**DECISION ADOPTING DEMAND RESPONSE
ACTIVITIES AND BUDGETS FOR 2012 THROUGH 2014**

1. Summary

By this decision, the Commission adopts demand response (DR) activities and budgets for Pacific Gas and Electric Company (PG&E), San Diego Gas & Electric Company (SDG&E), and Southern California Edison Company (SCE) (collectively, the Utilities) to conduct DR programs, pilots and associated activities for the years 2012 through 2014. We authorize a budget of \$191,886,588 for PG&E, \$65,806,526 for SDG&E, and \$196,338,052 for SCE.

We also approve DR customer incentives of \$33.5 million requested by SDG&E in this application,¹ as part of the above authorized budget, and authorize PG&E and SCE to pay their DR response customers the incentives that we approved in other proceedings.² This proceeding is closed.

2. Background

The Commission broadly defines demand response (DR) as reductions or shifts in electricity consumption by customers in response to either economic or reliability signals. Economic signals come in the form of electricity prices or financial incentives and reliability signals present themselves as alerts during times when the electricity system is vulnerable to extremely high prices or reliability is compromised. We have generally categorized DR programs

¹ SGE-05 at Appendix A, Table A-3.

² PG&E received approval of \$68.7 million in DR customer incentives through Decision (D.) 07-09-004 and \$15.2 million in DR customer incentives through D.07-05-029. SCE received approval of \$252.9 million for DR customer incentives through D.09-08-028, \$8.5 million through D.10-12-047. SCE seeks approval of \$199.3 million in DR customer incentives through Application (A.) 11-03-001 and A.10-07-016.

according to whether their purpose is to address spikes in market prices in the case of price-responsive programs or dynamic pricing or to relieve threats to system reliability in the case of reliability programs. Regardless of the category, the intent of the DR programs is to take advantage of these signals to maximize ratepayer benefit. Many of the decisions made in the applications today are with this intent in mind.

2.1. Procedural History

In Decision (D.) 09-08-027, the Commission adopted 2009-2011 DR activities and budgets for Southern California Edison Company (SCE), San Diego Gas & Electric Company (SDG&E) and Pacific Gas and Electric Company (PG&E), and required PG&E, SCE, and SDG&E (collectively, the Utilities) to file applications by January 30, 2011 for approval of DR activities and budgets for 2012-2014. D.10-12-024, which provides a consistent method for estimating the cost-effectiveness of DR activities among the Utilities, revised the deadline for filing of the applications to not later than March 1, 2011.

On March 1, 2011, the Utilities each filed an application for approval of their DR programs, activities, pilots, and budgets for 2012-2014 (Applications). Assigned Administrative Law Judge (ALJ) Kelly A. Hymes issued a ruling on March 30, 2011, consolidating the three applications, and setting a prehearing conference for May 3, 2011. Parties filed timely protests and responses to the Applications on April 1, 2011 and April 4, 2011.³

³ The assigned ALJ e-mailed the service list on March 31, 2011 clarifying that because of the consolidation of the three Applications, protests and responses would be due on April 4, 2011. North America Power Partners, Inc. (NAPP) and California Independent System Operator Corporation (CAISO) filed responses on April 1, 2011; Comverge, Inc., Enernoc, Inc., Energy Inc., California Energy Storage Alliance (CESA), and Ice Energy

Footnote continued on next page

In a related matter, ALJ Hymes issued a ruling on April 29, 2011⁴ that incorporated by reference into the record of this proceeding the Statewide Joint Investor-Owned Utility Study of Permanent Load Shifting⁵ (PLS Study) and its associated comments and reply comments.⁶ The ruling provided further guidance to the Utilities for revising estimates of the cost-effectiveness of proposed PLS activities in the applications and directed the Utilities to serve the revised estimates on May 20, 2011.

On May 3, 2011, the ALJ held a prehearing conference to determine parties, scope, schedule and other procedural matters. Aside from the three utility applicants, thirteen parties actively participated in this proceeding: California CESA, the CAISO, California Large Energy Consumers Association (CLECA), CALMAC Manufacturing Corporation (CALMAC), Demand Response Aggregators (DR Aggregators), Direct Access Customer Coalition (DACC), AReM, DRA, ICE Energy (ICE), Marin Energy Authority, NAPP, The Utility Reform Network (TURN), and the Utility Consumers Action Network (UCAN).

Following the prehearing conference, the assigned Commissioner and ALJ jointly issued a scoping memo on May 13, 2011 (Scoping Memo) that set out the

Inc. filed responses on April 4, 2011; and the Division of Ratepayer Advocates (DRA) and the Alliance for Retail Energy Markets (AREM) filed protests on April 4, 2011.

⁴ The April 29, 2011 ruling is available at <http://docs.cpuc.ca.gov/efile/RULINGS/134347.pdf>.

⁵ The assigned ALJ in Rulemaking (R.) 07-01-041, issued a ruling on February 11, 2011 placing the PLS Study into the formal record of that rulemaking. The PLS Study is available at <http://docs.cpuc.ca.gov/efile/RULINGS/130717.pdf>.

⁶ The assigned ALJ issued a ruling on July 29, 2011 directing SCE to file and serve errata to the PLS Study. SCE filed and served the errata to the PLS Study on August 2, 2011.

scope of the proceeding, which is discussed below. The Scoping Memo directed the Utilities to further revise the cost-effectiveness analyses using updated Load Impact Report data and consensus values. The scoping memo directed the Utilities to serve this set of revisions on May 27, 2011.

Parties served testimony on June 13, 2011 and rebuttals on July 11, 2011. During July 19 -22, 2011, parties participated in four days of evidentiary hearings. Following hearings, the parties received briefing guidance from the assigned ALJ in an August 1, 2011 Ruling. In this Ruling, PG&E was instructed to file a motion to late file versions of its DR Reporting Templates as late-filed exhibits. PG&E complied and the assigned ALJ issued a ruling on August 17, 2011 identifying and receiving the DR Reporting Templates into evidence.

On August 5, 2011, the assigned ALJ issued a ruling incorporating into the record of this proceeding responses by the Utilities to Commission Staff data requests. An attachment to the ruling included questions to the Utilities and the associated utility responses.⁷ Parties provided comments to these responses on August 12, 2011.⁸

⁷ PG&E did not respond to the data request in a timely manner. Due to time constraints of this proceeding, PG&E's responses were not included in the ruling attachment and thus are not a part of the record of this proceeding.

⁸ In comments to the August 5, 2011 ruling, DR Aggregators object to the "incorporation" into the record of this proceeding of the Utilities' responses to the Commission staff data request. SCE objected to the omission of a reply opportunity but provided its reply in Opening Briefs. In comments to the ruling, SDG&E stated that it did not consent to the post-hearing evidence being entered into the record. SDG&E has no objection to the inclusion of its data request responses in the record at this time for comment but not evidence. These objections are duly noted.

Parties filed briefs on August 21, 2011⁹ and reply briefs on September 9, 2011. The assigned ALJ submitted the record of this proceeding on September 9, 2011.

On December 28, 2011, the assigned Commissioner issued a ruling (ACR) authorizing the Utilities to continue DR expenditures and to continue to operate the current DR programs in 2012 until we issued a decision on these Applications. The ACR also directed the utilities to continue to record all expenses as previously directed by the Commission. The Commission ratified that ACR on January 12, 2012.

2.2. Scope of Proceeding

The scope of this proceeding is a review of the three 2012-2014 DR applications for compliance and reasonableness. The assigned Commissioner and ALJ emphasized in the Scoping Memo that DR is an essential piece of the California energy policy framework and, thus, it is crucial that what we approve in the Applications takes into account not only the policies set in Commission energy proceedings, but the energy policies set across the state of California. Accordingly, DR programs and their associated budgets requested in the Applications have been reviewed in three categories: compliance, reasonableness, and meeting future energy needs. Other matters, such as fund shifting, revenue requirement and cost recovery are also included in the scope of this proceeding and addressed in this decision.

In addition to a review of the DR programs, parties brought to light several policy issues requiring attention by the Commission. Some of these

⁹ By e-mail ruling, the ALJ revised the deadline, from August 19, 2011 to August 22, 2011, for parties to submit Opening Briefs.

issues affect more than one DR program such as cost-effectiveness, baseline methodology, dual participation and bilateral contracts with third party DR providers. Other issues look to the future of DR. These include the coordination of DR with California energy policies, the integration of DR programs with CAISO energy markets, and DR market competition.

2.3. Factors Considered in the Review of Applications

As discussed above and in accordance with the Scoping Memo, we review the three Applications in terms of compliance, reasonableness and meeting future energy needs.

In regards to reviewing the Applications for compliance, the Scoping Memo directed that the Applications comply with any and all directives related to DR, including a Guidance Ruling issued by ALJ Jessica Hecht on August 27, 2010. As mentioned in the Scoping Memo, we focus the proceeding on DR-specific directives, the analyses will also look to ensure compliance with related directives such as the Resource Adequacy rules. The Scoping Memo also noted that parties should be aware that Commission decisions containing references to DR in general may apply to these Applications, e.g., D.11-01-036 encouraged PG&E to improve the price trigger for its Air Conditioning (AC) cycling program in its 2012-2014 DR application. Furthermore, several Commission proceedings may contain potential overlap, e.g., Application (A.) 10-09-002, the Dynamic Pricing Proceeding.¹⁰ The Scoping Memo cautioned

¹⁰ We will not, however, review dynamic rates themselves. The Guidance Ruling declares, on page 5, that the DR applications proceeding will focus on price-responsive demand response, not dynamic rates. Footnote 5 accompanies this declaration, stating, "The authority to develop and recover costs associated with dynamic rates will be

Footnote continued on next page

parties that these proceedings would be monitored for any potential overlap with or impact on this proceeding. As discussed throughout this decision, the Commission is working to ensure that DR policies do not contradict policies in other areas of energy. Beyond contradiction, as we integrate DR into our portfolio mix, we seek to have it complement other energy policies going forward.

In addition, this proceeding examines the compliance of the cost-effectiveness measurements and inputs. We note that these Applications are the first to use Cost-Effectiveness Protocols (Protocols) developed and adopted by the Commission in D.10-12-024. Because this decision is the first time we apply the Protocols to the DR programs, it is prudent for us to remain flexible in our evaluation of the programs to ensure the right outcome in terms of investment in cost-effective DR.

The second criterion we use to evaluate these Applications is reasonableness. In this context, we examine the reasonableness of the DR program and portfolio design in terms of cost-effectiveness, track record, future performance, cost, flexibility and versatility, adaptability, locational value, integration, consistency across the Utilities' applications, simplicity, recognition, environmental benefits and consistency with general Commission policies¹¹ and policies affecting revenue allocation. We will discuss our review approach to using the Protocols in combination with these factors.

addressed in other proceedings." The Ruling notes that utilities should keep in mind that the proposals should complement dynamic pricing and/or respond to wholesale price signals.

¹¹ The Commission utilized these identical factors to analyze the 2009-2011 DR applications.

In regards to reviewing the Applications to meet future energy needs, we consider the evolving nature of DR as well as the impact of its evolution on both current and future applications. This proceeding considers the adequacy of the DR programs, looking at whether existing and proposed programs and pilots are sufficient to meet California energy goals in light of the changing nature of the energy grid. In particular, we recognize with the implementation of a 33 percent renewables portfolio standard (RPS), we may need additional flexibility from the grid to integrate intermittent renewable resources.¹² The need for this flexibility is not fully determined, but we can easily envision a scenario in which DR can complement renewable integration. When determining reasonableness, we will consider how investments in DR today could enable future renewable integration needs. In addition, our review will speak to specific activities including CAISO market integration and DR market competition. Because we anticipate that California's future energy policies needs to be dynamic, we often point to the California Energy Action Plan¹³ and the California Long Term Energy Efficiency Strategic Plan (Strategic Plan) so as to ensure coordination between fundamental direction as given in these documents and how to best integrate them into the DR policy framework.

¹² On April 12, 2011, California Governor Jerry Brown signed Senate Bill (SB) X1-2, requiring all California utilities, public and private, to obtain 33 percent of their electricity from renewable sources by the end of 2020. The Commission is implementing this legislation in R.11-05-005.

¹³ *Energy Action Plan I*, California Energy Commission, California Public Utilities Commission and Consumer Power and Conservation Financing Authority, May 8, 2003. Available at: http://docs.cpuc.ca.gov/word_pdf/REPORT/28715.pdf.

3. Motion of the Division of Ratepayer Advocates

Pursuant to Rule 11.4 of the Commission's Rules of Practice and Procedure, the DRA filed a motion on August 22, 2011 requesting the Commission for leave to file under seal the confidential Attachment A to DRA's Opening Brief. Pursuant to Public Utilities Code Section 583, PG&E designated the information contained in Attachment A as confidential. No party objected to the motion. In accordance with our Rules of Practice and Procedure, we find the motion to be reasonable. We grant DRA's motion to file under seal the confidential Attachment A.

We affirm all other assigned Commissioner and ALJ Rulings, including email rulings, in this proceeding. All motions not previously ruled upon or addressed in this decision are denied.

4. Policy Context

4.1. The Strategic Plan

Understanding the need to effect lasting transformation in the market for energy efficiency, the Commission developed the Strategic Plan in September 2008.¹⁴ The Strategic Plan set forth a roadmap for energy efficiency in California through the year 2020. Recognizing the importance of coordination and integration, the Strategic Plan includes, as one of its cross-cutting areas, Demand Side Management (DSM) Coordination and Integration.¹⁵ The vision of this cross-cutting area is that energy efficiency and DR (amongst others) are offered as elements of an integrated solution that supports California's energy and carbon reduction goals immediately. The Strategic Plan called for a shift away from single-product DSM approaches to more integrated approaches. These integrated approaches enable offerings of packages that maximize energy savings and improve utility program overhead efficiencies.

The goal of the Integrated Demand-Side Management (IDSMD) cross-cutting sector is to deliver IDSMD options that include energy efficiency, DR, energy management, and self-generation measures through coordinated marketing and regulatory integration. The Strategic Plan lays out three levels of integration: (1) comprehensive and coordinated marketing, (2) program delivery coordination, and (3) technology and systems integration. We used the IDSMD portion of the Strategic Plan as a point of reference in our review of the Applications and to provide guidance of future DR applications.

4.2. California Energy Agencies' Policies

For more than a decade, California's energy and air quality agencies have recognized the vital role of DR in meeting our shared responsibilities to provide clean, safe and reliable energy at reasonable rates. The foundational principal is the California's loading order policy, adopted by California energy agencies in the 2003 Energy Action Plan and reiterated in the Energy Action Plan II.¹⁶ The energy-sector measures articulated in the California Air Resources Board's Assembly Bill (AB) 32 Scoping Plan reinforce and amplify the central importance of the Loading Order.¹⁷ Energy Action Plan II delineates priorities for the deployment of cost-effective energy resources to meet California's energy needs and ranks energy efficiency and DR programs first in the "loading order."¹⁸ Energy Action Plan II also emphasized a need for DR programs that result in cost-effective savings and the creation of standardized measurement and evaluation mechanisms to ensure verifiable savings.

To ensure aggressive implementation of DR, in Energy Action Plan II we established a target of meeting 5 percent of peak demand with price responsive DR. A recent assessment of our progress found that we are far from meeting this goal. We remain committed to meeting this target and to increasing our reliance

on cost-effective DR. We believe that the opening of the CAISO's markets to DR coupled with ongoing enhancements of our Resource Adequacy program will facilitate progress toward meeting this goal.

We also expect that DR will be an increasingly valuable resource as we pursue future policy challenges. In September 2010, the Commission, the California Air Resources Board, the California Energy Commission (CEC), the California Environmental Protection Agency, and CAISO jointly unveiled a collaborative plan and vision titled, "*California's Clean Energy Future.*" The plan outlines how California will meet its ambitious energy policies and goals for the future including the reduction of California electric consumption and peak demand, integration of sufficient renewable resources to meet the 33 percent RPS and retirement or repowering of Once-Through-Cooling Plants. The California Clean Energy Future plan expressly acknowledges that in addition to its historic role as an emergency and peak demand management tool, DR will be able to provide a range of services that can support grid integration of large quantities of intermittent and variable renewable resources. The plan also articulates our collective commitment to integrating DR into the CAISO's wholesale energy markets.

Given the extent and ambition of these statewide policies and goals, we reviewed the Utilities' Applications with an eye toward ensuring that the DR programs and policies we adopt today move us toward attainment of these goals.

4.3. CAISO's DR Markets

Over the last five years, as part of its Market Redesign and Technology Upgrade (MRTU)¹⁹, CAISO has engaged stakeholders in designing market products where capacity represented by DR can be bid into wholesale markets, just as traditional generation can be done today. The CAISO expects that integrating DR into its wholesale markets will increase competition, promote efficiency and reduce costs.

Through its stakeholder process CAISO has developed two wholesale market products: (1) Proxy Demand Resource (PDR) and (2) Reliability Demand Response Resource (RDRR). PDR enables DR participation as a single resource or an aggregation of resources in the wholesale day-ahead and/or real-time energy markets and in the Ancillary Services market. In July 2010, the Federal Energy Regulatory Commission (FERC) approved CAISO's PDR. RDRR enables emergency responsive DR resources to integrate into the CAISO market and operations. However, on February 16, 2012, FERC rejected the CAISO's proposed RDRR tariff and provisions.

The Commission has taken a staged approach toward involving the Utilities and their customers to wholesale DR competition. Initially we focused on the Utilities' readiness to bid DR into wholesale markets. In R.07-01-041, the Commission stated that it would consider modifications to DR programs needed to support CAISO's efforts to incorporate DR into wholesale market design

an, January 2011, can be found at:

http://www.cpuc.ca.gov/NR/ronlyres/A54B59C2-D571-440D-9477-3363726F573A/0/CAEnergyEfficiencyStrategicPlan_Jan2011.pdf.

¹⁹ In 2005

protocols.²⁰ The Commission has been actively working within the CAISO stakeholder process to that end. The Utilities have worked to develop modifications to their current DR programs to allow the DR programs to be compatible with the CAISO's market products.

We have also encouraged the Utilities to participate in the CAISO's PDR. In 2009, the Commission ordered the Utilities to modify existing DR programs such that at least 10 percent of their DR programs would comply with the requirements of PDR.²¹ In December 2010, the Commission authorized the Utilities to operate pilot projects that could participate in PDR.²²

The Commission is now working to facilitate the next phase of DR wholesale integration--direct participation in CAISO whole electricity markets. Direct participation is the ability of bundled retail electric customers, either on their own or through an aggregator or third party DR provider, to bid DR directly into CAISO wholesale electricity markets. In 2009, the Commission opened Phase 4 of R.07-01-041²³ in response to FERC Order 719²⁴ which required CAISO to allow direct participation if state laws and rules do not prohibit such bidding. In D.10-06-002, we barred direct participation of investor-owned utilities (IOU) customers in the CAISO's wholesale market pending development of ratepayer protections and other relevant rules. We noted however that "Acting expeditiously to allow end-use customers or aggregators to bid DR resources

²⁴ *Wholesale Competition in Regions with Organized Electric Markets*, (FERC Order 719) issued October 17, 2008 in RM07-19 and AD07-7.

directly in [CAISO's] markets...is consistent with our identification of DR as one of the state's preferred means of meeting growing energy needs."²⁵ We are working to develop a new retail tariff rule, Rule 24, which will govern the terms and conditions of retail customers' participation in wholesale DR transactions. In 2011, Commission Staff issued a draft of Rule 24, and stakeholders subsequently provided comments. We have deferred adopting a final version of Rule 24 pending resolution of ongoing litigation at FERC over compensation rules for PDR resources. While some questions remain unresolved, we now are in a position to move forward with consideration of Rule 24 and expect to issue a decision in the near term.

We are also taking steps to update our current Resource Adequacy program rules to conform to the CAISO's wholesale market and place DR on an equal footing with generation resources. In D.11-10-003, we directed that beginning in 2013 retail non-dynamic pricing DR resources must be dispatchable locally in order to qualify for local Resource Adequacy credits. We are also working to harmonize our Resource Adequacy counting method with the approach used for conventional supply side resources. In D.11-10-003, we stated our intention to move away from our historical approach to Resource Adequacy accounting for DR in which the Resource Adequacy value attributed to DR programs has been "taken off the top" or used to reduce a utility's Resource Adequacy obligation. We will continue this practice for dynamic pricing programs, which are not dispatchable locally. Beginning in 2013, we will create a

²⁵ D.10-06-002 at. 16.

new Maximum Cumulative Capacity bucket for DR consistent with Resource Adequacy counting conventions for generation.

The next major policy question we must address is the extent to which we will embrace competitive procurement of DR and the timeline in which this transition will occur. Historically, California has employed a utility-centric model of DR procurement that allows only a limited role for third party aggregators. However, this model is changing. The CAISO's market upgrades and regulatory changes now underway at this Commission will soon make it possible for aggregators to play a much larger role in the procurement of DR at both the retail and wholesale levels. We think that third party aggregators can provide additional innovation and services to the market, yielding additional uncaptured potential benefits to DR in California. We intend to take up this question in a new DR policy guidance rulemaking to be opened later this year. As noted in the next section, we make several evaluation choices today in the context of this transition, in particular with the role of third party aggregators.

4.4. Ensuring Effective DR Programs during Transitional Period

DR programs are an essential element of California's energy resource strategy. Energy Efficiency and DR are our preferred resources for meeting California's energy needs, ranking at the top of the Loading Order. As such, the Commission recognized the need to evaluate and measure the effectiveness of DR programs. After opening a new rulemaking in January 2007, the Commission has since approved load impact protocols²⁶ and a cost-effectiveness

²⁶ D.08-04-050, adopted by the Commission on April 24, 2008, approved load impact protocols for DR programs.

framework.²⁷ Currently the Commission is investigating modifications needed to DR programs in order to be eligible for participation in the CAISO wholesale energy market. However, there remain additional DR policy issues that the Commission must address in order for the DR programs to operate effectively. We recognize that these Applications are occurring amidst a major policy transition, and therefore our review of the 2012-2014 Applications is occurring amidst considerable flux in CAISO markets and Commission policy toward DR. We have reviewed the Utilities' Applications in terms of their compliance with existing Commission and Federal policies encouraging the integration of DR programs into the CAISO market. We have also cast an eye toward the future. While we will not resolve the major outstanding questions on DR policy in this decision, we intend to preserve options and support a smooth and rational transition toward a more complete integration of DR into the CAISO's wholesale energy markets and the Utilities Resource Adequacy and long term procurement plans.

5. Summary of the Applications

The Applications submitted by the Utilities include proposed DR activities and programs and lay out DR policies that serve as a foundation for the proposals. The Applications also include budgets for these activities. The following sections briefly describe the proposed Applications, including the budgets, while highlighting a few specific proposals for each utility.

²⁷ D.10-12-024, adopted by the Commission on December 21, 2010, approved a cost-effectiveness protocols for DR programs.

5.1. PG&E (A.11-03-001)

PG&E proposes to continue most of its DR programs from the 2009-2011 program cycle and update several of the existing DR programs to create compatibility with CAISO's PDR requirements. For example, PG&E requests modifications to its Base Interruptible Program to enable the program to be bid into the CAISO market. PG&E also proposes to amend several other programs, most notably, combining the Demand Bidding Program with PeakChoice. With these programmatic proposals, PG&E estimates load impacts of 631 megawatts (MW) in 2012, 716 MW in 2013 and 730 MW in 2014.²⁸ PG&E's Application contains several pilot programs including one using the Home Area Network (HAN) technology. Although all three utilities had Aggregator Managed Program (AMP) contracts with DR aggregators during the 2009-2011 program years, only PG&E requests a one-year extension of the existing AMP contracts and to issue a competitive solicitation for contracts during 2013 to 2017.

In addition to the above programmatic proposals, PG&E proposes administrative modifications ranging from revising the fund shifting rules to simplifying its cost recovery mechanisms. PG&E requests approval of a DR budget of \$234,293,961 for years 2012-2014. PG&E also requests the authorization to provide \$84 million in DR customer incentive costs which we approved in D.07-09-004²⁹ and D.07-05-029.³⁰

²⁸ See Appendix B for the load impacts of each DR program.

²⁹ D.07-09-004 approved PG&E's customer incentives for the Base Interruptible Program.

³⁰ D.07-05-029 approved PG&E's customer incentives for the AMP contracts.

5.2. SDG&E (A.11-03-002)

SDG&E proposes overarching changes to its DR programs including changing the current Capacity Bidding Program baseline from individual 10-in-10 baseline with an adjustment of a 20 percent cap to an aggregated 10-in-10 baseline with a same day adjustment of a 40 percent cap and prohibiting multiple program participation where both programs provide Resource Adequacy qualifying capacity. As a result of its proposals, SDG&E anticipates an ex ante load impact of 146 MW in 2012, 185 MW in 2013, and 194 MW in 2014.³¹ While not requesting authorization for future AMP contracts, SDG&E requests authorization for program payment rates to be guaranteed to the Aggregators for a three-year period.

Administratively, SDG&E proposes that costs related to Information Technology (IT) upgrades for CAISO MRTU be recovered through its MRTU Memorandum Account. Additionally, SDG&E requests the ability to make adjustments to fund shifting rules to allow for greater flexibility. Overall, SDG&E requests a budget of \$68,120,000 for years 2012-2014.³²

5.3. SCE (A.11-03-003)

As with the other two utilities, SCE also proposes continuation of most of its DR programs from the 2009-2011 budget years with an eye toward incorporating many of these current programs into CAISO's PDR or RDRR requirements. To support CAISO market integration, SCE proposes an Ancillary Services tariff. SCE proposes a new price-responsive Residential Summer

³¹ See Appendix B for the load impacts of each DR program.

³² SGE-01, Table MG-3 at MFG-26.

Discount Plan, for both legacy and newly enrolled customers. SCE also requests to launch a PLS program. With these programmatic proposals, SCE estimates to increase its load impacts from its current 1530 MW to 1824 MW³³ by 2014³⁴ with approximately 1,360 MW of its portfolio available to be bid in the CAISO markets with full locational dispatch capability. SCE's application proposes two pilot programs: Smart Charging Pilot and the Workplace Charging Pilot. SCE claims these two pilots facilitate the adoption of new technologies.

In addition to the above programmatic proposals, SCE requests funding in support of its Dynamic Pricing and IDSM programs. SCE requests approval of a DR budget of \$229,037,000 for years 2012-2014.³⁵

6. Overarching Issues

Before we can make a determination on the approval of DR programs, activities, and budgets requested in this proceeding, we must address several overarching issues. First we must look at utility proposals to decrease the number of DR budget categories and consider revisions to the fund shifting rules for those categories. We also determine our approach to evaluating the cost-effectiveness of DR programs, whether we need to revise our rules for participating in more than one DR program, and whether our method for estimating energy usage is accurate.

³³ See Appendix B for the load impacts of each DR program.

³⁴ SCE-05 at 19.

³⁵ SCE-05A, Table IV-21 at 51.

6.1. Budget Categories and Fund Shifting Rules

6.1.1. Background

In D. 09-08-027, the Commission provided the Utilities the flexibility to shift funds authorized in the proceeding between DR programs, so that the Utilities could appropriately respond to unexpected events or changing conditions.³⁶ However, the Commission also said that major funding changes must be subject to Commission review and public comment.³⁷ Noting that the DR budget process would become meaningless if utilities were able to shift funds without reasonable parameters, the Commission developed rules that provided the flexibility needed by the Utilities without undermining the Commission's regulatory process.³⁸

The Commission established ten budget categories for DR programs and activities: 1) Emergency Programs; 2) Price Responsive Programs; 3) DR Service Provider Managed Programs (Aggregators);³⁹ 4) DR Enabling Programs; 5) Pilots; 6) Statewide Marketing Programs; 7) Evaluation, Measurement and Verification (EM&V); 8) System Support Activities; 9) DR Core Marketing and Research; and 10) Integrated Programs.

Within each of the budget categories, the Commission allows the Utilities to shift up to 50 percent of a program's funds to another program, with

³⁶ D.09-08-027 at 211-212.

³⁷ *Ibid.*

³⁸ *Ibid.*

³⁹ Following the adoption of D.09-08-027, the Commission granted a Petition for Modification by PG&E to move the Capacity Bidding Program from budget category 2 to category 3 to enable a fund shift from the AMP Contracts to the Capacity Bidding Program. See D.10-12-033.

appropriate monthly reporting. If a utility wants to shift more than 50 percent of a program's funds to a different program within the same budget category, the Commission requires the utility to first submit a Tier 2 Advice Letter.⁴⁰ The Commission also requires the Utilities to submit a Tier 2 Advice Letter if the fund shifting results in the elimination of a program. The Commission prohibits the elimination of any activity or program through multiple fund shifting for any reason without prior Commission authorization.

6.1.2. Utility Proposals

All three Utilities recommend continuing current fund shifting rules. However, the Utilities request the Commission to collapse the ten current budget categories into six categories as listed in the following table:

	Proposed Utility DR Program Categories (Approximate Funding Amount in Millions)		
	PG&E	SCE	SDG&E
Category 1	DR Programs: including reliability, price-responsive, and DR Provider-Managed programs (\$49.3)	DR Programs: including reliability, price-responsive, and DR Provider-Managed programs (\$115.3)	DR Programs: including reliability, price-responsive, and DR Provider-Managed programs (\$21.5)
Category 2	Enabling Programs, Pilots, DR Integration Policy and Planning (\$53.9)	Enabling Technology, Pilots and Emerging Markets and Technology (\$59.2)	Enabling Programs, Pilots, DR Integration Policy and Planning (\$28.8)
Category 3	EM&V (\$15.7)	Technology	EM&V (\$5.1)

⁴⁰ If associated with the implementation of a new DR program, the fund shift must be requested in the application for approval of the new program.

TABLE 6.1.2			
	Proposed Utility DR Program Categories (Approximate Funding Amount in Millions)		
	PG&E	SCE	SDG&E
		Integration and Support (\$20.6)	
Category 4	System Support Activities (\$41.5)	Measurement & Evaluation (M&E), Load Impacts and Cost Effectiveness (\$9.0)	System Support Activities (\$7.6)
Category 5	DR Core Marketing and Outreach (\$25.3)	Marketing, Education and Outreach (ME&O) (\$6.2)	DR Core Marketing and Outreach (\$1.1)
Category 6	Integrated Programs (\$14.6)	IDSMS Programs and Pilots (\$18.5)	Integrated Programs (\$4.9)

SDG&E alleges that the current structure of ten budget categories isolates programs and severely limits a utility's flexibility.⁴¹ PG&E contends that reducing the number of budget categories from ten to six will provide flexibility between programs with similar goals and will allow utility response to changes in customer enrollment in the various DR programs.⁴² By combining Reliability, Price-responsive and third-party DR provider-managed programs into one budget category, PG&E alleges utilities will be able to transfer funds to programs with highest enrollment and participation, optimize portfolio value, and better align programs with Resource Adequacy rules and changing market needs.⁴³ SCE argues that the current category structure does not provide the flexibility to

⁴¹ SGE-01 at MFG-14.

