, 9 (2) increase outreach efforts to enroll high usage customers, (3) simplify 10 the enrollment process to get more customers into the program, and 11 (4) pilot a virtual energy coach for continued engagement. 12

PG&E's second goal of its 2021-2026 ESA Program is to reduce 1 2 hardship for customers with greatest need states while maintaining a reasonable budget spend. PG&E's proposed approach to meet this 3 goal is to: (1) identify the customer groups with the greatest need, 4 5 (2) target outreach to those groups, (3) simplify enrollment, (4) offer measures to address specific need states, and (5) test the impact of a 6 7 virtual energy coach to assist with hardship reduction and energy 8 management. PG&E's third goal of its 2021-2026 ESA Program is to help improve 9 the environmental factors and social justice inequities impacting the 10 11 income-qualified customer population. PG&E's proposed approach to meet this goal is to partner with internal teams to leverage 12 complimentary equity programs and the funding available. See details 13 of possible leveraging opportunities in Section D.5.a. 14 a. Discuss lessons learned from the current cycle program design. 15 When evaluating the current cycle program design, the lessons 16 learned are: 17 1) Energy savings are declining, as demonstrated in both the 2019 18 19 Impact Evaluation results and 2019 Navigant P&G study. (See Section B.2.)81 20 2) In some cases, when repair or replacement work is done, the 21 customer may experience an increase in energy usage since 22 there is now a working gas furnace or water heater. However, 23 the repair/replacement work can positively impact their HCS 24 factors. (See LINA Study, Section B.2.)82 25

⁸¹ DNV-GL. ESA Program Impact Evaluation PY 2015-2017 Phase 2, Final Results. April 26, 2019; Navigant. 2019 Energy Efficiency P&G Study, Final Public Report. Prepared for CPUC. July 1, 2019.

⁸² Opinion Dynamics 2019 CA Low-income Needs Assessment, Full Draft Report Version 1, Vol.1. See: Section 6.2. (p. 124) re. HCS: Surveyed ESA participants receiving these measures perceived that these measures significantly improved the HCS of their homes. They reported a significant reduction in the frequency of HCS-related issues—uncomfortably cool or warms temps, drafts, mold/mildew/fungus/moisture, and pests—occurring in their home, compared to before they participated in ESA, and compared to the non-participants.

1	3)	Negative energy/bill savings from measure installation could be
2		offset with an increase in savings from other areas of the
3		customers' total household expense budget, and by greater
4		understanding of energy management or usage behaviors.
5		(See NEBs Study, Section B.2.) ⁸³
6	4)	Customer scheduling and availability are one of the largest
7		barriers to participation. (See Table I-4, Section A.3.b., ESA
8		Homes Unwilling or Unable to Participate). To begin the ESA
9		process, customers must make a time commitment to verify
10		program qualification and be evaluated for potential measures.
11	5)	The majority of CARE high usage customers do not participate
12		in ESA and are removed from CARE due to lack of response to
13		the income verification request. (See Figure I-3.)

⁸³ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final, August 2019.

FIGURE I-3 PY 2018 CARE ANNUAL REPORT CARE TABLE 13 CARE TABLE 13 CARE HIGH USAGE VERIFICATION RESULTS ⁽⁶⁾ Stage 1 – IRS Documentation Stage 2 – ESA Participation ^(f) Stage 3 – Usage Monitoring	Line Households (No Removed Referred to Failed and No. to Verify Response) (Verified) ^(a) ESA Removed ^(b) Ineligible ^(c) Completed Removed ^(d) Denied Approved	1 56,943 46,097 2,264 8,582 613 4,464 1,853 234 1 113	 (a) Includes customer who were verified as over income, requested to be removed, or did not agree to participate in ESA Program. (b) Includes customer who declined to participate in EA Program. failed to respond to appointment requests. or missed multiple appointments or denied 	access to all rooms.	(c) Includes customers who previously participated in ESA Program, did not meet the three-measure minimum, landlord refused, etc. These customers moved directly to Stage 3.	(d) Customers removed for exceeding 600 percent of baseline in any monthly billing cycle, after the 90-day grace period following ESA.	(e) High usage is defined as a customer that exceeds 400 percent of baseline. Results as of March 31, 2019 (reflecting verification requests mailed in 2017 or 2018.	(f) Does not include 1.652 customers still neurling ESA narticination
---	--	---	---	----------------------	--	--	--	---

(f) Does not include 1,652 customers still pending ESA participation.

1		6)	Customer feedback from PG&E's in-home customer
2			interviews,84 as well as the LINA Study indicates the customers'
3			primary gratitude is in the HCS benefits that reduce overall
4			feelings of hardship. Energy savings or bill savings are
5			secondary and rarely mentioned. (See Section B.2.) ⁸⁵
6		7)	Customers who participate in the ESA Program are moderately
7			high to highly satisfied with the program, according to LINA
8			Study results. (See Section B.2.) ⁸⁶ Customers who received
9			products and services installed at no cost indicated they were
10			grateful. ⁸⁷
11	b.	No	te program design modifications to garner increased energy
12		sav	rings and reduce hardships.
13			As discussed earlier, the ESA Program design modifications to
14		inc	rease energy savings and reduce hardship include:
15		1)	Partnering ESA more closely with the CARE Program in ways
16			not done in previous efforts to make ESA the next step in the
17			CARE customer's energy journey with PG&E
18		2)	Allowing self-certification of income and removing any
19			requirement for POA for installation of new simple measure
20			offering to establish some basic first-time savings;
21		3)	Focusing outreach on those who have not participated in ESA
22			and newly-enrolled CARE customers;
23		4)	Developing specific outreach and including measures for high
24			usage customers to help realize their deeper savings potential;

⁸⁴ Travis Research. PG&E ESA Report of In-Home Customer Interviews, October 2018.

⁸⁵ Opinion Dynamics 2019 CA Low-income Needs Assessment, Full Draft Report Version 1, Vol.1. See: Section 6.2 (p. 124) re. HCS: Surveyed ESA participants receiving these measures perceived that these measures significantly improved the HCS of their homes. They reported a higher average level of comfort and safety, and that their home was a healthier place to live, compared to nonparticipants.

⁸⁶ Opinion Dynamics 2019 CA Low-income Needs Assessment, Full Draft Report Version 1, Vol.1. See: Section 6.2 (p. 124) re. HCS: Surveyed ESA participants receiving these measures perceived that these measures significantly improved the HCS of their homes. They reported moderately high to high satisfaction with the measures they received and their overall experience with the program.

⁸⁷ Travis Research. PG&E ESA Report of In-Home Customer Interviews, October 2018.

1		5) Developing specific outreach and including measures for
2		customer groups with the greatest needs to help
3		reduce hardship;
4		6) Continuing production of load disaggregation profiles that
5		include customized solutions around energy, such as rate plans,
6		programs, behavioral tips; and
7		7) Piloting a virtual energy coach for ongoing assistance with
8		energy savings.
9	С.	Discuss expected accomplishments and potential obstacles to your
10		proposed design. What are the recommendations to overcome any
11		identified obstacles?
12		As discussed in Section A.2., PG&E expects its proposed
13		2021-2026 Program Design to accomplish its ESA Program goals.
14		First, PG&E expects increased penetration with CARE
15		households not previously treated by ESA due to targeted outreach
16		and relevant offers (simple measures and unique measures based
17		on need), overcoming the barriers of trust, and improved scheduling,
18		and a simpler enrollment process. Similarly, PG&E expects an
19		increase in energy savings for new CARE customers that have not
20		been previously ESA treated and increased participation of high use
21		customers. In addition, PG&E expects a reduction in overall
22		household hardship for customers in greatest need due to
23		installation of unique measures that target the hardship. With the
24		Virtual Energy Coach, PG&E expects the greater engagement with
25		customers will continue the energy savings process.
26		PG&E also expects an increase in customer satisfaction based
27		on previous customer research with participants and feedback from
28		stakeholders regarding suggestions for improvement. ⁸⁸
29		Potential obstacles in PG&E's delivery of the program and
30		recommendations for overcoming those obstacles.

⁸⁸ Travis Research. PG&E ESA Report of In-Home Customer Interviews, October 2018. Opinion Dynamics 2019 CA Low-income Needs Assessment, Full Draft Report Version 1, Vol.1.

PG&E discussed some potential obstacles and 1 2 recommendations for overcoming those obstacles at numerous Stakeholder Meetings and Contractors' Feedback Sessions. 3 One potential obstacle is locating contractors who have the 4 5 necessary skill levels and qualifications to conduct the whole home assessment and offer the virtual coach during the initial home visit. 6 PG&E recommends revamping its Workforce Education & Training 7 8 curriculum to coincide with the new requirements of the contractor journey and program elements. 9 The second potential obstacle is that installing simple measures 10 11 during the initial visit may not be feasible for some smaller contractor organizations. PG&E recommends addressing these in 12 the RFP process to ensure fair compensation for time and expenses 13 incurred. 14 A third potential obstacle is that ESA Program implementers 15 may have difficulty in coordinating schedules for a crew of 16 contractors for a single customer visit. During the RFP process this 17 should be addressed in the scope of work. During contract 18 19 negotiation, PG&E would work with the winning bidder to develop appropriate workstream and compensation for single 20 customer visits. 21 Lastly, the fourth potential obstacle is that due to travel time and 22 costs associated with serving rural locations, PG&E recommends an 23 incentive to be addressed in the RFP process. 24 2. **Proposed Program Delivery:** Complete the following: 25 a. Describe the proposed delivery of the program per the proposed 26 design approaches above. Discuss lessons learned from the 27 current program cycle; note that the lessons learned from delivering 28 29 ESA Common Area Measures will be answered in the section on 30 Multi-family Sector. PG&E's proposed delivery of its 2021-2026 ESA Plus Program 31 per the design approaches discussed above, consists of three levels 32 of ESA involvement and customer engagement: 33 Basic, Comprehensive, Comprehensive Plus, and a proposed Pilot. 34

1The Basic level of program delivery is expected to include a2load disaggregation profile and customized energy solutions report3for each CARE customer on a quarterly basis. These reports are4expected to be accessible to both the contractor and the customer5for review. The reports allow a contractor to know what may be6relevant during the initial home assessment and what to discuss7In addition, no income verification or POA would be required

In addition, no income verification or POA would be required since the customer is already on CARE. The CARE enrollment status allows the contractor to offer automatic eligibility for simple measure installation when doing outreach and setting up appointments.

9

10 11

12

19

20

21

22

23

24

25 26

27

28 29

During the Basic initial visit, the ESA contractor would conduct the home assessment, explain all available and feasible Comprehensive and Comprehensive Plus measures, install the simple measures, and conduct the Energy Education session. The contractor would also offer the opportunity to participate in the Virtual Energy Coach Pilot for ongoing assistance.

The customer may elect, after the Basic consultation, to receive more measures at the Comprehensive and the Comprehensive Plus levels. The customer would need to produce income documentation or proof of categorical program participation and assist in obtaining the POA, if necessary. The contractor would inform the customer of the next steps. Once the contractor submits the information online, a work order will be generated for the Implementer to use for scheduling an installation crew to go out to the customer's home.

The contractor should be well versed in all measures that are applicable for a customer's premise and particular need state, in addition to the Pilot.

For income-eligible customers not on CARE, the proposed
process will involve a simultaneous sign up for both ESA and CARE,
since no income verification is required for both. The customer can
self-certify for both programs. Due to the quarterly production cycle,
it may take a few months for any new CARE customer to get access

to a load profile and custom energy solutions report. If the customer 1 is brand new to PG&E, no custom energy solutions report is 2 expected to be available and the contractor must use the home 3 assessment form as the best reference for feasible measures, 4 5 programs, rates plans and behavioral tips. b. For new delivery approaches, where prior experience is limited, 6 detail thoroughly the delivery approach, associated risks, and risk 7 8 mitigation strategy. With PG&E's new proposed ESA Plus Program delivery, there 9 are four areas where prior experience is limited: (1) load 10 11 disaggregation profile reports, (2) updated home assessment visits and forms, (3) customer need states and related measures, and 12 (4) virtual energy coach. 13 To use the load disaggregation profile reports, PG&E 14 anticipates training will be required for all parties involved (PG&E 15 team, ESA contractors, IT specialists, Workforce Education & 16 Training Instructors, etc.) There is a risk the reports may be too 17 complicated and therefore not useful. PG&E intends to engage 18 19 these parties to test the usefulness of the reports during current program cycle year 2020. PG&E also expects to update the 20 21 Workforce Education and Training (WE&T) curriculum and delivery to accommodate the changes. PG&E proposes that ESA 22 contractors will have specific training to familiarize themselves with 23 the reports and the Pilot since they will be the primary channel for 24 enrollment. PG&E anticipates the internal PG&E ESA team will also 25 26 need to be informed and able to assist with questions. See 27 Attachment A for the Virtual Coach Pilot Implementation Plan. There is a potential risk that the new activities outlined for the 28 29 first ESA contractor visit may pose a challenge. The contractors 30 may need enhanced soft skills to meet the new objectives during the first visit. In addition, ESA contractors will need to be fully-versed in 31 32 the feasibility criteria for each measure. Based on the new design, the ESA contractor should verify need states, complete the home 33 assessment with the customer, and explain other feasible measures 34

and qualifying income requirements. If the customer does elect to
have all feasible measures installed, the contractor would submit the
information online and a work order would be generated for the
Implementer to use for scheduling an installation crew to go out to
the customer's home. There is the risk of it taking longer than
expected to schedule the right resources for the work. PG&E plans
to address this in the RFP process.

Another potential risk is contractor confusion about the customer need states. Because of PG&E's proposal for new measures to be available based on a customer's need state, the contractor will have to be well-trained in how to determine the validity of the need state, as well as the corresponding requirements and feasible conditions for measure installation. All of this is expected to be covered in the new curriculum for WE&T.

c. Describe how the proposed program delivery approach will achieve energy savings and hardship reduction program goals for each prioritized population.

15

16

17

PG&E's proposed ESA Program delivery approach is 18 19 anticipated to achieve energy savings or hardship reduction program goals for each prioritized population since each population 20 21 has specific measures assigned and matched to their need state. The various measure mix options were purposely designed to 22 23 achieve savings or reduce hardship for the prioritized customer groups, while maintaining program cost effectiveness. The 24 proposed utilization of a custom energy solutions report should also 25 26 help increase productivity of the energy education session between 27 the contractor and customer. The report is expected to contain personalized information about opportunities for savings and 28 29 recommendations for actions that may positively impact hardship.

1	d.	As applicable, respond to the following questions as it relates to
2		your specific program delivery approach:
3		i. What additional workforce development opportunities should be
4		employed to ensure hiring within local communities, especially
5		the disadvantaged communities and, where possible,
6		career-ladder jobs? How can the IOUs partner with CBOs,
7		community colleges and workforce investment boards?
8		The workforce development opportunities that could be
9		employed to increase the possibilities of hiring within local
10		communities, especially DACs and possibly provide career
11		ladder jobs include:
12		 Notifying local and regional workforce development
13		organizations (WDO) about ESA employment opportunities
14		in their areas. The WDOs would then communicate these
15		opportunities to people who come to them looking for work.
16		The notification would be handled by the ESA Implementers
17		and Contractors who would report their efforts to PG&E and
18		 Leveraging existing connections between PG&E EE teams
19		and WDOs to help generate awareness and interest in
20		opportunities with ESA Program contractors.
21		Other possible ways PG&E or IOUs can collaborate and
22		support community-based organizations (CBO), community
23		colleges and WDOs include:
24		 Providing information about ESA opportunities to
25		participants in Energize Colleges Program: This program
26		supports college students, teachers, and education
27		departments at various campuses across PG&E's territory.
28		Interns and fellows are trained on EE topics and
29		technologies to prepare them to work on campus
30		EE projects;
31		 Informing PG&E technical advisors and education
32		collaborators about ESA: PG&E staff sometimes serve on
33		technical advisory committees for Bay Area WDOs that

1	have job training programs and provide technical EE
2	classes to their students; and
3	Providing information to attendees at the Annual Solar Jobs
4	Fair: This is an annual event focused on career
5	opportunities in the solar industry. Through a contracted
6	vendor, PG&E invites job seekers and employers to PG&E's
7	Pacific Energy Center for networking, resume review
8	workshops, interview skills workshops, and recruiting.
9	ii. Discuss how your Marketing, Education and Outreach (ME&O)
10	plans support the Program Goals, including plans for improving
11	enrollment, meeting participation goals and targeting
12	multi-family households. Include proposed ME&O cost per
13	household for program years 2021-2026; how does this
14	compare to the current cycle? Discuss the history of your
15	ME&O methods' effectiveness and modifications or
16	opportunities to further streamline existing ME&O initiatives.
17	[WITNESS: OLSEN]
18	PG&E is committed to helping customers understand the
19	benefits of and eligibility requirements to participate in the ESA
20	Program. In its proposed approach to ME&O, PG&E builds
21	upon proven strategies from the 2017-2019 ESA marketing
22	campaign with plans to add insights and modify strategies to
23	help customers understand the benefits of the newly-proposed
24	redesign of the ESA Program offerings. These marketing
25	activities support PG&E's drive to achieve program goals of
26	participation, reducing hardship for need state customers, ⁸⁹ and
27	improving the environmental factors and social justice inequities
28	impacting the income-qualified customer population.
29	The following testimony explains:
30	 The history of PG&E's ME&O effectiveness, including
31	successful strategies and tactics to be carried forward;

⁸⁹ Descriptions of "need state" offerings in the ESA Comprehensive Plus outlined in Section .A.3.b.

1	٠	Proposed modifications or opportunities to further
2		streamline existing ME&O initiatives to support the Program
3		Goals; and
4	•	PG&E's proposed ME&O cost per household for PYs
5		2021-2026, and how this compares to the current cost per
6		household.
7	1)	The history of PG&E's ME&O effectiveness, including
8		successful strategies and tactics to be carried forward:
9		Through many years of effort, PG&E has achieved high
10		awareness and participation in the current ESA Program.
11		As of December 2018, more than 2,137,739 homes have
12		been treated.90
13		PG&E's ME&O for ESA focuses on building awareness
14		and delivering qualified leads in the form of application
15		submissions. Recent campaign results show that customer
16		targeting, effective messaging, and a "mix" of marketing,
17		including direct mail, e-mail, and targeted digital media, all
18		contribute to lead generation. The following section
19		describes the successful strategies and tactics ⁹¹ that have
20		increased response rates, delivered qualified leads, and
21		driven customer participation in ESA. PG&E has
22		incorporated these key learnings into its proposed
23		2021-2026 marketing approach.
24		PG&E's recent work to refine messaging and targeting
25		and optimize the marketing channel mix, contributed to
26		increased lead generation (in the form of application
27		submissions) and increased participation rates (homes
28		assessed and treated) in recent years. These findings are
29		documented in the 2018 ESA Marketing campaign
30		analysis ⁹² report, which PG&E has incorporated into its

⁹⁰ PG&E ESA Program and CARE Program Amended 2018 Annual Report. July 2, 2019, p. 5.

^{91 2018} ESA Campaign Analysis; May 15, 2019.

^{92 2018} ESA Campaign Analysis; May 15, 2019.

1	proposed 2021-2026 marketing approach. Successful
2	strategies and tactics include:
3	a) Leverage the power of repetition: Results from the
4	2018 ESA marketing campaign show that exposing
5	customers to ESA messages more than once through
6	direct channels is more successful at motivating
7	customers to act than a single communication. Within a
8	multi-channel campaign including digital media,
9	customer response rates to ESA direct marketing
10	touches in the third and fourth quarters of 2018 were
11	as follows:93
12	1) 54 percent responded after one mailer;
13	2) 82 percent responded after receiving two direct
14	marketing communications; and
15	3) The remaining 18 percent of customers that
16	responded to ESA marketing did so after receiving
17	three or more communications.
18	Because repetition is a factor in higher response
19	rates, PG&E plans to implement direct marketing
20	campaigns that use multiple touches to target eligible
21	customers each year during the 2021-2026
22	program cycle.
23	b) Use multiple communication channels and multi-touch
24	campaigns to drive more qualified leads: While a single
25	channel (direct mail) drove a higher response rate in
26	terms of applications submitted, more customers who
27	received direct mail and e-mail continued through the
28	process from application to assessment to treatment at
29	higher rates than customers who received only direct
30	mail.94 Because the increased rates of assessment

⁹³ 2018 ESA Campaign Analysis; May 15, 2019. Slide 8; Two Touches generate 82 percent of the Responses.

⁹⁴ 2018 ESA Campaign Analysis; May 15, 2019. Slide 7; "DM + EM Recipients Led to a Higher Assessment & Treatment Rate"

1		and treatment were consistent across multiple waves of
2		marketing, PG&E plans to continue to use a
3		combination of targeted, direct to customer
4		communications in coordination with
5		awareness-building media placement in the ESA PYs of
6		2021-2026.
7	c)	Coordinate outreach and engagement with CARE
8		marketing campaigns: To help more low-income
9		customers on their path to better bill and energy
10		management, PG&E added a partially pre-filled ESA
11		application form and postage-paid reply envelope to the
12		direct mail version of the CARE Program Welcome
13		Kit. ⁹⁵ In 2018, approximately 10,000 customers
14		completed and submitted the ESA application they
15		received with their CARE Welcome Kit.96 These
16		customer leads from the CARE Welcome Kit had higher
17		assessment and treatment rates compared to other
18		ESA Acquisition campaigns.97 24.5 percent of the
19		customers that submitted the ESA application from their
20		CARE Welcome Kit had their homes treated by the ESA
21		Program.

⁹⁵ Customers receive an ESA application form that has been prefilled with their information make it easier and faster for customers who are now enrolled in CARE to begin the next step and participate in ESA, if eligible. This pre-filled form only requires customers to provide a phone number and an e-mail (optional) prior to mailing it in via the pre-paid postage envelope.

⁹⁶ EDGEline data management system, 2018

^{97 2018} ESA Campaign Analysis; May 15, 2019.

TABLE I-15 CARE WELCOME KIT ESA ACQUISITIONS

Line No.	Rates	Welcome Kit	ESA Acquisition Campaigns ^(a)
1	Response Rate	6.7%	16.7%
2	Assessment Rate of Responders	64.2%	12.1%
3	Treatment Rate of Responders	24.5%	9.0%

(a) Includes e-mail, direct mail and other ESA customer marketing campaigns.

1	PG&E plans to continue marketing ESA in the
2	CARE Welcome Kit as an integration point for critical
3	messages to low-income customers.
4	PG&E has seen success in personalized and highly
5	targeted direct mail and e-mail to CARE-enrolled
6	customers living in ESA-eligible homes. PG&E
7	augmented this approach by using an ESA Propensity
8	Model for customer targeting. This model builds upon
9	the CARE propensity model and is used to identify
10	customers within the CARE-eligible population that are
11	most likely to participate in ESA. ⁹⁸ The original ESA
12	Propensity Model was developed in December 2014
13	with the goal of improving response to Marketing
14	communications by identifying customers with the
15	highest propensity to participate in the ESA Program.
16	In July 2016, PG&E commissioned development of a
17	new model that added third-party data. The current
18	model includes 27 distinct model variables and includes
19	the CARE Propensity Model scoring as one component.
20	PG&E plans ongoing updates to the propensity model,
21	adding data, and analysis.
22	d) <u>Testing and optimization of the campaign</u> : PG&E plans
23	to test and optimize campaign creative on an ongoing
24	basis to foster continuous improvement of messaging

⁹⁸ See Attachment B ESA Propensity Model.

1		and effectiveness of campaign strategies. As an
2		example of how this approach has been successful, in
3		2016, PG&E identified an opportunity to make the ESA
4		direct mail package easier for customers to respond to.
5		PG&E developed alternate versions of a personalized
6		letter and application and began testing in late 2016
7		testing a shorter, pre-populated form, and postage paid
8		business reply envelope.
9		The response rate to PG&E's direct mail efforts
10		increased from 6.2 percent in 2016 to a high of
11		19 percent in Q1 of 2019. PG&E plans to continue
12		optimizing ESA campaign messaging, strategies and
13		tactics to promote the program in ways that are
14		accessible, easy to understand, and offer a clear path to
15		participation.
16	2)	Proposed modifications or opportunities to further
17		streamline existing initiatives to support the Program Goals:
18		PG&E's proposed approach to ESA ME&O will target
19		eligible customers including CARE households not
20		previously treated by ESA. In addition, PG&E proposes to
21		target CARE-eligible customers with high usage and other
22		significant need states that indicate hardship with ME&O to
23		drive participation in the ESA Comprehensive Plus offering.
24		PG&E plans to develop, test and refine new messaging to
25		encourage customers to complete ESA
26		Program applications.
27		a) Continue and expand cross marketing with other
28		Income-qualified programs: PG&E's marketing and
29		outreach for ESA will be coordinated with CARE
30		marketing to build greater awareness with low-income
31		customers about holistic energy management and
32		cost-savings opportunities. As mentioned earlier in this
33		section, PG&E plans to continue the successful
34		cross-marketing between CARE and ESA because

1		customer leads for the ESA Program that originated
2		from the CARE Welcome Kit had higher assessment
3		and treatment rates compared to other ESA
4		Acquisition campaigns.
5	b)	Multi-family: PG&E plans to target property managers
6		and building owners with ME&O to drive participation in
7		the ESA Program In-Unit and CAMs that serve
8		multi-family households and properties. PG&E's
9		marketing to multi-family property managers and
10		owners is expected to continue until 2023, at which
11		point a third-party implementer is expected to launch a
12		new ESA multi-family program. To facilitate this launch,
13		PG&E marketing intends to work with the implementer
14		and determine the desired level of support
15		and coordination.
16	c)	Launch new program model: As stated in Section D.1.,
17		significant changes are being made to the ESA
18		Program model in an effort to reduce household
19		hardship.
20		PG&E expects the introduction of need-based
21		targeting of specific customer groups will have a
22		significant impact on PG&E's future messaging and
23		approach to marketing the ESA Program. PG&E
24		proposes using a combination of new strategies to drive
25		customer engagement and to specifically address the
26		proposed changes to program design. Table I-16 below
		shows how PG&E's marketing approach will adjust to
27		
27 28		the new program design and identify the marketing
		the new program design and identify the marketing strategies to achieve ESA Program goals.

TABLE I-16 PG&E'S MARKETING APPROACH FOR ESA PLUS

Line No.	ESA Changes Proposed for the New Design ^(a)	Proposed Marketing
1	Overcoming trust issues by partnering ESA more closely with the CARE Program. This would make ESA the next step in the CARE customer's energy journey with PG&E.	Continue to include ESA messaging and enrollment details in CARE Welcome Kit.
2	Easing enrollment requirements by allowing the same self-certification as CARE for the basic ESA Program.	Test and refine new messaging to clearly explain the ease of participation.
3	Removing the property owner approval requirement for installation of simple measures (e.g., light bulbs and power strips).	Test and refine messages to highlight ease of participation and "renter-friendly" rules.
4	Focusing outreach to those who have not participated in ESA and newly-enrolled CARE customers.	Cross-market to newly-enrolled CARE customers.
5	Targeting low-income, high usage customers to help achieve greater savings potential with specific measures.	Continue to use and refine propensity model to target customers that are more likely to participate in ESA.
6	Offering unique measures for customer groups that have the greatest need for hardship reduction.	Take a data-driven approach to customer segmentation to uncover insights related to need states that will enable PG&E to communicate in a relevant and compelling way.
		Test and refine messaging and value propositions related to the Comprehensive Plus offerings.
7	Producing load disaggregation profiles that include customized solutions around energy, such as rate plans, programs, behavioral tips.	Test and refine communications and messaging to ensure benefits are highlighted in ways that are relevant and actionable.

PG&E lessons learned and strategies used in 1 marketing the current ESA Program will be applied to 2 the proposed "Comprehensive and Comprehensive -3 Plus" ESA offerings. 4 5 Because of the new program design, the proposed messaging will focus on the package of simple 6 measures that will be installed during the initial in-home 7 8 assessment. PG&E plans to test messaging to 9 determine the most compelling and impactful themes for customers. PG&E expects that several of the need 10

1	state groups may be targeted geographically. This
2	opens the possibility of geographically-targeted media
3	and direct marketing to build awareness of and drive
4	participation in the new program offerings.
5	PG&E also plans to conduct research and test
6	messaging and customer response to multiple or
7	"bundled" program offerings for customers that may fit
8	into multiple need state groups.
9	As part of the ESA Comprehensive and
10	Comprehensive-Plus Program offerings, ESA
11	Implementers are expected to contact customers to
12	conduct follow-up installations once assessments are
13	completed and as potential follow-up measures are
14	identified. (See Section D.2.a.) In instances where
15	assessments identify follow-up measures that do not
16	lead to treatments, PG&E plans to re-engage with these
17	customers to prompt participation or identify reasons for
18	non-participation. PG&E plans to prioritize marketing to
19	eligible customers that may benefit from having their
20	homes treated with the new/proposed ESA
21	Comprehensive and Comprehensive-Plus
22	Program offerings.
23	In addition to cross-marketing CARE enrollees,
24	PG&E plans to undertake expanded efforts to reach
25	some of the most vulnerable customers that we serve.
26	As identified in Table I-6, there are customers that fit
27	into the following groups: High Usage, Medical
28	Baseline, Disconnections, DAC/Tribal/Rural and
29	Wildfire Threat.
30	3) PG&E's proposed ME&O cost per household for PYs
31	2021-2026, and how this compares to the current cost per
32	household.
33	In the 2017-2020 program cycle, PG&E's marketing
34	costs were 1.3 percent of the overall ESA Program budget.

In the 2021 to 2026 program cycle, PG&E's marketing 1 2 budget cost estimate is approximately 1.3 percent of the overall budget request. 3 PG&E's marketing cost per household treated in 2015 4 5 through 2018 ranged from \$18 to \$24 and was calculated by dividing the annual ME&O costs recorded for ESA by the 6 total homes treated in each corresponding year. 7 8 Based on the estimates for comparable marketing education and outreach costs proposed, PG&E's marketing 9 cost per household treated in 2021 through 2026 ranges 10 11 from \$21 to \$31 per customer based on the total homes treated. 12 Because the ESA Comprehensive Plus offering is 13 completely new and anticipated to require significant 14 start-up and development costs, those costs have been 15 excluded from the cost per household calculation. 16 PG&E's 2021-2026 per household costs differ from the 17 current cycle because of the differences between: 18 19 (1) program design and delivery; (2) which customers are targeted (the prior cycle targets last remaining eligible and 20 willing customers while the new cycle will focus on 21 customers defined to have specific needs states); and 22 (3) foundational activities required to implement the new 23 program design, such as research, development of new 24 materials, message development and testing, and 25 26 adjustments based on learnings from the test and learn 27 approach; (4) anticipated ramp-up of implementers and reduced annual enrollment/participation numbers mean that 28 29 fixed and foundational costs are not able to be spread over 30 as large of an audience. As a result, cost per household is estimated to increase. 31 a) Summary of ME&O Funding Request 32 PG&E anticipates its ESA-specific marketing will 33 create awareness and drive eligible customers to 34

1	complete program applications. Once the application is
2	completed, PG&E marketing passes these leads to
3	program implementers (contractor outreach and
4	implementer-related costs are explained in Section D.1.
5	of this testimony). For program cycle 2021-2026, PG&E
6	requests funding of \$12,410,807 to support the
7	marketing efforts. ⁹⁹

⁹⁹ Marketing budget line item in table A-1 of Appendix A includes ME&O, plus costs associated with the load disaggregation report.

TABLE I-17 ESA MARKETING BUDGET

Line No.	ESA Marketing	2021 Estimates	2022 Estimates	2023 Estimates	2024 Estimates	2025 Estimates	2026 Estimates
•	ESA Outreach Estimate						
	Communications Development	\$350,000	\$200,000	\$100,000	\$50,000	\$100,000	\$50,000
	Direct to customer (Direct mail, E-Mail, Bill Inserts)	\$441,200	\$415,000	\$407,410	\$380,110	\$388,110	\$395,610
	Media	\$300,000	\$400,000	\$200,000	\$200,000	\$200,000	\$200,000
	Forms/Collateral/Brochures	\$350,000	\$250,000	\$250,000	\$250,000	\$250,000	\$250,000
	Data Management, Measurement & Analysis	\$315,000	\$324,000	\$333,000	\$289,000	\$297,000	\$306,000
	Customer Research/Strategic Consulting/Other	\$100,000	\$100,000	\$50,000	I	\$50,000	I
	Labor, Technology License Fees, etc.	\$581,760	\$598,703	\$617,854	\$540,215	\$555,860	\$571,975
	Multi-family Property Owner and Manager Marketing	\$100,000	\$103,000	\$50,000	\$50,000	\$50,000	\$50,000
	ESA Marketing Budget Estimate	\$2,537,960	\$2,390,703	\$2,008,264	\$1,759,325	\$1,890,970	\$1,823,585

	DORE's ECA Outreach Budget Estimate is
1	PG&E's ESA Outreach Budget Estimate is
2	composed of various budget categories:
3	Communications Development includes advertising
4	agency time of staff for creative development and
5	production of marketing materials such as direct
6	mail, e-mail, video, and radio scripts.
7	Direct to Customer marketing includes costs such
8	as postage and production of direct mail acquisition
9	and retention campaigns, bill insert printing, text,
10	and e-mail design/programming and deployment.
11	 Media costs include media agency planning,
12	buying, analysis and reporting for tactics such as
13	display advertising, search engine marketing, print,
14	and radio.
15	Forms/Collateral/Brochures includes costs for
16	agency time of staff to design and write new forms
17	or brochures, translation costs, and other work to
18	update ESA forms and collateral annually. Also
19	includes printing and distribution of these materials
20	to the required locations (such as local offices and
21	PG&E inventory).
22	Data Management, Measurement and Analysis
23	includes costs such as data vendor time of staff for
24	programming and execution for customer list
25	generation, strategic planning support, Propensity
26	Model development, third-party data, and
27	maintenance, and campaign reporting and analysis.
28	Customer Research includes costs such as
29	third-party vendor resources to conduct studies or
30	surveys, location, travel and material costs for
31	studies such as focus groups or in-person studies.
32	Labor, technology license fees, etc. cost includes
33	PG&E staff to support planning and execution of
34	marketing activity, and licensing fees for technology

1	platform to conduct marketing campaigns such as
2	e-mail and text.
3	 Multi-family property owner and manager marketing
4	costs include a continuation of PG&E marketing to
5	support the ESA Program in-unit and CAMs efforts
6	that serve multi-family households and properties.
7	PG&E's marketing to multi-family property
8	managers and owners is expected to continue until
9	2023, at which point a third-party implementer is
10	expected to launch a new ESA multi-family
11	program. To facilitate this launch, PG&E marketing
12	anticipates that co-branded marketing materials
13	may be desired and if so, these materials will need
14	to comply with PG&E brand and legal standards.
15	To address this need, the Multi-family marketing
16	budget includes costs to develop and maintain
17	co-branded identity materials in PYs 2023-2026.
18	The marketing budget estimates assume a decision
19	will be issued by the end of 2020, to allow PG&E to
20	begin research, testing, and development in January
21	2021. Any delays in issuing the decision may require
22	PG&E to shift the timing of the planned activities and
23	associated budget expenditures. PG&E's budget
24	remains flexible to allow for allocation adjustments and
25	revised outreach activities based on the results of the
26	continual test and learn approach presented.
27	If program design or customer outreach requirements
28	change through the implementer solicitation process,
29	due to requirements of the final decision, or based on
30	lessons learned from outreach efforts, PG&E reserves
31	the right to adjust the marketing plans and cost
32	estimates accordingly. If timing of the implementation
33	changes, PG&E's expectation is that costs would shift
34	to accommodate the new schedule.

1 3.

2

3

4 5

28

29

3. **Prioritization of Target Participants**

[WITNESS: LEIVA JUNGBLUTH]: Detail the proposed approach (criteria and process) to identify and prioritize your participant categories or housing types with significant need for energy efficiency services. Provide a detailed explanation to support your proposed approach.

PG&E's proposed approach to identifying and prioritizing participant 6 7 categories or housing types with significant need was based on 8 availability of data from PG&E's own database where customer records are kept. Customer need states were derived from evaluating numerous 9 indicators on a customer's record and the best determinants of hardship 10 11 were deemed to be high usage, medical baseline participation, disconnections, geographical areas like DAC/Tribal/Rural and high 12 wildfire threat zones. In addition, PG&E leverages the household 13 income data provided by Athens Research to target areas where 14 low-income households are prevalent. 15

- 16a. Are households prioritized for service based on housing type,17energy usage, energy costs, energy burden, location, amount of18potential energy savings, and/or health, comfort and safety criteria?
- 19 PG&E proposes to prioritize households based on need states which are indicators of hardship such as high usage, medical 20 21 baseline enrollment, disconnections history, geographic locations such as rural, tribal and DACs in both single family and multi-family 22 dwellings. PG&E will also prioritize CARE customers who have not 23 participated in ESA. The current program design targets high users, 24 geographic locations such as tribal and housing types such as 25 26 multi-family deed-restricted buildings, mobile homes and single family dwellings, and targets new CARE customers 27
 - b. How will you address prioritized households not treated in the current cycle due to unwillingness to participate?

30PG&E proposes to address prioritized households not treated31due to unwillingness by contacting those households with a new32offer of automatic eligibility for free simple measure installation as33part of their CARE enrollment. The offer becomes the next step in34their energy journey with PG&E. The expectation is the closer tie to

1	the CARE Program will help address trust issues and the "no
2	documentation required" should make it much easier to get started.
3	PG&E is proposing specialized messaging and outreach that will be
4	integrated into the holistic outreach plan proposed in CARE
5	Chapter II Section D.
6	If the prioritized household is not already part of the CARE
7	Program, the same offer of free simple measure installation with
8	ESA can apply due to the self-certification of income option.
9	However, PG&E will also offer to enroll the customer in CARE in
10	this case.
11	c. How will energy efficiency services offered to the households vary to
12	maximize savings and assist households to reduce or better
13	manage energy bills, minimize disconnections, and foster
14	affordability of energy costs?
15	PG&E anticipates the measures offered to the customer groups
16	will vary based on the need states. PG&E's objective is to provide
17	specific measures that target those need states in addition to the list
18	of feasible measures that apply to the household to achieve savings
19	and reduce hardship. See final list of measures in Table I-23 below
20	in Section D.6. In addition to the measures, the custom energy
21	solutions report is expected to contain personalized usage
22	information and recommendations for savings that are specific to the
23	individual household. Recommendations may include rate plans,
24	demand response programs, payment options and alerts, as well as
25	behavioral tips, all with the goal of improved energy affordability and
26	bill management.
27	d. Will you prioritize providing services for households that previously
28	participated in ESA?
29	PG&E plans to prioritize households not previously treated.
30	However, if a household falls within a particular need state, PG&E
31	plans to offer the new targeted measures along with the customized
32	energy solutions report from the load disaggregation project.

1	e. What are the risks associated with your proposed prioritization, and
2	how do you plan to mitigate risks?
3	The potential risks and planned mitigations associated with
4	PG&E's proposed customer grouping or prioritization are listed in
5	Table I-18.

TABLE I-18 POTENTIAL RISKS AND MITIGATIONS WITH PRIORITIZED CUSTOMER GROUPS

Line No.	Potential Risk	Potential Mitigation
1	Customer unresponsiveness or unwillingness.	Additional outreach and increased local involvement, close interaction with CBOs and local government assistance program offices.
2	Homes are in disrepair and cannot be treated, which means funds to upgrade must come from another source.	Clear understanding and agreement with other organizations or agencies for leveraging funds or program measures.
3	It may prove too complex for contractors during implementation, which would require additional training resources and time.	New training program with input from contractors, and a constant feedback loop for updates.
4	Data tracking may prove difficult and reporting is inaccurate, which would require additional resources, time, and money.	Propose a dedicated subject matter expert for new program tracking and reporting.
5	The timeline for completion of all measures may extend to the point of frustration for customers, which would require more resources to address.	Call this out in the RFP process as major point in service level.
6	The appropriate resources to install measures may not be available, which means paying a higher price to find/keep contractors.	Call this out in the RFP process as major point in service level.
7	The Virtual Energy Coach vendor cannot deliver as agreed, which would require a rework and reimbursement.	Build in a guarantee performance clause in contract with vendor, confirm operations prior to launch.
8	The Virtual Energy Coach idea does not appeal to enough customers.	Document and deploy lessons learned from pilot.

6	f.	Explain whether the program should transition to uniform criteria for
7		all the IOUs to prioritize households for service.
8		PG&E recommends the program should transition to uniform
9		criteria for all IOUs because the IOUs have the same type of
10		customer data and face similar issues and challenges. This is a
11		statewide program and consistency can help with tracking and
12		reporting out on the same data. Targeting, providing clear direction,

and focus at the beginning of the program may generate better 1 2 results than general program outreach and tracking after the program. 3 g. Detail any needed changes to ESA Program eligibility guidelines as 4 5 a result of the proposed prioritization approach. PG&E is not proposing any changes to eligibility guidelines. 6 The ESA Program expects to continue to use 200 percent of 7 8 Federal Poverty Guidelines. While other income-qualified assistance programs may use some percentage of Area Median 9 Income for eligibility, the Athens data shows a decrease in number 10 11 of homes considered eligible in areas that are predominantly low-income and an increase in number of homes where income is 12 predominantly higher because the median amount adjusts.¹⁰⁰ 13 PG&E proposes to continue targeting the larger number of 14 income-gualified households in the lower income counties as 15 determined by the Federal Poverty Guidelines. 16 4. **Participation Barriers:** Discuss current cycle attempts to address 17 participation barriers, your lessons learned, and how your proposed 18 19 approach is improved to ensure prioritized households participate. Include potential alternatives to mitigate challenges faced by single fuel 20 utilities, SCE and SoCal Gas, or challenges for customers located where 21 only one fuel is offered. 22 23 During the current cycle, PG&E attempted to address participation barriers by seeking greater understanding of the barriers from 24 stakeholders who work closely with the low-income customer base. 25 PG&E heard anecdotally that marketing materials and customer 26 27 brochures were too complex and difficult to translate. PG&E consulted with community advocates and CBOs and made modifications to the 28 29 materials for clarity and understanding. PG&E also revised the 30 educational materials for CBOs to deliver information about benefits more quickly and succinctly to customers. 31

¹⁰⁰ Athens Research, AMI Eligibility Estimates November 2018.

ESA contractors updated their marketing collateral as well, and they continue to utilize both phone sales representatives and door-to-door canvassers for outreach. Contractors continue to provide feedback that the most effective customer response comes from face to face interaction at PG&E local offices and community events where PG&E employees are helping to promote the program. Having a visible PG&E connection helps establish credibility and assists in customer receptivity.

8 PG&E's proposed approach prioritizes household participation. It targets customer groups based on their need states and offers 9 customized solutions rather than a one size fits all approach. 10 11 As discussed, this approach helps the customer save and reduce hardship according to their personal situation. It also allows for easier 12 qualification and participation by removing the income verification for 13 simple measures. Promoting the simple ESA measures as an automatic 14 offering with CARE enrollment should also increase trust and credibility. 15 In addition, having simple measures installed for free along with a home 16 assessment may help with scheduling issues since the customer will 17 likely be getting something of value for their time. The Virtual Energy 18 19 Coach (for those included in the pilot) provides ongoing support and should help the customer feel like they have someone on their side. 20

PG&E's potential alternatives to mitigate challenges faced by single fuel utilities or challenges for customers located where only one fuel is offered include installing measures in partnership with other IOUs or large Municipal Utility Districts, like Sacramento Municipal Utility District (SMUD).

25 26

21

22

23

24

5. Referrals, Leveraging, and Coordination [WITNESS: O'DRAIN]:

a. Provide and review data about the ESA referral pipeline received 27 from other programs and those made to other programs. Describe 28 29 how this informed program design, delivery approach, and/or 30 prioritization of targeted participants. Include completed referrals and those that did not choose to participate in ESA. These 31 programs include, but are not limited to: CARE, Low-income 32 Weatherization Program (LIWP), Solar on Multi-family Housing 33 (SOMAH), Multi-family Single Point of Contact (SPOC), Multi-family 34

1	Energy Efficiency Rebates, Multi-family Upgrade Program,
2	Multi-family Electric Vehicle Programs, etc.
3	There are many touch points with income-qualified customers
4	through PG&E and external programs. There may be opportunities
5	to leverage these touchpoints to expand customer's awareness of
6	the ESA Program, and vice versa. Some examples of these
7	leveraging programs are shown in Table I-19 below.

Line No.	Regulatory Reference	Implementor	Program Name	Brief Description
-	AB 617	Local Air Districts	Community Action Plans	AB 617 directs air regulators to identify communities with a high cumulative pollution exposure burden and to work with communities to develop solutions. Action Plans have been developed to propose strategies to reduce harmful emissions and mitigate the effects of poor air quality through air filtration measures.
5	AB 2868	PG&E	Behind the Meter Thermal Storage Program	The approved program will install new heat-pump water heaters (HPWH) to replace propane, or retrofit existing electric resistance water heaters and HPWHs to load shift their use from the normal customer end use time to instead pre-heat the water during off peak periods. The load shifted water heaters are able to decrease GHG emissions, relieve congestion on the distribution grid during peak usage times, and help customers be successful on the new TOU rates.
ю	AB 2672	PG&E	San Joaquin Valley DACs Pilot Projects	The pilot projects in PG&E's service territory will replace propane and wood burning appliances with all electric appliances to help mitigate high energy costs and reduce harmful emissions in customers' homes.
4	AB 2723 and AB 217	GRID Alternatives	SASH Program	The SASH incentive provides low-income families with free or low-cost solar photovoltaic systems that significantly reduce household energy expenses and allow families to direct those savings toward other basic needs.
Ð	AB 2723 and AB 218	PG&E	Multi-Family Affordable Solar Homes Program (MASH)	Provides business solutions to offset the costs of installing new solar energy systems on multi-family affordable housing in California. MASH aims to improve the quality of housing, decrease energy use and lower costs for tenants. It also urges tenants to use high-performance solar systems that help protect California's environment.
Q	SB 1477	TBD	BUILD and TECH	The Building Initiative for Low-Emissions Development (BUILD) provides incentives to builders to find innovative and low-cost ways to build clean-energy homes. At least 30 percent of incentives go to low income housing. The Technology and Equipment for Clean Heating (TECH) Program incentivizes distributors and retailers to make more low-emissions space and water heating technologies available to improve health, safety, and energy affordability for low-income households.
7	AB 327	PG&E	DAC Green Tariff	This program will provide a 20 percent bill discount to customers in DACs who meet the income eligibility requirements for the CARE and FERA programs.
8	AB 1082 and AB 1083	PG&E	Empower EV	This program will provide an electric vehicle (EV) charger rebate and education pilot to provide EV chargers at little to no cost for PG&E residential customers with low to moderate incomes.
თ	N/A	PG&E	Relief for Energy Assistance through Community Help (REACH)	The REACH Program provides financial assistance for qualifying households throughout PG&E's service area. To qualify for the REACH financial support, a residential customer's household income must be at or below 200 percent of Federal Poverty Guidelines, must demonstrate an uncontrollable or unplanned change in their ability to pay their utility bill, must not have received REACH assistance within the past 18 months, and must have received a 15-day or a 48-hour disconnection notice.
10	D.17-12-003	PG&E	Fresno Energy Community Pilot	Results from proposed demand response pilots should contribute to the creation of new demand response programs, or significant improvements to existing programs, that can be implemented widely to augment the economic and/or environmental benefits demand response yields for DACs. Demand response can provide tangible environmental benefits to DACs by reducing localized air pollution and other detrimental environmental impacts.

1	b.	Address how San Joaquin Valley Pilot Program efforts to leverage
2		the ESA Program, per D.18-12-015, impact the utility's application.
3		The San Joaquin Valley Pilot Program (D.18-12-015) approved
4		pilot projects to replace propane and wood burning appliances in
5		12 DACs in the San Joaquin Valley. PG&E plans to provide electric
6		appliances to approximately 1,800 participants in the eight
7		communities of Allensworth, Alpaugh, Cantua Creek, Fairmead,
8		La Vina, Lanare, Le Grand, and Seville. Homes treated through this
9		pilot program will also be eligible for weatherization and all qualifying
10		measures through the ESA Program. The San Joaquin Valley Pilot
11		Program is still in the early stages of the implementation phase and
12		learnings have not been identified. As such, there are no impacts to
13		the utility's application at this time.
14	C.	Consider how the ESA Program may partner or leverage new
15		offerings for building electrification for low-income customers that
16		are approved by the Commission in Rulemaking 19-01-011.
17		On July 16, 2019, the Commission issued the Staff Proposal for
18		Building Decarbonization Pilots (Staff Proposal) via the
19		Administrative Law Judge's Ruling Seeking Comment on Staff
20		Proposal for Building Decarbonization Pilots (the Ruling).
21		Statutorily, the BUILD Program must reserve 30 percent of its
22		funding for low-income specific programs. The Staff Proposal
23		proposed that:
24		[A] portion of this low-income funding be devoted to incentives
25		for new low-income residential housing and a portion to a
26 27		contractor with low-income project development expertise to provide technical assistance to low-income residential project
28		developers. ¹⁰¹
29		Further development of specifics on the implementation for the
30		BUILD Program is expected to begin once the administrator and
31		implementor for the BUILD and TECH programs have
32		been determined.

¹⁰¹ *CPUC and CEC Staff Proposal for Building Decarbonization Pilots – Draft*, July 16, 2019, p. 32.

d. Discuss lessons learned from leveraging efforts to date, including 1 but not limited to Tribal Communities, Disadvantaged Communities, 2 other organizations and communities, and propose improvements to 3 current coordination efforts. [WITNESS: LEIVA JUNGBLUTH] 4 5 Lessons learned from leveraging efforts with Tribal Communities and DAC 6 There is low awareness of the ESA Program within tribal 7 8 communities in PG&E's territory. Increasing awareness requires developing relationships with local tribal government and 9 administrative staff to help communicate with tribal members and 10 11 promote the programs. In late 2018 and the first half of 2019, PG&E visited and 12 consulted with a number of tribes to promote the ESA Program.¹⁰² 13 Most recently, PG&E worked with the Yurok tribe to pilot and test 14 some best practices for outreach. The efforts included integration of 15 tribal support in multiple channels such as personalized letters to 16 members signed by tribal leaders, social media posts, flyers in the 17 tribal office and around buildings, and ESA representatives 18 19 attending on-site tribal events. Even with support and encouragement, some tribal members 20 are reluctant to participate in the ESA Program due to the condition 21 of the home. Working with local community action agencies or 22 23 contractors who have connections to the tribe is the best way to overcome the reluctance. Having a local resource or someone 24 known in the community be on-site to perform the in-home 25 26 assessment, makes the visit less threatening or intimidating. 27 Due to conditions of homes on tribal lands, plus the predominant use of alternative fuel sources such as propane, wood, 28 29 diesel, and solar, many of the ESA Program measures do not apply. 30 In order to address this, PG&E is proposing to raise the cap on the minor home repair for these communities from \$1,000 to \$2,500 in 31

¹⁰² See Attachment C for a complete list of Outreach with Native American Tribes.

1	order to help with feasibility criteria for measure installation and
2	positively impact household hardship.
3	Working with tribal communities also requires cultural sensitivity
4	to the tribes' many other priorities and traditions that limit their time
5	and availability. It would be helpful if outsiders acknowledge the fact
6	that building productive relationships with tribal communities
7	takes time.
8	Another hurdle for tribal communities to enroll in the ESA
9	Program is proof of ownership for individual residences. ¹⁰³ There
10	are many instances of lost paperwork or no paperwork, and the
11	occupant cannot provide acceptable proof of ownership.104 When
12	this occurs, the tribal council becomes involved which may cause a
13	delay in services being provided to the customer. ¹⁰⁵ It is better to
14	engage tribal leadership and staff before targeting any community
15	for services and outreach. It is also worthwhile to establish the list
16	of residents ahead of time, have the tribal staff validate ownership
17	status, and provide permission for the homes under their ownership.
18	The tribal leaders may also indicate any other agencies or
19	organizations that hold ownership. Doing these things first, before
20	any marketing and outreach will most likely improve
21	participation rates.
22	Lessons Learned from Leveraging Efforts with DACs
23	Refer to Section D.5.b. above for lessons learned from
24	leveraging efforts with DAC.

¹⁰³ ESA Contractor Tribal Survey by Richard Heath Associates Inc., August, 2018.
104 ESA Contractor Tribal Survey by Richard Heath Associates Inc., August, 2018.

¹⁰⁵ ESA Contractor Tribal Survey by Richard Heath Associates Inc., August, 2018.

e. Describe the benefits, if any, of California Department Community Services and Development (CSD) co-funding for efficient delivery of energy efficiency services to low-income tenants in your territory in the current cycle. If there is potential for such benefits, explain how to include CSD co-funding. [WITNESS: O'DRAIN]

CSD offers a similar menu of measures and services to low-income customers through its state- and federally-funded LIWP, 7 LIHEAP, and WAP as PG&E's ESA Program. CSD's programs offer a broader variety of measures than are offered by ESA, but with a smaller program budget, and CSD provides services to fewer customers. Leveraging funds enables the reach of both programs to expand. Through co-funding EE services to shared low-income customers, PG&E contributes to more income-gualified customers receiving more measures and the health and savings benefits they provide.

LIWP Leveraging

1

2

3

4 5

6

8

9

10 11

12

13

14

15

16

PG&E proposes to continue leveraging LIWP by co-funding 17 ESA measures available in-unit to income-gualified PG&E MF 18 19 tenants, as described in Section D.9. Co-funding ESA-eligible LIWP measures allows LIWP to expend more of its funding on measures 20 21 and services that are not available through ESA, including CAMs, ultimately resulting in services being provided to more 22 23 income-gualified California households.

Co-funding services is simpler than coordinating joint 24 installations, which requires development of standardized policies 25 26 and procedures, including installation and inspection criteria. Since 27 LIWP is a MF building program, this process would be managed by the third-party MFWB administrator. During the transition, when 28 29 PG&E is including MF unit treatments, PG&E plans to continue to 30 manage LIWP leveraging.

LIHEAP Leveraging 31

32 In parallel to the ESA Program, the federally-funded LIHEAP is administered by CSD and funded by the U.S. Department of Health 33 and Human Services. 34

I-97

1	LIHEAP provides assistance at various levels that include utility
2	bill assistance, assistance in times of state-identified crisis,
3	measures to resolve health and safety issues, and weatherization
4	for EE. An overview of the LIHEAP parameters is provided in
5	Table I-20.

TABLE I-20 CSD LIHEAP PARAMETERS

Line No.	Parameter	Description
1	Customer Eligibility	Any low-income (defined as 60 percent of state median income level) customer is eligible in California. Customers are prioritized to serve vulnerable populations and customers with high energy burden first.
2	Provider Eligibility	Federal regulations require that the program be implemented locally through non-profit organizations. These Provider organizations may hire for-profit subcontractors.
3	Allowable Measures	Program measures are selected to address health and safety and EE, to help keep families safe, comfortable, and reduce their energy burden. Measures may reduce usage of any fuel, such as electricity, natural gas, propane, fuel oil (kerosene), or wood.

6	When considering the income eligibility of a household for
7	services, customers participating in LIHEAP bill payment assistance
8	are categorically-eligible for the ESA Program; however, the reverse
9	is not the case, and customers participating in the ESA Program are
10	not categorically-eligible for LIHEAP services. The reason for this is
11	that LIHEAP is bound by a federal regulation that requires income
12	documentation be verified regardless of eligibility for state and other

programs; thus, ESA Program categorical qualifications would not 1 be accepted.106 2 In previous co-funded LIHEAP projects, PG&E and CSD agreed 3 which measures and services would be completed and charged to 4 which program.¹⁰⁷ For ease of administration, PG&E focused on 5 areas with shared contractors in past leveraging projects. During 6 the 2021-2026 ESA cycle, PG&E proposes leveraging projects with 7 8 CSD in focused areas, based on shared priorities, goals, and contractor availability. 9 As discussed with CSD, both PG&E and CSD are interested in 10 11 working together to help prevent customer disconnections. PG&E and CSD plan to focus first on leveraging services in low-income 12 areas with the highest rates of disconnections, located in Kern, 13 Fresno, Alameda, San Joaquin, and Humboldt Counties. PG&E 14 proposes to target collaboration in these areas. 15 Other priority areas to develop could include tribal and rural 16 areas with high reliance on propane or other non-PG&E 17 commodities. Developing opportunities in these areas where PG&E 18 19 is only able to address electric needs and CSD could serve

¹⁰⁶ LIHEAP-treated homes must verify income eligibility. All income for everyone in the household 18 years of age and older must be provided. Required proof of income may include the following depending on source of income: Gross wages: copies of check stubs for each pay period within the last 30 days; Self-employment: copy of the most current 1040 tax form with Schedule C (for self-employment) or Schedule E (for rental income); Jobs Paid in Cash: form CSD43B; Temporary Assistance for Needy Families (Cash Aid): notice of action for the current month and year; Unemployment: copy of EDD unemployment documentation reflecting a full consecutive month within the last 30 days; Child Support: statement from Department of Child Support Services or court order; Social Security Administration/Social Security Disability Income and/or Social Security Income: current bank statement showing direct deposit, award letter for the current year or copy of check; Pension/Annuities: statement indicating gross income within the last 30 days (bank statements are not acceptable). Other documentations includes: Food Stamps notice of action and Section 8 – Department of Housing and Urban Development (HUD) low-income housing notice.

¹⁰⁷ For example, See: RHA. CSD/PG&E Weatherization Programs Geographic Coordination Pilot – Final Draft. October 1, 2014; and The Sacramento Avenues Weatherization Project: A Collaboration between PG&E, SMUD, CRP, and Naildown Construction Energy. Presentation to the LIOB, San Diego: June 2, 2010. <u>http://www.liob.org/</u>.