⁴² PGE-01 at Ch. 10-C.

⁴³ *Id.* at Ch. 10-C.

make reliability programs price-responsive as directed by the markets and the state's regulatory bodies.⁴⁴

6.1.3. Parties' Positions

DRA, the only non-applicant party to provide comment on this issue, opposes the reduction in the number of budget categories. DRA requests that the Commission maintain separate categories for reliability and price-responsive programs.⁴⁵ Furthermore, DRA recommends that the Commission categorize PDR and RDRR product programs in separate categories or simply prohibit fund shifting between the two types of programs.⁴⁶ DRA suggests that it may be possible to re-categorize some similar programs, if the Commission adopts new fund shifting rules and enhances current rules. For example, DRA proposes that the Commission require Utilities to submit a Tier 2 Advice Letter for approval to increase a DR program budget by more than 50 percent through fund shifting.⁴⁷

6.1.4. Discussion

In D.09-08-027, the Commission addressed the fund shifting issue, including a request by PG&E to approve four budget categories. Recognizing the evolving electricity market, the Commission concluded that some flexibility would be reasonable, so long as that flexibility was balanced with regulatory oversight and public review. Thus, we established the ten budget categories along with rules for fund shifting.

⁴⁴ SCE-05 at 49, lines 26-27.

⁴⁵ DRA-01 at 1-8.

⁴⁶ *Ibid.*

⁴⁷ *Ibid.*

After the 2010-2012 program cycle, the Commission and the Utilities have moved further along the path toward CAISO market transformation which includes transitioning reliability programs to price-responsive programs. While the Utilities continue to stress flexibility as vital to market transformation, the Commission finds oversight and public review equally important. During our review of the Applications, we encountered obstacles to determining the reasonableness of many funding requests. These obstacles emanate from a lack of budget transparency. We agree that flexibility is important to the Utilities, but too much flexibility endangers budget transparency. Such is the case when specific costs that should be located in obvious budget categories are instead sorted into multiple categories or when costs supporting DR programs are requested and approved in separate proceedings, making it difficult to track all DR costs. We also address these issues in greater detail during our discussion of cost-effectiveness.

The Utilities' proposed combination of DR programs and activities creates budget categories that would allow the transfer of millions of dollars between programs in the same category. For example, SCE's proposed "Demand Response Programs" category has a proposed budget of \$115.3 million and its Save Power Day program has a proposed budget of \$30 million. With SCE's proposed category consolidation, SCE would be able to shift as much as \$15 million from the Save Power Day program to another program listed in this category.

We remain concerned about the potential shifting of large amounts of funding from one program to another. We, therefore, reaffirm our findings in D.09-08-027 that major changes to the relative funding of specific programs must be subject to thorough regulatory review and party comment. The Utilities

provide no new information or additional justification in these applications for us to change this general policy. Furthermore, we find that minor revisions of certain budget categories with additional safety provisions as recommended by the parties are reasonable. Therefore, we establish the following refinements to our budget categories and fund shifting rules.

First, we direct the Utilities to organize their DR programs within the following ten categories: 1) Reliability Programs;⁴⁸ 2) Price Responsive Programs; 3) DR Provider/ AMP;⁴⁹ 4) Emerging and Enabling Technologies; 5) Pilots; 6) EM&V; 7) ME&O Activities;⁵⁰ 8) DR Systems Support; 9) Integrated Programs and Activities (to include Technical Assistance), and 10) Special Projects.

We note that while the Commission previously authorized PG&E to categorize the Capacity Bidding Program to the DR Provider category, the purpose for the re-categorization was to allow PG&E to shift funds from the AMP Contracts to the Capacity Bidding Program.⁵¹ While we agree with the necessity of that particular shift, we find it no longer necessary to categorize these two programs together.

As has been Commission practice, Utilities may shift funds authorized in this decision within a category but shall not shift the funds between these 10 categories. We make two exceptions to this rule. Unlike PG&E and SCE,

⁴⁸ We renamed the "Reliability" Programs category to be consistent with the change from the term "Emergency."

⁴⁹ We previously authorized PG&E and SDG&E to categorize the Capacity Bidding Program in the DR Provider category.

⁵⁰ This category combines the Statewide Marketing and DR Core Marketing categories, but does not include IDSM ME&O.

⁵¹ D.10-12-033 at 10-11.

SDG&E included all of its DR customer incentives in the 2012-2014 DR Application. Because fund shifting rules in this proceeding are not applicable to PG&E's and SCE's customer incentives approved in other proceedings, we allow SDG&E additional flexibility for funds approved for customer incentives in this proceeding. For these funds only, we grant SDG&E the flexibility to shift the funds between categories through the submittal of a Tier 2 Advice Letter. This provides a level playing field between PG&E, SCE and SDG&E. We also recognize that going forward, when all utility incentives for DR are included in their DR applications, we may wish to re-consider the applicability of these fund-shifting rules. The second exception is we grant the Utilities the flexibility to shift the funds in Category 4, Emerging & Enabling Technologies, into Permanent Load Shifting through the submittal of a Tier 2 Advice Letter but not vice versa.⁵² This is to ensure the availability of sufficient funding if we determine higher incentive levels are required for quicker market transformation and the Utilities can still maintain the overall DR program portfolio budgets.

The Utilities may continue to shift up to 50 percent of a program's funds to another program within the same budget category, with proper monthly reporting. As recommended by DRA and agreed to by SCE, we require the Utilities to submit a Tier 2 Advice Letter before shifting more than 50 percent of a program's funds to a different program within the same budget category.⁵³ If a shift of more than 50 percent of a program's funds is necessary as part of the

⁵² The Utilities should not move funds from the Permanent Load Shifting Fund into any other categories.

⁵³ DRA-01 at 1-8, lines 19-24 and SCE Opening Briefs at 79.

implementation of a new program, the fund shift should be included in the application for approval of the new program.

The Utilities may not shift funds within the “Pilots” or “Special Projects” category without a Tier 2 Advice Letter submission. This will allow the Commission to properly monitor pilots and special projects to determine their efficacy and viability as a future full time program. The Utilities may shift funds for pilots in the Enabling or Emerging Technology category. The Utilities must continue to submit a Tier 2 Advice Letter to eliminate a program. As is the current policy, the Utilities may not eliminate a program through multiple fund shifting events or for any other reason without prior authorization from the Commission.

6.2. Evaluating Program Cost-Effectiveness

6.2.1. Background

In December 2010, the Commission approved D.10-12-024 which adopted a method for estimating the cost-effectiveness of DR activities. Most of the parties participating in these Applications also actively participated in the development of the Protocols. D.10-12-024 required the Utilities to use the Protocols for all future cost-effectiveness analysis of DR programs, including the 2012-2014 applications. The Commission directed the Utilities to use the DR Reporting Template to provide a cost-effectiveness analysis for any program “for which the Utilities are requesting a set budget and for which load impacts can be estimated using the load impact protocols.”^{54 55} The Protocols were designed to

⁵⁴ D.10-12-024 at 44.

be used to measure the cost-effectiveness of both individual DR programs and a utility's overall DR portfolio.⁵⁶

The Protocols require the Utilities to use the defined versions of the four cost-effectiveness tests from the Standard Practice Manual (SPM); the four tests used are 1) Total Resource Cost (TRC) 2) Program Administrator Cost (PAC) 3) Ratepayer Impact Measure (RIM) and 4) the Participant Test.⁵⁷ The Protocols explain that “[t]he output of each test is based on the net present value of the costs and benefits, discounted over the lifetime of the relevant DR resource. Hence the costs and benefits are not simply added together to produce the SPM outputs.”⁵⁸ The Protocols also define costs attributable to a DR program; use the Avoided Cost calculator developed by Energy and Environmental Economics, Inc. (E3)⁵⁹ to determine all avoided costs,⁶⁰ which are the primary benefits of DR programs; provide detailed instruction about how to determine the value of each cost and benefit; require a sensitivity analysis on specific key variables; and

⁵⁵ Funding for Integrated Demand Side Management activities requested in the 2012-14 app is exempt from cost-effectiveness analysis. The Commission noted that it may issue further guidance for calculating the cost-effectiveness of PLS activities.

⁵⁶ *2010 Demand Response Cost Effectiveness Protocols (Protocols)* at 5.

⁵⁷ The TRC test measures cost-effectiveness from the point of view of society as a whole. PAC test measures cost-effectiveness from the point of view of the utility. RIM test measures cost-effectiveness from the point of view of ratepayers. The Participant Test measures cost-effectiveness from the point of view of a program participant.

⁵⁸ *Protocols* at 14.

⁵⁹ The E3 Avoided Cost Calculator is a spreadsheet tool developed by the consulting firm, E3, as part of the Distributed Generation Cost-Effectiveness framework.

⁶⁰ The Protocols allow the Utilities to specify five adjustment factors to the avoided costs. These adjust the avoided generation capacity cost for an individual DR program

Footnote continued on next page

utilize public and transparent methods, models, and inputs. In addition to this quantitative analysis, the Protocols require the Utilities to provide a qualitative analysis of “optional” costs and benefits.

The Protocols do not define cost-effectiveness, rather they defer “[t]he means by which the Commission will use these protocols to determine whether to pursue various DR programs, activities or policies [to] other Commission proceedings,”⁶¹ such as this proceeding. The Commission emphasized that it developed the Protocols with the understanding that DR is in a transitional period.

Our approach to using the Protocols in this proceeding will be flexible to capture the benefits of the emerging change.⁶² We recognize that certain programs contained within the applications may not be cost-effective. In fact, several of the programs contained within the modifications do not pass one or more of the tests on their own. In this section, we do not provide a final determination of approval of any particular program or activity. When making a determination on the budget of a particular program, we choose to look at the program both in terms of the context of cost-effectiveness and in terms of the transition that the DR market is in. We recognize that this the first time that we have applied the Protocols to the DR Applications, and as a result, a certain level of flexibility is necessary to achieve the optimal result. The mixture of these

based on the following factors: “A” - availability of the program; “B” - notification times; “C” - trigger flexibility; “D” - distribution; and “E” - energy price.

⁶¹ *Protocols* at 5.

⁶² *Id.* at 4.

approaches will enable a better end result. We make specific determinations in subsequent sections discussing the programs and activities.

6.2.2. Utility Reported Cost-Effectiveness Results

In its testimony, PG&E asserts that its 2012-2014 DR portfolio is cost-effective because it has a benefit-cost ratio of 1.1 using the TRC test.⁶³ PG&E provided cost-effectiveness results for individual DR programs⁶⁴ and the portfolio using the four SPM tests. PG&E's DR portfolio cost-effectiveness analysis also includes costs attributable to its DR HAN Integration Project, Integrated Energy Audit Program, Integrated Technical Incentive Program and Time-of-Use Rates. PG&E provided two separate analyses using two cost-effectiveness models, one using the E3 methodology, and one using PG&E's Loss of Load Probability (LOLP).

SDG&E filed its cost-effectiveness analysis using the Protocols. SDG&E performed its cost-effectiveness analysis on a program-by-program basis, and on the portfolio which included ME&O; EM&V; and Technical Incentives costs. SDG&E provided an explanation of its assumptions for the five adjustment factors required by the Protocols.

⁶³ PG&E subsequently revised its TRC values in response to Commission Staff data requests. The revised TRC values, shown on Table 6.2.2, indicate that PG&E's portfolio TRC is actually 0.99 (using LOLP) and 0.63 (using the default E3 model).

⁶⁴ PG&E's cost-effectiveness analysis includes the 2012 AMP, Base Interruptible Program, Capacity Bidding Program, PeakChoice (including Demand Bidding Program), SmartAC, and PLS.

SCE provided its cost-effectiveness analysis and asserts to be in compliance with the 2010 Protocols.⁶⁵ SCE explained its assumptions for each of the adjustment factors to the E3 inputs.

The following tables show the TRC, PAC and RIM results for each utility's DR programs, as provided by the Utilities. In the case of PG&E, the table includes the results from the E3 Model and PG&E's LOLP model.

TABLE 6.2.2

6.2.3. Parties' Positions

DRA argues that the Commission should require the Utilities to demonstrate a need for any DR program before the Commission contemplates the cost-effectiveness of these programs. Once this threshold question is answered, DRA recommends that the Commission not approve any program

where the TRC benefit cost ratio is less than 1.0, unless the cost structure of the program can be changed to bring the TRC benefit cost ratio to at least 1.0. To improve the cost-effectiveness of certain programs, DRA provides some specific cost-cutting measures and other program modification recommendations, including revising SDG&E's "A Factor"⁶⁶ so that it is based on 250 hours,⁶⁷ as recommended in the E3 default method. DRA requests that the Commission use PG&E's cost-effectiveness analyses that uses the E3 default method, rather than PG&E's LOLP, because 1) the LOLP was completed in 2006 and is therefore outdated, and 2) the LOLP does not conform with the Protocols because it is confidential and uses proprietary software.

CLECA contends that the Commission should determine the cost-effectiveness of a program using all applicable data. Asserting that the Commission should consider the value of stability in a DR program and balance the value of that stability with any cost-effectiveness variance over time, CLECA claims that in the case of the Base Interruptible Program and the Demand Bidding Program, the policy of only counting a load once has a negative impact on the cost-effectiveness of these two programs because of the number of dually-enrolled customers. CLECA recommends several specific program modifications to improve cost-effectiveness, but notes that many inputs used to determine cost-effectiveness are out of the control of DR customers, i.e., weather and the economy. One recommendation is that SCE should amortize its

⁶⁶ The A Factor is intended to represent the portion of capacity value that can be captured by the DR program based on the frequency and duration of calls permitted. A program that can be "called" in every hour that a generation capacity constraint might be experienced by a utility would have an A Factor of 100 percent.

⁶⁷ SDG&E used an A Factor based on 100 hours.

Automated DR (ADR) program costs. CLECA also contends that the cost of transitioning some DR programs into CAISO markets is unknown, and thus the cost-effectiveness of certain programs such as the Demand Bidding Program and PeakChoice is unknown.

CAISO concludes that the Commission should require DR programs and activities to be “reasonable, competitive, and cost-effective on their own merits.”⁶⁸ CAISO recommends that the Commission require the Utilities to adjust certain program aspects to ensure that each program is cost-effective. Furthermore, CAISO suggests that the Commission not permit bundling of programs with cost-effectiveness results of less than 1.0 with other programs in order to improve the overall cost-effectiveness results.

TURN’s comments focus solely on SCE’s Application. TURN contends that SCE failed to include in its cost-effectiveness analysis all costs associated with DR programs and the DR portfolio. By excluding the IT costs and amortized costs for several DR programs, TURN asserts that the Commission has incomplete data to review the cost-effectiveness of SCE’s DR programs and portfolio.

6.2.4. Discussion

The Commission recognizes that this is the first time since they were adopted in D.10-12.024 that the Protocols are used in a DR application to evaluate the cost-effectiveness of DR programs. As stated in D.10-12-024, the Commission recognizes that this is a transition period in using these Protocols.

⁶⁸ CAISO Opening Briefs at 4.

We think that there is value to use the information provided by the Protocols in our review of the 2012-2014 DR applications.

We note that D.10-12-024 provided guidance to the Utilities to include qualitative descriptions of certain benefits to complement the cost-effectiveness numbers. All three of the applications failed to include this information, which we find to be critical in making our evaluation. Many of our choices in terms of our approach are severely limited by this lack of compliance with our guidance. Going forward, we expect to have this information to inform our deliberation on how to determine cost-effectiveness of DR applications. Without the qualitative information, we turn our focus to the quantitative information that was provided in the Applications.

Below, we discuss the cost-effectiveness analysis models and inputs, as well as the degree of flexibility we should allow in approving DR programs. We then put forth our approach to how we will use the Protocols to review the 2012-2014 DR applications. We also address deficiencies in the Protocols.

First, however, we address DRA's contention that the Commission should require the Utilities to demonstrate a need for any DR program before the Commission contemplates the cost-effectiveness of the DR programs. The Energy Action Plan II states that cost-effective energy efficiency and DR are the primary way we will meet California's electricity demand. Furthermore, under Public Utilities Code Section 454.5(b)(9)(C) utilities are required to first meet their "unmet resource need through all available energy efficiency and demand reduction resources that are cost-effective, reliable, and feasible." The Commission remains committed to the Energy Action Plan's loading order whereby energy efficiency and demand response are the preferred means of meeting California's energy needs. As such, we review the DR programs to

ensure that the DR resources we approve in this decision are a more cost-effective alternative to the utility procurement of supply-side resources. Thus, given this context, we decline to adopt DRA's proposal.

6.2.4.1. Models and Inputs to the Protocols

6.2.4.1.1. PG&E'S Use of Alternative LOLP Model

PG&E contends that the Commission should reject DRA's argument to use PG&E's default cost-effectiveness analysis (which uses the E3 model to determine the A factor and monthly capacity allotment), rather than PG&E's alternative cost-effectiveness analysis (which use PG&E's LOLP model to determine those quantities). DRA asserts that the LOLP model does not comply with the Protocols' requirement that the model be shared in the public domain and independently verifiable.⁶⁹ DRA also states that the Commission should consider PG&E's LOLP model outdated because of changes in generation capacity since the LOLP data has not been updated since 2006.⁷⁰

Arguing against DRA's claim that using the LOLP violates the Protocols, PG&E maintains that the Protocols allow the Utilities to use their own LOLP models in addition to the E3 default model.⁷¹ While DRA accepts that an alternate model is permitted, DRA contends that the Commission required such a model to have the ability to "be shared in the public domain, along with sufficient documentation of their derivation to allow them to be verified

⁶⁹ D.10-12-024, Attachment 1 at 23.

⁷⁰ DRA-01 and DRA-01c at 2-6.

⁷¹ PGE-08 at 9-4.

independently.”⁷² DRA counters PG&E’s claim by stating that allowing any utility to use proprietary models would be contradictory to the Commission’s efforts, as stated in the Protocols, to use consistent and transparent inputs for any cost-effectiveness analysis.

While we agree that PG&E’s use of the LOLP model is consistent with the Protocols authorization of an alternate model in addition to the default E3 model, we note that PG&E provided no evidence that the LOLP model is more accurate than the default E3 model. PG&E argues that the Protocols call the utility LOLP studies “more theoretically robust” than the E3 Model.⁷³ Despite this statement, the Protocols consider the E3 approach one that “properly place[s] more emphasis on the hours of the year when system demands are the highest.”⁷⁴ Furthermore, the Protocols conclude that in regard to the E3 approach, “the advantage of simplicity and transparency outweigh[s] the advantages of proprietary traditional LOLE/LOLP models.”⁷⁵

We agree with DRA that the LOLP model used by PG&E is not appropriate because of the proprietary nature of the LOLP model. We continue to allow the use of alternate models, as provided by D.10-12-024. However, in future DR Applications, we require the Utilities to provide an analysis of why an alternate model is preferable over the default. Given the above reasons, we will only consider the E3 model results when reviewing PG&E’s cost-effectiveness analyses in this proceeding.

⁷² D.10-12-024, Attachment 1 at 23.

⁷³ D.10-12-024, Attachment 1, 2010 Cost-Effectiveness Protocols at 23.

⁷⁴ *Ibid.*

⁷⁵ *Ibid.*

6.2.4.1.2. Costs Considered In DR Cost-Effectiveness Analysis

SCE disagrees with TURN's assertion that the DR Protocols require the Utilities to incorporate costs from other proceedings when performing a cost-effectiveness analysis on either a DR program or the DR portfolio. TURN states that the decision adopting the Protocols requires that the administrative costs of each program include all costs attributable to the program, including costs in a separate budget category.⁷⁶ SCE counters that the Protocols do not require the cost-effectiveness analysis to include related costs from other proceedings, explaining that if the Protocols required utilities to include all related costs from any proceeding, it would not have used the term "budget category."⁷⁷

In amended testimony regarding the cost-effectiveness of the portfolio, SCE states that its DR cost-effectiveness analysis takes into account DR-related costs from other proceedings.⁷⁸ SCE also asserts that the benefit cost ratio for all of its programs will improve to make them cost-effective if the "external" costs such as ADR, EM&V, and ME&O, which the Commission ordered to be added to each of their DR programs' administration costs, are eliminated. We continue to agree with the conclusion in D.10-12-024 that "it is reasonable...to ensure that all costs attributable to a program, including administrative and other costs that may not be captured in the program's budget, are included in the cost-

⁷⁶ D.10-12-024 at 22.

⁷⁷ SCE-07 at 10:18-28.

⁷⁸ SCE-05 at 45:17-21.

effectiveness of each program.⁷⁹ We add that SCE failed to include ME&O costs and misallocated EM&V costs in its cost-effectiveness analysis. The ME&O costs were included in SCE's cost-effectiveness analysis of the portfolio, but not in the analysis of the individual programs.

D.10-12-024 lists capital costs to utilities or participants as one of the major costs defined in the Protocols.⁸⁰ We disagree with SCE's interpretation of the Protocols requirement regarding costs and reaffirm that all costs directly attributable to a DR program or activity should be included in the cost-effectiveness program analysis, whether the cost is included in that program's budget or not. If the Commission allowed the Utilities to include and exclude the cost of an activity as they deem fit, we would never know the true costs of a program. We will utilize SCE's cost-effectiveness analysis that included all the costs attributable to each DR program, including the costs of activities such as ME&O, and IT costs approved in other proceedings, and the CLECA suggested amortization of ADR.⁸¹ We note however, that SCE is correct in that these costs should be amortized over the lifetime of the investment, and the annual costs applied to those years that the cost-effectiveness analysis covers.⁸²

6.2.4.2. Using the 2010 Protocols in Program Analysis

First, we note that the Utilities filed several versions of their DR Reporting Template spreadsheets, which contain their cost-effectiveness analyses. For each

⁷⁹ Protocols D.10-12-024 at Conclusion of Law 11.

⁸⁰ *D.10-12-024 Id.* at 34.

⁸¹ Submitted as part of SCE-08, "SCE DR Reporting Template - TURN Scenario."

⁸² *Protocols* at 29.

utility, we base our analysis upon the most recent version of the DR Reporting Template spreadsheets.⁸³ For the reasons discussed above, we rely upon PG&E's cost-effectiveness analysis using the E3 default method and SCE's cost-effectiveness analysis using the spreadsheet "CLECA+TURN".

As discussed previously, we rely heavily on the Protocols in considering the reasonableness of a DR program and its proposed budget. We turn to how the protocols should be applied to this set of DR programs included in these applications.

Parties provide several options for using the Protocols to determine whether DR programs should be approved. Both PG&E and SCE convey a belief that the Commission should approve an entire DR portfolio if the TRC of the portfolio itself is above 1.0. PG&E concludes that because the TRC benefit cost ratio for its DR Portfolio resulted in over a 1.0, the portfolio is cost-effective.⁸⁴ In comments, SCE contends that under D.10-12-024, its DR portfolio with a TRC result of 1.15 should be approved in total. SCE also argues in comments that the TRC should be the test when evaluating DR cost-effectiveness. Alternatively, DRA recommends that DR programs be reviewed individually and that the Commission consider rejecting funding for DR programs that are not cost-effective based on E3's 250-hour methodology.⁸⁵

We reiterate that the Protocols do not dictate how the Commission should use the results of the cost-effectiveness tests to approve DR programs. While the Protocols require the Utilities to provide a cost-effectiveness analysis of the entire

⁸³ PGE-18, SGE-12, and SCE-08, Spreadsheet "CLECA+TURN."

⁸⁴ PGE-01 at 9-4.

⁸⁵ DRA Opening Brief at 2-7.

DR portfolio in addition to each DR program, neither D.10-12-024 nor the Protocols say that a DR portfolio with a TRC above 1.0 is deemed cost-effective and should be approved. We do agree, however, that the portfolio wide approach provides useful information and should not be completely discounted. However, we also agree with DRA that we should also review the Applications' cost effectiveness by examining each program individually, as was the practice in D.09-08-027.⁸⁶ This hybrid approach is perhaps the most useful, given the fact that the Utilities did not provide the qualitative cost-effectiveness information as directed in D.10-12-024. When looking at both the overall portfolio and specific programs, when a program itself is not cost-effective, we are left with four options: 1) deny the program outright, 2) approve the program unmodified for policy rationale other than cost-effectiveness, 3) decrease costs associated with the program to improve the program's performance from a cost-benefit perspective, or 4) order the Utilities to increase relative benefits associated with the program, to improve the relative "bang for the buck." In this decision, we elect to take a mixture of these four strategies. Our primary point of evaluation will be program by program, but we will also look at the context of the overall DR portfolio in order to ensure that the proper policy context is considered.

We note that we found it difficult to define the parameters of the DR portfolio in this proceeding. Because there are a number of DR activities which are approved in separate proceedings, it is challenging to determine exactly what the DR portfolio contains. Given these challenges, in the future, we instruct the

⁸⁶ D.09-08-027 at 18-19.

Utilities in their future DR applications to consolidate as much as feasible all DR program costs into their DR Application.

D.10-12-033 does not constrain the analysis of a program's cost-effectiveness to only the TRC results. The inclusion of the other three tests provides useful context. In comments, SCE claims that it is Commission practice to use the TRC to determine cost-effectiveness. We disagree with SCE's claim. In D.09-08-027, the Commission stated that although the TRC is cited throughout that decision, all four tests were considered in the cost-effectiveness review.⁸⁷ We intend to continue our evaluation in this manner, with our evaluation primary focusing on the TRC but using the PAC and RIM when the context makes sense. The TRC, PAC, and RIM each provide a valuable perspective.⁸⁸ Because participation in DR programs is voluntary, we do not consider the Participant Test in our analysis for this proceeding.

The Protocols state that "flexibility in the application of these protocols may be necessary to fully reflect the attributes of some DR programs."⁸⁹ We conclude that our approach on how we use the Protocols allows us to be flexible in our approach to analyzing cost-effectiveness for DR programs. However, a large part of our approach is informed by the fact that certain qualitative information was not provided in the Applications. Since we direct the Utilities to provide this information for the next program cycle, we do not consider this

⁸⁷ D.09-08-027 at 19.

⁸⁸ D10-12-024 at Conclusion of Law 8 states that "[t]he relative weight given to any Standard Practice Manual test in determining program approval or modification should be determined within the demand response budget proceedings."

⁸⁹ *Protocols* at 6.

transitional approach to be precedential for future DR application proceedings or any other proceedings that discuss cost-effectiveness.

As we previously explained, we reviewed the TRC, PAC, and RIM results for each of the DR programs. We found that few of the DR programs have results equal to or greater than a 1.0 for all three of the tests. However, we recognize a large amount of uncertainty in our evaluation. We previously discussed a four-prong approach to our analysis when a program is not deemed cost-effective; when making the determination as to which of the four end results we choose for the program, we use the following criteria:

1. Where TRC test results are less than 1.0 but are 0.9 or higher, we consider these programs to be “cost-effective.” We take this approach in lieu of a “perfect” 1.0 result to recognize that there is a certain error band in our analysis due to the first-time nature of applying the protocols onto the programs. Specifically, we recognize that the sensitivity analysis⁹⁰ contained in the Utilities’ DR spreadsheets indicates that the benefit cost ratio would be greater than one with a reasonable error in the value of key variables. This also allows for a benefit of the doubt during this first use of the Protocols without compromising the integrity of the Protocols.⁹¹
2. Where the TRC benefit cost ratios results are between 0.5 and 0.9, we consider these programs to be “possibly cost-effective.” We look to the PAC and RIM to provide additional context to the program evaluation. These are programs that, given variations as shown by the sensitivity

⁹⁰ The sensitivity analysis on key variables provides a sense of the impact of any error in the calculation of the major inputs driving the final results of the analysis. See also D.10-12-024, Findings of Fact 14.

⁹¹ In addition, this 10% error band compensates for the utilities failure to submit qualitative information about the benefits of the DR programs.

analyses or small program modifications, could be cost-effective. We discuss the “possibly cost-effective” programs under the appropriate program category. Within that discussion, we provide modifications to these programs to improve their cost-effectiveness. These modifications can be either an order to increase benefits or to decrease costs. For when we order an increase in benefits, in most cases we modify the availability of the DR program. When we order costs to decrease, in most cases, the modifications consist of budget decreases.

3. Where the TRC benefit cost ratios fall below 0.5, we consider these programs to be “not cost-effective.” It is in these circumstances that we will consider either denial of the program entirely or approval with modifications for other policy rationale. In discussion of the policy rationale, we look at the PAC and RIM test results to provide greater context. Because eliminating programs perhaps creates the largest market uncertainty, we discuss the consequences of these programs as they arise.

6.2.4.3. Deficiencies in the Protocols

Because this is the first time that the Protocols are being used to determine the cost-effectiveness of DR programs, it is not surprising that our analysis uncovered several deficiencies in the Protocols. While the Commission was able to perform its review of the cost-effectiveness results, the deficiencies made it challenging. Correcting the deficiencies will improve the Protocols for the future. We describe these deficiencies below and direct Commission Staff to hold workshops to address and develop cures for the deficiencies.

First, the Protocols provide five factors to be used by the Utilities to adjust a DR program’s avoided costs, based on specific program characteristics. The Protocols allow the Utilities flexibility in determining the exact level of those adjustments. However, the results are inconsistent and sometimes based on speculation. For example, for the statewide Capacity Bidding Program, PG&E

uses 67 percent for the value of the A factor, SDG&E uses 42 percent, and SCE uses 39 percent. While we gave the Utilities latitude in selecting the A factor, the wide differences in the A factor between the Utilities are inappropriate given that the Capacity Bidding Program is available the same number of hours for each utility. In general, we observe that the A factor used in each program should be more consistent across the three utilities. Commission Staff should work with the parties to review the five factors in the Protocols in order to provide recommendations to the Commission in order to give better guidance to the Utilities in future applications.

Second, the Utilities were asked to allocate the budgets of supporting programs such as ME&O, EM&V, and IT etc. to each DR program, based on how those budgets are used to support programs or based on the total program budget. Each of the Utilities has a slightly different approach to this allocation and thus the allocations are not consistent across the Utilities. This inconsistency makes it challenging to analyze the allocations. The Commission provided prior guidance regarding our expectations for these allotments. The Utilities need to clarify their budget allotment procedures.

Third, as mentioned previously, the Protocols gave guidance to the Utilities to provide qualitative analysis of “optional” costs and benefits.⁹² The Utilities did not provide this information in their Applications, which is to the program’s detriment. We remind the Utilities that a qualitative analysis will

⁹² D.10-12-024 at 24-25.

assist us in determining whether actual quantitative values for currently unquantifiable factors can or should be included in potential future updates.⁹³

In a discussion above, we note that it is difficult to define the DR portfolio. Because there are a number of DR activities which are approved in separate proceedings, it is challenging to determine the contents of the DR portfolio. The Protocols should be updated to include a definition of what is in the portfolio and the process to determine the costs and benefits of its contents. We also direct that future DR Applications consolidate, as much as feasible, all DR related costs so that this analysis can be done.

Given some of these deficiencies, we direct the staff to hold workshops to validate and update the models.

6.3. Dual Participation Rules

In D.09-08-027, the Commission revised its policy of not permitting participation in more than one DR program or dynamic pricing tariff. Recognizing that limiting such dual participation could also limit the amount of peak load reduction achieved, we adopted the following rules on dual participation:^{94,95}

- a) Prohibit duplicative payments for a single instance of load reduction or drop. (In the case of simultaneous or overlapping events called in two programs, a single customer enrolled in those two programs shall receive payment only under the capacity program, not for the energy payment programs.)

⁹³ *Id.* at 25.

⁹⁴ D.09-08-027 at 152-153 and OP 30.

⁹⁵ The Commission required the Utilities to implement these rules between January 1, 2010 and May 1, 2010 pursuant to D.09-08-027 at 155.

- b) Allow dual participation in up to two DR activities, if one provides energy payments and the other provides capacity payments.
- c) Prohibit participation in two day-ahead programs or two day-of programs.

These rules apply to Critical Peak Pricing, even though it is a dynamic pricing tariff rather than a price-responsive DR program. The Commission concluded in D.09-08-027 that for the purposes of determining eligibility for dual participation Critical Peak Pricing shall be treated as an energy-based DR program. (Peak Day Pricing day-ahead is the name PG&E gives to its Critical Peak Pricing tariff). Accordingly, customers enrolled in Critical Peak Pricing (or Peak Day Pricing day-ahead) are also allowed to dual participate in day-of capacity-based programs such as the Base Interruptible Program.

In D.09-08-027, we anticipated that the Commission would re-evaluate these rules to determine their effectiveness in promoting program participation, increasing available DR load reduction, and avoiding instances of duplicative payments and gaming.⁹⁶

6.3.1. Utility Proposals

PG&E proposes to modify the current dual participation rules and reduce the combinations of programs available for dual participation. PG&E contends that simplified rules will reduce implementation efforts and ratepayer

⁹⁶ In its 2009-2011 DR budget application, SCE also recommended re-evaluating dual participation requirement in 2012 (A.08-06-001 et al., Exhibit 2. Also see D.09-08-027 at 141).

costs. PG&E also recommends modifying the existing dual participation rules, as follows:⁹⁷

- a) One program must be a capacity-based DR program and one must be an energy-based DR program (as established in D.09-08-027);
- b) One program must be a day-ahead DR program and one must be a day-of DR program (as established in D.09-08-027);
- c) One program must be an emergency or reliability program and the other must be a price-responsive program; and
- d) Both programs must be offered by the same DR provider.

Alleging that dual participation is not allowed in CAISO markets at this time, SCE proposes that the Commission wait to modify the current dual participation rules until after it finalizes the rules for direct participation in the CAISO markets. SCE expresses concern that if the current rules are eliminated, the “current dual participants in [the Demand Bidding Program] and [the Base Interruptible Program] would be forced to choose between [the Demand Bidding Program] and [the Base Interruptible Program]; which likely all would select [the Base Interruptible Program].”⁹⁸ SDG&E argues that the frequency and magnitude of DR program overlap warrant a review of the dual participation rules. SDG&E notes that in 2009 it experienced a 50 percent overlap between default Critical Peak Pricing and Capacity Bidding Program day-of events and in 2010 it experienced a 100 percent overlap for the same events. Fewer of the events called in SDG&E’s Base Interruptible Program and DemandSmart

⁹⁷ PGE-08, Chapter 2 at 2-7.

⁹⁸ SCE-07, Chapter VI at 34, lines 17-18.

program overlapped with Capacity Bidding Program events.⁹⁹ Based upon this history and program participation data, SDG&E concludes that “multiple program participation for Critical Peak Pricing and day-of DR programs is too overlapping, leading to an overestimation of DR capacity available for resource planning and likely leading to duplicative payments for the same capacity.” SDG&E concludes that this situation will be exacerbated as more customers default to Critical Peak Pricing.

SDG&E proposes two solutions to the problem it perceives. First, it recommends Critical Peak Pricing customers be precluded from participating concurrently in the Capacity Bidding Program or the Base Interruptible Program. Secondly, recognizing the economic burden this would place on third party DR providers, SDG&E offers an alternative to dual participation that it asserts creates “a viable business model” for third party DR providers. SDG&E suggests that Utilities offer third party DR providers who offer DR services to ADR-equipped Critical Peak Pricing customers both a monthly capacity payment and a Critical Peak Pricing day-of incentive. SDG&E contends this alternative would increase the available customer base for third party DR providers, provide a tool to maximize customers’ Critical Peak Pricing benefits and minimize costs, and leverage the ADR technology for day-of events when needed. SDG&E surmises that these benefits are achievable without the concern of double counting resource adequacy in resource plans or double payments for that capacity.¹⁰⁰

⁹⁹ SGE-01, Ch. 1 at MFG-7.

¹⁰⁰ SGE-01, Ch.1 at MFG-8.

6.3.2. Parties' Positions

CAISO opposes PG&E's proposed rules that allow dual participation in both the Base Interruptible Program and PeakChoice because both programs will be participating in the CAISO's RDRR product and PDR product.¹⁰¹ As discussed above, under its current rules for PDR and proposed rules for RDRR, CAISO does not allow dual participation between PDR and RDRR and within PDR.¹⁰²

DRA proposes the elimination of all current dual participation rules. DRA contends that the Commission should no longer permit dual participation for DR programs that are transitioning to the CAISO wholesale market, because CAISO does not allow dual participation of the same resource for its DR wholesale products.¹⁰³

DR Aggregators oppose DRA's proposal of eliminating dual participation in DR programs. DR Aggregators contend that DRA's recommendation is flawed in that it is premature, inconsistent with Commission policy, fails to consider consequences to customers, increases market uncertainty, and may not accurately reflect how the Utilities intend to dispatch their retail programs to participate in RDRR and PDR.¹⁰⁴ CLECA also opposes DRA's proposal because it maintains that CAISO does permit dual participation in RDRR.¹⁰⁵ As we noted

¹⁰¹ CAISO Protest at 7.

¹⁰² Pending FERC approval.

¹⁰³ DRA-01, Chapter 1 at 1-16, lines 25-29.

¹⁰⁴ DAG-02, Chapter II, at II-2, lines 8-14.

¹⁰⁵ CLE-01, Q&A 20 at 21-22 and CLE-02, Q&A 6 at 3.

above, FERC rejected the CAISO's proposed tariff and provisions for RDRR on February 16, 2012.

NAPP submits that "(t)he Commission's dual participation options adopted in D.09-08-027 should be expanded by permitting customers to participate in any combination of day-of or day-ahead programs subject to the limitation of one capacity and one energy program for a specified delivery period."¹⁰⁶

6.3.3. Discussion

6.3.3.1. Compliance

All three utilities executed the dual participation rules by the summer of 2010. Thus, the Utilities are in compliance with D.09-08-027 for implementing dual participation.

6.3.3.2. Reasonableness

As previously discussed, we anticipated re-evaluating the current dual participation rules to determine the effectiveness in promoting program participation, increasing available load reduction, and avoiding instances of duplicative payments and gaming. We note that neither the Utilities nor the parties provided explicit analysis on the effectiveness of dual participation in promoting customer participation. The Utilities' testimony implies that DR customers did not have to decide on one program over another under the current dual participation rules. We find that, as was our intention, the rules have promoted customer participation.

¹⁰⁶ NAPP Opening Brief at 2.

SDG&E contends that dual participation did not effectively increase load reduction due to overlapping events between programs.¹⁰⁷ SDG&E shows varying degrees of overlap between Critical Peak Pricing day-ahead events and Capacity Bidding Program, Base Interruptible Program and DemandSmart day-of events during the summers of 2009 of 2010. PG&E also provided data that showed a test event for its Base Interruptible Program on August 24, 2010 partially overlapped with its Peak Day Pricing day-ahead event.¹⁰⁸

SCE's experience during Summer 2010 offers a contrast. Currently SCE has customers dually enrolled in the Base Interruptible Program and the Demand Bidding Program.¹⁰⁹ SCE had nine Demand Bidding Program events in 2010,¹¹⁰ none of which overlapped with the Base Interruptible Program events.¹¹¹

The Utilities' experience with dual participation is mixed. SDG&E and PG&E's experiences were contradictory to our previous understanding that day-of events generally do not overlap with day-ahead events, while SCE's comports with it. We disagree with SDG&E's conclusion that dual participation does not effectively increase load reduction. SDG&E's analysis does not consider whether

¹⁰⁷ SGE-01 at MFG-6, Table MFG-1.

¹⁰⁸ PGE-01, Appendix 8A-E, Table 2.

dual participants provided *incremental* load reduction on days with overlapping event. Customers enrolled in Critical Peak Pricing have an economic incentive to drop load when Critical Peak Pricing events are called, but they are not required to do so. Dual participation in the day-of program may have caused them to curtail more than they otherwise might have. In addition, because events did not entirely overlap, the effect of allowing dual participation was to increase the number of days and types of circumstances in which individual customers could be called. Thus, dual participation helps provide more expansive and flexible DR resources that will support future systems needs such as integration of large amounts of intermittent and variable renewable generation. Finally, we note that these overlapping events did not add to ratepayer costs because Dual Participation Rule a) requires the Utilities to structure their tariffs in a way to avoid duplicative payments in such instances. Much of the concern about dual participation focuses on Critical Peak Pricing. In D.09-08-027, the Commission ruled that Critical Peak Pricing should be regarded as an energy-based program for the purposes of applying the dual participation rules. Thus customers enrolled in the Utilities' Critical Peak Pricing tariffs may also participate in day-of programs that offer capacity payments. SCE argued that Critical Peak Pricing is effectively a capacity based program because the method it employs to calculate the Critical Peak Pricing rate components implicitly provides a capacity payment to customers on the Critical Peak Pricing rate. We rejected this argument on the grounds that the critical distinction between capacity- and energy-based DR programs is whether or not they are dispatchable, not the manner in which payments are computed. Although customers enrolled in Critical Peak Pricing have a financial incentive to curtail load when events are called, they do not have an obligation to drop load. We see no reason to alter our

previous finding that Critical Peak Pricing should not be considered a capacity-based DR program.

Resource Adequacy counting conventions have also blurred the distinction between Critical Peak Pricing and DR programs. Historically the Utilities have attributed Resource Adequacy value to both, but the value for dynamic rates and DR has been “taken off the top” of the Utilities Resource Adequacy obligations. We are now taking steps to modify our Resource Adequacy program so that DR will be treated in a similar manner to supply-side resources. In D.11-10-003, we created a Maximum Cumulative Capacity bucket that will enable the Utilities to track the amount of DR they expect to realize through their own programs or have acquired to meet their Resource Adequacy requirement. Any value attributed to dynamic rates will continue to be “taken off the top.” We note that the CAISO has recommended that eventually we move away from attributing Resource Adequacy value to dynamic rates and instead simply factor their expected effect into the load forecasts used to determine Resource Adequacy needs. We agree.

6.3.3.3. Meeting Future Needs

We review our dual participation rules to ensure coordination with other State Energy Agencies’ policies to meet California energy needs in the future.

Integrating the Utilities’ retail DR programs with the CAISO’s market presents numerous complexities. In 2010, we initiated Phase IV of R.07-01-041 for the express purpose of developing rules for direct participation of retail electric customers, either on their own or through an aggregator or third party DR provider, to bid DR directly into CAISO wholesale electricity markets. Once adopted by this Commission, the direct participation rules will determine the specifics of how customers will participate in the CAISO markets. We note that

the Commission has issued proposed direct participation rules for comment in R.07-01-041.¹¹² Many of the issues parties have raised in this proceeding regarding dual participation are also under consideration in R.07-01-041. One example is PG&E's proposed modification that would restrict dual participation to programs provided by the same provider. We agree with SCE that R.07-01-041 (or a successor proceeding) is the appropriate forum in which to consider changes to our dual participation rules. In that proceeding, we intend to evaluate the impact of dual participation on the cost-effectiveness of dual participated DR programs.

Therefore, we decline to adopt any changes to our dual participation rules at this time. If necessary, we will further modify our dual participation rules to align with the final direct participation rules. In its comments on the Alternate Proposed Decision filed on April 9, 2012, SDG&E points out that its proposed Critical Peak Pricing Premium as an alternative to dual participation is dependent on its proposed limits to the current dual participation rules. SDG&E's proposal is no longer appropriate with the current unchanged dual participation rules. Therefore, we deny SDG&E's proposed alternative in this decision.

¹¹² The assigned ALJ issued a ruling on August 19, 2011 soliciting comments on the proposed rules.

6.4. Baseline Methodology

Certain DR programs pay customers to reduce energy usage during DR events.¹¹³ Utilities determine the amount of energy usage reduction by estimating the amount of energy the customer would have used if a DR event had not been declared. We refer to this estimate of energy usage as the “baseline.”

In D.09-08-027, the Commission adopted an “*individual 10-in-10 baseline with an optional 20 percent cap day-of adjustment*” as the methodology to determine a customer’s baseline. The methodology begins with the customer’s average energy use during the ten previous non-event business days, adjusted up or down based on the day-of adjustment. The day-of adjustment is equal to the average load of the first three of the four hours prior to the event divided by the average load of the corresponding hours from the past 10 similar weekdays. The day-of adjustment is capped at 20 percent, meaning that the adjustment must be between 80 to 120 percent of the 10-day average load. In addition, customers may opt out of the day-of adjustment, in which case the baseline would be the average of the 10 previous non-event business days. The baseline is calculated individually for each customer, and then the cap is applied individually for each customer. Individual customer results are combined to determine aggregator totals.

¹¹³ These programs are the Capacity Bidding Program, Demand Bidding Program, Optional Binding Mandatory Curtailment Program, and PG&E’s PeakChoice Program.

6.4.1. Parties' Positions

In SDG&E's amended testimony,¹¹⁴ SDG&E proposes to change the current Capacity Bidding Program baseline from "individual 10-in-10 adjusted baseline of a 20 percent cap" to an "aggregate 10-in-10 baseline with a same day adjustment of a 40 percent cap." SDG&E argues that the current baseline underestimates payments to aggregators. PG&E supports SDG&E's proposal to change the current baseline to an aggregated 10-in-10 baseline with a 40 percent cap.¹¹⁵

DR Aggregators recommend that the Commission remove the cap on the day-of adjustment, arguing that the cap undervalues customer performance.¹¹⁶ CLECA agrees that the existing 20 percent cap understates load reductions, but contends that the analysis of the 40 percent cap shows that there is a substantial chance of overstating the load impact.¹¹⁷ CLECA recommends that the Commission not eliminate the cap without further analysis.

SCE originally recommended that the Commission schedule a workshop to discuss alternative baseline issues.¹¹⁸ During hearings, SCE indicated that it was analyzing different baseline caps and thus a workshop would no longer be necessary.¹¹⁹ SCE agrees that a change in the 20 percent cap would be appropriate and supports SDG&E's proposal to implement an aggregated

¹¹⁴ SGE-13 at LW\KS-25.

¹¹⁵ PGE-08, Chapter 8 at 8-2.

¹¹⁶ DR Aggregators Opening Briefs at 14-21.

¹¹⁷ CLE-02 at 11.

¹¹⁸ SCE-07 at 29.

¹¹⁹ Tr. Vol. 1 at 172.

baseline with an optional 40 percent capped adjustment, but recommends continued examination.¹²⁰

An accurate baseline calculation helps determine the success of a DR program. Overestimation leads to overpayment, but underestimation could potentially lead to customer withdrawal from a DR program.

All three utilities agree that the aggregate 10-in-10 baseline with a same-day or day-of adjustment of a 40 percent cap is more accurate than the current 10-in-10 individual baseline with a 20 percent cap. SDG&E provided the results of an analysis that compared three baseline options (see table below). SDG&E suggests that the aggregated 10-in-10 baseline with a 40 percent cap is a more accurate baseline compared to the 20 percent cap, because it results in at least 91 percent of the 2010 M&E results, with a minor overestimation of 104 percent of the M&E results.

TABLE 6.4.2

Capacity Bidding Program day-of	Baselines	Baseline Load Impact as a Percentage of the 2010 M&E Results		
		July	August	September
	10-in-10 individual 20 % cap	71 %	89 %	68 %
	10-in-10 aggregated 20 % cap	83 %	100 %	75 %
	10-in-10 aggregated 40 % cap	95 %	104 %	91 %

Capacity Bidding Program day-ahead	Baselines	Baseline Load Impact as a Percentage of the 2010 M&E Results		
		July	August	September

¹²⁰ SCE Opening Briefs at 29.

	10-in-10 individual 20 % cap	85 %	95 %	96 %
	10-in-10 aggregated 20 % cap	94 %	101 %	104 %
	10-in-10 aggregated 40 % cap	102 %	100 %	104 %

DR Aggregators agree that SDG&E's proposal of the 40 percent capped adjustment is an improvement, but argue that it is not sufficient.¹²¹ Based on the table above, DR Aggregators argue that using the 40 percent cap on the aggregated baseline load underestimates customer actual load. DR Aggregators contend that "ratepayers are totally protected on overpayments because they can never pay for more than 100 percent of the nominated load, whereas aggregators and customers are at dramatic risk of underpayment because of the penalty mechanism that reduces payments to 50 percent of nomination levels at a performance of 89 percent."¹²²

DR Aggregators contend that the uncapped day-of adjustment is the most accurate mechanism because the vast majority of studies are based on an uncapped adjustment, which "implies the uncapped adjustment improves the accuracy of various baseline methodologies."¹²³ In its rebuttal testimony, CLECA argues that the cap should not be eliminated because of a lack of sufficient analysis.¹²⁴ CLECA acknowledges that DR Aggregators and SDG&E have made a case that the 40 percent cap has merit, but recommends that the Commission

¹²¹ DAG-01 at III-12.

¹²² DAG-01 at III-13.

¹²³ DAG-01 at III-10.

¹²⁴ CLE-02 at 10-11.

schedule workshops to further review the issue.¹²⁵ SDG&E asserts that the DR Aggregators did not provide an analysis comparing the DR Aggregators' "no cap" proposal to the 2010 M&E Capacity Bidding Program results.¹²⁶ SDG&E contends that without a comparison analysis, there is no understanding of the accuracy of the "no cap" baseline.¹²⁷

6.4.2. Discussion

The Commission encourages DR participation and considers an accurate customer baseline important to compensate the customer for its action. We reaffirm our prior statement that an accurate customer baseline is important to compensate customers for its action. The goal of the Commission is to increase the accuracy of the baseline. We agree that a change to the 20 percent cap is needed. SDG&E, PG&E, and the DR Aggregators have made a strong case that the 20 percent cap on the day-of adjustment for the 10-in-10 baseline understates load reduction, thus underpaying customers for their actions. Although the Commission agrees that more studies are needed, we find that the current 20 percent cap on these programs is underpaying customers. Since the Commission wishes to encourage DR and also protect ratepayers, we find that a change to use a 40 percent cap is warranted. A 40 percent cap on the day-of adjustment provides a fair balance for all customers as an interim solution. For consistency and administrative ease, we also revise the baseline used for the Capacity Bidding Program day-ahead program to 40 percent for a morning of adjustment. In making the decision to go to a 40 percent cap, it should be noted

¹²⁵ CLECA Opening Brief at 13.

¹²⁶ SGE-14 at LW\KS-1.

that the Commission did try to find a solution to the underpayments being yielded by the 20 percent cap. Within 30 days after the issuance of this decision, the Utilities shall submit an Advice Letter changing the existing baseline from a 20 percent cap to a 40 percent cap for the Capacity Bidding (day-of) Program.

We were persuaded by SDG&E's testimony the most. In analysis in its testimony,¹²⁸ SDG&E provides the most convincing evidence on record of which baseline is the most accurate. Using the 2010 M&E results as a reference point, SDG&E compares the 20 percent and the 40 percent baseline settlement result to the 2010 M&E result. The Commission agrees with SDG&E's method for determining the most accurate baseline for settlement, but questions whether the 40 percent cap is the most accurate for *all* utilities. Furthermore, none of the parties presented analysis in their testimony that compares the 30 percent, 35 percent, 50 percent and no cap results to the 2010 M&E results. On July 26, 2011, Commission Staff issued a data request to the Utilities asking for the baseline settlement result using both individual and aggregated baseline with 30 percent, 35 percent, 40 percent, 50 percent and no cap adjustment for Capacity Bidding Program day-ahead and Capacity Bidding Program day-of for the months of July, August and September 2010. On August 3, 2011, the Utilities responded to the data request. The assigned ALJ attached the responses to an August 5, 2011 Ruling allowing parties to comment on the responses.¹²⁹

SDG&E, CAISO, and the DR Aggregators filed comments to the data response on August 12, 2011. CAISO finds the results of the Utilities' data

¹²⁷ *Ibid.*

¹²⁸ SGE-13 at LW/KS 24-30.

¹²⁹ <http://docs.cpuc.ca.gov/efile/RULINGS/140887.pdf>.

responses to be inconclusive and recommends a study on the adjustment factors within a range of 20 percent and 50 percent, including a no-cap base, to be completed within the first quarter of 2012. CAISO recommends maintaining the existing 20 percent cap until there is more substantial data.¹³⁰ DR Aggregators request clarification on the basis and foundation for incorporating the data response into the records. Absent such clarification, the DR Aggregators object to the incorporation of the data response into the record and if the data response is made part of the record, DR Aggregators recommend the information in the data response should be given little or no weight.¹³¹ SDG&E does not consent to the post hearing evidence being entered into the record.¹³² More specifically, SDG&E does not object to the entry of the data response in the record for comment but not as evidence.¹³³

The Commission finds the results of the Utilities data response to be of limited use at this time. There is no clear evidence to determine the most accurate day-of adjustment that should be used for all the Utilities. More studies are needed to make an informed decision on baseline settlement. However, our guidance about using a 40 percent cap is reasonable while we conduct further study.

¹³⁰ Comments of CAISO in response to August 5, 2011 ALJ Ruling, filed August 12, 2011.

¹³¹ Comments of DR Aggregators in response to August 5, 2011 ALJ Ruling, filed August 12, 2011.

¹³² Comments of San Diego Gas & Electric Company in response to August 5, 2011 ALJ Ruling, filed August 12, 2011 at 3.

¹³³ *Ibid.*

We direct the Utilities to provide, within 60 days of the issuance of this decision, an analysis of the Demand Bidding and Capacity Bidding Programs and the AMP contracts that compares their baseline settlement result using both individual and aggregated baseline with the following cap percentages 20, 30, 40, 50 and no cap adjustment for the months of July, August, and September 2011. Further, we direct the Utilities to compare the 2011 baseline settlement results with the 2011 M&E results. The comparison analysis must include service accounts for whom the adjusted energy baseline option was selected in that nomination month. For additional data sampling, the analysis must also include a second set of service accounts, assuming all service accounts select day-of adjustment.

In addition, we direct staff to address the baseline comparison analysis at the annual Load Impact workshop. Prior to the workshop, we direct the Utilities to solicit parties' input on improving the baseline comparison studies. This input may include a discussion of alternate accepted baseline methodologies. Forty-five days following the workshop, the Utilities must submit a joint Advice Letter addressing whether there is need to change the current baseline along with a proposed baseline comparison study for the following year. The baseline comparison analysis and the workshop should be conducted each year through 2014, when this program cycle ends.

We do not change the current individual baseline for customers enrolled in the Capacity Bidding Program through an aggregator.¹³⁴ We find that a

¹³⁴ SDG&E, PG&E, and SCE proposed an aggregated baseline be used for the morning of adjustment.

customer's baseline calculation should be the same whether they enrolled in the Capacity Bidding Program through an aggregator or through a utility.

7. DR Programs and Activities

7.1. Third Party DR Contracts

7.1.1. Current Aggregator Managed Programs

In the aftermath of the 2006 California heat storm, the Commission moved swiftly to augment the Utilities' DR resources for the summers of 2007 and 2008. Noting that other jurisdictions had successfully used competitive bidding "to identify new demand response opportunities,"¹³⁵ we concluded that "[s]eeking proposals directly from customers and aggregators could unleash innovative and cost-effective demand response technologies and activities." We ordered PG&E and SCE to pursue Request For Proposals and bilateral contracts for additional demand response resources. At the time we adopted D.06-11-049, SDG&E was already pursuing a competitive solicitation for DR. Now known as the AMP contracts, these contracts provide opportunities for third party DR providers¹³⁶ to enroll and sign up retail customers including bundled service, Community Choice Aggregation, and Direct Access customers. The AMP contracts resulted in increased DR services beginning in June 2007.¹³⁷

Three years later, D.10-12-033 approved modifications to two of PG&E's AMP contracts. That decision rejected a request from PG&E for a competitive bidding process for new contracts beginning in 2012, citing the uncertainty

¹³⁵ See D.06-11-049, Finding of Fact 18, p. 68.

¹³⁶ Also known as DR Aggregators.

¹³⁷ The Commission approved the first AMP contracts in D.07-05-029.

regarding (1) the MRTU rules for DR, and (2) whether procuring DR directly from the market would be more cost-effective once direct participation by aggregators in the CAISO's market becomes viable. However, the Commission allowed PG&E the opportunity to request a one-year extension for the contracts "[i]f circumstances warrant."¹³⁸

The current AMP contracts between PG&E and five individual DR providers, which expired on December 31, 2011, required the aggregators to provide a total of 200 MW of load reduction in 2011. The contracts were available for 50 hours annually and do not allow the 1,000 currently enrolled customers to participate in the Capacity Bidding Program and the Base Interruptible Program.¹³⁹

SCE's current DR contracts expire in 2012. SCE received approval of the current DR contract capacity (280 MW) and administrative costs in prior Commission decisions.¹⁴⁰

SDG&E does not have any AMP contracts at this time.

7.1.2. Utility Proposals

PG&E requests the Commission to extend the current four AMP contracts for one year, with no additional changes, pursuant to D.10-12-033. PG&E provided the following proposed contract levels, by aggregator, for 2012:

¹³⁸ D.10-12-033 at 9.

¹³⁹ SCE and SDG&E also have experience with aggregator contracts. SCE currently has contracts with five DR Aggregators; one of which will expire in 2011 and four of which will expire in 2012. SCE's five contracts provide 105 MW in resource adequacy qualifying capacity. SDG&E contracted with one aggregator, but cancelled the contract in 2011.

¹⁴⁰ D.08-03-017 and D.09-08-027. See also SCE-03 at 70.

TABLE 7.1.1.1

Company		MW
1	EnerNoc, Inc.	70
2	Alternative Energy Resources, Inc. (Comverge)	50
3	Energy Curtailment Specialist, Inc.	40
4	Energy Connect, Inc.	20
Total		180

PG&E requests a budget of \$1.2 million¹⁴¹ for the administrative costs of its AMP contracts. PG&E contends that “extending existing AMP contracts through 2012 is needed to prevent a gap in the DR portfolio arising from PG&E’s current lack of authorization by the Commission to hold a new AMP solicitation to replace the existing AMP contracts¹⁴² and the inability for aggregators to directly participate in the CAISO market.”¹⁴³

PG&E also requests Commission authority to hold a competitive solicitation for new AMP contracts “that can be bid into the CAISO markets as PDR.”¹⁴⁴ PG&E proposes that the five-year contracts would seek to provide 150-250 MW of new DR beginning in 2013. PG&E notes that the funding for these contracts is not included in this application.

SCE does not request the Commission to renew current AMP contracts that expire in 2012, nor does SCE request authorization to solicit a new set of

¹⁴¹ The Commission authorized \$2.7 million for the administrative costs in the 2009-2011 budget cycle.

¹⁴² In a related matter to be discussed in a later section of this decision, PG&E requests to hold a competitive solicitation in 2012 seeking new AMP contracts effective 2013-2017.

¹⁴³ PGE-08 at 2-2 – 2-3.

¹⁴⁴ PGE-01 at 2-28.

contracts. In its Opening Brief, however, SCE states that it “would be prudent for the Commission to leave open the option for the future.” SCE further explains that “The Commission should allow the IOUs the opportunity to present requests to extend their contracts or undertake a new contract solicitation, until such time that the direct participation rules are established and there is an adequate market in which aggregators can viably participate. Failure to do so could mean that a resource with reliable load would be lost or that there would be a detrimental gap between when contracts expire and when direct participation is fully implemented. This would allow third party aggregators to maintain the customers that are enrolled in the current contracts.”¹⁴⁵ SDG&E notes in its application that it is in negotiations with successful bidders from its 2009 DR Request for Offer.¹⁴⁶ SDG&E does not request any new contracts with DR providers. Based on experience with the deliverability of its previous DR contract, SDG&E recommends that the Commission revisit its policy on bilateral DR contracts and deny any future contracts.¹⁴⁷

¹⁴⁵ SCE Opening Brief, at 78.

¹⁴⁶ SCE-01 at MFG-9.

¹⁴⁷ SGE-01 at MFG-9 and MFG-10. Upon cross-examination SDG&E witness Gaines clarified that this recommendation was specific and limited to SDG&E, its service territory, and its customers only and was not intended as a general recommendation applicable to either SCE or PG&E. (RT at 204 (SDG&E (Gaines)).) Witness Gaines testified: “[T]here are significant differences between their service territories and ours. Edison and PG&E are about five times the size of SDG&E... They have a much larger industrial base, and they have different climate zones. All those would drive perhaps different conclusions.” (RT at 205 (SDG&E (Gaines))).