1		customer's propane and other non-electric driven needs would allow
2		customers to receive more benefits.
3	f.	Describe the benefits, if any, of co-funding with water agencies for
4		efficient delivery of energy efficiency services to low-income tenants
5		in your territory. If there is potential for such benefits, explain how to
6		include similar co-funding.
7		California is a drought-prone state, and co-funding delivery,
8		installation, and measure costs to shared water and energy
9		customers is an effective way to provide water and energy savings
10		benefits to low-income customers that might not otherwise
11		receive them.
12		CPUC Requirement for Water Leveraging
13		D.17-12-009 specified that the IOUs develop collaboration
14		programs with the largest water agencies—including both water
15		retailers and water wholesalers—in their service territories. ¹⁰⁸
16		In 2018, PG&E identified 30 water agencies as the largest water
17		retailers and wholesalers in PG&E's territory. PG&E contacted each
18		water agency regarding participation in a customized Water
19		Coordination Program that leveraged ESA Program services in their
20		individual service areas. PG&E also hosted two Water-Energy
21		Forums (2018 and 2019) to discuss water-energy partnership
22		opportunities and assess interest of water agencies to collaborate
23		with PG&E to enhance water conservation efforts for
24		low-income customers.
25		PG&E's Current Approach
26		PG&E developed a water conservation program with water
27		agencies that leverages the existing ESA Program. By leveraging
28		ESA's access to low-income customer homes, PG&E helps water
29		agencies provide basic water conservation services and cold water
30		conservation measures to shared income-qualified water and
31		energy customers at relatively low cost to the utility. In 2019, PG&E
32		has agreements with six water agencies.

¹⁰⁸ D.17-12-009, Atch 1, OP 59 and OP 28.g.

1	PG&E currently provides a menu of five water conservation
2	services and three cold water conservation measures. Partnering
3	water agencies leverage PG&E's ESA presence in their customer
4	homes to provide these minor water services and installations.
5	Each partner agency pre-selects the specific ESA Water
6	Coordination measures and service options they wish to fund from
7	the menu. Maintaining a specific menu of services and measures
8	offered through the water coordination partnerships provides
9	multiple benefits for both PG&E and its partner water
10	agencies, including:
11	 Streamlined water agency decision making;
12	Limited standards development cost;
13	 Minimized training development and delivery costs; and
14	Reduced program administration complexity and cost.
15	PG&E's menu includes services and measures that can be
16	effectively funded by water agencies and performed by ESA
17	contractors as part of PG&E's ESA Water Coordination
18	partnership effort.
19	Listed in Table I-21 below are the current services and
20	measures funded by water agencies and performed by ESA
21	contractors as part of PG&E's ESA Water Coordination
22	partnership effort.

(a) When water heating fuel is not provided by PG&E, making measure unavailable through ESA.					

By August of 2019, the Energy-Water Leveraging Partnership 1 Program has served 2,443 income-qualified households. These 2 measures are expected to result in an estimated savings of 3 11.8 million gallons of water and 13,700 kWh per year. 4 Water leveraging 2021-2026 5 PG&E proposes to continue its leveraging partnerships with 6 identified water wholesalers and retailers in 2021-2026.109 Key 7 components of successful water/energy leveraging include: utilizing 8 the existing contractor network already adept in leveraging services 9 with other IOUs and programs; outreach to water agencies; 10 contracts with water agencies; contracts with contractors capable of 11 12 conducting the work; contractor management; water agency billing

¹⁰⁹ These were described in PG&E Advice Letter 3990-G-A/5329-E-A, approved in Energy Division NSDL dated January 4, 2019.

1		and reporting; tracking adherence to prevailing wage requirements
2		of public water agencies; and cross-program compliance.
3	g.	[Intentionally left blank as in the guidance document]
4		
5	h.	Discuss coordination with entities with existing affordable clean
6		energy programs including agencies such as California Energy
7		Commission, California Air Resources Board (CARB), which
8		adopted a 2018 Community Air Protection Blueprint identifying
9		communities most impacted by air pollution pursuant to Assembly
10		Bill 617 (Garcia, 2017). ¹¹⁰ Also identify any additional programs
11		that provide opportunities to promote public health and energy
12		efficiency in tandem. Examples may include, but are not limited to,
13		lead and asbestos programs, asthma reduction programs, etc.
14		Describe the potential benefits to delivery of energy efficiency
15		services to low-income households with significant need, if any,
16		through coordinating with CARB's Community Air Protection
17		Program, and/or prioritizing the first ten communities identified by
18		CARB. ¹¹¹ If there is potential for such benefits, describe any
19		policies or programs to achieve these benefits.
20		[WITNESS: LEIVA JUNGBLUTH]
21		PG&E is actively engaged in CARB's implementation of the
22		AB 617 Community Air Protection Program, which is focused on
23		reducing criteria air pollutants and air toxics in selected
24		communities. Five of the selected communities are in PG&E's
25		service area and are detailed in Table I-22 below.

¹¹⁰ 'Community Air Protection Blueprint' available at <u>https://ww2.arb.ca.gov/our-work/programs/community-air-protection-program/community-air-protection-blueprint</u>.

¹¹¹ These are the communities with highest cumulative impacts from multiple pollution sources in CA.See: https://ww2.arb.ca.gov/our-work/programs/community-air-protection-program.

TABLE I-22 COMMUNITIES IN PG&E'S TERRITORY SELECTED BY CARB FOR IMPLEMENTATION OF **AB 617 COMMUNITY AIR PROTECTION PROGRAM**

Line No.	Community	Monitoring Plan	Action Plan
1	West Oakland		Х
2	Richmond	Х	
3	South Sacramento/Florin	Х	
4	Shafter	Х	Х
5	South-east Fresno	Х	Х

1 Protection plans are expected to be developed for Richmond 2 and South Sacramento once a monitoring plan is underway. In South Sacramento/Florin, PG&E provides gas service only. 3 For all plans, whether monitoring or emissions reduction, the 4 5 specific geographic areas of focus and the strategies to be utilized for achieving abatement of air pollution are expected to be identified 6 via the community-focused, joint decision-making framework. That 7 8 framework relies on decisions made by a steering committee comprised of the local air quality management district and 9 community members. PG&E has a dedicated team that is currently 10 11 engaged in the process. Their goal is to coordinate with steering committees to provide information on PG&E programs and services 12 that can support the emissions reduction strategies and 13 14 implementation plans. The five communities are also considered DACs and will most likely be a prioritized need state for outreach 15 with the new ESA Plus Program. 16

17 İ. Identify any additional programs that provide opportunities to promote public health and energy efficiency in tandem. Examples 18 may include, but are not limited to, lead and asbestos programs, 19 asthma reduction programs, etc.

There are state and local agencies and programs that could 21 potentially provide opportunities to promote public health and EE in 22 23 tandem. Some of these agencies include:

CA Department of Public Health; and 24

20

25

CA Department of Health Care Services (DHCS).

1	Some of the programs DHCS administers, mandated by the
2	federal government or required by state law, include: CA Children's
3	Services Child Health and Disability Prevention Program,
4	Genetically Handicapped Persons Program, Family Planning,
5	Access, Care, and Treatment Program, Program of All-Inclusive
6	Care for the Elderly, Every Woman Counts, Coordinated Care
7	Management. DHCS also administers programs for underserved
8	Californians, including farm workers and American Indian
9	communities.
10	CA Department of Veteran Affairs
11	CA Office of Environmental Health Hazard Assessment
12	CA Department of Social Services
13	 DSS administers: Women, Infants and Children; In-Home
14	Supportive Services; CalWORKS
15	CA Disability Services Association
16	 RAMP (Regional Asthma Management & Prevention)
17	Mosquito Abatement Programs
18	 Public and Community Health Professionals (cities, counties,
19	public agencies)
20	a) Identify any additional leveraging opportunities.
21	[WITNESS: O'DRAIN]
22	PG&E has explored leveraging arrangements with several
23	municipal utilities in its service area, including SMUD and
24	Redding Energy Utility (REU), and plans to continue these
25	leveraging these opportunities in 2021-2026 if feasible.
26	SMUD
27	PG&E plans to continue leveraging activities with the SMUD
28	in 2021-2026. PG&E and SMUD overlap in the Sacramento
29	area, with SMUD providing electric services and PG&E
30	providing gas services. Both utilities provide EE services to
31	income-qualified customers and are now leveraging the same
32	contractor for our programs in 2019. The shared contractor
33	assesses qualifying homes, and then bills each utility
34	appropriately for the measures and services provided to support

1	its commodity, thus reducing the number of visits and customer
2	touch points.
3	Redding Energy Utility (REU)
4	PG&E also plans to continue to coordinate with REU.
5	In 2019, the PG&E ESA Program coordinated with REU's
6	weatherization program for income-qualified customers. The
7	program offers natural gas and electricity saving measures to
8	customers served by both PG&E and REU. Income-qualified
9	Redding natural gas customers that participate in PG&E's ESA
10	Program were automatically enrolled in REU's program and
11	receives all feasible electric measures in addition to the gas
12	ESA measures. The joint program leveraged training,
13	processes, and customer touches to minimize program
14	implementer costs and resources, while providing maximum
15	benefit to customers. In 2018, PG&E leveraged
16	704 REU homes.
17	6. ESA Measure and Portfolio Composition
18	[WITNESS: LEIVA JUNGBLUTH]: Discuss the proposed
19	measure mix.
20	The measures proposed for the 2021-2026 ESA Program Cycle are
21	listed by category in Table I-23 below. This mix of measures has been
22	determined to be optimal for deployment based on the program
23	considerations of cost effectiveness, energy savings, hardship
24	reduction, difficulty of installation, and customer acceptance
25	and satisfaction.

TABLE I-23 PG&E'S PROPOSED ESA MEASURES

Line			Domestic Hot			
No.	HVAC	Enclosure:	Water:	Lighting:	Appliances:	Miscellaneous:
1	Blower Motor Retrofit*	Air Sealing/ Envelope*	Faucet Aerators*	Vacancy Sensor*	Refrigerator*	Tier 2 Advanced Power Strip*
	Furnace Repair/ Replacement*	Attic Insulation*	Showerhead*	LED A-Lamp*	Refrigerator*	Pool Pump
	High Efficiency	Minor	Water Heater Repair/	LED	High Efficiency	Air Purifier*

	Central Heat Pump*	Sealing	Water Heater Blanket*	Hardwired Fixture*		
	Smart Thermostat*	Insulation Minor	Water Heater Pipe Insulation*			
	Evaporative Cooler	Home Repair Plus*	Thermostatic Shower Valve*			
	Central A/C Replacement	1 100	Combined low-flow Showerhead and			
	Central A/C Tune-up*		Thermostatic Shower Valve*			
	Prescriptive Duct Test and Seal		Thermostatic Tub Spout/ Tub Diverter*			
	Portable A/C*		Water Heater Repair/			
	Furnace Repair/ Replacement for Renters*		Replacement for Renters*			

Notes: All italicized measures are newly-proposed measures.

Measures marked with an asterisk are also offered as multi-family in-unit measures.

1

2

A subset of the new measures are proposed to target customers in

specific need states for hardship reductions and are listed in Table I-24.

TABLE I-24 PROPOSED ESA MEASURES FOR PG&E NEED STATES

Line No.	Plus Measures	High Usage	Medical Baseline	DAC/ Tribes	Rural	Wildfire Threat
1	Diagnostic Driven Air Sealing	Х				
2	Floor Insulation	Х				
3	Air Purifier		Х	Х		
4	Portable A/C		Х	Х	Х	
5	Minor Home Repairs Plus			Х	Х	
6	Cold Storage					Х

1 a. Identify specific measures that reduce the utility's program costs in offering ESA services and/or increase the benefit to the customer. 2 Include new technologies. 3 Specific measures do not reduce PG&E's overall program costs 4 in offering ESA services. It is PG&E's practice to negotiate a fair 5 price on all materials and labor for every measure. Individual 6 measures are evaluated on a cost/benefit ratio and aggregated to 7 determine the total Cost Effectiveness score for the program. 8 Refer to Section D.6.b.i. for detail on ESA Cost Effectiveness Test. 9 All measures provide a level of benefits to customers either through 10 energy savings and subsequent bill savings (Resource Measures), 11 12 or through improvements in HCS (Non-Resource Measures). Some measures provide more benefits than others. Both costs and 13 savings for measures can be reviewed in Chapter IV, Table A-4 14 15 Planning Assumptions.

With respect to new technologies as measure offerings, PG&E 16 is not proposing any at this time. Based on the insights from the 17 18 PCT TOU Pilot, (Sections B.2 and D.6.d.i.) where customers were generally disinterested in the device, along with comments made 19 20 about customer reluctance with new technologies from LIOB 21 members at the LIOB Workshop held on September 16, 2019 in San Diego, and comments from other stakeholders, specifically the 22 23 community action agencies in Fresno during the ESA Open House on August 20 and 21, 2019, PG&E finds new technologies often 24 score low on the customer acceptance and satisfaction criteria. 25

I-108

1	In addition, depending on the technology and device, there can be
2	issues with installation and lack of proof of energy savings or
3	HCS benefits.
4	b. Cost Effectiveness and Other Criteria for Program Measures:
5	[WITNESS: O'DRAIN]
6	i. Describe the criteria used to compose the portfolio.
7	The ESA Program Measures portfolio was initially
8	developed using six criteria to guide measure selection.
9	The six criteria are:
10	1) <u>Strategic Fit</u> : How does the product align with Regulatory
11	direction? How does the measure align with other IOUs?
12	Are there leveraging opportunities?
13	2) Customer and Contractor Impacts: How likely is the
14	customer to receive/use this measure? How difficult is the
15	measure for the contractor to install?
16	3) <u>Non-Energy Benefits</u> : Does this measure reduce negative
17	health impacts or improve customer comfort? Does
18	this measure reduce GHG emissions and/or
19	water consumption?
20	4) Energy Savings: How much energy does this
21	measure save?
22	5) Implementation: What are the permitting, inspection, and
23	ancillary repair requirements for this measure? How does
24	the cost affect overall program budget?
25	6) <u>Cost Effectiveness</u> : Is this measure cost effective?
26	Once the preliminary portfolio composition was set, the
27	measures were further refined using the ESACET. The
28	ESACET is the primary cost effectiveness test for the ESA
29	Program and includes all measures and all known benefits and
30	costs, including NEBs and administrative costs. ¹¹²

¹¹² D.14-08-030, OP 43. D.19-06-022, Attachment A, pp. 16 and 24-25 requires ESA to use and discuss the methodology adopted in D.14-08-030 in this application, which includes consideration of non-energy benefits, including participant HCS.

1	The secondary ESA cost effectiveness test is the Resource
2	Test (formerly known as the Resource TRC). ¹¹³ The Resource
3	Test includes only the avoided cost benefits and the installation
4	costs for the measures; NEBs and administrative costs are not
5	included in the test. Therefore, it is not comparable to the
6	ESACET but provides some information on the contribution of
7	resource measures to the program.
8	Health, Comfort and Safety Evaluation
9	D.14-08-030 directed the IOUs to conduct a preliminary,
10	qualitative Equity Evaluation during the 2015-2017 cycle.114
11	The CEWG worked with the IOUs in 2017 to perform this
12	assessment, renamed the HCS Evaluation, ¹¹⁵ and reviewed
13	the results.
14	The HCS Evaluation included a rating from 0 to 5 for each
15	program measure that reflects the extent to which that measure
16	mitigates one of four potential HCS issues. ¹¹⁶ The four HCS
17	issues address the extent to which the measure:
18	1) Eliminates combustion-related safety threat;
19	2) Eliminates fire safety threat/improves home security
20	(crime prevention) and building integrity;
21	3 Reduces or eliminates extreme temperatures and
22	temperature variations inside the home/improves customer
23	ability to manage in-home temperatures; and

¹¹³ The CEWG recommended that the Resource TRC test be renamed the "Resource Test" in their June 2018 report. This was to avoid confusion caused by including the acronym "TRC" in the test name and make it clearer that this test is different from the more widely used Total Resource Cost (TRC) test as described in the Standard Practice Manual.

114 D.14-08-030, OP 43.d.

¹¹⁵ ESA Health Comfort Safety Evaluation 2017 (December 2017). Available at: <u>https://pda.energydataweb.com/#!/documents/2120/view</u>.

¹¹⁶ The Equity Evaluation (or ESA Health Comfort Safety Evaluation) rating indicates the extent to which every ESA measure achieves each particular health or safety improvement. A rating of "1" indicates that the measure results in that particular improvement for only a small number of homes which receive it, and "5" indicates that the measure almost always results in that particular improvement.

1	4) Improves air quality, ventilation, and/or air flow
2	(e.g., reduces drafts and leakage).
3	The original HCS Evaluation results were posted on the
4	Commission's public document website in December 2017.117
5	The CEWG recommended the HCS evaluation continue to be
6	conducted periodically as needed for program planning
7	and NEB updates, and PG&E conducted an HCS
8	(Resource/Non-Resource) evaluation of the measures included
9	in its proposed 2021-2016 portfolio in order to score them as
10	Resource or Non-Resource Measures for Chapter IV,
11	Tables A-5, A-7, A-8, and A-9.
12	While PG&E used the same scoring criteria for the original
13	2017 HCS Evaluation, most measures provide both resource
14	and non-resource benefits. Measures are scored as being
15	either resource or non-resource measures for purposes of
16	analyzing cost-effectiveness. Assigning measures as Resource
17	or Non-resource is predicated on energy savings, and a
18	measure that provides even minimal energy savings will be
19	rated as a Resource measure, even if it provides more HCS
20	benefits. Measures and sub-measures with zero or less $k \ensuremath{W}\xspaceh$ or
21	Therm annual savings are scored as non-resource
22	measures. ¹¹⁸
23	Non-Energy Benefits
24	PG&E included NEBs from the 2019 NEBs 2.0 Study in
25	ESACET. These updated NEBs are discussed in Section B.2.
26	Because of errors discovered in the new NEBs 2.0 model
27	produced as part of the NEBs 2.0 Study, PG&E updated the
28	NEBs inputs in the old NEBs 1.0 (Low income Public
29	Participation Test (LIPPT)) model to use for the 2021-2026

^{117 &}lt;u>https://pda.energydataweb.com/#!/documents/2120/view.</u>

¹¹⁸ PG&E modified the CEWG recommendation that measures having less than 1 kWh or 1 therm of annual energy savings be categorized as non-resource measures for the Resource Test from "less than 1" to "zero or less". See: Recommendations of the ESA Program CEWG, June 1, 2018, p. 9.

1		ESACET. NEBs were allocated across measures in the ESA		
2		portfolio manually using the general methodology described in		
3		the NEBs 2.0 Study.		
4		1. PG&E categorized individual measures as Resource or		
5		Non-Resource, based on whether they provided energy		
6		savings (see Appendix A, Tables A-8 and A-9 for measure		
7		Resource/Non-Resource (R/NR) categorizations).		
8		2. PG&E assigned NEB values into related categories, based		
9		on which specific measures and aggregated measure		
10		groups have likely contribution to each NEB effect.		
11		3. PG&E allocated aggregated NEBs savings by total cost		
12		between Resource/Non Resource (ratio)		
13		a. PG&E allocated the share of the NEB's effect that is		
14		contributed by each causal measure based on a		
15		combination of measure cost, commodity, and other		
16		multiplicative importance factors tailored to		
17		specific NEBs.		
18		i. Resource portion assigned according to energy		
19		savings.		
20		ii. Non-Resource portion assigned according to the		
21		total aggregated cost for assigned NEBs category.		
22		The result is that each NEBs value is shared in defensible		
23		ratios among contributing program measures so that		
24		100 percent of NEB value is accounted for in the ESA portfolio.		
25		Previously, NEBs were allocated based on a measures'		
26		energy savings. A significant flaw with this allocation is that		
27		measures, such as furnace repair and replacement, which		
28		provide zero or negative savings, would be allocated no NEB		
29		value. However, this measure is performed solely for its		
30		non-energy (safety) benefits and should receive a high		
31		NEB score. The new allocation method addressed this flaw.		
32	ii.	Describe how the portfolio composition results in deeper		
33		energy savings.		

1		PG&E prioritized measures providing higher energy savings
2		s 2021-2026 ESA portfolio. PG&E also reconsidered criteria
3		could help provide more high energy savings measures to
4	qua	lifying customers. For example, in Table I-26 of
5	Sec	tion D.6.c., and in Section D.7., PG&E discusses revised
6	refr	gerator criteria that would help more customers receive the
7	ene	rgy saving benefits this measure delivers. Measures with
8	low	energy savings that provided minimal NEBs were assessed
9	for _l	ootential retirement, as described in Table I-26 in
10	Sec	tion D.6.c.
11	iii. Des	cribe how criteria used to compose the portfolio effectively
12	sele	ects measures to include that will have a positive impact on
13	cus	tomer bills and hardship reduction.
14		The measure portfolio is composed by evaluating how each
15	mea	asure contributes to energy savings for the customer, and
16	whi	ch measures provide NEBs to help with hardship reduction.
17	The	measure portfolio selection process is described in further
18	deta	ail in Section D.6.b.i.
19	iv. Dise	cuss the cost-effectiveness results of proposed measures
20	(coi	nsistent with methodology adopted in D.14-08-030.) Explain
21	ass	umed values and variables and other model components.
22	Idei	ntify specific source for each measure's anticipated energy
23	sav	ings (e.g., deemed workpaper ID), and whether a measure is
24	a N	on-Resource or "equity" measure (i.e., may result in negative
25	sav	ings but improves health, comfort, and safety).
26		Cost effectiveness results of specific measures are shown
27	in T	ables A-8 and A-9 in Chapter IV. Resource/Non-Resource
28	mea	asures are also identified in Tables A-8 and A-9.
29	Res	ource/Non-Resource scoring criteria are discussed in
30	Sec	tion D.6.b.i. above. Individual measures need not be cost
31	effe	ctive as it is the total portfolio that is assessed. ¹¹⁹

¹¹⁹ D.14-08-030, OP 43(a), and reaffirmed in D.17-12-009, pp. 222 and 405.

 v. Provide justification for measures included in the portfolio (if any) that do not meet the current cost effectiveness criteria, but serve other important policy objectives (such as to reduce hardships).
 ESA does not have mandated cost effectiveness criteria at the portfolio level or at the measure level. In developing the ESA portfolio, PG&E used an average ESACET score of 0.7 for the program cycle at the portfolio level as the cost effectiveness criteria for evaluating measures in the proposed programs. In order to maintain a portfolio ESACET of 0.7 or above, an ESACET minimum score at the measure level is necessary to evaluate which measures should compose the proposed portfolio. PG&E used a measure level ESACET score minimum of 0.3 and measure volume to consider measures for removal due to low cost effectiveness.

1 2

3

4 5

6

7

8

9

10

11

12

13

14

15

16Table I-25 lists the measures that do not meet cost17effectiveness criteria but are proposed to remain in the portfolio,18since they provide HCS benefits to customers. Refer to19Table I-27 in Section D.6.e. for PG&E's proposed modifications20for existing measures. Refer to Table I-26 in Section D.6.c. for21PG&E's proposed measures for retirement.

TABLE I-25 MEASURES ADVERSELY EFFECTING COST EFFECTIVENESS AND REMAINING IN THE PROGRAM

Line No.	Category	Measure	Cost Effectiveness (CE)	Reason to Remain
1		Air Sealing/Envelope	Resource measure with low cost effectiveness; ESACET <0.3	HCS to reduce hardship
	Existing	Blower Motor Retrofit	Resource measure with low cost effectiveness; ESACET <0.3	This measure provides electric savings, increases comfort, and reduces noise. The ESACET score to installation rate ratio for this measure has little impact on the portfolio level ESACET.
	Measures	Central A/C Tune-Up	Resource measure with low cost effectiveness; ESACET <0.3	HCS to reduce hardship
		Exterior LED Lighting	Resource measure with low cost effectiveness; ESACET <0.3	This measure provides electric savings and increases safety. The ESACET score to installation rate ratio for this measure has little impact on the portfolio level ESACET.
2		Air Purifier & Portable A/C	Non-Resource measure with low cost effectiveness; ESACET <0.3	HCS to reduce hardship
	New Measures	Cold Storage	Non-Resource measure with low cost effectiveness; ESACET <0.3	HCS to reduce hardship

8

9

vi. For all measures identify which are in-unit or common area.

MF in-unit treatments are included in the proposed ESA Plus Program, as defined in Section D.1. above. Table I-23 in Section D.6. identifies the measures that are available for MF in-unit customers. PG&E proposes moving MF in-unit and CAM into the MFWB Program as discussed in Section D.9, and as illustrated in Figure 1.4. The measures for both MF in-unit and CAM are expected to be defined as a result of the solicitation for the MFWB Program.

1	C.	Identify measures from the prior portfolio for retirement along with
2	i	the measure's values and explain the requested retirement
3		PG&E requests the measures listed in Table I-26 be retired from
4	t	the prior portfolio, because of low cost effectiveness as indicated by
5	t	the ESACET scores or because of zero or negative energy savings
6	I	per the 2015-17 Impact Evaluation. As discussed in Section D.6.c.,
7	I	measures with an ESACET of 0.3 or less were considered for
8	I	retirement. The measures proposed for retirement are resource
9	I	measures with low to no energy savings, rather than HCS benefits,
10	I	being the primary consideration for evaluation. PG&E proposes to
11	I	replace the Duct, Test, and Seal measure with Prescriptive Duct
12	:	Sealing, which involves a different installation methodology, to
13	i	mprove the cost effectiveness of this measure. The proposed
14	I	measure retirements result in a portfolio with an overall higher
15	I	ESACET score.

TABLE I-26 PROPOSED ESA MEASURES FOR RETIREMENT

Line No.	Category	Measure	Reason for Removal
1	HVAC	Smart Fan Delay/ Efficient Fan Controller	Negative energy savings per 2015-17 Impact Evaluation
		Duct, Test, and Seal	Negative energy savings per 2015-17 Impact Evaluation
2	Lighting	Torchiere	Resource measure with low cost effectiveness; ESACET = 0.17
		Interior Hardwired Fixture – Ceiling	Resource measure with low cost effectiveness; ESACET = 0.19
		Interior hardwired fixture – Sconce	Resource measure with low cost effectiveness; ESACET = 0.10
		Interior hardwired fixture – Vanity	Resource measure with low cost effectiveness; ESACET = 0.19

 Discuss findings from programable communicating thermostats/smart thermostats through pilot studies and/or temporary allowance (mid-cycle advice letter non-standard dispositions).

D.17-12-009, OP 147 directed the electric IOUs to conduct a smart thermostat TOU pilot to determine whether smart thermostats are a helpful energy management tool for low-income customers to support their transition to TOU rate plans. The pilot would also evaluate if connected technology can assist low-income customers in lowering high air conditioner-driven electric energy usage.

PG&E recruited customers to participate in the pilot and initiated pilot activities in early 2019. Installation of all feasible thermostats and the rate change to TOU were completed in the first quarter of 2019. Enrolled customers receive bill protection for the duration of the pilot; a bill credit would be provided if they end up paying more for their energy bills while being on the TOU rate. Pilot participants have completed the first of three surveys as part of the study design. The second of three surveys is planned for early November 2019, in order to capture customer feedback on summer bill impacts. Pilot findings, including survey results, a load impact analysis, gross energy and demand saving impacts, and installations lessons-learned will be included in the pilot final report, due to the CPUC in March 2020.

> Results from the first survey provides information regarding how low-income customers currently view their energy usage and implications for scaling up smart thermostat installations and the devices' perceived benefits to the general low-income population. Survey findings are summarized as follows:

- Barriers to participation include general lack of interest in smart thermostats;
- Elderly or health related reasons for disinterest in the smart thermostat offering;

1	 Incompatible equipment in homes (e.g., existing wiring
2	configuration requirement, inaccessibility, despair condition
3	of existing HVAC equipment);
4	 Potential cooling savings may not be realized, given that
5	50 percent of survey respondents reported that they only
6	use their A/C on very hot days; and
7	 Supplemental cooling is very popular, and survey
8	respondents are very accustomed to turning on fans instead
9	of using A/C.
10	PG&E will incorporate these findings as smart thermostats
11	are introduced into the program in late 2019.
12	ii. Discuss whether to expand the existing policy, that only
13	operable air conditioning units are eligible for repair and
14	replacement, to also authorize repair or replacement of
15	inoperable units.
16	In PG&E's current program, the repair or replacement of an
17	existing inoperable central A/C unit is not offered. PG&E does
18	replace inoperable room A/Cs as part of the existing program
19	and this measure is included in PG&E's proposed design.
20	PG&E proposes the existing policy of limiting central A/C
21	repair/replacement to operable units remain in place. While
22	repairing or replacing an inoperable A/C unit may provide HCS
23	benefits to customers, it also has the potential to significantly
24	increase customer bills, thus resulting in additional hardship.
25	Due to this implication, PG&E proposes offering Portable A/Cs
26	with the goal of increasing HCS benefits, while minimizing bill
27	impacts for customers in the Medical Baseline and
28	DAC/Tribal/Rural need states. Refer to Section B.1.c. for details
29	on PG&E's needs states.
30	PG&E proposes to make Portal A/Cs available to Medical
31	Baseline and DAC/Tribal/Rural customers without an existing
32	central A/C or with an inoperable central A/C. The portable A/C
33	would offer HCS benefits by providing cooling in the space
34	where A/C is needed the most, rather than cooling the entire

1	hom	e and potentially increasing energy bills. This measure is
2	prop	osed to be available to both home owners and renters in
3	thes	e needs states. PG&E proposes offering this measure in
4	Clim	ate Zones 11, 12, 13, and 14, which is consistent with
5	PG8	E's approach on cooling measures, as discussed in
6	Sect	ion 6.d.iii. below.
7	iii. Disc	uss potentially offering heating and cooling measures to
8	new	climate zones to reduce hardships.
9		PG&E's heating measures are currently available for all
10	PG8	E climate zones, and PG&E proposes to continue offering
11	heat	ng measures in these same climate zones.
12		PG&E expanded offering cooling measures to new climate
13	zone	s in the 2017-2020 program cycle based on the approval of
14	PG8	E's Mid-Cycle AL. ¹²⁰ Climate zones were expanded to
15	offer	cooling measures in climate zones 11, 12, 13, and 14, at a
16	mini	num. These climate zones are a focus for cooling
17	mea	sures due to the potential to reduce customer energy use
18	and	oills based on Cooling Degree Days from the Guide to
19	Calif	ornia Climate Zones and Bioclimatic Design ¹²¹ for these
20	clima	ate zones. In addition, the 2016 LINA Study ¹²² identified
21	the r	eed for cooling measures to address customer health,
22	com	ort and safety in climate zones with high cooling degree
23	days	. Since PG&E's cooling measures are already offered in
24	clima	ate zones with high cooling degree days, PG&E is not
25	prop	osing to expand cooling measures to new climate zones.

¹²⁰ PG&E's Mid-Cycle AL3990-G/5329-E (July 16, 2018), AL3990-G/5329-E-A (September 14, 2018), 3990-G/5329-E-B (October 8, 2018). NSDL on AL3990-G/5329-E-A, 3990-G/5329-E-B partially approving PG&E's Mid-cycle requests was issued on January 4, 2019.

e. Measure Modifications

1

2

3

4 5

6

7

8

PG&E proposes to modify measures from the prior portfolio for the following three reasons: (1) increase potential energy savings for customers; (2) assist in reducing hardship for customers; and (3) minimize the negative impact to the portfolio's cost effectiveness for high volume measures with significantly reduced energy savings. Table I-27 summarizes PG&E's proposed measure modifications along with reasons for each modification requested.

In PG&E's current ESA Program, the repair and replacement of 9 water heaters and furnaces are offered to all housing type owners in 10 all climate zones—renters are excluded from the current measure. 11 Due to the increasing equity gap between homeowners and 12 renters,¹²³ PG&E proposes to extend these two measures to 13 renters in all climate zones, offering HCS benefits to reduce 14 hardship for rental customers. Because property owners bear some 15 level of responsibilities to providing functioning equipment for 16 renters, we are proposing a property owner co-pay of \$250 and 17 \$500 for repairs and replacements, respectively. The co-pays are 18 19 designed such that they do not entirely take away landlords' obligations to maintain equipment and provide a habitable 20 21 environment, but provide incentives and reduce barriers in doing so.

¹²³ Eggleston, Jonathan, and R. Munk, "Net Worth of Households: 2015," Current Population Reports, P70BR-164, U.S. Census Bureau, Washington, D.C., 2019.

TABLE I-27 PROPOSED MEASURE MODIFICATIONS

Line No.	Category	Measure	Modification	Reason for Modification	Comments
~	Appliances	Second Refrigerator	Remove requirement of minimum household size	The eligibility change allow households with a second refrigerator to benefit from cost effective energy savings provided by this measure. In addition, it increases portfolio energy savings and NEBs as reflected in the ESACET score.	Refer to Section D.7.11 for Policy Change
		Refrigerator	Change age criteria to be based on Effective Useful Life (EUL)	Refrigerator efficiency is not dictated by the year of the last major refrigerator efficiency standards revision, as was in the 1990s. Changing the replacement criteria to match the EUL allows this measure to remain relevant throughout the program cycle and customers to benefit from the cost effective energy savings provided by this measure.	Refer to Section D.7.12 for Policy Change
2	Domestic Hot Water	Water Heater Repair and Replacement	Expand to Renters with Property Owner co-pay	Reduces hardship for renters by addressing unsafe and/or inoperable equipment.	Refer to Section D.7.14 for Policy Change
б	Enclosure	Minor Home Repairs Plus	Cap increased from \$1,000 to \$2500 for customers identified in the DAC, Tribal and Rural need states	Addresses disrepair of homes to meet feasibility criteria for measure installation to positively impact household hardship.	Refer to Section D.5.d for details
4	HVAC	Furnace Repair and Replacement	Expand to Renters with Property Owner co-pay	Reduces hardship for renters by addressing unsafe and/or inoperable equipment.	Refer to Section .D.7.14 for Policy Change
ى ب	Lighting	LED A-Lamp	Introduce measure cap of 4 lamps per home	Energy savings for LEDs are reduced by 93 percent with the baseline change from incandescent to CFL, significantly reducing savings to customers. The ESACET score combined with the large volume of this measure adversely impacts the ESACET at the portfolio level. Introducing a measure cap minimizes the cost-effectiveness impact to the ESA portfolio.	Refer to Section D.7.13 for Policy Change

~

2 Applications for 2021-2026 may propose modifications to rules in 3 the ESA Policy and Procedures Manual or prior Commission decisions. 4 List here all proposed rule modifications necessary to implement your 5 proposed design and delivery. For each rule modification: 6 a. Provide justification for the rule modification if not already discussed in the design and delivery section(s). 8 b. Provide quantitative and/or qualitative analysis of the benefit to 9 customers in hardship reduction and impact to customer bills. 10 c. Provide associated impact to the ESA portfolio budget and energy 11 savings. 12 PG&E proposes 17 ESA modifications. These are described below. 13 PG&E's ESA and CARE policy modifications are also detailed in 14 Appendix B. 15 1) Allow automatic enrollment of CARE self-certification customers to 16 receive installation of simple measures only, provided in PG&E's 17 proposed ESA Basic level of program delivery. 18 PG&E requests that CARE customers not be required to provide 19 income verification to participate in its proposed ESA Basic measure 20 installation, described in Section D.2.a. 21	1	7.	Proposed Rule Modifications:

34 customers maximize the benefits available to them while helping the	33		PG&E sees this as a way to help qualified low-income		
	34		customers maximize the benefits available to them while helping the		

1	CARE Program maximize penetration rates. The majority of eligible
2	ESA customers are already enrolled in CARE, but if they are not,
3	PG&E's ESA contractors will inform them of automatic enrollment
4	before they participate in ESA.
5	Justification
6	Enrolling qualified customers in CARE rate assistance and EE
7	programs helps them receive the maximum benefits available to
8	them, in addition to helping PG&E to realize potential in the most
9	cost-effective way possible.
10	Analysis of Customer Benefit
11	Qualified low-income customers will receive CARE benefits they
12	are entitled to.
13	Anticipated Impacts to ESA
14	Impacts to ESA are minimal, as ESA Energy Specialists already
15	inform customers that are not on CARE about automatic enrollment,
16	as well as other ways to enroll in the rate.
17	3) Authorize the ESA Working Group (ESA WG) process described in
18	Section E.4.
19	Justification
20	The ESA Working Group is expected to provide greater
21	transparency of ESA technical issues, and potential efficiencies
22	through greater standardization. This Working Group is based on
23	the previous MCWG, ¹²⁴ which was successful in bringing interested
24	stakeholders together to update the ESA Policy and Procedures
25	Manual and ESA Installation Standards Manual. PG&E believes
26	that this new Working Group will provide increased transparency
27	and increase program flexibility.
28	Analysis of Customer Benefit
29	More flexibility to update program will likely help the IOUs keep
30	the programs updated with the most current measures providing
31	customers with the best energy and NEBs.

¹²⁴ Established in D.12-08-044, and re-convened in D.16-11-022, OPs 67 and 137, and Section 3.13.2, pp. 241.

1		Anticipated Impacts to ESA
2		Adding a standing Working Group would create additional
3		administrative costs for IOUs to manage the process.
4	4)	Modify process for measure changes and fund shifting, as described
5		in Section E.4.
6		Because PG&E is proposing a new program, it requests
7		flexibility to adjust based on its experience as the program rolls out.
8		PG&E requests the ability to make measure modifications and fund
9		shifts through advice letters or ESA-CARE Monthly Reports. The
10		process for fund shifts aligns with fund shifting authority already
11		provided to the CARE Program in D.06-12-038, requested and
12		discussed in Item 10 in this section. PG&E requests the ability to
13		make measure modifications during the program cycle—including
14		adding or retiring measures—similar to the process used by the
15		IOUs' EE programs, described in Section E.4.
16		PG&E anticipates that modifying the fund shifting and measure
17		modification process would accommodate many of the adjustments
18		that will be necessary to successfully run PG&E's new innovative
19		ESA Programs and to implement any program changes that may be
20		required based on experience and lessons learned over the course
21		of the program cycle.
22		Justification
23		The 2021-2026 program cycle will be the longest ESA Program
24		cycle to date. Flexibility to make adjustments to ESA will be critical
25		to the program's success.
26		Analysis of Customer Benefit
27		Having the ability to retire poorly performing measures and add
28		new measures that provide more energy savings or NEBs will likely
29		allow the program to benefit more customers.
30		Anticipated Impacts to ESA
31		More flexibility allows program managers to assess and
32		prioritize better performing measures to optimize the
33		program portfolio.

 Replace the Annual Report Public Meeting with a public meeting convened by the ESA WG at a minimum of every two years to discuss lessons learned and potential program adjustments. Justification

D.12-08-044, OP 5(b) directed the IOUs to convene a minimum of one public meeting per year, within 60 days of their ESA-CARE annual report filings, and other public meetings as deemed necessary by either the IOUs, the Energy Division, the ALJ, or the Commission.¹²⁵ ESA and CARE public meetings are currently held to discuss studies, and IOUs report and discuss program results and activities regularly to the LIOB at their quarterly public meetings and subcommittee meetings.

The Annual Report meetings have seen less active participation 13 and discussion over the years, as it seems there has been more 14 interest by the public in attending specifically focused program 15 meetings. PG&E proposes that the obligatory Annual Report 16 meetings be discontinued and replaced with a combination of 17 biennial public working group meetings (as described in 18 19 Section E.4.) and other focused meetings to discuss studies and other specific topics as needed. 20

Analysis of Customer Benefit

PG&E believes public meetings that engender increased stakeholder interest and engagement facilitate opportunities for more meaningful public discussion about the ESA Program, ultimately contributing to increased customer benefits.

26 <u>Anticipated Impacts to ESA</u>

Decreases program costs to plan and conduct public meetings that provide questionable benefits.

PG&E requests permission to propose policy changes based on the
third-party administrator's design for PG&E's MFWB Program
following the MFWB solicitation.

22 23

24

25

27

28

¹²⁵ D.12-08-088, OP 5(b).

1		In support of the Commission's guidance, the MFWB Program is
2		not limited to the previously approved measures or other
3		requirements in prior Commission decisions or to the provisions of
4		the ESA Policy and Procedures Manual. ¹²⁶ PG&E requests
5		permission to propose ESA policy changes after a program decision
6		is issued, to align with the third-party administrator's design for
7		PG&E's MFWB, as discussed in Section D.9.
8		Justification
9		In D.19-06-022, the Commission is encouraging innovative
10		multi-family sector designs. ¹²⁷ PG&E cannot anticipate what the
11		successful design will look like at this time. Therefore, PG&E
12		requests to propose any potential multi-family policy changes that
13		align with the selected multi-family design.
14		Analysis of Customer Benefit
15		Encourages creative proposals to provide deeper MFWB
16		energy savings.
17		Impacts to ESA.
18		Unknown at this time.
19	7)	Align ESA fund shifting rules with CARE fund shifting rules to allow
20		shifting between categories that are reported in IOU Monthly reports
21		rather than requested by AL.
22		Modify ESA fund shifting rules to allow shifting between
23		categories to align with the CARE fund shifting rules authorized in
24		D.06-12-038. In CARE, IOUs are allowed flexibility to shift funds
25		between categories and those fund shifts are reported in the
26		Low-income Monthly and Annual reports, providing greater program
27		management flexibility while providing transparency.
28		PG&E seeks modifications to the fund shifting rules for the ESA
29		Program to align with the fund shifting rules authorized for the CARE
30		Program as discussed above. Specifically, under the CARE
31		Program, the utilities are allowed flexibility to shift funds between

¹²⁶ D.19-06-022, p. 21.

¹²⁷ D.19-06-022, Attachment A, Section I.D.9., p. 20.

1	categories and those fund shifts are reported in the Low-income
2	Monthly and Annual reports. The Commission adopted the CARE
3	fund shifting rules in D.06-12-038 and has reaffirmed the rules in the
4	respective decisions for CARE Program plans and budgets each
5	year through the 2020 program cycle. PG&E proposes that the
6	Commission allow the ESA Program the same fund shifting rules
7	afforded for the CARE Program to shift funds between categories to
8	simplify the process and allow greater flexibility for management and
9	oversight budget needs. PG&E proposes to continue to report the
10	ESA Program fund shifts in the Low-Income Monthly and
11	Annual reports.
12	Fund Shifting Background
13	The Commission formalized its rules for shifting program funds
14	between ESA and CARE Program cost categories, sub-categories,
15	and across PYs and program budget cycles in D.08-11-031 and
16	modified them in D.10-10-008. ¹²⁸ The Commission's adopted fund
17	shifting rules also established requirements for requesting and
18	reporting any such fund shifting. OP 135 (b) of D.12-08-044
19	reaffirmed and continued the Commission's adopted fund shifting
20	rules in the 2012-2014 program cycle.
21	OP 135 of D.12-08-044 states:
22	Pacific Gas and Electric Company, Southern California Edison
23	Company, Southern California Gas Company and San Diego
24 25	Gas & Electric Company shall continue to follow the Fund Shifting Rules in the Energy Savings Assistance and California
26	Alternate Rates for Energy Programs in the 2012-2014 program
27	cycle, as follows:
28	(a) <u>COMMITMENT OF FUTURE FUNDING FOR</u>
29	LONG-TERM PROJECTS: For those long-term projects
30	that require funding beyond the current budget program
31 32	cycle and that will not yield savings in the current cycle, if applicable, these Utilities may anticipatorily commit
33	funds for such projects for expenditure during the next
34	program cycle, under strict limitations as follows:
35	(i) These Utilities shall seek authorization for such
36	long-term projects and current and future cycle

¹²⁸ D.08-11-031, OP 85.c; and D.10-10-008, OP 4.

1 2 3 4 5			funding commitment by itemization of each long-term project in the utility portfolio plan, including an estimate of the total costs broken down by year and an estimate of associated energy savings, if any;	
6 7 8 9		(ii)	These Utilities shall seek authorization and commitment of all funding for long-term projects in the current program cycle and actually encumber such funds in the current program cycle;	
10 11 12 13 14		(iii)	All contracts with any and all types of implementing agencies and businesses must explicitly allow completion of long-term project related work beyond the current budget program cycle;	
15 16 17		(iv)	The amount of next cycle funds encumbered for long-term projects may not exceed 20% of the current program cycle budget;	
18 19 20 21 22		(v)	These Utilities shall separately track and report all long-term projects and obligations, including all information regarding funds encumbered and estimated date of project completion until such project is completed; and	
23 24 25 26		(vi)	Energy savings for projects with long lead times shall be calculated by defining the baseline as the codes and standards applicable at the time the building permit for the project is issued.	
27 28 29 30 31 32	(b)	ENERGY SAVINGS ASSISTANCE PROGRAMS FUND SHIFTING AND LIMITATIONS : Utilities are permitted to shift funds under the following conditions in the Energy Savings Assistance Program are permitted to shift funds under the following conditions in the Energy Savings Assistance Program.		
33 34 35 36 37		(i)	Within 2012-2014 Budget Cycle: Except for the shifting of funds described in subsection b(3) below, the Utilities are permitted to shift funds from one year to another within the 2012-14 cycle without prior approval.	
38 39		(ii)	Fund Shifting Between 2012-2014 Budget Cycle and Future Budget Cycle:	
40 41 42 43 44 45 46			 a. "Carry back" Funding: Except for the shifting of funds described in subsection b(3) below, Utilities are permitted to shift and borrow from the next budget cycle, without prior approval of such fund shifting, if (a) the next cycle budget portfolio has been approved by the Commission; and (b) 	

1 2 3 4			such fund shifting is necessary to avoid interruptions of those programs continuing into the next cycle and for start-up costs of new programs; and
5 6 7 8 9 10 11		b.	"Carry forward" Funding: Utilities are permitted to carry over all remaining, unspent funds from program year to program year or budget cycle to budget cycle and shall include all anticipated carry over funds in the upcoming budget applications.
12 13 14 15 16 17	(iii)	any sh for "ca Comm Admin	histrative Law Judge's Prior Approval: For hifting of funds, within or out of cycle, except arry forward" funding considered by the hission through budget applications, the histrative Law Judge's prior written approval uired if any of the following applies:
18 19 20 21 22 23		a.	Shifting of funds into or out of different program categories including, but not limited to: (a) administrative overhead costs, (b) regulatory compliance costs, (c) measurement and evaluation, and (d) the costs of pilots and studies;
24 25		b.	Shifting of funds into or out of Education subcategory;
26 27		C.	Shifting of funds between gas/electric programs; and/or
28 29 30		d.	Shifting of funds totaling 15% or more of the total current annual Energy Savings Assistance Program budget.
31 32 33 34 35 36 37 38 39 40	(iv)	of the when orderin Article and Pr Admin approv	e Utilities shall secure prior written approval fund shift from the Administrative Law Judge required by subsection b(3) above, of this ng paragraph, by filing a motion pursuant to a 11 of the Commission's Rules of Practice rocedure. Upon showing of good cause, the histrative Law Judge may issue a ruling ving the requested fund shift. Utilities, in the n, must show good cause by setting forth the ing:
41 42		a.	The reason(s) why such fund shifting is necessary;
43 44		b.	The reason(s) why such motion could not have been brought sooner; and

1 2 3 4 5	c. Justification supporting why the proposed shifting of funds would promote efficient, cost effective and effective implementation of the Energy Savings Assistance Programs.
6 7 8 9 10	 (v) Utilities shall track and maintain a clear and concise record of all fund shifting transactions and submit a well-documented record of such transactions in their monthly and annual reports relevant to the period in which they took place.
11	The fund shifting rules in OP 135 of D.12-08-044 were also in
12	effect over the 2015-2016 bridge period years for the ESA Program.
13	These fund shifting rules were revised in D.16-11-022, as
14	modified by D.17-12-009, by permitting the utilities to use the AL
15	process to request fund shifting. ¹²⁹ D.17-12-009 delegates the
16	Commission's Energy Division the discretion to approve fund shifts
17	between gas and electric departments up to 25 percent of each
18	budget category. ¹³⁰
19	Justification
20	The current fund shifting rules are unclear and can contribute to
21	administrative delays. PG&E seeks modifications to the
22	Commission's existing fund shifting rules in OP 135 of D.12-08-044
23	to clarify rule contradictions and simplify the rules to allow greater
24	flexibility for management and oversight budget needs. OP 130 of
25	D.17-12-009, directs the utilities to use the existing rules pertaining
26	to shifting funds between gas and electric budget categories, as set
27	forth in OP 135 of D.12-08-044. However, this directive seems to be
28	contrary to Section 5.1.3. of D.17-12-009 which delegates to Energy
29	Division the discretion to approve fund shifts between gas and
30	electric departments up to 25 percent of each budget category.
31	PG&E recommends the Commission adopt a rule for fund shifting
32	between gas and electric budgets as approved in Section 5.1.3. of
33	D.17-12-009 which delegates the Energy Division the discretion to
34	approve the request up to 25 percent of each budget category.

D.17-12-009, Section 5.1.3.

D.17-12-009, Section 5.1.3.

1		Analysis of Customer Benefit
2		Increased flexibility to make program adjustments increases
3		program efficiencies allowing more customers the opportunity to
4		participate in the program.
5		Anticipated Impacts to ESA
6		Simplified processes allow greater flexibility for management
7		and oversight, more rapid response time, and increased
8		program efficiencies.
9	8)	Clarify ESA Program Uncommitted Unspent Funds Cap for
10		Carry-Over.
11		PG&E recommends that the percent cap for uncommitted
12		carry-over unspent funds be 25 percent and that the funds serve
13		ESA Program participants. D.17-12-009 directs the utilities to use
14		uncommitted unspent funds that are not carried forward to be used
15		to offset future ESA Program Year collections. ¹³¹ OP 134 of
16		D.17-12-009 establishes a cap for the amount of carry-over unspent
17		funds from PY to PY and within a given cycle to either 25 percent or
18		15 percent. ¹³² PG&E seeks Commission clarification because it
19		unclear which percent cap the Commission intended to authorize.
20		However, PG&E recommends that the percent cap for uncommitted
21		carry-over unspent funds be 25 percent and that the funds serve
22		ESA Program participants.
23		Justification
24		The current fund shifting rules are unclear, contributing to
25		administrative delays.
26		Analysis of Customer Benefit
27		Greater administrative efficiencies allow more program dollars
28		to be spent directly on customer benefits.
29		Anticipated Impacts to ESA
30		Greater management and oversight flexibility, more rapid
31		response time, and increased program efficiencies.

OP 132 of D.17-12-009.

D.17-12-009, OP 134 cites both 15 percent and 25 percent.

1	9)	Allow electric/gas expenditure tracking at portfolio level, rather than
2		individual measure level.
3		PG&E requests authority to manage and track electric and gas
4		expenditures at the portfolio level rather than at the individual
5		measure level in the same manner that the commodity split is
6		managed for EE programs.
7		Justification
8		More flexibility to manage commodity expenditures at the
9		portfolio level allows better real-time oversight, which may assist
10		avoid unspent funds accumulation. PG&E anticipates that
11		maintaining the split at the portfolio level will also reduce
12		administrative and IT expenses required to track spending at a
13		detailed level.
14		Analysis of Customer Benefit
15		Greater administrative efficiencies allow more program dollars
16		to be spent directly on customer benefits.
17		Anticipated Impacts to ESA
18		Managing the gas and electric funding at the individual measure
19		level is expensive and time consuming in terms of staff resources,
20		IT, and other administrative costs.
21	10)	PG&E proposes that the Resource Test be discontinued.
22		The Resource Test was adopted by the Commission along with
23		the ESACET in D.14-08-030 per Cost-Effectiveness Working Group
24		recommendations, as described in Section D.11.b. The Resource
25		Test includes only the avoided cost benefits and the installation
26		costs for the resource measures; NEBs and administrative costs are
27		not included in the test. Therefore, the Resource Test is not
28		comparable to the ESACET but provides some information on the
29		contribution of resource measures to the ESA Program. The
30		Resource Test is included for informational uses only.
31		Justification
32		ESA cost effectiveness without NEBs are already calculated for
33		the TRC, RIM, and PAC tests, and ESACET includes both the
34		energy and NEBs provided by the program. Unlike the ESACET,

1	TRC, RIM, and PAC tests which can all be calculated in the same
2	model, the Resource Test must be calculated separately. PG&E
3	believes the Resource Test provides little additional value for this
4	extra effort, and proposes it be discontinued.
5	Analysis of Customer Benefit
6	PG&E does not believe performing the Resource Test provides
7	any customer benefit in.
8	Anticipated Impacts to ESA
9	The Resource Test requires ESA staff time to perform, for no
10	discernable customer benefit.
11	11) PG&E proposes to remove the requirement that a household have a
12	minimum of six occupants in order to qualify for replacement of a
13	Second Refrigerator.
14	See Section D.6.e.
15	Justification
16	Refrigerators provide good energy savings and high ESACET
17	scores.
18	Analysis of Customer Benefit
19	More customers would qualify to receive second refrigerator
20	replacements, thus realizing increased energy savings.
21	Anticipated Impacts to ESA
22	Provides more ESA energy savings. More second refrigerators
23	would qualify to be replaced, increasing the budget.
24	12) PG&E proposes to change the age criteria for a refrigerator to
25	qualify for replacement from pre-2001 manufacture to a rolling date
26	of 14 years.
27	See Section D.6.e.
28	Justification
29	The refrigerator age criteria was last updated in D.12-08-044.
30	A hard date rather than a rolling date based on refrigerator age was
31	specified because refrigerators savings were increased substantially
32	by refrigerator efficiency standards changes implemented in 1993,
33	establishing a new EE baseline, such that replacing a refrigerator
34	that was only a few years old with a newer refrigerator manufactures

1	after 1993 provided substantial savings. The IOUs completed a
2	refrigerator degradation analysis in 2011 to determine what
3	replacement criteria to use. ¹³³ D.12-08-044 authorized refrigerator
4	replacement criteria change from pre-1993 to pre-1999 units. ¹³⁴
5	This was changed to pre-2001 units in D.16-11-022. ¹³⁵
6	Over time, refrigerators have become more efficient. It is
7	reasonable for refrigerator energy savings to be determined the age
8	of the refrigerator (degradation) than by the year of the last major
9	refrigerator efficiency standards change, especially when it is so far
10	past the current effective useful life of a refrigerator. Changing the
11	replacement criteria to 14 years is based on its Effective Useful Life,
12	as documented in PG&E Workpaper. ¹³⁶
13	Analysis of Customer Benefit
14	More customers would qualify to receive refrigerator
15	replacements, thus realizing increased energy savings.
16	Anticipated Impacts to ESA
17	Provides more ESA energy savings. More refrigerators would
18	qualify to be replaced, increasing the budget.
19	13) PG&E requests the Commission allow IOUs to establish an LED
20	Lamp measure cap to limit the number of individual measures
21	deployed at a location.
22	See Section D.6.e.
23	Justification
24	Measure caps that would limit the number of individual
25	measures deployed at a location were removed in D.17-12-009
26	(modifying D.16-12-022). ¹³⁷ This was done in order to shift ESA
27	away from limits designed to restrict program spending towards a

¹³³ Updated ESA Program Refrigerator Replacement Eligibility Criteria Memo (Refrigerator Degradation Study), dated December 2, 2011.

¹³⁴ D.12-08-044, OP 67, and Section 3.8.

¹³⁵ D.16-11-022, Section 3.5.2.1., p. 103

¹³⁶ PG&E Work Paper PG&ECOAPP128: Retail Products Platform, Revision # 6. April 3, 2018. p. 6.

¹³⁷ D.17-12-009, Attachment 1 (modifying D.16-12-022) OP 26, COC 26, and pp. 120-122.

1	system that allows for more administrative flexibility to meet EE
2	savings targets and ensure an opportunity for EE participation by
3	2020. ¹³⁸ D.17-12-009 specifically discussed the value of removing
4	caps on the number of physically installed units for relatively
5	low-cost measures that contribute significant energy savings, such
6	as "lighting measures and water-saving measures." ¹³⁹ For the
7	2021-2026 program cycle, PG&E will begin using CFLs as the
8	baseline for LED energy savings rather than incandescent light
9	bulbs. ¹⁴⁰ Energy savings for lighting drops significantly (93 percent
10	reduction), and PG&E requests the flexibility to use measure caps to
11	help manage its ESA budget and cost effectiveness. Providing an
12	unlimited number of LEDs to customers decreases the overall cost
13	effectiveness of the ESA portfolio. (Chapter IV, ESA Table A-9
14	shows the cost-effectiveness of lighting measures.)
15	Analysis of Customer Benefit
16	Limiting the number of LED lamps per home would allow
17	PG&E to continue to provide LED lighting to customers in the
18	ESA Program.
19	Anticipated Impacts to ESA
20	Limiting the number of LED lamps per home helps increase the
21	overall cost effectiveness of the ESA portfolio, allowing PG&E to
22	continue to include lighting measures in the program.
23	14) PG&E proposes to expand eligibility for Furnace and Water Heater
24	Repair & Replacement to renters with a landlord co-pay.
25	See Section D.6.e.
26	Justification
27	Property owners are required to provide heat and hot water to
28	their rental units, however, we know that not all unsafe equipment is
29	replaced. PG&E plans to require a landlord co-pay to help defray
30	some of the cost to the ESA Program. At \$500 for replacements

D.17-12-009, Attachment 1 (modifying D.16-12-022), pp. 51-52.

D.17-12-009, Attachment 1 (modifying D.16-12-022) Section 3.5.2.10, p. 120.

PG&E Workpaper, ESA. LED Measures Revision #2, August 22, 2019.