7.1.3. Parties' Positions

DRA objects to PG&E's request for the one-year extension to its AMP contracts. Citing a lack of justification by PG&E for the extension, DRA presents several arguments against the contract extension: the contracts are unnecessary because of anticipated excess capacity in 2012; the AMP contracts did not perform well between 2007 and 2010; the contracts are not cost-effective, and the contracts do not have reasonable safeguards to address any under-performance. DRA concludes that ratepayers will overpay if the Commission approves PG&E's extension request. Furthermore, DRA contends that one contract has a provision that, if the contract had been extended prior to October 31, 2010, would have significantly reduced the premium prices.¹⁴⁸

DRA also recommends that the Commission should only consider new third party DR provider contracts after it finalizes the direct participation rules in Phase IV of R.07-01-047.¹⁴⁹ DRA explains that "[T]his will ensure that third party aggregator contracts will not reduce DR provider's direct participation in the CAISO's wholesale market."¹⁵⁰ DRA also argues that the "current surplus capacity situation exposes ratepayers to substantial financial risk of paying for unneeded capacity"¹⁵¹ if the Commission authorizes a new contract solicitation.

CAISO supports PG&E's proposal for a competitive solicitation of DR resources with the assumption that these resources would be integrated into the

¹⁴⁸ DRA-01, Chapter III at 1-20 to 1-26.

¹⁴⁹ *Ibid.*

¹⁵⁰ DRA Opening Brief at 56.

¹⁵¹ *Ibid.*

CAISO market.¹⁵² CAISO believes that competitive solicitation should be the default procurement method for DR and, like generation procurement, should occur before the Utilities develop their own retail DR programs. CAISO recommends that the “IOUs use competitive procurement to solicit DR designed to satisfy long term procurement and resource adequacy requirement for aggregators.”¹⁵³

DACC/AReM support the CAISO’s position that competitive procurement of DR resources would provide the significant benefit of transitioning away from utility-dominated DR markets, thereby reducing ratepayer risks. As a general policy, DACC/AReM advocates for expanding DR market competition and eliminating participation barriers for non-utility DR providers.¹⁵⁴ DACC/AReM strongly argues that continuation of the utility monopoly provision of DR services (“business as usual”) ensures only high cost programs and a failure to meet the Commission’s policy goals.¹⁵⁵

DR Aggregators maintain that there is an immediate need to renew the current AMP contracts. DR Aggregators base this need on current barriers to DR provider participation in CAISO markets and uncertainty about the timing and extent of future DR provider participation in those markets pending our adoption of direct participation rules. Pointing to the Commission’s approval of the current contracts, DR Aggregators argue that there is no comparable

¹⁵² CAISO Opening Brief at 23.

¹⁵³ ISO-1 at 11, lines 18-19.

¹⁵⁴ DACC/AReM Opening Brief at 15.

¹⁵⁵ DACC/AReM Reply Brief at 3.

opportunity for DR providers to participate in CAISO in 2012. DR Aggregators conclude that it is essential to renew the AMP contracts for 2012.

DR Aggregators also support PG&E's request for new solicitation for AMP contracts that can bid into the CAISO market. DR Aggregators believe that the Commission's authorization is an important step to preserve and increase DR resources.¹⁵⁶ Supporting the need for bilateral contracts in 2012 and the foreseeable future, DR Aggregators note that the "volume of participants expected to engage in direct participation may be small."¹⁵⁷

NAPP submits that the Commission must address the issue of the expiring bilateral contracts in order to provide regulatory certainty for DR providers. NAPP urges the Commission to require the Utilities to hold competitive solicitations for new contracts that qualify for Resource Adequacy and can be bid into the CAISO wholesale markets. NAPP suggests that the "contracts should be restructured to better address the regulatory risk associated with long-term contracts and improve the overall performance of the contracts."¹⁵⁸

7.1.4. Discussion

7.1.4.1. Compliance

In D.09-08-027, the Commission denied PG&E's request for an RFP without prejudice but allowed PG&E to "propose a similar RFP in the future, if appropriate based on market conditions."¹⁵⁹ In a subsequent decision regarding PG&E's Petition for Modification of D.09-08-027, we again denied PG&E's

¹⁵⁶ DR Aggregators Reply Brief at 37.

¹⁵⁷ DR Aggregators Opening Brief at 51.

¹⁵⁸ NAPP Opening Brief at 2.

request to modify the previous decision and hold a competitive solicitation. We reiterated, “(i)f circumstances warrant and new aggregator contracts are not available in 2012, PG&E may request that its existing contracts be extended to continue for that year.”¹⁶⁰ We conclude that PG&E’s request for a one-year extension to its AMP contracts complies with the direction of D.09-08-027 and D.10-12-033.

7.1.4.2. Reasonableness

7.1.4.2.1. Need to Maintain Current DR Resources

We concur with PG&E and DR Aggregators that significant questions remain unresolved regarding when and to what extent Third-Party DR providers will be able to participate in the CAISO’s markets. Given this uncertainty, we agree that there is merit to maintaining the Resource Adequacy capacity resources provided by the current AMP contracts. Moreover, as we anticipate that we will expect the Utilities to rely more on competitive provision of DR services once we do open up Direct Participation, we find that it is prudent to maintain the presence of Third Party Aggregators during this transitional period.

We are not persuaded by DRA’s argument that we should deny PG&E’s request for the contract extension because of its high reserve margin. While we agree with DRA’s concerns regarding the excess capacity in PG&E’s system, we want to keep DR resources available for our use when needed. For example, we anticipate needing more flexible and dispatchable resources to better integrate intermittent renewable resources onto our grid. Investing in DR resources now,

¹⁵⁹ D.09-08-027 at 118.

¹⁶⁰ D.10-12-033 at 9.

especially those from third party resources, will better enable us to have that resource in the future. In addition, we must be consistent in enforcing the loading order articulated in Energy Action Plan II and ensure that the Utilities do not procure or build conventional generation when DR may meet the same system need. While we regard DR as a substitute for generation and are pursuing efforts to ensure that it can compete on equal terms, we recognize that DR and generation are produced in fundamentally different ways. Power plants are long-lived physical assets, which can generally be expected to remain available even if idled or mothballed during periods of excess capacity. While DR resources require some investment in software and equipment, they depend to a great degree upon investments in human capital and management decisions that are easily reversed. The shorter procurement timeframe for DR resources raises the specter of a stop-start-stop-start cycle that may discourage investment by participants and aggregators alike. We wish to avoid such an outcome and intend instead to continue to develop dependable and sustainable DR resources that will be viable substitutes for generation as the reserve margin begins to close later in this decade.

We conclude that it is prudent that we preserve the resources represented by both PG&E and SCE's current AMP contracts. Subject to requirements detailed below, we direct both utilities to maintain, at minimum, the current level (in MW) of aggregator managed contracts through the end of 2014. We authorize PG&E to extend its current contracts through the end of 2012 without alteration. For 2013 and 2014, the Utilities may extend their current contracts or conduct a competitive solicitation for new third party DR resources. New or extended contracts must be cost-effective, as discussed below. We also

encourage additional third party cost-effective MWs of DR to be procured via competitive solicitations, above the minimum current levels.

7.1.4.2.2. Performance and Cost-Effectiveness of AMP Contracts

While ordering the extension of the current level, at a minimum, of aggregator managed contracts, we want to ensure that we are making cost effective investments. We share DRA's concerns about the performance of PG&E's AMP contracts. According to DRA's testimony, there were very few actual events from 2007 to 2010.¹⁶¹ Specifically, there were zero non-test events for the AMP contracts in 2009 & 2010. In contrast, other DR programs experienced considerably more actual events during this time frame.¹⁶²

We are also concerned about the cost-effectiveness of these contracts. We disagree with the DR Aggregators that we should approve the extension because we found these contracts cost-effective when we initially approved them. At that time, we had not adopted the Protocols and did not address the question of cost-effectiveness. Furthermore, the input assumptions we use herein to evaluate the instant applications are probably different than what we would have used five years ago. Since the adoption of the Protocols in D.10-12-047, we are now able to examine cost-effectiveness.

PG&E's analysis shows that the AMP contracts have a benefit-cost ratio less than or equal to 0.5 for all three cost-effectiveness tests. As we discussed in the cost-effectiveness section of this decision, we consider programs with ratios of 0.5 or lower in the TRC test to be "not cost-effective." Setting aside DRA's

¹⁶¹ DRA-01, Chapter 1, Table 5 at 1-25.

¹⁶² For example, Capacity Bidding Program had 12 events.

concerns regarding the under performance of the AMP contract, PG&E's cost-effectiveness template shows that none of the contracts would be cost-effective even assuming 100 percent performance. These contracts have limited availability (50 hours/year in summer) so the A factor, which is based on the program's availability, is only 30 percent. This is much lower than other DR programs that are available for more hours. With the current cost-effectiveness ratios,¹⁶³ these contracts are far from being cost-effective.

As discussed above, however, we exercise our ability to examine the AMP program via a larger policy lens. We wish to expand the role third party aggregators play in the California DR market; we just need to do it on a cost-effective basis. We find it unreasonable to extend these contracts without addressing these issues. PG&E did not provide any analysis on alternative solutions, such as modifying the contract terms and conditions to make these contracts cost-effective. Nevertheless, we cannot allow any extension without sufficient revisions to make the contracts cost-effective in the future. We recognize, however, there may not be sufficient time for PG&E and the AMP contractors to complete their negotiations, receive approval by the Commission of the new contracts, and then enroll customers into the new contracts by the beginning of the 2012 summer season. Thus, we grant PG&E's request to extend four of its current AMP contracts to operate during the 2012 calendar year unmodified other than extending the term of the contracts to December 31, 2012. For 2013-2014, PG&E is further directed and authorized to extend its AMP program associated budget either by re-negotiating cost-effective AMP contracts

¹⁶³ TRC result of 0.49, PAC result of 0.42 and RIM result of 0.42.

for 2013-2014 received by the Commission as directed below or conducting a competitive solicitation for, at minimum, an equal quantity (180 MW) of DR to be provided by third parties during 2013-2014. Thus, if PG&E elects to extend the current AMP contracts beyond 2012, it must renegotiate the terms of the contracts to improve their cost-effectiveness, increasing the TRC ratio to be cost effective as set forth in this decision. Within 90 days from the issuance of this decision, PG&E should submit a Tier 2 Advice Letter that includes the renegotiated contracts, along with a revised cost-effectiveness analysis that provides the results of the three cost-effectiveness tests. Alternatively, PG&E may conduct a competitive solicitation for, at minimum, an equal quantity (180 MW) of DR to be provided by third parties during 2013-2014. In either case, to be considered cost-effective the AMP contracts must comply with the Protocols as well as all of the cost-effectiveness directives that we discuss in this Decision, e.g., PG&E shall not use the LOLP model in its cost-effectiveness analysis.

We also approve the request by DR Aggregators, and agreed to by PG&E, to enroll net energy metering customers in AMP. This should assist in improving the cost-effectiveness of the AMP contracts.

We also direct SCE to preserve the current level of AMP resources (280 MW) during the transition period of 2013 to 2014. At its election, SCE can comply with this direction either by negotiating extensions of its current contracts or conducting a competitive solicitation for, at minimum, an equal quantity of third party DR resources. If it chooses to extend its current AMP contracts, SCE shall submit within 90 days of this Decision applications for 2013-2014 third party DR aggregator contract extensions. If SCE opts to conduct a competitive solicitation, it should submit as soon as appropriate an application seeking Commission approval, no later than September 7, 2012. The extended or

new contracts must be cost-effective, as defined herein. As stated above, PG&E, SCE and SDG&E are all encouraged to procure additional third party-cost effective MWs of DR through competitive solicitations, above current minimum levels.

7.1.4.3. Meeting Future Needs

As discussed above, we agree with the Applicants and parties that the Commission should preserve the DR resources from current and future AMP contracts because they can be bid into the CAISO market. Looking ahead to our pursuit of SB 1X's requirement that the Utilities obtain 33% of the energy they deliver from renewable sources by 2020, we also expect that DR will likely be called upon to meet new needs beyond its historic role as an emergency resource and peak shaving tool. DR is ideally suited to support grid integration of renewable generation, much of which will be intermittent or variable. Accordingly, we conclude that the presence of third party aggregators in California will foster the innovation needed to meet this approaching challenge.

7.2. Marketing, Education, and Outreach

In D.09-08-027, we strongly encouraged the Utilities to move toward more coordinated ME&O, and reduce or eliminate program-specific budget requests for the 2012-2014 budget applications. We directed the Utilities to coordinate these activities with similar activities in energy efficiency and demand-side management programs. Additionally, in the Guidance Ruling, we required the Utilities to include proposals for bridge funding for IDSM marketing.

In D.09-08-027, the Commission approved marketing budgets in three categories: Category 6 for Statewide DR Marketing, Category 9 for Local DR

Marketing,¹⁶⁴ and Category 10, IDSM Marketing. We adopted 2009-2011 budgets of \$6.4 million for PG&E, \$4.94 million for SCE and \$1.25 million for SDG&E for Statewide DR Marketing, also known as Flex Alert.¹⁶⁵ We also authorized local DR marketing budgets of \$10.7 million for PG&E, \$9.38 million for SCE and \$6.94 million for SDG&E.¹⁶⁶

As previously addressed in the chapter on cost-effectiveness, in order to improve the cost-effectiveness of many DR programs, we direct the Utilities to decrease costs in some specific areas, including ME&O. Proposed and approved 2012-2014 budgets for the Statewide DR ME&O and Local DR ME&O will be discussed separately.

7.2.1. Statewide DR Marketing / Flex Alert Campaign

The Commission created the Flex Alert campaign as a statewide marketing program that encourages residential customers to reduce their demand when CAISO calls a Stage I Emergency. In D.09-08-027, the Commission required that future DR statewide marketing strategies would be determined by the Strategic Plan.¹⁶⁷ The Strategic Plan provides several strategies to “create a consumer experience that offers an integrated set of DSM information and program

¹⁶⁴ In the 2009-2011 DR application, each utility used a different name for Category 9. SCE called Chapter 9, “Specialized Marketing, Education, and Outreach.” PG&E called it “Core Marketing and Outreach.” SDG&E called it “Customer Education, Awareness and Outreach. For the purposes of this decision, all marketing that is not Statewide or IDSM marketing will be referred to as Local ME&O.

¹⁶⁵ *Id.* at 96.

¹⁶⁶ D.09-08-027 at 98.

¹⁶⁷ D.09-08-027, OP 17.

options.”¹⁶⁸ D.09-09-047 directs the Utilities to integrate DR Statewide Marketing with energy efficiency statewide marketing. Because the two proceedings, energy efficiency and DR, are on different budget cycles, the Commission directed the Utilities to propose 2012 bridge funding in this DR application for statewide marketing.¹⁶⁹

Each utility has an individual budget for the statewide marketing program; these budgets are pooled together to fund one contract currently held by SCE. SCE requests \$1,649,330 per each year 2012 and 2013, to cover the costs of the statewide contract. PG&E requests \$ 1,086,500 per year for years 2012 and 2013, to cover the cost of its portion of the program contract. SDG&E requests a budget of \$210,000 for 2012 for its portion of the contract.

PG&E and SCE assert that because the energy efficiency program application cycle has been delayed, two years of bridge funding is necessary. We recognize that the energy efficiency application cycle is anticipated to be a two year cycle, from 2013-2014. We elect to not fund any DR statewide marketing funding requests for 2013 and 2014 in this proceeding. Rather, we direct each Utility to file a separate Application for its statewide marketing activities. This Application shall focus on statewide marketing activities across various different demand-side marketing, education and outreach activities, including DR, Energy Efficiency, and Distributed Generation programs. The Utilities shall file the Application no later than August 3, 2012. The Applications shall span across ME&O activity across program years 2013 and 2014.

¹⁶⁸ Strategic Plan, Section 10 at 80.

¹⁶⁹ DR Guidance Ruling, August 2010.

We have consistently encouraged the Utilities to coordinate and integrate ME&O messaging in order to deliver common messages. We address this further in our discussion on local ME&O. The Statewide ME&O Applications for 2013 and 2014 should include two components of demand response awareness: 1) emergency alerts and, 2) general awareness for residential and small commercial customers.

For DR budget years 2009-2011, we approved a total statewide DR ME&O budget for PG&E, SCE and SDG&E of \$10 million. PG&E and SCE combined request a budget of \$5.42 million for years 2012 and 2013. We deny funding without prejudice for 2013; we direct the Utilities to include 2013 funding in the statewide marketing activities Application described above. However, we authorize the requested budget for SCE and PG&E to be spent in 2012 only. We encourage PG&E, SCE and SDG&E to consider General Order 156 goals and in particular, if flex alerts are targeted to regions or areas where census data shows minority populations, efforts should be made to secure contractors or subcontractors from or familiar with those targeted regions and with experience creating and implementing marketing efforts that are in-language. Any statewide plan should consider marketing and outreach in languages used by customers and tailored to serve the cultural, socio-economic, geographic, age, disability, residential type, and other diversity of customers, with a well tailored focus on those customers most affected by electrical supply, transmission, distribution, usage, conservation, resource constraints or urgent issues. Given this rationale, we further expand PG&E's budget to \$3,500,000. We expand SCE's budget for 2012 to \$5,500,000.

SDG&E's DR statewide marketing budget request of \$210,000 equals its DR statewide marketing budget authorization of 2011; we find this amount

insufficient for SDG&E's portion of the statewide contract in 2012. SDG&E's DR statewide marketing budget for 2009 through 2011 equaled approximately \$1.25 million.¹⁷⁰ We expand the budget to \$1,000,000 for 2012; we find this amount to be a more appropriate amount for SDG&E's portion of the DR statewide marketing effort.

Because the budgets are pooled to fund one contract, a coordinating committee consisting of representatives from all three utilities and Commission Staff should be established to ensure the contract terms and plans are responsive to any emerging issues. SCE shall consider General Order 156 goals when awarding the contract and is encouraged to require the prime contractor to hire subcontractors who meet these General Order goals. In particular, should a summer flex alert campaign be anticipated, SCE should require the contractor to utilize target geographic and demographic data to effectively design a plan that focuses on all effective areas. PG&E, SCE and SDG&E are encouraged to provide specific geographic and demographic data and to secure data from CAISO containing such data points as potentially affected substations, zip codes, languages spoken, and other census data and research which can help create a well-targeted program to more effectively encourage conservation, energy efficiency, and appropriate responses to energy emergencies. These values should also be represented in the statewide marketing application for the 2013-2014 time frame. The Utilities should report before July 2, 2012 their plans to reach the diversity of Californians that are most likely to be affected by any emerging energy issues.

¹⁷⁰ SGE-01 at MFG-26.

For the reasons discussed above, we authorize a 2012 Statewide DR ME&O budget for each utility as provided in the following table:

TABLE 7.2.1

Statewide DR ME&O Budgets		
Utility	Total Requested (2012-2013)	Authorized Total (2012)
SDG&E	\$ 210,000	\$ 1,000,000
PG&E	\$ 2,173,000	\$ 3,500,000
SCE	\$ 3,298,659	\$ 5,500,000

7.2.2. Local Demand Response Marketing Education & Outreach

7.2.2.1. Utility Proposals

PG&E proposes a general DR marketing budget of \$24.579 million during the 2012-2014 budget cycle. PG&E describes two categories of work within its marketing activities: “Continued Marketing, Education and Outreach” which includes research, outreach, awareness, and enrollment, support and retention in programs, and “Portfolio and Marketing Optimization” which includes strategic planning, customer targeting, program optimization and additional research.

In its Application, SDG&E proposes a \$7.191 million budget for its Local DR Marketing which SDG&E allocates across several budget categories. SDG&E requests \$1.158 million for a Customer Education, Awareness and Outreach program. SDG&E explains that the purpose of the Customer Education, Awareness and Outreach Program is to provide general information about DR to all of its customer classes. In addition, SDG&E requests that a portion of several DR program budgets be dedicated to marketing that individual program. SDG&E proposes \$2.165 million to market its Base Interruptible Program,

Capacity Bidding Program, Technical Assistance, Technical Incentive, PLS and the Small Technology Deployment Pilot. SDG&E also requests \$3.868 million for Peak Time Rebate marketing materials to educate customers on 1) how DR and Peak Time Rebate are mutually beneficial, 2) rates and eligibility, 3) notification enrollment, 4) energy usage modification and 5) the installation of enabling technologies.

SCE recommends a Local DR Marketing budget of over \$40 million which is separated into five areas: DR individual program marketing; Circuit Savers; DR ME&O; Peak Time Rebate; and Critical Peak Pricing marketing to small business customers.¹⁷¹ SCE requests a total of \$8.868 million for individual marketing budgets in many of its DR programs and activities that include the development of program materials and enrollment campaigns. SCE proposes to enhance its Circuit Savers program, a campaign that targets customers on load-constrained distribution circuits; and requests a budget of \$2.6 million. In order to provide outreach to smaller business, agricultural, and water customers in DR programs, SCE proposes a budget of \$3.7 million for its DR ME&O. SCE also requests \$5.9 million to conduct marketing to non-residential customers about Critical Peak Pricing. While already receiving approval of the program in D.08-09-038, SCE requests a budget of \$20 million for Peak Time Rebate ME&O.

7.2.2.2. Parties' Positions

Only UCAN commented on utility Local DR Marketing budgets. UCAN opposes SDG&E's funding request to market Peak Time Rebate. UCAN

¹⁷¹ Customers with a demand of less than 200 kW.

provides several examples where ME&O budgets are excessive.¹⁷² For example, UCAN considers the DR Local ME&O cost per customer to be excessive for a program in which a customer is automatically enrolled and participates voluntarily. UCAN argues that SDG&E should leverage the requested \$28 million in its dynamic pricing application, A.10-07-009, to offer customers information about dynamic pricing and Peak Time Rebate.¹⁷³ Also, UCAN opposes SDG&E's Customer Education, Awareness and Outreach Program, calling it overly broad and targeted at the wrong customers.

7.2.2.3. Discussion

Over the past several years, the Commission has directed the Utilities to integrate all customer demand-side programs in a coherent and efficient manner.¹⁷⁴ In the Strategic Plan, we emphasized a coordinated approach to ME&O and directed the Utilities to develop marketing messages that offer bundles of DSM programs targeted to specific customer groups.¹⁷⁵ We further ordered the Utilities to coordinate all energy efficiency ME&O programs with DR ME&O programs to ensure integration across demand side management programs by the next portfolio cycle.¹⁷⁶ In D.09-08-027, we approved a total of three marketing budget categories and encouraged the Utilities to coordinate, reduce, or eliminate program-specific budget requests in the 2012-2014 DR applications. We find that the ME&O funding requests in the DR applications do

¹⁷² UCN-01 at 4-6.

¹⁷³ UCN-01 at 4.

¹⁷⁴ D.07-10-032 at 5.

¹⁷⁵ *Strategic Plan*, Section 10 at 80, September 2008.

¹⁷⁶ D.09-09-047, OP 34.

not convey an adequate effort toward this policy. Our discussion below provides specific direction for coordination, reduction and, in some cases, elimination within the various Utilities’ marketing funding requests. To start, we compare the authorized budgets in D.09-08-027 to the percent spent on marketing, education and outreach, and also to what was applied for in these Applications.

Utility	Total Approved Funds Local DR ME&O 2009-2011	Percent Spent from 8/09-11/11	Total Requested Funds allocated toward Local DR ME&O 2012-2014	Total Approved Funds for Local DR ME&O 2012-2014
SDG&E	\$6,029,209	41.6%	\$7,159,000	\$ 5,650,000
PG&E	\$10,707,000	53.1%	\$24,579,192	\$13,000,000
SCE	\$9,381,464	34.9%	\$40,780,659	\$ 22,000,000

While the Utilities have begun to use integrated marketing funding to streamline their messaging to customers, we consider the IDSM marketing category an interim measure toward complete integration. The utilities should be making further strides towards integrated marketing. Approving any more than the previously approved three marketing budgets in this proceeding is contradictory to past decisions.

PG&E’s 2012-2014 requested marketing budget includes marketing for its Smart AC program. We note that funding for SmartAC was not part of PG&E’s 2009-2011 DR application. For 2010 and 2011, SmartAC was approved and funding was authorized separately through a SmartAC application. The utility

proposed using a portion of its proposed budget to conduct research. However, the utility has already conducted foundational research through its Peak Day Pricing proceeding, and the results gained for the cost invested do not justify greater rate payer expense on further research. The approved budget of \$13,000,000 is approximately 53 percent of the utility's requested budget, which is the equivalent of what PG&E spent on marketing in 2009 through 2011. This amount is reasonable given the context of past activities.

SDG&E proposes two new marketing efforts in this application that were not included in its budget in the last program cycle. The Commission provided direction about Peak Time Rebate during the Advanced Metering Initiative proceeding. SDG&E self-initiated the Small Commercial Technology. These two activities account for 77 percent of the local marketing budget that SDG&E proposed. The recommended approved budget of \$5,650,000 is approximately 81 percent of the utility's requested budget. According to the November DR monthly report SDG&E spent 41% of its total authorized budget in 2009-2011. However, because the utility is marketing activities it has not marketed in the past, it is reasonable to provide a larger budget than what SDG&E spent in 2009 through 2011. Therefore, we approve a budget of \$5,650,000 for SDG&E.

SCE proposed two marketing efforts in this program cycle that were not included in the last cycle. The Commission directed that the utility have Peak Time Rebate for residential customers and Critical Peak Pricing for non residential customers whose usage is under 200 kW. These two activities account for 62 percent of the marketing budget that SCE proposed. Of the three utilities, SCE spent the least amount of its budget in 2009-2011. As discussed below, we authorize approximately half of the Peak Time Rebate budget. However, we agree with comments made by SCE and CLECA that at this point

the timing will not work for SCE to request marketing funds for large or small customer Critical Peak Pricing or Peak Time Rebate in another proceeding. Subsequently, we authorize budgets in these categories. We recognize that this has implications for the authorization we give in their requested budgets in the appropriate program categories too. We will discuss this in greater detail, below. PG&E was the first utility to request funding for Critical Peak Pricing marketing to small commercial customers in its 2009 Rate Design Window. The Commission approved PG&E's request, but required that the utility fulfill reporting requirements to ensure that the expenses for the effort were transparent and that outreach and education efforts were effective. The Commission authorizes SCE marketing request here, and direct the utility to work with Commission staff to develop timelines for the same reporting requirements that are required of PG&E for its Critical Peak Pricing outreach¹⁷⁷ to small commercial customers.

We reviewed the Utilities' requests for marketing individual DR programs. Both SCE and SDG&E recommend budgets to market their Reliability Programs. The Commission has capped the size of emergency-triggered DR that counts for Resource Adequacy. Although these programs remain open to new enrollment pursuant to the Settlement Agreement, we find that there is no rationale to encourage enrollments in these programs. As a result, it is reasonable to conclude that these marketing budgets are not necessary and we deny such requests.

¹⁷⁷ D.09-09-022, OP 13-16.

SCE requests marketing funds for the Schedule Load Reduction and Optional Binding Mandatory Curtailment programs. We find it unreasonable to create marketing budgets for programs, which have few, if any, customers. SCE and SDG&E also propose marketing budgets for their Capacity Bidding Programs, a program administered by third party providers. The Utilities have a combined total of one customer directly enrolled in this program. We find it unnecessary for the Utilities to market a program primarily administered by a third party. We deny requests for marketing funds for the Schedule Load Reduction, Optional Binding Mandatory Curtailment and Capacity Bidding Programs.

In comments, the Utilities expressed a concern that ME&O funding is not just for marketing, but also for educating and notifying customers. While we deny funding for marketing to Reliability program customers, we recognize a potential need to educate and communicate program changes to these customers. If a utility finds it necessary to target funds to educate and communicate with Reliability program customers, the Utilities can utilize funds from other DR programs within the ME&O category and in compliance with fund shifting rules. In addition, funding for customer notifications should be allocated from the DR Support Systems budget category. The changes made to the 2012-2014 DR ME&O budget are for two primary reasons: 1) historical ME&O under spending and 2) to make DR programs more cost-effective. We acknowledge with this second rationale that a certain amount of investment in ME&O is necessary to help support the ability to have robust programs. So when decreases are made to the ME&O budget to improve cost-effectiveness, we recognize that the Utilities can alternatively find ways of increasing benefits of those programs.

SCE and SDG&E request funding for activities that the Commission has required to be integrated: Technical Assistance and Technology Resource Incubator Outreach.¹⁷⁸ Because the Utilities have been directed to integrate these programs, marketing for these activities should come from the IDSM marketing budget. We address these marketing requests in our discussion of IDSM below.

SCE plans to enroll 196,000 customers¹⁷⁹ in its Summer Discount Plan by 2014. However, current enrollment levels from the September 2011 monthly report and the Enrollment Forecast table¹⁸⁰, indicate that SCE will only enroll 71,463 by 2014. Based on SCE's proposed budget of \$6 million, this equals \$93 per enrolled customer. As we noted above, SCE only spent 35 percent of its ME&O budget by November 2011. But, we also recognize that SCE spent 75 percent of its entire AC cycling budget which included ME&O and administrative costs. Thus while we decrease SCE's requested AC cycling budget, we do so only by 50 percent. We authorize SCE a budget of \$3 million for its Summer Discount Program ME&O.

We find SCE's \$1 million requested increase for the Circuit Saver program to be unreasonable, given that SCE expanded this program while spending less than one-third of its approved 2009-2011 Circuit Saver budget as of March 2011.¹⁸¹ Similarly, SCE proposes to expand its DR ME&O, but has used only a fraction of its budget in the current funding cycle. We find it reasonable to

¹⁷⁸ *Joint Assigned Commissioners' Ruling Providing Guidance on Integrated Demand-Side Management in 2009-2011 Portfolio Applications*, April 11, 2008.

¹⁸¹ SCE 2012-2014 DR Program Portfolio, Volume 2 at 115.

reduce the requested budget for Circuit Saver and DR ME&O to \$1,000,000 for each program.

Our review found instances where the Utilities could take advantage of coordination and integration. SCE requests \$20 million in marketing funds for Peak Time Rebate and SDG&E requests \$3.8 million. For both utilities, this amount represents half of its total local marketing request. UCAN recommends that SDG&E use existing channels like email, direct mail and the SDG&E website to market to potential Peak Time Rebate customers. Both SDG&E and UCAN agree that once most customer email addresses are obtained, marketing costs should decrease.¹⁸² However, neither SDG&E nor UCAN provide any estimates of cost savings.

The Commission directed SDG&E, as well as the other utilities, to make usage and cost information available to its customers online in anticipation of smart meter deployment.¹⁸³ Using these tools should assist in fulfilling the Commission's goal of reaching customers through single points of contact while simultaneously decreasing the marketing budgets for these activities. Instead of doubling marketing budgets to provide information about one program, the Utilities should focus residential and small commercial marketing efforts on motivating them to use the My Account tool as well as other available online resources. We reduce the marketing funds for these activities accordingly. We authorize SCE to spend \$10 million on Peak Time Rebate and SDG&E to spend \$3 million on Peak Time Rebate.

¹⁸² SGE-06 at GMK-4:9-10.