1	and \$250 for repair, PG&E believes this will still be low enough to
2	encourage them to participate on behalf of their renters.
3	Analysis of Customer Benefit
4	Income-qualified tenant customers with unsafe equipment would
5	be eligible to receive furnace and water heater repair and
6	replacement, providing them with increased HCS benefits.
7	Anticipated Impacts to ESA
8	More measures would be eligible for repair and replacement, at
9	higher cost to the program. Requiring a landlord co-pay of \$500 for
10	replacements and \$250 for repair will help defray some of the cost
11	to the ESA Program.
12	15) Update Policies & Procedures Manual to allow PG&E to provide
13	non-resource/HCS Measures based on five needs states: CARE
14	High Users, Disconnected, Medical, DAC/Tribal/Rural,
15	Wildfire zones.
16	PG&E's new ESA approach provides additional HCS measures
17	to customers based on their needs states. (See Section D.1.
18	regarding PG&E's proposed ESA Comprehensive Plus approach.)
19	Justification
20	This is an additional criteria that is different than the housing
21	type, climate zone, feasibility-to-install, and cost criteria that are
22	currently used to determine measure eligibility, and if approved, will
23	require updates to the Statewide ESA Policies and Procedures
24	Manual. PG&E's justification and analysis of the benefits and
25	impacts is included in Section D.1. of this application.
26	Analysis of Customer Benefit
27	See Section D.6.e of this application.
28	Anticipated Impacts to ESA
29	See Section D.6.e of this application.
30	16) Authorize the ESA-CARE Study Working Group process described
31	in Section D.10.
32	PG&E, in conjunction with the other IOUs, proposes the
33	formation of an ESA/CARE Study Working Group to provide a
34	transparent and robust study process. The ESA/CARE Study

Working Group will provide input on the scope, timeline, and budget 1 2 of studies. The Study Working Group will take a consensus driven approach with the goal of maximizing timely results. The IOUs 3 expect the Study Working Group to hold quarterly meetings, jointly 4 5 review proposed study statements of work, and participate in project kick-offs. This approach is expected to facilitate more relevant and 6 7 focused studies that include budgets that are commensurate with 8 the specific objectives and methodology necessary to execute the work for each study. 9 Justification 10 11 This approach is expected to facilitate more relevant and focused studies that include budgets that are commensurate with 12 the specific objectives and methodology necessary to execute the 13 work for each study. 14 Analysis of Customer Benefit 15 ESA and CARE studies provide data regarding customer 16 barriers to participation, assessment of needs, energy savings, 17 NEBs, and other inputs that help the IOUs develop better, more 18 19 targeted offerings to enhance the customer experience and provide tangible benefits. 20 21 Anticipated Impacts to ESA Adding an additional working group increase cost and staff time, 22 23 however, PG&E anticipates the opportunity to work through important studies through a more transparent process will increase 24 the relevance and robustness of study findings while potentially 25 26 decreasing controversy surrounding results. 17) PG&E requests to change the IOU member's LIOB term to 27 28 two years. 29 The IOUs request to change the rotating term for the IOU LIOB 30 position from one year to two years. The IOUs' assigned seat on the LIOB rotates among the four IOUs annually. 31

1		Justification
2		D.05-04-052 established the LIOB position terms and increased
3		them all from 1-year to 2-year staggered terms, except for the IOU
4		seat, which remained at one year. ¹⁴¹
5		D.05-04-052 provided that the LIOB terms granted in the
6		Decision were flexible and open to change as warranted.142
7		The IOUs have determined that a one-year term is not long enough
8		to be effective in this position. A new IOU representative rotates
9		onto the board, begins committee assignments, learns the position,
10		and then a new IOU member rotates onto the Board and the
11		process starts again. The IOUs believe a rotating 2-year position
12		would allow the representative to contribute more effectively to
13		provide IOU perspective and insight on issues facing low-income
14		customers.
15		The IOUs consulted with ED regarding the appropriate process
16		to request that the IOU position term be extended from one year to
17		two years, and believe that a request to change terms can be made
18		through this Application. ¹⁴³
19		The IOUs request the rotating term for the IOU LIOB position
20		increase to two years from one year.
21		Analysis of Customer Benefit
22		Increasing the LIOB term ultimately benefits customers by
23		providing IOUs the opportunity to be more effective ESA advocates
24		at the LIOB.
25		Anticipated Impacts to ESA
26		This change increases IOU effectiveness at the LIOB.
27	8.	Multi-Family Sector Design [WITNESS: BENASSI]:
28		The Multi-family Sector Design section here, and Section 9, uses
29		the following key terms and definitions. The IOUs are requested to use
30		these terms in their Applications. The terms are: "in-unit" is an attached

D.05-04-052, OP 21, and pp. 71-74, p. 91.

D.05-04-052, p. 74.

A change through this Low-Income Application would be more efficient than through a PFM of D.05-04-052.

1	household dwelling unit; "common area" refers to communal spaces,
2	such as community room or hallways, shared energy systems or the
3	exterior envelope and excludes "in-units" spaces; and "whole building"
4	refers to the entirety of a multi-family property, including both the
5	common areas and in-unit spaces. In the following section (Section 9),
6	the IOUs are directed to propose a third-party designed and
7	implemented Multi-Family Whole Building Program. Section 9 does not
8	limit the IOUs from additionally proposing to serve multi-family tenants
9	and/or common areas by the ESA Program, but any such proposals
10	shall not duplicate services provided through the third-party Multi-family
11	Whole Building Program.
12	a. History:
13	i. Describe how the ESA Program in-unit and Common Area
14	Measures (CAM) efforts served multi-family households,
15	buildings, and/or properties during the current program cycle.
16	Summarize successes and challenges with current cycle
17	multi-family efforts' measures, targeted marketing tactics,
18	eligibility rules, and alignment with other energy efficiency and
19	financing programs.
20	PG&E's ESA Program in-unit and CAM's efforts serve
21	multi-family households and properties during the current
22	program cycle through two approaches.
23	PG&E serves ESA CAM by working directly with multi-family
24	properties to implement EE measures while allowing property
25	owners to select their own contractor. As part of PG&E's CAM
26	requirements, property owners need to make ESA in-unit
27	services available to tenants and these efforts are coordinated
28	by PG&E's ESA implementers. PG&E's CAM implementer
29	coordinates ESA in-unit treatment directly with ESA MF in-unit
30	implementers.
31	PG&E serves ESA MF in-unit by working directly with
32	low-income tenants. In-unit treatment, including energy
33	education, is overseen by PG&E's ESA implementers and
34	in-unit treatments are performed by ESA trained contractors.

1	ESA CAM provides several project services to properties
2	participating in CAM, including:
3	Energy benchmarking support for Energy Star Portfolio
4	Benchmarking Manager: PG&E ESA CAM projects receive free
5	benchmarking treatment to maintain compliance with
6	D.17-12-009 and AB 802. As of September 2019, 24 properties
7	(consisting of 119 buildings and 2,146 units) have been
8	benchmarked through ESA CAM. The ESA CAM benchmarking
9	reports provide owners with insight on:
10	 Usage data over the past year, displayed per month for
11	easy comparison for properties across a portfolio;
12	 Energy usage per square foot for portfolio comparison;
13	 Possible upgrades for properties beyond the ESA CAM
14	scope and corresponding program referrals; and
15	Energy Star Portfolio Benchmarking Manager "score"—
16	comparing the property to other multi-family properties in
17	California.
18	Technical support throughout the program process (lead to
19	completion): This includes conducting an energy audit,
20	assistance with the development of a project's scope of work,
21	insight on other funding sources to cover measures outside of
22	ESA CAM, guidance throughout the lifecycle of the project, and
23	coordination with PG&E's multi-family SPOC for referral to other
24	programs if property is not eligible for CAM. Comprehensive
25	support to projects, includes:
26	 <u>Prequalification Call</u>: Projects will have a prequalification
27	call with the maintenance staff and property managers to
28	review eligibility documents, confirm building characteristics
29	and ESA CAM opportunity. This process provides insight
30	on the project's potential and assists in identifying other
31	programs the property can layer if eligible for ESA CAM or
32	provide referrals to a better-fit program if not eligible for
33	ESA CAM;

- <u>Energy Audit</u>: Projects receive a free energy audit, which
 can be a costly investment for affordable housing
 developers and is an enrollment barrier in other programs;
 and
- 5 Scope of Work Assistance: Assist property owners • understand which measures their properties are eligible for, 6 equipment specifications, program incentives, and other 7 8 funding sources to cover measures outside of the ESA CAM eligible measure list. This level of no-cost support 9 through energy programs is a direct response to an 10 11 affordable housing market need. Owners are often resource-constrained and cannot afford to invest the time or 12 hire personnel to navigate which program is best for their 13 property or what upgrades are best suited for the property. 14 Energy retrofits require energy and equipment experience, 15 building knowledge, and funding source knowledge-all of 16 which is available to owners by ESA CAM. 17
 - A) Summarize successes and challenges with current cycle multi-family efforts' measures, targeted marketing tactics, eligibility rules, and alignment with other energy efficiency and financing programs.

Successes with current cycle multi-family efforts' measures, targeted marketing tactics, eligibility rules, and alignment with other EE and financing programs, include:

Measures:

18 19

20 21

22 23

24

25

26

27

28 29

30

31

32

33

34

ESA CAM has a robust set of no-cost deemed measures being requested by deed-restricted properties to assist in upgrading common areas that are utilized by tenants. By freeing up the costs associated with these upgrades to the buildings, property owners can then use that money to provide additional services to residents or to fund other major renovations outside of syndication. To date, the program has been successful in building a pipeline of interested low-income projects.

1	These customers are eager to make improvements in
2	the common area and central systems of their buildings,
3	that without ESA CAM would be challenging to fund.
4 •	Targeted Marketing:
5	PG&E's ESA CAM implementer maintains active
6	relationships with affordable housing organizations
7	which has resulted in several CAM project leads.
8	The CAM implementer leverages its relations with
9	PG&E Multi-family Upgrade Program (MUP) contractors
10	which has resulted in the majority of CAM projects.
11	Outreach to Tax Credit Allocation Committee
12	(TCAC) applications and the CPUC Broadband
13	Program has resulted in the CAM pipeline having eight
14	percent of projects listed on the Broadband Program list
15	and 48 percent from TCAC.
16	Other efforts include an active ESA CAM online
17	presence through social media (Facebook, Twitter,
18	LinkedIn) accounts and a program website.
19 •	Alignment With Other EE and Financing Programs:
20	There are three EE programs layered with ESA
21	CAM, CSD LIWP, PG&E MUP, and Bay Area Regional
22	Energy Network (BayREN) Multi-family Building
23	Enhancements Program, and alignment with these
24	programs have resulted in additional measures added
25	to project scopes.
26	ESA CAM has experienced higher program uptake
27	with projects nearing re-syndication or leveraging other
28	financing mechanisms. Timing program intervention
29	with property re-syndication is essential due to the
30	owner planning for and having resources to complete
31	large scale renovations. Alignment during this key time
32	provides the management and logistical resources that
33	may not be available during normal property
34	operating conditions.

1	Challenges with current cycle multi-family efforts'
2	measures, targeted marketing tactics, eligibility rules,
2	and alignment with other EE and financing programs,
	include:
4	
5	<u>Measures</u> : <u>MEW/P</u> treatment of some measures is shellonging
6	MFWB treatment of some measures is challenging
7	for measures such as attic insulation, where in-unit is
8	installed by ESA contractors and CAM is installed by
9	the property's contractor and unqualified units are not
10	covered by ESA, requiring proprieties to look for other
11	options.
12	Some CAM measures are not provided by ESA
13	in-unit, thus not providing "whole building" treatment.
14	For example, wall insulation is provided by CAM and
15	not by ESA in-unit, thus the property will likely need to
16	cover the expense or utilize other programs if wanting
17	wall insultation in buildings with units.
18	Multi-family buildings (regardless of metering
19	configuration) are made up of multiple meters.
20	The number of meters per site varies, and can be
21	challenging to map individual meters to buildings if the
22	site consists of more than one building.
23	<u>Targeted Marketing</u> :
24	Reaching smaller portfolio owners or property
25	owners (greater than 10 properties), who are not as
26	engaged with housing events and housing advocate
27	groups is a challenge. Direct outreach efforts (i.e., cold
28	calling) using internet research (if information is
29	available) to identify these property owners and
30	make contact is time consuming with minimal project
31	lead generation.
32	Property owners who are not engaged with housing
33	events and housing advocate groups are challenging to
34	engage via direct mail. ESA CAM mailed postcards to

I-143

1	properties (deed and non-deed-restricted) listed on the
2	Broadband, Housing Authorities, TCAC recipients, HUD
3	properties, and USDA properties lists. 7 percent of the
4	postcards were returned to sender. In addition, no
5	known leads have resulted from this effort to date.
6	<u>Eligibility Rules</u> :
7	ESA in-unit requires tenant approval for ESA
8	treatment which can add complexity in providing a
9	coordinated customer in-take process as only the
10	property owner's approval is required for common
11	areas measures.
12	A majority of deed-restricted properties set
13	affordability requirements using area median income,
14	which is county specific and does not always align well
15	with ESA's income requirements.
16	 <u>Alignment With Other EE and Financing Programs</u>:
17	The three EE programs best layered with ESA CAM
18	are CSD LIWP, PG&E MUP, and BayREN Multi-family
19	Building Enhancements Program. Each have different
20	eligibility requirements and differing completion dates
21	which make leveraging challenging.
22	ii. Discuss how ESA Program in-unit and CAM efforts coordinated,
23	or did not, services including the customer in-take process,
24	auditing, measure installation, and post-installation quality
25	assurance. Show the numbers of actual and estimated treated
26	multi-family units and properties, in ESA (in-unit) and ESA CAM,
27	served each year for program years 2017-2020.
28	PG&E's CAM efforts include the coordination with the ESA
29	in-unit direct install program implementer(s) to offer ESA
30	measures and services including enhanced energy education to
31	all eligible tenants wanting to participate. CAM services,
32	including measure installations, are provided through PG&E's
33	CAM implementer and contractors selected by the customer.
34	ESA in-unit services, including measure installations, utilize the

1	existing ESA model whereby treatment is exclusively provided
2	by ESA-certified contractors. The CAM implementer and the
3	ESA implementer coordinate to facilitate delivery of services
4	and minimal tenant disruption. Currently, PG&E does not use a
5	coordinated customer in-take process as ESA in-unit requires
6	tenant approval for ESA treatment which complicates a
7	coordinated customer in-take process as only the property
8	owner's approval is required for common areas measures.
9	Table I-28 summarizes the number of actual and estimated
10	treated multi-family units and properties, in ESA (in-unit) and
11	ESA CAM, served each year for PYs 2017-2020 in PG&E's
12	service territory.

TABLE I-282017-2020 ESA IN-UNIT AND ESA CAM TREAMENTS

Line No.	Property Type	2017 Actual	2018 Actual	2019 Estimated	2020 Estimated	Total
1	ESA CAM Properties	N/A	_	3	151	154
2	ESA MF in-unit ^(a)	14,537	16,372	19,425	19,802	70,136

(a) PG&E's ESA in-unit treatment is provided by ESA-trained contractors and is not part of CAM.

13	iii.	Single Point of Contact (SPOC): What level of ESA funding,
14		staff, time, and resources went to the SPOC directive for
15		program years 2017-2020? What lessons learned or best
16		practices resulted from this activity? How will you carry forward
17		best practices (beyond 2020) and at what funding level?
18		A) What level of ESA funding, staff, time, and resources went
19		to the SPOC directive for program years 2017-2020?
20		For PYs 2017-2020, PG&E's funding level is \$471,018.
21		PG&E's Multi-family SPOC, launched in 2017, to provide
22		multi-family property owners, managers, and other industry
23		professionals with a centralized resource for energy-related
24		funding opportunities through analytics driven guidance by

1	phone, online, and e-mail. Stakeholders can access
2	program resources by visiting www.PGEmultifamily.com.
3	Table I-29 summarizes PG&E's SPOC funding per year
4	for programs years 2017-2020.

TABLE I-29 2017-2020 SPOC FUNDING

Line No.	2017 Actual	2018 Actual	2019 Budgeted	2020 Budgeted	Total	
1	\$31,600	\$121,167	\$156,772	\$161,480	\$471,018

17

This funding provides 2-3 vendor staff, depending on the activities being supported, in support of the SPOC directive for PYs 2017-2020. The funding amounts captured in Table I-29 do not include PG&E resources required to setup the SPOC directive, including defining SPOC directive, collaborating with other PG&E programs to support the directive, and contracting. PG&E resources are also required for ongoing SPOC oversight, facilitation with internal PG&E programs, and vendor management.

B) What lessons learned or best practices resulted from this activity?

Best Practices resulting from PG&E's SPOC activities include:

Referral Support: SPOC provides program referral 18 19 support to a broad set of multi-family programs, including programs available across PG&E territory, 20 statewide programs, and regional programs. SPOC 21 22 also refers customers to other utility SPOCs through a robust handoff process. Referral programs include, 23 PG&E EE programs such as MUP, ESA, and Moderate 24 Income Direct Install (MIDI); financing options such as 25 On-Bill Financing (OBF) and On Bill Repayment (OBR); 26 and EV programs. SPOC also provides referrals for 27 other non-utility financing programs, such as the Fannie 28

1		Mae Green Rewards and EE programs offered by the
2		CSD and Regional Energy Networks (REN).
3	•	Decision Tree: SPOC maintains a decision tree to
4		determine "best fit" characteristics per program, and a
5		corresponding Referrals Table, to prioritize the
6		programs for each customer.
7	•	Benchmarking support: Through SPOC, customers can
8		receive free benchmarking services to better inform
9		program decision process and maintain compliance with
10		AB 802. 144
11	•	Consolidation of Multi-family Program Materials: SPOC
12		consolidated multi-family-specific marketing 'fact sheets'
13		to provide customers with a consolidated view of
14		programs that is available at:
15		www.PGEmultifamily.com.
16	•	Property Engagement: Proactive engagement with
17		management companies to review their portfolios and
18		guide them to available programs.
19	•	Conferences: Active engagement at multi-family
20		specific conferences.
21	•	Single Vendor: SPOC services outsourced to same
22		vendor administering Energy Efficiency's Multi-Family
23		Upgrade Program and ESA CAM providing by default,
24		a common entry point for EE services for property
25		owners. Vendor selected has deep multi-family
26		knowledge and established relationships within the
27		multi-family sector.
28	C) <i>F</i>	low will you carry forward best practices (beyond 2020)
29	а	nd at what funding level?
30		PG&E plans to carry forward best practices (beyond
31	2	020) and proposes a funding level of \$2.2 million for PY

¹⁴⁴ Building Energy Use Disclosure and Public Benchmarking Program Mandated under Assembly Bill (AB) 802 available at: <u>https://ww2.energy.ca.gov/benchmarking/documents/AB_802_chapter_590.pdf</u>.

1	2021-2026 as detailed in Table A-1 in Chapter IV. PG&E
2	proposes to carry forward best practices by integrating
3	SPOC with the MFWB Program. ¹⁴⁵ PG&E proposes to use
4	a third-party administrator for its MFWB Program (detailed
5	below in Section D.9.), which SPOC will be included.
6	PG&E's proposed funding level is based on the number of
7	estimated properties that will be participating in PG&E's
8	proposed MFWB Program. Best practices carrying forward
9	beyond 2020, include:
10	<u>Referral Services</u> : PG&E expects SPOC to continue to
11	provide referral services and PG&E will request bidders
12	to define their referral process, including maintaining
13	updated referral list and defining referral criteria to
14	ensure the right program is being referred, along with a
15	robust handoff process to ensure customers are not lost
16	in the process. Referral services should include all
17	available program funding sources and include
18	programs offered by PG&E, other IOUs, Regional
19	Energy Networks, CSD, municipal utilities, low-income
20	housing tax credits, federal investment tax credits,
21	water utilities, and others as applicable. The list of
22	programs needs to be regularly updated to reflect new
23	programs and/or the closure of programs.
24	Ideally, the SPOC will be responsible for
25	determining the referral criteria and warm handover
26	process in collaboration with each program
27	administrating entity. The following further describes
28	PG&E's proposed duties for SPOC:
29	Decision Tree: The SPOC will continue to maintain a
30	'decision tree' to determine 'best fit' characteristics per

¹⁴⁵ MFWB Program refers to the treatment of the entirety of a multi-family property, including both the common areas and in-unit spaces.

1	program, and a corresponding 'referrals table,' to
2	prioritize the programs for each customer to maintain.
3	Benchmarking Support: SPOC will continue to provide
4	MF customers with benchmarking support to better
5	inform in the program decision process.
6	 <u>Consolidation of Multi-family Program Materials</u>: SPOC
7	will continue to provide SPOC for MF programs to
8	provide customers with a consolidated view of available
9	programs.
10	Property Renovation Journey: Bidders will also be
11	requested to define how they will engage with
12	multi-family properties to influence their property
13	renovations to align with their low-income housing tax
14	credits and federal investment tax credits timing.
15	Outsourcing to Vendor: With deep multi-family
16	experience, including available MF programs and
17	services, assists in reducing SPOC ramp-up time and
18	reducing administrative costs related to knowledge
19	development.
20	b. SPOC Finance Technical Assistance Proposal: Per D.16-11-022
21	OP 45, as modified by D.17-12-009, create a proposal for financial
22	technical assistance, from the SPOC, to help building owners
23	navigate the financing options available through your on-bill finance
24	program or other finance programs.
25	To assist property owners navigate the financing options
26	available through PG&E's on-bill finance program or other finance
27	programs, PG&E proposes to expand SPOC services to more
28	formally include financing services and assistance. MF properties
29	participating in PG&E's EE programs will be provided an option to
30	consider financing as a tool to cover or expand their upgrade efforts.
31	Since not all MF properties participating in PG&E's programs
32	originate via SPOC, PG&E proposes routing properties interested in
	financing through SPOC. SPOC would provide a report listing the
- 33	
33 34	array of multi-family program funding options complete with eligibility

1		screening, estimated assistance (technical and financial) and
2		estimated financing available for the scope through OBF.
3		To accomplish this SPOC's proposed scope would:
4		Develop a Referral/Request Process: Allow multi-family
5		building owners, consultants and contractors to submit the
6		proposed scope of work;
7		• Formalize and Expand the Decision Tree: Review project data
8		provided and determine the estimated incentive opportunity
9		from each program source;
10		Document Measure Opportunities and Excluded Measures:
11		Report how each measure identified could be supported by a
12		program or financing; and
13		Estimate OBF Contribution: To offset the cost of all EE
14		measures, SPOC will review project submittal to estimate the
15		OBF loan size, and if necessary, support the customer through
16		meter conversion, application and loan agreement.
17		This framework will likely allow SPOC to assist with project
18		scope building on the initial success SPOC's customer engagement
19		in programs. These activities are crucial to maximize the retrofit
20		scope because multi-family buildings are upgraded typically once
21		every 15 years.
22	С.	Non-deed-restricted Multi-family Properties: OP 41a of
23		D.16-11-022, as modified by D.17-12-009, required an analysis of
24		non-deed-restricted multi-family buildings with a high percentage of
25		low-income tenants in your territory. Provide a brief statement of the
26		EE potential in your territory for this sector. Do you recommend
27		extending direct install services, for whole building or common areas
28		only, to these properties? What requirements, such as rent increase
29		restrictions, can maintain affordability in treated properties?
30		PG&E's analysis of non-deed-restricted and deed-restricted
31		multi-family buildings with a high percentage of low-income tenants
32		(at least 65 percent of the households meet ESA income
33		requirements) estimates 1,300 non-deed and 237 deed-restricted
34		properties within PG&E's territory as illustrated in Table I-30.

TABLE I-30 DEED AND NON-DEED-RESTRICTED PROPERTIES WITHIN PG&E'S TERRITORY

		PG&E Multi-family Market (>5 units)					
Line	% at or below 200%		Deed			Non-Deed	
No.	FPG	Properties	Buildings	Units	Properties	Buildings	Units
1	≤ 50%	1,982	13,970	168,724	20,490	60,670	623,964
2	50% - 65%	252	2,424	18,722	1,747	5,974	43,224
3	≥ 65%	237	3,890	18,783	1,300	4,401	26,026
4	Total	2,471	20,284	206,229	23,537	71,045	693,214

Source: CoStar with HUD, USDA, TCAC lists layered for Deed-restricted buildings; includes MF properties with 5+ units of Class B & C (non-deed-restricted buildings with potentially income-eligible tenants).

1	i.	Provide a brief statement of the EE potential in your territory for
2		this sector.
3		PG&E estimates the EE potential for these
4		non-deed-restricted properties with at least 65 percent of
5		households meeting ESA's income requirements to be
6		184,419,790 kWh and 6,303,010 Therms, which is 10 percent of
7		the estimated average consumption as detailed in Table I-31.

TABLE I-31 ESTIMATED ENERGY CONSUMPTION FOR NON-DEED-RESTRICTED PROPERTIES WITH AT LEAST 65 PERCENT OF HOUSEHOLDS MEETING ESA'S INCOME REQUIREMENTS

	PG&E Multifamily Market (+5 units) Non-deed						
% at or below 200% FPG	Properties	Buildings	Units	Estimated Electricity Estimated Natural Gas (the (kWh) Consumption Consumption			
≥ 65%	1,300	4,401	26,026	1,844,197,903	63,030,102		

8		The EE potential for these non-deed-restricted properties is
9		based on applying average of the energy consumption of
10		241 properties from PG&E's non-deed-restricted analysis
11		across the remaining non-deed properties.
12	ii.	Do you recommend extending direct install services, for whole
13		building or common areas only, to these properties?

1	PG&E proposes to extend ESA funding to non-deed
2	properties for CAMs provided at least 65 percent of the
3	households meet ESA income requirements. PG&E requests
4	the permission to determine the intervention strategy (upstream,
5	downstream, midstream, direct install, non-resource, finance,
6	etc.) based upon the MFWB Program solicitation process
7	detailed in Sections D.9., E.1., and E.2. below.
8	PG&E proposes to extend ESA funding to
9	non-deed-restricted properties in recognition that
10	deed-restricted properties covers only a portion of the total
11	population of buildings where income-qualified residents reside.
12	Currently, the affordable housing demand outpaces the supply
13	of deed-restricted housing, ¹⁴⁶ many income-qualified residents
14	are unable to find deed-restricted housing and are required to
15	sign a lease with a non-subsidized market rate housing
16	property. This population of properties is often referred to as
17	Naturally Occurring Affordable Housing (NOAH), meaning these
18	properties are not restricted to low-income residents, but
19	naturally offer below, or at market rents.
20	PG&E proposes to include non-deed-restricted properties in
21	its MFWB Program as detailed in Section D.9., provided:
22	 The tenant meets ESA eligibility requirements to qualify
23	ESA in-unit treatment; and
24	 The property has at least 65 percent of the households
25	meeting ESA's income requirements to qualify for ESA
26	CAM.
27	iii. What requirements, such as rent increase restrictions, can
28	maintain affordability in treated properties?
29	To maintain affordability of rents in treated properties,
30	PG&E proposes to continue to include rent increase restrictions

¹⁴⁶ Waitlists at deed-restricted properties (or properties that accept HUD Section 8 vouchers) often include thousands of prospective residents, as discussed in a recent article from the Sacramento Bee: <u>https://www.sacbee.com/news/local/article194674404.html</u>.

to ESA participation agreements stating that properties will not 1 2 increase rents for the qualified income-qualified dwellings as a result of the work that is performed with ESA funding. In 3 addition, PG&E proposes that the MFWB Program administrator 4 5 provide a tenant complaint process, should rent increase restrictions not be followed, that will direct tenants to local 6 7 support services when issues cannot be resolved between the property and the tenant. 8 9. Multi-family Whole Building Program [Witness: Benassi] When 9 looking to encourage innovation, the Commission recently directed the 10 11 energy efficiency program administrators to transition the majority of their overall portfolios to programs designed and implemented by 12 third parties.¹⁴⁷ Similarly, we direct the IOUs' 2021-2026 ESA 13 Application to include a Multi-Family Whole Building energy efficiency 14 program (MFWB Program) designed and implemented by one or more 15 third parties who will, taken together, serve all qualified prioritized 16 populations identified in the Application.¹⁴⁸ The application shall 17 include specific information about the scoring criteria and process for the 18 19 solicitation. The MFWB Program implementer(s) shall provide energy efficiency services for the whole building which includes common areas 20 and tenant units, but may provide treatment of only common areas or 21 only tenant units in a particular building if it is not feasible to undertake 22 both. The IOUs are strongly advised to consider a statewide program 23 with a single implementer. It seems particularly important that the 24 MFWB Program for buildings with SCE electricity customers and 25 SoCalGas gas customers shall have a single implementer. The MFWB 26 Program is not limited to the previously approved measures or other 27 requirements in prior Commission Decisions or to the provisions of the 28 29 ESA Policy and Procedures Manual. The proposal shall include the 30 following:

¹⁴⁷ D.18-01-004; D.16-08-019.

¹⁴⁸ The definition of "third party" in D.16-08-019 shall also apply for purposes of ESA Programs.

1	As directed, PG&E proposes to use a third-party administrator for
2	the design and implementation of its entire MFWB Program. PG&E's
3	proposes to include the following in its MFWB Program for both
4	deed-restricted and non-deed-restricted multi-family properties:
5	 Whole building¹⁴⁹ treatment for properties where at least 65 percent
6	of households meet ESA income requirements and the dwellings
7	meet ESA qualification requirements;
8	 CAM¹⁵⁰ measures for properties where at least 65 percent of
9	households meet ESA income requirements;
10	 In-unit¹⁵¹ measures for ESA eligible MF households;
11	SPOC services; and
12	 CSD MF LIWP funding for ESA in-unit measures.
13	PG&E intends for its MFWB Program to serve both eligible MF
14	tenants, regardless of the property's qualification to participate in the
15	MFWB Program, and eligible properties (not to focus solely on property
16	owners). PG&E proposes to include contract Key Performance
17	Indicators (KPI) and goals to reflect this intent. Multi-family properties
18	are defined as properties with buildings having five or more attached
19	units. Properties with buildings with less than five attached units will be
20	treated as single family. Properties with a mix of buildings having five or
21	more attached units and less than five attached units will be treated as
22	multi-family properties.
23	PG&E proposes to include all MF components into its MFWB
24	Program to provide MF tenants and properties with the following
25	benefits:
26	Single entry point;
27	 Avoid customer and market place confusion;
28	 Simplify the enrollment process; and
29	 Streamline MF tenant and property treatment.

¹⁴⁹ "Whole building" refers to the entirety of a multi-family property including both the common areas and in-unit spaces.

¹⁵⁰ "Common area" refers to communal spaces, such as a community room or hallways, shared energy systems or the exterior envelope and excludes "in-units" spaces.

¹⁵¹ "In-unit" is an attached household dwelling unit.

1	PG&E proposes to use a single administrator to facilitate leveraging
2	and integration with other state or federally funded income-qualified
3	programs. PG&E proposes the duties of its single MFWB Program
4	administrator to include, but not be limited to:
5	 MFWB Program design for both deed and non-deed-restricted
6	properties, including how to address the need states indicative of
7	hardship identified in Section B.1.c.;
8	Customer acquisition and outreach: income-qualified tenants and
9	properties;
10	 Enrolling participants: income-qualified tenants and properties;
11	 Providing program and project technical assistance;
12	Receiving, reviewing, and approving all program documentation;
13	Conducting quality assurance pre-installation and post-installation
14	site visits;
15	 Processing and sending incentive payments;
16	 Contractor recruitment and management;
17	• WE&T
18	• SPOC services, including best practices detailed in Section D.8.a.iii,
19	above;
20	 CSD MF LIWP funding for ESA in-unit measures; and
21	 Leveraging water agency efforts for both income-qualified tenants
22	and properties; the top water agencies in PG&E's territory are listed
23	above in Section D.5.f.
24	PG&E proposes local administration of its MFWB Program to be
25	successful in providing income-qualified tenants and properties with a
26	robust program and offer this program to customers on a timely basis.
27	Moving to a third-party administration is new for ESA and will require
28	each IOU to understand and address the implications and nuances of
29	moving to this model; including:
30	 MF specific data challenges, including; identification of deed and
31	non-deed-restricted properties meeting least 65 percent of
32	households meet ESA income requirements, identifying the meters
33	associated with each property, identifying the MF household
34	associated with each property, and confirming previous participation

- in ESA or other EE programs. PG&E's customer databases 1 2 currently do not identify MF properties, the meters associated with each property, or customers living in MF properties with five or more 3 dwelling units; and 4 5 Meeting regulatory reporting expectations as ESA currently requires • detailed reporting, including at the measure level. Moving to a 6 third-party administrator for design and implementation makes it 7 8 challenging to plan and implement database systems to support the new program design while providing the detailed reporting that the 9 Commission is accustomed. 10 11 While PG&E proposes local administration of its MFWB Program, if directed to adopt a single administrator, PG&E plans to work with the 12 other IOUs to implement a single administrator serving the entire state 13
 - decide the best path forward to serve this customer segment.

14

15

and looks forward to a collaborative discussion with all stakeholders to

PG&E proposes to evaluate proposed programs against the criteria outlined in Table I-32 to determine advancement to contract negotiations. These criteria are not necessarily listed in any order of importance. PG&E expects to revise RFP scoring criteria to reflect the actual RFP and to align with the directives in the final decision.

TABLE I-32 MFWB PROGRAM SOLITIATION PROPOSED SCORING CRITERIA

Line No.	RFP Scoring Criteria	Sub-Criteria
1	Program Design	Program Design, Theory & Evaluability
		Customer Acquisition & Outreach
		Serve all qualified prioritized populations
		IDSM Program Features
		Program Innovation
		Customer Compliant Resolution, including rent control complaints
2	Program Benefits	Number of Properties Treated per year
		Number of Units Treated per year
		Energy Savings (kWh, therms, British Thermal Units (BTU)) per year
		Cost Effectiveness per year
		Distribution across prioritized populations
3	Program Feasibility;	Program Management & Risk
	CAM, In-unit and SPOC	Compensation & Performance
		Savings Measurement
		Compliance Requirements
		Utilization of existing local ESA workforce
4	Needs States	How program design addresses the customer needs states as defined in Section B.1.c;
		High Usage
		Medical Baseline
		Disconnections
		DAC/Tribal/Rural
		Wildfire Risk Zones
		The goal is to serve all qualified prioritized populations identified in the Application
5	Leveraging Other	How program design leverages other programs, such as;
	Programs	Solar On Multi-family Housing (SOMAH)
		CSD LIWP
		TCAC
		Water Agencies
6	WE&T	Job Training
		Job Creation
		Pathways to Employment
		Collaboration with Local Training Programs
7	Company Qualifications	Implementer Team Qualifications
		Prior Implementation Experience
8	Supply Chain	Diverse Business Enterprise
	Responsibility	Sustainability
9	Cost	Performance Based
		Continuous Improvement
10	Safety	Safety Questionnaire

1PG&E proposes to establish a MFWB Procurement Review Group2(PRG), which will include low-income expertise, and Independent3Evaluator (IE) similar to Energy Efficiency's third-party solicitation4process per D.18-01-004.¹⁵² The goal of the PRG and IE will be to5monitor, evaluate and provide oversight of all phases of the solicitation6process for selecting the third-party administrator for PG&E's MFWB7Program.

 Provide an overview or brief description of the general program goals and budget and solicitation process and timeline. Additionally, use the budget template to provide annual budget levels.

PG&E intends for its MFWB Program to serve both properties owners of both deed and non-deed-restricted building with at least 65 percent of households meeting ESA income requirements and to serve qualified MF low-income tenants, regardless of the property's qualification to participate in the MFWB Program. This is reflected in the program goals and budgets.

PG&E proposes its MFWB Program budget for measure installation, commonly referred to as "above the line" expenses, to be 30 percent of its entire measure installation budget. This aligns closely with the percentage split between multi-family and non-multi-family ESA eligible customers.

The proposed budget for PG&E MFWB Program is \$202 million based on the estimates included in Table I-33. This budget is based on PG&E's current ESA CAM and in-unit treatments and CSD LIWP leveraging estimates. PG&E requests permission to adjust the estimated budgets below as a result of the final decision and the solicitation for the MFWB Program third-party administrator. Table I-33 summarizes the estimated for the MFWB budget.

152 D.18-01-004, OPs 3 and 5.

TABLE I-33 PROPOSED MFWB PROGRAM BUDGET

Line No.	MF Component	2021	2022	2023	2024	2025	2026	Total
1	SPOC	N/A	N/A	\$400,000	\$412,000	\$424,360	\$437,091	\$1,673,451
2	CAM	N/A	N/A	15,400,000	23,100,000	23,793,000	24,506,790	86,799,790
3	In-Unit	N/A	N/A	21,460,296	23,505,515	24,210,680	24,937,001	94,113,492
4	CSD LIWP	N/A	N/A	1,323,731	1,363,443	1,404,346	1,446,477	5,537,997
5	Administrator Fee	N/A	N/A	3,858,403	3,386,667	3,488,267	3,592,915	14,326,252
6	Total MFWB	N/A	N/A	\$42,442,430	\$51,767,625	\$53,320,654	\$54,920,273	\$202,450,982

Based on this budget, PG&E estimates its MFWB Program will treat 845 properties, totaling an estimated 4560 buildings and over 83,000 in-units. Based on the estimated treatments, PG&E estimates saving 89,488,524 kWh and 3,479,353 therms. PG&E requests permission to adjust the goals as a result of the solicitation for the MFWB Program third-party administrator.

1

2

3

4

5

6

As stated above, for its MFWB third-party solicitation process,
PG&E proposes to use a PRG and IE leveraging Energy Efficiency's
third-party solicitation process. PG&E's MFWB solicitation timeline
will be approximately 14-17 months from PRG/IE setup through
contract award and is detailed in Section D.9.a.iii below.

PG&E proposes to continue its current ESA MF in-unit, CAM,
SPOC, and CSD LIWP leveraging programs throughout 2021 and
will transition MF in-unit to the new ESA Plus Program upon launch
in 2022. All MF components (in-unit, CAM, SPOC, LIWP
Leveraging) are anticipated to transition to the MFWB Program upon
launch in 2023 as illustrated in Figure I-4.

FIGURE I-4 ESA PROGRAM TRANSISTION

ESA Program Transition

6

7

8

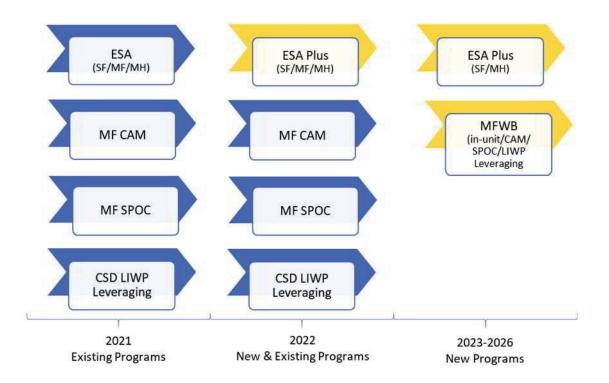

9

10

11

12

13

PG&E estimates four to five months to transition to the MFWB Program and requests permission to adjust the timeline based on the MFWB Program solicitation. PG&E anticipates beginning this solicitation process 2021 and completing it in 2022, with the MFWB launching in the first quarter of 2023. The actual launch date of the MFWB Program will be dependent of the actual solicitation timeline and the time required to standup the new program. i. Describe the energy savings and treatment targets for multi-family properties in the MFWB Program. What are the annual savings targets in kWh, therms, and equivalent BTUs? What are the annual goals for number of properties and number of units served? Is there a minimum efficiency target for each

property? Will the goals adjust based on the solicitation process? 14

PG&E's MFWB Program estimates treating 845 deed and 1 2 non-deed-restricted properties, totaling an estimated 4,560 buildings. This equates to 130 deed-restricted properties 3 and 715 non-deed-restricted properties. In addition, PG&E 4 5 estimates treating over 83,000 MF in-units. Based on the MFWB Program estimated treatment targets, PG&E estimates 6 89,488,524 kWh and 3,479,353 in therm savings. PG&E's 7 8 estimated energy savings are based on savings estimates from current ESA's MF in-unit treatments, CAM treatments, and 9 EE MUP. 10 11 While energy savings is the primary goal, the MFWB

Program is expected to also include in-unit HCS elements for 12 in-unit treatment to address income-qualified tenant hardship 13 needs. In addition to including HCS elements to address 14 income-gualified tenant hardship needs, PG&E proposes that 15 the in-unit treatment of the MFWB Program also address the 16 specific needs states as defined in Section B.1.c. above; CARE 17 customers identified as high energy users, having been 18 19 disconnected, receiving the medical baseline rate, residing in a DAC, on tribal lands, or in a rural area, residing in a wildfire risk 20 zone. Table I-34 summaries the number of potential 21 multi-family CARE customers per need state. 22

TABLE I-34 PG&E'S PROPOSED NEED STATES FOR MULTI-FAMILY

Line No.		High Usage	Medical Baseline	Disconnections	DAC ^{(a)/} Tribal/ Rural	Wildfire Threat	
1	Problem	Level of usage incurs surcharge	Device or condition requires extra energy	Payments are missed and power is turned off	Environmental conditions impact energy use	Power shut-off is likely	
2	Approximate Customer Counts ^(b)	3,400	20,400	21,900	173,400	5,400	
(a) Disadvantaged Communities. (b) As of June 30, 2019.							

1	PG&E requests permission to adjust the energy savings and
2	treatment targets as a result of the solicitation for the MFWB
3	Program third-party administrator.
4	A. What are the annual savings targets in kWh, therms, and
5	equivalent BTUs?
6	PG&E's estimated annual energy savings targets for the
7	MFWB Program are detailed in Table I-35. These targets
8	are based on PG&E's current ESA MF in-unit, CAM
9	projects, and Energy Efficiency's MUP historical
10	performance and the estimated MFWB Program treatments.
11	Table I-35 summarizes the proposed MFWB Program
12	energy savings and treatment targets starting in 2023 to
13	align with the launch of the MFWB Program.

TABLE I-35 PROPOSED MFWB PROGRAM ENERGY SAVINGS AND TREATMENTS

PG&E requests permission to adjust the annual savings 1 2 targets based on the MFWB Program solicitation to ensure the solicitation process considers innovative and alternative 3 program designs to best serve income-qualified tenants and 4 5 property owners. B. Is there a minimum efficiency target for each property? 6 PG&E proposes a minimum efficiency target of 7 8 10 percent savings for each property participating in ESA MFWB Program that includes CAM, with or without in-unit 9 10 treatments. The 10 percent savings per property is based 11 on EE programs such as PG&E's MUP, CSD's LIWP and BayREN's Bay Area Multi-family Building Enhancements 12 Program. PG&E requests permission to adjust the 13 minimum efficiency target based on the solicitation process 14 to ensure the solicitation process considers innovative and 15 alternative program designs to best serve low-income 16 tenants and property owners. PG&E proposes not requiring 17 a minimum efficiency target for tenants and properties only 18 19 participating in MF in-unit treatment. C. Will the goals adjust based on the solicitation process? 20 21 PG&E requests permission to adjust the goals based on the solicitation process to ensure the solicitation process 22 23 considers innovative and alternative program designs to best serve low-income tenants and property owners. 24 What are your proposed income guidelines for participation and 25 ii. 26 processes to certify eligibility? How will affordability (for rents) 27 be maintained? PG&E proposes an income guideline for property 28 29 participation to require at least 65 percent of the units to be 30 occupied by households that qualify under the ESA affordability definition. Under this proposal, this income guideline for 31 32 participation in the MFWB Program is the same as the income guideline currently utilized for MF CAM. Deed-restricted 33 properties will be required to provide: (1) regulatory agreements 34

with a government agency showing compliance with the income 1 2 eligibility requirements; or (2) tenant income verification or enrollment in a gualified categorical program as approved by the 3 CPUC. Non-deed-restricted properties will be required to 4 5 provide tenant income verification or enrollment in a qualified categorical program, as approved by the CPUC. 6 PG&E proposes to allow property owners to enroll tenants 7 8 in ESA in-unit and install measures without tenants enrolling separately in ESA provided the property owner provides income 9 eligibility for the units. For properties not participating in the 10 11 MFWB Program, individual MF households can continue to participate in ESA provided they are income-eligible. 12 A. How will affordability (for rents) be maintained? 13 To maintain affordability of rents in treated properties, 14 PG&E proposes to continue to include rent increase 15 restrictions to ESA participation agreements stating that 16 property owners will not increase rents for the 17 income-gualified dwellings as a result of the work that is 18 performed with ESA funding. In addition, PG&E proposes 19 that the MFWB Program administrator provide a tenant 20 21 complaint process should rent increase restrictions not being followed that will direct tenants to local support 22 services when issues cannot be resolved between the 23 property and the tenant. 24 iii. At a minimum, include in the timeline: (1) issuing necessary 25 26 solicitations; (2) executing contracts; and (3) launching the 27 MFWB Program. Based on the EE third-party solicitation process, PG&E 28 29 estimates the timeline for the solicitation process from PRG 30 and IE setup to through MFWB Program launch to take 16-21 months as illustrated in Figure I-5 below. 31

FIGURE I-5 PROPOSED MFWB PROGRAM SOLICATION AND LAUNCH TIMELINE

MFWB Program Solicitation & Launch Third-Party Administrator Solicitation & Launch Timeline

1	This proposed timeline is based on the following:
2	PRG/IE Setup Phase: Two to three months, which includes
3	one to two months overlapping with RFP preparation.
4	 <u>Solicitation Process</u>: 11-14 months from RFP preparation
5	through contract execution:
6	 RFP preparation phase includes PRG/IE review of the
7	RFP and scoring criteria.
8	 RFP release and submission phase for bidders to
9	prepare and submit their proposals.
10	 RFP evaluation and selection phase includes PRG/IE
11	review of RFP proposals, scoring and ranking.
12	 Negotiations and contracting phase includes PRG/IE
13	review of final contract.
14	 Program Launch: 4-5 months from contract execution to
15	program launch.
16	Additional details regarding the solicitation process are in
17	Section E.2., below.
18	Since EE has not yet completed a third-party solicitation
19	through contract award as of the filing of this application, PG&E
20	proposes to work with the PRG and IE to modify the timeline

based on the timing and directives of the final decision. PG&E 1 2 also proposes to adjust the program launch based on the solicitation results. 3 iv. Consider all feasible and appropriate opportunities for job 4 5 training; job creation; or pathways to employment for members of low-income or disadvantaged who participate in local job 6 7 training programs. 8 As part of PG&E MFWB Program solicitation, PG&E proposes to request bidders to define any local hiring practices, 9 10 including engagement with local job training programs for 11 placement into job opportunities prior to listing with the general public. PG&E also places a high value on local community 12 partnerships and values workforce development opportunities 13 that ensure hiring within local communities. To that end, PG&E 14 will encourage vendors to consider the benefits of working with 15 all local trained and certified ESA contractors. The program has 16 made a substantial investment in current programming cycle in 17 training local workforce and PG&E would like to ensure that its 18 19 customers get the maximum benefits from these past 20 investments. 21 PG&E also proposes to request bidders to explore other opportunities to encourage workforce development, such as: 22 23 Requiring building operator training for properties receiving • ESA MFWB CAM funding for central systems; 24 Encouraging hiring of staff residing in DACs to fill positions 25 • 26 created as a result of ESA MFWB; 27 Pathways to employment for members of low-income or disadvantaged who participate in local job training 28 29 programs; and 30 Coordinate and leverage relationships with workforce development and contractor associations such as California 31 32 Workforce Development Boards, Center for Sustainable Energy, Brightline Defense Project, EE for All, and 33 community colleges. 34

b. The Massachusetts LEAN Multi-family Program has a single 1 application portal for a multi-family retrofit program funded by 2 different programs and agencies. Address how the MF solicitation 3 will address the goal to, where feasible, create a seamless customer 4 5 interface for delivering energy efficiency services for owners and tenants of multi-family buildings. 6 As part of PG&E's MFWB Program solicitation, PG&E proposes 7 8 to request bidders to identify how their MFWB Program will create a seamless customer interface for delivering EE services for owners 9 and tenants of multi-family buildings by using the Massachusetts 10 11 LEAN Multi-family Program as a best practice. PG&E also proposes to request bidders to identify specific requirements for PG&E and/or 12 for other program and agencies to support the bidder's 13 implementation of a seamless customer interface for owners and 14 tenants of multi-family buildings. 15 c. Describe how the solicitation process will address the following: 16 i. Offer existing demand response tools, technology or education 17 to help multi-family households shift load to off-peak times. 18 19 PG&E proposes to include in its MFWB Program solicitation 20 that bidders include in their proposals how they will integrate 21 offering existing demand response tools, technology or education to help multi-family households shift load to off-peak 22 23 times in their MFWB Program. Provide multi-family building owners flexibility in choosing a 24 ii. contractor to implement ESA-funded energy efficiency 25 26 measures, including processes with open or continuous 27 enrollment and trainings, cost control measures (such as competitive bids), and coordinated statewide requirements.¹⁵³ 28 29 As part of PG&E's MFWB Program solicitation, PG&E 30 proposes to request bidders to define how they will provide multi-family property owners flexibility in choosing a contractor 31

¹⁵³ SB 454 (2011) requires that recipients of utility incentive dollars to warrant they have complied with building permit requirements and used licensed contractors.

1		to implement ESA-funded EE measures for common areas
2		while utilizing the expertise of existing ESA-trained contractors
3		as stated above in Section D.9.a.iv. PG&E is focused on
4		ensuring a seamless transition of the program from one cycle to
5		another and will encourage bidders to be mindful of the cost and
6		the importance of local businesses in the communities we
7		serve.
8		PG&E proposes to request bidders to detail their contractor
9		processes, including the following:
10		<u>Contractor Strategy</u> , including: Properties requesting full
11		MFWB treatment, properties requesting CAM only
12		measures, properties requesting in-unit only treatment only,
13		or MF low-income households requesting in-unit treatment;
14		<u>Contractor Management Processes</u> , including: Contractor
15		recruitment, open or continuous contractor enrollment,
16		contractor licensing verification, on-boarding, training,
17		technical support, contractor performance, and how to
18		utilize current local trained and certified ESA contractors;
19		<u>Cost Control Measures</u> : Such as competitive bids and
20		direct install components they plan to implement to ensure
21		ratepayer funds are being utilized most effectively; and
22		<u>Coordinate Statewide Requirements</u> : For properties
23		receiving a fuel source from another IOU.
24	iii.	Address the need to work with multi-family building
25		owners/managers to plan ESA energy efficiency projects that
26		coincide with other building upgrades or building refinancing.
27		PG&E proposes to include in its MFWB Program solicitation
28		that bidders include how they will work with multi-family building
29		owners/managers to plan ESA EE projects that coincide with
30		other building upgrades or building refinancing in their
31		proposals.

 iv. Address whether bidders may submit bids that propose serving the entire state, or specific geographic areas, or specific prioritized populations.

PG&E proposes that bidders will submit proposals that 4 5 serve PG&E's entire geographical area. PG&E proposes to use a single administrator to facilitate collaboration, leveraging and 6 7 integration with other state or federally funded income-qualified 8 programs to fully cover PG&E's territory. PG&E proposes that the single third-party administrator subcontract with other 9 providers serving specific geographic areas or specific 10 11 prioritized populations as needed to deliver an innovated, robust MFWB Program that drives deep energy savings. PG&E 12 anticipates that having a single MFWB Program administrator 13 for PG&E's territory will enable a smooth transition should the 14 Commission direct a single administrator to serve the 15 entire state. 16

27

28 29

30

31

 v. Address whether feasible and appropriate opportunities for job training, job creation, or pathways to employment for members of low-income or disadvantaged communities who participate in local job training programs are incorporated.

As part of PG&E MFWB Program solicitation, PG&E expects to request bidders to use local hiring practices, including engagement with local job training programs for placement into job opportunities prior to listing with the general public. PG&E is focused on ensuring a seamless transition of the program from one cycle to another and will encourage bidders to be mindful of cost and the importance of local businesses in the communities we serve. As stated in Section D.9.c.ii., PG&E will encourage vendors to consider the benefits of working with all local-trained and certified ESA contractors.

In addition, the solicitation process will request bidders to
explore feasible opportunities to encourage workforce
development, such as:

1	 Encouraging hiring of staff residing in DACs to fill positions
2	created as a result of ESA MFWB;
3	 Develop a workforce development network list; and
4	Coordinate and leverage relationships with workforce
5	development and contractor associations, such as California
6	Workforce Development Boards, Center for Sustainable
7	Energy, and community colleges.
8	Other Elements in ESA Program Design and Delivery
9	10. Proposed Performance Assessments To Inform Future Cycle
10	Decision Making [WITNESS: O'DRAIN]:
11	If designed with meaningful purpose, conducted rigorously, and the
12	results used effectively, assessing performance and benefit to the ESA
13	Program participants allows for course correcting within the
14	2021-2026 timeframe.
15	To support the assessment of program performance and benefit to
16	the ESA participants, PG&E is proposing two changes in the approach
17	to define and budget of ESA studies:
18	1) Forming an ESA/CARE Study Working Group; and
19	2) Adopting Energy Efficiency's Measurement and Evaluation Studies
20	funding approach.
21	Formation of an ESA/CARE Study Working Group
22	PG&E, in conjunction with the other IOUs, proposes the formation of
23	an ESA/CARE Study Working Group to provide a transparent and
24	robust study process. The ESA/CARE Study Working Group will
25	provide input on the scope, timeline, and budget of studies. The Study
26	Working Group could take a consensus driven approach with the goal of
27	maximizing timely results. The IOUs expect the Study Working Group to
28	hold quarterly meetings, jointly review proposed study statements of
29	work, and participate in project kick-offs. This approach is expected to
30	facilitate more relevant and focused studies that include budgets that
31	are commensurate with the specific objectives and methodology
32	necessary to execute the work for each study.

1	Adopting Energy Efficiency's Measurement and Evaluation Studies
2	Funding Approach
3	PG&E proposes adopting Energy Efficiency's approach of defining
4	an overall statewide study budget along with a study roadmap process
5	that provides both transparency and flexibility to scope forthcoming
6	study proposals and associated budgets. The IOUs propose to include
7	their annual study roadmap in their Annual ESA-CARE Reports. With
8	this approach, statewide budgets are proposed for study categories, not
9	specific studies. Specific budgets for each specific study would be
10	designated as they are scoped. The IOUs plan to work with the
11	ESA/CARE Study Working Group to finalize the project scope and
12	timing of each study.
13	Appendix C provides additional details regarding the proposed
14	ESA/CARE Study Working Group process along with the studies
15	roadmap process.
16	a. Impact Evaluation
17	Propose a budget, scope, objectives, schedule, and
18	methodology for the next impact evaluation. Present a detailed
19	discussion of how 2015-2017 impact evaluation results influenced
20	current (PY 2018-2020) program goals and planning. How would
21	the proposed next impact evaluation(s) have improved value and aid
22	prompt improvements to program performance and benefit
23	to participants?
24	As detailed in Appendix C, for the 2021 to 2026 ESA/CARE
25	application, the IOUs propose two to four statewide impact
26	evaluation studies with a total statewide budget of \$1,500,000.
27	Each study will have a not-to-exceed budget of \$500,000.
28	PG&E anticipates at least two impact evaluations to occur;
29	one of the ESA Plus Program for PYs 2022-2023 and one of the
30	MFWB Program for PYs 2023-2024. This would allow evaluation of
31	new program changes to potentially be completed in time to use
32	results in next application planning. Other impact evaluation studies
33	could be more focused on specific measures or other program areas
34	of interest.

The IOUs are anticipating extensive program design and 1 2 implementation changes during this program cycle. As discussed elsewhere in this application, PG&E is anticipating a 15-month 3 transition to solicit and implement new proposed program designs 4 for its ESA Plus Program, and a 22-month transition to solicit and 5 implement its MFWB Program. As stated in the Application, these 6 transition periods may be adjusted based on the solicitation of each 7 8 program. The IOUs are proposing to use impact studies to focus on effectiveness of their new program design and measures. 9 In addition to the impact evaluation, the IOUs are proposing some 10 11 complementary process evaluation elements, discussed in Section D.10.c., to augment the program impact study, especially in 12 light of the extensive program design and implementation changes. 13 The specific scope and budget for each of the impact evaluations 14 will be finalized in the ESA/CARE Study Working Group. 15 16

The specific impact evaluation studies, including the scope, timeline, and budget for each specific impact evaluation are undefined at this time. PG&E proposes the IOUs work with the ESA/CARE Study Working Group (proposed in Section D.10. above and in Appendix C) to finalize scope and timing of the evaluation studies.

17

18 19

20 21

PG&E continues to leverage findings and data from studies 22 23 conducted during prior program cycles to inform its ESA portfolio proposals and ongoing program improvements. The 2015-2017 24 Impact Evaluation Phase 2 results are used in this application to 25 26 determine energy savings. PG&E's proposed ESA Program 27 addresses the challenges of decreasing energy savings by changing the balance of benefits between energy savings and hardship 28 29 reduction. PG&E presents a detailed discussion of how 2015-2017 30 Impact Evaluation results influence both current and application program goals and planning in its discussion of Impact Evaluation 31 32 results in Section B.2.a., and in its detailed discussions of the effect of lower ESA energy savings in Sections A.2., C.3, and D.6. 33

1	b) Low-Income Needs Assessments (LINA) ¹⁵⁴
2	Propose a budget and topics for the 2022 LINA and budget only
3	for the 2025 LINA. Present a detailed discussion of why these
4	areas warrant study for the 2022 LINA report and how you would
5	incorporate future LINA information to establish program goals
6	and/or facilitate accomplishing those goals.
7	LINA Studies: Per Pub. Util. Code Section 382(d), the CPUC
8	is mandated to complete a LINA Study every three years with the
9	assistance of the LIOB.
10	Given the current study will is anticipated to be completed in
11	December 2019, a forthcoming Needs Assessment is required to be
12	conducted. The IOUs plan to start the 2022 LINA study in 2020 and
13	will scope it in 2019 in order to solicit and onboard a consultant in
14	2020. Since this study will begin in 2020, the IOUs will file an AL to
15	request authorization and budget for the 2022 LINA Study. The
16	requested funding for the 2022 LINA Study is proposed to fund 2020
17	related expenditures and unspent authorized, committed 2022 LINA
18	budget from the 2017-2020 cycle will carry over into the 2021-2026
19	program cycle to complete the study by December 31, 2022.
20	As detailed in Appendix C, the IOUs propose two LINA Studies
21	to begin during the 2021-2026 program cycle, with not-to-exceed
22	statewide budgets of \$500,000 each (allocated evenly between the
23	CARE and ESA Programs):
24	1) 2025 Statewide LINA (to be scoped and solicited in 2023); and
25	2) 2028 Statewide LINA (to be scoped and solicited in 2026).
26	As with the 2022 LINA Study, the 2028 LINA Study will cross
27	program cycles and required authorized committed funding to be
28	carried forward into the next program cycle.
29	PG&E anticipates continuing to use the LINA studies to help
30	improve CARE and ESA Programs ability to meet customer needs.
31	The LINA studies accommodate changing markets and

¹⁵⁴ The Low-income Needs Assessment is required every third year pursuant for Pub. Util. Code Section 382 (d).

1	implementation strategies through examination of low-income needs
2	and research questions, as described in Section B.2.
3	c) Studies and Pilots:
4	Discuss all other proposed studies/pilots or any alternative or
5	additional proposed assessment of performance. All proposals
6	must include budgets, a timeline, and detailed justification and
7	implementation plans for the proposed study/pilot.
8	Studies
	In addition to the Impact Evaluations and LINA studies
9	discussed above in Section D.10.a. and D.10.b., PG&E, in
10	
11	conjunction with the other IOUs, is proposing the following statewide
12	studies for the 2021-2026 is program cycle:
13	One to four ESA Process Evaluations as recommended in the
14	2017 Impact Evaluation;
15	One CARE-ESA Categorical Eligible Program Update Study
16	Funding for this Study will be split between the CARE and ESA
17	Programs at 50 percent each; and
18	One NEB Study.
19	As described in Section D.10. and Appendix C, statewide
20	budgets are proposed for study categories, not specific studies.
21	Budgets will be designated for each specific study as it is scoped.
22	PG&E proposed the IOUs work with the ESA/CARE Study Working
23	Group to finalize the project scope and timing. Table I-36, below,
24	summarizes the study budget by study category.
25	In addition, PG&E is requesting additional EM&V Research
26	funding of \$300,000 that will enable additional PG&E-specific
27	research projects or data analyses during the 2021-2026 program
28	cycle to assist in answering questions not included in a specific
29	study but that may arise during the course of running the
30	low-income programs. These are expected to be deployed following
31	the Study Working Group process described in Section D.10. and
32	Appendix C.

A summary of each of the proposed studies is included below. 1 2 Additional details regarding the study description, rationale, budget, and timing for each of the evaluations is described in Appendix C. 3 Statewide Process Evaluations: IOUs are proposing one to four 4 5 process evaluations to review new and specific ESA Program elements to be defined within the ESA/CARE Study Working Group. 6 The total statewide proposed budget for these studies is \$500,000. 7 8 This proposed process evaluation(s) will assess program progress once the program has operated for a minimum of 12 months, and is 9 anticipated to begin in late 2023 or early 2024. It will assess 10 11 whether and how the program is achieving desired outcomes according to original planning and design. Lessons learned and 12 recommendations will inform if the program is operating as intended 13 and what may be the elements should be adjusted to achieve 14 optimal program impacts. The key objective of the study(s) is to 15 ensure the program activities are consistent and producing intended 16 outputs and outcome and to propose processes to help the program 17 better achieve its goals and objectives. 18

19 NEBs Primary Research and NEBs Model Update: One of the recommendations from the 2019 NEBs study is for California to 20 21 invest in primary data collection to form California specific values for a selected set of NEBs. Until now, IOUs have relied on literature 22 research to gather best available and most recent NEBs 23 documentations and NEB value data. This approach has not 24 yielded the robust and reliable results that the IOUs and 25 26 stakeholders desired. During 2021-2026, IOUs are proposing a 27 focused primary market research effort to collect California specific NEBs values. This focused study will use outputs and 28 29 recommendations from the 2020 NEBs Follow-Up Study and it is 30 anticipated to begin in 2021. The results from this primary research will feed into the NEBs model for benefit calculation. 31 32 The preliminary statewide budget for this study is \$500,000. PG&E proposes the IOUs work with the ESA/CARE Study Working Group 33 to finalize the project scope, timing, and budget. 34

Statewide CARE-ESA Categorical Program Study: The IOUs 1 2 propose to conduct a study to update the list of categorically-eligible programs. ESA and CARE programs are allowed to 3 categorically-enroll households that participate in other 4 5 means-tested programs. The income requirement for enrolling in CARE and ESA Programs is less than or equal to 200 percent of 6 FPL, as set forth in Pub. Util. Code Section 739.1(b)(1). The current 7 8 list of categorically-eligible programs has not been reviewed or updated since 2013. This study will review eligibility requirements of 9 currently authorized programs and seek other programs with similar 10 11 eligibility criteria in order to update the list of means-tested programs that may be used to gualify customers to participate in CARE and 12 ESA Programs. In addition, this study will review the income 13 verification process of these programs to determine if their process 14 can be leveraged by CARE in support of the CARE PEV process. 15 This information can be used for program design and updates. 16 The purpose of this study is to review the effectiveness of these 17 categorical program design, participant eligibility requirements and 18 19 other implementation concerns, relative to the targeted population for these services. The proposed budget for this statewide study 20 21 is \$150,000. Funding for this study would be evenly allocated between the CARE and ESA budgets. This study is anticipated to 22 23 begin in 2021. Summary of Study Budget: Table I-36 provides a summary of 24

24Summary of Study Budget.Table 1-30 provides a summary of25the proposed budget for each study category for 2021-2026.26As discussed in Section D.10. and in Appendix C, the budget for27each specific study will be determined once the study has28been scoped.

			statewide budget			PG&E Study Budget	et
Sta	Statewide Study Categories	Statewide	ESA (50%)	CARE (50%)	Total	(CARE (50%)	ESA (50%)

(a) LINA 2022 Study will be requested from 2017-2020 budget in an AL to be filed in Q4 2019. The AL will request to carryover committed funding to the 2021-2026 cycle.

1	PG&E supports the continuation of the current Joint Utility
2	Funding Split for joint projects funded between the four IOUs. The
3	funding split is detailed in Table I-37.

Line No.	Utility	Funding Split
1	PG&E	30%
2	SCE	30%
3	SoCalGas	25%
4	SDG&E	15%

TABLE I-37 JOINT UTILITY STUDY FUNDING SPLIT

Pilots [WITNESS: LEIVA JUNGBLUTH] 4 PG&E is proposing two pilots for the 2021-2026 program cycle 5 6 as detailed below. Virtual Energy Coach Pilot: The purpose of PG&E's proposed 7 Virtual Energy Coach Pilot is to extend and enhance the results of 8 9 the Low-Income Disaggregated Load Profiles Project, which was ordered by D.16-11-022 and modified by D.17-12-009. The plan is 10 to use the disaggregated load profiles of CARE and ESA customers 11 12 to test the impact of personal use information, communications and interactions on energy savings, residential rate selection, 13 participation in other programs and changes in behavior. 14 The proposed pilot will provide ESA Program participants with a 15 Virtual Energy Coach (VEC) to help them implement their 16 personalized energy action plan. The results are anticipated to 17 assist in determining if additional support, follow up, progress 18 tracking, and recognition can cost-effectively make a positive 19 difference in energy use, hardship reduction, customer engagement 20 21 and satisfaction. See detailed VEC Pilot Implementation Plan in Attachment A. 22 Long-Term CARE Customer (LTC) Pilot: The LTC Pilot is 23 24 proposed during the 2021-2026 program cycle to test the effectiveness of different outreach and communications to increase 25 ESA participation with long-term CARE customers (defined as 10 or 26

1	more years continuously) that have not previously enrolled in ESA.
2	Both groups will receive information that require their response or
3	risk losing their CARE discount. However, one group of customers
4	will receive communications focused on the benefits of ESA. The
5	other group will receive communications focused on the economic
6	impact of potentially losing their CARE discount. Data collection
7	and analysis on the impacts of both positive benefits and negative
8	economic impacts will be important in informing future ESA and
9	CARE enrollment policies. See detailed LTC Pilot Implementation
10	Plan in Appendix D.
11	11. Cost-Effectiveness [WITNESS: O'DRAIN]
12	a. Provide a summary of quantitative valuation of the benefit to cost
13	ratio of ESA Program (using cost-effectiveness tests),
14	demonstrating any notable trends in cost-effectiveness of the ESA
15	Program (e.g., over time, over different populations) or other
16	analytical results that informed proposed Program goals and
17	approach. Include tables or graphs to illustrate cost-effectiveness
18	trends discussed.
19	PG&E used the two cost effectiveness tests authorized for the
20	ESA Program: the ESACET and the Resource Test. ¹⁵⁵ Table A-7
21	in Chapter IV illustrates cost effectiveness trends over time.
22	D.19-05-019 required all Distributed Energy Resources to
23	perform the TRC, Ratepayer Program Administrator Cost, and
24	Ratepayer Impact Measure (RIM) Tests when performing
25	cost-effectiveness analyses. ¹⁵⁶ While the TRC is not considered
26	the primary test for ESA, in compliance with D.19-05-019, these
27	three tests were run at the portfolio level and included for
28	informational purposes in Table A-7 in Chapter IV.

¹⁵⁵ These two tests were authorized by the Commission in D.14-08-030 and reiterated again for continued use in this application in D.19-06-022, D.14-08-030, OP 43.c, Conclusion of Law (COL) 45.c, p. 66; and D.19-06-022, Attachment A, Section I.D.11.a.i, p. 24 and Attachment B, Tables A-7, A-8, and A-9.

¹⁵⁶ D.19-05-019 Decision Adopting Cost-Effectiveness Analysis Framework Policies For All Distributed Energy Resources, OP 2 and p. 17.

The ESACET has been specifically developed and authorized 1 as the primary test to assess cost-effectiveness, including 2 consideration of NEBs for the ESA Program and includes: all 3 measures, all known benefits (including energy savings and NEBs), 4 and all costs (including administrative costs).¹⁵⁷ NEBs included in 5 this test were updated in 2019.¹⁵⁸ 6 The Resource Test excludes measures designated as 7 "non-resource" measures. Non-resource measures are measures 8 with "little to no energy savings, but significant NEBs, such as 9 health, comfort and/or safety."¹⁵⁹ For example, the regular furnace 10 11 repair and replacement measure (as opposed to the recently added High Efficiency Furnace measure) is driven by its Natural Gas 12 Appliance Test (NGAT) failure, not by potential to save energy. 13 In fact, repaired HVAC applications frequently lead participating 14 households to use cooling and heating services that they were not 15 using before, thus generating more energy usage. However, these 16 negative savings may also promote and produce favorable HCS 17 benefits for the program participants. 18 19 Non-resource measures excluded from the Resource Test include those sub-measures with zero or negative kWh or Therm 20 21 annual savings. The Resource Test includes only the avoided cost benefits and the installation costs for the resource measures; NEBs 22

¹⁵⁷ D.14-08-030, OP 43.c, COL 45.c, p. 66; adopted the Cost-Effectiveness Working Group's Final Report (July 15, 2013), describing the two new ESA cost effectiveness tests (available at the following link: <u>http://docs.cpuc.ca.gov/SearchRes.aspx?docformat=ALL&docid=99753158</u>). Tests were refined in the CEWG's June 1, 2018 recommendations; available at: <u>http://docs.cpuc.ca.gov/SearchRes.aspx?docformat=ALL&docid=99753158</u>]. Tests June 2018 report, the CEWG recommended the IOUs continue to use ESACET as the primary cost effectiveness test for ESA, and continue to use the renamed Resource Test for informational purposes only (Table 1, p. 4), and to revisit the usefulness of the Resource Test in the future.

¹⁵⁸ SERA. Non-Energy Benefits and Non-Energy Impact (NEB/NEI) Study for the California ESA Program, Vols. 1 and 2, Final. August 2019. (See: <u>https://pda.energydataweb.com/#!/documents/2295/view</u>.).

¹⁵⁹ Recommendations of the ESA Program CEWG, dated June 1, 2018. The CEWG's Reports can be seen at the following link: http://docs.cpuc.ca.gov/SearchRes.aspx?docformat=ALL&docid=99753158.

and administrative costs are not included in the test. Therefore, the 1 2 Resource Test is not comparable to the ESACET but provides some information on the contribution of resource measures to the ESA 3 Program. The Resource Test is included for informational uses 4 5 only. The CE WG recommended that a team reconvene to discuss 6 and determine what cost-effectiveness threshold to use for the ESA 7 8 Program. In the meantime—absent a specified threshold—PG&E set a 0.7 average portfolio threshold for the cycle as its goal. PG&E 9 determined that considering available data, the 2021-2026 ESA 10 11 portfolio proposed in this application provides a balanced cost-effective ESA portfolio, balancing potential energy savings with 12 increased HCS for its low-income customers. 13 Cost-effectiveness results for ESA are shown in Chapter IV, 14 Table A-7. 15 *In presenting cost-effectiveness results and trends apply* 16 i. consistent and compliant methodology for calculating 17 cost-effectiveness (see D.14-08-030 for adopted 18 19 Cost-Effectiveness Working Group recommendations) and use the updated savings values from the 2015-2017 ESA 20 21 Impact Evaluation. PG&E followed the cost effectiveness methodology adopted 22 in D.14-08-030, as well as the directives of D.19-05-019 23 regarding cost effectiveness.¹⁶⁰ PG&E used the updated ESA 24 2015-2017 ESA Impact Evaluation Phase 2 results in the 25 26 ESACET and Resource Tests, as well as in the TRC, PAC, and 27 RIM tests. Updated NEBs from the 2019 NEBs Study were also used. Both Impact and NEBs Study results were described 28 29 previously, in Section B.2. 30 b. The Commission is to "take into consideration both the cost-effectiveness of the services and the policy of reducing the 31

¹⁶⁰ D.14-08-030, OP 43.c, COL.45.c, p. 66; and D.19-06-022, Attachment A, Section I.D.11.a.i, p. 24 and Attachment B, Tables A-7, A-8, and A-9.

hardships facing low-income households"¹⁶¹ when setting policy governing energy efficiency services for low-income households.

 What changes, if any, do you propose for the method of cost-effectiveness calculation adopted in D.14-08-030 per Cost-Effectiveness Working Group recommendations?

Consistent with the CEWG's recommendations, PG&E is using the ESACET and Resource Tests with the aspirational goal of achieving a cost/benefit ratio as close to one as possible which is a significant challenge given PG&E's approach with increasing comfort and health measures aimed at addressing the need states. As stated above, considering available data, PG&E's average 2021-2026 ESACET ratio of 0.72 includes a balanced mix of measures providing both energy and NEBs to low-income customers. PG&E proposes no changes to the method of cost-effectiveness calculation for ESACET adopted in D.14-08-030 per CEWG recommendations.¹⁶²

PG&E proposes that the Resource Test no longer be 17 required because it provides little additional value. In their June 18 19 2018 report, the CEWG recommended the IOUs continue to use ESACET as the primary cost effectiveness test for ESA, and to 20 revisit the usefulness of the Resource Test in the future.¹⁶³ 21 The Resource Test includes only the avoided cost benefits and 22 the installation costs for the measures; NEBs and administrative 23 costs are not included in the test to understand the contribution 24 of resource measures to the program. Cost effectiveness 25 26 without NEBs are calculated for the TRC, RIM, and PAC tests, 27 and ESACET includes both the energy and NEBs provided by the program. PG&E believes the Resource Test provides little 28 29 additional value and proposes it be discontinued. 30 (See Section D.7.)

¹⁶¹ Pub. Util. Code Section 2790.

¹⁶² D.14-08-030, OP 43.c, COL 45.c, p. 66.

¹⁶³ The CEWG's June 1, 2018 recommendations (Table 1, p. 4); available at: <u>http://docs.cpuc.ca.gov/SearchRes.aspx?docformat=ALL&docid=99753158</u>.

1	ii. Explain how cost-effectiveness results have informed design
2	and/or delivery and identify any proposed changes.
3	PG&E performed the ESACET on its proposed 2021-2026
4	ESA Program and adjusted the measure mix to help achieve an
5	ESA Program design that is cost effective at the portfolio level.
6	Refer to Section D.6. for proposed changes. ESACET results
7	are provided in Tables A-7, A-8, and A-9 in Chapter IV.
8	E. ESA Program Administration
9	1. Components of Program Administration [WITNESS: BENASSI]
10	a. Per the proposed design and delivery, list and define the necessary
11	components of program administration (e.g., Contract solicitation,
12	negotiation, and management; sharing data and information;
13	reporting for compliance; audits; change management). Suggest
14	any proposed changes to policies that would significantly reduce
15	utilities' administrative costs in offering ESA services.
16	Program administration components are identified in Table I-38
17	below and cover both the ESA Plus Program (introduced in
18	Section B.1.) and the third-party administrator for the MFWB
19	Program (Section D.9.). Table I-38 discusses responsibilities of
20	PG&E, third-party vendors, and program subcontractors.

	:				
No.	Program Auministration Components	Program Element Definition	PG&E	Third-Party Vendors	Subcontractors
~	Contracts	Request for Proposal (RFP), including contract negotiation through contract execution	Manages solicitation process via PRG/IE; result is contract execution	Participates in solicitation process, including contract negotiations; result is executed contract	May provide input to third-party vendors in support of RFP
		Contract management	Contract(s) with third-party vendors	Contracts with subcontractors, if applicable	N/A
		Performance evaluation – development and ongoing assessment (KPIs)	Evaluation of third-party vendors and feedback as well as corrective action planning	Adherence to KPIs and evaluation of subcontractors, if applicable	Adherence to KPIs and improvement plan development and execution
		Payment structure and process for payments	Payments to third-party vendors for measure installation work and for program administration	Payment to subcontractors, if applicable	N/A
7	Change Management	Program transition plan	Development and management of program transition plan	Review and adherence to program transition plan	May contribute to program transition plan
		Program design plan of ESA Plus Program	Development and management of program design plan	May contribute to program design plan	May contribute to program design plan
		Program design plan of MFWB Program	Review and oversight adherence of program design plan	Development and management of program design plan	May contribute to program design plan
		Program implementation plan	Review, approval, and oversight adherence of program implementation plan	Development and management of program implementation plan	May contribute to program implementation plan
		Communications	Communication with internal and external stakeholders including customers, third-party vendors, and subcontractors	Communication with subcontractors and PG&E	Communication with third-party vendors and PG&E
7	Change Management	Data analysis, risks identification and mitigation strategies	Review and approval of risk and mitigation plan and oversight on adherence	Development and management of risk and mitigation plan	Ongoing program feedback, obstacles or challenges
		Program database	Development and implementation of database requirements	Support requirements development.	Test and report data or system issues
			Set up third-party vendors and subcontractors in program database, if applicable	Manage subcontractors	
		WE&T	Energy Training Center to train third-party vendors and subcontractors, if applicable	Supplemental training of subcontractors or full training of workforce, if applicable	Soft skills and database tools training
ю	Customer Data Sharing	Maintain customer database	Develop customer data sharing guidelines and governance, share customer data with third-party vendors and subcontractors	Utilize and safeguard customer data appropriately	Utilize and safeguard customer data appropriately
		Capture program enrollments	N/A	Validate projects	Create projects in customer database
4	Program Delivery	Customer pipeline management	Oversee customer pipeline management	Development and management of customer pipeline	Support and maintain pipeline management
		Customer acquisition	PG&E marketing and outreach support	Support in outreach events and connecting with local organizations with relationships with low-income customers or properties	Leverage various acquisition channels including: outreach events, outbound calling, canvassing, etc.
		Customer enrollment	Provide program forms and channels for enrollment	Validate enrollments are complete	Enroll customers
Ω	Program Delivery	Materials management, if applicable	Specifications development, solicit and maintain bulk purchasing contract and negotiate pricing	Ensure bulk purchase materials are used	Order and install bulk purchase materials
		Measure installation	Post NGAT Gas Service Representatives (GSR) dispatch, if applicable	Oversee measure installation	Install measures
		Customer support	PG&E call center support and complaint resolution	Call center support and complaint resolution	Call center support
		Customer satisfaction	Customer survey to evaluate customer experience and program performance	Quality assurance of subcontractors	N/A
9	Reporting	Regulatory reporting	Reporting to CPUC and stakeholders	Data entry adherence to support reporting	Data entry adherence to support reporting
		Internal reporting	Program metrics; third-party vendors goals and KPIs	Reporting to PG&E	Reporting to third-party vendors
7	Audits	Income verification audits	Perform sample audit	Audit subcontractor enrollments	Audit enrollments
		Measure installation audits	Sample through Central Inspection Program	Inspect subcontractor work	Inspect work
		QA/QC of measure installation payments	QA/QC of invoice payments to third-party vendors	QA/QC of invoice payments to subcontractors	QA/QC of invoice payments
		QA/QC of program payments to third-party vendors	QA/QC of invoice payments to third-party vendors	QA/QC of invoice payments	N/A

TABLE I-38 PROGRAM ADMINISTRATION COMPONENTS

I-185

PG&E proposes to continue to contract with third-party vendors 1 2 to implement the ESA Plus Program. In addition, PG&E proposes to use a third-party vendor for the design and implementation of its 3 entire MFWB Program, including all in-unit and common area 4 5 treatments. PG&E expects to oversee the administrator contracts and the administrators will manage their own contracts with 6 7 program subcontractors. 8 i. Suggest any proposed changes to policies that would significantly reduce utilities' administrative costs in offering 9 ESA services. 10 11 While PG&E is proposing several changes to the program policies in Section D.7. above, none of these changes 12 significantly reduce utilities' administrative costs in offering ESA 13 services. 14 2. Program Implementers [WITNESS: BENASSI]: 15 a. List all solicitations the IOU would run to contract implementers to 16 carry out programs described in the Design and Delivery sections 17 above. Which Design and Delivery elements, if any, will not be 18 19 solicited for implementation by third-party entities, and why? Energy efficiency programs per Commission D.18-01-004 are third-party 20 21 designed and delivered in part to keep administration costs low and optimize effectiveness of installed measures through innovation in a 22 competitive marketplace. For Design and Delivery elements that 23 are solicited, how will you ensure that there is a sufficient number of 24 third-party program implementers competing? 25 26 List all solicitations the IOU would run to contract implementers i. 27 to carry out programs described in the Design and Delivery sections above. 28 29 PG&E proposes to hold two solicitations in support of the 30 programs described in the Design and Delivery sections above: 1) Program administrator(s) to implement the ESA Plus 31 32 Program. PG&E will maintain ownership of the program design. Refer to Section B.1. for ESA Plus Program 33

1		proposal summary and Section D.1. for details regarding the
2		ESA Plus Program; and
3		2) Third-party administration of the MFWB Program to include
4		program design and implementation. Refer to Section 9 for
5		details regarding the MFWB Program.
6	ii)	Which Design and Delivery elements, if any, will not be solicited
7		for implementation by third-party entities, and why?
8		PG&E will not include program design elements in the ESA
9		Plus Program solicitation as PG&E has extensive experience in
10		running the ESA Program, and has detailed insights into
11		low-income single family and mobile home customer segment to
12		be able to address these customers' needs.
13		The RFPs for the ESA Plus and the MFWB Programs
14		propose to solicit for the delivery of program elements identified
15		in Table I-38 above. For both programs PG&E anticipates it will
16		continue to:
17		• Utilize internal marketing resources for program awareness
18		marketing campaigns and to cross-promote ESA with other
19		programs administered by PG&E. Program administrators
20		are expected to also employ their own marketing resources
21		and strategies to promote the programs and drive program
22		participation;
23		Utilize PG&E call centers to provide customer support for
24		customers interested in enrolling in the ESA Programs as
25		some customers require a reassurance in program
26		legitimacy by a PG&E representative. Program
27		administrators are expected to also provide their own
28		call center customer support as needed;
29		Utilize PG&E Energy Training Center to continue to provide
30		subcontractor onboarding and training to ensure adherence
31		to the program and installation policies. Program
32		administrators are also expected to provide supplemental
33		workforce training as needed;

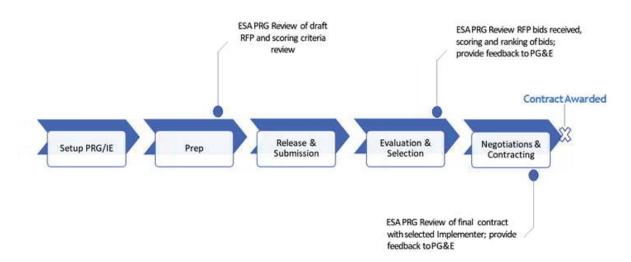

1	Offer NGAT as a measure to eligible customers and
2	performed by administrators' NGAT technicians; this
3	measure will continue to be funded by PG&E's General
4	Rate Case (GRC). PG&E GSR will be expected to continue
5	assisting customers on NGAT related issues in support of
6	ESA Program delivery; and
7	 Offer inspections through PG&E's Central Inspection
8	Program (CIP) of work performed under the ESA Plus and
9	the MFWB Programs. PG&E expects the administrators to
10	perform their own Quality Assurance/Quality Control as well.
11	iii) For Design and Delivery elements that are solicited, how will
12	you ensure that there is a sufficient number of third-party
13	program implementers competing?
14	To ensure that there is a sufficient number of third-party
15	program implementers competing in the solicitations, PG&E
16	plans continue to leverage existing best practices of publicizing
17	the ESA Plus and MFWB Programs RFPs across multiple
18	platforms, including:
19	 PG&E website on the Bid Opportunities section;
20	Proposal Evaluation & Proposal Management Application
21	website;
22	 PG&E's e-mail distribution lists of known suppliers and past
23	RFP participants;
24	 CPUC's e-mail distribution list of low-income suppliers; and
25	 ESA stakeholder working groups, such as the MFWG.
26	In addition, PG&E will host solicitation webinars to ensure
27	vendors understand program requirements and solicitation
28	process details. New to this program cycle, PG&E plans to
29	publicize the RFPs on LinkedIn to test the effectiveness of that
30	channel in attracting new bidders. PG&E will also explore the
31	possibility of announcing the RFPs at forums attended by
32	third parties such as industry association conferences,
33	if deemed appropriate.

b. Which Design and Delivery elements, if any, do the IOUs propose to 1 2 administer as a statewide program, with a single third-party program implementer for all IOU regions? 3 PG&E does not propose to administer any program design and 4 5 delivery elements as a statewide program, with a single third-party program implementer for all IOU regions. 6 c. Detail a proposed process for soliciting program implementers for 7 8 your territory and statewide programs (if proposed above). Include discussion of solicitation and contracting processes from the current 9 cycle, noting best practices, and lessons learned on each of the 10 11 following elements: Detail a proposed process for soliciting program implementers 12 for your territory and statewide programs (if proposed above). 13 To provide an additional level of transparency, PG&E proposes 14 to establish a PRG, which will include low-income expertise, and an 15 IE similar to EE's third-party solicitation process per D.18-01-004 for 16 soliciting program implementers.¹⁶⁴ As described in Section D.9, 17 the PRG and IE will monitor, evaluate and provide oversight of all 18 19 phases of the solicitation process and this process will be used for selecting program administrators for PG&E's ESA Plus and MFWB 20 21 Programs. PG&E will leverage EE expertise in setting up the PRG and IE and proposes to leverage and modify EE's PRG and IE 22 Handbook to detail roles and expectations of the PRG and the IE, 23 specific to ESA's solicitation process. The handbook will discuss 24 eligibility requirements, guiding principles, roles and responsibilities 25 26 of PRG, IE and PG&E, Non-Disclosure Agreements, and declaration 27 of absence of conflict of interest. The solicitation process includes the following steps as 28 illustrated in Figure I-6 below: 29

164 D.18-01-004.

FIGURE I-6 PROGRAM IMPLEMENTER SOLICITATION PROCESS

PRG/IE Solicitation Process

1	PRG/IE setup: PG&E will announce the PRG membership and
2	IE opportunities to relevant stakeholders who do not have a financial
3	interest in the outcome of any solicitations. PG&E will review
4	eligibility, select members of the PRG and the IE and inform them of
5	what is expected of them during the RFP process to be outlined in
6	the PG&E ESA PRG and IE Handbook. PG&E will leverage Energy
7	Efficiency's experience in setting up the PRG and the IE.
8	RFP preparation: PG&E will prepare the RFP which will include
9	a reasonable RFP schedule, clear scoring criteria, and a detailed
10	scope of work. The PRG and the IE will be given the opportunity to
11	review the RFP package and provide feedback. During this stage,
12	PG&E will host pre-bidder conferences as discussed in
13	Section E.2.c.i. below.
14	RFP release and submission: PG&E will announce the RFP and
15	post the RFP package in the Power Advocate platform allowing
16	bidders to prepare and submit their proposals. Refer to
17	Section E.2.c.i. below for additional insight on the use of Power
18	Advocate in the solicitation process.

1	RFP evaluation and selection: PG&E will review the RFP
2	proposals, score and rank them. Scoring and ranking will be shared
3	with the PRG and IE for their review and feedback.
4	Negotiations and contracting: PG&E will enter contract
5	negotiations with the selected RFP finalists. The PRG and the IE
6	will review the final contract. PG&E will execute the contracts.
7	i. Propose an outreach and communications strategy for the
8	solicitation process that will garner a strong (in quantity and
9	quality) response from third parties to the Request for
10	Offer (RFO).
11	PG&E proposes the following outreach and communication
12	strategy for the solicitation process to garner a strong response
13	from third parties:
14	 Announcing the RFPs via multiple communication channels;
15	 Hosting a pre-bidding conference;
16	 Posting the RFPs in Power Advocate; and
17	 Utilizing Power Advocate for communication with
18	participating bidders.
19	Additional insight regarding PG&E's communication strategy
20	is detailed in Section E.2.a.iii. above. PG&E plans to host
21	solicitation conferences and webinars in support of each RFP
22	which will provide information on the ESA Program and goals
23	and will discuss the RFP process and timeline. The purpose of
24	these conferences is to clarify the need for the RFP and to
25	provide clear guidance on how to go through the bidding
26	process. Interested parties who meet the bid pre-qualification
27	requirements, will be invited to register on Power Advocate to
28	participate in the RFP process. All communication between
29	PG&E and bidders will be carried out via Power Advocate. All
30	relevant RFP materials will be posted on Power Advocate and
31	all proposals will be completed and submitted in Power
32	Advocate. Utilization of Power Advocate will ensure that all
33	bidders receive consistent information and that there is

1	transparency in the sharing of information and what documents
2	must be submitted and the RFP timeline.
3	PG&E does not intend to use the two-stage RFP process
4	utilized in EE's third-party solicitation process. PG&E will forgo
5	the Request for Abstract (RFA) stage because the ESA
6	solicitations are intended for: (1) the implementation portion of
7	program delivery of the ESA Plus Program; and (2) the MFWB
8	Program is for a single administrator. Removing the RFA stage
9	is likely to compress the RFP schedule so PG&E can execute
10	its program more expeditiously.
11	ii. What controls ensure a fair, unbiased, transparent, and rigorous
12	solicitation process, from RFO design, through bidder
13	evaluation, to contract negotiation? Address whether there
14	should be an independent evaluator, a procurement review
15	group, and/or Commission review of contracts exceeding a
16	certain amount, similar to requirements in D.18-01-004.
17	A. What controls ensure a fair, unbiased, transparent, and
18	rigorous solicitation process, from RFO design, through
19	bidder evaluation, to contract negotiation?
20	To ensure a fair, unbiased, transparent, and rigorous
21	solicitation process from RFP design, through bidder
22	evaluation, to contract negotiation, PG&E plans to utilize
23	the following:
24	Review ESA RFP requirements defined by the
25	Commission prior to RFP commencement;
26	• Two-part RFP process: (1) written proposal based on
27	RFP package; and (2) interviews based on questions
28	relating to submitted proposals;
29	RFP scorecard is developed prior to the release of the
30	RFP to identify subject areas for individual scoring and
31	determine the appropriate weighting for each area;
32	Once the RFP COA has been posted and through
33	contract execution, all communications with potential

1	bidders and bidders is conducted through PG&E's
2	sourcing team;
3	Run the solicitations in Power Advocate, allowing all
4	bidders to have access to the same information at the
5	same time;
6	 All questions from bidders and PG&E responses are
7	shared with all bidders; and
8	 Set up PRG and IE for solicitation for the program
9	administration for the ESA Plus Program and for the
10	third-party administration of the MFWB Program as
11	discussed in Section E.2.c. above.
12	B. Address whether there should be an independent evaluator,
13	a procurement review group, and/or Commission review of
14	contracts exceeding a certain amount, similar to
15	requirements in D.18-01-004.
16	PG&E proposes formation of the PRG and hiring an
17	Independent Evaluator as described above in Section E.2.c.
18	above since this ensures a high level of transparency in the
19	procurement process. It is not proposed at this time to
20	request Commission review of contracts.
21	iii. What contract terms and conditions must the IOUs include in
22	contracts to:
23	• Allow the IOUs to ensure that third-party program
24	implementers comply with program rules and regulations;
25	Several provisions can be included in PG&E's
26	third-party implementer contracts to ensure they comply
27	with program rules and regulations in accordance with
28	the ESA Policies and Procedures Manual, Installation
29	Standards Manual and the Income-Qualified Programs
30	Decision requirements. These may include, but are not
31	limited to:
32	 Flow through provisions in the contracts with the ESA
33	Plus Program implementer(s) and MFWB administrator

1	to ensure they include program rules and regulations in
2	contracts with their contractors;
3	 Provisions for audits of records related to
4	subcontracting, including, but not limited to California
5	Contractor B License and any other license or
6	certificates required by the state of California, and
7	training required by the program; and
8	 Provisions to audit program documents and inspect
9	work performed to ensure compliance with program
10	standards and quality of work performance.
11 •	Allow the IOUs to track implementer progress and ensure
12	meeting performance milestones and goals;
13	ESA Program will adhere to PG&E's best practices
14	around tracking implementer progress and ensuring that
15	program performance milestones and goals are met.
16	Currently these include monthly reports and Quarterly
17	Business Reviews with third-party vendors to review their
18	performance on KPIs and Service Level Agreements (SLA).
19	Performance reviews are anticipated to be conducted more
20	frequently when warranted by deviation from the program
21	plan. In the case of under-performance, timely corrective
22	action plan will be developed as needed and PG&E will
23	ensure that program implementers adhere to the plan.
24	Weekly meetings with program implementers may be
25	utilized to discuss day-to-day program operations and to
26	identify and address any barriers to meeting program goals.
27	Conducting program goal reporting monthly and invoicing
28	work monthly has proven successful in providing timely
29	insight into program's actual performance, as compared to
30	forecasts and program goals.
31 •	Allow the IOUs to hold third-party program implementers
32	accountable if progress and performance milestones are
33	not met;

1	PG&E proposes to include provisions in the third-party
2	contracts that will hold program implementers accountable if
3	progress and performance milestones are not met. The
4	provisions under consideration may include, but are not
5	limited to:
6	 Termination of contract for non-performance;
7	 Limiting work or access to customer data; reassigning
8	work; and
9	 Contract provisions for liquidated damages if key
10	requirements or program goals are not met:
11	Tying timing of implementer compensation to
12	meeting program milestones; and
13	 Building-in an amount of compensation at risk for
14	under-performance on key quality components
15	(such as home inspection pass rate) impacting
16	overall program cost and customer experience.
17	In addition, PG&E can leverage any best practices
18	and contract terms for under-performance not included
19	above that will emerge from EE Third-Party contracts
20	once third-party RFPs and contract negotiations are
21	concluded.
22	 Attract third-party entities to submit bids in response to
23	solicitations; and
24	PG&E will take several measures to attract third parties
25	to submit bids in response to solicitations as defined in
26	Section E.2.a.iii. above. In addition, PG&E will propose
27	realistic and attainable RFP timelines which will be vetted by
28	the PRG and the Independent Evaluator. This will ensure
29	that bidders' resources are used effectively and that they
30	receive consistent and timely feedback during the
31	RFP process.

 Allow third-party entities the certainty and ability to propose bids to implement programs without high price risk premiums.

PG&E plans to allow third-party entities the ability to 4 5 propose bids to implement programs without high price risk premiums. PG&E is aware that, at times, vendors propose 6 bids with high price risk premiums when faced with 7 8 uncertainty. To mitigate this PG&E plans to develop well-defined Scope of Work for the ESA Plus and the 9 MFWB Program RFPs that will be reviewed by the PRG(s) 10 11 and the IE(s) to ensure that vendors are provided clear program requirements. PG&E will continue to leverage 12 existing Company practices of holding pre-bidding 13 conferences to offer new bidders insight into the program 14 and the RFP process. PG&E will continue to utilize its 15 internal two-part RFP process in which bidders are 16 requested to submit a written bid which is followed by bidder 17 interviews giving them two opportunities to explain their 18 19 proposals to PG&E.

iv. Please identify all contract terms and conditions that can feasibly be standard across all contracts and/or all the IOUs.

Based on EE's efforts in support of D.18-01-004, PG&E 22 23 believes that common contract terms and conditions can be feasibly made standard across ESA contracts and all IOUs. 24 PG&E proposes to work with other IOUs to develop standard 25 26 ESA contract terms and conditions that can be used for ESA 27 administrator contracts. PG&E recommends that the IOUs leverage the Proposed Standard Third-Party Contract Terms 28 29 and Modifiable Contract Terms developed by the IOUs for the administration of third-party EE programs¹⁶⁵ to develop 30 Standard Contract Terms and Modifiable Contract Terms. 31

1 2

3

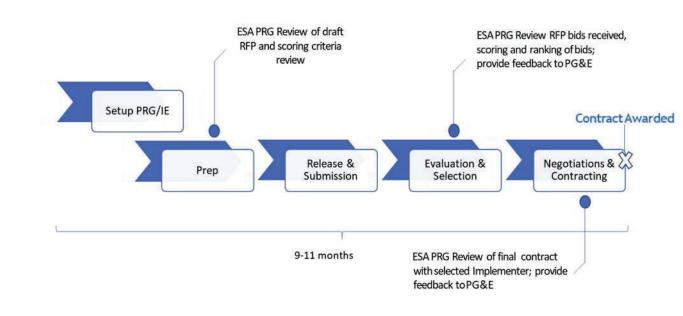

20 21

¹⁶⁵ D.18-01-004, OPs 3 and 5.

1		These terms could be applicable to PG&E's ESA Plus and the
2		MFWB Program administrator contracts.
3		Standard Contract Terms could include:
4		• Eligibility (type of business, license requirements, insurance
5		and bonding requirements, etc.);
6		Safety Requirements;
7		Dispute Resolution Process; and
8		Termination Process.
9		Contract provisions that are negotiable and subject to
10		change based on third-parties' program design and
11		implementation proposals can be captured in the Modifiable
12		Contract Terms.
13		Modifiable Contract Terms could include:
14		 Workforce Standards and Quality Installation Procedures;
15		 Progress and Evaluation Metrics;
16		Contract Term/Length;
17		 Payment Schedule and Terms;
18		 Data Collection and Ownership Requirements; and
19		Coordination with other program administrators.
20	v.	Include a schedule for issuing the necessary solicitations and
21		executing contracts.
22		PG&E's schedule for issuing the ESA Plus Program
23		solicitation and executing contracts is illustrated in Figure I-7.

FIGURE I-7 ESA PLUS SOLICITION TIMELINE

ESA Plus Solicitation Implementer Solicitation Timeline

1	Based on the EE third-party solicitation process, PG&E
2	estimates the timeline for this solicitation process from PRG and
3	IE setup through contract execution to take nine to eleven
4	months as illustrated above. PG&E proposes to begin the
5	solicitation process for the ESA Plus Program implementer
6	within the first month following receipt of the Commission's final
7	decision.
8	This timeline is based on the following:
9	 <u>PRG/IE Setup Phase</u>: 2-3 months, which includes one
10	month overlapping with RFP preparation;
11	 <u>Solicitation Process</u>: 8-10 months from RFP preparation
12	through contract execution.
13	 <u>RFP Preparation Phase</u>: Includes PRG/IE review of the
14	RFP and scoring criteria.
15	 RFP release and submission phase for bidders to
16	prepare and submit their proposals;
17	 RFP evaluation and selection phase includes PRG/IE
18	review of RFP proposals, scoring and ranking; and

1	 Negotiations and contracting phase includes PRG/IE
2	review of final contract.
3	PG&E's schedule for issuing the ESA MFWB Program
4	solicitation and executing a contract is detailed in
5	Section D.9.a.iii., above. PG&E proposes to begin the
6	solicitation process for the ESA MFWB Program third-party
7	administrator within three months following of initiating the
8	solicitation process for the ESA Program.
9	Since EE has not yet completed a third-party solicitation
10	through contract award, PG&E proposes to work with the PRGs
11	and IEs to modify the timelines for each solicitation based on
12	the timing and directives of the final Decision. PG&E also
13	proposes to adjust the program launch based on the solicitation
14	process results.
15	3. Audits [WITNESS: O'DRAIN]:
16	a. Changes and improvements should leverage learnings from both
17	internal and external audits. Provide background via response to 'I'
18	and 'ii' below and how audit results have influenced this application
19	in response to 'iii'.
20	i. Internal Audits: Describe internal audits of the utility's ESA
21	Program during the current program cycle and all utility-initiated
22	audits of the ESA Program by a third-party consultant
23	PG&E initiated an internal audit for the current program
24	cycle in May 2019 that is targeted to be completed by the end of
25	October 2019. The focus of this audit is to assess controls for
26	managing the ESA Program, including: participant eligibility,
27	service provider performance, inspection of installed EE
28	measures, and IT security in compliance with CPUC
29	requirements. The goal of the audit is to ensure: ineligible
30	applicants are not participating in the ESA Program;
31	implementers adhere to the contractual terms; inspections are
32	properly performed to ensure customer's safety, and
33	unauthorized users are prevented from inappropriately modify
34	unit cost in the system which may result in financial loss.

1	PG&E, for the 2012-2014 program cycle, conducted a
2	two-part internal audit that began in 2014 and completed
3	in 2015.
4	 Part 1: Evaluated PG&E's controls for managing the ESA
5	Program and focused on ensuring that: (1) the ESA
6	Program is in compliance with CPUC requirements,
7	(2) participants meet the program's eligibility requirements,
8	(3) payments for services provided by Richard Heath and
9	Associates (RHA), PG&E's ESA implementer, and its
10	subcontractors are valid, and (4) user access to the Energy
11	Partners Online (EPO) system, ESA's program database
12	from approximately 2004 – Q2 2018, is adequately
13	monitored. Part 1 of internal audit concluded that PG&E's
14	controls over the processes for managing the ESA Program
15	need strengthening ¹⁶⁶ in the following areas: (1) reviewing
16	and approving measure price changes, (2) documenting
17	CIP inspector performance, and (3) monitoring user access
18	to EPO.
19	 Part 2: Evaluated PG&E's for complying with CPUC
20	requirements for recording and reporting ESA Program
21	costs. Part 2 of the internal audit concluded that PG&E's
22	controls for recording and reporting ESA Program costs
23	needed strengthening ¹⁶⁷ in the following areas:
24	(1) obtaining guidance from the CPUC on the reporting of
25	fixed costs to the ESA Program, (2) establishing a
26	procedure for recording the monthly and year-end accruals,
27	(3) maintaining documentation to support the reports
28	submitted to the CPUC, and (4) preventing and detecting
29	duplicate payments.

To classify risks, PG&E's Internal Auditing uses the categories of low, medium, and high, based on the likelihood and significance of the risk resulting in harm to the Utility.

To classify risks, PG&E's Internal Auditing uses the categories of low, medium, and high, based on the likelihood and significance of the risk resulting in harm to the Utility.

1	PG&E's response and corrective action for each conclusion
2	of the two-part internal audit that began in 2014 and completed
3	in 2015 for the 2012-2014 program cycle is provided below.
4	 Part 1: PG&E's response was a Management Action Plan
5	that defined the corrective actions for each audit conclusion
6	as follows:
7	Conclusion 1 found the ESA Program needs to
8	strengthen reviewing and approving measure price
9	changes, PG&E implemented the following corrective
10	actions based on the Management Action Plan:
11	 Revised its measure price processes and created a
12	Utility Procedure;
13	 Created an additional attachment to RHA Contract
14	Work Authorization listing all measures and their prices
15	by contractor and project area to serve as the single
16	source from which measure prices will be entered
17	into EPO;
18	 Created a procedure for the review and approval of
19	measure price changes that requires coordination with
20	the Sourcing Department to record any price changes in
21	the contract; and
22	 Worked with External Verification to develop a process
23	for receiving bill credits from RHA for any measures not
24	installed or inappropriately installed, as identified during
25	the CIP quality assurance review.
26	Conclusion 2 found the program needs to strengthen
27	documenting CIP inspector performance, PG&E
28	implemented the following corrective actions based on the
29	Management Action Plan:
30	 PG&E revised its CIP process;
31	 Created a new CIP Field Observation Form to ensure
32	that required supervisors ride-alongs are monitored,
33	completed, and documented; and
34	 Internal Audit provided CIP with fraud training.

1	Conclusion 3 found the program needs strengthen the
2	monitoring user access to EPO, PG&E implemented the
3	following corrective actions based on the Management
4	Action Plan:
5	 PG&E revised its EPO user access process and created
6	two Utility Procedures;
7	 Created a procedure to remove users who are inactive
8	for 45 days;
9	 Developed a policy and procedure for granting and
10	managing user access to EPO; and
11	 Assigned an owner to manage user access to EPO.
12	Part 2: PG&E's response was a Management Action Plan
13	that defined the corrective actions for each audit conclusion
14	as follows;
15	Conclusion 1 found the program needs guidance from
16	the CPUC on the reporting of fixed costs to the ESA
17	Program, PG&E implemented the following corrective
18	actions based on the Management Action Plan:
19	 PG&E added on-going footnote to the 2014 CARE/ESA
20	Annual Report ESA-Table 1 and CARE/ESA monthly
21	report ESA-Table 1: "This measure category includes
22	the primary contractor administration fees and
23	subcontractor direct costs." PG&E's best recollection is
24	that PG&E communicated with the Energy Division prior
25	to inserting the footnote into tables;
26	 PG&E completed a comprehensive pricing transparency
27	review in 2015 that included analysis of material, labor,
28	and administrative costs;
29	 PG&E determined the dollar amount of CIP labor costs
30	for performing NGAT testing from 2009-2015.
31	 In June 2015, PG&E moved approximately
32	\$10 million from the ESA Balancing Account to
33	GRC funding for CIP NGAT testing labor costs from
34	the 2010 to June 2015 period. Going forward,

1	PG&E allocated CIP labor costs for NGAT to a GRC
2	balancing account.
3	PG&E's ESA Program team communicated with CIP
4	that all NGAT inspections were to be charged to the GRC.
5	PG&E served supplemental testimony on June 17, 2015
6	in the hearings on A.14-11-007, et al. That supplemental
7	testimony disclosed changes to the tracking of funding for
8	NGAT-related costs.
9	Conclusion 2 found the program needs to establish a
10	procedure for recording the monthly and year-end accruals,
11	PG&E implemented the following corrective actions based
12	on the Management Action Plan:
13	 Revised its ESA accrual process and created a Utility
14	Procedure; and
15	 Developed document, and implement process for the
16	monthly and annual accrual.
17	Conclusion 3 found the program needs to maintain
18	documentation to support the reports submitted to the
19	CPUC, PG&E implemented the following corrective actions
20	based on the Management Action Plan:
21	 Created a password protected Low-income Programs
22	folder to store documentation in support of monthly and
23	annual reports filed with the CPUC.
24	Conclusion 4 found the program needs to strengthen
25	process to prevent and detect duplicate payments, PG&E
26	implemented the following corrective actions based on the
27	Management Action Plan:
28	 Implemented software changes to correct the root
29	cause that permitted double payments in the program
30	database (EPO);
31	 Revised its payment review process and incorporated
32	changes into procedure document for Repair and
33	Placement invoice processing; and

1	 Resolved double payments made by PG&E to Repair
2	and Placement contractors.
3	ii. External Audit Findings: Include your utility's response to the
4	audits conducted by the State Controller's Office for PYs
5	2013-2015 along with a summary of all corrective measures
6	implemented to ensure compliance. Specify where each
7	corrective measure is also properly reflected and/or
8	documented e.g. monthly and/or annual report, formal
9	filings, etc.
10	The State Controller's Office (SCO) conducted an audit of
11	PG&E's ESA PY2013-2015 program. This audit was finalized in
12	December 2018. A summary of all corrective measures
13	implemented by PG&E to ensure compliance follows. ¹⁶⁸
14	a) " <u>Finding 1</u> : PG&E did not consistently maintain validation
15	checklists for ESA expenditures."
16	 <u>SCO Recommendation</u>: "We recommend that PG&E
17	ensure that all recorded ESA Program expenditures are
18	fully supported by sufficient, appropriate documentation,
19	and that all documentation is preserved in such a
20	manner that it may be readily examined."
21	PG&E implemented process improvements related to
22	routing and storage of documents. To facilitate proper
23	record keeping including the transaction validation
24	checklists, PG&E implemented the following process
25	improvements related to routing and storage of the
26	documents since 2015:
27	 In January 2016, the ESA Program implemented Utility
28	Standard 2015-118891 ("Energy Savings Assistance
29	Program Contract Price"). This standard defines the
30	steps the ESA Program uses for Quality

¹⁶⁸ PG&E responded to the SCO October 2017 draft external audit findings and recommendations on December 1, 2017. In 2018, PG&E moved to a new ESA Program database (Energy Insights) and as result the procedures and documents described in PG&E's response may have changed.

1	Assurance/Quality Control on a sample of weekly	
2	invoices over \$500,000 to ensure the contractually	
3	agreed upon measure amount was correctly captured	l in
4	the invoice before final approval. This validation	
5	process compares the costs listed in the invoice to th	е
6	costs identified in the contract to ensure they match.	
7	This is done in addition to the Validation Checklist an	d
8	is also attached to the invoice as supporting	
9	documentation and proof of review.	
10	 Beginning in March 2016, the review and approval of 	all
11	invoices, including supporting Validation Checklist, fo	r
12	the ESA Program are conducted through PG&E's	
13	Electronic Document Routing System (EDRS).	
14	Implementing electronic routing for approval ensures	all
15	supporting documentation for expenditures are includ	led
16	in the approval request and mitigates the risk of	
17	documents being lost.	
18	In August 2019, the EDRS was replaced with the	
19	Customer Energy Services (CES) Validation	
20	SharePoint. The new SharePoint will help serve	
21	three functions:	
22	 Standardize the process for reviewing, approving 	,
23	and storing invoices;	
24	 Ensure that CES is in compliance with the 	
25	Enterprise Records Management Standard; and	
26	 Support audit and data requests for Invoices. 	
27	 In 2018, ESA launched Energy Insight—With this new 	N
28	ESA Program database, PG&E began an automated	
29	Quality Assurance/Quality Control process which	
30	validates payments made through Energy Insight.	
31	The process validates:	
32	 Measure quantities; 	
33	 Total Approved cost; 	
34	 Accuracy of data; 	

1		 Labor Rates; and
2		 Project stages are appropriate.
3	b)	"Finding 2: PG&E lacked an appropriate method to capture
4		and account for administrative costs."
5		SCO Recommendation: "We recommend that PG&E
6		continue to work with the CPUC to devise an
7		accounting and reporting system to capture and
8		account for all ESA Program administrative costs in
9		one reporting area."
10		PG&E implemented the following corrective actions
11		regarding the finding and recommendation:
12		PG&E implemented a stand-alone Implementation line
13		item to account for ESA Program administrative costs
14		incurred by prime contractors in one reporting category
15		of the proposed budget tables. PG&E proposed this
16		change in an AL filed on June 20, 2017, and the
17		proposal was approved by the Commission on
18		December 14, 2017; 169
19		 Beginning January 2018, PG&E's monthly ESA
20		Program report to the Commission incorporated the
21		revised budget template that identifies the prime
22		contractors' administrative costs on a monthly basis;170
23		and
24		 PG&E also tracks these payments internally on a
25		monthly basis and has developed a guidance document
26		to manage this process.
27	c)	" <u>Finding 3</u> : PG&E did not provide adequate supporting
28		documentation for contract procurement."
29		• <u>SCO Recommendation</u> : "To adhere to its procurement
30		policies and procedures, we recommend that PG&E

¹⁶⁹ PG&E Conforming AL 3830-G/5043-E (June 20, 2017), approved in Conforming AL Resolution PG&E G-3531 (December 14, 2017).

¹⁷⁰ See ESA-CARE Monthly Report for January 2018 (February 21, 2018), ESA Table 1, fn 2, and ESA Table 1a, fn 3.

1		document in sufficient detail the rationale for its
2		procurement methods, decision criteria, and award
3		justification."
4		PG&E implemented action plans to mitigate the risk of a
5		similar finding in the future. To assure continuous
6		improvement and consistency across work portfolios, PG&E
7		formalized a revised strategic sourcing process and
8		associated training that specifically covers document
9		retention. This mandatory training was rolled out in
10		December 2016 and requires annual renewal.
11	d)	Compliance with Prior ESA Audit
12		The SCO was also tasked to review PG&E's
13		compliance with the recommendations of the Commission's
14		audit of the PY2009-2010 ESA Program. PG&E discusses
15		corrective measures implemented to ensure compliance
16		with the CPUC's observations in Table I-39 below.171

¹⁷¹ SCO. PG&E Audit Report ESA Program: January 1, 2013, through December 31, 2015 (December 2018), Appendix 2—Summary Schedule of Prior CPUC Audit Findings.

TABLE I-39	CPUC ESA PY2009-2010 AUDIT FINDINGS REVIEW
------------	--

Line		Ctotic	SCO Commonto	
-	CPUC OBSERVATION 2: PG&E failed to demonstrate compliance with the Federal Energy Regulatory Commission (FERC) Uniform System of Accounts (USOA), General Order (GO) 28 and its internal accounting controls. Invoices for six percent or \$2.98 million of the sampled contractor invoice transactions lacked sufficient documentation.	I Energy Regulatory Com fificient documentation.	mission (FERC) Uniform System of Accounts (USOA), General Order (GO) 28 ar	d its internal accounting controls. Invoices for
2	RECOMMENDATION: PG&E should ensure that all recorded program expenditures are fully supported by sufficient appropriate documentation, including documents substantiating its performed procedures.	Not implemented	Our audit found similar issues related to program expenditures. See Finding 1.	PG&E implemented process improvements related to routing and storage of the documents since 2015. See PG&E's response to Finding 1.
e	CPUC OBSERVATION 6: PG&E failed to demonstrate compliance with general accounting best practices and § 581. PG&E reports its prime contractor costs to administer its ESAP within other cost areas such as within the measures.	counting best practices ar	d § 581. PG&E reports its prime contractor costs to administer its ESAP within o	ther cost areas such as within the measures.
4	RECOMMENDATION: To accurately reflect the true extent of the ESAP general administrative costs, the Commission and all four large utilities providing ESAP should devise an accounting and reporting system to capture all costs to administer ESAP in the administrative cost category whether incurred internally or by the utility or externally by a utility contractor. Within 90 days of the date of this memo, ED should provide its parter.	Not implemented	Our audit found similar issues related to accounting for administrative costs. See Finding 2.	PG&E implemented process improvements to ensure prime contractor administrator costs are captured in a separate budget line item. See PG&E's response to Finding 2.
2ı	CPUC OBSERVATION 7: PG&E failed to demonstrate compliance with: the USOA, GO general administrative costs and lack proper substantiation.		28, D.05-04-052 and §§ 451, 581, and 584. Thirty-nine percent of the contracted hourly rates of PG&E's implementation contractors are unidentified	E's implementation contractors are unidentified
Q	RECOMMENDATION: PG&E should begin to require its contractors to provide a full breakdown and substantiation of their costs as required in D.05-04-052 and GO 28 and provide the results of such when requested to do so by the Commission.	Not implemented	PG&E stated that guidance regarding the level of detail that must be provided by its contractors is pending from the CPUC Energy Division.	PG&E agrees with the SCO's comments.
7	CPUC OBSERVATION 8: PG&E failed to demonstrate compliance with the FERC USOA,	USOA, GO 28 and its own	GO 28 and its own internal accounting controls. Two recorded entries from the sample reviewed were lacking supporting employee timecards.	ere lacking supporting employee timecards.
ω	RECOMMENDATION: PG&E should ensure all recorded program expenditures are fully supported by sufficient appropriate documentation and maintain said documentation so that UAFCB may readily examine them at its convenience.	PG&E provided SCO with documentation of its current time- entry processes.	PG&E provided the Time Administrator Training Guide, last updated July 16, 2015, and a copy of the New Time Entry Process for CES Business Operations. PG&E stated that it had implemented SPA ESSMSS (Employee Self Service/Manager Self Service) in January 2013 to improve labor recording processes. SAP ESSMSS provides the following functions: management employees can submit their time directly; supervisors and their delegates can approve time directly; supervisors and their delegates can approve time directly; makeepers do not need to manually enter time or maintain timesheets in other systems; and the system validates leave balances in real time and implements general time-entry validation rules and controls.	SCO's comments accurately reflect PG&E's actions to address UAFCB's Recommendation.
თ			We did not test the effectiveness of PG&E's implementation of these processes. However, we did validate that PG&E implemented SAP ESS/MSS.	
10	CPUC OBSERVATION 9: PG&E failed to demonstrate compliance with §§ 451, 581, and 584.		PG&E overpaid one of its contractors by \$8,272.	
7	RECOMMENDATION: PG&E should: (1) revise the terms of its existing contracts to include a provision requiring a detail-level hours worked schedule from its work of (2) retund ESAP funds with either (3) a charge against its investors' account (2) retund ESAP funds with either (3) a darge against its investors' and complete vendor billing support before making payments. Within 90 days after the UAFCB provides its Energy Division Director memo and Appendix A and C to PG&E, it should provide the UAFCB with a summary of the steps it has taken to resolve this matter.	PG&E provided a corrective action plan.	PG&E stated that: (1) It will include the detail level of hours worked requirement in all subsequent contracts with Direct Technologies. We did not verify this update to the contracts using the recovery from the contractor was not warrated because the revised support for the invoice recornield with the invoice total. We validated this assertion; however, our review of the revised invoice support differed from the nonice total by \$3. (3) It provided UAFCB with evidence that all program managers in ESAP on June 27, 2013, completed an invoice review refresher training program to ensure accurate and complete vendor billing support before making payments.	PG&E respectively disagrees with the SCO's comment to the extent SCO found invoices did not support \$3 in contractor costs. PG&E s review of the revised invoices shows that the invoices accurately reflect all costs. PG&E will provide a second copy of this information to the SCO through a separate communication.