¹⁸³ *Decision Adopting Rules to Protect the Privacy and Security of the Electricity Usage Data of the Customers of PG&E, SCE and SDG&E*, D.11-07-056, OP 5 and OP 6 at 164.

While we reduce the Local DR ME&O funds for these programs, we recognize that there are similarities among each utility's designs for Peak Time Rebate and proposed dynamic rates. These similarities create opportunities for the Utilities to collaborate and provide general statewide messages about these two types of programs. As we discussed in the Statewide ME&O section, we direct utilities to include proposals for messaging these types of rates in the Statewide ME&O Application.

We authorize SCE a budget of \$22 million for all local marketing, which is approximately 55 percent of what the utility requested. Given that the utility spent only 35 percent of its authorized budget in 2009-2011, we find this amount to be reasonable. We authorize a total local marketing budget for SDG&E of \$5,650,000.

Unlike SDG&E and SCE, PG&E did not include marketing budgets within each of its program budgets. Instead, PG&E included all of its local marketing in its DR Core Marketing and Outreach line item. However, like SDG&E and SCE, PG&E's proposed ME&O budgets are not justified based on past expenditures. We reduce PG&E's Local ME&O budget accordingly.

In order for marketing funds to comply with our prior orders, we direct the Utilities to consolidate all marketing funding from the three categories previously approved in D.09-08-027 into two categories: ME&O and IDSM ME&O. We move the marketing budgets from the individual DR program funding requests to the ME&O category. The statewide marketing budget is now a line item within the ME&O category and is only for 2012. Pursuant to the discussion on cost-effectiveness and our discussion above, we appropriately categorize all marketing funds, decrease funding for several programs and activities as discussed in this and the cost-effectiveness sections.

For each utility, the first Monthly Demand Response Report following issuance of this Decision shall include a section on marketing expenditures, which the utilities shall develop in collaboration with Commission staff. Tracking Marketing expenditures will allow the Commission to better monitor ME&O activity. Furthermore, all marketing efforts by the utility should comply with the following policies:

- a) Programs that have few to no customers enrolled, such as the Scheduled Load Reduction and Optional Binding Mandatory Curtailment Programs, do not require marketing funds. We prohibit the use of ratepayer funds to market these programs.
- b) Marketing plans should focus on price-responsive programs and permanent load shifting activities.
- c) Marketing efforts for residential and small commercial customers should focus on customer enrollment through "My Account."
- d) Marketing for Peak Time Rebate should either be done online or through highly targeted campaigns only.
- e) Marketing the concepts of dynamic rates should be included in the Statewide ME&O Application. Statewide marketing efforts must be coordinated with local marketing campaigns.

The following table shows the authorized Local DR ME&O budgets for specific programs and activities:

SCE Local Marketing

Program/ Activity	ME&O Requested	Authorized ME&O (to be categorized as Local DR ME&O)
Agricultural Pumping Interruptible	\$44,500	\$0
Base Interruptible Program	\$103,000	\$0
Optional Binding Mandatory Curtailment	\$9,000	\$0
Scheduled Load Reduction Program	\$9,000	\$0
Rotating Outages	\$77,000	\$0
Ancillary Services	\$5,000	\$0
Capacity Bidding Program	\$237,500	\$0
Demand Bidding Program	\$302,400	\$275,000
Summer Discount Plan	6,714,000	\$3,000,000
Peak Time Rebate	\$20,028,000	\$10,000,000 ¹⁸⁴
Critical Peak Pricing > 200 kW	\$297,900	\$275,000
Critical Peak Pricing <200kW	\$5,639,000	\$5,500,000

¹⁸⁴ This amount approximately equals one year of the funding requested by SCE to market this program. We consider this reasonable because SCE spent only 30 percent of its 2009-2011 Peak Time Rebate ME&O budgets by August of 2011, according to the SCE DR monthly report for August 2011.

Real Time Pricing	\$489,500	\$480,000
PLS	\$310,000	\$250,000
DR ME&O	\$3,673,037	\$1,000,000
Circuit Savers	\$2,599,822	\$1,000,000
Technical Incentives	\$242,000	\$220,000
TOTAL	\$40,780,659	\$22,000,000

PG&E Local Marketing

Program/ Activity	ME&O Requested	Authorized ME&O (to be categorized as Local DR ME&O)
DR Local ME&O	\$24,579,192	\$13,000,000

SDG&E Local Marketing

Program	ME&O Requested	Authorized ME&O (to be categorized as Local DR ME&O)
Base Interruptible Program	\$165,000	\$0
Capacity Bidding Program	\$150,000	\$0
Peak Time Rebate	\$3,868,000	\$3,000,000
Small Commercial Technology Deployment	\$1,639,000	\$1,500,000
Customer Awareness, Education & Outreach	\$1,158,000	\$1,100,000

PLS	\$84,000	\$ 75,000
Technical Incentives	\$95,000	\$75,000
TOTAL	\$7,159,000	\$5,750,000

7.3. DR System Support Activities

In D.09-08-027, the Commission adopted the following budgets for DR infrastructure activities System Support Activities (in Category 08): PG&E - \$16.902 million, SDG&E - \$0, and SCE - \$13.158 million. Subsequently, D.10-12-047 approved a request of SCE to shift \$3.525 million previously authorized in D.09-08-027. The Commission directed SCE to now use these funds for system improvements needed to support participation in PDR activities, in general, and, more specifically, SCE's Capacity Bidding Program and DR contracts.

7.3.1. Utility Proposals

7.3.1.1. PG&E

For 2012-2014, PG&E requests \$41.5 million for DR Operations which is divided into three categories: DR Enrollment and Support (\$15.787 million), Inter-Act/DR Forecasting Tool (\$14.408 million) and Notifications (\$11.328 million).¹⁸⁵

- DR Enrollment and Support: As part of the CAISO market integration effort, PG&E proposes enhancements and increased labor costs to several DR enrollment systems including the Capacity Bidding Program operating system and Event Manager. In addition to the enhancements costs, PG&E requests funds for licensing fees and software maintenance costs.

¹⁸⁵ PGE-01 at 4-2.

- **Inter-Act/ DR Forecasting:** InterAct is PG&E's energy management and DR event notification application. PG&E requests funds for InterAct system updates, licensing fees, labor costs, and operational costs.
- **Notifications:** PG&E utilizes two notification systems for its DR programs: Varolli and Yukon. PG&E contracts with Varolli, a third party vendor, to provide notifications for PeakChoice, Peak Day Pricing, Demand Bidding Program, Base Interruptible Program, Schedule Load Reduction Program, Optional Binding Mandatory Curtailment Program and AMP Contractors. PG&E requests funds in this category for licensing fees, notification costs and labor costs. To provide SmartAC notifications, PG&E uses the Yukon system. Another CAISO integration project, PG&E plans to update Yukon to accommodate locational dispatch. PG&E requests funds for IT enhancements, notification and labor costs in the effort to revise Yukon for CAISO integration.

PG&E also proposes funds for PDR Risk Assessment and Review to capture PDR transactions; and for Meteorology Services Group to expand activities in support of Peak Day Pricing, Capacity Bidding Program, PeakChoice, SmartAC, day-ahead Demand Bidding, PDR and Load Research.

7.3.1.2. SCE

SCE recommends a budget of \$20.6 million in the DR System Support Activities Category for DR system infrastructure expenses during the 2012-2014 program cycle.¹⁸⁶ In addition to these new expenses, SCE requests that the Commission allow SCE to carry over unspent CAISO integration funds authorized in D.10-12-047.¹⁸⁷ SCE explains that many of these previously

¹⁸⁶ SCE-02 at 147.

¹⁸⁷ SCE-01 at 122. In D.10-12-047, the Commission authorized \$3.535 million to fund CAISO-related PDR and RDRR integration costs.

authorized costs target the revision of SCE's retail DR programs to be compatible with CAISO wholesale products like PDR and RDRR. Despite receiving the 2009-2011 funds to update programs for PDR and RDRR integration, SCE only anticipates completing work by the end of 2011 that enables the Capacity Bidding Program and Demand Bidding Program to participate in PDR. However, if the Commission authorizes SCE to carry over the unspent CAISO funds, SCE alleges it will be able to complete the work necessary for SCE's DR programs to be compatible with RDRR by 2012.

SCE identified nine infrastructure items, equaling \$12.4 million, to support DR programs during the 2012 - 2014 program cycle and beyond. The following table depicts the requested allocations for these expenses, including funds initially requested in D10-12-047. In addition to these expenses totaling \$12.164 million, SCE has also identified \$8.436 million in labor and non-labor expenses. SCE explains that the non-labor costs include \$2.08 million in contracts, \$100,000 in on-line training and approximately \$79,000 for administrative overhead expenses.

**TABLE 7.3.1.2
SCE'S SYSTEMS AND TECHNOLOGY BUDGET REQUESTS FOR 2012-2014**

Infrastructure Expense	Activity	Amount Initially Requested in D.10-12-047	Amount Newly requested in A.11-03-001
SubCategory			
Customer Contact and Notification System (\$1,125,000)			
	Outage Notification Communication		600,000
	System Enhancements for PDR/RDRR Geographic Dispatch	150,000	
	Event Notification System (ENS) Licensing Fees		345,000
	ENS CPP	234,000	
	ENS Save Power Day	957,000	
	FirstCall Interactive Licensing & Notification		180,000
Load Control and Dispatch Platforms (\$6,864,000)			

	Alhambra FMRadio Communications System Licensing, Notification and System Enhancements		1,426,000
	Implementation of PDR/RDRR Geographic Dispatch	275,000	
	DR Automation Server Licensing, Software, & Enhancements	200,000	1,775,000
	APX Bidding & Event Dispatch Platform Licensing, Hosting, Security, & System Enhancements		2,163,000
	Advanced Load Control System (ALCS) Implementation of SEP IP		1,000,000
	ALCS Unanticipated Modifications with SCE Back Office		500,000
Load Control and Event Dispatch End User Technologies (\$165,000)			
	Auto DR		40,000
	DR Gadgets		125,000
Customer Web Pages for Program Education and Event Notification (\$1,160,000)			
	Ingrate Existing Energy Manager Suite w/ Auto-DR Platform		100,000
	Update, Implement, & Modify Web Training Modules		60,000
	Unanticipated Projects		500,000
	Implement PDR/RDRR Geographic Dispatch	2,000,000	
	Modify Bidding & Settlement Systems for DBP	1,000,000	
	Develop, Modify, & Maintain Existing Customer Web Pages to Support DR Programs.		500,000
Customer Relationship Mgmt Systems / Reporting Environments (\$2,000,000)			
	Develop and Maintain CRM		1,500,000
	Develop Integrated Systems to Manage Customer Enrollment		500,000
Billing and Event Settlement Dispatch Systems (\$750,000)			
	Modify CSS central Billing System to Accommodate Dual Participation and Settlement Baseline		750,000
Technology/Software Needs (\$100,000)			
	Activities and equipment to Support Dispatch/Measurement of DR Events		100,000
Total		\$4,816,000.00	\$12,164,000.00

7.3.1.3. SDG&E

SDG&E requests a budget of \$5.4 million to implement all DR-related IT updates. SDG&E proposes funding for three specific IT projects: Customer Relationship Management System, Middleware, and CAISO Integration.

With full deployment completed in 2010, SDG&E plans to maintain its Customer Relationship Management System during the 2012-2014 period.¹⁸⁸ SDG&E requests a total budget of \$1.259 million to cover the costs related to this system.

SDG&E proposes to implement a Middleware Infrastructure, a framework to interface between internal and external systems. Recommending a budget of \$0.839 million to cover the cost of design, development and deployment of the Middleware Infrastructure, SDG&E also requests \$1.8 million to fund additional hardware, software and interfaces necessary to synchronize program and event data across applications on this framework.

SDG&E proposes minor IT purchases that will enable its DR programs' participation in the CAISO wholesale market programs. Noting that CAISO uses varying automated systems to enable bidding, scheduling, dispatching, and settlement of standard generation resources, SDG&E points out that these systems were used for the SDG&E's 2009 Participating Load Pilot. Through this pilot, SDG&E identified potential functional interfaces to incorporate PDR-ready DR programs. SDG&E requests an initial budget of \$1.5 million to fund CAISO MRTU IT infrastructure and system licenses and maintenance. SDG&E asserts that further MRTU Integration efforts will be recorded and recovered through its MRTU Memorandum Account.

7.3.2. Parties' Positions

TURN's testimony focuses on SCE's IT costs in relationship to program cost-effectiveness. TURN argues that several IT costs were not included in SCE's

¹⁸⁸ SDG&E states that it may update to a newer version of its Customer Relationship Management System but does not specifically request funding for the update.

cost-effectiveness analysis and templates.¹⁸⁹ TURN contends that SCE omitted as much as \$164 million in GRC-funded software project costs in its DR cost-effectiveness analysis.¹⁹⁰ In response, SCE submitted an alternative analysis with a cost-effectiveness spreadsheet that includes some of these GRC DR-related costs.¹⁹¹ As a result, TURN urges the Commission to verify that the other two utilities have properly included all IT costs in DR cost-effectiveness analyses.¹⁹²

On a related matter, TURN suggests that the Commission reconsider its requirement that 10 percent of the Utilities' DR portfolio be bid into the CAISO market as PDR. Highlighting the \$36 million cost of a software system to support Dynamic Pricing, TURN recommends that the Commission "reconsider the push toward dynamic pricing."¹⁹³

CAISO takes notice of PG&E's DR operations costs and argues that a shift toward a competitive procurement paradigm for DR will be a more efficient means of acquiring DR and relieve ratepayers of inordinate utility IT and infrastructure costs that will likely increase over time.¹⁹⁴

7.3.3. Discussion

In the Commission's review of the Utilities' proposals for DR IT costs, we found three challenges that impacted our analysis. First, throughout the Applications, the Utilities often include labor costs within the IT costs in addition

¹⁸⁹ TRN-01 at 3.

¹⁹⁰ TRN-01 at 9.

¹⁹¹ SCE-08.

¹⁹² TRN-01 at 4.

¹⁹³ TRN-01 at 3.

¹⁹⁴ ISO-01 at 10-13.

to labor allocated separately for regulatory and other management support. The consolidation of these costs makes it difficult for the Commission to assess the reasonableness of DR proposals. Second, the Utilities do not provide adequate description or justification for most of their IT funding requests. Third, the Utilities do not adequately demonstrate what costs are being recovered in this proceeding, why they are distinct from costs requested in other proceedings and, why they do not represent a duplication of other efforts or costs.

While the Utilities argue that the CAISO integration requires these proposed IT changes, none provide adequate description and justification for these projects. The Utilities' Applications did not provide justification as to why a utility chose one IT solution from among other comparable solutions. SCE, for example, explains the intention of a proposed system and the impact on DR programs but neglects to explain the choices or provide the reasons for the ultimate selection. CAISO challenges SCE's proposed telemetry costs for its Ancillary Service Tariff, arguing that "Edison's meter estimate is overstated and needs to be substantiated."¹⁹⁵

Relatedly, TURN's testimony presents \$164 million in software costs that SCE requested in its 2011 GRC application.¹⁹⁶ The Commission must ensure that the Utilities are not recovering costs more than once for software and hardware systems to support DR programs. Again, the Utilities provide inadequate information in their applications to fully explain and justify IT activities and the associated funding requests.

¹⁹⁵ ISO-01 at 19.

¹⁹⁶ TRN-01 at 11.

SDG&E's DR IT Systems budget request for 2012-2014 is reasonable. However, given the level of CAISO integration requirement costs, SDG&E's IT budget may be understated. Like PG&E and SCE, SDG&E co-mingles requested IT equipment costs with labor costs, and imbeds management labor costs in general administrative and overhead costs. In D.09-08-027, we denied SDG&E's IT budget because of a lack of description. For the 2012-2014 DR budgets, all three utilities present the Commission with the same situation.

In calculating the cost-effectiveness of a DR program or activity, the costs incurred from the DR Systems Support Activities budget are spread across each DR activity. Instead of proposing specific decreases to PG&E's and SDG&E's Systems Support budgets or additional cuts for SCE, we direct each utility to decrease overall program budget requests to make each program cost-effective. We allow the three Utilities to allocate the decreases across the DR Systems Support and ME&O budget categories and individual program administrative budgets to provide California with cost-effective DR programs. The Utilities may decrease either internal program costs (i.e., administrative or capital costs of the program) or external costs (e.g., marketing and IT budgets which were not requested as part of the program but were allotted to program costs in the cost-effectiveness analysis). For certain programs, this requirement can be met by program modifications to increase the benefits of the program.

The Commission issued D.11-11-008 delaying, until November 2014, the implementation of PG&E's small and medium business customers defaulted to Peak Day Pricing. As a result, we reduce PG&E's budget request for Peak Day Pricing notifications to \$1.339 million for notifications and \$0.758 million for labor. In addition, we decrease SCE's overall Category 8 budget by \$1 million.

We find the two \$500,000 requests for “unanticipated activities” to be unreasonable and unjustifiable and deny these requests.

7.4. Reliability Based DR

Reliability or emergency-based DR programs are those programs triggered by the Utilities in response to an actual or imminent declaration by CAISO of a system emergency. The Commission directed the Utilities to transition its DR activities from reliability-based programs to price-responsive programs. In Phase 3 of R.07-01-041, the Commission approved a Joint Motion Settlement Agreement (Settlement Agreement) removing Commission-required enrollment caps on interruptible programs,¹⁹⁷ creating a new CAISO wholesale reliability market product called Reliability Demand response Resource (RDRR), and mandating that all utility emergency-triggered programs participating in RDRR continue to receive resource adequacy counting. The Commission adopted, as part of the Settlement Agreement, the condition that the amount of emergency-triggered DR MW attributable to Resource Adequacy decreases from a cap of 3 percent of the CAISO all-time system peak in 2012 to 2 percent of system peak in 2014.

¹⁹⁷ D.09-08-027 capped demand response emergency programs at then current enrollment (in megawatts) and funding levels pending the resolution of R.07-01-041 Phase 3, with a limited exception for the PG&E SmartAC program.

7.4.1. Utility Proposals

7.4.1.1. PG&E

PG&E currently maintains three reliability-based programs: Base Interruptible Program, Optional Binding Mandatory Curtailment Program,¹⁹⁸ and Scheduled Load Reduction Program.¹⁹⁹ For the 2012-2014 DR budget cycle, PG&E recommends changes solely to the Base Interruptible Program including the implementation of a pre-enrollment qualification process, retesting for non-compliant participants, limiting enrollment if the MW cap is approached, and allowing Base Interruptible Program participants to dual participate in PG&E's best effort day-ahead PeakChoice program. PG&E's proposed changes reduce the amount of reliability-triggered programs that count toward its resource adequacy requirements. PG&E notes that this is consistent with the terms of the Phase 3 Settlement Agreement, including the MW cap whereby PG&E's MW cap is 543.9 MW through 2016.

7.4.1.2. SDG&E

As part of its policy to simplify its DR programs and reduce the reliance on reliability-based programs, SDG&E proposes to make the Base Interruptible Program its only reliability-based program. SDG&E requests to eliminate its Optional Binding Mandatory Curtailment Program and Critical Peak Pricing-Emergency programs. Although the Schedule Load Reduction Program

¹⁹⁸ Both PG&E and SCE have Optional Binding Mandatory Curtailment programs which exempt qualifying customers from reduction of electric supply during scheduled rotating outages in exchange for a partial power reduction of their entire distribution circuit during every rotating outage when system and local emergencies occur.

¹⁹⁹ Schedule Load Reduction Program is subject to Public Utilities Code Section 740.10 and, despite a lack of customer participation, cannot be terminated without legislation.

is legislatively mandated and SDG&E will continue to offer the program, SDG&E proposes to minimize Schedule Load Reduction Program expenditures. With the Base Interruptible Program being its only reliability-based program, SDG&E recommends limited changes to keep below its 20 MW cap. SDG&E proposes to bid the Base Interruptible Program into CAISO's RDRR mechanism. As such, SDG&E requests the elimination of Option B of the Base Interruptible Program because the three-hour response time allowed in Option B does not comport with the 40-minute requirement in RDRR. SDG&E also requests to add a summer month rate premium. As previously discussed, SDG&E proposes to eliminate dual program participation in Base Interruptible Program.

7.4.1.3. SCE

In recognition of the transition of DR programs from reliability to price-responsive programs, SCE proposes to add a price-responsive component to its Summer Discount Plan.²⁰⁰ The Summer Discount Plan will be reviewed and discussed under the price-responsive chapter of this decision. SCE requests to make minor changes to its Agricultural Pumping Interruptible²⁰¹ and Base Interruptible Programs²⁰² to transition them to wholesale RDRR. However,

²⁰⁰ As part of the terms of the Phase 3 Settlement (D.10-06-034), SCE agreed to file an application to create a price-responsive option for SDP by the end of the second quarter of 2010 so that SDP could be bid into the CAISO market.

²⁰¹ Changes to the Agricultural Pumping Interruptible include modifications to align the program trigger with the requirements of the RDRR and to allow for geographical dispatch of events, and modifications to existing notification systems and event performance and tracking databases.

²⁰² Changes to the Base Interruptible Program include modifications to existing notification systems, billing system, and event performance and tracking databases, and reprogramming of remote terminal units to allow for regional dispatch.

because the Agricultural Pumping Interruptible and Base Interruptible Programs are close to SCE's 2016 cap of 659 MW when combined, SCE plans to stop marketing the Base Interruptible Program unless measurable attrition provides sufficient headroom under the cap. To manage against rate subsidies if the MW cap is exceeded, SCE proposes to reduce the incentive payments for all interruptible programs covered by the MW cap requirement during the calendar year in which the oversupply is expected.

SCE requests a budget of \$52,995 for its Schedule Load Reduction Program. SCE explains that in the Schedule Load Reduction Program, enrolled customers nominate a load reduction through one of three options where at least 15 percent of demand will be compensated on a per-kWh credit on their bills for the amount reduced. Despite no enrollment in the Schedule Load Reduction Program, SCE points out that the program is legislatively mandated and thus recommends continued funding at the minimal requested budget level.

SCE requests no changes to its Optional Binding Mandatory Curtailment or Rotating Outages Programs.

7.4.2. Parties' Positions

Only DRA and CLECA provided comments regarding the Utilities' Reliability programs. DRA recommends the Commission not approve PG&E's and SDG&E's Base Interruptible Program programs unless the programs' cost structures are changed to improve the TRC result to above 1.0. DRA supports PG&E's proposed mechanism to deter non-compliant Base Interruptible Program participants and recommends the Commission apply the same mechanism to

SCE and SDG&E's Base Interruptible Program.²⁰³ CLECA recommends retaining the Base Interruptible Program, but increasing PG&E's Base Interruptible Program operating hours from 120 to 180 hours to improve the program's cost-effectiveness,²⁰⁴ which PG&E agrees to in its rebuttal testimony.²⁰⁵ CLECA expresses concern with SCE's proposal on how to manage the cap limit because of the potential impacts to the participants.

7.4.3. Discussion

7.4.3.1. Compliance

As described above, the Commission adopted a Settlement Agreement in D.10-06-034 which has a significant impact on the Utilities' Base Interruptible Program. Among other things, the Settlement Agreement sets cap limits on the Resource Adequacy counting for these programs²⁰⁶ and requires the Utilities to address the oversupply if the total load impacts from these programs exceed the cap limits. The cap limit for 2012 Resource Adequacy compliance year is 1,659 MW for the three utilities combined, which will decrease to 1,005.4 MW in 2016. PG&E's and SDG&E's program load impacts from the reliability-based programs are well under the cap for 2012 as well as 2016.

²⁰³ DRA-01c, Chapter 3 at 3-5.

²⁰⁴ CLE-01, Chapter II at 10.

²⁰⁵ PGE-08, Chapter 2 at 2-11.

²⁰⁶ PG&E' and SCE's AC Cycling programs are currently considered reliability-based programs pending Commission's decisions on the Utilities' applications to transition them into price-responsive programs in the Utilities' AC Cycling and this DR application.

In compliance with D.10-06-034, the Utilities provided testimony addressing the cap issues. We find the Utilities' cap proposals reasonable. Based on the Utilities' ex ante forecast as shown in their April 1, 2011 Load Impact reports and the Utilities proposals, we do not anticipate any oversupply issues pending the final decisions on the SCE's applications on transitioning the AC cycling programs to price-responsive programs.²⁰⁷

7.4.3.2. Reasonableness

Our examination of the Utilities' cost-effectiveness analyses of the Reliability programs included the statewide Base Interruptible Program and SCE's Agricultural Pumping Interruptible programs. The table below provides a list of these programs and the utility results of the cost-effectiveness tests.

TABLE 7.4.3.2				
Cost-Effectiveness Test Results of Utilities' Reliability Programs				
Program	TRC	PAC	RIM	Determination
SCE's Agricultural Pumping-Interruptible	1.12	0.88	0.88	Cost-Effective
PG&E's Base Interruptible Program	0.90	0.73	0.73	Cost-Effective
SDG&E's Base Interruptible Program	0.98	0.82	0.82	Cost-Effective
SCE's Base Interruptible Program	1.33	1.01	1.01	Cost-Effective

SCE's Agricultural Pumping-Interruptible cost-effectiveness analysis resulted in a TRC greater than 1. This result does not include the \$44,500 costs

²⁰⁷ A.10-06-017, the assigned ALJ issued a proposed decision on September 19, 2011.

we eliminated from the Local DR ME&O budget and the \$50,739 we eliminated in the DR Systems budget. With these changes, we authorize the program.

As can be seen on the cost-effectiveness Test Results table, SCE's Base Interruptible Program cost-effectiveness analysis resulted in TRC, PAC, and RIM benefit cost ratios all above 1.0. As this meets our previously discussed criteria for cost-effectiveness, we approve funding for SCE's Base Interruptible Program during 2012-2014, minus any ME&O requested funds.

SDG&E's cost-effectiveness analysis of its Base Interruptible Program resulted in a TRC of 0.98. In this instance, we determine that the cost-effectiveness of 0.98 to be within our "error band" and the programs to be cost effective. Therefore, we approve the program. We have eliminated marketing funds for this program.

We approve SDG&E's request to eliminate its Base Interruptible Program Option B in order to conform the rest of the Base Interruptible Program to CAISO's RDRR. The cost-effectiveness analysis provided by SDG&E included the requested addition of a summer month premium. Because the cost-effectiveness analysis with the budget decrease produced a "cost-effective" result, we approve the summer month premium.

PG&E's Base Interruptible Program cost-effectiveness analysis shows a TRC of 0.9. Based on the previously discussed rationale, we find that the program is within the error band and is cost effective. However, because this is such a large program, additional improvements can be made either through a decrease in funding or an increase in benefits. As recommended by CLECA, increasing the availability of the Base Interruptible Program from 120 to 180 hours per year will increase the benefits of the program and thus improve its cost-effectiveness results. In comparison, SCE's Base Interruptible Program is

available 180 hours a year and its A Factor is 68 percent.²⁰⁸ Increasing PG&E's A factor to 68 percent for the program results in a TRC of 1.05. In order to improve the cost-effectiveness for PG&E's Base Interruptible program, we direct PG&E to increase its availability to 180 hours and to decrease its budget for this program by the \$140,704 we eliminated from the ME&O budget allocated to the Base Interruptible Program. All of the changes regarding PG&E's Base Interruptible Program should go into effect for the 2013 and 2014 program years, since there might be customer impact for 2012 given the issuance date of this Decision.

By directing PG&E to increase the availability of its Base Interruptible Program from 150 to 180 hours per year, we recognize that some currently-enrolled program customers rely on operating backup generation (BUG) in order to provide the committed load reduction. It is unclear whether BUG operation for BIP is permitted under the Federal, State or local air quality regulatory agencies' rules. The record of this proceeding does not include enough information to make a determination. We thereby defer all issues related to BUGs to R.07-01-041 or its successor proceeding.

PG&E also proposes several changes to its Base Interruptible Program including a pre-enrollment qualification process and retesting for non-compliant participants. DRA supports both of these revisions and recommends that the Commission adopt these changes for the other two utilities. SDG&E agrees to do so,²⁰⁹ but SCE opposes the recommendation to adopt PG&E's proposal. SCE claims that it has similar procedures in place. We find SCE's procedures

²⁰⁸ SCE-08, DR Reporting Template, "Base Interruptible Program" tab, cell D40.

²⁰⁹ SGE-06 at GMK 13.

adequate. Unless otherwise noted herein, we approve PG&E's and SDG&E's requested revisions to their Base Interruptible Programs.

Although enrollment in Schedule Load Reduction Program is zero, we approve budgets as requested for each utility's Schedule Load Reduction program because the program is legislatively-mandated. No party provided comment on the Optional Bidding Mandatory Curtailment program, SCE's Rotating Outages program, or SDG&E's proposal to eliminate its Critical Peak Pricing- Emergency program. Because the Optional Bidding Mandatory Curtailment and Rotating Outages programs are small, we authorize the budget requests for the Optional Bidding Mandatory Curtailment Program for PG&E and SCE, and for Rotating Outages from SCE. We approve the request from SDG&E to terminate its Optional Bidding Mandatory Curtailment and Critical Peak Pricing-Emergency Programs.

7.4.3.3. Meeting Future Needs

As directed by the Commission, the Utilities are transforming more reliability programs to price-responsive programs. In this respect, we find that the Utilities' Reliability programs are meeting the future needs of California.

7.5. Price-Responsive DR Programs

Price-responsive programs are a key component of the Commission's DR policy.²¹⁰ Utilities trigger these programs based on the price of the wholesale market or when system conditions warrant and provide participating customers with pricing incentives in addition to a routine energy rate. The three Utilities in

²¹⁰ D.09-08-027 at 30.

this proceeding offer two key price-responsive programs: Demand Bidding²¹¹ and Capacity Bidding²¹² programs. In some cases, the Utilities contract with third-party DR providers to offer a program. The Utilities' price-responsive program proposals are described below.

7.5.1. Utility Proposals

7.5.1.1. PG&E

PG&E intends to modify its price-responsive DR programs, with the goal of increasing customer enrollment and participation, program cost-effectiveness, and participation in the CAISO market. PG&E requests budgets for and revisions to several price-responsive programs: Capacity Bidding Program, a combined Demand Bidding Program and PeakChoice program, and SmartAC.

PG&E requests to continue to make its Capacity Bidding Program available through third party DR providers. Traditionally, PG&E has offered its Capacity Bidding Program between the months of May through October; but has only provided monthly capacity payments from June to September. PG&E requests to extend the capacity payments to include May and October in an effort to take advantage of these customers' load shed capabilities.