TABLE I-39 CPUC ESA PY2009-2010 AUDIT FINDINGS REVIEW (CONTINUED)	
---	--

Line				
10	CPLIC ORSERVAT		Status 300 Jatus 300 Julianianis 300 Julianianis 300 Julianianis 30 Julianianis 30 Julianianis 28 and 584 114 FCB was unable to determine the accuracy of involves totalion \$766 J36	
<u>3</u>			and ook. UNLOB was unable to determine the accuracy or invorces totaling acc PG&E stated that: (1) It included the detail level of hours worked requirement in all subsequent contracts with Direct Technologies. We did not verify this update to contracts. (2) A recovery from the contractor was not warranted because the revised support for the invoices recordied with the invoice totals. We validated this assertion; however, our review of the revised invoice support differed from the invoice total by \$88.	SCOS comments accurately reflect PG&E's SCO's comments accurately reflect PG&E's actions to address UAFCB's Recommendation. PG&E implemented invoice validation process improvements since the 2009-10 audit report to address accuracy of invoicing; CES Invoice Validation Standard (Utility Standard: CUST-4015S).
14	. CPUC OBSERVATION 11: PG&E did not demonstrate compliance with §§ 581 and 584.		PG&E improperly accounted for or improperly accrued some of its employee's hours.	
Ω	RECOMMENDATION: PG&E should ensure proper accounting for its labor hours to ensure accurate data reporting and program labor costing.	PG&E provided SCO with documentation of its current time-entry process.	PG&E stated that it provided staff with a Time Administrator Training Guide, last updated July 16, 2015, and a copy of the New Time Entry Process for CES Business Operations. PG&E stated it implemented SAP ESSMSS in January 2013 to improve labor recording processes. SAP ESSMSS in provides the following: management employees can submit their time directly; supervisors and their delegates can approve time directly; timekeepers do not need to manually enter time or maintain timesheets in other systems; and the system validation rules and controls.	SCO's comments accurately reflect PG&E's actions to address UAFCB's Recommendation.
16	5 CPUC OBSERVATION 11: PG&E did not demonstrate compliance with §§ 581 and 584.		PG&E improperly accounted for or improperly accrued some of its employee's hours.	
17			We did not test the effectiveness of PG&E's implementation of these processes. However, we did validate that PG&E implemented SAP ESS/MSS.	
18	CPUC OBSERVATION 14: PG&E failed to demonstrate compliance with FERC USOA, GO 28 and its own internal controls and procurement policies and procedures. Over 34% of the payments to contractors that UAFCB sampled lacked proper supporting documentation.	OA, GO 28 and its own ir	ternal controls and procurement policies and procedures. Over 34% of the paym	nents to contractors that UAFCB sampled lacked
6	RECOMMENDATION: PG&E should (1) adhere to and enforce the terms of its existing contracts and (2) preserve all the required documentation supporting all of its recorded expenses in a manner such that UAFCB may readily examine the same at its convenience. (3) If PG&E changes the way it conducts business during an active contract period, PG&E should amend its contracts with its direct service providers and ensure that the terms of the executed contract are adhered to.	PG&E provided a corrective action plan.	For (1) and (3), PG&E stated that it will update Section 8 – Work Authorization Form of the Repair and Replacement contracts to clarify that the information is to be submitted electronically for any new contracts or existing contracts. When they are renewed. We did not verify this update to the contracts. For (2), PG&E stated that it continues to require its contractors to electronically enter the Work Authorization Form details directly into the EPO database. We did not test the effectiveness of this process.	SCO's comments reflect PG&E's corrective actions. Since that time, PG&E continues to manage and implement regular contract updates to reflect updates to terms, pricing, rates, and measures.
20	CPUC OBSERVATION 15: PG&E failed to demonstrate compliance with §§ 451, 581 and 584. Five of the sampled transactions regarding payments to PG&E's direct service providers that UAFCB reviewed had inconsistent accounting for rendered services and allocations between its gas and electric programs.	31 and 584. Five of the s	ampled transactions regarding payments to $PG\&E$'s direct service providers that	UAFCB reviewed had inconsistent accounting for
21	RECOMMENDATION: UAFCB should review PG&E's new controls and their implementation in this area in a future audit or examination.	PG&E did not provide a corrective action of their Energy Partner Online plan.	Based on interviews and flowcharts provided by PG&E of their Energy Partner Online process, any corrections necessary to invoices are sent back to contractors to revise and resubmit for payment. We did not test the effectiveness of PG&E's implementation of this process.	PG&E agrees with the SCO's comments
Note:	e: SCO. PG&E Audit Report ESA Program: January 1, 2013, through December 31, 2015 (December 2018), Appendix 2-Summary Schedule of Prior CPUC Audit Findings.	:015 (December 2018), A	ppendix 2Summary Schedule of Prior CPUC Audit Findings.	

1		iii. Describe how internal and External Audits' findings influenced
2		this proposal for administration of the program.
3		Internal and external audit results influenced PG&E's
4		processes in the administration of the ESA Program and
5		corrective actions have been made to address the audit
6		findings. PG&E continually reviews its processes for
7		continuous improvement.
8	4. F	Process for Program Revisions in PY 2021-2026
9	а	. Regardless the frequency and set of impact evaluations and other
10		studies in the performance-assessments program elements above,
11		propose a process/methodology for an IOU to correct its course to
12		achieve established goals and targets within the program period.
13		State specifically what course corrections would require
14		Commission approval or not and why, and the proposed process for
15		obtaining Commission approval.
16		ESA Working Group
17		PG&E proposes an ESA WG to help manage course corrections
18		during the 2021-2026 program cycle. PG&E proposes that this
19		Working Group have a similar structure to the previous MCWG.
20		This new Working Group would include members from each of the
21		IOUs, Energy Division, California Public Advisor's Office, LIOB, and
22		other interested stakeholders. Membership would be by
23		organization, with each member organization having one primary
24		representative (and one vote in any voting situation), although
25		additional member organization staff could be designated to work on
26		various task groups. General meetings would convene quarterly
27		with ad hoc task groups meeting as needed in between the general
28		quarterly meetings to accomplish specific tasks.
29		PG&E proposes that the ESA WG's Tasks include:
30		 Update the Policy and Procedures Manual to conform with the
31		decision;
32		Update the ESA Installation Standards Manual;
33		 Monitor progress toward goals;
34		 Discuss and recommend changes to goals;

1	 Discuss a process for mid-cycle measure adjustments,
2	retirements and additions;
3	 Discuss other mid-cycle course corrections necessary to
4	achieve goals;
5	 Discuss and recommend program revisions required by new
6	laws that become effective during PYs 2021-2026; and
7	 Convene a public meeting every two years to discuss lessons
8	learned and potential program adjustments.
9	PG&E proposes that this public meeting replace the IOUs'
10	annual report public meetings and create an opportunity for more
11	meaningful public discussion of the Commission's Low-Income
12	Program. The annual report meetings have become less well
13	attended over time, except when they coincide with an application or
14	other major filing.
15	PG&E proposes that the ESA Working Group would be a
16	consensus-based decision making. The ESA WG would be
17	managed by IOUs: either rotating chairmanship annually or hiring
18	consultant to manage and facilitate, and produce annual report of
19	activity including decisions made and recommendations.
20	Within six months of decision issuance: the IOUs would
21	convene the working group, propose and define ESA WG rules and
22	processes, establish ESA WG calendar, and prioritize tasks.
23	MFWB Program
24	In support of the Commission's guidance: The MFWB Program
25	is not limited to the previously approved measures or other
26	requirements in prior Commission Decisions or to the provisions of
27	the ESA Policy and Procedures Manual, ¹⁷² PG&E requests
28	permission to propose policy changes post Decision to align with the
29	selected third-party administrator's design for PG&E's MFWB
30	Program. As discussed in Section D.9., PG&E cannot anticipate
31	what the successful MFWB design will look like at this time. PG&E's

_

¹⁷² D.19-06-022, p. 21.

request to propose potential multi-family policy changes is 1 2 discussed in Section D.7. and Appendix B. Process to Make Program Modifications During the 2021-2026 3 Program Cycle 4 5 Because PG&E is proposing a new program, it requests flexibility to adjust based on its experience as the programs roll out. 6 The 2021-2026 program cycle will be the longest ESA Program 7 8 cycle to date. Flexibility to make adjustments within the cycle based on lessons learned will be critical to the program's success. In 9 Section D.7, PG&E requested to modify ESA fund shifting rules to 10 11 allow shifting between categories to align with CARE fund shifting rules authorized in D.06-12-038. In CARE, IOUs are allowed 12 flexibility to shift funds between categories and those fund shifts are 13 reported in the Low-income Monthly and Annual reports. 14 PG&E also requests more flexibility to make measure changes 15 during the cycle. Currently, measures are modified, added or retired 16 during program applications. D.17-12-009 authorized a Mid-Cycle 17 Update AL filing to make program adjustments in the middle of the 18 19 2017-2020 program cycle. Rather than proposing one mid-cycle update in the middle, PG&E prefers a more flexible process that can 20 21 be used to make adjustments throughout the cycle. PG&E's program proposals will be rolling out over time, as seen in the Gantt 22 23 charts in Attachment D. PG&E believes the ability to make adjustments will be key to meeting program goals. The EE 24 programs make measure adjustments noticed through their monthly 25 26 reports. PG&E proposes to work with the ESA WG to develop 27 criteria for reporting measure adjustments (including adding new measures, retiring measures and modifying measures) in the 28 29 ESA-CARE Monthly Reports. 30 PG&E is hopeful that the ESA WG process along with the requested ability to make measure modifications and fund shifts 31 32 through the ESA-CARE Monthly Reports can accommodate the adjustments that will need to be made to run the new innovative 33 programs and implement any program changes that may be 34

1	required based on experience and lessons learned over the course
2	of the program cycle. PG&E requests permission to submit ALs as
3	required to request program and budget adjustments beyond the
4	adjustment levels allowed in the new proposed fund shifting rules
5	described in Section D.7.
6	i. Discuss the effectiveness of the mid-cycle working groups and
7	advice letter process and indicate whether to consider similar or
8	different approaches for PYs 2021-2026.
9	PG&E believes the working group format was beneficial for
10	discussing and making recommendations on the Policies and
11	Procedures Manual, and on technical issues, such updating the
12	Installation Standards Manual, and proposes Working Groups
13	for both ESA issues and ESA-CARE Studies during the
14	2021-2026 program cycle. Refer to Sections B.2.h-B.2.k for
15	details on the work groups for PY 2017-2020. Refer to
16	Sections D.10.C and E.4.9 for proposed working groups for PY
17	2021-2026.
18	ii. New laws that become effective during PYs 2021-2026 could
19	require revisions in PYs 2021-2026. What process do you
20	suggest for incorporating changes?
21	PG&E believes discussion of new laws requiring program
22	revisions should part of the ESA WG's mandate.
23	F. Revenue Requirement and Rate Impacts [WITNESS: LI]:
24	In the ESA Program Revenue Requirement and Impact section of the
25	application:
26	1. Discuss the revenue requirements necessary to achieve the program
27	plans and objectives proposed for the application period, as well as the
28	projected rate impacts (with quantitative information provided
29	through B-2 and B-3 rate impacts tables).
30	PG&E's proposed revenue requirements for PYs 2021-2026 to
31	achieve the ESA Program Goals and Budgets of this testimony
32	discussed in Section C are presented in Table I-40 below. PG&E
33	proposes to recover in rates \$588 million in the electric PPP's Revenue
34	Adjustment Mechanism and \$516 million in the gas Public Purpose

- 1 Program Surcharge LIEE in 2021-2026 subject to change due to the
- 2 benefit burden and Revenue Franchise Fees & Uncollectibles (RF&U)
 3 approved in future GRCs.

(a)	The benefit burden and RF&U are based on 2017 GRC for illus and RF&U are approved in future GRCs applicable to the year.	on 2017 GRC for i applicable to the ye	illustration purpos ear.	es. The revenue	requirement sha	all be adjusted ac	cordingly when t	illustration purposes. The revenue requirement shall be adjusted accordingly when the benefit burden ear.

I-215

1 Benefit Burden

The benefit burden costs include medical, vision, dental, employee 2 healthcare contributions, group life insurance, short-term incentive 3 payments, 401k expenses, relocation expense, short-term disability, and 4 5 tuition reimbursement. D.14-08-032 approving PG&E's 2014-2016 GRC Application directed PG&E to track and recover benefit burden through 6 the Customer Programs, including the electric and gas Public Purpose 7 8 Program Low-income Balancing Account (PPPLIBA), electric Public Purpose Program Revenue Adjustment Mechanism (PPPRAM) and gas 9 Public Purpose Program Low-income Energy Efficiency Balancing 10 11 Account. Since then, the benefit burden is determined in PG&E's GRC filed every three years. 12

13The benefit burden shown on Table I-40 for 2021-2026 ESA14Program Electric and Gas Revenue Requirements represents the15benefit burden for 2019 determined in PG&E's 2017 GRC pursuant to16D.17-05-013 allocated between electric and gas for illustration purposes.17The revenue requirement shall be adjusted accordingly with the benefit18burden approved in future GRCs applicable to the year.

19 <u>Revenue Fees and Uncollectible Factor</u>

The RF&U is determined through GRC and updated on an annual basis. The RF&U shown on Table I-40 for 2021-2026 ESA Program Electric¹⁷³ represents the RF&U using the 2019 factor, 0.011349, determined in D.17-05-013 for illustration purposes. The revenue requirement shall be adjusted accordingly with the RF&U approved in future GRCs applicable to the year.

26 <u>Electric and Gas Split</u>

The electric and gas split is based on the impacts of program expenses to electric and gas customers. For 2021-2026, PG&E proposes to assign 53 percent of the ESA Program expenses to electric customers and 47 percent to gas customers. The annual electric and gas split for PY 2021-2026 is detailed in Table I-41.

¹⁷³ Per D.04-08-010 PPP surcharge rates (which ESA is a component of) do not include a factor for revenue fees and uncollectible expense.

TABLE I-41 PG&E ELECTRIC (53%) AND GAS (47%) SPLIT FOR 2021-2026

Line No.		2021	2022	2023	2024	2025	2026	
1	Electric ^(a)	\$91,989,704	\$88,726,229	\$100,723,060	\$100,428,841	\$100,053,665	\$99,926,232	
2	Gas	\$81,575,776	\$78,681,751	\$89,320,450	\$89,059,539	\$88,726,835	\$88,613,828	

(a) Does not include RF&U. See Table I-40, line 4.

1	Rate Impacts
2	PG&E's proposed ESA Program rate and bill impacts among
3	PG&E's electric and gas customer classes are shown in Tables I-42 and
4	I-43 for PG&E's electric and gas customers, respectively.
5	Under PG&E's ESA Program expense forecast proposal, the bill
6	impact for a typical bundled residential electric customer using 500 kWh
7	per month in 2021 will decrease \$0.30 from \$121.17 to \$120.87. The
8	bill for a typical bundled residential customer using approximately twice
9	the average baseline allowance in 2021, or 700 kWh per month, will
10	decrease \$0.42 from \$179.01 to \$178.59.

TABLE I-42 PG&E ESTIMATED ELECTRIC RATE IMPACTS FROM 2021 ESA PROGRAM REQUEST

Line No.	Class/Schedule	October 1, 2019 Present Rates (cents/kWh)	Proposed 2021 ESA Expense (cents/kWh)	Rate Change	Percentage Change
1	Bundled

⁽a) CARE Customers receive a 20 percent discount off of PG&E's total bundled rate and are exempt from the CARE portion of PG&E's Public Purpose Program Surcharge (G-PPPS) rates and cost recovery of the California Solar Initiative Thermal Program.

⁽b) Transportation rates paid by all customers include an additional GHG Compliance Cost Recovery component of \$0.05049 per therm.

⁽c) Covered Entities (i.e., customers that currently have a direct obligation to pay for allowances directly to the Air Resources Board) will pay a GHG Obligation Cost component of \$0.00268 per therm to cover PG&E allowance costs associated with lost and unaccounted for gas and compression costs. Covered entities will see a line item credit on their bill equal to \$0.04781 (\$0.05049 minus \$0.00268) per therm times their monthly billed volumes.

⁽d) ESA Programs are allocated based on the Direct Allocation Method adopted in D.95-12-053 and updated in PG&E's 2018 GCAP (D.19-10-036).

PG&E will incorporate the annual electric ESA Program revenue 1 2 requirement authorized in this proceeding into electric rates in the Annual Electric True-Up (AET) with other rate changes effective 3 January 1 of each year in the program forecast period, or as soon 4 5 thereafter as possible. Any required ESA Program electric rate change resulting from this proceeding will be implemented in accordance with 6 the then-current adopted revenue allocation and rate design methods 7 8 adopted for the ESA Program revenue component of electric PPP rates.

PG&E will incorporate the gas funding requirement authorized in this 9 proceeding into gas rates in its annual gas PPP surcharge AL and 10 Annual Gas True-Up (AGT) filings with other rate changes effective 11 January 1 of each year in the program forecast period, or as soon as 12 thereafter as possible. Similarly, any gas ESA program revenue change 13 will be allocated among customer classes consistent with then-current 14 adopted practices.¹⁷⁴ If a decision is not issued in time to incorporate 15 the proposed revenue requirement in PPP surcharge rates by 16 January 1, 2021, PG&E will incorporate changes adopted in this 17 proceeding in the following year's PPP surcharge advice letter.¹⁷⁵ 18

PG&E requests Commission authority to implement its PY
20 2021-2026 funding request on January 1, 2021, should a final decision
21 on PG&E's application not be issued on or before January 1, 2021.
22 If this request is approved then, upon the issuance of a final decision,
23 PG&E will true-up the difference between the final decision and its filed
24 request through its annual AET and PPP surcharge AL process.

Include detailed accounting of unused funds from prior budget cycles
 and show how these funds reduce the revenue requirement.

27Table I-44 illustrates PG&E's unspent, uncommitted funds for prior28years' program cycles. Balances are through July 31, 2019.

¹⁷⁴ ESA Programs are allocated based on the Direct Allocation Method adopted in D.95-12-053 and updated in PG&E's 2018 Gas Cost Allocation Proceeding (GCAP) (D.19-10-036, COL 15 and OP 10).

¹⁷⁵ D.04-08-010 adopted that utilities may request a change in gas PPP surcharge rates during the year only if failure to make the rate change would result in a forecasted total rate increase of 10 percent or more on January 1 of the next year.

1	PG&E intends to use these unspent, uncommitted funds of
2	\$67.7 million to offset collections for PY 2020, as ordered by
3	D.16-11-022, and modified by D.17-12-009, OP 132, and the
4	Mid-Cycle AL Non-Standard Disposition Letter, approved on January 4,
5	2019. The 2009-2016 electric unspent, uncommitted funds of
6	\$60 million were included in PG&E's AET AL 5661-E, which was filed
7	on October 15, 2019. The gas unspent, uncommitted funds of
8	\$7.7 million were included in PG&E's AGT AL 4173-G, which was filed
9	on October 31, 2019.

TABLE I-44PRIOR YEARS' UNSPENT, UNCOMMITTED FUNDS AS OF JULY 2019

Line No.	Year	Electric	Gas	Total	
1	2015	\$20,500,466		\$20,500,466	
2	2016	37,335,084	\$1,298,449	38,633,533	
3	2009-2016 Pool	2,174,096	6,369,816	8,543,912	
4	Total Unspent, Uncommitted	\$60,009,646	\$7,668,265	\$67,677,911	
3.	Include a brief discussion	n of the costs a	nd the benefit	s of these	
	programs and how they	impact the rates	S.		
	The mandate of the	ESA Program is	s to assist low	-income customers	
	reduce energy expenditu	ires by providin	g EE measure	es, and reducing	
	hardship by providing me	easures that ad	dress HCS. T	hese important	
	and meaningful benefits	of energy savir	ngs, reduced e	expenditures, and	
	improved HCS, serve a	valuable purpos	se for the mos	t vulnerable	
	population; and, based c	on the overall co	ost effectivene	ss test, the	
	program is designed to c	leliver these be	nefits in the m	lost reasonable	
	and equitable way.				
	Details around the b	udget costs and	d goals are dis	cussed Section C.	
	The benefits are discuss	ed in Section D	and impact to	o rates is	
	discussed in Section F.1				
4.	Include a brief descriptio	n of the balanc	ing accounts f	or the ESA	
	Program and explain any	y changes.			
	There are no change	es to the balanc	ing accounts	that PG&E uses to	
	track the program cost o	nd rovonuo rog	uiromont for 2	021 2026 ESA	

26 track the program cost and revenue requirement for 2021-2026 ESA

1		Program. PG&E uses the following balancing accounts to track the				
2		program cost and revenue requirement:				
3		Public Purpose Program Low-income Balancing Account (PPPLIBA)				
4	PPPLIBA is split between Electric and Gas.					
5	PPPLIBA – Electric is a subaccount of Electric Preliminary					
6	Statement Part P – the Customer EE Adjustment balancing account and					
7	tracks the electric portion of the ESA Program expense.					
8	PPPLIBA – Gas tracks the gas portion of the ESA Program expense					
9	in accordance with Gas Preliminary Statement Part Y.					
10		Public Purpose Program Revenue Adjustment Mechanism (PPPRAM)				
11		PPPRAM, Electric Preliminary Statement Part DA, records the				
12		authorized electric revenue requirement for ESA Program and actual				
13		revenue collected through rates. Any over or under collection will be				
14		adjusted through the AET process or as otherwise determined by				
15		the Commission.				
16		Public Purpose Program – Low-income Energy Efficiency (PPP-LIEE)				
17		PPP-LIEE, Gas Preliminary Statement Part BH, records the				
18		authorized gas revenue requirement for ESA Program and actual				
19		surcharge collected. Any over or under collection will be adjusted				
20		through the AGT process or as otherwise determined by				
21		the Commission.				
22 II.	Со	nclusion [WITNESS: LEIVA JUNGBLUTH]				
23		Summarize requests for which you are seeking the Commission's approval				
24	as	part of the ESA and CARE Program plans and budgets for PYs 2021-2026.				
25		As described throughout this application, PG&E requests the Commission				
26	app	prove the following as just and reasonable:				
27	1)	PG&E's total ESA Budget request of approximately \$1.1 billion for				
28		2021-2026 program cycle and associated revenue requirements and				
29		rate impacts;				
30	2)	PG&E's energy savings and participation goals;				
31	3)	New ESA Plus Program design with Basic, Comprehensive, and				
32		Comprehensive Plus approach measure offerings;				
33	4)	Changes in measure offerings based on new approach, including additions,				
34		modifications and removal of certain measures;				

- 1 5) Solicitation of Third-party administration of PG&E's MFWB Program
- 2 modelled after PG&E's EE third-party solicitation process, as applicable; and
- 3 6) Changes in policy as spelled out in the Policy Chart.

PACIFIC GAS AND ELECTRIC COMPANY CHAPTER I ATTACHMENT A VIRTUAL ENERGY COACH PILOT IMPLEMENTATION PLAN

Virtual Energy Coach (VEC) Pilot

CPUC Decision (D.) <u>16-11-022</u>, as modified by D.<u>17-12-009</u>, directed the electric IOUs to jointly issue a statewide competitive bid process to solicit a vendor to produce electric (and gas, if available) end-use residential load profiles for the California Alternate Rates for Energy (CARE) and Energy Savings Assistance (ESA) Program eligible population, including customers currently enrolled in CARE and ESA programs totaling roughly 3.1 million households.

While the results of the statewide program are still outstanding, PG&E is proposing to extend and enhance the use of these load profiles with CARE and ESA customers to test the impact of the personal profile information on driving energy savings, residential rate selection, participation in other programs and changes in behavior.

Together with the current provider of the profiles (Uplight), PG&E will develop an innovative multi-channel engagement offering to help low-income residential customers more easily make decisions, take action, and track progress on their energy usage and bill savings after the ESA contractor has completed a home assessment.

This pilot will leverage the work that is being completed for the statewide Low-Income Disaggregated Load Profiles Project, such as the on-going access to disaggregated load profiles developed from AMI & CIS data for CARE customers that reside online. The scope of this pilot builds on the continuation of the Low-Income Disaggregated Load Profiles Project deliverables for PG&E through the 2021-2026 period¹.

The Pilot design will need to identify any reductions in energy usage, any changes in program participation and usage behavior; and improvements in customer satisfaction, as well as improvements in operational efficiency flowing from customers' use of the 'Virtual Energy Coach' (VEC). The Pilot should provide valuable lessons learned for possible future expansion.

1. Overview of Budget

Estimated Total Project Costs are as follows (more details included below):

Pilot	Total Cost	PG&E Cost
Virtual Energy Coach Pilot	\$ 1,300,000	\$ 1,300,000

2. Brief Pilot Description

The purpose of the pilot program is to provide ESA program participants with a 'Virtual Energy Coach' to help encourage on-going energy savings, optimal residential rate selection and participation in a variety of programs, plus inspire changes in behavior. The VEC will be an innovative multi-channel engagement offering whereby each customer receives a dynamic, hyper-personalized action plan that identifies and tracks their next best actions to reduce their energy hardship. Ongoing communication and interactions, feedback and support through a variety of channels will help customers make progress. By ensuring that a personalized message is delivered to each customer through the channels and at the cadence of their choice, the VEC will maximize the impact of the messages being delivered while positioning PG&E as a trusted advisor to the ESA customer population.

¹ Pilot budget does not include funding for the continuation of the Low-Income Disaggregated Load Profiles Project for PG&E through the 2021-2026 program period.

Pilot Implementation Plan

3. Projected Pilot Outcomes

- Validation of the hypothesis that providing additional support, follow-up and progress tracking across various channels will help participating customers cost-effectively implement personalized energy action plans.
- Confirmation of how customers prefer to interact with the VEC as well as gather customer insights and attitudes towards the use of technology for this purpose. The pilot will identify additional requirements for a successful rollout to the entire Low-Income customer base, and beyond.
- Establishment of protocols for tracking and measuring the following KPIs: energy savings, bill savings, hardship reductions, increased program enrollments, improved customer satisfaction, decreased disconnections, and call volume reductions or other operational efficiencies. This pilot will test the ability to measure these program benefits.

4. Pilot Rationale and Expected Outcome

- Customers going through the ESA program are provided with energy education, delivered once in-home by an ESA Contractor. Based on customer research, this one-time provision is not enough to motivate or encourage change.
- The VEC was conceived as a way of maintaining an ongoing conversation with customers, bringing their personalized information alive and encouraging continuous progress against a personalized plan.
- The coach will interact with customers through the digital and in-person channels of their choice. Using digital channels for customer engagement and scalable data analytics to generate customers' savings plans greatly increases the cost-effectiveness of this coaching approach as compared to a solution that is wholly reliant on personal interventions with ESA contractors and Customer Service Representatives, (CSRs).
- The expected outcome is greater customer engagement, better energy management, and increased satisfaction as compared to customers who do not participate in the pilot.
- If the pilot shows promising results, it could be leveraged to assist the broader CARE customer base, and potentially all residential customers.

5. Pilot Implementation

- Target Area: PG&E service territory
- Treatment Size: a minimum of 10% of ESA treated homes in one year or approximately 5,000 7,500 customers with a corresponding control group. In order to balance the design and test the value of the VEC with both CARE and ESA customers, there would be four groups for evaluation: 1) customer with ESA treatment and VEC, 2) customer with ESA and no VEC, 3) CARE customer with no ESA treatment but opts in to VEC, 4) CARE customer with no ESA and no VEC.

Line			
No	Group Composition	ESA Treatment	No ESA Treatment
1	VEC Treated	#1	#3
2	Not VEC Treated	#2	#4

- Customer Eligibility Requirements: all customers who are visited by an ESA contractor after the new program design is launched.
 - Customer segmentation and offerings by need states (i.e. high usage, Disadvantaged Community (DAC), disconnection, medical baseline, and wildfire threat zone) will be noted and flagged during the opt-in and assessment phases.

PG&E

2

Pilot Implementation Plan

The following implementation steps will be conducted for this study:

- Develop a detailed research plan, which will define the following:
 - The breadth of actions and measures to be recommended for eligible customers through the VEC such as Rate plans, Demand Response programs, Demand Side Management programs, Bill Payment plans, Energy Efficiency and Load Shifting tips along with other relevant programs
 - Customer journeys for customers in each of the need states, mentioned above, and associated offers. Examples include: Solar (i.e. SASH) or High Usage Alerts for high use customers; Indoor air quality measures for customers in DACs; Bill alerts for customers who have previously received disconnection notices; Comfort measures for customers on medical baselines; cold storage devices for customers in wildfire threat zones
 - The data collection and analysis plan for KPIs:
 - Will include simple surveys to measure treatment versus control customer sentiment along with VEC impact and VEC engagement pre and post experience.
 - Will also highlight any anticipated limitations of the analysis if sample sizes cannot be reached and direct causal links are suspect.
- Recruitment: Primarily through ESA contractors for new ESA customers, and/or a telemarketing service if contractors cannot follow-through. Telemarketing would also be used to recruit CARE customers (non-ESA).
 - Depending on interest and opt-in levels, there may be a need to offer incentives for joining or staying in the program. For example, to appropriately recognize customers' time and efforts, the VEC could offer an incentive of a gift card upon completion of both pre- and post-program surveys.
- Implement pilot 5,000+ homes
 - Allow participants to be engaged with the VEC in the channel of their choice. This may include personalized interstitials, calls, voice, text, etc. Smart technology (e.g. smart speakers) may also be used if preferred.
 - Provide continuous customer engagement through education and recommendations for saving energy in their homes.
 - Allow customers to track their progress over time.
 - As technology and operational requirement allow, strive to provide a "1-click" to enroll option for customers whereby they could seamlessly enroll in all savings opportunities at once.
- Pilot Evaluation and Report Development
 - Conduct pilot evaluation using a 3rd party evaluator.
 - Compile findings for a summary report.
 - o Identify lessons learned and best practices for inclusion in pilot expansion and improvement.
 - Pilot KPIs will be measured through the following mechanisms: measurement of directional changes in energy savings; survey responses from customers pre/post; enrollment counts in other programs/service offers; customer interactions with VEC for engagement, satisfaction surveys; pre and post analysis of operations (e.g. calls to call center) and any differences in disconnection quantities.

6. Pilot Budget & Timing Table

The timeline for this proposed pilot program would be as follows:

		Months Post-CPUC Decision	Sample Timeline - If
Line		on the 2021-2026 ESA	CPUC Decision Received
No.		Program Plan	Q1 2021
1	Finalize Research Plan	1-6	Jan-Jun 2021
2	Train ESA Contractors (allow	10-12	Oct-Dec 2021
	12 months post-decision for		
	contractor RFP)		
3	Recruit Participants	10-18	Oct 2021 – Jun 2022
4	Implement Pilot	13-36	Jan 2022-Dec 2023
5	Evaluate Pilot	37-42	Jan-Jun 2024
6	Seek Full Program Rollout	43-48	Jul-Dec 2024
	Approval in an Advice Letter		
7	Full Program Launch	49 onward	Jan 2025

The following activities are expected to be cost drivers for this study:

Line		
No.	Activity	Estimated Cost ²
1	Detailed Research Plan	675 000
	 Includes Development of Experimental Design 	\$75,000
2	Customer Recruitment	¢250.000
	 Includes Marketing & Potential Incentives 	\$350,000
3	Pilot Implementation	
	 Product Development & Solution Delivery 	\$800,000
	(Solution Vendor) including Smart Technology	
4	Pilot Evaluation	67F 000
	Includes Report	\$75,000
5	Total	\$1,300,000

PG&E

² It is important to note that these costs are the most current estimate and may subject to change due to technological developments during the two-year period before implementation begins.

PACIFIC GAS AND ELECTRIC COMPANY CHAPTER I ATTACHMENT B ESA PROPENSITY MODEL

ESA Propensity Model

Propensity Model Development

The original ESA propensity model was developed in December 2014 with the goal of improving response to Marketing communications by identifying customers with the highest propensity to participate in the ESA program. In July 2016, PG&E began development of a new propensity model that added new data and other third-party variables.

Model Characteristics

In general, the ESA Propensity Model targets customers with the following characteristics:

- Less affluent
- High propensity to be CARE eligible
- Recent movers with short tenure
- Has Spanish language preference
- High energy usage
- High energy savings opportunity (EEOS)
- Pay through Cash/Pay Station and not EFT
- More involved in PG&E programs
- Lower valued homes
- Live in a ZIP+4 that has high penetration of ESA/CARE and low penetration of Your Account enrollment

<u>Variables</u>

_

PG&E's current ESA model considers a wider array of variables at both the customer and premise level, which make it more predictive and less susceptible to bias.

		Link to Getting an
Priority	Model Variable	ESA Treatment
1	Higher CARE Acquisition Model Score	More Likely
2	Participation in My Account	Less Likely
3	Common Area Dwelling Types	Less Likely
4	Higher PGE Program Participation	More Likely
5	Higher Zip+4 overall My Account penetration	Less Likely
6	Detached Dwelling Types	More Likely
7	Less Acculturated Spanish Speakers (4,5)	More Likely
8	Shared Wall Dwelling Type	More Likely
9	Pay Station Payments	More Likely
10	English Language Preference	Less Likely
11	Cash Payments	More Likely
12	Graduate School Education	Less Likely
13	Less information Known by Acxiom	More Likely
14	Higher Zip+4 Overall "ESA" Penetration	More Likely
15	Field Service Visits	More Likely
16	Multiple Payment Methods Used	More Likely
17	Higher Zip+4 Overall "CARE" Penetration	More Likely
18	EFT Payments	Less Likely
19	Higher Household Income	Less Likely
20	Higher Home Market Value	Less Likely
21	Longer Length of Residence	Less Likely
22	Higher Customer Age	More Likely
23	Higher Electric Average Usage	More Likely
24	Longer Tenure in Months	Less Likely
25	Higher Electric Bill Amount	Less Likely
26	Higher Electric Energy Opportunity Kwh	More Likely
27	Higher Home Square Footage	Less Likely

PACIFIC GAS AND ELECTRIC COMPANY CHAPTER I ATTACHMENT C NATIVE AMERICAN TRIBAL OUTREACH

PG&E'S NATIVE AMERICAN TRIBAL OUTREACH

as of August 2019

On January 4, 2019, PG&E's Tribal Consultation Plan was approved as proposed in the July 16th, 2018 filing of the Mid-Cycle Advice Letter (AL) 3990-G/5329-E pursuant to Decision (D.) 16-11-022. The plan includes a prioritization and focus on 11 tribes based on highest poverty and lowest penetration levels. PG&E has made contact with all 11 tribes, held in-person meetings with seven, provided information to three, and has had no response from one. The table below is a summary of outreach as of August 2019.

		No Response or	
TRIBAL OUTREACH STATUS	In Person	Materials Only	Non-FR
Berry Creek Rancheria of the Tyme-Maiou Tribe	X NC		
Big Sandy Rancheria of Western Mono Indians of California	X SF		
Cahto Indians of the Laytonville Rancheria	Х		
Chicken Ranch Rancheria of Me-Wuk Indians of California		No Response	
Cold Spings Rancheria of Mono Indians	X SF		
Dunlap Band of Mono	X SF		Х
Grindstone Rancheria of Wintun-Wailaki Indians		Х	
Guidiville Rancheria of California	X NC		
Habematolel Pomo of Upper Lake	Х		
Hoopa Valley Tribe	х		
Hopland Band of Pomo Indians	Х		
Manchester Band of Pomo Indians	X NC		
Mooretown Rancheria of Maidu Indians	X NC		
North Fork Mono	X SF		Х
North Fork Rancheria of Mono Indians	X SF		
Pinoleville Pomo Nation		Х	
Redwood Valley Rancheria of Pomo Indians	Х		
Robinson Rancheria of Pomo Indians		Х	
Round Valley Indian Tribe	Х		
Sherwood Valley Rancheria of Pomo Indians	Х		
Tuolumne Me-Wuk Tribe	х		
United Auburn Indian Community/Auburn Rancheria	х		
Yurok Tribe	Х		

The blue lines are the 11 priority tribes. NC represents the meeting held by Northern Circle Indian Housing Authority where tribal leaders were in attendance. SF represents the Sierra Tribal Forum held in Yosemite with tribal leaders. Non-FR is non-federally recognized tribes.

In total, 23 tribes have had interactions with PG&E representatives and been informed of the Low Income Programs, both CARE and ESA.

7	A. CA	RE Program Context
8		In the CARE Program Context and Summary section of the application:
9	1.	History
10		Provide a brief history of the CARE Program and how it helps
11		low-income customers, how it is funded and how the program has
12		changed over the years, including any prior guidance given by the
13		Commission.
14		Pacific Gas and Electric Company (PG&E, the Company, or the
15		Utility) has administered the CARE Program since its inception in 1989,
16		as authorized in the California Public Utilities Commission (CPUC or
17		Commission) Decision (D.) 89-07-062 and D.89-09-044. Since the start
18		of the CARE Program in 1989 through 2018, PG&E's CARE customers
19		have received nearly \$9.4 billion in cumulative discounts.
20		Senator Share's Universal Lifeline Telephone Service bill (signed
21		into law in the 1980s), Senate Bill (SB) 987 (Dills – Chapter 212)
22		established an assistance program to provide rate relief to low-income
23		households from increasing baseline differentials brought about by
24		baseline rate reform in the mid-1980s. This bill also established that the
25		cost of the program would not be borne solely by any single class of
26		customer. This bill was codified in California Public Utilities Code
27		(Pub. Util. Code) Section 739.1. ¹
28		The CARE Program is authorized by California Pub. Util. Code
29		Section 739.1, which provides that:

¹ All statutory references contained herein are to the California Pub. Util. Code unless expressly stated otherwise.

[T]he commission shall ensure that the level of CARE discount for 1 2 low-income electric and gas customers correctly reflects the level of need...subject to both of the following: (1) that the commission 3 ensure that low-income ratepayers are not jeopardized or 4 overburdened by monthly energy expenditures, pursuant to 5 subdivision (b) of Section 382; and (2) That the level of the discount 6 for low-income electricity and gas ratepayers correctly reflects the 7 level of need as determined by the needs assessment conducted 8 pursuant to subdivision (d) of Section 382.² The entire discount 9 shall be provided in the form of a reduction in the overall bill for the 10 eligible CARE customer.³ 11 Benefits to the Customer: The CARE Program⁴ provides a 12 minimum of 20 percent on gas and electric bills to qualifying residential 13 single-family households, tenants of sub-metered residential facilities, 14 15 nonprofit group living facilities, agricultural employee housing facilities and migrant farm worker housing centers. The rate assistance helps to 16 reduce the energy burden for limited income customers, who have 17 saved cumulatively over \$9.4 billion since inception through the end 18 of 2018. 19 20 Funding: The CARE Program is funded by the Public Purpose 21 Program (PPP) surcharges collected from non-CARE ratepayers. For program years 2021-2026 PG&E estimates a total of 22 23 1,446,000 customers will be eligible annually for the CARE discount and 24 requests \$4.25 billion to continue the CARE Program as currently designed with the changes detailed in Section B.4. 25 Changes Since Inception: The CARE Program began by providing 26 a 15 percent discount on energy rates to residential households with 27 income at or below 150 percent of the federal poverty guidelines. 28 Section 739.1(a) currently allows assistance to customers with annual 29 household income no greater than 200 percent of the federal poverty 30 guidelines levels. In 2013, the California state legislature revised 31 Section 739.1(c) to require that the CARE electric discount be no less 32 than 30 percent and no greater than 35 percent of the revenues that 33

² Section 739.1.

³ Section 739.1(c)(3).

⁴ The program was originally referred to as the "Low-income Rate Assistance Program-(LIRA)." The program name was changed to CARE in D.92-04-024.

1		would have been provided for the same billed usage by non-CARE
2		customers. ⁵ CARE participants also receive a 20 percent discount on
3		natural gas charges.
4		See Table II-1 for other Commission guidance related to CARE.
5	2.	Summary
6		Provide a CARE Program summary, including descriptions of (i) the
7		legal framework of the CARE Program, and (ii) eligible population.
8		(i) Legal Framework
9		Table II-1 describes mandated regulatory changes to the CARE
10		Program given by the Commission since 2001.

⁵ California Assembly Bill (AB) 327 (Perea 2013).

TABLE II-1 COMMISSION DECISIONS FROM 2001 REGARDING CARE

Line	Decision			
<u>No.</u>	Number D.01-05-033	CPUC Ruling Included a capitation fee of up to \$12 for new enrollment.		
	D.01-05-033	Increased CARE income eligibility from 150 percent to 175 percent of Federal Poverty Guidelines.		
	and	Increased the discount rate from 15 to 20 percent.		
	D.02-01-040			
2	D.02-07-033	Adopted CARE Automatic Enrollment for participants of Low-income Home Energy Assistance Program (LIHEAP), Women, Infants, and Children (WIC) Program, Medical and Healthy Families.		
3	D.05-10-044	Increased the CARE income thresholds from 175 percent to 200 percent of the Federal Poverty Guidelines.		
4	D.06-12-038	Authorized the increase of Community Outreach Contractor (COC) Capitation fees from up to \$12 to up to \$15.		
		Provided CARE discount to common areas of nonprofit group living facilities.		
		Adopted Categorical Enrollment.		
		Adopted four-year certification period for fixed income residential and sub-metered customers.		
5	D.08-11-031	Approved the CARE Program for Program Year (PY) 2009-2011.		
		Extended the certification period for sub-metered and expanded program customers from one year to two years.		
		Made all categorical eligibility requirements that apply to Universal Lifeline the same as those for CARE.		
		Adopted One-e-App pilot project in two counties in PG&E's service area.		
		Adopted a requirement to report customer complaints about recertification in monthly and annual reports.		
		Adopted the goal of 90 percent enrollment of eligible customers by the end of 2011.		
6	D.12-08-044	Approved the CARE Program for PY 2012-2014.		
		Required utilities to file the cooling center report by December 21st of each year.		
		Retained all prior pre-approved categorical enrollment programs and directed utilities to jointly and annually review and submit an updated list of proposed categorical eligible program for the upcoming year via Tier 2 advice letter by January 31st of each year.		
		Directed utilities to develop an interim targeted Post Enrollment and Post Recertification income Verification stratified probability model and design a long-term probability model based on lessons learned and data from implementation of the interim probability model.		
		Adopted rule that barred customers who fail to respond to an income verification request from self-certified re-enrollment in CARE for 24 months.		
		Increased capitation fee for new enrollment from "up to \$15" to "up to \$20" and adopted a new capitation fee of "up to \$18" for capitation contractors that aid in the Post Enrollment Verification (PEV) process.		
		Adopted the high usage customer process.		
		Authorized funding to continue the Community Help and Awareness with Natural Gas and Electricity Services (CHANGES) pilot and evaluation through 2014.		
		Directed the utilities to file annual estimates of eligible CARE customers by December 31 of each year.		
		Adopted an aspirational goal of 90 percent enrollment of eligible CARE customers.		
7	D.14-08-030	Approved a 12-month bridge for 2015 at the 2014 authorized budget level.		
		Directed the utilities to incorporate into their respective strategies for the 2015-2017 program cycle the findings and recommendations from four studies, including the Low-income Needs Assessment (LINA) Study, and Multi-family Segment Study, and three working groups.		
		Prepare the 2015-2017 application using the Guidance Document framework per Attachment Q to this Decision.		
8	D.15-12-047	Authorized the on-going CHANGES Program.		
9	D.16-11-022 and D.17-12-009	Approved the 4 years program cycle 2017-2020.		
L	D.17-12-009	<u> </u>		

1		(ii) Eligible Population
2		Pursuant to California's legal requirements, PG&E's CARE
3		Program serves five eligible customer segments within its territory:
4		 Single-family residential households with PG&E gas and/or
5		electric accounts;
6		 Sub-metered tenants of master-metered facilities, such as
7		mobile home parks and sub-metered apartment complexes;
8		 Nonprofit group living facilities such as half-way homes,
9		rehabilitation facilities, homeless shelters, women's shelters,
10		and hospices;
11		Agricultural employee housing facilities such as privately-owned
12		employee housing as defined in Health and Safety Code
13		Section 17008, that is licensed and inspected by state or local
14		agencies, pursuant to Health and Safety Code, Division 13,
15		Part 1 (commencing with Section 17000), and housing for
16		agricultural employees that are non-migrant and operated by
17		non-profit entities as defined in Labor Code Section 1140.4(b),
18		that has received an exemption from local property taxes
19		pursuant to the Revenue and Taxation Code Section 214(g);
20		and
21		 Migrant farm worker housing centers operated by the Office of
22		Migrant Services through the Department of Housing and
23		Community Development or by non-profit entities pursuant to
24		Health and Safety Code Section 50710.
25	3.	Program Eligibility Guidelines
26		(1) Provide a summary of the program eligibility guidelines;
27		(2) including income, (3) categorical eligibility qualifications,
28		(4) self-certifications, and (5) the enrollment process. (6) Identity any
29		proposed changes from the current framework.
30		1. Summary of the Program Eligibility Guidelines
31		Section 739.1(a) establishes that customers are eligible for
32		CARE if the annual household incomes "are no greater than

1		200 percent of the federal poverty guidelines levels
2		Commission issued the notice to update the annual income
3		guidelines for the CARE Program. ⁷
4		Section 739.1(c)(1) also requires that the CARE electric
5		discount be no less than 30 percent and no greater than 35 percent
6		of revenue provided for same usage by non-CARE customers and a
7		gas discount of 20 percent. ⁸
8		PG&E uses the methodology defined in D.01-03-028 for
9		developing annual estimates of the number of customers that will be
10		eligible for the CARE Program for the upcoming year.
11	2.	Income
12		The Household Income Eligibility process allows CARE
13		applicants to enroll by self-certifying their income eligibility. The
14		eligibility is determined based on the total household income, with
15		income limits based on the number of occupants living in a
16		household. The income eligibility guidelines are updated annually
17		by the CPUC Energy Division (ED) and issued to utilities prior to
18		becoming effective on June 1.
19		The customer is not required to submit written documentation to
20		enroll in CARE and may qualify using any of the options described
21		in Section 3.5. below. PG&E proposes to continue the same
22		eligibility processes for program years 2021-2026.
23	3.	Categorical Eligibility Qualifications
24		The Categorical Eligibility process automatically considers
25		low-income customers to be qualified for the CARE Program, if the
26		customer is already enrolled in one of the Commission-approved

⁶ Section 739.1(a).

⁷ D.12-08-044, Ordering Paragraph (OP) 119 states: The proposals of San Diego Gas & Electric Company (SDG&E) and Southern California Gas Company (SoCalGas) to move the Commission's CARE annual income letter release date from May 1 to April 1 each year is approved, and we also move up the Family Electric Rate Assistance (FERA) update date so that the CARE and FERA updates are simultaneously released.

⁸ Section 739.1(c)(1).

1		means-tested ⁹ low-income public assistance programs. The list of
2		categorical eligibility programs is updated annually by the CPUC ED
3		and issued to utilities prior to becoming effective on June 1 of each
4		year. The approved eligible categorical programs as of the date of
5		this filing are:
6		Bureau of Indian Affairs General Assistance;
7		CalFresh/SNAP (Food Stamps);
8		CalWorks (TANF) or Tribal TANF;
9		Head Start Income Eligible (Tribal Only);
10		• LIHEAP;
11		Medicaid/Medi-Cal;
12		 Medi-Cal for Families (Healthy Families A&B);
13		National School Lunch Programs;
14		Supplemental Security Income; and
15		• WIC.
16		Qualified customers need only self-certify that they are enrolled
17		in one or more of the above programs. Verification occurs only after
18		enrollment through the PEV process described later in
19		Section A.3.5-6 below.
20	4.	Self-Certification
21		In accordance to CPUC guidance, customers can self-certify
22		(and self-recertify) their eligibility for the CARE Program. ¹⁰
23		Self-Certification requires the customer to complete and sign a
24		declaration at the bottom of the CARE enrollment form, which
25		certifies that their household meets the program guidelines. The
26		customer also agrees to provide proof of qualification to PG&E,
27		upon request. PG&E proposes to continue the same certification
28		processes in 2021-2026 and budget for this activity is included in the
29		processing, certification and recertification budget category. See
30		Table II-7.
31	5.	Enrollment Process

⁹ Means-tested programs are low-income assistance programs in which the customer's income is verified by the appropriate state and federal agencies.

¹⁰ D.89-07-062.

The CARE Program provides easy enrollment for qualified customers through two self-certification options: (1) Categorical Eligibility (explained above); and (2) Household Income Eligibility. Customers may apply or recertify for the CARE Program through paper application, online application, over the phone with a representative, text or an Interactive Voice Response (IVR) system.

1

2

3

4 5

6

After PG&E reviews a CARE application for categorical program 7 8 qualification or household income qualification, PG&E approves the CARE applicant to receive the CARE discount. Customers living in 9 non-fixed income households are certified for two years. Customers 10 11 with a fixed income, for example Social Security, are certified for four years. PG&E notifies customers by phone, e-mail (EM), and 12 mail 90 days prior to the expiration of their current enrollment. 13 PG&E also reminds the customers to recertify their eligibility for the 14 program. PG&E does not require proof of income for re-certification. 15

16All CARE customers are subject to recertification and17post-enrollment verification, referred to as PEV.

Similar to the initial enrollment process, PG&E currently allows 18 19 customers to recertify their household's eligibility for the CARE Program by paper application, online application, EM, over the 20 21 phone with a representative, or IVR system. Regardless of which enrollment process chosen, each customer must declare that their 22 23 household participates in approved categorical programs or meets the program guidelines, and agree to provide proof of income, 24 if asked. Customers who do not recertify within 90 days of the 25 26 original request are removed from the program and have the option 27 to re-enroll through the original certification process.

As discussed in D.12-08-044, PG&E adopted a CARE Propensity Model to identify predictive variables that, if all else were equal, would identify someone more likely to be eligible.¹¹ The current CARE Propensity Model was originally adopted in 2013 and enhanced in 2016 to include additional data inputs. Both the

¹¹ Advice Letter (AL) 3410-G-A/4279-E-A.

1	original model and the enhanced version was thoroughly vetted to
2	confirm that customers selected from among high propensity model
3	deciles are more likely to be eligible in CARE than randomly
4	selected customers.
5	The Propensity Model determines which PG&E customers
6	appear more likely to be eligible for CARE and assigns each
7	customer a decile score (1-10), with Decile 1 being most likely to be
8	eligible for CARE and 10 being least likely to be eligible. Customers
9	who score in Deciles 1 or 2 of the model are automatically recertified
10	given their "extremely high" likelihood of eligibility. Customers in
11	Deciles 3 or higher follow the recertification process outlined above.
12	All CARE-enrolled households are eligible to be selected for the
13	PEV process, which requires customers to provide documentation of
14	their total annual household income or participation in an approved
15	public assistance program.
16	6. Proposed Changes From Current Framework
17	For program cycle 2021-2026, PG&E proposes to continue
18	the current program eligibility and enrollment processes explained
19	above.
20	For PEV in 2021-2026, PG&E requests \$9.2 million to support
21	this process. PG&E proposes to verify approximately 8 percent
22	(around 108,000 customers) of all CARE customers annually to
23	maintain the integrity and quality of the CARE enrollment process.
24	The overall rate is composed of customers who meet the following
25	selection criteria:
26	Model Score Selection: Customers selected for PEV based on
27	being in Deciles 8-10, a low Propensity Model score are
28	73 percent more likely than those randomly selected to
29	be verified as ineligible. Approximately 4.5 percent
30	(60,750 customers) of the entire CARE population is scored in
31	Deciles 8-10 of the Propensity Model and expected to be
32	eligible for PEV selection annually.
33	<u>Random Selection</u> : A random sample is selected for Propensity
34	Model validation and tracking overall program health.

1	Approximately 1 percent (13,500 customers) of the entire CARE
2	population is randomly selected for PEV annually.
3	High Usage Selection: Customers with usage above
4	400 percent of baseline in any monthly billing cycle
5	must undergo the High Usage PEV process and agree to
6	participate in the Energy Savings Assistance (ESA) Program.
7	Approximately 2.5 percent (33,750 customers) of the entire
8	CARE population is expected to be eligible for the High Usage
9	PEV process annually.
10	PG&E may adjust the PEV rate over time based on verification
11	results and lessons learned. PG&E does not anticipate the PEV
12	rate to exceed 200 percent of the 2011 PEV rate of 11 percent,
13	which would require a Tier 2 advice letter for approval as directed in
14	D.12-08-044. 12
15	B. Current Proposal Summary for Program Years 2021-2026
16	1) Explain Your Plans for the CARE Program Budget for 2021-2026
17	PG&E requests the Commission approve its CARE funding request
18	of \$4.25 billion for PY 2021-2026 to continue operating PG&E's CARE
19	Program for qualified customers.
20	a) Overview of Budget Costs
21	For PY 2021-2026, PG&E proposes the following CARE
22	discount and program administrative expense costs in Table II-2
23	below.

_

¹² D.12-08-044, OP 92.

	1 BUDGET FOR PY 2021-2026
TABLE II-2	PG&E'S PROPOSED CARE PROGRAM

2021-2026 Total Proposed Budget	\$85,174,700	4,166,219,000	\$4,251,393,700
2026 Proposed Budget		705,667,000	\$720,454,700
2025 Proposed Budget	\$14,444,200	700,957,000	\$715,401,200
2024 Proposed Budget	\$14,070,600	696,394,000	\$710,464,600
2023 Proposed Budget	\$13,961,600	691,973,000	\$705,934,600
2022 Proposed Budget	\$13,760,000	687,689,000	\$701,449,000
2021 Proposed Budget	\$14,150,600	683,539,000	\$697,689,600
CARE Budget Categories	Program Administrative ^(a)	CARE Discount	Total Program and Discount Costs
Line No.	~	7	ς

(a) Includes estimated benefit burden determined in 2017 GRC for illustration purposes and shall be adjusted accordingly when the benefit burden is approved in future GRCs applicable to the year.

1	2)	Discuss How Elements and Strategies in the Proposal Are Specifically
2	_,	Designed to Reach and Maintain the 90 Percent Penetration Goal That
3		Was Established in D.08-11-031
4		For 2021-2026, PG&E continues to support the Commission's
5		penetration goal of 90 percent that was established in D.08.11-031.
6		To maintain and exceed this goal, PG&E proposes to continue its
7		programmatic efforts of extensive targeted marketing and outreach
8		(M&O) to ensure that (1) qualified customer households remain
9		enrolled in CARE; and (2) eligible customer households can easily
10		enroll and recertify in CARE. These include continued proven
11		marketing strategies and enhancing partnerships with
12		Community-Based Organizations (CBO) to continue education of
13		eligible hard to reach populations in low penetration counties.
14		These are discussed in detail in Section D.1.e.
15		In addition, we propose to continue proven strategies such as:
16		 Post-enrollment verification and high usage verification to
17		ensure that we maintain the integrity of the program participants
18		enrolled;
19		Diverse enrollment channels such as paper, e-mail, phone, text
20		and IVR to support customer preferences; and
21		 Effective community outreach with local and culturally
22		competent community partners.
23	3)	Provide an estimate of the number of households projected to be
24		enrolled, along with the overall budget requested to meet this goal for
25		each program year
26		PG&E's estimated number of households projected to be enrolled
27		each year for 2021-2026 is 255,000 and corresponding M&O budget
28		request is approximately \$8 million annually. To maintain the
29		90+ percent penetration goal in 2021-2026, PG&E projects to recertify
30		approximately 537,000 households and enroll approximately
31		255,000 new households annually. See Table II-3.
32		PG&E estimates that 1,350,000 households out of
33		1,446,000 estimated eligible households will be enrolled in CARE by

the end of 2020, a penetration rate of approximately 93 percent. This 1 rate will fluctuate based on annually updated CARE eligibility estimates. 2 PG&E projects total attrition of 1,530,000 households over the 3 6-year cycle. On average, 19 percent of enrolled households 4 5 or 255,000 are expected to drop off the program annually due to: customers choosing to close their accounts, failing to recertify, informing 6 PG&E of their ineligibility due to change in economic circumstances, or 7 customers not responding to PG&E's PEV requests. 8

TABLE II-3	PG&E'S CARE ENROLLMENT ESTIMATES AND PROPOSED BUDGET FOR PY 2021-2026
------------	---

Total	1,446,000 3,222,000	1,530,000	1,530,000	I	1,350,000	93%	\$4,251,393,700
2026	1,446,000 537,000	255,000	255,000	I	1,350,000	93%	\$720,454,700
2025	1,446,000 537,000	255,000	255,000	I	1,350,000	93%	\$715,401,200
2024	1,446,000 537,000	255,000	255,000	I	1,350,000	93%	\$710,464,600
2023	1,446,000 537,000	255,000	255,000	I	1,350,000	93%	\$705,934,600
2022	1,446,000 537,000	255,000	255,000	I	1,350,000	93%	\$701,449,000
2021	1,446,000 537,000	255,000	255,000	I	1,350,000	93%	\$697,689,600
Program Year	PY 2019 Estimated Eligible Recertifications	New Enrollments	Attrition	Net Increase	Year-End Enrollment	Year-End Penetration Rate ^(a)	Proposed Budget ^(b)
Line No.	<i>⊢</i> 0	ო	4	S	9	7	ω

(a) Rate will fluctuate based on annually updated CARE eligibility estimates which are impacted by economic factors, such as unemployment levels and economic growth/declines.

(b) See Table II-2, line 3.

1		PG&E uses the methodology adopted by the CPUC in D.01-03-028
2		for developing annual estimation of eligibility for the CARE Program. ¹³
3		The enrollment forecast is based on a number of factors including:
4		planned outreach initiatives, scheduled recertification dates, and
5		historical trends related to enrollment, retention, and attrition.
6	4)	Explain any proposed changes from prior years
7		As discussed below, PG&E's proposed changes to the CARE
8		Program include:
9		 Increase of Capitation fee to \$30;
10		Permanently revise the filing date of annual estimates to CARE
11		eligible customers to February 12 annually; and
12		Change the certification period for Non-Profit, Agriculture, Migrant
13		Farm Worker Housing Facilities from two years to four years.
14		• These proposed changes are also described in Appendix B, items
15		16, 17, and 18.
16		a) PG&E requests an increase for Capitation fee from \$20 to \$30.
17		PG&E currently partners with 52 Community Outreach
18		Contractors (COC) to assist low-income individuals and families
19		enrolling into CARE. PG&E compensates COCs \$20 per new
20		customer enrolled by the COC in the CARE Program. This payment
21		amount has not been revised to account for cost of living increases
22		since 2013. Given PG&E's high CARE penetration rate, converting
23		customers who have chosen not to participate in the past has
24		become increasingly difficult and will likely require additional
25		outreach efforts to reach those not yet enrolled. Additionally, PG&E
26		would like to encourage community partners to adopt a more holistic
27		approach to educating customers on not only the CARE and FERA
28		discounts, but also assist customers in enrolling in the ESA Plus
29		Program, as well as educating them on better rate options and
30		energy management tools, during CARE/FERA education and
31		application process. In addition, CBO efforts to enroll those in hard
32		to reach populations, require increased numbers of touches to

13 D.01-03-028, pp. 49-51.

identify those who have not yet been served. PG&E proposes to
increase the CARE capitation fee for new enrollment from \$20 to
\$30. To support this holistic approach targeting hard to reach
populations and double the enrollments through this channel, the
budget proposed for this request is \$360,000 for 2021-2026 or
\$60,000 per year.

TABLE II-4 CARE COCS ACTIVITY 2015-2018

Line No.	Year	# of COCs	Enrollments	Total Expenditures
1	2018	60	1,081	\$21,620
2	2017	60	952	\$19,040
3	2016	70	1,119	\$22,380
4	2015	69	1,035	\$20,700

b) PG&E proposes to permanently revise the filing date of annual 7 estimates to CARE eligible customers to February 12 annually 8 9 PG&E proposes to permanently move the filing date of annual estimates to CARE eligible customers to February 12. PG&E and 10 the other Investor-Owned Utilities (IOU) are required to estimate the 11 number of customers potentially eligible for CARE annually on 12 December 31.¹⁴ The Commission determined that CARE eligibility 13 should adhere to the federal poverty guidelines in compliance with 14 Section 739.1(a), which states that CARE shall serve households 15 with incomes no greater than 200 percent of the federal poverty 16 guideline levels.¹⁵ The federal Department of Health and Human 17 18 Services (DHHS) typically updates these guidelines near the end of January each year. A Joint Utilities' consultant incorporates results 19 20 of the current year Department of Health and Human Services 21 poverty guidelines in the estimates of the eligible CARE population.

¹⁴ In D.12-08-044, the Commission granted the Joint Utilities' request to file the annual CARE eligibility estimates on December 31 of each year.

¹⁵ Section 739.1(a), "The commission shall continue a program of assistance to low-income electric and gas customers with annual household incomes that are no greater than 200 percent of the federal poverty guideline levels, the cost of which shall not be borne solely by any single class of customer."

Because the Joint Utilities' consultant usually cannot incorporate 1 2 DHHS guidelines into its estimates until February, the Joint Utilities usually request an extension to file these estimates from December 3 to February. To accommodate the DHHS timeline and to avoid 4 5 requesting an extension to comply each year, PG&E proposes the date to submit the annual estimate of eligible customers be 6 permanently revised from December 31 to February 12 of each year 7 8 for the current year. Extending this deadline to February 12 for the past five years 9 has not had an adverse impact on the low-income programs nor 10 11 delayed the filing of the program first monthly report for the current 12 year. c) Change the certification period for Non-Profit, Agriculture, Migrant 13 Farm Worker Housing Facilities from two years to four years 14 To continue to receive a CARE discount, certain categories of 15 customers are required to certify their eligibility every two years. 16 These categories of customers include Non-profit, Agricultural, and 17 Migrant Farm Worker housing facilities. The enrollment process 18 19 requires these organizations/facilities provide documentation, such as a copy of 501(c)(3) tax exemption and license to provide social 20 services. PG&E proposes to extend the eligibility period to 21 four years from two years. Changing the certification period to 22 four years from two years will reduce the administrative burden for 23 these resource constrained benefitting organizations when it is time 24 for them to recertify and whose status is unchanged. This proposal 25 26 would also help to increase the program enrollment rate and mitigate the possibility of eligible organizations losing the valuable 27 discount. 28 29 5) Based on Your Review of Study Findings and/or Working Group and 30 LIOB Recommendations, Which New Strategies or Best Practices Do You Propose for Inclusion in This Program to Increase Participation and 31 Retain Eligible Households? 32 33 As of the date of this application, the Low-income Oversight Board (LIOB) did not make recommendations applicable to CARE. 34

The Preliminary 2019 LINA Study results suggested that CARE 1 post-enrollment process including recertification, verification, and High 2 Usage verification have been successfully removing ineligible 3 customers.¹⁶ In addition, ineligibility is the primary reason most 4 customers are removed.¹⁷ Those removed tend to have lower 5 economic hardship and higher incomes. However, the post enrollment 6 processes can also remove some eligible customers.¹⁸ Therefore, post 7 8 enrollment processes can be improved to reduce barriers to the retention of eligible CARE customers. For example, while less common, 9 lack of awareness or lack of understanding about the CARE application 10 11 process or household eligibility requirements continue to be barriers. As has been found in past research, privacy concerns do not appear to 12 be a barrier to participation. 13

In September 2019, PG&E modified the list of acceptable 14 documents to verify income for the PEV process for high-usage 15 customers from only the Internal Revenue Service (IRS) Tax Form to 16 income documents accepted in the regular PEV process. This 17 modification will reduce one barrier to proving income and if successful, 18 19 will reduce the number of qualified customers being removed from the program. PG&E expects to continue this process in 2021-2026. 20 PG&E also expects to use the results in the 2019 LINA Study Final 21 Report which will be issued at end of 2019 as a source for continuous 22 improvements to these processes. 23

24 **C. CARE Program Goals and Budgets for PYs 2021-2026**

27

28

- In the CARE Program Goals and Budgets section of the application
 provide a description of the 2021-2026 program requests, including:
 - 1) Provide proposed program activities and program participation goals for each year. Include the number of eligible households;

¹⁶ Opinion Dynamics. 2019 CA Low-income Needs Assessment, Draft Report, Vol. 1 (October 2019), Section 4.2, pp. 44-47.

¹⁷ Opinion Dynamics. 2019 CA Low-income Needs Assessment, Draft Report, Vol. 1 (October 2019), Section 4.2, pp. 44-47.

¹⁸ Opinion Dynamics. 2019 CA Low-income Needs Assessment, Draft Report, Vol. 1 (October 2019), Section 4.2, pp. 44-47.

- 1a)Provide actual participant data from 2018, including CARE2participant counts and percentage rates for program enrollment.3Also provide estimated participation data for 2019;4PG&E's actual participant data from 2018 and estimated5participation data for 2019, with participant counts and percentage
 - rates for program enrollment are outlined below.

6

TABLE II-5 CARE PARTICIPATION AMOUNTS AND PERCENTAGE RATES

Line No.	Year	Participation	Penetration Rate
1	2018 ^(a)	1,376,003	89.6%
2	2019 ^(b)	1,368,000	95%

(a) Actual participation for 2018.

(b) Estimated participation for 2019 based on estimated attrition and new enrollments from planned M&O.

7	b)	Discuss potential reasons for any significant variations in enrollment
8		during the current program cycle.
9		PG&E has not experienced any significant variations in
10		enrollment during the current program cycle. Penetration rates have
11		gradually increased each year.
12	c)	Discuss issues, if any, that present challenges toward reaching and
13		maintaining the enrollment goal established by the Commission;
14		At the time of this application, PG&E does not anticipate any
15		challenges to maintain the program aspirational goal of 90 percent.
16		However, the above changes requested should assist in overcoming
17		some of the challenges associated with retaining qualified
18		customers participation through the verification process outlined in
19		Section B.
20	d)	Identify how the Utility's CARE Program goals for the 2021-2026
21		CARE Program aligns with Commission directives of reaching a
22		penetration goal of 90%;
23		PG&E's program goals for a 2021-2026 CARE Program aligns
24		with Commission goals for 90 percent penetration in three ways:

1	 Continued successful outreach strategies
2	(See Section D.1.e.);
3	 Exploring broader local partnerships to energize and
4	deepen community engagement (see Section D.1.e.); and
5	 PEV enhancements as discussed above in Section B.5. that
6	were implemented in September 2019.
7	The elements and strategies of the CARE Program discussed in
8	this section are designed to (1) drive enrollment among remaining
9	households estimated to be eligible for CARE by effectively breaking
10	down the barriers which led to inaction; and (2) retain households
11	who qualify for CARE to maintain or surpass the Commission's
12	aspirational goal of 90 percent.
13	e) Describe existing program elements and strategies that will
14	continue;
15	As described below, PG&E's existing program elements and
16	strategies that will continue include:
17	• M&O
18	 Processing, Certification and Recertification;
19	• PEV;
20	 Information Technology (IT) Programming;
21	CHANGES Program;
22	Studies;
23	Measurement and Evaluation;
24	Regulatory Compliance;
25	General Administration; and
26	CPUC ED Staff.
27	Marketing and Outreach: PG&E requests \$48 million to
28	continue its M&O efforts from 2021-2026, an average of \$8 million
29	annually. PG&E conducts extensive M&O efforts to retain existing
30	qualified customers as well as to attract the remaining unenrolled,
31	eligible customer population. This budget category includes costs
32	for acquisition and retention marketing and community engagement
33	strategies. These strategies and proposals are discussed in more
34	detail in Section D.1.e. of this testimony.

Processing, Certification and Recertification: PG&E requests 1 2 \$5.3 million to continue processing, certification, and recertification of CARE applications from 2021-2026, an average of 3 \$883 thousand annually. This cost category encompasses 4 5 day-to-day administrative tasks associated with processing CARE applications for enrollment and for recertification. 6 Post-Enrollment Verification and High Usage Process: 7 8 PG&E requests \$9.2 million to support its PEV and High Usage process from 2021-2026, an average of \$1.5 million annually. 9 PG&E promotes program integrity by verifying customers' eligibility 10 11 for CARE after high usage customers' eligibility is verified, and as appropriate, referring to ESA. This budget cost category 12 encompasses day-to-day administrative tasks associated with 13 completing PEV and High Usage verifications. 14 IT Programming: PG&E requests \$7.4 million for IT 15 programming related to CARE from 2021-2026, an average of 16 \$1.2 million annually. This budget category includes costs for the 17 CARE database, systems enhancements, and mobile access. 18 19 CHANGES Program: PG&E requests \$3.2 million for PG&E's portion of the shared cost of ongoing CHANGES Program from 20 2021-2026, an average of \$535 thousand annually. This budget 21 category includes reimbursement cost for the ongoing CHANGES 22 Program and PG&E staff labor to support the CHANGES Program. 23 Studies: PG&E requests \$172,500 for PG&E's shared studies 24 cost from 2021-2026. This represents PG&E's CARE share of the 25 26 two LINA studies and the statewide categorical eligible program 27 study proposed in ESA Chapter I, Section D.10.b-c. <u>Measurement & Evaluation</u>: PG&E requests \$1.2 million from 28 29 2021-2026, an average of \$200 thousand annually. This budget 30 category includes all measurement and evaluation related to the CARE Program, including contract expenses for the annual study of 31 CARE customer eligibility estimates. 32 <u>Regulatory Compliance</u>: PG&E requests \$2.3 million from 33 2021-2026, an average of \$387 thousand annually. This budget 34

1	category includes costs for staff labor and travel expenses
2	associated with preparing regulatory filings and regulatory-related
3	activities.
4	General Administration: PG&E requests \$7.2 million for
5	program administration and management from 2021-2026, an
6	average of \$1.2 million annually.
7	CPUC Energy Division Staff: PG&E requests \$1 million from
8	2021-2026, an average of \$176 thousand annually. This budget
9	category represents funding for ED staff. ¹⁹
10	f) Describe new program elements and strategies, if any, including
11	budget estimates for new approaches;
12	PG&E has no additional programs beyond those already
13	discussed in Section C.1.e.
14	g) Describe in detail any proposed pilots and/or studies, including
15	detailed budgets and timelines;
16	Studies:
17	The IOUs propose three CARE-ESA studies to begin during
18	the 2021-2026 program cycle. Detail about these studies are
19	available in Chapter I ESA Section D.10.b-c Program Studies
20	and Pilots.
21	 2025 Statewide LINA (to be scoped and solicited in 2023)
22	 2028 Statewide LINA (to be scoped and solicited in 2026)
23	 Statewide CARE-ESA Categorical Program Study
24	The proposed budget for these studies is provided in
25	Table II-6. The budget for each specific study will be
26	determined once the study has been scoped.

¹⁹ Funding to ED per D.16-11-022, D.12-11-015, D.10-04-029, D.09-09-047, D.08-10-027, D.05-12-026, D.06-12-038, D.05-11-011 and ALs 2745-E, 2683-G, 1936-E, 1754-E, 1575-G, and per Budget Act Chapter 50, Statute 1999.

TABLE II-6 2021-2026 STATEWIDE CARE-ESA STUDIES AND BUDGETS

	2021-2026 S	tudy Summary	Table		PG	&E Study Budge	et
Line No.	Summary	Statewide Budget	ESA (50%)	CARE (50%)	PG&E ESA Share (30%)	PG&E CARE Share (30%)	Total PG&E Budget

2	LINA (2 studies) ^(a)	\$1,000,000	\$500,000	\$500,000	\$150,000	\$150,000	\$300,000
3	Statewide CARE-ESA Categorical Study (1 study)	150,000	75,000	75,000	22,500	22,500	45,000
4	Total	\$1,150,000	\$575,000	\$575,000	\$172,500	\$172,500	\$345,000

(a) LINA 2022 Study will be requested from 2017-2020 budget in an advice letter to be filed in Q4 2019. The AL will request to carryover committed funding to the 2021-2026 cycle.

1 2

Long-Term CARE Customer Pilot:

As discussed in Chapter I ESA Section D.10.c., PG&E proposes the Long-Term CARE (LTC) Customer pilot during the 3 2021-2026 program cycle to test the effectiveness of outreach 4 5 and communications with long-term CARE customers (defined as more than 10 years continuously) that have not previously 6 enrolled in ESA. The LTC pilot will focus on M&O strategy, 7 8 tactics and messaging to assist in enrolling long-term CARE customers into the ESA Program. The target customers will be 9 selected from the population who: (1) have been receiving the 10 CARE discount for more than 10 years continuously; (2) have 11 occupied the same premise during this time; and (3) have not 12 13 participated in ESA. The pilot will select two groups of 14 5,000 customers from the total population of approximately 95,000 as of June 30, 2019. See Table I-4, Chapter 1, 15 Section 3.a. Both groups will receive information that they must 16 17 respond or risk losing their CARE discount.

The LTC pilot planning is expected to begin in late 2023 and 18 pilot implementation is expected to begin in 2024. The pilot cost 19 20 is included in ESA Program budget. The pilot could result in the loss of CARE discount for those customers selected and who do 21 not respond. Data collection and analysis on the impact of both 22 23 positive benefits and negative economics will be important in

II-23

1	informing future ESA and CARE enrollment policies.
2	See detailed Pilot Implementation Plan in Appendix D.
3	h) Specify the total requested budget of the portfolios for each program
4	year, and for the entire budget cycle;
5	The total requested budget of the portfolios for each program
6	year and for the entire budget cycle are as follows/in
7	Table II-7 below.
8	(i) CARE Program Budget
9	In this section, PG&E breaks down the CARE Program
10	Budget for PY 2021-2026 by category in Table II-7 below.

TABLE II-7	CARE PROGRAM ADMINISTRATIVE BUDGET FOR PY 2021-2026

II-25

1		PG&E's budget for 2021-2026 was derived using a
2		bottoms-up planning of administrative resources, planned M&O
3		cost estimates (derived from historical averages and planned
4		strategies), systems enhancements, as well as ongoing planned
5		programming activity of recertifications and post-enrollment
6		verification activity.
7		i) Estimate the total number of households to be enrolled for each
8		year, and for the entire budget program year cycle.
9		For 2021 through 2026, PG&E estimates that
10		255,000 households will be enrolled in CARE annually, and
11		1,530,000 households will be enrolled in CARE for the entire budget
12		program year cycle. PG&E bases these estimates on historical
13		program performance on attrition and newly eligible population
14		estimates. These estimates will be impacted by changes in
15		economic factors. This will balance estimated attrition of the same
16		number of households, meaning total CARE enrollment is estimated
17		
17		to remain the same.

As described above in Section B, PG&E proposes a change in recertification and has made a change in PEV process. PG&E proposes changing the recertification of non-profit, agriculture, migrant farm worker housing facilities from two years to four years to reduce administrative burden of the not for profits.
18 19 20 21 22 23 24 25 26 27		RE Program Delivery CARE Enrollment, Recertification and Outreach: a) Discuss any warranted changes to enrollment, recertification, and/or post-enrollment verification processes. As described above in Section B, PG&E proposes a change in recertification and has made a change in PEV process. PG&E proposes changing the recertification of non-profit, agriculture, migrant farm worker housing facilities from two years to four years to reduce administrative burden of the not for profits. In September 2019, the Joint IOUs changed the PEV process
18 19 20 21 22 23 24 25 26 27 28		RE Program Delivery CARE Enrollment, Recertification and Outreach: a) Discuss any warranted changes to enrollment, recertification, and/or post-enrollment verification processes. As described above in Section B, PG&E proposes a change in recertification and has made a change in PEV process. PG&E proposes changing the recertification of non-profit, agriculture, migrant farm worker housing facilities from two years to four years to reduce administrative burden of the not for profits. In September 2019, the Joint IOUs changed the PEV process for high-use customers. PG&E modified the acceptable income
18 19 20 21 22 23 24 25 26 27 28 29		 RE Program Delivery CARE Enrollment, Recertification and Outreach: a) Discuss any warranted changes to enrollment, recertification, and/or post-enrollment verification processes. As described above in Section B, PG&E proposes a change in recertification and has made a change in PEV process. PG&E proposes changing the recertification of non-profit, agriculture, migrant farm worker housing facilities from two years to four years to reduce administrative burden of the not for profits. In September 2019, the Joint IOUs changed the PEV process for high-use customers. PG&E modified the acceptable income verification documents to add all household income documentation
18 19 20 21 22 23 24 25 26 27 28 29 30		 RE Program Delivery CARE Enrollment, Recertification and Outreach: a) Discuss any warranted changes to enrollment, recertification, and/or post-enrollment verification processes. As described above in Section B, PG&E proposes a change in recertification and has made a change in PEV process. PG&E proposes changing the recertification of non-profit, agriculture, migrant farm worker housing facilities from two years to four years to reduce administrative burden of the not for profits. In September 2019, the Joint IOUs changed the PEV process for high-use customers. PG&E modified the acceptable income verification documents to add all household income documentation accepted in the standard PEV process in addition to the IRS Tax
18 19 20 21 22 23 24 25 26 27 28 29 30 31		 RE Program Delivery CARE Enrollment, Recertification and Outreach: a) Discuss any warranted changes to enrollment, recertification, and/or post-enrollment verification processes. As described above in Section B, PG&E proposes a change in recertification and has made a change in PEV process. PG&E proposes changing the recertification of non-profit, agriculture, migrant farm worker housing facilities from two years to four years to reduce administrative burden of the not for profits. In September 2019, the Joint IOUs changed the PEV process for high-use customers. PG&E modified the acceptable income verification documents to add all household income documentation accepted in the standard PEV process in addition to the IRS Tax Form. This will reduce one barrier identified in LINA study and

b) Discuss any needed changes or updates to existing probability models.

1 2

PG&E proposes to rebuild the Propensity Model every three to 3 four years to avoid data decay that can degrade the accuracy of the 4 5 model over time. A rebuild entails analysis of all available data fields using the most recent customer data to evaluate new 6 7 variables for possible inclusion or exclusion from the model. During 8 the process, previously included variables may still remain in the model, but could be reweighted, and new variables may be included 9 in the rebuild, while others may be omitted. PG&E plans to rebuild 10 11 the model in 2020 (last rebuild was in 2016), then starting in 2021, PG&E plans to conduct an annual refresh to incorporate new 12 customer enrollment data from the prior year to capture changes. 13 The cost to rebuild the model is estimated at \$13,000 (rebuild would 14 occur in 2024) and the annual update to the CARE propensity model 15 is estimated at \$8,000 per program cycle year. Costs involved 16 cover the overhead for analyst and programming resource time. 17 Total estimated costs for updating the model during the 2021-2026 18 cycle is estimated at \$61,000. This cost is included in the M&O 19 budget proposed in Section D.1.e. (within the Data Management, 20 21 Measurement and Analysis budget category). PG&E expects to continue using a CARE propensity model for 22 acquisition, recertification and post-enrollment verification. 23 c) Discuss any warranted changes to the high usage policy and/or 24 appeal process. 25 As discussed above, change to the list of acceptable income 26 27 documents is warranted for the high usage policy. (Section B.5.). d) Discuss any warranted modifications to applying the CARE discount 28 29 for Green Tariff Shared Renewables customers. 30 In compliance with Resolution (Res.) E-4880, issued October 27, 2017, 20 PG&E proposes no modifications to the 31

²⁰ Res.E-4880. Approval for Income-Qualified Customers Who Enroll in the Green Tariff Shared Renewables Program to Continue Receiving the Applicable CARE or FERA Discounts [PG&E AL 4976-E].

application of the CARE discount for Green Tariff Shared 1 2 Renewables customers. e) Discuss the current and suggested Outreach strategies and 3 methods to improve CARE enrollment and retention including the 4 5 estimated costs. [WITNESS: OLSEN] In this section, PG&E presents its primary discussion of current 6 and suggested M&O strategies to improve CARE enrollment and 7 8 retention including the estimated costs. This section also presents PG&E's proposed strategy for Community Based Outreach during 9 the 2021-2026 cycle, along with the proposed budget. 10 11 PG&E's budget for the overall M&O category which consists of marketing, community engagement, and other administrative 12 expenses is \$48 million. 13 PG&E's Marketing Proposal Summary 14 PG&E's strategic marketing focus and continuous improvement 15 efforts over many years resulted in a participation rate for the CARE 16 Program that is currently above 90 percent.²¹ In 2018, CARE 17 marketing helped drive a total of 239,000 new enrollments in the 18 19 program. For 2019, PG&E marketing of the CARE Program is contributing towards forecast enrollment of 237,000. During 20 program cycle 2017-2020, M&O evolved, placing greater emphasis 21 on data-driven decision making, and using a test-and-learn 22 23 approach to deliver more cost-effective acquisition strategies and tactics. PG&E plans to apply the same rigor during the final year of 24 the current cycle (2020) and carry this approach forward into the 25 26 new program cycle to achieve ongoing success. 27 The total estimated marketing budget for 2021 through 2026 to continue these marketing efforts and test new strategies is 28 approximately \$35.4 million.²² The proposed budget is reasonable 29 30 because PG&E will need to continue significant marketing outreach for the CARE Program, and expects that some acquisition costs 31

²¹ PG&E CARE Enrollment Variance Report indicates penetration rate of 95 percent as of June 30, 2019.

²² Does not include community engagement, and other outreach expenses.

1	may increase in relation to efforts to convert customers that have
2	been unresponsive to past marketing. Marketing is critical to meet
3	the obligations to achieve penetration rate goals and ensure that
4	customers are well-informed about CARE, as well as other energy
5	management tools, and remain enrolled in the program.
6	CARE Marketing Goals
7	PG&E's proposed marketing plans sustain levels of enrollment
8	per the Commission's established aspirational penetration rate of
9	90 percent.
10	Marketing also supports CARE retention to ensure eligible
11	customers maintain the financial assistance they need to pay
12	their bill.
13	Additionally, marketing aims to build greater awareness and
14	engagement with income qualified customers about holistic energy
15	management opportunities.
16	PG&E's Suggested Marketing and Outreach Strategies and
17	Methods for Continuation
18	PG&E proposes its M&O efforts continue focus on (1) enrolling
19	customers in CARE and FERA; and (2) retaining qualified
20	customers on the programs.
21	PG&E expects to use awareness, acquisition and retention
22	strategies such as multi-channel direct marketing, paid digital and
23	radio media, New Mover outreach, automated recertification
24	reminder e-mails and Welcome Kit campaigns from the previous
25	cycle to maintain CARE penetration rates. PG&E plans to use
26	results from 2019 and 2020 marketing tests ²³ to inform strategies
27	for maintaining CARE penetration and increasing FERA penetration
28	for the 2021-2026 program cycle. Marketing must continue to
29	generate new enrollments to replace those customers lost to attrition
30	(e.g., customers who leave the territory, fail-to-recertify or do not
31	complete PEV), as well as look for ways to identify, contact, and

²³ Examples of marketing tests that may be conducted during the program cycle include communication message testing, targeting tests, tactics tests, digital version side-by-side tests, etc.

motivate those customers that have received outreach, but 1 2 remain unenrolled. PG&E's marketing approach is flexible to allow for adjustments 3 based on: (1) ongoing testing and lessons learned from 4 outreach in 2019, 2020, and 2021 through 2026; and (2) the 5 Commission's approval of the combined CARE and FERA outreach 6 forecast budget. 7 8 **Continue Multi-Channel, Multi-Touch Campaigns** PG&E proposes continued use of multi-channel marketing (e-9 mail, direct mail (DM), digital video, IVR message, etc.) to reach 10 11 customers. Multi-channel marketing benefits customers by making it easier for them to engage, such as signing up for CARE, in 12 whatever channel they are using or comfortable with—it provides 13 choice. Multi-channel marketing also allows for repetition, which is 14 important because the more people hear/see a message, the more 15 familiar it becomes. For some consumers, it takes hearing a 16 message multiple times before they act. Repeating a message 17 multiple times and in different channels generates familiarity and a 18 19 higher likelihood that customers will respond to a message. Repetition of messages is critical to engage customers and 20 incite them to take action. Through testing, PG&E has found that it 21 can take at least 3-5 messages for customers to engage.²⁴ PG&E 22 plans to use a combination of DM and e-mail that co-promote CARE 23 and FERA. "Always-on" digital advertising strategy will be layered in 24 to complement direct marketing campaigns to increase awareness, 25 26 provide reminder messaging, and support new customer enrollments. The use of broadcast and traffic radio campaigns 27 provide an additional layer of media, again to drive awareness as 28 29 well as enrollment. PG&E also plans to continue program promotion 30 via other M&O channels such as the PG&E Residential Digital

²⁴ Frequency and sequence testing results, 2015 CARE End of Season Analysis, Executive Summary, p. 4, prepared by Targetbase, November 16, 2015.

1	Newsletter, Home Energy Reports, local offices or payment centers
2	and pge.com.
3	Target Qualified Customers Via the CARE Propensity Model
4	PG&E plans to continue use of the CARE propensity model ²⁵ to
5	target eligible, non-enrolled, income-qualified customers. PG&E's
6	residential customer records (CARE and non-CARE) are scored
7	quarterly and grouped into ten deciles with the most likely eligible
8	customers residing in the lower deciles. PG&E's CARE direct
9	marketing campaigns leverage the deciles scores to create
10	customer lists with the following criteria:
11	Customers with Decile score of 1-3;
12	Customers with Decile score of 4, with an income indicator
13	below \$100,000 are included;
14	Customers with Decile score of 5, with an income indicator
15	below \$70,000 are included;
16	Customers with a Decile score of 4 and 5 that do not have an
17	income flag available, or customers with a decile score 6 or higher,
18	are not included on direct marketing lists.
19	The Propensity Model enables PG&E to target customers that
20	are more likely eligible for CARE and the table below illustrates how
21	most enrollments generated from DM and e-mail campaigns are
22	from lower deciles.

²⁵ An algorithm designed to assess likelihood for CARE based on select demographics and characteristics. See Section A.3.5. for a description of the CARE Propensity Model.

TABLE II-8 PG&E'S 2018 CARE DIRECT MAIL AND E-MAIL ENROLLMENTS BY DECILE

Model Decile	No. of Customers Contacted	% of Total Enrollments	Enrollment Rate
1	85,891	20%	10%
2	150,898	24%	7%
3	193,383	24%	5%
4	167,458	15%	4%
5	124,634	10%	3%
6	28,937	4%	5%
7	14,694	2%	6%
8	7,645	1%	8%
9	2,099	0%	5%
10	528	0%	4%
Overall	776,167	100%	6%

The CARE Propensity Model is a tool used to identify which customers are most likely to be CARE-eligible based on variables that are predictive of the desired behavior (CARE enrollment). As noted in Section D.1.b., PG&E proposes a rebuild of the Propensity Model every three to four years, and an annual refresh of the Propensity Model to ensure the model retains statistical accuracy for use in targeting eligible customers.

1

2

3

4

5

6

7

PG&E has also reviewed penetration rates for subgroups within 8 the CARE population including eligible customers who live in High 9 Poverty²⁶ and Rural²⁷ areas. These groups are not mutually 10 11 exclusive—a majority of rural and high poverty areas are located in the same counties indicating that there are eligible customers who 12 classify as both rural and high poverty. PG&E plans to continue 13 14 targeting the hard-to-reach populations, specifically within rural and high poverty groups where PG&E sees opportunity to increase 15 penetration rates. 16

²⁶ A High Poverty household has income at or below 100 percent of the Federal Poverty Level Guidelines. PG&E has identified specific zip codes and counties within PG&E's territory that fall within this definition for targeting purposes. See Section D.3.a. for a list of identified High Poverty areas.

²⁷ Rural areas are generally defined as those isolated from larger metropolitan areas, by distance or other physical features. PG&E has identified specific zip codes and counties within PG&E's territory that fall within this definition for targeting purposes. See Section D.2.a. for a list of identified Rural areas.

Engage Customers Through Relevancy

1

Key program messages are delivered to customers depending 2 on where they are in their energy management journey. At the 3 beginning of the journey program messaging focuses on CARE 4 5 enrollment messages targeted to low-income customers. Once a customer enrolls in CARE, they receive messages about the 6 7 requirements for ongoing participation in the program via the CARE 8 Welcome Kit. At that time, the customer is also encouraged to apply for the ESA Program and sign up online for tools and alerts. 9 PG&E's retention campaigns remind customers of the need to 10 11 recertify before their CARE discount expiration date to maintain their CARE discount. 12

PG&E plans to continue engaging customers who are new to 13 PG&E's territory via the year-round acquisition program executed 14 through a partnership with a third-party vendor. The New Mover 15 Program assists people who are moving by simplifying the process 16 of establishing services with energy, cable, internet, and phone 17 providers. A renter/owner questionnaire is used to target customers 18 19 who may be CARE-eligible and offers CARE as an option to the customer. Customers who accept the offer are sent enrollment 20 21 information.

According to Acxiom modeling,²⁸ the most common language preference among PG&E's CARE-enrolled customers is English (51 percent) followed by Spanish (35 percent).²⁹ Therefore, marketing campaigns will continue to be conducted in English and Spanish to address the primary language preferences. Bilingual English/Spanish bill inserts promoting CARE and FERA will continue

²⁸ Acxiom is a third-party data collection agency which has a large repository of multi-sourced demographics. Both public and private sources are used to compile the data such as public records, data compilers and data co-ops. Residential marketing campaigns often use Acxiom data to develop relevant customer-based targeted marketing. Data sourced from Acxiom is currently stored in PG&E's Customer Analytics and Segmentation Database and is refreshed regularly.

²⁹ PG&E Residential Profiles for CARE and FERA Enrolled and Non-Enrolled Customers, Customer Analytics and Segmentation Database, May 31, 2018.

to be included in the residential customer bill package several times 1 2 throughout the year. The insert includes the CARE and FERA application and targets customers who have a "CARE-eligible" flag 3 based on having a CARE Propensity Model score of 1-3. 4 5 Additionally, when the CARE annual income guidelines are updated in June per the release of the revised Federal Poverty Level 6 information, the bill insert is distributed to all residential customers 7 8 who are not currently enrolled in CARE.

PG&E will continue to support CARE customers with outreach 9 materials in multiple languages and to serve those customers with 10 11 accessibility needs. All forms and brochures that include the CARE and FERA income guidelines will continue to be updated annually in 12 compliance with D.12-08-044.30 Customers will find program 13 applications in English, Spanish, Chinese, Vietnamese, and Large 14 Print formats on pge.com and/or by calling PG&E's Customer 15 Contact Center. Materials are also available at PG&E local offices 16 and via CBOs. Braille applications are available by request through 17 the Customer Care Contact Center. 18

19

Test, Learn, and Optimize

PG&E plans to continue testing marketing strategies, tactics,
and messages through a combination of research and in-market
performance evaluation. Testing and evaluation are critical to
improving marketing approaches and cost-effective outreach.
Allowing for flexibility in the plan is important to make continual
adjustments to the strategies proposed.

26Tests will be designed to drive ongoing improvements to key27marketing performance indicators, such as campaign response28rates, penetration rate changes with hard-to-reach groups and29overall marketing cost-per acquisition. These indicators are30monitored on an ongoing basis so that changes can be made to31PG&E's campaign approaches. For example, in Q1 of 2017 PG&E32added a text call-to-action (CTA) in e-mail to test the hypothesis that

³⁰ D.12-08-044, OP 119.

1	an additional response option for customers who rely heavily on
2	their mobile phones would increase enrollment rates. The new
3	text CTA was implemented in mobile versions of the e-mail for the
4	newly-eligible segment of the campaign. Results showed a
5	24 percent increase in e-mail enrollment rate for the Q1 2017
6	newly-eligible segment versus Q4 2016. Based on these positive
7	results, PG&E rolled out text CTAs to all CARE marketing segments
8	in 2017 and creating a text option in Spanish.
9	Retain and Engage Qualified Customers
10	In addition to driving new customer enrollment, PG&E uses
11	M&O to engage income eligible customers in other opportunities to
12	manage energy costs and encourage retention of existing CARE
13	customers. PG&E will continue to leverage existing retention
14	campaigns to build stronger relationships with low-income
15	customers.
16	PG&E plans to continue refining the CARE welcome
17	experience and communication campaign through the 2021-2026
18	program cycle.
19	In 2018, PG&E updated the Welcome Kit which is sent to new
20	CARE customers shortly after enrollment by DM or e-mail. The
21	Welcome Kit provides customers with the following:
22	 Information about the CARE discount program;
23	 Individual CARE discount expiration date;
24	 Instruction on where to find the CARE discount on the bill; and
25	 Explanation for why managing usage levels below 400 percent
26	of baseline is a critical requirement to participate in CARE.
27	In 2019, PG&E analyzed the impact of the Welcome Kit on
28	CARE customer retention. The analysis showed that the CARE
29	Welcome Kit has had a positive impact on the overall retention of
30	CARE customers: of those customers who received the Welcome
31	Kit, 43.9 percent recertified for CARE versus a 37.2 percent
32	recertification rate for customers who did not receive a Welcome

Kit.³¹ Customers who received a Welcome Kit also had higher 1 tenure on the CARE Program by three months compared to those 2 that did not receive the communication.³² 3 In addition to supporting CARE retention, the Welcome Kit has 4 5 driven enrollment in other PG&E income qualified programs. For example, in 2018, PG&E added a pre-filled ESA lead form and 6 postage-paid reply envelope to the DM version of the Welcome Kit 7 8 to encourage new CARE customers to apply to participate in ESA. This communication drove more than 10,000 incremental leads for 9 ESA.³³ In addition to generating a large number of ESA responses, 10 11 customer leads from this CARE Welcome Kit had a higher assessment and treatment rate compared to other ESA outreach 12 campaigns.³⁴ PG&E plans to continue to use the Welcome Kit to 13 communicate critical messages to low-income customers. 14 As CARE customers approach the recertification period, 15 there are two e-mail marketing campaigns in place to promote 16 retention: (1) auto-recertify notification; and (2) recertification 17 reminders. PG&E proposes to continue these campaigns in the 18 19 2021-2026 cycle. While the primary focus of the auto-recertify e-mail is to alert 20 customers in Deciles 1 and 2 that they have been automatically 21 re-enrolled in CARE, this touchpoint can also serve as an 22

opportunity to provide secondary messages, such as encouraging customers to complete a Home Energy Checkup or rate comparison.

For customers required to recertify, PG&E sends an e-mail notification reminder to the customer that their recertification date is approaching and encourages them to act to recertify. The

³³ ESA leads tracked via Edgeline and Webtrends, Q1-Q4, 2018.

³⁴ ESA 2018 Campaign Analysis, prepared by Targetbase, May 15, 2019.

1	recertification reminder e-mails are sent at 120-days, 90-days,
2	60-days, and 30-days prior to the CARE expiration date and are
3	complementary to the mailed recertification letter and application
4	that is sent out by CARE Operations. In conducting the Welcome
5	Kit analysis noted above, data showed that the recertification e-mail
6	provided an increase in recertifications for audiences both receiving
7	and not receiving a Welcome Kit, with a slightly higher increase
8	in recertification occurring for Welcome Kit Non-Recipients
9	(10.8 percent vs. 9.6 percent). ³⁵ This would indicate that the
10	additional touchpoint of a reminder e-mail provides a cost-effective
11	approach to increasing overall recertification rates.
12	Proposed New Strategies for Testing and Assessment
13	The following section includes discussion of new strategies and
14	tactics PG&E proposes during the 2021-2026 program cycle.
15	Enhance Recertification Campaign
16	Although paper applications still account for a significant
16 17	Although paper applications still account for a significant percentage of marketing applications, customers are demonstrating

17 18 19 20 21 22 23	percentage of marketing applications, customers are demonstrating their desire to use quicker and more convenient channels to engage. In the first half of 2018, 50 percent of responders from the direct marketing campaign were online enrollments versus 16 percent who submitted paper applications. ³⁶ An option to text to enroll was added to acquisition e-mail campaigns during the first half of 2017, and then a Spanish language text option was added later
 17 18 19 20 21 22 23 24 	percentage of marketing applications, customers are demonstrating their desire to use quicker and more convenient channels to engage. In the first half of 2018, 50 percent of responders from the direct marketing campaign were online enrollments versus 16 percent who submitted paper applications. ³⁶ An option to text to enroll was added to acquisition e-mail campaigns during the first half of 2017, and then a Spanish language text option was added later that year. PG&E has observed a marked increase in text responses
 17 18 19 20 21 22 23 24 25 	percentage of marketing applications, customers are demonstrating their desire to use quicker and more convenient channels to engage. In the first half of 2018, 50 percent of responders from the direct marketing campaign were online enrollments versus 16 percent who submitted paper applications. ³⁶ An option to text to enroll was added to acquisition e-mail campaigns during the first half of 2017, and then a Spanish language text option was added later that year. PG&E has observed a marked increase in text responses over time, from 3 percent in 2017 to 10 percent in 2018. ³⁷
 17 18 19 20 21 22 23 24 25 26 	percentage of marketing applications, customers are demonstrating their desire to use quicker and more convenient channels to engage. In the first half of 2018, 50 percent of responders from the direct marketing campaign were online enrollments versus 16 percent who submitted paper applications. ³⁶ An option to text to enroll was added to acquisition e-mail campaigns during the first half of 2017, and then a Spanish language text option was added later that year. PG&E has observed a marked increase in text responses over time, from 3 percent in 2017 to 10 percent in 2018. ³⁷ Based on these results, PG&E proposes the addition of a text

³⁵ Appendix E, CARE Welcome Kit Analysis, p. 7, prepared by Targetbase, August 19, 2019.

³⁶ CARE Q1 and Q2 2018 Acquisition Campaign Analysis, prepared by Targetbase, November 27, 2018 (revised December 17, 2018).

³⁷ CARE Q1 and Q2 2018 Acquisition Campaign Analysis, prepared by Targetbase, November 27, 2018 (revised December 17, 2018).

recertification via text message. Customers who open the
recertification e-mail notification on a mobile device will see a
prompt that includes an option to recertify by text. The customer will
then be able to answer the recertification questions via text in the
same manner that is used for acquisition campaigns.

PG&E also plans to test an additional recertification reminder 6 message deployed via outbound text message during 2021. An 7 8 outbound text message can be sent to customers who have opted-in to receive information via text message and have provided a valid 9 cell phone number. Recertification reminder messages would also 10 11 offer a prompt for the customer to view the message in Spanish if preferred. These messages are intended to create a greater sense 12 of urgency for the customer, reminding them of their upcoming 13 recertification date and encouraging them to respond promptly 14 to recertify. 15

Test New Tactics Targeting Hard-to-Reach Customers

16

17

18 19 PG&E proposes targeted increases in paid media to specific zip codes to address those zip codes with penetration rates below 60 percent.

In 2017, PG&E analyzed zip codes for hard-to-reach Rural and
High Poverty areas. The analysis showed some Rural and High
Poverty zip codes are within counties that have overall high
penetration rates. This seems to indicate that current marketing
strategies are successful with our targeted customer population and
perhaps only require slight strategic modifications like specifically
targeting lower penetration zip codes.

In late 2019, PG&E will test targeting media to identified Rural
and High Poverty zip codes to evaluate the potential for new tactics
to increase penetration within these hard-to-reach groups. PG&E
plans to place additional media spend in targeted zip codes
including digital, radio and new home-delivered tactics (i.e., shared

mail,³⁸ ValPak and doorhangers). If the results show positive 1 impact to penetration rates, PG&E will look to continue these tactics 2 during the 2021-2026 cycle. 3 **Community Based Outreach** 4 5 PG&E partners with CBOs to enhance its outreach to income gualified and hard-to-reach³⁹ customers to complement traditional 6 mass-marketing efforts. 7 8 PG&E's community outreach strategies support its CBO partners to provide face-to-face interaction and leverage the cultural 9 competencies of CBO staff who have built trust within hard to reach 10 11 communities. PG&E has gained insights and feedback from its long-standing investments in community-based partnerships. CBO 12 partners bring knowledge about the nuances and intricacies of local 13 communities and provide a perspective of the day-to-day 14 experiences of this customer segment. PG&E has leveraged these 15 insights in the past to reassess strategies, target outreach dollars 16 more effectively, and redesign outreach material to reach more 17 targeted audiences. PG&E remains invested in its approach to 18 19 engage community-based partners and will continue to support this crucial aspect of its outreach strategy for 2021-2026 and request 20 funding of \$7.9 million (see Table II-11) to support the following 21 efforts: 22 23 1. Advance a holistic approach to promote and educate customers in limited income and vulnerable populations 24 about the various income qualified programs and rate 25 options. PG&E will work in a variety of ways to increase 26 27 community engagement. PG&E currently works with CBOs to

³⁸ Shared mail combines an advertiser's marketing piece with those of other individual advertisers into one open mail package. Each participating advertiser pays only a fraction of the total third class postage.

³⁹ PG&E defines hard-to-reach customers as groups who are inaccessible to most conventional M&O methods and is comprised of those who traditionally would not seek support or cannot access the usual PG&E avenues. These customers are generally characterized in the following groups: disabled, elderly, limited English proficiency, geographic isolation, racial/ethnic minorities, transient families, multi-family and mobile home, renters, low education and literacy levels, and refugee status.

1	promote assistance programs through multiple channels. These
2	channels include COC program, and Health Outreach Workers.
3	PG&E's outreach and engagement efforts will target
4	underserved communities addressing populations with language
5	barriers, and rural areas by utilizing CBO's and other resource
6	organizations that have existing relationships and trust within
7	these communities. These outreach channels focus on CARE,
8	FERA, ESA, Medical Baseline, REACH, and energy
9	management tools, such as Bill forecast and Budget Billing.
10	PG&E will complement traditional marketing tactics with one on
11	one direct interaction with rural customers by utilizing the
12	following channels: CBOs, door-to-door campaigns, Health
13	outreach workers, outreach through churches, faith-based
14	groups and other emerging opportunities.
15	2. Leverage results from its past CBO Pay for Performance
16	pilot program, which contracted directly with

The key learning from this pilot is that the grassroots (e.g., grocery store tabletops, door-to-door canvassing) approach helps us to connect with customers who have not yet enrolled in CARE or FERA but at a very high cost due to reaching many already enrolled customers to find the few who are not. In the next programming cycle, we will continue to learn with testing of different grassroots approaches to convert

1	3.	PG&E will continue to leverage and expand its current COC
2		program by increasing the number of new and successful
3		productive partnerships targeting Disadvantaged and hard
4		to reach populations. PG&E will seek CBOs to deliver
5		culturally and linguistically specific outreach, to include, but not
6		limited to faith-based groups, student resources centers at
7		universities, organizations serving seniors, community
8		organizations serving customers in their language, veterans,
9		refugees, customers with disabilities and tribal organizations
10		(in coordination with the ESA team). PG&E will seek to expand
11		CBOs education across service territory with high eligible
12		numbers not yet enrolled. Once onboarded, COCs will receive
13		a Training Toolkit with targeted training modules integrating all
14		equity programs including CARE, FERA, ESA, Medical
15		Baseline, REACH, rate options (DAC Green Tariff), energy
16		management tools and other assistance programs enabling
17		COCs to have a knowledgeable conversation with their clients
18		regarding energy assistance. CARE capitation fees and
19		development of training and engagement toolkit throughout
20		program years.
21	4.	Continue support of community events with PG&E's local
22		customer representatives who attend events and outreach
23		directly to customers. Community partners will continue to be
24		invited to take part in strategic event days at PG&E's local
25		offices where customers are present to learn more about
26		qualified income programs and services available to them.
27		PG&E plans to complement its multi touch marketing approach
28		with CBO outreach events. PG&E will support traditional COC
29		and Community Ambassador Program outreach with face to
30		face awareness at community events. CBO partners may
31		leverage PG&E event participation assistance, when available,
32		to cover staffing, promotional items and set up at community
33		events they would otherwise be unable to attend. PG&E will
33 34		events they would otherwise be unable to attend. PG&E will offer a promotion toolkit to CBOs and support event promotion

1	through in-language radio stations, online media (including
2	social media or mail inserts in targeted zip codes to increase
3	foot traffic to these events.
4	Marketing and Outreach Budget Proposal Summary
5	PG&E proposes a total CARE M&O budget of \$48 million for the
6	2021-2026 Low-income program cycle. PG&E's budget remains
7	flexible to allow for allocation adjustments and revised outreach
8	activities based on the results of the continual test and learn
9	approach presented.
10	The estimated budget is broken out by year in Table II-9 below.

CARE Program M&O	2021 Estimated	2022 Estimated	2023 Estimated	2024 Estimated	2025 Estimated	2026 Estimated	Total 2021-2026 Estimated
)	\$5,688,110	\$5,658,493	\$5,836,602	\$5,897,444	\$6,058,012	\$6,223,298	\$35,361,959

CARE Program M&O	M&O Community Engagement Other Outreach Costs	Total M&O Expenses
Line No.	− 0 0	4

PG&E is providing cost estimates for currently anticipated 1 2021-2026 M&O activities to enroll and retain eligible customers in 2 the CARE Program. In the table below, PG&E has included 3 estimates of PG&E's labor, third-party contracts and other costs 4 5 relating to M&O activities that are to be recovered through the CARE Program balancing accounts. Given that many of the 6 proposed marketing activities include co-promotion of CARE and 7 8 FERA, where applicable, PG&E has allocated a portion of the 9 associated cost to be funded within the CARE budget proposal. In these instances, the primary funding would be allocated to 10 11 CARE since CARE has a significantly higher estimated-eligible population. The FERA estimated budget has allocated a portion 12 of co-promotion activity based on the relative size of the FERA 13 14 estimated eligible population. 15

Descriptions of each cost category are listed below Table II-10.

	CARE Marketing and Outreach	2021 Estimates	2022 Estimates	2023 Estimates	2024 Estimates	2025 Estimates	2026 Estimates	Total 2021-2026 Estimates

1		f)	Discuss how Outreach efforts will result in meeting program
2			participation goals including any specific population sectors or
3			segments.
4			M&O for the previous cycle successfully supported the
5			achievement of surpassing the 90 percent target penetration rate for
6			CARE. To maintain a penetration level at or above 90 percent,
7			M&O will need to be executed at a level consistent with what was
8			done in the previous cycle. PG&E plans to continue its current
9			strategies, as detailed in the prior section. Additionally, PG&E
10			expects to continue to test and learn to make improvements to
11			areas that require additional focus, such as hard-to-reach
12			customers, including Rural and High Poverty groups and areas
13			within PG&E's territory where penetration rates are below average
14			to improve overall penetration rates.
15	2)	Ta	rgeting the Rural Population and Hard-to Reach for CARE:
16		a)	Identify specific underserved rural areas in your territory and discuss
17			what new strategies you will employ to target and enroll those
18			households, and the strategies for each area, if different.
19			PG&E identified 104 zip codes in rural areas that have CARE
20			penetration less than 60 percent. Table II-13 displays the top
21			15 rural zip codes ranked in terms of the number of estimated
22			CARE-eligible households (See Attachment B – Rural Zip
23			Code List).

TABLE II-13 TARGETING RURAL ZIP CODES

			CARE
Line	Zip	CARE-Eligible	Penetration
No.	Code	Households	Rate
1	95521	4,300	53.9%
2	95382	3,316	57.7%
3	95242	2,608	53.7%
4	95223	1,869	21.7%
5	93442	1,489	59.4%
6	93449	1,238	27.9%
7	95321	1,110	35.4%
8	95326	981	52.9%
9	93465	916	51.9%
10	95746	844	49.0%
11	95383	793	44.3%
12	95247	763	45.5%
13	93463	743	49.3%
14	93428	644	53.9%
15	95573	631	44.1%

To increase CARE penetration in these rural zip codes during 1 2 the 2021-2026 cycle, PG&E proposes targeted strategies including: (1) direct marketing campaigns using DM and e-mail targeting rural 3 customers with Decile scores that indicate likely CARE eligibility; 4 (2) digital media buys with heavier spending in rural zip codes with 5 CARE penetration rates below 60 percent; (3) digital and broadcast 6 radio campaigns in Designated Market Areas that cover rural 7 counties with CARE penetration rates below 60 percent; and 8 (4) zip-targeted home-delivered outreach such as ValPak and 9 shared mail inserts. 10 PG&E will work to expand CBOs programs in the identified 11 Rural areas to promote assistance through multiple channels. 12 These channels include COC program, Health Outreach Workers, 13 door-to-door campaigns, outreach through churches, other 14 faith-based groups and tribal organizations (in coordination with 15 the ESA team). 16

1		b) Identify Hard-to-Reach customers in your territory and discuss what
2		new strategies you will employ to target and enroll those
3		households, and the strategies for each area, if different. 40
4		In the 2021-2026 program cycle, PG&E plans to conduct
5		analysis that will identify the Hard-to-Reach population that meet the
6		criteria outlined in the definition provided by D.18-05-041, and are
7		also identified by the propensity model as likely CARE-eligible.
8		Based on the results of the analysis and population distribution,
9		PG&E plans to incorporate the Hard-to-Reach population in the
10		targeted marketing strategies as detailed above in Section D.2.a.
11	3)	Targeting the High Poverty Areas and Disadvantaged Communities
12		for CARE:
13		a) Identify the very high poverty areas (income less than 100% of
14		Federal Poverty Guidelines) within your service territory that are
15		underserved by county and discuss what new strategies you will
16		employ to increase penetration in these areas.
17		PG&E has identified 32 counties with residential households
18		below 100 percent of the Federal Poverty Guidelines. Of those
19		counties, 12 have a CARE penetration rate below 60 percent.

⁴⁰ For the application filing only use the definition of "Hard-to-Reach" found in D.18-05-041.

TABLE II-14 TARGETING HIGH POVERTY COUNTIES

TABLE II-15 TARGETING DISADVANTAGED COMMUNITIES

PG&E plans to leverage existing CARE targeted marketing strategies discussed in Section D.1.e. to identify eligible customers within DACs. PG&E proposes that the strategies planned for direct marketing and paid media are sufficient to target and deliver program messages to encourage customers residing in DACs to enroll in CARE.

9The holistic local community-based outreach plans outlined10above will target all geographic areas including disadvantaged11communities where program penetration is lowest.

3

4

5

6

7

8

1	4)	Other New and Proposed Strategies:
2		[WITNESS: MURPHY-ROACH]
3		a) Provide a brief description of new strategies that will be employed,
4		including a description of activities performed by third parties and
5		other stakeholders.
6		See Section D.1.e. for a description of new strategies.
7	5)	Leveraging:
8		a) Discuss progress, developments and additional enhancements to
9		streamline coordination with California Lifeline.
10		Starting in January 2019, PG&E has shared data with the
11		CPUC Communications Division twice a year on January 15 and
12		July 15 to generate leads for enrollment purposes between LifeLine
13		and the CARE and ESA Programs, in compliance with D.17-12-009.
14		This data exchange is facilitated via CPUC Secure File Transfer
15		Protocol (FTP). Two data exchanges have been completed prior to
16		this filing therefore it is too early at this point to propose additional
17		enhancements to this process. PG&E is open to discuss progress,
18		developments and additional enhancements to streamline the
19		data information sharing process in future meetings with
20		Commission Staff.
21		b) Discuss progress, developments and additional enhancements to
22		streamline coordination with CSD to expedite applications and
23		approval for Low-Income Home Energy Assistance Program
24		(LIHEAP) crisis grants for CARE accounts at risk of disconnection.
25		Since 2016, PG&E has worked closely with the California
26		Department of Community Services and Development (CSD) staff to
27		streamline LIHEAP crisis grants for customers who are at risk of
28		disconnection. PG&E has implemented the following:
29		 Conducted quarterly meetings to address and streamline the
30		pledging process;
31		 Explored avenues to increase PG&E's communication directly
32		with LIHEAP Service Providers, as requested at a workshop in

1		Salinas as part of the Disconnections Order Instituting
2		Rulemaking (OIR); 42
3		 Revised internal IVR system to improve CSD identified
4		challenges. For example, the revisions include providing unique
5		'Pledging Codes' to agencies as well as providing a confirmation
6		number when a pledge is made. The IVR system was also
7		revised to eliminate multiple business rules which will increase
8		the ability for callers to self-serve instead of being transferred to
9		a Customer Service Representative;
10		 Increased the pledge payment window from 60 to 90 days;
11		 Provided training on how the pledge IVR system works, Solar
12		Billing, Low-income Assistance Programs, Rate Reform, as well
13		as how pledges are administered internally;
14		 Worked with PG&E's Credit Department to provide information
15		to customers that qualify for LIHEAP regarding where to call for
16		LIHEAP assistance;
17		 Provided training to CSD regarding the use of the Subsidized
18		Housing Assistance Relief Energy (SHARE) pilot program to fill
19		in potential gaps where a LIHEAP grant may not be enough to
20		prevent disconnection; and
21		 Provided opportunities for LIHEAP providers to become CARE
22		COCs and REACH support agencies.
23	E. CAI	RE Program Administration
24	1)	Describe the administration of the program, and any proposed changes
25		or improvements.
26		PG&E administers its CARE Program through use of dedicated
27		program managers and analysts to provide oversight coordination with
28		marketing, updating changes to new eligibility guidelines, reporting, data
29		requests responses, ongoing communications with the Energy Division
30		and coordination among IOUs. In addition, the programming team
31		updates training and delivery to community partners while coordinating
32		program changes with a centralized internal operations team supporting

42 Rulemaking (R.) 18-07-005.

1		new applications, recertification processing and PEVs, leveraging
1		economies of scale with the energy efficiency operations team. PG&E
2		
3		continues to minimize its administrative burden and proposes to
4		continue this cost-effective approach. Refer to Section C.1.h., Table II-7
5	- `	for CARE Program administrative budget.
6	2)	Changes and improvements should leverage learnings from both
7		internal and external audits. Provide background via response to 'a' and
8		'b' below and how audit results have influenced this application in
9		response to 'c':
10		a) Internal Audits: Describe internal audits of the utility's CARE
11		Program during the current program cycle and all utility-initiated
12		audits of the CARE Program by a 3 rd party consultant. Include your
13		utility's response and corrective measures.
14		PG&E did not conduct an internal audit of the CARE Program
15		during the current program cycle 2017-2020. In addition, PG&E did
16		not initiate audits of the CARE Program by a third-party consultant.
17		PG&E will conduct a review of CARE processes that will identify any
18		gaps with recommendations after the new CARE database
19		conversion. This is scheduled to be conducted at the end of the
20		system conversion in 2021.
21		b) External Audit Findings: Include your utility's response to the audits
22		conducted by the State Controller's Office for PYs 2013-2015 along
23		with a summary of all corrective measures implemented to ensure
24		compliance. Specify where each corrective measure is also
25		properly reflected and/or documented e.g., monthly and/or annual
26		report, formal filings, etc.
27		The State Controller's Office audited PG&E's CARE Program
28		for the period of January 1, 2013 through December 31, 2015. The
29		objectives of the audit were to:
30		(1) Determine whether PG&E manages the CARE Program in
31		conformance with applicable laws, regulations, and agreement
32		terms and conditions;
		·

(2) Assess whether PG&E's CARE Program is in compliance with 1 2 applicable laws, regulations, and agreement terms and conditions: 3 (3) Identify opportunities and priorities in which financial 4 5 management governance may help to strengthen key controls; and 6 (4) Follow up on prior audit findings and evaluate the effectiveness 7 8 of remediation. As stated above, the audit began in June 2016 for the 9 program period January 1, 2013 through December 31, 2015 and 10 11 concluded in January 2017. PG&E received a final audit report in December 2018. The audit report identified one instance of 12 non-compliance with applicable laws, regulations, and agreement 13 terms and conditions. The audit found that PG&E did not maintain 14 validation checklists for 6 of 26 CARE Program expenditures to 15 indicate that the expenditures were properly reviewed and 16 authorized prior to payment. The absence of the checklists could 17 result in payments being made without proper authorization. 18 19 Although the validation checklists were missing, the audit determined that all expenditures were program related and 20 21 supported by invoices and/or other documentation. All expenditures were properly recorded. 22 23 The audit recommended that PG&E ensure that all recorded CARE Program expenditures are fully supported by sufficient, 24 appropriate documentation, and that all documentation is preserved 25 26 in such a manner that it may be readily examined. 27 PG&E agreed with the finding and recommendation. To facilitate proper record keeping including the transaction validation 28 29 checklists, PG&E implemented the following corrective measures 30 related to routing and storage of the documents since 2015. In January 2016, the CARE Program implemented the Utility 31 32 Standard CUST-4015S (Invoice Validation Standard). This 33 standard defines the steps the CARE Program uses to validate and approve invoices, completing the Invoice Validation Checklist 34

1	prior to payment. CARE Program employees responsible for
2	validating and approving invoices are trained on this standard and
3	refreshed annually.
4	Additionally, CARE expenditure transactions are reviewed
5	quarterly through Quality Assurance (QA) reviews. These QA
6	reviews select a random sample of invoices for auditing in order
7	to monitor internal processes and adherence to the Invoice
8	Validation Standard.
9	PG&E now uses the electronic routing throughout the Company
10	to increase ease of document retrieval and storage, as a standard
11	for approval of all invoices and supporting documentation for
12	expenditure. This mitigates the risk of documents being lost.
13	In August 2019, PG&E implemented an online Customer Energy
14	Services (CES) Validation Checklist that serves three functions:
15	 Standardize the process for reviewing, approving and storing
16	invoices;
17	 Ensure that CES is in compliance with the Enterprise Records
18	Management Standard; and
19	 Support audit and data request for Invoices.
20	c) Describe how Internal and External Audits' findings influenced this
21	proposal for administration of the program.
22	External audits' findings influenced this proposal for
23	administration of the program by the continuation of the standard
24	that was developed for utilizing validation checklists in the approval
25	of invoices for expenditures made in support of the CARE Program.
26	This standard is still a part of the program managers responsibilities
27	as a routine responsibility of managing this program.
28	No internal audits influenced this proposal for administration of
29	the programs because no internal audits were performed relating to
30	CARE as of the date of this filing.
31	F. Community Help and Awareness With Natural Gas and Electricity
32	Services
33	1) Discuss whether you propose to continue the CHANGES Program
34	funding from the CARE budget. Why or Why not?