²¹¹ The Demand Bidding Program is a program in which customers submit bids specifying the amount of energy usage they are willing to curtail during DR events in exchange for a fixed incentive rate in the case of PG&E or to receive bill credits in the case of SCE. SDG&E does not provide a Demand Bidding Program.

²¹² Capacity Bidding Program is a bidding program where customers make a monthly commitment to provide load reduction when called upon during program events. Participating customers receive a monthly capacity incentive payment for their committed load reductions, as well as an energy incentive payment based on the actual amount of energy reduced during the event. PG&E, SDG&E and SCE provide a Capacity Bidding Program.

As part of the overall movement to enable utility programs to be bid into the CAISO markets, PG&E proposes to transition all of its Demand Bidding Program customers to PeakChoice during 2012. The Demand Bidding Program would then cease to exist no later than December 31, 2012. PG&E alleges that this will eliminate the need for costly system upgrades required in order for the Demand Bidding Program to be bid into the CAISO markets.

PeakChoice is a price-responsive DR program that provides customers with options that tailor DR participation to accommodate the customer's operational needs and DR capabilities. PG&E considers PeakChoice its retail platform for CAISO's PDR product. In addition to transferring the Demand Bidding Program customers to PeakChoice, PG&E recommends several modifications to PeakChoice to meet the goals listed above: add a 10-minute notification product, broaden time availability, allow for more flexibility in load reduction commitments, expand customer eligibility to include Direct Access and Community Choice Access customers, allow Base Interruptible Program participants to dual participate in Best Effort Day-ahead PeakChoice, and expand event triggers. With the proposed changes and the inclusion of the Demand Bidding Program into PeakChoice, PG&E requests a budget of \$10.501 million for PeakChoice during the 2012-2014 budget cycle.

PG&E's SmartAC program is an air conditioning direct load control program for residential and small and medium business customers. Pursuant to an all party settlement approved by the Commission in D.11-01-036,²¹³ PG&E must decrease the number of SmartAC devices to be installed through this

²¹³ *Decision Approving Pacific Gas and Electric Company's 2010-2011 SmartAC Program and Budget*, D.11-01-036, January 27, 2011.

program, maintain a target of 174 MW, and add a price trigger at the bid cap of the CAISO beginning in 2012. PG&E proposes several non-program changes that are meant to directly improve the efficiency of the SmartAC program but are not directly attributable to the SmartAC program budget including day of notifications to customers, refined locational dispatching, and the use of and interaction with dynamic pricing and HAN-enabled devices. Largely due to the settlement limitations, PG&E requests a 2012-2014 budget of \$25.054 million for SmartAC, only one-third of the 2009-2011 approved budget.

7.5.1.2. SDG&E

SDG&E identifies two goals relevant in the development of the price-responsive portion of its Application: simplifying DR programs and enabling DR programs for integration into the CAISO market. SDG&E requests budget authority for its Capacity Bidding Program and its Peak Time Rebate program. As a side note, SDG&E provides a brief discussion of two price-responsive programs for which it does not seek funding in this Application: namely PeakShift and Summer Saver.

SDG&E considers its Capacity Bidding Program to be successful in terms of customer acceptance, enrollment and participation. Hence, it proposes to continue this program with only a few revisions. To further increase enrollment and participation, SDG&E proposes increased annual incentive payments for key months, but balanced with decreased payments for shoulder months. In order to integrate its Capacity Bidding Program into the CAISO market, SDG&E intends to establish a price trigger and bid the Capacity Bidding Program day-ahead program as a CAISO PDR product. SDG&E also recommends that the Commission remove the backup generation provision from its Capacity Bidding Program and prohibit the use of backup generation to achieve load reduction.

The total recommended 2012-2014 budget for these proposals is \$11.9 million which represents a “best case scenario” of customer enrollment.

SDG&E’s Peak Time Rebate program is an incentive-based program developed and approved in SDG&E’s 2008 GRC. Peak Time Rebate helps customers achieve load reduction during peak energy consumption periods. Customers receive a base incentive for reducing energy through manual means and a premium incentive for reducing energy through automated enabling technologies. Peak Time Rebate’s final roll-out, expected to begin in 2011, is contingent upon eligible customers having a Smart Meter and SDG&E completing the required IT and billing and notification system modifications.

SDG&E included the initial funding for the customer communication and education in its Smart Meter proceeding. In this DR budget Application, SDG&E requests to transition Peak Time Rebate into the DR portfolio, and requests additional funding for administration and ME&O for the program and its 1.1 million customers. SDG&E proposes a budget of \$4.4 million for these Peak Time Rebate activities during the 2012-2014 DR budget cycle.

7.5.1.3. SCE

SCE proposes to offer a panoply of price-responsive programs: Demand Bidding Program, Capacity Bidding Program, Ancillary Services Tariff, Summer Discount Plan and the Save Power Day²¹⁴ Program. SCE anticipates these programs to provide a significant portion of the price-responsive DR in the 2012-2014 program cycle. Additionally, SCE expects to bid the Capacity Bidding Program, Demand Bidding Program, and Summer Discount Plan into the CAISO

²¹⁴ Formerly known as the Peak Time Rebate Program.

markets and thus proposes modifications to meet the requirements of programs participating in the market.

SCE seeks faster customer enrollment and increased customer satisfaction with its Demand Bidding Program. As such, SCE requests to expand the Demand Bidding Program to include non-residential customers with loads under 200 kW, reduce bidding limits to a 1 kW minimum bid and eliminate aggregated participation in this program. SCE also proposes to modify the Demand Bidding Program design and systems to allow geographical event dispatch for integration with CAISO's MRTU as PDR. SCE explains that D.10-12-047 approved a request to repurpose \$3.5 million to support program modifications that enable participation as PDR. Thus, SCE requests that the proposed changes to the Demand Bidding Program be funded through D.10-12-047. For the 2012-2014 DR budget cycle, SCE requests \$1.786 million to operate the Demand Bidding Program.

As noted above, SCE expects to integrate its Capacity Bidding Program into CAISO and thus recommends business process and system modifications. SCE also proposes to change the Capacity Bidding Program to a year-round program to provide additional hours for available dispatch. To cover both the proposed modifications and the operations of this program for 2012-2014, SCE requests a budget of \$0.96 million.

As directed by D.09-08-027, SCE proposes the adoption of a limited enrollment tariff to comply with the 10-minute dispatch notification time requirement for participation in the CAISO's Ancillary Services market as either PDR or Participating Load. SCE's proposal recommends an Ancillary Services tariff for a 5-minute minimum and 30-minute maximum event dispatch. SCE suggests that customers on this tariff must also be ADR enabled and must install

equipment and software that can interface with CAISO to supply telemetry data. SCE proposes to limit the number of customers receiving complimentary equipment, but incur the cost of equipment installation. SCE anticipates no more than five service accounts would participate in this program and requests a budget of \$0.743 million to operate the Ancillary Services tariff.

As previously discussed, SCE's Summer Discount Plan is currently a reliability-based program but SCE is requesting to transition it to a price-responsive program²¹⁵ that provides credit to customers who allow their air conditioning units to cycle off and on during curtailment events.²¹⁶ Participating customers receive a monthly credit on their electric bills from June to October. In 2012-2014, SCE proposes to transition the 330,000 current customers to the new price-responsive program and enroll new customers in accordance with the SmartConnect business case.²¹⁷ SCE also proposes to double the available event hours for the Summer Discount Plan from 90 to 180 and implement a new market-based trigger allowing the Summer Discount Plan to be bid into CAISO using the PDR product. SCE included the funding for transitioning current customers into the price-responsive Summer Discount Plan in its Transition

²¹⁵ Pursuant to the settlement agreement in D.10-06-034, SCE agreed to submit an application introducing a price-responsive option for the Summer Discount Plan such that the program could be bid into CAISO's markets.

²¹⁶ SCE filed application A.10-06-017 on June 30, 2010 requesting to transition the residential Summer Discount Plan to a price-responsive resource that can be bid into and integrated with CAISO's markets.

²¹⁷ The SmartConnect business case was approved in 2008 pursuant to the settlement agreement in D.10-06-034, Appendix A, Attachment B. (PCT Program Decision Modifications and Revised Business Case Assumptions.)

application.²¹⁸ In this Application, SCE requests \$71.1 million to support the enrollment of 196,000 new customers, maintain operations, perform customer education and awareness campaigns, and provide legacy customers with the option for an override technology function.

The Save Power Day Program²¹⁹ is an incentive program that offers residential customers bill credits for lower energy usage during certain peak usage periods throughout the year. Residential customers are defaulted to the Save Power Day Program once they receive an Edison SmartConnect meter. The Save Power Day Program was approved and funded as part of the SmartConnect business case. Costs incurred through 2012 are funded through the Edison SmartConnect Balancing Account. SCE requests Save Power Day Program funding for 2013-2014 to include ME&O, direct event notification, a rebate program for enabling technologies, and program management and administration. SCE requests a total budget of \$24.7 million to administer and operate the Save Power Day Program.

7.5.2. Parties' Positions

Most parties commenting on price-responsive programs focused on the cost-effectiveness of these programs. If a comment referenced a specific program or a specific change to a program to improve the program's cost-effectiveness, we discuss it here. Otherwise, we addressed the comment in our cost-effectiveness discussion and do not restate it here.

²¹⁸ See A.10-06-017 at 1-2.

²¹⁹ Formerly known as the Peak Time Rebate Program.

CLECA urges the Commission to continue the Demand Bidding Program for both bundled and direct access customers as it is a proven, cost-effective utility DR program. DRA recommends the Commission not approve PG&E's request to combine the Demand Bidding Program with PeakChoice. DRA asserts that no PeakChoice options are cost-effective, including those combining the Demand Bidding Program with PeakChoice. DR Aggregators recommend that PeakChoice be expanded through the use of third party DR providers to facilitate customer participation.

UCAN recommends that the Commission condense SDG&E's Peak Time Rebate program. UCAN opposes most, if not all, of the \$4.4 million Peak Time Rebate budget requested by SDG&E for two reasons. UCAN believes the cost is excessive and also asserts that the funding SDG&E is seeking in a separate proceeding could be leveraged to educate customers about dynamic pricing and Peak Time Rebate to customers.²²⁰

DRA expresses concern about the low cost-effectiveness results for all three utilities' Capacity Bidding Program, but offers no solution to improve the cost-effectiveness of this program. DRA recommends that the Commission deny funding for all Capacity Bidding Programs unless the Utilities can improve the cost-effectiveness results for the program. DRA also suggests that SDG&E did not correctly perform the cost-effectiveness analysis on its Peak Time Rebate program by not capturing all associated costs of Peak Time Rebate in the cost-effectiveness analysis.²²¹

²²⁰ UCN-01 at 4 and SDG&E application 10-07-009 at <http://www.sdge.com/regulatory/documents/a-10-07-009/Application.pdf>.

²²¹ DRA-01 at 3-18.

7.5.3. Discussion

In our discussion, we first identify the findings of our cost-effectiveness analysis regarding price-responsive programs and then address each price-responsive program along with any necessary modifications.

Results of Program Review using Cost-Effectiveness Protocols with focus on TRC		
PG&E Capacity Bidding Program day-of	Cost-Effective (TRC = 1.11)	Approved
PG&E Capacity Bidding Program day-ahead	Possibly Cost-Effective (TRC = 0.73)	Approved w/Modifications
PG&E PeakChoice + Demand Bidding Program	Not Cost-Effective (TRC = 0.47)	Denied
PG&E Demand Bidding Program	Cost-Effective (TRC = 1.09)	Approved w/Modifications
PG&E PeakChoice	Not Cost-Effective (TRC = 0.38)	Denied
PG&E SmartAC residential	Possibly Cost-Effective (TRC = 0.68)	Approved w/ Modifications
PG&E SmartAC non-residential	Not Cost-Effective (TRC = 0.25)	Approved w/ Modifications
SDG&E Capacity Bidding Program	Possibly Cost-Effective (TRC = 0.69)	Approved w/ Modifications
SCE Capacity Bidding Program	Not Cost-Effective (TRC = 0.39)	Approved w/ Modifications
SCE Demand Bidding Program	Possibly Cost-Effective (TRC = 0.74)	Approved w/ Modifications
SCE Ancillary Services Tariff	Possibly Cost-Effective (TRC = 1.04)	Denied without Prejudice
SCE Save Power Day	Cost-Effective	Approved
SCE Summer Discount Program	Cost-Effective	Approved

non-residential (enhanced)	(TRC = 1.39)	
SCE Summer Discount Program residential	Cost-Effective (TRC = 1.26)	Approved
SCE Summer Discount Program non-residential (base)	Possible Cost-Effective (TRC = 0.76)	Approved w/ Modifications

7.5.3.1. “Cost-Effective” & “Not Cost-Effective” Programs

As a result of our analysis and approach, we find the following programs “cost-effective”: PG&E’s Capacity Bidding Program (day-of), PG&E’s Demand Bidding Program; SCE’s Save Power Day, SCE’s Summer Discount Program non-residential enhanced, and SCE’s Summer Discount Program residential. We approve all of these programs except PG&E’s Demand Bidding Program as requested and authorize budgets for these programs with no further modifications other than the ME&O and DR Systems budget decreases we previously discussed. We discuss PG&E’s Demand Bidding Program below.

We find the following three programs to be “Not Cost-Effective:” PG&E’s SmartAC non-residential, PG&E’s PeakChoice with or without the Demand Bidding Program, and SCE’s Capacity Bidding Program.

PG&E’s SmartAC non-residential program performed very poorly on all the cost-effectiveness tests. Given the poor cost-effectiveness results and because there are other options available to non-residential customers who want to participate in DR programs (such as the Capacity Bidding Program, Demand Bidding Program and dynamic rates), our initial response is to deny funding for the non-residential SmartAC program and direct PG&E to terminate the program. In comments to the Proposed Decision, PG&E asks to continue to operate its non-residential SmartAC program with its existing non-residential

customers and decrease the overall SmartAC budget by \$5,640,759.²²² This decrease, along with the required \$3.7 million ME&O budget decrease, makes both the residential and non-residential portions of PG&E's SmartAC program cost-effective. We permit PG&E to continue to operate the non-residential portion of its SmartAC program with its existing customers and a limited budget.

PeakChoice, with or without the Demand Bidding Program, is not cost-effective. While the "Best Effort" options performed slightly better,²²³ none of the other four PeakChoice options received cost-effectiveness results high enough for further consideration. PG&E recommends that the Commission consider factors other than cost-effectiveness when determining the reasonableness of PeakChoice including future performance, flexibility and versatility, adaptability, locational value, and consistency with Commission policies.²²⁴ PG&E asserts that PeakChoice successfully measures up to these factors. PG&E contends that PeakChoice provides multiple choices in multiple program characteristics thereby providing versatility.²²⁵ DRA contends that PG&E's Peak Choice Best Efforts day-ahead is essentially the same program as the Demand Bidding Program.²²⁶ PG&E emphasizes that PeakChoice is ready for the CAISO market since it can be locationally called and, compared to most of

²²² The difference between PG&E's initial proposed budget of \$24,994,094 and PG&E's proposed budget of \$19,353,335 provided in its Comments at 10.

²²³ PeakChoice Best Effort day-ahead attained results of 0.72 for the TRC, 0.72 for the PAC, and 0.69 for the RIM.

²²⁴ PG&E Opening Brief at 19.

²²⁵ PGE-01, Appendix 2B at 1-4.

²²⁶ DRA Opening Brief at 30.

PG&E's other programs, already has the necessary software upgrades. We agree that it is an advantage for PeakChoice that it can be locationally called.

However, we dispute PG&E's argument regarding software.

Setting aside the cost-effectiveness of this program, PeakChoice has not lived up to the potential PG&E has asserted. In a 2007 Advice Letter seeking approval for this program, PG&E predicted 42 MW by the end of 2008.²²⁷ PG&E's 2009-11 Application predicted load impacts of 31, 117, and 292 MW for 2009, 2010, and 2011, respectively.²²⁸ PG&E points out in comments, the 2009-2011 forecasts included the MW anticipated from a requested integration with the Base Interruptible and Demand Bidding Programs which the Commission denied.²²⁹ In April 2011, PG&E's monthly reports shows load impacts of 25 MW.²³⁰ PG&E's Application forecasts only 27 MW for 2012 and shows no increase through 2014.²³¹ Despite these expectations, PeakChoice simply has not achieved the results that PG&E anticipated.

Because of PeakChoice's past failures and its poor performance on cost-effectiveness, we deny funding for PeakChoice. In comments, PG&E and CAISO expressed concern about an abrupt end to PeakChoice.²³² Thus, while we require PG&E to terminate the program, transition its customers to other DR

²²⁷ PG&E Advice Letter 3085-E, July 13, 2007 at 6.

²²⁸ A.08-06-003, 2009-2011 DR application, Amended PG&E Testimony, Table 5-4 at 5-16, September 19, 2008.

²²⁹ PG&E Comments at footnote 12.

²³⁰ PG&E Monthly Report on Interruptible Load and Demand Response Programs, April 2011.

²³¹ PGE-01 at Table 8-5 at 8-7.

programs such as the Capacity Bidding Program and Demand Bidding Program, and adapt the IT system developed for it to PG&E's other DR programs, we recognize that this should be done in a thoughtful way. PG&E shall migrate its customers to other DR programs such that all of its PeakChoice customers are migrated to other programs by the end of 2012. The specifics and schedule of this transition plan, including the details to adapt the IT system from PeakChoice to other DR programs and a revised plan to meet the 10 percent PDR requirements, shall be submitted in a Tier 2 Advice Letter no later than 90 days following the issuance of this decision.

As customers are being transitioned to other programs because of the termination of PeakChoice we encourage the MWs to be transitioned to third party contracts, when feasible, because we envision that their ability to address customers' needs will be superior to the Utilities' abilities.

SCE requests to continue its Capacity Bidding Program but extend it to a full-year operation. SCE provided no details of this modification; nor did it include a cost-effectiveness analysis for a full-year operation. The Capacity Bidding Program is a statewide program that is primarily administered by third party DR providers. Our analysis of PG&E and SDG&E's Capacity Bidding Program shows these programs to be "Possibly Cost-Effective." However, our analysis of SCE's program generates a "Not Cost-Effective" outcome. We compared the three utilities' Capacity Bidding Program programs to understand why a statewide program could have such a wide variation in cost-effectiveness, and why the A factors for this program differ so widely among the three utilities.

²³² PG&E Comments at 9 and CAISO Comments at 11-12.

Our review produced no conclusive answers to explain the differences in cost-effectiveness results.

As we discussed earlier, SCE did not correctly perform the cost-effectiveness analysis of this program, incorrectly allocating EM&V and ME&O funds. To make the Capacity Bidding Program cost-effective, we would require an additional \$5 million to be eliminated from the Capacity Bidding Program budget for the 2012-2014 budget cycle. A decrease of this magnitude may not permit SCE to adequately operate the Capacity Bidding Program. It is not reasonable to authorize a program with an inadequate budget nor is it reasonable to eliminate a statewide program in one part of the state.

Therefore, we allow SCE to maintain its Capacity Bidding Program, with the marketing budget eliminated but we also require SCE to either decrease the program budget or to find alternative ways to increase the benefits of this program to make this program cost-effective.

To ensure improvement in the cost-effectiveness of the Capacity Bidding Program, we require SCE to perform an in-depth analysis of its program to (1) propose details of how the full-year Capacity Bidding Program would work, including additional incentive costs, forecasted load impacts, and an updated cost-effectiveness analysis for both the day-of and day-ahead options; (2) analyze the differences between PG&E, SDG&E and SCE's Capacity Bidding Program to determine why SCE's program is so much less cost-effective than the other utilities' program; and (3) provide a plan for improving the Capacity Bidding Program cost-effectiveness to 0.75 in 2013 and to 0.9 in 2014.²³³ We direct SCE to

²³³ At least two of the SPM tests must be at these levels.

submit this analysis in a Tier 2 Advice Letter no later than 120 days following the issuance of this decision.

In the interim, we approve a budget of \$661,287 for the Capacity Bidding Program, a decrease of \$300,000 from the requested budget. In their Tier 2 Advice Letter, if SCE can expand benefits but requires this additional \$300,000 funding to achieve the results, we will consider restoring this budget cut. In addition, we eliminate \$1.7 million from SCE’s DR Systems budget to reflect the majority of the \$1.9 million allocated to the Capacity Bidding Program.

7.5.3.2. “Possibly Cost-Effective” Programs

As a result of our cost-effectiveness analysis, we find the remaining price-responsive programs to be “possibly cost-effective” as shown in the tables below. As we addressed in our cost-effectiveness discussion, these programs become cost-effective with increases in benefits and/or decreases in costs. The following table provides a list of the programs we have determined to be “possibly cost-effective” and the budget decreases required, in addition to decreases in the ME&O and DR System budgets that we previously discussed, in order for the programs to be considered cost-effective and approved. Unless otherwise stated, programmatic revisions requested by the Utilities in their applications for these programs are also approved.

Budget Cuts Needed for PG&E's Possibly Cost-effective Programs			
Program	Budget Decrease Required for Cost-Effectiveness	DR Core M&O Budget Decrease	Remaining Budget Decrease
Capacity Bidding Program Day-Ahead	\$2,721,415	\$1,500,750	\$1,220,665
Demand Bidding Program	<i>further analysis must be provided by PG&E</i>		
SmartAC	\$6,887,565	\$3,722,278	\$3,165,287

residential			
TOTAL			\$4,385,952

For PG&E’s Capacity Bidding Program Day-Ahead, our approval is contingent on the following condition. PG&E shall either decrease the budget as outlined in the table above, find a way to increase the benefits of the program to get to a cost-effective result as discussed above, or some combination of these two approaches. Within 60 days of issuance of this decision, PG&E shall file a Tier 2 advice letter indicating what steps they will take to make these programs cost-effective.

For PG&E’s SmartAC residential program, as indicated in our earlier discussions on PG&E’s SmartAC non-residential program, PG&E requests to decrease the overall SmartAC budget by \$5,640,759. This decrease, along with the required \$3.7 million ME&O budget decrease, makes both the residential and non-residential Smart AC program cost-effective. With these changes, we approve the SmartAC residential program.

TABLE 7.5.3.2 B			
Budget Cuts Needed for SDG&E's Possibly Cost-effective Programs			
Program	Budget Decrease Required for Cost-Effectiveness	Program ME&O Budget Decrease	Remaining Budget Decrease
Capacity Bidding Program	\$4,304,607	\$150,000	\$4,154,607
TOTAL			\$4,154,607

For SDG&E’s Capacity Bidding Program, our approval is contingent on the following condition. SDG&E shall either decrease the budget as outlined in the table above, find a way to increase the benefits of the program to get to a cost-effective result, or some combination of these two approaches. Within

60 days of issuance of this decision, SDG&E shall submit a Tier 2 advice letter indicating what steps they will take to make these programs cost-effective.

TABLE 7.5.3.2 C						
Budget Cuts Needed for SCE's Possibly Cost-effective Programs						
	Budget Decrease Required for Cost-Effectiveness	Program ME&O Budget Decrease	DR IT Systems Budget Decrease	Omitted ME&O Budgets	Omitted Evaluation Budget	Remaining Budget Decrease
Summer Discount Plan non-res. Base	\$1,734,172	\$3,714,00	\$7,386	\$14,641	\$82,699	\$1,700,758
Demand Bidding Program	\$1,571,549	\$27,400	\$51,132	\$11,200	(\$866,274)	\$665,343
TOTAL						\$2,366,101

For SCE’s Summer Discount Plan non-residential Base and their Demand Bidding Program, our approval is contingent on the following condition. SCE shall either decrease the budget as outlined in the table above, find a way to increase the benefits of the program to get to a cost-effective result, or implement a combination of these two approaches. Within 60 days of issuance of this decision, SCE shall submit a Tier 2 advice letter indicating what steps they will take to make these programs cost-effective.

For all three utilities, the above requirements are mostly self-explanatory and unless otherwise stated herein, we approve these programs as requested and authorize budgets with the revisions listed above. There are a few exceptions as follows.

As previously discussed, we approve PG&E’s request to decrease its SmartAC budget by \$5.6 million in lieu of eliminating the non-residential portion of the program because the decrease makes the entire SmartAC program

cost-effective. We also approve the request by DR Aggregators and agreed to by PG&E to enroll net energy metering customers in SmartAC.

In its Application, PG&E requested to combine the Demand Bidding Program with PeakChoice. Because we require PG&E to terminate PeakChoice, we deny PG&E's request to combine these two programs.

In its testimony, PG&E provided a combined cost-effectiveness analysis of its Demand Bidding Program with PeakChoice. Upon Commission Staff's request, PG&E provided an approximation of its Demand Bidding Program cost-effectiveness analysis.²³⁴ PG&E's analysis indicates that the Demand Bidding Program is cost-effective. However, because the analysis is an approximation, we tentatively consider the Demand Bidding Program "possibly cost-effective." We require PG&E to perform an updated cost-effectiveness analysis and submit it along with a recalculated budget in a Tier 2 Advice Letter no later than 60 days from the issuance of this decision. If, however, the results indicate less than cost-effective, we will direct PG&E to further revise its Demand Bidding Program budget. We approve PG&E's Demand Bidding Program contingent upon the receipt and approval of the Advice Letter. We authorize PG&E a budget of \$3.216 million for its 2012-2014 Demand Bidding Program, equal to the authorized amount for this program during 2009-2011.

We have decreased PG&E's Capacity Bidding Program budget through our directives in the Local DR Marketing Category, as discussed above. We are concerned that the budget for the day-of option of this program should be decreased by \$1.22 million to be cost-effective. In comments, PG&E notes that

²³⁴ ALJ Ruling, August 5, 2011, Appendix.

because most PeakChoice customers are expected to migrate to the Capacity Bidding Program, the cost-effectiveness results will improve. At this time, we authorize the requested budget for the day-of option of the Capacity Bidding Program minus the requested marketing funds, contingent upon an additional Tier 2 Advice Letter submission in 60 days that shows the program is cost-effective without the additional \$1.22 million budget decrease. Lastly, we approve the request by DR Aggregators and supported by PG&E to enroll net energy metering customers in the Capacity Bidding Program.

SDG&E’s analysis of its Peak Time Rebate program results in a “cost-effective” program. However, SDG&E did not perform the cost-effectiveness analysis correctly because they failed to include the per kW incentive provided to customers.²³⁵ Our cost-effectiveness analysis includes a per customer incentive of \$0.75 /kWh. The following table shows SDG&E’s cost-effectiveness results for the Peak Time Rebate and the results that include the incentives.

TABLE 7.5.3.2 D		
Cost-Effectiveness Analysis of Peak Time Rebate		
without the customer incentive of \$0.75/kWh		
	net benefits	benefit/cost
TRC	\$19,298,279	3.92
PAC	\$21,018,290	5.29
RIM	\$18,724,942	3.60

TABLE 7.5.3.2 E

²³⁵ ALJ Ruling, August 5, 2011, Appendix.

Cost-Effectiveness Analysis of the Peak Time Rebate		
with the customer incentive of \$0.75/kWh		
	net benefits	benefit/cost
TRC	\$12,685,107	1.96
PAC	\$12,200,727	1.89
RIM	\$9,907,379	1.62

The results of the analysis that includes the customer incentives show a “cost-effective” program. We do not require any further program modifications at this time, other than a decrease in the Local DR ME&O budget. We direct SDG&E to recalculate the cost-effectiveness analysis of the Peak Time Rebate program to include the customer incentives.

Our discussion in the ME&O section of this decision directs SDG&E to rely on online marketing for its Peak Time Rebate program. Consistent with our policy that the Utilities shall integrate, coordinate, and reduce ME&O, we re-categorize SDG&E’s ME&O budget for its Peak Time Rebate program to the Local DR ME&O budget subcategory and reduce the budget accordingly.

We approve SDG&E’s Peak Time Rebate program and authorize a budget of \$0.485 million to administer the program. We direct SDG&E to submit a Tier 2 Advice Letter with its recalculated cost-effectiveness analysis within 60 days of the issuance of this decision.

We re-categorize the ME&O budget in SCE’s Save Power Day program to the Local DR ME&O Category and decrease SCE’s ME&O budget for this program by 50 percent. We approve SCE’s Save Power Day program and authorize the remainder of the program’s budget.

SCE proposes the Ancillary Service Tariff, as directed by D.09-08-027, which requires the Utilities to file a proposal for at least one DR program that can participate in CAISO’s Ancillary Service market. SCE requests \$743,353 for

its Ancillary Service Tariff program. We consider this program to be “possibly cost-effective” and may even be cost-effective with budget cuts. While SCE’s cost-effectiveness analysis included the estimated \$2.7 million in customer incentives, SCE failed to include a request for the estimated \$2.7 million in customer incentives required for this program in its Application. SCE states that it “is currently developing the capacity credit amount for this [Ancillary Services] product and that a “final amount will be submitted with the tariff in the Advice Letter seeking authorization.”²³⁶ An Advice Letter is not the proper vehicle for funding requests. SCE should have requested the needed funding in this Application. Thus, we deny SCE’s request for an Ancillary Services Tariff program without prejudice. SCE should propose a fully developed Ancillary Service Tariff program with a complete budget (including the administrative and incentive costs as well as local marketing costs) through a Petition for Modification for consideration in the 2012-2014 program cycle or include all of this information for the next program cycle. As part of its filing, SCE should provide a cost-effectiveness analysis, which shows how the program meets the cost-effectiveness criteria in this decision.

We note that we have a strategy for the “possibly cost-effective” programs, which is to have the utilities file an advice letter indicating that they have cut costs or increased benefits. Given the issuance date of this Decision, we authorize Staff to enable program changes to go into effect starting in 2013 and to continue to 2014, leaving 2012 unmodified if needed. We delegate this discretion in order

²³⁶ SCE-05 at 22, lines 10-11.

to create some customer certainty due to the regulatory lag of approval of these Applications.

7.6. Dynamic Pricing Program Budget Requests

The Utilities' Dynamic Pricing programs provide electric rates that reflect wholesale market conditions. Dynamic Pricing programs available to customers include Critical Peak Pricing and Real Time Pricing. Critical Peak Pricing imposes a short-term rate increase on customers during critical conditions. Real Time Pricing programs charge customers rates similar to actual hourly wholesale energy prices.

7.6.1. Utility Proposals

7.6.1.1. PG&E

PG&E contends that its Peak Day Pricing program, a dynamic pricing program, motivates participants to reduce demand in response to higher retail rates triggered by increases in the system-wide temperature.²³⁷ While noting that dynamic rates programs are approved in rate-setting proceedings, PG&E requests approval of funds in this proceeding to support Peak Day Pricing. Specifically, PG&E requests funding to cover the costs of 1) measurement and evaluation efforts, and 2) personnel to support the notifications for Peak Day Pricing during 2014.²³⁸ PG&E explains that these costs have not been covered in other Peak Day Pricing proceedings.²³⁹ We discuss the requested budgets for these efforts in the EM&V and DR Support sections of this decision.