PG&E sees value in the services provided by the CHANGES 1 Program to language isolated and vulnerable populations and includes 2 the funding request in the program budget but would be supportive of 3 the Commission authorizing alternative funding sources to continue the 4 CHANGES Program funding as alluded to in D.15-12-047. D.15-12-047 5 authorized the program funding not to exceed \$1.75 million annually 6 from the CARE Program budget for the CHANGES Program.⁴³ The 7 8 Decision also stated the Commission may reauthorize funding for the CHANGES Program through CARE's next budget cycle or from another 9 funding source if long-term or on-budget financing for CHANGES 10 Program is not authorized.44 11

D.16-11-022 authorized the funding for CHANGES Program through 12 the CARE Program budget from 2017-2020. As no new funding source 13 was authorized prior to the filling of this testimony, PG&E proposes that 14 the budget for the CHANGES Program continue from the CARE 15 balancing account at the same funding level authorized in D.15-12-047 16 and D.16-11-022, of which PG&E is responsible for 30 percent of the 17 total program cost (see Appendix B, Item 19). PG&E requests the 18 19 Commission provide a clear funding directive for the CHANGES Program for 2021 and beyond whether from the CARE balancing 20 account or from another funding source. 21

22 2) If CHANGES continues to be funded through CARE, what is the
 23 appropriate annual funding level?

If CHANGES continues to be funded through CARE, PG&E
proposes the same funding level as authorized for 2017-2020, not to
exceed \$1.75 million annually, to be split among the IOUs: 30 percent
from PG&E; 30 percent from SCE; 25 percent from SoCalGas; and
15 percent from SDG&E.

⁴³ D.15-12-047, OP 4.

1 G. Cooling Centers

2

3

4

 Discuss whether your utility's cooling center budget is incorporated into your most recent General Rate Case (GRC) as directed in D.16-11-022, as modified by D.17-12-009.

5 As directed in D.16-11-022, as modified by D.17-12-009, PG&E incorporated the cooling center budget into the 2020 General Rate Case 6 (GRC), Supplemental Testimony, Exhibit (PG&E-6). The forecast for 7 8 PG&E's 2020 Cooling Center costs is \$150,000, which is necessary to provide grants to support 35 Cooling Centers operated by eight 9 government entities. This forecast assumes the same 35 Cooling 10 11 Centers will be needed during the 2020 GRC rate case cycle and does not include potential cost increases that may occur due to the effects of 12 climate change, such as any need to expand coverage areas that may 13 be subject to high temperatures or increase the number of high heat 14 trigger days. The CPUC is currently conducting an Order Instituting 15 Rulemaking (OIR) to Consider Strategies and Guidance for Climate 16 Change Adaptation (R.18-04-019; Adaptation OIR) with an expected 17 decision in winter 2019, at the earliest. That decision is expected to 18 19 include CPUC guidelines for climate models, scenarios, and timeframes the IOUs should use to take climate adaptation into account in their 20 operational planning. After the CPUC issues its guidance in the Climate 21 Change Adaptation decision, PG&E will reassess Cooling Center plans 22 in light of climate scenarios, datasets, and analytic approaches the 23 CPUC recommends be used for the projected effects of global warming 24 on temperatures across PG&E's service territory. 25

- 26 2) If not, propose annual cooling center budgets consistent with the
 27 requirements outlined in D.16-11-022, as modified by D.17-12-009, for
 28 the upcoming 2021- 2026 application period and discuss the timeline for
 29 your next GRC and plans to incorporate cooling centers.
- PG&E has included the Cooling Center funding request in its 2020
 GRC, Supplemental Testimony, Exhibit (PG&E-6).
- 32 H. Senate Bill 1135 Family Electric Rate Assistance
- 33Describe how your plan and proposals comply with legislative changes34addressing FERA enrollment in Senate Bill 1135 and goals outlined in

Commission decisions D.18-08-013 and D.18-11-027. Include and discuss 1 recommendations to address mandates to increase FERA participation and 2 all related budget implications. 3 PG&E's plan and proposal complies with legislative changes addressing 4 FERA enrollment in SB 1135 and goals outlined in Commission decisions 5 D.18-08-013⁴⁵ and D.18-11-027⁴⁶ by including in the M&O plan, strategies 6 to increase new customer enrollment in the FERA Program through 7 increased M&O of the program. See Section H.3.c. for more detail. 8 The FERA Program provides rate assistance households of lower to 9 middle-income customers. The FERA Program was designed to assist 10 11 families that are ineligible for the CARE rate because their income level falls slightly above the CARE Program income eligibility limit.⁴⁷ 12 FERA is available for households of three or more individuals that have 13 a total household income over 200 percent and up to 250 percent of the 14 federal poverty guideline level. The income threshold increases with each 15 additional individual over three people. 16 FERA participants receive a program discount of 18 percent effective 17 January 1, 2019,48 18 By year-end 2018, nearly \$65.4 million in cumulative subsidies have 19 been provided to PG&E FERA customers since 2004.⁴⁹ PG&E's current 20 penetration rate is 13 percent (approximately 21,493 customers) of the 21 eligible population which is currently estimated to be 165,333 customers.50 22 23 1. FERA Proposal Summary For Program Cycle 2021-2026, PG&E makes the following FERA 24 25 proposals:

- **48** Section 739.12.
- 49 PG&E's 2018 FERA Annual Report.
- **50** PG&E's Athens Research Data provided January 2019.

⁴⁵ D.18-08-013, *Decision on Pacific Gas and Electric Company's Proposed Rate Designs and Related Issues*, among other authorizations, directed PG&E to increase its FERA subscription level, with an aim of 50 percent over the next six years, and propose new FERA-specific outreach in this application (OPs 15 & 16).

⁴⁶ D.18-11-027, Decision on Southern California Edison's Proposed Rate Designs and Related Issues.

⁴⁷ The FERA Program was authorized by D.04-02-057 as the Large Household Program.

1		CBO compensation for FERA enrollments;
2		Request the FERA Program aspirational goal be included into the
3		Low-income Proceeding moving forward;
4		• Combine the FERA Annual Report with the ESA and CARE Annual
5		Report;
6		 Make changes to the FERA Balancing Account;
7		Continue co-promotion of CARE and FERA via successful
8		marketing channels;
9		 Refine the targeting approach for FERA qualified customers;
10		 Develop and test a FERA propensity model;
11		 Target key markets with broad-reaching M&O
12		 Increase FERA Program customer retention efforts;
13		Continue to place additional focus on driving awareness and
14		enrollment in the Central Valley;
15		 Increase awareness and marketing through public relations;
16		• Streamline online qualification confirmation for CARE and FERA;
17		Provide FERA-specific outreach; and,
18		Provide Welcome Kit communications for new FERA customers.
19	2.	PG&E's Recommendation to Increase FERA Participation and
20		Related Budget
21		PG&E uses the joint utility methodology adopted by the CPUC in
22		D.01-03-028 for developing the annual estimate of the number of
23		customers that will be eligible for the CARE Program for the upcoming
24		year. ⁵¹ PG&E proposes to use this same method to estimate the
25		number of customers potentially eligible for FERA discount.
26		PG&E describes the methods it uses to estimate the eligible CARE
27		population in Section B.3. As of July 30, 2019 the current estimate of
28		FERA eligible population is 165,333. ⁵²
29		PG&E estimates that 26,600 households out of 165,333 estimated
30		eligible households will be enrolled in FERA by the end of 2020, which

D.01-03-028.

PG&E's Athen's Research Data provided January 2019.

1	equals a penetration rate of 16 percent. ⁵³ This rate will fluctuate based
2	on annually updated FERA eligibility estimates.
3	To pursue the ambitious aspirational goal of 50 percent penetration
4	by 2023 and beyond, PG&E will deploy its best efforts to recertify
5	approximately 23,333 households and enroll 22,667 new households
6	annually. This estimate is for planning purposes only because FERA
7	has only been co-marketed with CARE so there is no history to forecast
8	annual enrollment numbers with an aggressive dedicated budget.
9	The estimate of the number of households projected to be enrolled
10	each year for 2021-2026 is shown in Table II-16.

Line No.	Program Year	2021	2022	2023	2024	2025	2026	Total
1	PY 2019 Estimated Eligible	165,333	165,333	165,333	165,333	165,333	165,333	165,333
2	Recertifications	15,000	20,000	25,000	25,000	25,000	30,000	140,000
3	New Enrollments	22,000	22,000	23,000	23,000	23,000	23,000	136,000

1		PG&E's proposed FERA Program budget categories for activities in		
2		the 2021-2026 program cycle shown above, are explained below:		
3		Outreach: PG&E proposes \$15.82 million in 2021-2026 for the		
4		following strategies: Acquisition marketing, Retention marketing, and		
5		Community Engagement.		
6		Processing, Certification, Recertification: PG&E proposes \$348,100		
7		in 2021-2026 to process FERA applications. This cost category		
8		encompasses day-to-day administrative tasks associated with		
9		processing FERA applications for new enrollment and recertification.		
10		Post Enrollment Verification: PG&E proposes \$512,100 in		
11		2021-2026 to support FERA PEV process. This cost category		
12		encompasses day-to-day administrative tasks associated with		
13		completing PEV.		
14		Regulatory Compliance: PG&E proposes \$179,900 in 2021-2026		
15		for program regulatory activities. This category includes costs for staff		
16		labor and travel expenses associated with preparing data requests,		
17		regulatory filings and other regulatory-related activities.		
18		General Administration: PG&E proposes \$337,000 in 2021-2026 for		
19		program administration activities.		
20		FERA Discount: PG&E proposes \$101.4 million in 2021-2026 for		
21		the discount applied to eligible customers' bill.		
22	3.	FERA Program Delivery		
23		a. Program Activities and Participation Goals		
24		1) Eligible Population		
25		The FERA Program serves two eligible segments:		
26		 Single-family residential households with their own PG&E 		
27		electric accounts; and		
28		 Sub-metered tenants of master-metered facilities, such as 		
29		mobile home parks and sub-metered apartment complexes.		
30		2) Processing and Certification		
31		Customers self-certify their income eligibility to enroll in the		
32		program. The income eligibility guidelines are updated annually		
33		by the ED and issued to utilities prior to becoming effective on		

1	June 1.54 Self-Certification requires the customer to complete
2	and sign a declaration at the bottom of the FERA enrollment
3	form, which certifies that their household meets the program
4	guidelines. The customer also agrees to provide proof of
5	qualification to PG&E, upon request. PG&E proposes to
6	continue the same certification processes in 2021-2026.
7	3) Recertification
8	Enrolled customers are required to self-recertify their
9	continued program eligibility every two years. Renewed
10	enrollees may be subject to similar post re-certification income
11	verification. Customers may apply or recertify for the FERA
12	Program via paper application, online application, over the
13	phone with a representative, or through IVR.
14	4) Post-Enrollment Verification
15	Household Income Eligibility verification occurs after
16	enrollment. PG&E proposes to verify 1 percent via random
17	selection of all FERA customers annually. The proposed
18	budget for this is \$512,100 in 2021-2026.
19	b. New Program Elements and Strategies
20	1) PG&E Proposes Compensation for FERA Enrollment
21	For each new FERA enrollment generated by a CBO, PG&E
22	proposes to compensate the CBO \$30. This will allow PG&E to
23	leverage new and existing network of CARE Outreach
24	Contractors and CBOs incenting equal outreach education
25	efforts on FERA Program.
26	2) PG&E Proposes to Include FERA Program in the
27	Low-income Proceeding Moving Forward
28	PG&E proposes to include the FERA Program in its Income
29	Qualified programs cycle applications moving forward (see
30	Appendix B, Item 20).

⁵⁴ D.12-08-044, OP 119 states: The proposals of SDG&E and SoCalGas to move the Commission's CARE annual income letter release date from May 1 to April 1 each year is approved, and we also move up the FERA update date so that the CARE and FERA updates are simultaneously released.

PG&E's Mid-Cycle Advice Letter (MCAL) second 1 supplemental requested CARE unspent marketing funds to be 2 used between 2018 and 2020 to increase customer enrollment 3 into the FERA Program, along with a FERA M&O plan. 4 5 In pursuit of the Commission's aspirational goal of 50 percent FERA enrollment by 2023, PG&E must increase additional 6 marketing efforts and request additional funding post 2020. 7 8 While committed to compliance, PG&E recognizes that as a self-certification program where the enrollment application 9 form is co-presented with CARE, the CARE/FERA shared 10 11 enrollment form poses a significant barrier to increasing program enrollment. 12 In compliance with D.18-08-013, PG&E requests 13 FERA-specific outreach as part of this application.⁵⁵ To create 14 administrative efficiencies moving forward, prevent issues 15 regarding one program being litigated in multiple proceedings, 16 and for convenience, PG&E requests justification for FERA 17 Program funding be included in the Low-income program cycle 18 19 applications for 2021-2026 and beyond. 3) PG&E Proposes to Combine FERA Annual Report With the 20 ESA and CARE Annual Report 21 PG&E proposes to include the FERA Annual Report on 22 23 penetration progress towards its aspirational goals and budget expenditure with CARE and ESA annual report filed in May of 24 each year for the preceding year (see Appendix B, Item 21). 25 PG&E has an existing directive to report on FERA progress at 26 the end of each year annually until 2023.56 Therefore, PG&E 27 proposes to begin this combined ESA, CARE, and FERA 28 29 Annual Report, beginning May of 2024 regarding 2023 30 progress. By adopting this proposal, PG&E can create administrative efficiencies. 31

56 D.18-08-013, OP 15.

⁵⁵ D.18-08-013, OP 16.

1	4) PG&E Proposes Change to the FERA Balancing Account
2	[WITNESS: LI]
3	FERA, Electric Preliminary Statement Part DX, records the
4	revenue shortfalls and program administrative costs for the
5	large household program, also called the FERA Program.
6	PG&E proposes also recording the marketing costs associated
7	with the FERA Program into the FERA balancing account
8	instead of in the CARE balancing account where they are
9	currently being recorded. See Attachment C for a red line
10	version of FERA, Electric Preliminary Statement Part DX.
11	Disposition of the balance in this account for implementation
12	into rates is determined through the Annual Electric True-Up
13	(AET) Advice Letter process or as otherwise determined by the
14	Commission.
15	c. Marketing & Outreach [WITNESS: OLSEN]
16	D.18-08-013 ordered PG&E to make significant efforts to
17	achieve 50 percent FERA Program enrollment by year-end 2023
18	and directed PG&E to file an amendment to the July 16, 2018
19	ESA/CARE MCAL Update to inform the Commission of PG&E's plan
20	to use unspent CARE marketing funds from the 2017-2020 program
21	cycle to increase FERA enrollment. ⁵⁷
22	PG&E developed a M&O Plan (Plan) for 2018-2023 which was
23	included as an attachment to the Mid-Cycle Update. ⁵⁸ The Plan
24	outlined strategies and tactics designed to grow FERA awareness
25	and participation under the CPUC's direction to increase FERA
26	penetration to the aspirational goal of 50 percent penetration by
27	2023. The Plan addressed four key points set forth in the
28	Decision: ⁵⁹

⁵⁷ D.18-08-013, pp. 74-76;p. 181, OP 15.

⁵⁸ M&O plan AL 3990-G-B/5329-E-B; Second Supplemental: ESA/CARE Mid-Cycle Update Advice Letter per D.17-12-009; Filed October 8, 2018.

⁵⁹ D.18-08-013, pp. 75-76; p. 181 OP 16.

1	1.	Enhance the CARE propensity model ⁶⁰ to more precisely
2		identify FERA-eligible customers;
3	2.	Use the new customer lists to enroll eligible customers using
4		DM, telemarketing, and/or EM outreach, with the understanding
5		that all such enrollment marketing must be co-marketing for
6		both the CARE and FERA Programs to remain consistent with
7		the Pub. Util. Code and D.16-11- 022;
8	3.	Expand PG&E's existing CBO efforts to target and increase
9		CARE and FERA outreach, including a special focus in the
10		Central Valley; and
11	4.	Include any other measures PG&E believes would be useful to
12		increase FERA participation by using co-marketing for the
13		CARE and FERA Program.
14		PG&E proposes a budget of \$15,816,100 for the 2021-2026
15	pro	gram cycle to deliver FERA M&O based on the significant
16	cha	llenge it faces to accurately target program marketing to the
17	rela	tively small eligible population to pursue the aspirational goal of
18	50 I	percent by 2023 and continue penetration growth through 2026.
19	Thi	s budget is reasonable because there are significant challenges
20	to d	lriving increased FERA participation. These challenges were
21	out	ined in the FERA M&O plan and are still applicable, including:
22	•	With the minor difference in household income requirements
23		between the CARE and FERA Programs, there is a risk that
24		FERA-eligible customers who are on the cusp between the
25		two income ranges may enroll in the CARE Program. PG&E
26		expects that the CARE PEV process should help to identify
27		customers that are not qualified and move them into FERA if
28		they are eligible.
29	•	The small estimated eligible population for FERA (approximately
30		3 percent of the total residential customer population) makes it

⁶⁰ PG&E utilizes a 'propensity model' to determine customers with the highest probability for CARE-eligibility based on demographic factors. A description of the CARE propensity model can be found in Section A.3.5.

1	difficult to identify and accurately target these customers. ⁶¹ The
2	limited accuracy of available household income and household
3	size data makes it difficult to pinpoint the customers who are
4	FERA-eligible for targeted marketing efforts. PG&E
5	plans to cast a wider net to ensure that as many potentially
6	FERA-eligible customers as possible are receiving program
7	marketing. This requires a marketing budget beyond just the
8	cost of targeting the estimated FERA-eligible population.
9	Through 2020, the condition that CARE and FERA be
10	co-promoted necessitates that program requirements be
11	presented clearly so customers understand the difference in
12	household income and household size requirements. PG&E's
13	test and learn strategy includes message testing designed to
14	identify effective positioning for these two different programs.
15	Additionally, PG&E is proposing FERA-only message
16	testing in the new program cycle to evaluate the impact of
17	stand-alone marketing.
18	Customers who look to be FERA-eligible may actually be
19	CARE-eligible due to a categorical qualification for CARE. As
20	an example, if a household of three people has total household
21	income that falls outside the CARE limits (i.e., income would
22	qualify the household for FERA), but also has one household
23	member who participates in a qualified assistance program,
24	that household is eligible to enroll in CARE through
25	categorical qualification.
26	Marketing Proposal
27	PG&E defines the following objectives for FERA M&O (for
28	2021-2026):
29	1. Increase awareness of the FERA Program, and the program
30	eligibility requirements;

⁶¹ FERA estimated eligible population in PG&E's territory is 165,333 per the Athens Research estimate from January 2019. Per PG&E Residential Market Sizing estimates, there are 5,641,728 residential customers as of September 20, 2019.

2. Drive enrollment in the FERA Program to pursue the 1 2 aspirational goal of 50 percent penetration in the program by the end of 2023, and; 3 3. Pursue year-over-year enrollment growth beyond 2023. 4 5 PG&E's approach to accomplishing these objectives is based on lessons learned and experience gained from years of CARE 6 marketing efforts and the initial FERA marketing campaigns 7 8 launched in 2019. The approach will be further refined as new learning is available from the 2019 and 2020 campaigns. PG&E 9 plans to expand upon these efforts by refining the targeting 10 11 methodology, exploring additional channels, and testing messaging to maximize impact and response. PG&E's marketing approach is 12 intentionally flexible to allow adjustments based on: (1) lessons 13 learned from the increased FERA outreach in 2019 and 2020; 14 (2) lessons learned during the 2021-2026 cycle; and (3) budget 15 approval of both combined CARE and FERA outreach and proposed 16 stand-alone FERA outreach. 17 **Marketing Strategy & Tactics** 18 19 1. The following section includes discussion of the strategies and tactics PG&E proposes for the 2021-2026 program cycle. 20 A. Continue co-promotion of CARE and FERA via 21 successful marketing channels. Review of the CARE 22 and FERA customer profile shows that the audiences are 23 similar in many ways, with the primary difference being 24 a higher income and larger household size among 25 26 FERA-gualified customers. For this reason, and to align with prior statutory mandates, 62 PG&E plans to continue 27 co-marketing CARE and FERA using a shared application 28 29 and drive customer enrollment using the following marketing 30 tactics to target eligible, non-enrolled customers.

62 D.18-08-013, pp. 181-182, OP 16.

1		a.	Multi-touch DM and EM campaigns: Given its success
2			in driving CARE enrollments, ⁶³ multi-touch direct
3			marketing campaigns using DM and EM will continue to
4			be a primary acquisition tactic for FERA.
5		b.	Bill inserts: CARE and FERA have been co-promoted
6			via bill inserts for many years, so PG&E plans to
7			continue to leverage this tactic, testing and refining
8			messaging to drive enrollments in FERA. Testing is
9			planned in 2019 and 2020 to evaluate if placing greater
10			emphasis on FERA's electricity discount leads to more
11			FERA enrollments. The results from this test will be
12			used to inform bill insert messaging for 2021-2026.
13		C.	Paid media: Digital media and targeted radio buys that
14			co-promote CARE and FERA are planned to
15			complement direct marketing messages.
16		d.	Home delivered print tactics: PG&E is planning to test
17			zip-code targeted, home delivered communications
18			(i.e., door hangers, Val Pak and Retail Me Not shared
19			mail) in late 2019. Results will be analyzed to
20			determine how effective these tactics are in reaching
21			hard-to-reach customers with CARE and FERA
22			messages. Outreach will be optimized for cost
23			effectiveness based on results.
24		e.	Online content: PG&E plans to continue to co-promote
25			CARE and FERA via a landing page on pge.com. The
26			landing page is the primary location for advertising
27			campaigns that include a CTA to go online for more
			information and to apply.
28

	В.		fine the targeting approach for FERA qualified stomers.
29	В.		

_

⁶³ See Section D.1.e.

1	which is approximately 3 percent of PG&E's total residential
2	population and approximately 12 percent of the total
3	estimated eligible CARE population in PG&E's territory.64

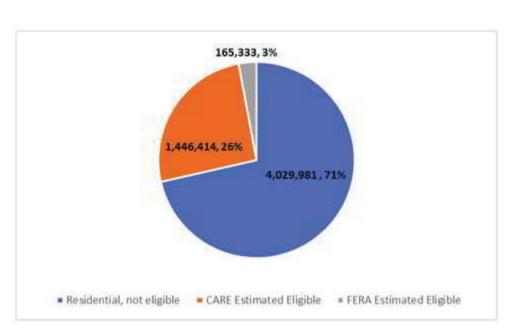

FIGURE II-1 CARE AND FERA ESTIMATED ELIGIBLE POPULATION AS A PORTION OF TOTAL RESIDENTIAL

Estimated income data is secured via third-party 4 5 sources and does not have a high level of accuracy, nor is it available for all customers. Because of the small difference 6 in household income requirements between CARE and 7 8 FERA, not having reliable income data for all customers presents a significant challenge to correctly identify 9 FERA-eligible versus CARE-eligible customers for targeted 10 marketing efforts. 11 C. PG&E proposes near-term continued use of the CARE 12 Propensity Model (see Section A.3.5. for a description of 13 14 the CARE Propensity Model).

⁶⁴ FERA estimated eligible population in PG&E's territory is 165,333 per the Athens Research estimate from January 2019. CARE estimated eligible population is 1,446,414 as filed in Application 14-11-007, Attachment A, February 8, 2019.

This model is the foundation for targeting FERA-eligible, non-enrolled, income-qualified customers, adding an overlay for data attributes of household size and household income within the required income range for FERA eligibility to develop FERA eligible mailing lists.

33

To address the significant challenge of identifying households that are FERA-qualified, PG&E proposes the development of a FERA Propensity Model to identify potentially FERA-eligible customers. PG&E plans to evaluate enrollment results from 2019 and 2020 co-marketing campaigns to look at the characteristics of CARE responders versus FERA responders. This will inform the data attributes that should be included in the model. The new FERA Propensity Model will be tested against the current targeting approach that uses data overlays of Household Size and Household Income to identify likely FERA-eligible customers.

The cost to build the new FERA Propensity Model is \$19,000. After the initial build of the FERA model, and testing through 2021, PG&E plans to rebuild the model every three years for a cost of approximately \$13,000. Additionally, PG&E plans to conduct annual updates estimated at \$8,000 per program cycle year, or \$40,000 total for 2022-2026. These costs are included in the proposed M&O budget outlined below.

D. Target key markets with broad-reaching marketing and outreach.

In addition to co-marketing efforts outlined above, PG&E proposes to allocate media spend for standalone FERA digital campaigns using zip code analysis to identify and target low-income customers in areas with likely eligible FERA population. As noted above, targeted radio buys will also co-promote CARE and FERA in priority areas such as

II-72

1		the Central Valley and areas with lower than average
2		penetration.
3	E.	Increase FERA Program customer retention efforts.
4		Similar to the CARE Program, FERA enrolled
5		customers are required to recertify their eligibility every two
6		years. FERA attrition rates were higher than CARE in
7		2018, ⁶⁵ so retention marketing efforts were put in place in
8		2019 to improve the recertification rate.
9		PG&E plans to continue two EM marketing campaigns
10		to encourage retention of FERA enrolled customers:
11		(1) auto-reenrollment; and (2) recertification reminders.
12		a. Customers with a CARE propensity model decile score
13		of 1, 2 or 3 are selected for auto-reenrollment based on
14		the likelihood that these customers meet the
15		qualification requirements. PG&E plans to
16		automatically reenroll the top three deciles.
17		Auto- reenrollment occurs approximately 180 days prior
18		to the expiration date. PG&E sends these customers
19		notification via EM to alert them that they have been
20		automatically reenrolled in the FERA Program and no
21		further action is required by the customer to continue
22		receiving the FERA discount. The EM includes
23		messaging that the customer should contact PG&E if
24		they no longer qualify for FERA due to changes in
25		income or other household needs.
26		b. PG&E plans to evaluate the new FERA Propensity
27		Model for use to select customers for FERA
28		auto-reenrollment for the 2021-2026 cycle to ensure
29		that qualified customers remain on the program.
30		c. PG&E initiates a recertification reminder campaign at
31		120 days from a customer's recertification date,

⁶⁵ CARE recertification rate in 2018 was 63 percent (excluding auto-recertification) versus FERA 2018 recertification rate of 9 percent.

1	including an EM reminder for customers due to recertify
2	Then a recertification application is sent via DM at
3	approximately 90-days prior to the recertification date,
4	along with another EM reminder message. The EM
5	reminders are sent again at 60-days and 30-days prior
6	to the recertification deadline to prompt the customer to
7	take action to recertify. This EM reminder approach ha
8	been in place for CARE since 2015 and was
9	implemented for FERA in July 2019. PG&E plans to
10	conduct analysis to evaluate the impact of this
11	campaign on improving recertification rates for FERA
12	once enough data is available.
13	F. Continue to place additional focus on driving
14	awareness and enrollment in the Central Valley.
15	Targeting of media spend in the Central Valley will
16	continue to be an important part of the FERA marketing pla
17	to address the directives in D.18-08-013.
18	PG&E plans to complement targeted media efforts and
19	the multi-touch marketing approach with FERA CBO
20	outreach focused in the Central Valley. PG&E will focus or
21	COC expansion and partnering with CBOs in high FERA
22	enrollment opportunity areas to increase rates of FERA
23	participation in the Central Valley. PG&E will support
24	traditional Community Ambassador Program outreach with
25	face-to-face awareness at community events and promotion
26	support through in-language radio stations, online media
27	and mail inserts in targeted zip codes to increase foot traffic
28	to these events.
29	G. Increase awareness and marketing reach through
30	public relations tactics.
31	Public relations (PR) tactics are a cost-effective way to
32	drive additional reach and awareness of financial assistanc
33	programs and can be targeted to regions with low
34	enrollment. PG&E proposes to continue leveraging PR,

1	incorporating the FERA Program and eligibility information
2	in media outreach campaigns. PG&E is not requesting
3	budget for PR activities via the CARE or FERA balancing
4	account. These efforts are funded through the GRC.66
5	H. Streamline online qualification confirmation for CARE
6	and FERA.
7	PG&E plans to develop an interactive web
8	questionnaire that enables customers who arrive on the
9	combined CARE/FERA landing page to more easily
10	determine which program they qualify for. A module
11	towards the top of the page will guide customers through
12	answering the qualification questions and a result will
13	display whether they qualify for either CARE or FERA.
14	If they do not qualify for either program, the results will
15	promote other energy saving tips and tools.
16	I. Leverage vendor partnerships to drive enrollments for
17	FERA.
18	The New Mover program has been in place for CARE
19	since 2018 (see Section D.1.e. for a description of the New
20	Mover Program). PG&E plans to incorporate FERA
21	messaging into the existing program to co-promote both
22	CARE and FERA to new movers.
23	2. PG&E proposes the following FERA-specific outreach efforts to
24	determine if stand-alone messaging is more effective than
25	co-marketing in generating new FERA enrollments.

⁶⁶ PG&E's 2020 GRC, Exhibit (PG&E-9), Ch. 8, p. 1. Although not specifically referred to as "public relations" in PG&E's GRC testimony, these are the costs associated with these tactics covered by Corporate Affairs who "supplies critical information to the public and employees during emergencies and communicates public safety information; raises customer awareness around utility programs, pricing, service options, and other customer programs...."

A. Test a rate comparison message to FERA-eligible customers.

PG&E launched a CARE Rate Plan Education Report 3 per the directive in D.17-12-00967 via a DM acquisition 4 5 campaign sent to CARE-eligible customers in third quarter of 2018. The letter included personalized energy usage 6 information and compared the customer bill amount to what 7 8 their bill would have been if they were on CARE, and the total annual savings amount with CARE. The test showed 9 positive results. The Rate Comparison test message 10 11 outperformed the CARE control message that has been used for direct marketing campaigns since 2016. The test 12 version drove a higher enrollment rate for both the Newly 13 Eligible segment (enrollment rate of 6.11 percent versus 14 5.40 percent) and the Non-Responder segment (enrollment 15 rate of 6.18 percent versus 5.59 percent).⁶⁸ Based on 16 these results, PG&E proposes to test this tactic as a 17 FERA-specific direct marketing campaign. 18 19 B. Test direct mail, e-mail and telemarketing tactics to FERA-eligible customers. 20 21 PG&E plans to develop campaigns to test FERA-specific messaging. In addition to testing a FERA 22 23 Rate Comparison message as described above, PG&E plans to test FERA-specific messaging in the multi-touch 24 DM and EM campaigns versus an existing CARE/FERA 25 combined message that launched in 2019. This type of A 26 versus B message test⁶⁹ will evaluate whether a 27 FERA-specific message helps increase FERA enrollments 28

67 D.17-12-009, OP 103-104.

1 2

⁶⁸ CARE Rate Comparison Analysis, pp. 3-4, prepared by Targetbase, August 6, 2019.

⁶⁹ AB testing is essentially an experiment where two or more variants are shown to the target at random, and statistical analysis is used to determine which variation performs better for a given conversion goal.

1		over a co-marketing CARE/FERA message or a
2		CARE-specific message.
3		Furthermore, once the new FERA Propensity Model is
4		complete, PG&E plans to test outbound telemarketing to
5		select FERA-eligible customers in the top deciles. Because
6		telemarketing tends to be a more costly tactic, PG&E
7		expects that this tactic would only be used for those
8		customers with the lowest Decile scores (i.e., the most-likely
9		eligible customers). If these FERA-only communication
10		tactics are deemed successful, they would continue as part
11		of the overall CARE and FERA marketing plan.
12		C. Enhance retention efforts for FERA.
13		PG&E proposes development and implementation of
14		welcome communication tactics for new FERA customers
15		similar to that described above for CARE. The CARE
16		Welcome Kit, delivered via DM and EM, has been a
17		successful engagement point with low-income customers
18		(see Section D.1.e. "Retain and Engage Qualified
19		Customers").
20		PG&E also proposes additions to the existing
21		recertification EM reminder campaign for both CARE and
22		FERA. This strategy is outlined for CARE in Section D.1.e.
23		"Enhance Recertification Campaign" and would follow the
24		same approach for FERA.
25		Community Based Outreach
26		As described above in CARE M&O Section D.1.e., the
27		FERA Program will be a key part of the holistic outreach
28		partnership with community-based partners described in the
29		CARE M&O proposal. The FERA budget for compensation
30		of the CBO partners at a fee of \$30 per new enrollment
31		generated by the CBO is \$36,000.
32	4.	FERA Marketing & Outreach Budget
33		For this program cycle PG&E proposes a FERA M&O budget that
34		uses the FERA balancing account. PG&E requests a budget of

\$15,816,100 for FERA M&O, community engagement, and other
outreach/administrative activities for 2021-2026 to support the goal of
increasing FERA participation and driving customer retention in the
FERA Program. PG&E's budget remains flexible to allow for allocation
adjustments and revised outreach activities based on the results of the
ongoing test and learn approach.

PG&E provides a budget forecast in the table below for estimated
expenditures through 2026 to market the FERA Program. PG&E has
included estimates of PG&E's third-party contracts, and other costs
relating to marketing activities that are to be recovered through the
FERA Program balancing account.

TABLE II-18 2021-2026 ESTIMATED FERA MARKETING & OUTREACH BUDGET

Total	2021-2026	Estimated	\$15,286,123	335,871	194,106	\$15,816,100
	2026	Estimated	\$2,735,455	59,743	34,802	\$2,830,000
	2025	Estimated	\$2,674,323	58,178	33,799	\$2,766,300
	2024	Estimated	\$2,614,930	56,658	32,812	\$2,704,400
	2023	Estimated	\$2,554,530	55,183	31,787	\$2,641,500
	2022	Estimated	\$2,498,473	53,750	30,877	\$2,583,100
	2021	Estimated	\$2,208,412	52,359	30,029	\$2,290,800
		FERA Program	Marketing & Outreach	Community Engagement	Other Outreach Costs	Total M&O Expenses
	Line	No.	~	2	e	4

A breakdown of the costs above are provided in the tables below. 1 In the M&O budget Table II-19 below, estimated costs include 2 proposed marketing activity for 2021-2026. Given that many of the 3 proposed marketing activities include co-promotion of CARE and FERA, 4 where applicable, PG&E has allocated a portion of the associated cost 5 to be funded within the CARE budget proposal. The FERA estimated 6 budget has allocated a portion of co-promotion activity based on the 7 relative size of the FERA estimated eligible population. 8

5. FERA Program Administration [WITNESS: MURPHY-ROACH]

Similar to CARE, PG&E administers its FERA Program through use 5 6 of program managers and analysts to provide oversight coordination with marketing updating changes to new eligibility guidelines, reporting, 7 process data requests and ongoing communications with the energy 8 division. In addition, the programming team updates training and 9 delivery to community partners while coordinating program changes with 10 a centralized internal operations team supporting new application, 11 recertification processing and PEVs, leveraging economies of scale with 12 the energy efficiency operations team. PG&E continues to minimize its 13 administrative burden and proposes to continue this cost-effective 14 approach. Funding request: \$337,000. 15

1	6.	FERA Revenue Requirements and Rate Impacts [WITNESS: LI]
2		This section describes PG&E's 2021-2026 FERA Program electric
3		revenue requirements and projected rate impacts that would arise due
4		to requests in this application for the program cycle.
5		a. Revenue Requirement
6		Pursuant to D.18-08-013, the Commission ordered a 50 percent
7		penetration goal for the FERA Program by 2023. To achieve this
8		goal, PG&E has requested a modest increase in program
9		administration and M&O budgets.
10		To achieve the FERA Program goals, administrative budgets,
11		and M&O, PG&E's proposed revenue requirements for PY
12		2021-2026 are presented in Table II-22 below. PG&E proposes to
13		recover in rates \$120 million in electric distribution rate components
14		in 2021-2026 subject to change due to benefit burden and Revenue
15		Fees and Uncollectibles (RF&U) Factor approved in future GRCs.

TABLE II-22 2021-2026 FERA PROGRAM ELECTRIC REVENUE REQUIREMENTS

Line No.	Category	2021	2022	2023	2024	2025	2026	Total
1	Program Budget	\$12,850,068	\$15,693,768	\$18,587,768	\$21,203,368	\$23,818,268	\$26,434,168	\$118,587,408
2	Benefit Burden	6,632	6,632	6,632	6,632	6,632	6,632	39,792
3	RF&U	145,911	178,184	211,028	240,712	270,389	300,076	1,346,300
4	Total Revenue Requirement	\$13,002,611	\$15,878,584	\$18,805,428	\$21,450,712	\$24,095,289	\$26,740,876	\$119,973,500

Note The benefit burden and RF&U are based on 2017 GRC for illustration purposes. The revenue requirement shall be adjusted accordingly when the benefit burden and RF&U are approved in future GRCs applicable to the year.

16

b. Benefit Burden

17	The benefit burden costs include medical, vision, dental,
18	employee healthcare contributions, group life insurance, short-term
19	incentive payments, 401K expenses, relocation expense, short-term
20	disability and tuition reimbursement. PG&E's 2014 GRC,
21	D.14-08-032 approved on August 14, 2014 (for the period
22	2014-2016), directs PG&E to track and recover benefit burden
23	through the customer programs, including the electric and gas
24	Public Purpose Program Low-income Balancing Account

1	(PPPLIBA), electric Public Purpose Program Revenue Adjustment
2	Mechanism (PPPRAM) and gas Public Purpose Program
3	Low-income Energy Efficiency Balancing Account (PPP-LIEE)
4	effective January 1, 2014. Since then, the benefit burden is
5	determined in GRC which PG&E files every three years.
6	The benefit burden shown on Table II-22 for 2021-2026 FERA
7	Program Electric Revenue Requirement represents the benefit
8	burden for 2019 determined in 2017 GRC (for the period 2017-2019)
9	pursuant to D.17-05-013. The revenue requirement shall be
10	adjusted accordingly with the benefit burden approved in future
11	GRCs applicable to the year.
12	c. Revenue Fees and Uncollectible (RF&U) Factor
13	The RF&U is determined through GRC and updated on annual
14	basis. The RF&U shown on Table II-22 for 2021-2026 FERA
15	Program Electric Revenue Requirement represents the RF&U for
16	2019 determined in 2017 GRC (for the period 2017-2019) pursuant
17	to D.17-05-013 for illustration purpose. The revenue requirement
18	shall be adjusted accordingly with the RF&U factor approved in
19	future GRCs applicable to the year.
20	d. Subsidy
21	With increasing marketing being proposed, PG&E anticipates
22	that FERA applications will increase throughout the 2021-2026
23	period. FERA discounts are available to PG&E's electric customers
24	with income levels between 200 percent plus \$1 and 250 percent of
25	the federal poverty guidelines. The total FERA subsidy for electric
26	customers is approximately \$101 million, see Table II-23.

TABLE II-23 ESTIMATED 2021-2026 FERA SUBSIDY FORECAST^(a)

Line No.	Year	Electric
1	2021	\$10,353,000
2	2022	12,898,000
3	2023	15,727,000
4	2024	18,273,000
5	2025	20,819,000
6	2026	23,364,000
7	Total	\$101,434,000

(a) The FERA subsidy forecast maintains the current rate design established in D.14-06-029.

1	e. Rate Impacts
2	PG&E's proposed 2021-2026 FERA Program Administrative
3	Expense rate and bill impacts among PG&E's electric customer
4	classes are shown in Table II-24.

TABLE II-24 2021 ELECTRIC RATE IMPACT OF FERA PROGRAM ADMINISTRATIVE EXPENSES (\$000)

Under PG&E's FERA Program administrative expense forecast proposal, the bill impact for a typical bundled residential electric customer using 500 kilowatt-hours (kWh) per month in 2021 will increase \$0.08 from \$121.17 to \$121.25. The bill for a typical bundled residential customer using approximately twice the average baseline allowance in 2021, or 700 kWh per month, will increase \$0.14 from \$179.01 to \$179.15.

1 2

3

4 5

6

7

PG&E will incorporate the annual electric FERA Program
revenue requirement authorized in this proceeding into electric rates
in the Annual Electric True-Up (AET) with other rate changes
effective January 1 of each year in the program forecast period, or
as soon thereafter as possible. Any required FERA Program
electric rate change resulting from this proceeding will be
implemented in accordance with the then-current adopted revenue

1			allocation and rate design methods adopted for the ESA Program
2			revenue component of electric PPP rates.
3			f. Balancing Accounts
4			1) Family Electric Rates Assistance Balancing Account
5			FERA, Electric Preliminary Statement Part DX, records the
6			revenue shortfalls and program administrative costs for the
7			large household program, also called the FERA Program.
8			PG&E proposes also recording the marketing costs associated
9			with the FERA Program into the FERA balancing account. See
10			Attachment C for a redline version of FERA, Electric Preliminary
11			Statement Part DX. Disposition of the balance in this account
12			for implementation into rates is determined through the AET
13			advice letter process or as otherwise determined by the
14			Commission.
15	I.	CAF	RE Revenue Requirements and Rate Impacts [WITNESS: LI]
16		1)	Discuss the revenue requirements necessary to achieve the program
17			plans and objectives proposed for the application period as well as the
18			projected rate impacts that would arise due to the increased revenue
19			requirements.
20			This section describes PG&E's 2021-2026 CARE Program electric
21			and gas PPP revenue requirements and projected customer bill impact
22			associated with this application.
23		1.	Revenue Requirement
24			PG&E's proposed revenue requirement for program years
25			2021-2026 to achieve the CARE Program goals are presented in
26			Table II-25 below. PG&E proposes to recover \$3,440 million in electric
27			CARE rate components and \$850 million in the gas PPP-CARE
28			surcharge rates in 2021-2026. These amounts will be slightly updated
29			to reflect changes due to the employee benefit burden and RF&U
30			approved in future GRCs.
31			The employee benefit burden and RF&U included in this application
32			are taken from the 2019 approved benefit burden and RF&U amounts.
33			Pursuant to Section 739.1, PG&E is authorized to record all
34			reasonable administrative costs associated with the implementation of

1the CARE Program. The total amount collected through CARE rates is2equal to the sum of forecasted CARE discounts, forecasted CARE3administrative costs, and end-of-year forecasted balances in the CARE4balancing accounts. CARE rates are equal to the CARE electric5revenues and gas surcharges allocated to each applicable customer6class divided by each customer class's adopted sales forecast.

⁷⁰ In addition to CARE sales, sales to Utility Electric Generation and Street lighting customers are exempt from the CARE surcharge.

TABLE II-25	2021-2026 CARE PROGRAM ELECTRIC AND GAS REVENUE REQUIREMENTS	
	2021-2026 CARE	

Total		\$3,396,764,654 4,350,306 38,599,253	\$3,439,714,213		\$849,191,162 1,087,578	\$850,278,740	\$4,289,992,953

2021		\$557,426,629 725,051 6,334,463	\$564,486,143		\$139,356,657 181,263	\$139,537,920	\$704,024,063
Category	Electric:	Program Budget Benefit Burden RF&U	Total Electric:	Gas:	Program Budget Benefit Burden	Total Gas:	Total CARE Revenue Requirement
Line No.	~	0 0 4	5	9	7 8	6	10

The benefit burden and RF&U are based on 2017 GRC for illustration purposes. The revenue requirement shall be adjusted accordingly when the benefit burden and RF&U are approved in future GRCs applicable to the year. Note

a) Benefit Burden

1

I	a)	
2		The benefit burden costs include medical, vision, dental,
3		employee healthcare contributions, group life insurance, short-term
4		incentive payments, 401K expenses, relocation expense, short-term
5		disability and tuition reimbursement. PG&E's 2014 GRC,
6		D.14-08-032 approved on August 14, 2014 (for the period
7		2014-2016), directs PG&E to track and recover benefit burden
8		through the Customer Programs, including the electric and gas
9		PPPLIBA, electric PPPRAM and gas PPP-LIEE effective January 1,
10		2014. Since then, the benefit burden is determined in the GRC
11		which PG&E files every 3 years.
12		The benefit burden shown on Table II-25 for 2021-2026 CARE
13		Program Electric and Gas Revenue Requirements represents the
14		benefit burden for 2019 determined in 2017 GRC (for the period
15		2017-2019) pursuant to D.17-05-013 allocated between electric and
16		gas for illustration purpose. The revenue requirement shall be
17		adjusted accordingly with the benefit burden approved in future
18		GRCs applicable to the year.
19	b)	Revenue Fees and Uncollectible Factor
20		The RF&U is determined through GRC. Per the 2017 GRC
21		Decision, the RF&U factor is updated on annual basis. The RF&U
22		shown on Table II-25 for 2021-2026 CARE Program Electric ⁷¹
23		represents the RF&U for 2019 determined in 2017 GRC (for the
24		period 2017-2019) pursuant to D.17-05-013 for illustration purpose.
25		The revenue requirement shall be adjusted accordingly with the
26		RF&U factor approved in future GRCs applicable to the year.
27	c)	Electric and Gas Split
28		PG&E proposes to continue the currently adopted method for
29		allocating CARE Program administrative expenses between gas and
30		electric customers. Consistent with D.89-07-062, PG&E currently
31		allocates the CARE administrative costs between electric and gas in

⁷¹ Per D.04-08-010 PPP surcharge rates (which CARE A&G is a component of) do not include a factor for revenue fees and uncollectible expense.

proportion to the discounts received by CARE customers. For 1 2 2021-2026, PG&E proposes to assign 80 percent of the CARE Program administrative expenses to electric customers and 3 20 percent to gas customers. 4 5 a. Balancing Accounts There are no changes to the balancing accounts that PG&E 6 7 uses to track the program cost and revenue requirement for 8 2021-2026 CARE Program. PG&E proposes to continue using the following balancing accounts to track the program cost and revenue 9 requirement: 10 11 i. Public Purpose Program Surcharge – California Alternate Rates Energy Account (PPP-CARE) 12 PPP-CARE, Gas Preliminary Statement Part V, records the 13 gas projected CARE shortfall and administrative expenses 14 authorized by the Commission that are recovered through the 15 billed surcharges and other amounts received from the State of 16 California Gas Consumption Surcharge Fund. The annual gas 17 PPP Surcharge advice letter updates the natural gas PPP 18 19 surcharge rates to fund the CARE Program which are then included in the Annual Gas True-Up (AGT) for implementation 20 into rates. 21 California Alternate Rates for Energy Account 22 ii. 23 California Alternate Rates for Energy Account (CAREA), Electric Preliminary Statement Part M, records the difference 24 between the electric CARE Program revenue shortfall and 25 26 CARE administrative expenses and the revenues collected 27 through the CAREA rate component. Disposition of the balance in this account for implementation into rates is determined 28 29 through the AET advice letter process or as otherwise 30 determined by the Commission. b. Discounts 31 CARE discounts are available to PG&E's gas and electric 32 customers with income levels not exceeding 200 percent of the 33 federal poverty guidelines. Gas customers are eligible to receive a 34

1	20 percent discount on their monthly gas bills. Total electric CARE
2	discounts average approximately 35 percent. Table II-26 below
3	presents PG&E's current forecast of the 2021-2026 CARE subsidy.

Line No.	Year	Electric	Gas	Total
1	2021	\$554,149,000	\$129,390,000	\$683,539,000
2	2022	554,149,000	133,540,000	687,689,000
3	2023	554,149,000	137,824,000	691,973,000
4	2024	554,149,000	142,245,000	696,349,000
5	2025	554,149,000	146,808,000	700,957,000
6	2026	554,149,000	151,518,000	705,667,000
7	Total	\$3,324,894,000	\$841,325,000	\$4,166,219,000

TABLE II-26 ESTIMATED 2021-2026 CARE SUBSIDY FORECAST

4	i. The CARE discount forecast maintains the current rate design
5	established in D.14-06-029.
6	ii. CARE customers are also exempt from paying costs for
7	Department of Water Resources Bonds, CARE PPPs, and the
8	California Solar Initiative (CSI). These exemptions are not
9	reflected in the subsidy forecast and will total an estimated
10	\$590 million in program years 2021-2026.
11	c. CARE Administrative Costs Over 2021-2026
11 12	 c. CARE Administrative Costs Over 2021-2026 Pursuant to Section 739.1(d), PG&E is authorized to record all

(1)	CARE Customers receive a 20% discount off of P Purpose Program Surcharge (G-PPPS) rates and				G&E's Public
(2)	Transportation rates paid by all customers include	an additional GHG Compliance Co	st Recovery compo	onent of \$0.050	49 per therm
(3)	Covered Entities (i.e.customers that currently have pay a GHG Obligation Cost component of \$0.0026	• • •			,

pay a GHG Obligation Cost component of \$0.00268 per therm to cover PG&E allowance costs associated with lost & unaccounted for (LUAF) gas and compression costs. Covered entities will see a line item credit on their bill equal to \$0.04781 (\$0.05049 minus \$0.00268) per therm times their monthly billed volumes.

1	Under PG&E's CARE Program administrative expense forecast
2	proposal, the bill for a typical bundled residential customer using
3	32 therms per month in 2021 will decrease \$0.01 from \$52.32 to
4	\$52.31.

⁷² Rates are rounded to 3 decimals for viewing ease. Percentage rate changes are calculated on a 5-digit basis.

PG&E will incorporate the annual electric CARE Program 1 2 revenue requirement authorized in this proceeding into electric rates in the AET with other rate changes effective January 1 of each year 3 in the program forecast period, or as soon thereafter as possible. 4 5 Any required CARE Program electric rate change resulting from this proceeding will be implemented in accordance with the then-current 6 adopted revenue allocation and rate design methods adopted for the 7 ESA Program revenue component of electric PPP rates.73 8

PG&E will incorporate the gas funding requirement authorized in 9 this proceeding into gas rates in its annual gas PPP surcharge 10 11 advice letter and AGT filings with other rate changes effective January 1 of each year in the program forecast period, or as soon 12 as thereafter as possible. Similarly, any gas CARE Program 13 revenue change will be allocated among customer classes 14 consistent with then-current adopted practices. If a decision is not 15 issued in time to incorporate the proposed revenue requirement in 16 PPP surcharge rates by January 1, 2021, PG&E will incorporate 17 changes adopted in this proceeding in the following year's PPP 18 surcharge advice letter⁷⁴. 19

J. Preliminary Schedule [WITNESS: NONE]

20

PG&E provides the following proposed preliminary schedule as required
 by the Guidance Document:

⁷³ The current methods for setting electric PPP rates, including the CARE surcharge, were adopted in D.07-09-004.

⁷⁴ D.04-08-010 adopted that utilities may request a change in gas PPP surcharge rates during the year only if failure to make the rate change would result in a forecasted total rate increase of 10 percent or more on January 1 of the next year.

- (c) CPUC Rule 14.3(a).
- (d) CPUC Rule 14.3(d).

1 K. Conclusion [WITNESS: MURPHY ROACH]

PG&E's CARE and FERA proposals to continue administering the
program with enhancements should be adopted. The proposals discussed
above should be deemed just and reasonable, in the interest of ratepayers,
and adopted by the Commission.

ATTACHMENT A

CARE AND FERA PROGRAM BUDGET DESCRIPTIONS

CARE Program Regulatory Budget Category	Cost Category Description
OUTREACH	This cost category includes: • Marketing and outreach campaigns, such as direct mail, e-mail, digital marketing channels, text, radio and video • Retention communications • Market Research • Printing, storage and fulfillment of bill inserts, applications, advertising and promotional materials, annual notifications to Sub-metered facilities (SB 920), and other CARE Program materials • Data management and data procurement • Postage and handling fees • CARE toll-free line operation and staffing • Grassroots outreach with community and faith-based organization (CBOs) • Capitation fees to Community Outreach Contractors for new CARE enrollments and assistance with the Post Enrollment Verification process, community event costs, community outreach activities and partnerships • Staff labor related to marketing and outreach • Other expenses include travel, fees, conferences, catering and other outreach-related costs
PROCESSING, CERTIFICATION, AND RECERTIFICATION	This cost category encompasses day-to-day administrative tasks associated with processing CARE applications, including: • Opening, sorting, scanning, processing, and data entry of CARE applications • Initiating and responding to customers' inquiries by mail, e-mail or phone regarding Program participation • Resolving billing issues related to Program enrollment • Tracking CARE enrollment and recertification statistics in support of operations, management and regulatory • Training and other related costs
POST ENROLLMENT VERIFICATION (PEV)	This cost category encompasses day-to-day administrative tasks associated with completing PEV and High Usage verifications, including the following: • Opening, sorting, scanning, data entry and processing of CARE PEV and High Usage correspondences • Printing and mailing of PEV and High Usage letters • Initiating and responding to customers' inquiries by mail, e-mail or phone regarding the PEV and High Usage process • Resolving billing issues • Tracking CARE PEV and High Usage statistics in support of operations, management and regulatory support • Training and other related costs
IT PROGRAMMING	This budget category includes costs for CARE database, systems enhancements and mobile access, including: • Replacement of CARE One database with new software platform Energy Insight • Ongoing software enhancements and licensing for PG&E's current technology supporting CARE Program activities • Routine and non-routine system maintenance • Automated CARE enrollment internal data exchanges among CARE, ESA, REACH and LIHEAP Programs • External data exchanges with IOUs, municipalities and water utilities • Data reporting and analysis • CARE system enhancement and maintenance • Online applications enhancement and maintenance • Website and Interactive Voice Response (IVR) enhancement and maintenance • Other IT-related obligations
CHANGES PROGRAM	This budget category includes reimbursement cost for the ongoing CHANGES program and PG&E staff labor to support the CHANGES program
STUDIES	This budget category includes cost to conduct studies
MEASUREMENT AND EVALUATION	This cost category includes all measurement and evaluation related to the CARE Program, including contract expenses for the annual study of CARE customer eligibility estimates.
REGULATORY COMPLIANCE	This category includes costs for staff labor and travel expenses associated with regulatory activities, including: Program applications Advice letters Tariff revisions, comments and reply comments Hearings Preparation of regulatory compliance reports Preparation of data request responses Attendance at working group sessions, public input meetings and public workshops Tarvel expenses and other related costs
GENERAL ADMINISTRATION	This category includes costs for program administration and management, including: Program management labor Office supplies and equipment Envelopes and printing of CARE letters Customer research Propensity model costs associated with eligiblity criteria and data management Other expenses include training, travel, fees, aconferences, catering and other administrative-related costs
CPUC ENERGY DIVISION STAFF	 Other expenses include training, traver, tees, aconterences, catering and other administrative-related costs This cost category includes reimbursement to the CA Public Utilities Commission for services rendered by CPUC per D.16-11-022, D.12-11-015, D.10-04-029, D.09-09-047, D.08-10-027, D.05-12-026, D.06-12-038, D.05-11-011 and Advice Letters 2745-E, 2683-G, 1936E, 1754-E, 1575-G and per Budget Act Chapter 50, Statute 1999.

FERA Program Regulatory Budget	Cost Category Description
Category OUTREACH	
OUTREACH	This cost category includes: • Marketing and outreach campaigns, such as direct mail, e-mail, digital marketing channels, text, radio and video
	Mainteing and outreath campaigns, such as unethinair, e-mail, uigtan marketing chames, text, radio and video Retention communications
	• Market Research
	 Printing, storage and fulfillment of bill inserts, applications, advertising and promotional materials, annual notifications to Sub-metered facilities (SB
	20), and other FERA Program materials
	Data management and data procurement
	Postage and handling fees
	Grassroots outreach with community and faith-based organization (CBOs)
	Capitation fees to Community Outreach Contractors for new FERA enrollments, community outreach activities and partnerships
	Staff labor related to marketing and outreach
	Other expenses include travel, fees, conferences, catering and other outreach-related costs
PROCESSING, CERTIFICATION, AND	This cost category encompasses day-to-day administrative tasks associated with processing FERA applications, including:
RECERTIFICATION	Opening, sorting, scanning, processing, and data entry of FERA applications
	 Initiating and responding to customers' inquiries by mail, e-mail or phone regarding Program participation
	Resolving billing issues related to Program enrollment
	Tracking FERA enrollment and recertification statistics in support of operations, management and regulatory
	Training and other related costs
POST ENROLLMENT VERIFICATION (PEV)	This cost category encompasses day-to-day administrative tasks associated with completing FERA Post Enrollment Verification process, including the
	following:
	Opening, sorting, scanning, data entry and processing of FERA PEV correspondences
	Printing and mailing of PEV letters
	 Initiating and responding to customers' inquiries by mail, e-mail or phone regarding the PEV process Resolving billing issues
	Tracking FERA PEV statistics in support of operations, management and regulatory support
	Training and other related costs
IT PROGRAMMING	This budget category includes costs for FERA database, systems enhancements and mobile access, including:
	Ongoing software enhancements and licensing for PG&E's current technology supporting FERA Program activities
	Routine and non-routine system maintenance
	Automated FERA enrollment internal data exchanges among other assistance programs
	External data exchanges
	Data reporting and analysis
	FERA system enhancement and maintenance
	Online applications enhancement and maintenance
	Website and Interactive Voice Response (IVR) enhancement and maintenance
	Other IT-related obligations
REGULATORY COMPLIANCE	This category includes costs for staff labor and travel expenses associated with regulatory activities, including:
	Program applications
	Advice letters
	Tariff revisions, comments and reply comments
	• Hearings
	Preparation of regulatory compliance reports
	Preparation of data request responses
	Attendance at working group sessions, public input meetings and public workshops Torucl uncorrected attendance to a sets
	Travel expenses and other related costs
GENERAL ADMINISTRATION	This category includes costs for program administration and management, including:
	Program management labor Office supplies and equipment
	Office supplies and equipment Envidence and printing of FERA letters
	Envelopes and printing of FERA letters Customer research
	Customer research Propensity model costs associated with eligiblity criteria and data management
	Other expenses include training, travel, fees, aconferences, catering and other administrative-related costs
CPUC ENERGY DIVISION STAFF	This cost category includes reimbursement to the CA Public Utilities Commission for services rendered by CPUC

ELECTRIC PRELIMINARY STATEMENT PART DX FAMILY ELECTRIC RATE ASSISTANCE BALANCING ACCOUNT

Sheet 1

(T)

(N)

(T)

(T)

DX. FAMILY ELECTRIC RATE ASSISTANCE BALANCING ACCOUNT (FERABA)

- 1. PURPOSE: The purpose of the electric FERABA is to record the revenue shortfalls, and program administrative costs, and marketing costs for the large household program (also called the Family Electric Rate Assistance (FERA) program) approved by Decisions 04-02-057 and 07-09-004.
- APPLICABILITY: The FERABA shall apply to all electric customers except for those specifically excluded by the Commission.
- 3. REVISION DATE: Disposition of the balance in this account shall be determined through the Annual Electric True-Up (AET) advice letter process.
- 4. RATES: This account does not currently have a rate component.
- 5. ACCOUNTING PROCEDURE: PG&E shall make entries to the following subaccounts at the end of each month as follows:
 - a) A debit entry equal to the FERA revenue shortfall in residential customer revenue resulting from the change in price from Tier 3 to Tier 2 for all enrolled FERA customers. The revenue shortfall is computed by subtracting the residential customers' monthly revenues from the revenues that would have been recovered from customers had the Tier 3 rate not been reduced.
 - b) A debit entry equal to the FERA discount for charges for the California Solar Initiative.
 - c) A debit entry equal to the administrative costs <u>and marketing costs</u> associated with the FERA (T) program.
 - d) A credit entry to transfer the balance to other regulatory accounts as appropriate for rate recovery, upon approval by the CPUC.
 - e) A debit entry equal to interest on the average balance in the account at the beginning of the month and the balance after the above entry, at a rate equal to one-twelfth of the rate on three-month Commercial Paper for the previous month, as reported in the Federal Reserve Statistical Release, H.15, or its successor.

	DRAFT 11/01/19 8:25 AM RMR
1	PACIFIC GAS AND ELECTRIC COMPANY
2	CHAPTER III
3	CONCLUSION

4 Summarize requests for which you are seeking the California Public Utilities Commission's (Commission) approval as part of the ESA and CARE 5 Program plans and budgets for PYs 2021-2026. [WITNESS: MURPHY-ROACH] 6 7 Pacific Gas and Electric Company (PG&E) appreciates the opportunity to present its proposed budget and program design for its 2021-2026 Energy Savings 8 Assistance (ESA), California Alternate Rates for Energy (CARE), and Family Electric 9 10 Rate Assistance (FERA) programs. As demonstrated throughout its testimony, by providing ESA, CARE, and FERA 11 program benefits to PG&E's customers for program years 2021-2026, PG&E 12 13 expects to: (1) continue providing eligible customers with ESA, CARE, and FERA benefits; (2) reach previously treated customers who will receive additional benefits 14 now available through the ESA Plus program; and (3) reach customers not served in 15 previous cycles. PG&E believes the ESA Plus program, as currently designed, 16 provides a compelling proposition for promoting energy savings while delivering 17 health, comfort, and safety benefits for the five need states identified to be prioritized 18 19 in the 2021-2026 program cycle. PG&E believes its proposed budget, program designs, marketing and outreach 20 approach for ESA, CARE, and FERA will also increase access to underserved 21 22 populations. Please see Tables III-1, III-2, and III-3 for the proposed budgets of

ESA, CARE, and FERA for program years (PYs) 2021-2026.

23

III-1

Includes estimated benefit burden determined in 2017 GRC for illustration purposes and shall be adjusted accordingly when the benefit burden is approved in future GRCs applicable to the year. (a)

1	Su	mm	ary of PG&E's Requested Proposals
2	1.	Ch	apter I – ESA Program Summary of Critical Program Elements and
3		Re	quests
4		٠	Approve ESA Plus program design with three levels: basic, comprehensive
5			and comprehensive plus as well as the virtual energy coach pilot.
6		•	Approve customer self-certification eligibility for ESA Basic which PG&E
7			believes will help overcome one of the barriers of participation.
8		•	Approve the prioritization of CARE enrolled customers who have not
9			participated in ESA previously as well as customers in the five identified
10			need states: high energy users; previously disconnected for non-payment of
11			services; medical baseline; rural, tribal and disadvantaged communities; and
12			wildfire threat zones.
13		•	Approve the various modifications to the program rules designed to increase
14			benefits to the customers for energy savings, health, comfort and safety;
15			such as:
16			 Changes in measure offerings based on new design, including
17			additions, modifications and removal of certain measures. All measure
18			changes are based on their contributions to energy savings, and non-
19			energy benefits.
20			 Solicitation of third-party administration for PG&E's Multi-family Whole
21			Building Program modelled after PG&E's EE third-party solicitation
22			process as applicable, and permission to request policy changes
23			following solicitation.
24		•	Approve key program policy changes including:
25			 Establishing ESA Working Group and Studies Working Group;
26			continuing Multi-family Working Group;
27			 Modifying fund shifting rule;
28			 Tracking gas and electric budget at the portfolio level rather than
29			individual measure level;
30			 Flexibility to file Advice Letters for program modifications as needed;
31			and
32			 Full listing of policy changes included in the Program Policy Changes
33			contained in Appendix B.

1		•	Approve the Virtual Energy Coach Pilot to evaluate the impact of
2			personalized communications on customer behavior.
3		•	Approve the Long-Term CARE Customer Pilot to encourage ESA
4			participation for customers on CARE for 10 or more years continuously.
5		•	Approve Impact, Low-Income Needs Assessment, Process, Categorical
6			Program and Non-Energy Benefits Studies recommendations.
7		•	Approve PG&E's proposed Marketing, Education and Outreach plans and
8			corresponding budget request for the ESA Plus program.
9	2.	Ch	apter II – CARE Program Summary of Critical Program Elements and
10		Ree	quests
11			PG&E proposes the following CARE program recommendations for the
12		202	21-2026 program cycle:
13		•	Approve the increase of Capitation Fee from \$20 to \$30;
14		•	Approve request to permanently revise the filing date of annual estimates to
15			CARE eligible customers from December 31 to February 12 of each year for
16			the current year;
17		•	Approve change of the certification period for Non-Profit, Agriculture,
18			Migrant Farm Worker Housing Facilities from 2 years to 4 years; and
19		•	Approve continuation of successful marketing strategies and testing of new
20			strategies to target CARE-eligible customers, including the holistic
21			Community Engagement strategy to promote and educate customers in
22			limited income and vulnerable populations about the various income
23			qualified programs and rate options.
24	3.	Ch	apter II – FERA Program Summary of Critical Program Elements and
25		Ree	quests
26			PG&E proposes the following FERA program recommendations for the
27		202	21-2026 program cycle:
28		•	Approve CBO compensation for FERA enrollments;
29		•	Approve the inclusion of the FERA Annual Report goals and budget
30			expenditure with CARE and ESA annual report filed in May of each year for
31			the preceding year commencing 2024 for 2023 progress;
32		•	Approve request to include the FERA program aspirational goal into the Low
33			Income Proceeding moving forward;
34		•	Approve changes to the FERA Balancing Account;

1 Approve marketing and outreach strategies and corresponding budget • request to continue co-promotion of CARE and FERA via successful 2 marketing channels; and 3 Approve new FERA-specific Marketing, Education and Outreach and 4 • 5 corresponding budget request for work to increase FERA program awareness and enrollment. 6 Therefore, for the reasons stated throughout PG&E's Prepared Testimony, 7 PG&E requests the Commission adopt PG&E's proposed ESA, CARE, and 8 FERA proposed budgets and program design as just and reasonable. To 9 prevent any interruption in customer assistance, PG&E respectfully requests a 10 11 final decision be issued on this application no later than December 31, 2020.

[1] Proposed new measures for Program Years (PY) 2021-28 are labeled "NEW" in the first part of measure name.		
(2) PY 2020-22 incorporates all housing tones - Single Home, and Multi-Family. PY 2023-26 includes only Single Family and Mobile Home.		
[3] "Winor Home Renaid" is included as nart of the "Air SealimuEnvelore" measure.		
[1] C. Tchlon A. B. and A. B. for monormon and Man. B. monormon designmentions		
5) Refer to ESA Chapter I Section D.6 for detailed measures and portfolio composition; measure additors; retirements, and modifications.		
Per ZUT3-11 / Impact Evaluation, bundle includes: Low Flow Show Fleact, Faucet Aeriators, Internostatic Shower Varves.

Units Treated

 NOTES

 [1] Multifamily buildings are defined as 5 or more attached units

 [2] Property is a collection of one or more buildings that constitute a multifamily property

 [2] Property is a collection of one or more buildings that constitute a multifamily property

 [3] Multifamily tenant units are provided here to give a sense of the number of low-income households impacted through treatment of a whole building treatment or common area measures

 [4] "Units Treated" should only be completed for units not captured in A-6 as part of a whole building treatment where measures are installed in common areas and in units

110* Include chart pertaining to each proposed measure, with information included on type of home (i.e Single Family, Multi Family, Mobile Home) and electric or gas (if applicable)	luded on type of home (i.e.	Single Family, Multi Family,	Mobile Home) and el	ectric or gas	(if applicabl	e).										
111 Formords from on the Docentron Moontern TDC and deal not from 20.	18 Decommendations of th	a Cost Effectiveness Working	Group													

1111[1] Formerly known as the Resource Measure RKC, updated per June 2018 Recommendations of the Cost Effectiveness Working Group. 112[2] Resource measures are defined as having energy savings greater than 2ero. 113[3] Multi-family in-unit will transition to MFWB program starting in PY 2023.

PACIFIC GAS AND ELECTRIC COMPANY APPENDIX B POLICY CHART

APPENDIX B 2021-2026 Application Policy Changes for ESA, CARE, and FERA

Line No.	Subject	Proposed Request Detail	Current Practice	Source	Testimony
		1	ESA		
1	Expand Self-Certification	Allow automatic enrollment of CARE self- certification customers to receive installation of simple measures only, through PG&E's proposed Basic level of program delivery.	ESA self-certification allowed in defined areas (such as ZIP codes) with 80% or above income qualified.	P&P 2019, Sec.2.2.3.1: "CARE self-certification does not automatically qualify a household for ESA Program, except in the case of group homes or targeted self- certification areas, where it is specifically allowed. In the case where the utility has verified that the customer is CARE-eligible within the past year, such income verification may be used for ESA Program participation."	Section I.D.7.a-c, and Section I.D.2.a
2	ESA Participation Requirements	Require low income customers be enrolled in CARE in order to qualify for ESA simple measure installation.	No requirement.	P&P 2019, Section 4.2: In the course of ESA enrollment, Outreach worker informs income qualified ESA participant about CARE Program. "Outreach workers will also provide assistance in enrolling the customer in CARE if the customer chooses to participate in it."	Section I.D.7.a-c
3	Process: Working Group	Authorize ESA Working Group (ESA WG) process to update Statewide ESA P&P Manual and Installations Standards Manual, discuss and recommend changes to goals, discuss a process for mid-cycle measure adjustments, retirements and additions, discuss other mid-cycle course corrections necessary to achieve goals' discuss and recommend program revisions required by new laws that become effective during PYs 2021-2026, convene a biennial public meeting.	None.	D.12-08-044 established the MCWG; D.16-11-022 re- convened it (D.16-11-022, OP.67 and 137, and Section 3.13.2, pp.241).	Section I.D.7.a-c, and Section I.E.4
4	Process for measure changes	process for IOUs to add/retire measures during the program cycle. This would help	Measures are proposed and changed through Application process. There was no mid-cycle process prior to last cycle; previous program cycles were 2-3 years. D.17-12-009 required Mid- Cycle AL process to make adjustments during the longer 4-year 2017-2020 program cycle, including adding/retiring measures and shifting budgets.	D.17-12-009 established Mid-Cycle AL process for program adjustments (D.17-12-009, Attachment 1: OP.6, 16, 21, 57-59, 79, 90, 99, 144, FOF.22, and pp.323-324, 348); and D.16-11-022, p.245. P&P 2019, Section 5.3: Utilities jointly evaluate existing program measures in the course of developing recommendations for programs in subsequent years. Measures are evaluated using all available information on both costs and benefits (including energy benefits as well as non-energy benefits), and from that information the Utilities develop a set of recommendations for CPUC approval.	Section I.D.7.a-c, and Section I.E.4
5	AR Public Meeting	Replace the Annual Report Public Meeting with a public meeting convened by the ESA WG every two years to discuss lessons learned and potential program adjustments-	An Annual Report Public Meeting is held within 60 days of May 1 AR filing.	D.12-08-044, OP.5(b).	Section I.D.7.a-c, and Section I.E.4
6	MF	Allow PG&E to propose ESA program MF policy changes after the Multifamily Whole Building solicitation based on the third party administrator's design for PG&E's MultiFamily Whole Building Program. Innovative designs may require changes to existing MF policies and procedures.	None for MFWB. MF CAM policies are defined in D.17-12-009. MF in-unit policies are listed with SF and MH policies in the Statewide ESA P&P Manual.	D.19-06-022, Section 9: guidance document requests IOUs propose solicitation process for third-party design and implementation for a MFWB program.	Section I.D.7.a-c
7	Fund Shifting	Modify ESA fund shifting rules to allow shifting between categories to be reported in Monthly Reports, to align with CARE fund shifting rules authorized in D.06-12-038. In CARE, IOUs are allowed flexibility to shift funds between categories and those fund shifts are reported in the Low Income Monthly and Annual reports.	Fund shifting allowed via AL, as revised in D.16-11. 022 and modified in D.17-12-009. D.17-12-009 Sec.5.1.3 delegates to ED the discretion to approve fund shifts between gas and electric departments up to 25% of each budget category.	D.16-11-022 and modified in D.17-12-009	Section I.D.7.a-c
8	Unspent Funding Caps	Clarify ESA Program Uncommitted Unspent Funds Cap for Carry-Over. The percent cap for uncommitted carry-over unspent funds is listed as both 15% and 25% in D.17-12- 009. PG&E believes this cap was meant to be 25% and seeks clarification.	D.17-12-009, OP.134 establishes a cap for the amount of carry-over unspent funds from program year to program year and within a given cycle to either 25% or 15% (both are stated in OP 134)	D.17-12-009, OP.134	Section I.D.7.a-c
9	Commodity Budgets	Allow electric/gas expenditure tracking at portfolio level rather than individual measure level.	E/G expenditures are tracked at the measure level.		Section I.D.7.a-c
10	Cost Effectiveness	Discontinue use of the Resource Test.	The Energy Savings Assistance Cost-Effectiveness Test (ESACET) and the Resource Test were authorized by the Commission in D.14-08-030 and reiterated again for continued use in this Application in D.19-06-022	D.14-08-030, and Recommendations of the Energy Savings Assistance Program Cost Effectiveness Working Group dated June 1, 2018. http://docs.cpuc.ca.gov/SearchRes.aspx?docformat=ALL &docid=99753158	Section I.D.7.a-c, and Section I.D.11.b
11	Measures: 2nd Refrigerator Criteria	Remove the requirement that a household have six occupants in order to qualify for a Second Refrigerator.	Homes must have 6 or more persons to qualify for replacement of a second refrigerator.	D.16-11-022, OP.13 authorizes second refrigerators; six- person HH on p.103; P&P 2019, Section 2.6.2	Section I.D.7.a-c, and Section I.D.6

APPENDIX B 2021-2026 Application Policy Changes for ESA, CARE, and FERA

Line No.	Subject	Proposed Request Detail	Current Practice	Source	Testimony
		•	ESA		
12	Measures: Refrigerator Criteria	Change age criteria for a refrigerator to qualify for replacement from pre-2001 to a rolling date of 14 years (based on refrigerator EUL).	A refrigerator must be manufactured before 2001 to be eligible for replacement.	pre-1998 (revised from pre-1993): D.12-08-044 , based on KEMA Refrigerator Degradation Study; <u>pre-2001</u> : D.16-11-022, Section 3.5.2.1., p.103	Section I.D.7.a-c, and Section I.D.6
13	Measures: Allow Measure Caps	Allow IOUs to establish measure caps to limit the number of individual measures deployed at a location.	D.17-11-009 removed all measure caps that would limit the number of individual measures deployed at a location.	D.17-11-009, Attachment 1 (modifying D.16-12-022) OP.26, COC.26, and pp.125-127.	Section I.D.7.a-c, and Section I.D.6
14	Measures: Furnace and Water Heater R&R to renters	Expand eligibility for Furnace and Water Heater R&R to renters. Require landlord co- pay of \$500 for replacements and \$250 for repair.	Furnace and Water Heater R&R is only availabe to home owners in all C2s. Reason: By CA law, heating & cooling is a condition of rent and is therefore the responsibility of landlords. Furnaces and hot water heaters are repaired/replaced for safety (failing NGAT).	P&P 2019, Section 2.6.2	Section I.D.7.a-c, and Section I.D.6
15	Providing Additional NR Measures based on customer Needs States	Update ESA P&P to provide Non- Resource/Health Comfort Safety Measures based on 5 Needs States: CARE Electric and Gas High Users, Disconnections, Medical, DAC/Tribal/Rural, Wildfire zones.	No current policy or requirement or criteria for providing HCS measures based on needs states	na	Section I.D.7.a-c, and Section I.D.1
		I	CARE	L	
16	CARE Capitation Fee	Increase CARE capitation fee to \$30.	Current capition fee is \$20.	D.12-08-044, OP 105 adopted an increase capitation fee from "up to \$15.00" to "up to \$20.00" for each new CARE enrollment. (D.01-06-010 initiated capitation fees, which were increased in D.02-01-040.)	Section II.B.4.a
17	Annual CARE Eligibility Filing	Change annual CARE eligibility filing date from December 31 to February 12 each year.	Filing date established in D.12-08-044. Date guidelines released by the federal Dept of Health and Human Services changed from Q4 to the end of January each year, necessitating IOUs to file a Motion each year to request an extension to file.	D.12-08-044 established filing date.	Section II.B.4.b
18	CARE Expansion Program	Extend Expansion Program certification period to 4 years.	Current certification period is 2 years.	D.92-04-024 and D.92-06-060	Section II.B.4.c
19	CHANGES Funding	Continue CHANGES funding from CARE balancing account at same funding level of \$1.75 million annually or from another funding source as alluded to in D.15-12-047	In the CARE Balancing Account	D.15-12-047, OP 4 approved funding for CHANGES program from CARE balancing account through end of the program cycle that ends in 2017, and the Commission may consider funding CHANGES through CARE for future CARE cycles if CHANGES is not funded by another source such as the Commission's reimbursable budget. D.16-11-022, OP 128 approved funding for CHANGES program from CARE balancing account during 2017-2020 program cycle.	Section II.F.1-2
20	Move FERA into LI Proceeding	Move FERA into LI Proceeding.	FERA is included in the GRC proceeding.	D.18-08-013 Decision on Pacific Gas and Electric Company's Proposed Rate Designs and Related Issues	Section II.H.3.b.2
21	Combine FERA annual report with the ESA and CARE annual report	Combine FERA annual report with the ESA and CARE annual report, beginning May of 2024 regarding 2023 progress.	FERA annual report is a stand-alone report that filed in May of each year for the preceding year.	D.04-02-057 , OP 5 , PG&E filed Advice Letter 2498-E-A which became effective June 17, 2004, that set forth the FERA reporting requirements developed jointly by the utilities, DRA, Energy Division, Latino Issues Forum, and TURN.	Section II.H.3.b.3
	I	l	Both		1
22	Process: Working Group	Authorize the ESA-CARE Study Working Group process to scope and approve specific ESA and CARE studies.	Studies for entire program cycle proposed in Program Budget Application and authorized in Program Decision.	D.19-06-022 Guidance Document.	Section I.D.7.a-c, Section I.D.10, and Appendix C
23	LIOB Term	Change IOU LIOB member term from one- year to two-years.	IOU term on LIOB is one year. Other LIOB member terms were changed from one-year to staggered two-year terms in 2005.	D.05-04-052, OP.21, and p.74, p.91: established the LIOB position terms and increased them all from one-year to two-year staggered terms, except for the IOU seat, which remained at one year.

1 PROCESS FOR PROPOSED STUDIES FOR 2021-2026 LOW INCOME APPLICATION

Given a longer program cycle, and prior experience demonstrating how study needs can change after initial studies are proposed by the investor-owned utilities¹ (IOUs) and when the final decision is issued, the IOUs are proposing a different approach to define and budget ESA/CARE studies. Specifically, the IOUs propose two changes in the process taken to define and budget specific ESA/CARE studies;

- Adopting Energy Efficiency's Measurement and Evaluation Studies Funding Approach
- Forming an ESA/CARE Study Working Group.

Adopting Energy Efficiency's Measurement and Evaluation Studies Funding Approach

The IOUs propose an overall Statewide ESA/CARE study budget along with processes that provide both transparency and flexibility to scope forthcoming study proposals and associated budgets. In a process similar to the one used for Energy Efficiency Measurement and Evaluation Studies, an annual study roadmap will be prepared and updated in the IOUs' Annual ESA-CARE Reports.

Forming an ESA/CARE Study Working Group

The IOUs propose the formation of an ESA/CARE Study Working Group to provide a transparent and robust study process. The Study Working Group will take a consensus driven approach with the goal to maximize timely results. The IOUs expect the Study Working Group to hold quarterly meetings, jointly review proposed study statements of work, and participate in project kick-offs and other project meetings as outlined below.

This approach is expected to facilitate more relevant and focused studies that include budgets commensurate with the specific objectives and methodology necessary to execute the work.

In summary, the IOUs propose the following:

- Manage the ESA/CARE studies using a flexible studies roadmap approach, to be updated on an annual basis.
- Manage specific studies via the following steps:
 - Step-1: Project concept
 - Step-2: Statement of work
 - Step-3: Project plan and public engagement
 - Step-4: Draft report and public engagement
 - Step-5: Final report and public engagement.

¹ Individually, the four California Investor Owned Utilities (IOUs) are: Pacific Gas and Electric Company (PG&E), Southern California Edison Company (SCE), Southern California Gas Company (SoCalGas), and San Diego Gas and Electric Company (SDG&E).

- Manage the ongoing study process using an ESA/CARE Study Working Group composed of Energy Division staff, stakeholders, and IOUs, using a consensus approach, with a quarterly meeting format. IOUs will rotate annually to facilitate the ESA/CARE Study Working Group, or potentially co-fund a working Group Facilitator.
- All study proposals in this 2021-2026 applications are considered to be project concepts, to be followed with detailed Statements of Work, and project plans during the program cycle.
- The IOUs will continue to project manage statewide ESA/CARE studies using the existing statewide Study allocations and co-funding agreement structure, with a clearly assigned lead-utility for each project where the lead utility holds the Study contract.

2 PROPOSED STUDIES FOR 2021 - 2026 ESA AND CARE APPLICATION

The IOUs expect several required studies to be conducted during the 2021-2026 cycle, including:

- Two Low Income Needs Assessment Studies (mandated by state legislature to occur every three years)
- At least two ESA Impact Evaluations (these have typically occurred every two-three years)
- Several additional studies to be defined during the program cycle, which may include: ESA process evaluations, ESA Non-Energy Benefits (NEBs), and ESA/CARE categorical program studies.

These studies are detailed below.

2.1 IMPACT EVALUATION STUDIES

ESA Impact Evaluation Studies: For the 2021 to 2026 ESA/CARE application, the IOUs propose two to four statewide ESA impact evaluation studies with a total statewide budget of \$1,500,000. Individual study budgets will not exceed \$500,000, allocated 100% to ESA.

PG&E anticipates at least two impact evaluations to occur, one evaluating the ESA Plus program for PYs 2022-2023 and one evaluating the MFWB program for PYs 2023-2024. This would allow evaluation of new program changes to potentially be completed in time to use results in next Application planning. Other evaluations could be more focused on specific measures or other program areas of interest.

The IOUs anticipate extensive program design and implementation changes during this program cycle. As discussed elsewhere in PG&E's Low Income Opening Testimony (Opening Testimony), PG&E is anticipating a 15-month transition to solicit and implement new proposed program designs for its ESA Plus program, and a 22-month transition to solicit and implement its MFWB

program.² As stated in Opening Testimony, these transition periods may be adjusted based on the solicitation of each program.³ The IOUs propose to use a 2022 to 2023 impact study to focus on effectiveness of their new ESA program design and measures. In addition to the impact evaluation, the IOUs propose some complementary process evaluation elements, discussed in Opening Testimony, Chapter 2, Section D.10.c, to augment the program impact study, especially considering the extensive ESA program design and implementation changes proposed. The specific scope and budget for each of the impact evaluations will be finalized in the ESA/CARE Study Working Group.

2.2 PROCESS EVALUATION STUDIES

Statewide Evaluation: The IOUs propose one to four ESA process evaluations to review new and specific ESA program elements to be defined within the ESA Study Working Group. The proposed statewide budget for these ESA studies is \$500,000, allocated 100% to ESA. Process evaluation(s) will assess ESA program progress once the program is in operation for a minimum of 12 months. It is anticipated to begin in 2023 or 2024 and will assess whether and how the program is achieving desired outcomes according to original planning and design. Lessons learned and recommendations will inform if the ESA program is operating as intended and what elements, if any, should be adjusted to achieve optimal program impacts. The key objective of the study/studies is to (1) ensure the program activities (a) are consistent with required policies and procedures, (b) produce intended outputs and outcomes; and (2) propose processes to help the program better achieve its goals and objectives.

2.3 MARKET STUDIES

Low income Needs Assessment Studies: Per Cal. Pub. Util. Cod. Sect. 382(d), the CPUC is mandated to complete a Low-Income Needs Assessment (LINA) Study every three years with the assistance of the Low Income Oversight Board.⁴ The LINA Study explores the current needs of the low income customers in the context of ESA program designs and examines low income implementation and the effectiveness of the services and measures in addressing the low income electricity and gas customers' energy expenditures, hardship, language needs, and economic burdens.

The IOUs propose two LINA Studies to begin during the 2021-2026 program cycle, with not-toexceed statewide budgets of \$500,000 each (allocated evenly between the CARE and ESA programs):

• 2025 Statewide LINA (to be scoped and solicited in 2023 and completed by December 31, 2025).

² Opening Testimony, Chapter 2, Section D.9.a, and D.10.a.

³ Opening Testimony, Chapter 2, Section D.9.a.

⁴ Cal. Pub. Util. Cod. Sect. 382(d). All statutory references are to the California Public Utilities Code unless expressly stated otherwise.

• 2028 Statewide LINA (to be scoped and solicited in 2026 and completed by December 31, 2028). As with the 2022 LINA Study, the 2028 LINA Study will cross program cycles and required authorized committed funding to be carried forward into the next program cycle.

In addition to the 2025 and 2028 LINA Studies described above, the IOUS will initiate planning for the 2022 LINA Study in 2019 and complete the Study in 2022 during the 2021-2026 program cycle. To secure funding to commence this study, the IOUs will file an Advice Letter to request authorization and budget for the 2022 LINA Study prior to the beginning of next cycle. The requested funding for the 2022 LINA Study will fund the entire study costs, including the related expenditures in 2019 and 2020. The IOUs plan to scope the Study in 2019-2020 in order to solicit and onboard a consultant in 2020. The IOUs propose to request unspent authorized, committed 2022 LINA budget from the 2017-2020 cycle, and request it be carried over into the next 2021-2026 program cycle to complete the Study by December 31, 2022.

Statewide ESA-CARE Categorical Program Study: The IOUs propose to conduct a study to update the list of categorically-eligible programs for ESA and CARE. The purpose of this study is to review the compatibility of these categorical program participant eligibility requirements with ESA and CARE eligibility requirements.

ESA and CARE programs are currently allowed to categorically enroll households that participate in other means-tested programs. The income requirement for enrolling in CARE and ESA programs is less than or equal to 200% of Federal Poverty Level, as set forth in Section 739.1(b)(1).⁵ The current list of categorically-eligible programs has not been reviewed or updated since 2013. This study will review eligibility requirements of currently authorized programs and seek other programs with similar eligibility criteria in order to update the list of means-tested programs that may be used to qualify customers to participate in CARE and ESA programs. This information can be used for program design and updates.

The proposed budget for this statewide study is \$150,000. Funding for this study would be evenly allocated between the CARE and ESA budgets. This study is anticipated to begin in 2021.

2.4 NON-ENERGY BENEFITS (NEBS) PRIMARY RESEARCH AND NEBS MODEL UPDATE

One of the recommendations from the 2019 NEBs study is for California to invest in primary data collection and research to form California-specific values for a selected set of NEBs. The California IOUs have not conducted any California-based primary research on NEBs since the first study establishing NEBs for the low income cost effectiveness tests in 2001.⁶ Until now,

⁵ Section 739.1(b)(1).

⁶ TecMarket Works, Skumatz Economic Research, Inc. and Megdal and Associates. The Low-income Public Purpose Test (LIPPT) Updated for Version 2.0, Final Report (May 25, 2001), Prepared for Reporting Requirements Manual Working Group and the Cost Effectiveness Committee

the IOUs have relied on secondary data and literature review to gather best available and most recent NEBs documentations and NEBs value data to update NEBs used in ESA cost effectiveness tests. This approach has not yielded the robust and reliable results that the IOUs and stakeholders desired.

During 2021-2026, the IOUs propose a focused primary market research effort to collect California-specific NEBs values. This focused study will use outputs and recommendations from the 2020 NEBs Follow-up Study. The results from the primary research will feed into the NEBs model for benefit calculation.

The preliminary budget for this ESA statewide study is \$500,000, allocated 100% to ESA. The IOUs will work with the ESA/CARE Study Working Group to finalize the project scope and timing.

2.5 OTHER EVOLVING STUDY AND DATA NEEDS

The IOUs propose an additional statewide ESA study budget of \$1,200,000 (allocated at \$300,000 for each IOU)⁷ for studies to be defined during 2021-2026 to support various IOU program data needs. These study needs may include ESA program pilot evaluation and assessment as well as other miscellaneous ESA data needs. IOUs recommend using the ESA/CARE Study Working Group to provide oversight for this expenditure

3 BUDGET SUMMARY AND ALLOCATION BY IOU

For the 2021-2026 ESA/CARE application, the IOUs propose to include an overall statewide evaluation budget of **\$4,850,000**. Table 1, below, is a statewide summary of proposed ESA/CARE study concepts and preliminary budget (including budget allocations to ESA and/or CARE), study scope and timing for 2021-2026. These details are subject to change and may evolve overtime. These changes will be managed as a part of the proposed ESA/CARE Study Working Group.

⁷ Each IOU is including \$300,000 of the total discretionary budget in their ESA study budgets, as shown in Table 2.

Table 1: 2021-2026 Statewide Study Summary Ta	able
---	------

Statewide Study Summary	Study Budgets	CARE Allocation	ESA Allocation
Impact Evaluation Studies (2-4 ESA Studies)	\$1,500,000	-	\$1,500,000
Process Evaluation Studies (1-4 ESA Studies)	\$500,000	-	\$500,000
Market Studies:			
 2025 Statewide LINA (1 ESA/CARE Study) 	\$500,000	\$250,000	\$250,000
 2028 Statewide LINA (It is anticipated that work on this Study will begin in 2026 and carry over into the next program cycle.) 1 ESA/CARE Study) 	\$500,000	\$250,000	\$250,000
 CARE-ESA Categorical Eligible Program Study (1 ESA/CARE Study) 	\$150,000	\$75,000	\$75,000
Non-Energy Benefit Primary Research and Model Update (1 ESA Study)	\$500,000	-	\$500,000
Additional M&E budget to be allocated to ESA studies:			
• PG&E	\$300,000	-	\$300,000
• SCE	\$300,000	-	\$300,000
SoCalGas	\$300,000	-	\$300,000
• SDG&E	\$300,000	-	\$300,000
Statewide Total	\$4,850,000	\$575,000	\$4,275,000

The IOUs propose to retain the existing Statewide study allocation:

- PG&E: 30%
- SCE: 30%
- SCG: 25%
- SDG&E: 15%

Table 2 summarizes the Statewide study allocation by IOU.

Budget Allocation	PG&E	SCE	SoCalGas	SDG&E	Total
Allocation % by IOU	30%	30%	25%	15%	100%
Allocated Statewide Study Budget	\$1,095,000	\$1,095,000	\$912,500	\$547,500	\$3,650,000
Discretionary Study Budget	\$300,000	\$300,000	\$300,000	\$300,000	\$1,200,000
Total	\$1,395,000	\$1,395,000	\$1,212,500	\$847,500	\$4,850,000
Average Budget Per Year	\$232,500	\$232,500	\$202,083	\$141,250	\$808,333

Table 3: 2021-2026 PG&E ESA and CARE Study Summary Table

^a LINA 2022 Study will be requested from 2017-2020 budget in an Advice Letter expected to be filed in Q4 2019. The AL will request to carryover committed LINA funding to the 2021-2026 cycle.

PACIFIC GAS AND ELECTRIC COMPANY APPENDIX D LONG TERM CARE PILOT

Long-Term CARE Customer Pilot

PG&E proposes the Long-Term CARE Customer (LTC) pilot during the 2021 – 2026 program cycle to test the effectiveness of outreach and communications with long-term CARE customers (defined as more than 10 years continuously) to increase their participation in ESA.

1. Overview of Budget

The proposed budget for the pilot is \$275,000.

Study	PG&E Cost
Long-Term CARE Customer Pilot	\$275 <i>,</i> 000

2. Projected Pilot Outcomes

- Increased ESA Program participation
- Insight into barriers around ESA participation
- Energy savings for ESA participants
- Reduced hardship for ESA participants
- Reduced CARE subsidy for non-CARE ratepayers as ESA participants decrease their energy usage

3. Brief Pilot Description

The Long-Term CARE Customer (LTC) pilot will focus on marketing and outreach strategy, tactics and messaging to assist in enrolling long-term CARE customers into the ESA program. The target customers will be selected from the population who 1) have been receiving the CARE discount for more than 10 years continuously, 2) have occupied the same premise during this time, and 3) have not participated in ESA. The total population as of June 30, 2019 was approximately 95,000.

Marketing and outreach materials will be developed specifically for the targeted groups. PG&E is proposing to leverage existing touchpoints and established relationships with the targeted population to promote the ESA program. There will be a customer participation survey after the marketing and outreach efforts to provide feedback on the customer experience.

The pilot population will be segmented in two groups. Both groups will receive information that they must respond or risk losing their CARE discount. However, the first group will receive outreach communications that focus on the customer's opportunity to enjoy the benefits of receiving no-cost energy saving products and services with free installation as part of the PG&E CARE program. The second group will receive outreach communications that focus on the economic impact of potentially losing their CARE discount if they fail to respond. Under which group would the targeted population be more likely to respond? Data collection and analysis on the impact of both positive benefits and negative economics will be important in informing future ESA and CARE enrollment policies.

4. Pilot Rationale and Expected Outcome

PG&E is proposing the Long-Term CARE Customer pilot for the following reasons:

- To test how positive benefits and negative economic incentives work in persuading long-term CARE customers to sign up for the ESA program.
- To gather more information on barriers to ESA participation.
- To propose any future policy changes for long-term CARE customers.

PG&E expects to uncover the best effective messaging for this population to take action since behavioral science indicates the fear of loss can be more motivating than the opportunity for benefits.

5. Pilot Implementation

The following implementation steps will be conducted for this study:

- Select two groups of 5,000 customers that have been receiving the CARE discount at the same premise for more than 10 years continuously and have not previously participated in ESA.
- Develop and implement targeted marketing and outreach plans to the selected groups. One will be focusing on the opportunity for free energy efficiency items and the other will be focusing on the possibility of losing the discount.
 - Each marketing and outreach plan should have multiple components, including mailed materials, phone calls, and in person conversations. Marketing and outreach plan should also include multiple languages to best reach the target population. The pilot should have a data gathering component to determine which efforts are effective, the associated costs and impact over time on the CARE discount 13 months post treatment.
- Track the customer interactions and responses.
- Conduct survey to gather customer feedback regarding outreach and messaging.
- Analyze all pilot results.
- Analyze the impact on CARE discount 13 months post treatment.
- Prepare report with recommendations for outreach and messaging best practices and any policy changes.

6. Pilot Budget & Timing Table

The pilot planning is expected to begin in late 2023 and pilot implementation is expected to begin in 2024. The following table provides estimates of time and cost based on initial planning assumptions.

Activity	Estimated Cost	Approximate Timing
Develop detailed pilot plan	\$30,000	1 month
Develop marketing materials	\$50,000	3 months
Implement pilot – 10,000 customers* NOTE: cost for ESA measures are included in ESA budget request	\$125,000	8-12 months
Customer Experience Survey	\$25,000	1 month
Analyze data	\$15,000	2 months
Prepare Report	\$30,000	3 months
Total	\$275,000	18 – 20 months

*Much of the forecasted pilot cost is anticipated to be outreach and follow up with the pilot participants.

PACIFIC GAS AND ELECTRIC COMPANY APPENDIX E WELCOME KIT ANALYSIS

ESA 2018 Campaign Analysis

May 15, 2019 Presented by: Targetbase

Image Source: PG&E ESA Q4 2018 Creative

AppE-1

ESA 2018 Analysis – Background & Objective

PFA

Through Q1-Q3 of 2018, ESA Acquisition was testing the following creative:

- New letter copy
- New Application (hand-raiser form)
 - Outer Envelope

Primary Objectives:

- Evaluate the results of creative tests conducted in 2018 Acquisition campaigns.
- Understand the contribution the CARE Welcome Kit is providing to ESA applications, assessments and treatments.
 - Examine the digital activity for customers receiving ESA Acquisition emails.
- Determine how many communications a customer received prior to applying for ESA. (in order to inform future Non-Responder efforts)

0|||

- DM Test Letter outperforms the Control Letter in terms of Response Rate.
- In Q1, the Non C-6 audience (Propensity Model) outperformed the C-6 audience (17.3% vs 13.8%). o d

DM + EM Recipients lead to more completions than the DM Only Recipients, even though the DM Only recipients generate a higher Response Rate.

- Out of all campaign responses for Q3, Q3B and Q4, customers receiving two touches generated more than 80% of the response.
- Open and Click Rates increased as the year progressed.

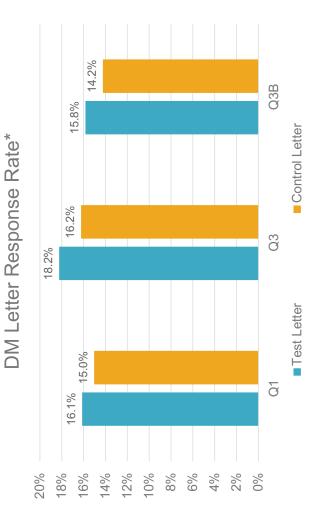

¥

- Significant drop-off of customers not completing the online application.
- CARE Welcome Kit continues to generate high quality ESA leads, leading to higher Assessment and AppE-3 Treatment Rates of Responders.

Throughout the course of the year, while the DM Test Letter outperformed the Control Letter in Response Rate, the Assessment and Treatment Rate for the Responders remained relatively flat across both versions. •

*Response Rate = Number of Customers who responded / Number of Customers who received a communication AppE-4

More Assessments and Treatments were generated from the Test Application compared to the Control Application, however the Control Applications generated a higher Response Rate. •

	Q1 Campaign	npaign	Q3 Campaign	npaign	Q3B Campaign	mpaign
	Control Application	Test Application	Control Application	Test Application	Control Application	Test Application
Response Rate **	17.9%	13.1%	20.2%	14.2%	17.7%	12.4%
Assessment Rate of Responders**	14.3%	16.4%	12.7%	15.4%	10.5%	15.1%
Treatment Rate of Responders**	9.6%	10.8%	11.3%	13.8%	8.2%	11.7%

*Response Rate = Number of Customers who responded / Number of Customers who received a communication **Assessments and Treatments are as of 04/01/2019 AppE-5

Non C-6 Audience Segment Outperformed C-6 Audience in Q1

- In terms of Response Rate, the Non C-6 audience segment outperformed the C-6 audience segment in the Q1 campaign. Assessments and Treatments were flat amongst the two groups. •
 - The Non C-6 audience is based on selecting customers using the ESA Propensity Model. •

Q1 2018 Campaign

*Response Rate = Number of Customers who responded / Number of Customers who received a communication **Assessments and Treatments are as of 04/01/2019 AppE-6

Non C-6 audience

C-6 audience

DM + EM Recipients Led to a Higher Assessment & Treatment Rate

- In terms of Response Rate, the DM Only Recipients outperformed those that received both DM and EM
 - However, of those that Responded, DM + EM Recipients have a higher conversion rate to Assessments and Treatments.

	g	-	Q3	S	Q3B	38
	DM Only	DM & EM	DM Only	DM & EM	DM Only	DM & EM
Response Rate*	16.8%	12.8%	19.8%	13.5%	16.7%	11.6%
Assessment Rate of Responders**	14.5%	17.3%	12.0%	17.4%	11.2%	15.9%
Treatment Rate of Responders**	9.5%	11.6%	10.8%	15.6%	8.8%	12.2%

*Response Rate = Number of Customers who responded / Number of Customers who received a communication **Assessments and Treatments are as of 04/01/2019 AppE-7

Out of all Campaign Responses for Q3, Q3B and Q4, 54% responded after receiving the first communication, 82% responded after receiving the second communication, and the remaining after receiving the third communication. •

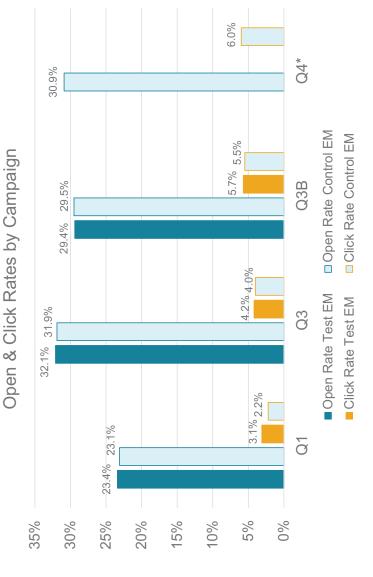

*Results do not include those that responded to multiple communications and Q1 2018 to keep the audience selection consistent across the campaigns. (Q1 2018 had C6 and Non C-6 customers)

Open and Click Rates Increased Throughout 2018

Test Email and Control Email had very similar results, Response Rate was almost flat across the email versions. •

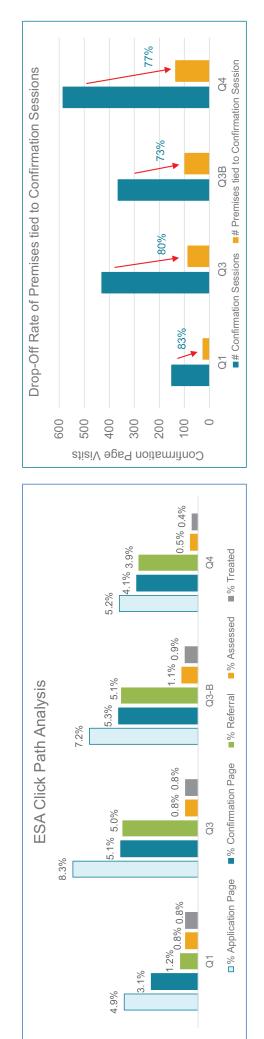

* Q4 sent the Control EM creative only.

- PF&F
- Due to a customer not having to log in to their account to apply for ESA, leads to the inability to identify the customers that begin the application process but do not reach the Confirmation Page.
- reached the Confirmation Page. PG&E could track customers through the ESA online application process if a In addition, there is a large drop-off in being able to tie back Premise ID to the Session ID for customers that customer could be identified.
 - Adding a tag to the Account Number field on the Application Page could lead to the identification of customers. 0

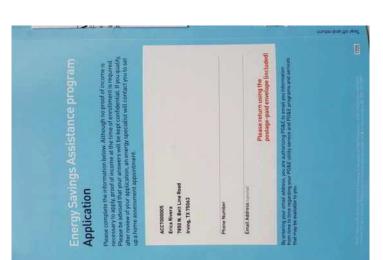

CARE Welcome Kit generates a large number of Responses, but more significantly these customers have a much higher Assessment and Treatment Rate of Responders, compared to Acquisition campaigns. •

ESA Acquisition Campaigns*	16.7%	12.1%	9.0%
Welcome Kit	6.7%	64.2%	24.5%
	Response Rate	Assessment Rate of Responders	Treatment Rate of Responders

AppE-11

Creative: DM CARE Welcome Kit *Average of Q1, Q3, Q3B, and Q4 ESA Campaigns, across all creative versions.

Recommend sending two Acquisition communications to customers as it generates the highest volume of responses. Only recommend sending three communications as the budget allows.

average (29%)*. To optimize the Open Rate without DNOs and subsequently lead to more Responses, With Email DNOs included, ESA Open Rates are the same compared to the PG&E 2018 Residential recommend testing various subject lines and email templates.

- Place a tag on the Account Number field (to the online ESA Application Page) to generate the ability to tie a customer to a specific action. By doing so will improve drop-off tracking, retargeting, application page refinements and identify conversion opportunities.
- Continue to include the ESA Application in the CARE Welcome Kit as it generates an increased rate of Responders, as well as a higher rate of Assessments and Treatments, compared to ESA Acquisition campaigns.

33

PACIFIC GAS AND ELECTRIC COMPANY STATEMENT OF QUALIFICATIONS OF PAOLA BENASSI

- 3 Q 1 Please state your name and business address.
- A 1 My name is Paola Benassi, and my business address is Pacific Gas and
 Electric Company, 245 Market Street, San Francisco, California.
- Q 2 Briefly describe your responsibilities at Pacific Gas and Electric Company
 (PG&E).
- A 2 I am currently a Principle Program Manager on PG&E's Energy Efficiency
 team. Previously, I was the Manager on PG&E's Income Qualified
 Programs and Disadvantaged Communities team. My responsibilities at
- PG&E have included managing teams in the design, implementation, and
 management of energy efficiency (EE) programs and low income programs.
- 13 Q 3 Please summarize your educational and professional background.
- A 3 I received a Bachelor of Science degree in Engineering and a Master of
 Science degree in Engineering, both from San Jose State University in
 San Jose, California. I joined PG&E's EE team in 2010 and have managed
 various teams in the design, implementation, and running of EE programs.
 In 2016, I began managing the Energy Savings Assistance Program team in
 overseeing the strategy and operations of the program. I have of 20 plus
 years of program/product management experience from a variety of
- 21 industries including start-ups and large international companies.
- 22 Q 4 What is the purpose of your testimony?
- A 4 I am sponsoring the following testimony of Energy Savings Assistance and
 California Alternate Rates for Energy (CARE) Programs and Family Electric
 Rate Assistance (FERA) Programs and Budgets Application for the
 2021 2026 Program Years:
- Chapter I, "Energy Savings and Assistance Program Plan and Budget":
 - Section C, "ESA Program Goals and Budgets":
 - Subsection 5;
- 30 Section D, "ESA Program Design and Delivery":
 - Subsection 8, 9;
- 32 Section E, "ESA Program Administration":
 - Subsection 1, 2;

- Attachment D, "GANTT CHART"; and
- Chapter IV, "Excel Attachments":
- 3 ESA Budget Tables A-1, A-2, A-3, A-10.
- 4 Q 5 Does this conclude your statement of qualifications?
- 5 A 5 Yes, it does.

PACIFIC GAS AND ELECTRIC COMPANY

2 STATEMENT OF QUALIFICATIONS OF LORI LEIVA JUNGBLUTH

3 Q 1 Please state your name and business address.

1

- A 1 My name is Lori Leiva Jungbluth, and my business address is Pacific Gas
 and Electric Company, 245 Market Street, San Francisco
- 6 Q 2 Briefly describe your responsibilities at Pacific Gas and Electric Company
 7 (PG&E).
- A 2 I am a Principal Program Manager on the Income Qualified Programs and
 Disadvantaged Communities team where I lead strategy for the Energy
 Savings Assistance (ESA) Program and serve as the liaison to the Native
 American Tribal Communities.
- 12 Q 3 Please summarize your educational and professional background.
- A 3 I received a Master's degree in Business Administration from Notre Dame 13 de Namur University and a Bachelor's degree in Business from University of 14 San Francisco. I joined PG&E in 2013 to lead the Customer Strategy and 15 Research team where my role was to uncover insights to help improve 16 customer experience, engagement, and satisfaction; in addition to 17 influencing changes in communications, program/product development and 18 operations. In 2016, I moved to the Pricing Products team and led product 19 management work on the statewide initiative for Residential Rate Reform. I 20 joined the Income Qualified Programs team in 2018 to lead strategy for the 21 new ESA Program design and serve as liaison for Tribal Communities. 22 23 Before PG&E, I had a successful career as a supplier of services, and held Senior Vice President level positions at global services firms where I 24 provided strategy consulting, program management, customer research and 25 26 insights, marketing and communications to many Fortune 500 companies in 27 the financial services, technology and consumer packaged goods industries.

PACIFIC GAS AND ELECTRIC COMPANY STATEMENT OF QUALIFICATIONS OF HUNG (EUNICE) LI

- 3 Q 1 Please state your name and business address.
- A 1 My name is Hung (Eunice) Li, and my business address is Pacific Gas and
 Electric Company, 77 Beale Street, San Francisco, California.
- 6 Q 2 Briefly describe your responsibilities at Pacific Gas and Electric Company
 7 (PG&E).
- A 2 I am currently a Supervisor in Energy Accounting which oversees
 accounting and cost recovery for electric transmission business and public
 purpose programs including but not limited to low income programs, energy
 efficiency and demand response. I also oversee several other reporting
 functions for Energy Accounting which include reporting with California
 Public Utilities Commission on balancing accounts and reporting with
 Department of Water Resource (DWR) for DWR bonds remittances.
- 15 Q 3 Please summarize your educational and professional background.
- A 3 I graduated with a Bachelor's Degree with a concentration in Accounting in 16 2001 from the Chinese University of Hong Kong. After college, I joined 17 Deloitte Hong Kong as auditor for 4 years. While I was an auditor in Deloitte 18 Hong Kong, I completed and certified as public accountant with Association 19 of Chartered Certified Accountants in United Kingdom and the certification is 20 currently inactive. I joined PG&E in 2006 as an Accounting Analyst in the 21 Financial Accounting team. Since then I have been taking on increasing 22 23 responsibilities and different accounting areas in various accounting teams. I was promoted to Supervisor, overseeing accounting area for debt, 24 intercompany transactions, various subsidiaries and consolidation in 2010. 25 In 2012, I moved on to Revenue Accounting. Since 2016, I moved to 26
- 27 Energy Accounting and is responsible for responsibilities stated in
- Answer A2 above.

- 2 A 5 Yes, it does.

PACIFIC GAS AND ELECTRIC COMPANY STATEMENT OF QUALIFICATIONS OF ERIK V. OLSEN

- 3 Q 1 Please state your name and business address.
- A 1 My name is Erik V. Olsen, and my business address is Pacific Gas and
 Electric Company, 245 Market Street, San Francisco, California.
- 6 Q 2 Briefly describe your responsibilities at Pacific Gas and Electric Company
 7 (PG&E).
- A 2 I am the Product Marketing Manager for PG&E's Energy Efficiency and
 Low Income Programs. I lead a team that is responsible for the strategic
 planning, development, and implementation of customer marketing,
 education and outreach plans for CARE, FERA, Energy Savings Assistance,
- and Residential and Non-Residential Energy Efficiency productsand services.
- 14 Q 3 Please summarize your educational and professional background.
- A 3 I received a Bachelor of Arts degree in Business Administration, with
 concentration in Marketing from the University of Washington.
- Prior to working for PG&E, I spent more than 10 years in brand
 management and marketing for leading consumer brands as well as
 business to business companies. During this time, I developed and
 implemented integrated marketing plans and managed marketing return on
 investment operations.
- In 2008, I accepted the contract position of Program Marketing Manager 22 23 with PG&E. I was in charge in developing strategy for customer outreach and education related to Peak Day Pricing and assisted with the 2009 Rate 24 Design Window outreach testimony. In September 2009, my responsibilities 25 26 evolved to include management of Peak Time Rebate and Real Time 27 Pricing, and project planning and early implementation of PG&E's Peak Day 28 Pricing outreach plans. In 2011, I worked on the redesign of PG&E's customer energy statement and later that year, sponsored testimony and 29 30 workpapers as a witness in the 2010 Rate Design Window Application. Between 2012 and 2018, I have supported Demand Response, Smart Grid 31 and General Rate Case proceedings; and held roles of increasing 32 responsibility in Energy Efficiency Strategy, Retail and Channel Marketing 33

1		Strategy and Small and Medium-Sized Business Marketing Strategy.		
2		In November 2018, I accepted the position that I now hold.		
3	Q 4	What is the purpose of your testimony?

CO	Carbon Monoxide
COC	Community Outreach Contractor
COL	Conclusion of Law
CPUC or Commission	California Public Utilities Commission
CSD	California State Department of Community Services and Development
CSI	California Solar Initiative
СТА	Call-to-Action
D.	Decision
DACs	Disadvantaged Communities
DAC-SASH	Disadvantaged Communities Single-Family Affordable Single Homes
DHHS	Department of Health and Human Services
DM	Direct Mail
DNV-GL	Det Norske Veritas – Germanischer Lloyd
DRAM	Demand Response Auction Mechanism
ED	Energy Division
EE	Energy Efficiency
EM	E-mail

Acronym	Definition
ESA	Energy Savings Assistance
ESACET	Energy Savings Assistance Cost Effectiveness Test
FERA	Family Electric Rate Assistance
FPL	Federal Poverty Level
FTP	File Transfer Protocol
GHG	Greenhouse Gas
GRC	General Rate Case
GTSR	Green Tariff Shared Renewables
H&S	Health & Safety
HCS	Health, Comfort, and Safety
HUD	Housing and Urban Development
HVAC	Heating, Ventilation and Air Conditioning
IOU	Investor-Owned Utilities
IRS	Internal Revenue Service
IT	Information Technology
IVR	Interactive Voice Response
kWh	kilowatt-hours
LIEE	Low-Income Energy Efficiency
LIHEAP	Low Income Home Energy Assistance Program
LINA	Low-Income Needs Assessment
LIOB	Low-Income Oversight Board
LIWP	Low Income Weatherization Program
LTC	Long-Term CARE
M&O Plan	Marketing & Outreach Plan
MCAL	Mid-Cycle Advice Letter
MCWG	Mid-Cycle Working Group
ME&O	Marketing, Education and Outreach
MF	Multi-Family
MFWB	Multi-Family Whole Building
MFWG	Multi-Family Working Group
NEB/NEI	Non-Energy Benefits and Non-Energy Impact
NEBs	Non-Energy Benefits
NEBS 2.0	NEBS Update Study
NRDC	Natural Resources Defense Council
NSDL	Non-Standard Disposition Letter
ODRS	online data reporting systems

Acronym	Definition
OIR	Order Instituting Rulemaking
OP	Ordering Paragraph
PAC	Participant Cost Test
РСТ	Programmable Communicating Thermostat
PEV	Post Enrollment Verification
PFM	Petition for Modification
PG&E, the Company, or the Utility	Pacific Gas and Electric Company
PHC	Prehearing Conference
POA	Property Owner Authorization
PPP	Public Purpose Program
PPP-CARE	Public Purpose Program Surcharge – California Alternate Rates Energy Account
PPP-LIBA	Public Purpose Program Low-income Balancing Account
PPP-LIEE	Public Purpose Program Low-income Energy Efficiency Balancing Account
PPP-RAM	Public Purpose Program Revenue Adjustment Mechanism
PR	Public Relations
PSPS	Public Safety Power Shutoff
PYs	Program Years
QA	Quality Assurance
R.	Rulemaking
Res.	Resolution
RF&U	Revenue Fees and Uncollectibles
RFP	Request for Proposal
RIM	Ratepayer Impact Measure Test
SASH	Single-Family Affordable Solar Homes
SB	Senate Bill
SCE	Southern California Edison Company
SDG&E	San Diego Gas & Electric Company
SERA	Skumatz Economic Research Associates, Inc.
SMUD	Sacramento Municipal Utilities District
SoCal Gas	Southern California Gas Company
SOMAH	Solar on Multi-family Affordable Housing
SPOC	Single Point of Contact
TANF	Temporary Assistance for Needy Families
TELACU	The East Los Angeles Community Union

Acronym	Definition
TOU	Time-of-Use
TRC	Total Resource Cost
U.S.	United States
WDO	Workforce Development Organization
WE&T	Workforce Education & Training
WIC	Women, Infants, and Children
YOY	year-over-year