²³⁷ PGE-01 at 2-31.

²³⁸ *Ibid.*

²³⁹ *Ibid.*

7.6.1.2. SCE

In its 2012-2014 DR Application, SCE requests funding for two rate-based programs: Critical Peak Pricing and Real Time Pricing.

SCE conveys that, in D.09-08-028,²⁴⁰ the Commission directed SCE to file applications for optional dynamic pricing rates and mandatory Time of Use rates. In A.10-09-002, SCE filed to extend its default Critical Peak Pricing/Time of Use tariff to 600,000 Commercial and Industrial customers with less than 200 kW demand and 1,200 Agricultural customers with equal to or greater than 200 kW demand. SCE also proposed to retain the Real Time Pricing-2 tariff structure and adapt it to all non-residential rate groups. The Commission directed SCE to seek cost recovery in either this DR application or the upcoming general rate case.

Critical Peak Pricing is a summer season tariff whereby SCE offers participants lower energy rates during non-events in exchange for shifting or reducing electricity use during critical peak events when rates are higher. There are two Critical Peak Pricing programs, one for customers with loads equal to or greater than 200kW and one for customers with demands less than 200 kW.

For customers with demands equal to or greater than 200 kW, SCE offers a Critical Peak Pricing tariff of a 60 percent rate reduction for demand charges during non-event days. Energy charges during non-event days are equal to the Time of Use base rate. SCE proposed changes to the Critical Peak Pricing in A.10-09-002 including transitioning Critical Peak Pricing to a year-round

²⁴⁰ *Decision Adopting Settlements On Marginal Cost, Revenue Allocation, And Rate Design*, adopted by the Commission on August 20, 2009.

http://docs.cpuc.ca.gov/word_pdf/FINAL_DECISION/106088.pdf.

program, applying demand credits only during the summer, and dispatching events year-round. SCE did not include marketing, education, and outreach funding in A.10-09-002 and thus, requests that funding in this DR Application. SCE proposes ME&O activities to continue ME&O efforts to defaulted Critical Peak Pricing customers, generate program awareness, and develop sales support materials. SCE requests a total budget of \$2.67 million to implement and administer the Critical Peak Pricing for customers with demands greater than or equal to 200 kW.

For customers with demands less than 200 kW, SCE provides credits to either energy usage charges during a non-event or to time-related demand charges. Additionally, SCE bills the customer an increased energy charge during a Critical Peak Pricing event. In A.10-09-002, SCE proposes to default to Time of Use/Critical Peak Pricing rates those commercial and industrial customers with demands less than 200 kW and for agricultural customers with demands greater than 200 kW. SCE recommends these customers be given the option to opt out of this program. SCE requests funding to transition the 600,000 non-residential and 1,200 agricultural and pumping customers to the Critical Peak Pricing default rates. SCE recommends a budget of \$7.63 million to include ME&O, event notifications, and program administration.

Real Time Pricing is a dynamic, Time of Use pricing tariff for Commercial and Industrial customers with demand greater than or equal to 500 kW. SCE bills participants for electricity based on temperature-driven prices. Because of the complexities of Real Time Pricing, SCE proposes to develop customer awareness through marketing and education efforts. SCE did not include the costs of this effort in A.10-09-002 and thus requests funding in this Application. SCE plans to integrate marketing efforts for Real Time Pricing with other DR

programs. SCE requests a budget of \$1.115 million to implement, administer and market the Real Time Pricing program.

7.6.1.3. SDG&E

SDG&E does not request funding for dynamic pricing programs.

7.6.2. Parties' Positions

DRA contends that the Commission should direct the Utilities to request funding related to dynamic pricing or rate-related programs in Phase I of GRCs. DRA argues that if the Commission reviews these programs in this proceeding, the results of the cost-effectiveness tests should be thoroughly examined. DRA points out that the results of the cost-effectiveness tests show that SCE's rate-based program, Critical Peak Pricing, is not cost-effective.

7.6.3. Discussion

Aside from PG&E's Peak Day Pricing program, the budget requests for rate-based programs are heavily focused on ME&O efforts. ME&O efforts for rate-based programs equal over \$26 million for SCE and \$3.8 million for SDG&E. As we discussed in the ME&O section, over the past several years the Commission has directed the Utilities to integrate, coordinate, reduce, and in some cases eliminate ME&O efforts.

PG&E requests funding for its Real Time Pricing program for Evaluation, Measurement and Verification and for personnel to support the notifications for Peak Day Pricing. We address these requests in the EM&V and DR Systems Support sections of this decision.

SCE requests over \$11 million for its Critical Peak Pricing program: \$7.63 million for its program for customers with demand less than 200kW and \$2.671 million for its program for customers with demand greater than or equal

to 200 kW, and \$1.115 million its Real Time Pricing program. SCE proposes that \$6 million of the \$11 million requested funds be used for ME&O.

SCE explains that it did not include ME&O funding in its Application to implement the Critical Peak Pricing geared to customers with demand greater than or equal to 200 kW and, thus, requests that funding in this DR Application.²⁴¹ SCE proposes ME&O activities to continue ME&O efforts to defaulted Critical Peak Pricing customers, generate program awareness, and develop sales. SCE estimates that by 2014, this program will have fewer than 3,000 customers enrolled, but notes that the eligible population is 12,000.²⁴² For its Critical Peak Pricing program for customers with demand greater than 200 kW, SCE is requesting nearly \$0.3 million solely to conduct ME&O activities. SCE filed a Dynamic Pricing Application for funding for the overall Critical Peak Pricing program for customers with demand greater than 200 kW, but did not include the funding for ME&O, event notification and program management and administration.²⁴³

The cost-effectiveness analysis of Critical Peak Pricing results in TRC, PAC, and RIM ratios of 0.4. SCE did not provide separate analysis of the two Critical Peak Pricing sub-programs. SCE's Critical Peak Pricing program is "not cost-effective". Because dynamic rate programs are in the purview of GRCs or dynamic rate proceedings, we do not make program modifications in this proceeding.

²⁴¹ SCE-03 at 42-43.

²⁴² *Id.* at 44.

²⁴³ *Id.* at 46.

For both SCE's dynamic pricing programs, as discussed above, the Commission has made a determination that these rates are reasonable and in the public interest. The transition to dynamic pricing programs should not preclude outreach and education to customers who are going to be impacted. Therefore, we make an exception to our cost-effectiveness criteria by approving SCE's request of \$7.49 million for its Critical Peak Pricing program (customers with demand less than 200kW), \$2.65 million for its Critical Peak Pricing program (customers with demand greater than or equal to 200kW), and \$1.1 million for its Real Time Pricing program. We direct that funding for these programs after this DR cycle not be included in future DR applications.

7.7. Emerging and Enabling Technologies

7.7.1. Auto DR/Technology Incentives

Automated DR (Auto DR or ADR) refers to automated technologies that allow a customer's equipment or facilities to reduce demand automatically in response to a DR event or price signal, without the customer taking individual action. Limited data suggests that ADR customers have a higher participation rate in DR programs²⁴⁴ and provide better load shed.²⁴⁵ Data also suggests that customers on dynamic rates perform better with ADR.²⁴⁶

In D.09-08-027, the Commission authorized over \$20 million for ADR during 2009-2011 and ordered the Demand Response Measurement and Evaluation Committee (DRMEC) to evaluate ADR's load impacts,

²⁴⁴ ALJ Ruling of August 5, 2011, Appendix at 21 and 29.

²⁴⁵ PGE-01 at 3-6, lines 14-15.

²⁴⁶ ALJ Ruling of August 5, 2011, Appendix at 29.

cost-effectiveness, predictability of load reduction, potential for expansion, and integration with CAISO markets.²⁴⁷ In addition, the Commission also required the Utilities to include proposals for funding and incorporating ADR into DR programs for the next program cycle.²⁴⁸ In September 2010, the Utilities submitted the results of the evaluation report.²⁴⁹

In the current applications, the Utilities have consolidated their Technology Incentive budgets to provide incentives only for ADR technologies (in the last cycle, incentives were offered for Non-ADR enabling technologies as well). PG&E requests \$26.3 million, SCE requests \$35.8 million, and SDG&E requests \$9.1 million for Technology Incentives limited to ADR.

7.7.1.1. Utility Proposals

The Utilities propose conceptually similar ADR program with differences in certain details (incentive levels, verification methods, eligible DR programs, allowed technologies, etc.). The Utilities recommend changes, motivated by the DRMEC evaluation report, to improve customer performance and cost-effectiveness. These changes include the following:

- Divide the incentive payment
 - 60 percent upon project completion and

²⁴⁷ In September 2010, the Utilities submitted a report subsequent to a workshop to solicit input from stakeholders on proposals for the 2012-2014 DR program cycle.

²⁴⁸ D.09-08-027 at 93.

²⁴⁹ 2009 Loan Impact Evaluation and Cost Effectiveness Tests of California Statewide Automated Demand Response Programs, Christensen Associates Energy Consulting, September 27, 2010 available at www.sdge.com/regulatory/documents/a-08-06-022/reports/AutoDR.pdf

- 40 percent after one year, based on a customer's actual performance in a DR program. Currently, customer enrollment is sufficient; no performance is required.
- Require a three-year enrollment into the DR program by the customer. SDG&E proposes a one-year enrollment. Currently all utilities require one-year enrollment.

The incentive payments, ranging from \$250/kW to \$300/kW, are targeted to medium and large non-residential customers; however, both SCE and PG&E propose to expand eligibility to smaller customers.^{250,251} PG&E proposes to make some funds available to small commercial customers at the rate of \$450/kW. PG&E's proposal includes additional incentives to encourage the use of certain higher-cost emerging technologies, but is potentially more rewarding from a load shed perspective, ranging from \$50/kW to \$150/kW.²⁵² SDG&E recommends additional incentives to aggregators²⁵³ to motivate Critical Peak Pricing customers to install enabling technologies and encourage customers to perform during DR events.

The Utilities did not perform a cost-effectiveness analysis for the ADR budgets pursuant to the Guidance Ruling which considered ADR an enabling technology program. However, in the Utilities' cost-effectiveness analysis of DR programs, ADR budgets are allocated as costs to respective DR programs in proportion to expected customer enrollment.

²⁵⁰ SCE-01 at 76, lines 10-12.

²⁵¹ PGE-01 at 3-13, Table 3-3, line 7.

²⁵² PGE-01 at 3-13, Table 3-3.

²⁵³ SGE-01 at GMK-48, line 7.

7.7.1.2. Party Positions

CLECA supports targeting ADR as an enabling technology,²⁵⁴ and agrees with PG&E and SCE's recommendation to require participating customers to enroll in DR for at least three years. As a supporter of targeting Technology Incentives to technologies that support open-ADR,²⁵⁵ CLECA recommends that the Commission limit these incentives to technologies that use open-ADR.²⁵⁶

DR Aggregators consider the changes to ADR proposed by SDG&E and SCE to be unjustified and onerous, and claim that the changes will decrease incentives to customers.²⁵⁷ DR Aggregators argue that the requirement to carry 40 percent of the cost of the technology is a substantial financial liability for customers, equipment vendors or aggregators.²⁵⁸ NAPP also opposes the 40 percent payment deferral, arguing that this could result in fewer customers willing to install ADR technology.²⁵⁹

Additionally, DR Aggregators request that the Commission require PG&E to revise its ADR program to allow enrollment by customers participating in bilateral contracts with third party DR aggregators.²⁶⁰ NAPP agrees with DR

²⁵⁴ CLE-01 at 31.

²⁵⁵ CLE-01 at 31-38.

²⁵⁶ CLECA Opening Brief at 15.

²⁵⁷ DR Aggregators Opening Brief at 28.

²⁵⁸ DAG-01 at V-2.

²⁵⁹ NAPP Opening Brief at 13-14.

²⁶⁰ DR Aggregators Opening Brief at 28.

Aggregators adding that the Commission should promote consistency among the Utilities and require PG&E to provide a similar offering.²⁶¹

7.7.1.3. Discussion

In its evaluation study, the DRMEC found that customer load shed underperformed compared to the anticipated performance level of the equipment design. We find the Utilities' proposal to divide the payment into an initial 60 percent payment upon project completion and a 40 percent payment a year later predicated on the customer performance demonstration to be consistent with DRMEC's recommendation to address this issue. Moreover, the partial payment enhances the cost-effectiveness of the DR program by motivating the customer to demonstrate load shed performance at the level the equipment was designed to achieve.

We acknowledge that the additional 40 percent investment requirement could pose a financial liability to customers. However, we consider the one-year investment to be a reasonable minor inconvenience in comparison with the improved cost-effectiveness the programs experience. We reject DR Aggregators' recommendation to require the Utilities to provide customers 100 percent of the incentive amount upon project completion. In comments, several parties informed the Commission of a U.S. Department of Energy grant to equipment vendors to implement ADR.²⁶² This program provides customers federal grants for up to 50 percent of the costs of equipment needed to

²⁶¹ NAPP Opening Brief at 4.

²⁶² Grant No. DE-OE0000314: see also Awards Summary at <http://www.recovery.gov/Transparency/RecipientReportedData/pages/RecipientProjectSummary508.aspx?AwardIdSur=111472>.

participate in the ADR program. However, the recipients of the federal grants must pay, up front, their matching half of the costs. The federal grant program expires at the end of 2012. Therefore during 2012, we will allow an exception to the 60-40 split discussed above for any customer enrolled in the federal ADR grant program. Furthermore, during 2012, we extend the exception to the 60-40 split for all customers to maintain equitable treatment with the federal ADR grant program.

DR Aggregators request to revise PG&E's ADR program to allow enrollment by customers participating in bilateral contracts with third party DR aggregators. We agree. PG&E shall open ADR to include AMP customers revise its ADR program to include AMP customers once the AMP contracts are deemed cost-effective.

We also agree with CLECA's recommendation to align SDG&E with SCE and PG&E and see no reason for SDG&E to deviate from the practice of requiring ADR customers to enroll in some DR programs for a minimum of three years.

On a related matter, we note that the three ADR programs are conceptually similar but differ in many implementation details (incentive levels, verification methods, eligible DR programs, qualified technologies, application processes, etc.). By the end of the 2012-2014 DR program cycle, the Utilities will have had more than six years experience in managing ADR programs. We expect that by that time, the Utilities should be converging on a core set of best practices. In keeping with this policy of increasing consistency across utilities to reduce transaction and program costs, we direct the Utilities to collaborate on the development of a statewide ADR program with common program rules and

incentive levels. We anticipate that a statewide proposal will be a part of the 2015-2017 DR Application.

We approve the utility ADR programs as requested but with the discussed modifications and direct the Utilities to fund ADR technologies that interoperate using generally accepted industry open standards or protocols. We authorize the ADR budgets as requested for 2012-2014.

7.7.2. Emerging Technology

Emerging Technology programs provide funding to research studies of new and emerging technologies and equipment, processes, and products. In D.08-09-027, the Commission authorized the following budgets for Emerging Technology: PG&E - \$2.4 million, SDG&E - \$2.1 million, and SCE - \$9.24 million. We concluded that it would be helpful to develop guidance on the use of DR-related research and development funds including the types of projects to be funded and reasonable funding amounts. To date, the Commission has not provided such guidance.

7.7.2.1. Utility Proposals

PG&E proposes evaluations in four emerging technologies: Open ADR-based commercial and public Plug-In Electric Vehicle (EV) charging systems, energy storage technologies, technologies that facilitate real-time feedback of DR resources, and technologies and controls that facilitate DR resources to provide new capabilities including ancillary services. PG&E requests a budget of \$3.7 million to perform these evaluations.

SCE plans to leverage current collaborations while seeking out new ones in order to advance DR as it relates to codes and standards, the expansion of residential DR, and commercial and industrial customer solutions. SCE proposes several activities that explore the technical aspects of whole market

integration: telemetry deployment, improving the quantification of performance, and technologies that support IDSM. SCE requests the Commission to authorize a budget of \$7.3 million for its Emerging Technology projects.

SDG&E will focus on four categories of emerging technologies: heating ventilation and air conditioning, energy storage, advanced controls, and electric vehicles. SDG&E proposes to evaluate and discuss barriers, risks, merits and cost-effectiveness for projects in these categories. SDG&E requests \$2.1 million to cover the costs of proposed evaluations and demonstrations.

7.7.2.2. Discussion

Parties provided few comments regarding the Utilities' proposed programs and budgets for Emerging Technology.

In D.08-06-027, the Commission determined that given the continuing evolution in DR techniques, enabling technologies, and evaluation methods, California benefits from investing in research and development that will encourage the adoption of cost-effective DR. We find it reasonable to continue funding Emerging Technology projects for all three utilities. Our review of utility Emerging Technology proposals indicates that the programs address appropriate technologies needing evaluation and appear reasonable in terms of budget requests. Unless otherwise noted herein, we approve the Emerging Technology proposals as requested. We authorize the proposed 2012-2014 Emerging Technology budgets as requested for each utility.

As in D.08-06-027, we continue to emphasize the importance of ensuring that the research and development undertaken is understood by this Commission and can be shared with other research entities. We require the three utilities to provide semi-annual reports regarding their Emerging

Technology projects. These reports shall summarize each project, the potential benefits of the technology or technique, the activities undertaken as part of the project, and provide any available data and results. The Utilities shall follow the reporting format previously developed by staff for this purpose (and as modified by staff in the future), and provide reports on the previous year's Emerging Technology activities by March 31 and September 30 of each year.

7.7.3. Permanent Load Shifting (PLS)

PLS refers to the shifting of energy usage from one time period to another on a recurring basis. Generally speaking, PLS involves storing electricity produced during off peak hours and using the stored energy during peak hours to support loads. Examples of PLS technologies include battery storage and thermal energy storage.

In D.06-11-049, the Commission directed the Utilities to initiate a process to solicit proposals from third parties for PLS programs. The utilities subsequently issued bilateral contracts and implemented a pilot program involving various PLS technologies. For the 2007-2011 pilot period, the Commission approved approximately \$10 million each for SCE and PG&E and approximately \$4 million for SDG&E. In terms of MWs, this funding is approximately 8 MW of PLS capacity for PG&E,²⁶³ 11 MW of PLS capacity for SCE,²⁶⁴ and 1 MW of PLS capacity for SDG&E.

D.09-08-027 ordered the Utilities to conduct a joint study of PLS cost-effectiveness, market potential, and strategies to encourage adoption of PLS.

²⁶³ PGE-01 at 3-2, line 13.

²⁶⁴ SCE-03 at 80, line 14.

The Utilities completed the study on December 1, 2010 and used it as the basis for the proposals in their Applications with respect to PLS.

7.7.3.1. Utility Proposals

In the 2012-2014 DR applications, PG&E proposes a budget of \$15 million for 27 MW of PLS, SCE proposes a budget of \$14 million for 19 MW of PLS and SDG&E proposes a budget of \$3.4 million for 3.6 MW of PLS storage. All three utilities propose to revise the administrative framework of the programs to a standard offer contract instead of the Request for Proposal process used during the pilot phase.

PG&E and SDG&E propose to fund only mature technologies. SCE recommends allocating \$3 million of its budget request for emerging technologies. SCE and SDG&E propose an incentive of approximately \$500 per kW of installed PLS capacity as a standard offer for mature PLS technologies. PG&E provides a sliding scale for incentive levels as its standard offer, ranging from \$250 per kW for a 4-to-6 hour shift up to \$500 per kW for a 10 hour shift; the incentives are limited to mature technologies. SCE proposes an incentive of \$3000 per kW as a standard offer for emerging PLS technologies.

7.7.3.2. Parties' Positions

ICE Energy, CALMAC, and CESA oppose the utility proposals and recommend the following changes:

- Increased budgets, specifically \$120 million total for all three utilities, divided equally among mature and emerging technology programs;
- Standardized program design across all utilities; and
- Increased incentive levels.

ICE also objected to the cost-effectiveness analysis performed by SCE and asserts that the actual TRC is 1.0.

7.7.3.3. Discussion

Earlier in this decision, we laid out an approach to how we would use the Protocols in our review of the DR programs. However, we consider PLS to be different from other DR programs because PLS shifts energy usage on a permanent basis instead of merely decreasing energy usage during certain times. Furthermore, the Protocols indicate that “these protocols may not be fully applicable to permanent load-shifting programs.”²⁶⁵ Because of this difference, we find it necessary and reasonable to review PLS and its cost-effectiveness analyses differently from the other DR programs.

As calculated by the Utilities, the PLS programs do not perform well on the TRC test, with ratios results of 0.69 for PG&E, 0.77 for SCE, and 0.45 for SDG&E. We look to the other tests for additional context; PAC tests range from 1.5 to 2.0 and RIM test results range from 0.8 to 0.9.

We agree that the cost-effectiveness analysis submitted by the Utilities for the PLS programs indicates that the TRC ratio is low. Using the TRC test results would indicate that the programs are not cost effective, and should not be approved. However, we recognize that TRC as calculated by the utilities is perhaps not the most appropriate metric to evaluate the cost-effectiveness of PLS, because there is a large capital investment on the part of the customer which is not captured accurately in the TRC.

²⁶⁵ *Protocols* at 5.

In the case of the proposed PLS programs, the Utilities added full equipment expenses to the cost side of the TRC test but did not add any offsetting customer benefits to the other side. While customer benefits are difficult to quantify, the Protocols provide the Utilities with the option to estimate a value for difficult-to-quantify inputs and require that the Utilities include a qualitative discussion of those unquantifiable inputs. The Utilities did not include this qualitative analysis for the PLS program. However, SCE acknowledges the importance of non-energy/monetary benefits to PLS customers and states that, “[w]hile non-energy/monetary benefits are important elements in customer’s decision to install PLS equipment, the quantifiable benefits probably remain the major factor in their decision making process. In addition, non-energy/monetary benefits are difficult to quantify, so it is challenging in assessing such values.”²⁶⁶ As previously discussed, the omission of a qualitative analysis is problematic. This is particularly true for PLS programs.

The broader context is useful in our evaluation. In particular, the PAC results capture very interesting results. The PLS PAC ratios are all greater than 1.0 (PG&E has a PAC result of 1.84, SCE has a PAC result of 2.0 and SDG&E has a PAC test result of 1.48).

Given the discussion above, we find it reasonable to consider the PLS programs as proposed to be cost-effective and therefore approve the programs. CESA, CALMAC, and ICE contend that PLS has substantial potential and the program budgets should be larger, specifically \$120 million for the three utilities

²⁶⁶ ALJ ruling of August 5, 2011 at 49, Response to Q#7.

combined,²⁶⁷ divided equally among mature and emerging technology programs.²⁶⁸ SCE rebuts that the likely effect of the larger budget on “SCE’s ratepayers would be an approximately \$7 million per year increase in rates;”²⁶⁹ hence, a larger budget isn’t reasonable. Further, PG&E argues that its program to date “is not fully subscribed”²⁷⁰ and that the “PLS program has a benefit-cost ratio of less than one...Given [this], it will not be prudent to increase the program size.”²⁷¹

We agree with CESA, CALMAC, and ICE that the utility proposed budget levels of \$32 million combined are not consistent with previous Commission guidance on expanding the use of PLS resources. However, we acknowledge that there are still many unknowns as to what a wider implementation of a successful PLS program entails. As discussed previously, not all of the benefits of PLS are accurately captured in the cost-effectiveness protocols. While we are confident they exist, we do not have enough evidence before us to warrant expansion of the current budgets as proposed by CESA, CALMAC and ICE. Further, we agree with SCE that a budget increase will have direct impacts on customers. We find that on balance, the budget as shown below to be appropriate.

Permanent Load Shifting, 2012-2014

²⁶⁷ CESA Opening Brief at 8.

²⁶⁸ *Ibid* at 7.

²⁶⁹ SCE-07 at 44, line 10.

²⁷⁰ PGE-08 at 3A-1, line 23.

²⁷¹ *Ibid*, line 29.

Utility	Amount Requested	Amount Authorized
PG&E	\$15,129,846	\$15,000,000
SCE	\$14,243,195	\$14,000,000
SDG&E	\$3,308,000	\$3,000,000

In regards to the argument by CESA/ICE for a much larger emerging technology program, we emphasize that the Commission has already adopted a decision to fund emerging storage technologies in the Self-Generation Incentive Program²⁷² and we find that providing a similar program in the DR portfolio would be redundant. Hence, we reject CESA/ICE's proposal to allocate funding to PLS emerging technologies and deny SCE's request for a PLS emerging technology program.

Regarding the incentive levels paid out in the PLS programs, we find it important that they are low enough to ensure that they are cost effective, but also high enough to encourage customer adoption of PLS.

CESA, ICE, and CALMAC argue that the PLS incentives should be increased to a range of \$1000/kW to \$2000/kW. As rationale for the higher incentive, ICE finds that "its PLS resource passes a 1.0 TRC benefit/cost ratio assuming incentive levels of \$2000/kW."²⁷³ And CALMAC asserts that proposed incentive levels "will not drive the market to install load-shifting equipment."²⁷⁴

We have determined that we will not rely upon the TRC in our review of PLS cost-effectiveness analyses. To evaluate the reasonableness of proposed

²⁷² R.10-05-004 (http://docs.cpuc.ca.gov/PUBLISHED/FINAL_DECISION/143459.htm).

²⁷³ ICE Energy Opening Brief at 6.

²⁷⁴ CMC-01 at 17.

incentive levels, it is more important to examine the impact on ratepayers via the RIM test. ICE's own analysis shows the RIM ratio to be 0.73,²⁷⁵ a result substantially worse than ratepayer neutral suggesting that ICE's proposed incentive levels amount to a significant subsidy of the PLS customer by ratepayers.

We direct the Utilities to revise the cost-effectiveness analyses using incentive levels up to \$1000/kW with input from Energy Division.

We note that the DR PLS incentives approved in this decision apply to mature thermal energy storage technology and are therefore not eligible for incentives under the Self-Generation Incentive Program pursuant to the guidelines adopted in D.11-09-015.

We recognize that as proposed, there are several key differences between the Utilities' programs. SCE and SDG&E have flat customer incentive rates per installed kW of peak load shift, whereas PG&E has a sliding scale that varies depending upon the number of hours of load shift provided by a customer's PLS technology. The Utilities have different levels of customer incentives, ranging from \$250 to \$545 per installed kW of peak load shift; all of which are designed to be approximately ratepayer neutral. SDG&E proposes to cap incentive payments at 15 percent of project cost²⁷⁶ and PG&E at 50 percent of project cost,²⁷⁷ while SCE did not specify a cap. Other program details are not described or clear such as eligible technologies; the process for vendors and technologies to become qualified for funding; the application process to receive incentives; the

²⁷⁵ ICE-01 at 10, Table 7.

²⁷⁶ SGE-06, Appendix B at 57.

²⁷⁷ PGE-01 at 3-4.

verification process to determine incentives; and the incentive payment process, terms, and timing, etc. We find that the Utilities did not include sufficient details in their filings regarding the design and operation of the PLS programs.

Regarding program standardization, SCE states: “The IOUs will continue to work together on creating a consistent PLS Program, but SCE will not adopt a program decision just for the sake of consistency with the other IOUs if it does not meet the needs of our customers.” SCE continues to say that “Standardizing incentives amongst the IOUs would not be ideal for customers because each utility has its own costs and benefits. Our rate structures are created based on SCE-specific costs and benefits and not that of PG&E and SDG&E.”²⁷⁸

CESA argues that “Program simplicity and consistency across utility service territories is critical to minimizing transaction cost and to developing best practices in program administration.”²⁷⁹ CESA recommends that the Commission require PLS program uniformity and suggests that consistent program components should include technology eligibility, incentive structure, EM&V requirements, program criteria, application process and rules, and reporting. CESA contends that it may be reasonable to allow some differences between utility service territories to reflect differences in load shapes and electric.²⁸⁰ ICE and CALMAC agree with this position. The PLS Study also identifies three factors critical to a PLS program’s effectiveness in encouraging

²⁷⁸ ALJ Ruling of August 5, 2011 at47, Response to Q#5.

²⁷⁹ CESA Opening Brief at 10.

²⁸⁰ CESA Opening Brief at 10.

customer adoption of PLS: program consistency, program simplicity, and adequate education and training about PLS technologies.²⁸¹

We see broad alignment between the parties and the PLS Study regarding the Commission's goals of program simplicity and consistency across the Utilities' territories, while allowing for appropriate differences. Because many program details are yet to be determined by the Utilities, we cannot assure program consistency when appropriate.

To achieve program consistency, we direct the Utilities to work collaboratively to develop and propose a standardized, statewide PLS program based on standard offer with common design and rules, and with differences limited to 1) incentive levels, 2) timing and duration of peak load shift, and 3) considerations specific to customer needs unique to a utility territory. The Utilities shall jointly submit the proposal to the staff within 90 days of issuance of this decision. The proposal should include the updated cost-effectiveness analyses as previously discussed. We direct staff to seek feedback from interested parties and facilitate a consensus process for the Utilities to finalize the statewide program design and rules. Upon completion, the Utilities should submit an updated proposal of the statewide PLS program in a Tier 2 Advice Letter within 30 days of notice from staff.

7.7.4. PG&E's DR Home Area Network (HAN) Integration

In D.09-03-026, the Commission approved PG&E's request to upgrade its Advanced Metering Infrastructure deployment plan to include HAN-capability, pending development of suitable standards and HAN devices for use inside

²⁸¹ *PLS Study* at 13, Table 2.

customer premises. In the Smart Grid Privacy decision,²⁸² the Commission directed the Utilities and Commission staff to collaborate to develop HAN implementation plans with details and a timeline focused on making HAN functionality and benefits generally accessible to customers.

7.7.4.1. PG&E'S Proposals

PG&E requests a budget of \$30.7 million for two HAN-related activities:

- 1) \$27.5 million: DR-HAN Integration project, consisting of two components:
 - IT integration to establish back-end HAN-based DR capabilities to support both pilot and general deployment of HAN-based DR program, and
 - "Evaluation Project" - Small-scale initial rollout or pilot of HAN-based DR program to 2000 homes and small and medium business customers equipped with PG&E provided load-control devices.
- 2) \$3.2 million: Lab Work to test HAN devices & preparatory work for both DR-HAN integration project and EV pilot.

7.7.4.2. Parties' Positions

CLECA opposes the HAN project and considers it expensive and not implementable. In its testimony, CLECA states that the budget for the HAN proposal has impacts on 2,000 customers, for a total cost of \$17,500 per customer.²⁸³ CLECA contends that the proposal might be better suited to R.08-12-009 (the Smart Grid Rulemaking). CLECA also argues that the HAN activity as proposed would require ratepayer investment for software

²⁸² D.08-12-009 at OP 9.

²⁸³ See p. 39-40 of CLECA testimony.

functionality. Overall, they contend that the proposal will not produce benefits for the DR market or for PG&E's customers.²⁸⁴

7.7.4.3. Discussion

PG&E asserts that the funds requested for these two projects are incremental to the basic HAN capability authorized and funded in D.09-03-026. The Commission adopted conservation and DR benefits from HAN-enabled programs in D.09-03-026.²⁸⁵ Determining that "[t]here is significant uncertainty as to when this program will begin, and we prefer not to authorize related costs at this time,"²⁸⁶ the Commission directed that "[t]hose costs will have to be recovered in a separate proceeding. PG&E should seek recovery of the related IT costs at the same time."²⁸⁷ PG&E considers this project to be "incremental to the work executed as part of the HAN Enablement project funded by the SmartMeter program."²⁸⁸ PG&E asserts the additional capabilities gained through the DR-HAN Integration project will enable PG&E to reach new residential and small and medium business customers with DR programs envisioned in D.09-03-026.

We accept PG&E's rationale and agree that the DR-HAN Integration project is incremental to the basic HAN functionality funded in D.09-03-026. We further find PG&E's current request to be consistent with Commission direction

²⁸⁴ See p. 41 of CLECA testimony.

²⁸⁸ PGE-01 at 5-5 line 19-21.

in D.09-03-026 to seek recovery of IT costs for the incremental functionality in a later proceeding.

However, this rationale does not apply to the request of \$3.2 million for HAN-related lab work. In its Application, PG&E describes this work as involving the “technology assessment of HAN-enabled end-use devices in a HAN laboratory or test environment before implementing approaches and programs at the production scale.”²⁸⁹ However, in D.09-03-026, the Commission approved \$21.4 million for “technology assessment”²⁹⁰ that included the following items:

- \$6.4 million for “pilot testing to ensure that the proposed network can be integrated into the (Advanced Metering Infrastructure) AMI and will work as intended;”²⁹¹
- \$6 million (with 50 percent matching vs. \$12.5 M requested) for HAN related “laboratory testing and product demonstrations;”²⁹² and
- \$5 million for “labor for HAN standards support.”²⁹³

There is no discussion in D.09-03-026 that suggests that the approved costs for technology assessment are specific to HAN-enabled conservation but not HAN-enabled DR. Thus, we conclude that the approved technology assessment funds apply to both conservation and DR related HAN capabilities. Since the

²⁸⁹ PGE-01 at 5-3 line 16-18.

²⁹⁰ D.09-03-026 at 84-86.

²⁹¹ *Id.* at 85.

²⁹² *Ibid.*

²⁹³ *Id.* at 86.

Lab Work is intended for technology assessment to support HAN-related DR capabilities, we conclude that this is duplicative of work already approved by the Commission and reject the request of \$3.2 M for Lab Work.

The IT costs that PG&E originally requested, but the Commission deferred in D.09-03-026, equaled \$14.8 million, \$12.7 million less than the \$27.5 million being requested in the current proposal. We acknowledge that the HAN field has been rapidly evolving and the technology landscape today could be very different from that contemplated during the D.09-03-026 proceeding. Hence, a certain amount of increase in the cost estimate is reasonable. While PG&E contends that the scope of the current project is broader than that approved in D.09-03-026, PG&E provides limited information in its Application to explain the differences between the projects and the reasons for the requested increased budget. Thus we limit the increase to 15 percent in addition to the original cost of \$14.8 million.

We note that PG&E's request includes a small-scale initial pilot²⁹⁴ of a HAN-based DR program to 2,000 residential and small and medium business customers equipped with PG&E provided load control devices²⁹⁵ with no specified funding allocated to it. The pilot cost was not included as part of the costs authorized in D.09-03-026. It is prudent for PG&E to pilot a new technology-based DR program. Considering SDG&E's budgets for its HAN-based pilot and programs (Residential Automation Technology) and PG&E's

²⁹⁴ PG&E refers to this as an "evaluation project."

²⁹⁵ PGE-01 at 5-7.

budget request for its HAN-based EV pilot, we authorize \$3 million for PG&E to conduct its evaluation project.

We approve PG&E's request for its HAN Integration project including the \$3 million for the evaluation project. However, we decrease its overall budget by \$7.48 million, and authorize a budget of \$20.02 million for the IT Integration and the evaluation projects. Furthermore, we require the HAN project to be categorized in budget category 11, Special Projects. Fund shifting within this category must be requested through a Tier 2 Advice Letter.

PG&E provides no schedule for when the pilot included in the DR HAN Integration project will be executed. PG&E states that the schedule is dependent on 1) the "development of applicable standards...SEP2.0"²⁹⁶ and 2) the availability of suitable, standards-compliant HAN devices from third parties.²⁹⁷ But PG&E notes that the schedule is "uncertain"²⁹⁸ and that "delays in the schedule for HAN enablement activities may cause a change in PG&E's plans for any of the HAN-dependent projects and programs."²⁹⁹

We acknowledge the fast-changing nature of the HAN field. It is likely that PG&E may be re-evaluating its HAN-related implementation plans in response to D.11-07-056, related to HAN deployment³⁰⁰ in the Smart Grid OIR proceeding (R.08-12-009). Hence, we direct PG&E to submit a Tier 2 Advice Letter with clear descriptions for this pilot, including a detailed schedule for the

IT work and pilot execution, in order to release the \$20.2 million allocated for this item. The descriptions should follow the guidelines for “Pilots” described later in this decision. This Advice Letter should be filed no later than September 30, 2012.

7.7.5. Small Customer Technology Deployment

7.7.5.1. SDG&E’s Proposal

SDG&E proposes a new technology enabling program, called Small Customer Technology Deployment, and requests \$13 million for its implementation. SDG&E explains that the launch of the Small Customer Technology Deployment program is contingent upon approval of a detailed implementation plan as informed by the results of an in-progress 2009-2011 Residential Automated Control Technology pilot, expected to conclude in the first quarter of 2012. SDG&E anticipates that the program will offer professionally installed HAN-based ADR enabling technologies at no cost for up to 15,000 residential customers and 3,000 small commercial customers participating in DR programs. Potential end-use loads targeted through this program include air conditioning, refrigeration, lighting, pool pumps, and electric water heaters.³⁰¹ SDG&E explains that the Small Customer Technology Deployment program will give participants “the ability to manage various end-use electric loads year-round through utility tested and certified enabling technology.”³⁰²

³⁰¹ SGE-05 at 50.

³⁰² *Id.*, Appendix B at 33.

7.7.5.2. Parties Positions

UCAN initially raised concerns about the excessive cost of this program³⁰³ but no longer seemed concerned about the cost during evidentiary hearings, and instead proposed that SDG&E use certain types of HAN devices.

DRA raised concerns about the cost-effectiveness of Small Customer Technology Deployment and that the timing of the program Advice Letter depended on the completion of the Residential Automated Control Technology pilot after this decision.³⁰⁴

7.7.5.3. Discussion

The Small Customer Technology Deployment is not cost-effective. However, the program is a technology enabling program, and thus does not require a separate cost-effectiveness analysis. Furthermore, given the early stage of the HAN market, using a behind-the-meter device may be the best current tool to motivate customers to use HAN capability. We approve the Small Customer Technology Deployment program with the following conditions.

First, within 30 days of completion of the Residential Automated Control Technology Pilot, SDG&E shall submit a Tier 2 Advice Letter to include updated program details informed by the results of the pilot. We direct staff to review these results as a condition to release the authorized budget for the Small Customer Technology Deployment program.

We previously authorized SDG&E to deploy a limited number of HAN-based devices to small commercial customers in its AMI proceeding. To avoid

³⁰³ UCN-01 at 6.

³⁰⁴ DRA-01 at 3-17.

duplication, we direct SDG&E to target the Small Customer Technology Deployment program to residential customers only and we reduce the budget accordingly to \$10.83 million.

Because the program targets Peak Time Rebate customers, we direct SDG&E to (1) limit participation in the Small Customer Technology Deployment program to Peak Time Rebate customers only;³⁰⁵ (2) combine the two programs, and (3) include an updated cost-effectiveness analysis of the combined programs in its required Peak Time Rebate Advice Letter submission due 60 days after the issuance of this decision. As discussed in the ME&O chapter of this decision, we also reduce the marketing budget.

If the Small Customer Technology Deployment Program is successful, we would consider it to be a major step forward in achieving the long-term vision of enabling wide-scale residential DR through customer managed automated technologies seamlessly integrated with utility AMI systems. We expect the program to drive the market to develop HAN-related devices that are easy to self-install and available at a reasonable cost to the average customer. We also expect this program to encourage third party providers to offer HAN-based devices to customers. We direct SDG&E to include in its Advice Letter a proposal for how the Small Customer Technology Deployment Program could drive this market transformation.

7.8. Evaluation, Measurement and Verification

The Commission depends upon EM&V studies to provide valuable insight on the effectiveness of DR programs. Information on DR program attributes,

³⁰⁵ Note that this does not preclude customer participation in other DR programs, such as dynamic pricing programs, which are not part of this application.

including customer acceptance and load impact, improves the design, operation, and maintenance of DR programs. In D.08-04-050, the Commission directed the Utilities to use the Load Impact protocols³⁰⁶ to develop program evaluations and prepare and evaluate future budget applications. The Load Impact protocols are a necessary tool in the analysis of DR cost-effectiveness and for long term resource planning.

Traditionally, the Utilities perform DR program evaluations on statewide programs, activities such as marketing, and on dynamic rate tariffs available throughout the state. The statewide program evaluations are overseen by the DRMEC.³⁰⁷ D.09-08-027 authorized DRMEC to perform evaluations of individual DR activities, programs and dynamic tariffs.

In D.08-06-027, the Commission approved EM&V budgets of \$9.062 million for PG&E, \$4.106 million for SDG&E, and \$7.075 million for SCE.³⁰⁸

7.8.1. Utility Proposals

The Utilities request a total EM&V budget of \$31.5 million for the 2012-2014 DR program cycle to perform both statewide and individual program evaluations: PG&E requests \$15.7 million, SDG&E requests \$6.7 million and SCE

³⁰⁶ In R.07-01-047, the Commission developed and adopted protocols for estimating the impact of DR programs on the electric load.

³⁰⁷ The DRMEC is composed of members from the California Public Utilities Commission, the California Energy Commission, and a representative from each of the three utilities. Previous Commission decisions created the DRMEC and authorized it to oversee the evaluation of statewide demand response activities; this authority was confirmed in D.06-11-049 and again in D.08-05-027.

³⁰⁸ The Commission decreased EM&V budgets slightly to reflect programs where EM&V funding had been requested, but the Commission had ultimately not approved the program.

requests \$9.1 million. The Utilities propose to conduct specific load impact studies, process evaluation, and research studies with this funding.

PG&E requests funding to conduct local load impact studies of PLS, PeakChoice, Peak Time Rebate, Real Time Pricing, SmartAC, Time-of-Use Rates, and DR Pilots.³⁰⁹ SCE plans to conduct a local load impact evaluation on Critical Peak Pricing /Time of Use, Base Interruptible Program, Aggregator Programs (Capacity Bidding Program and DR Contracts), Auto-DR, Agricultural Pumping Interruptible, Save Power Days, Real Time Pricing, and Summer Discount Plan for year 2012-2014.³¹⁰ Because it anticipates that over 5 million electric meters will be replaced by Edison SmartConnect meters by the end of 2012, SCE proposes to evaluate related programs and tariffs as part of its SmartConnect Impact evaluation.³¹¹ SDG&E also proposes to perform local load impact evaluations of several DR programs.³¹²

All three utilities plan to conduct process evaluations. PG&E proposes process evaluations for its AMP, Base Interruptible Program, Capacity Bidding Program, Peak Day Pricing, PeakChoice, PLS, SmartAC, Peak Time Rebate, Pilot programs, Technology Incentive, ADR, demand-side program integration efforts and public campaign.³¹³ SDG&E plans process and marketing evaluations for new or revised programs including Critical Peak Pricing -Default, Peak Time

³⁰⁹ PGE-01 at 8-13.

³¹⁰ SCE-05 at 3.

³¹¹ *Id.* at 4.

³¹² SGE-13 at LW\KS-22.

³¹³ PGE-01 at 8-13.

Rebate, Peak Shift at Work,³¹⁴ Peak Shift at Home,³¹⁵ and Small Customer Technology Deployment. SDG&E recommends no process evaluations for established programs.³¹⁶ SCE states a need to conduct a process evaluation and marketing survey, but does not provide any details.³¹⁷

PG&E proposes to conduct a statewide study on demand-side program integration efforts and public awareness campaign. Other research studies may include the integration of DR into the CAISO market and general research studies. SCE did not request funding for any other research studies. SDG&E requests funding to conduct other customer research studies, forecast application development, and end-use meter.³¹⁸

In addition to budget requests, SDG&E recommends clarifying language related to DRMEC activities. SDG&E expresses concern regarding potential accusations of anti-trust violations where the Commission has ordered utilities to work together on issues, such as the DRMEC. SDG&E requests the Commission to explicitly state that “implementation of required statewide DR activities...represents a state policy goal and that the Commission intends the Joint IOUs to work collaboratively as described to achieve this goal.”³¹⁹ SDG&E, representing all three utilities, requests that the Commission explicitly authorize

³¹⁴ Peak Shift at Work rate is a default critical peak pricing program for small commercial customers.

³¹⁵ Peak Shift at Home rate is a critical peak pricing program for residential customers.

³¹⁶ SGE-13 at LW\KS-22.

³¹⁷ SCE-05 at 5.

³¹⁸ SGE-13 at LW\KS-23.

³¹⁹ SGE-01 at MFG-13 to 16.

the Utilities to engage in DRMEC activities necessary to collaboratively implement the Commission-ordered DR statewide activities.³²⁰

7.8.2. Other Parties' Comments

Only DRA provided comment on the Utilities' requested EM&V budgets. DRA urges the Commission to consolidate all funding requests for dynamic pricing into a single proceeding under Phase 1 of a GRC,³²¹ which includes funding for the EM&V budget to evaluate dynamic pricing.

7.8.3. Discussion

This decision authorizes the DRMEC to continue to perform evaluations of both statewide and individual DR activities, and to continue reporting its findings in annual public workshops. We direct the DRMEC to ensure that EM&V activities are jointly planned and implemented to achieve the core objectives as adopted in D.09-09-047: 1) Load Impact Evaluations; 2) Process Evaluations; 3) DR Potential, Market Assessment and Technology Studies; 4) Policy and Planning Support; and 5) Financial and Management Audits.

Throughout this decision, we have made several design changes to DR programs. Measuring the load impact of each of these DR programs will provide valuable insight on the effect of these changes. Given that the Utilities are required to file load impact estimates of all their DR programs annually, it is reasonable to approve funding for impact evaluations in this decision. While we approve the funding for impact evaluations as requested, we direct the Utilities

³²⁰ *Ibid.*

³²¹ DRA-01 at 1-12.

to conduct statewide impact evaluations whenever possible in order to provide synergies in the analysis and cost savings.

The process evaluation plans that the Utilities provided in their applications vary greatly. PG&E's process evaluation plan includes long-standing DR programs, while SDG&E's evaluation plan focuses on new programs and programs with design changes. Additionally, the Utilities fail to provide adequate description of their process evaluation plan. Process evaluations provide the Commission with insight on how the Utilities administer their DR programs. Process evaluations are especially valuable for new DR programs, but unnecessary for every DR program. Given the lack of detail provided by the Utilities, it is difficult to determine which DR programs require a process evaluation. Therefore, the Commission directs the DRMEC to submit a detailed process evaluation plan that lists all DR programs to be evaluated during 2012-2014 along with an explanation of the necessity of each evaluation.

The process evaluation plan should provide details that were omitted in the DR applications, including timing and funding. The plan should also include a list of what DR programs will not be evaluated and an explanation of why these programs will not be evaluated. This will ensure that process evaluations are performed when necessary, but that no program is inappropriately overlooked. When appropriate, the DRMEC should consider statewide process evaluations. Because statewide evaluations are not always feasible, the plan should provide a process for maintaining oversight of non-statewide evaluations.

We direct the DRMEC to submit the process evaluation plan to the Commission Staff no later than 60 days following the issuance of this decision. Following review and approval of the plan by staff, the Utilities shall work with

the DRMEC to implement the evaluation plan. If adjustments are needed throughout the three-year cycle, the Utilities may submit a revision of the plan to the Staff.

PG&E requests \$15,721,000 to conduct EM&V during 2012-2014,³²² \$2.7 million of which is attributed to PG&E's labor cost.³²³ Upon review, we find PG&E's EM&V budget request reasonable. For 2012-2014, SCE proposes a budget of \$9,093,654 for EM&V.³²⁴ Thirty-three percent, or \$3,035,428, of this amount is attributed to labor costs. SCE did not provide adequate information to explain its labor allocation. We find SCE's EM&V labor cost unreasonable. We reduce SCE's EM&V labor budget to \$1.54 million. SDG&E requests \$5.1 million for EM&V during the 2012-2014 program cycle,³²⁵ with over \$700,000 allocated to two full time employees. We find this amount to be reasonable in comparison with the other two utilities. In comments, SDG&E states that its budget request did not include any funding for research. We thus authorize a total EM&V budget of \$5.715 million for SDG&E to include the \$600,000 for research funding.

The Commission considers the DR Potential, Market Assessment and Technology Studies, and the Policy and Planning Support Studies important to the success of DR programs. Because these studies (frequently referred to as Research Studies) inform Commission policies on DR programs, we direct that these studies be overseen directly by Commission Staff. We authorize a budget

³²² PGE-01 at 8-2.

³²³ SCE comments at 21.

³²⁴ SCE-5 at 6.

³²⁵ SGE-13 at LW\KS-24.

of \$3 million to be divided among the Utilities as follows: PG&E - \$1.2 million, SCE - \$1.2 million, and SDG&E - \$0.6 million.

We authorize the Commission’s Executive Director to hire and manage one or more contractors to perform DR Research Studies, as described in this decision. Costs shall be limited to work performed during the 2012-2014 budget cycle and shall not exceed \$3 million based on the allocation described above.

The Commission authorizes the following total budgets as allocated for the 2012-2014 EM&V program:

TABLE 7.8.3		
	Requested Budget 2012-2014	Authorized Budget 2012-2014
PG&E	\$15,721,000	\$15,721,000
SCE	\$9,093,654	\$7,604,147
SDG&E	\$5,115,000	\$5,715,000

7.9. Anti-Trust Issue

In D.09-08-027 the Commission ordered the Utilities to implement statewide DR programs and activities in a collaborative fashion. In its Application, SDG&E requests the Commission to address a legal issue regarding joint-utility cooperation posed by the antitrust laws. SDG&E, speaking for all three utilities, contend that agreements among the Utilities concerning core elements of the competitive process could be viewed as unlawful under the antitrust laws.³²⁶ This could result in ratepayers or shareholders bearing the costs of defending an antitrust lawsuit. To mitigate against these potential risks we

³²⁶ SGE-03 at MFG-15.

find that³²⁷ a State Action Doctrine defense to an antitrust action exists where: (a) the challenged conduct is a result of directions clearly articulated and affirmatively expressed as state policy; and (b) there is continued active supervision of the Utilities activities in this regard. Further, implementation of required statewide DR activities as called for in the Commission's final decision regarding the approval of the Utilities 2012-2014 DR activities represents a state policy goal which, for clarity, the Commission now affirmatively states that such policy provides and includes that the Utilities work collaboratively to achieve this goal. We therefore authorize the Utilities to engage in certain specific activities necessary to collaboratively implement the DR statewide activities as ordered by the Commission.

7.10. Integrated Demand Side Management (IDSM)

7.10.1. Background

The DSM Coordination and Integration chapter of the Strategic Plan envisions that DSM options including DR be offered as elements of an integrated solution that supports energy and carbon reduction goals immediately.³²⁸ Through the Guidance Ruling,³²⁹ the assigned Commissioner provided direction to the Utilities regarding the IDSM portion of their DR Application. In an effort to align DR and Energy Efficiency funding for IDSM activities, the Ruling directed the Utilities to use 2012 as a bridge year for DR IDSM funding.³³⁰ The

³²⁷ These findings are consistent with D.10-06-009 modifying D.09-12-024 and more recently D.10-12-054 modifying D.09-09-047.

³²⁸ *Strategic Plan*, September 2008 at 71.

³²⁹ <http://docs.cpuc.ca.gov/efile/RULINGS/122575.pdf>.

³³⁰ The energy efficiency portion of the activities is funded through the end of 2012.

Guidance Ruling noted that it makes sense to consolidate the Commission's review of these integrated activities in one proceeding.³³¹

The Guidance Ruling instructed the Utilities that the 2012-2014 DR budget applications should include proposals and budget requests for two types of IDSM activities: 1) IDSM Strategic Plan activities; and 2) traditional DR activities with an integration component that previously had been integrated in the 2009-2011 budget cycle. Examples of this second group include Technical Assistance and Technology Incentives,³³² Emerging Technologies, and local marketing. The Ruling directed that 2012 funding would be bridge funding and beyond 2012 all IDSM activities would be proposed and approved through the energy efficiency proceeding.

7.10.2. Utility Proposals

7.10.2.1. PG&E

PG&E proposes eight IDSM activities: 1) Integrated Marketing and Outreach, 2) Integrated Education and Training, 3) Integrated Sales Training, 4) Flex Alert,³³³ 5) Integrated Energy Audits, 6) Technology Incentives, 7) Integrated Emerging Technology, and, 8) PEAK. PG&E requests budgets of \$6.25 million for year 2012 and \$6.25 million for year 2013. PG&E asserts that it conducted all of these activities during the 2009-2011 budget cycle.

³³¹ Guidance Ruling at 14.

³³² Technical Assistance/Technology Incentives provides on site audits and financial incentives for customers to implement enabling technologies.

³³³ Flex Alert is removed from this category and addressed in the ME&O chapter of this decision.

7.10.2.2. SCE

SCE proposes twelve IDSM activities with budgets for 2012 and 2013: Technical Assistance/Technology Incentives, Flex Alert,³³⁴ Energy Leaders Partnership, Federal Power Partnership, IDSM Marketing, Commercial New Construction Pilot, IDSM Food Processing Pilot, a pilot for Institutional Partnerships, Residential New Construction Pilot, DR Technology Resource Incubator Outreach, Statewide IDSM, and Workforce Education and Training. SCE asserts that all of these activities were part of its 2009-2011 DR portfolio.

SCE identifies a need for funding to integrate the Technical Assistance portion of Technical Assistance/Technology Incentives, but not technology incentives. SCE requests \$848,006 for 2012, and \$625,192 for 2013 to integrate the audits that comprise the Technical Assistance program. SCE requests a total IDSM budget of \$7.889 million for 2012 and \$7.358 million for 2013.

7.10.2.3. SDG&E

SDG&E proposes four IDSM activities: Technical Assistance, Microgrid, Education and Outreach, and Flex Alert. Unlike PG&E and SCE, SDG&E did not include an IDSM Chapter in its previous DR and energy efficiency applications, so SDG&E did not have a 2011 DR budget for Microgrid or Education and Outreach to use as a reference to approve bridge funding for 2012. SDG&E requests \$3.2 million for its Technical Assistance program.

SDG&E is requesting \$1.269 million for IDSM Education and Outreach. The utility proposes to use the funding to conduct research, develop an umbrella DSM campaign and use interactive media to target all of its customer classes.

³³⁴ See footnote 4.

SDG&E proposes to transition the integrated marketing activities to the statewide campaign beginning in 2013. SDG&E requests a total of \$4.711 million to fund its IDSM budget in 2012.

7.10.3. Parties' Positions

DRA recommends that the Commission consider only one year of bridge funding, 2012, for IDSM activities. No other party commented on IDSM activities.

7.10.4. Discussion

The Utilities' IDSM proposals do not provide detailed information about what they have accomplished in the 2009-2011 DR cycle, but rather the Utilities focus on what they propose to do in the future. The Utilities do not demonstrate that they have effectively used existing budgets to achieve Commission objectives to integrate DSM. We recognize that delays in the energy efficiency program created obstacles to DR IDSM activity implementation during 2009.³³⁵ We find that the DR IDSM implementation delay may have led to the lack of description regarding past achievements in the IDSM. However, given that the Utilities do not have adequate information about IDSM successes, we find that it would not be prudent to increase the scope of activities, as SDG&E and SCE request, or the funding.

The Guidance Ruling specifically directed the Utilities to request authority to continue existing integrated activities for one year (2012). Furthermore, the Ruling explained that 2012 will serve as a bridge funding year for integrated activities that were approved in D.09-09-047. It is reasonable to authorize

³³⁵ The utilities did not implement most IDSM activities until 2010.

funding for 2012 so that the Utilities can continue with the existing scope of activities. If an activity has been operating within its scope during 2009-2011, we will consider the continuation of that activity.

In directing the Utilities to propose bridge funding for 2012, the Guidance Ruling noted that future authority and funding for IDSM activities will be considered in future energy efficiency proceedings beginning with 2013-2014 Energy Efficiency applications. Given the current projected cycle of the Energy Efficiency proceeding, it is reasonable to anticipate that the Energy Efficiency proceeding will require funding for its overall portfolio in 2013. Because the Guidance Ruling directed that IDSM activities will be considered in future Energy Efficiency proceedings, we direct the Utilities to request funding for post-2012 IDSM activities as part of their request for Energy Efficiency funding. Furthermore, when the Utilities file the request for 2013-2014 energy efficiency transition funding, they should include a discussion of the achievements of each IDSM activity to justify the funding request. We require the Utilities to serve the energy efficiency bridge funding applications to the DR service list because we anticipate the Utilities to request DR IDSM funding.

PG&E requests the same programs and budgets in 2012 as it requested in 2011. Pursuant to our discussions above, we approve PG&E's IDSM budget for 2012 as requested. For the reasons we provide above, we deny PG&E's request for 2013 IDSM funding in this proceeding.

SCE's Energy Leaders Partnership Program (Partnership Program) provides a prime example that requested increases to SCE's IDSM 2012 budgets are unnecessary. The Partnership Program successfully introduced customers to DR and energy efficiency simultaneously. Twenty-six cities enrolled in DR programs and developed event curtailment plans. The integrated approach led

to over 155 integrated audits. SCE accomplished this by spending only 15 percent of the authorized budget for the Partnership Program. However, SCE requests 2012 bridge funding of \$935,343,³³⁶ a significant increase over the \$413,000 spent in 2009-2010. We agree with SCE that the Partnership Program is successful, but we deny increased funding, because the Partnership Program succeeded with less than its authorized budget.

We approve SCE's 2012 Partnership Program and authorize a budget of \$868,031, one third of its 2009-2011 budget. For 2012, we approve SCE's Technical Assistance budget of \$839,506.³³⁷ For each of the other requested IDSM programs, we approve an amount equal to one-third of the 2009-2011 budgets, for a total of \$3.184 million. We deny all funding for 2013 for the reasons we discussed above.

We approve SDG&E's Technical Assistance IDSM budget as requested, but deny SDG&E's request for the funding of its Microgrid project. SDG&E's 2009-2011 IDSM funding did not include funding for the Microgrid. Furthermore, SDG&E's status reports about Microgrid in its IDSM quarterly reports shows no evidence that the \$119,000 funding request will improve this program. SDG&E's 2009-2011 authorized DR budget did not include a budget for IDSM ME&O. Thus we have no direct comparison in reviewing SDG&E's 2012-2014 request for \$1.269 million. We rely upon SCE's approved amount in 2009-2011, which equals \$2.95 million. We, therefore, approve one-third of this

³³⁶ SCE-04 at 12.

³³⁷ This amount reflects the redaction of \$8,500 for SCE's local ME&O budget.

amount, or \$994,359 for SDG&E's 2012 IDSM ME&O budget. We authorize a total IDSM 2012 budget of \$4.305 million for SDG&E.

7.11. Utility Pilots

7.11.1. PGE's Proposed Pilots

PG&E requests that the Commission authorize PG&E to perform three pilots: Commercial and Industrial Based Intermittent Resource Management Pilot 2 (IRM 2), Transmission & Distribution (T&D) Pilot, and Plug-In Electric Vehicle (EV) Pilot. PG&E recommends budgets of \$2.48 million each for the IRM2 and the T&D pilots, and \$3 million for the Plug-In-EV pilot.

PG&E describes IRM 2 as a continuation of the field study and demonstration of other demand-side storage capabilities begun through a collaborative effort between PG&E, Lawrence Berkeley National Laboratory, and CAISO.³³⁸ In IRM 2, PG&E will develop models and scenarios to 1) create best practices for assembling DR products to achieve best-in-class results and 2) inform the construction or modification of new or existing DR resources. Leveraging the work done in the previous IR pilot, PG&E proposes to use the same customers to participate in this pilot but may recruit additional customers for diversity. Working with CAISO, PG&E will determine how best to bid these new or revised DR resources into the CAISO market. PG&E contends that the

³³⁸ During the 2009-2011 DR budget cycle, the collaboration explored and produced a field demonstration framework to address ways to mitigate intermittence of renewable resources. Phase 1 of this collaboration produced an assessment of various end-use loads and equipment to be considered in the field demonstration. Phase 2 performed field demonstrations to observe whether a properly controlled demand side resource can respond appropriately to CAISO needs and provide real-time 5-minute energy services.

results of IRM 2 “will provide further insight on the use of demand-side resources to integrate IRR.”³³⁹

In the future, PG&E envisions using demand side resources to assist with T&D operations. As such, PG&E has studied the integration of wholesale and retail DR into T&D. With the T&D Pilot, PG&E proposes to explore and demonstrate the feasibility and viability of applying current and future demand-side capabilities to provide services that assist T&D operations and planning. PG&E contends that the T&D pilot will identify the characteristics of resources needed for T&D operations as well as the demand-side resources to fulfill those needs.³⁴⁰ Additionally, PG&E proposes that the pilot evaluate or develop optimization and forecasting tools. Using a two-phased approach for the pilot, PG&E explained that the first phase includes a scoping study and the second phase would deploy a field demonstration of incorporating DR resources in T&D operations. PG&E predicts that the pilot will use SmartAC and select AutoDR enabled Commercial and Industrial resources for the field demonstration, as these resources have operational characteristics that may meet T&D operational needs.³⁴¹

In addition to the DR-HAN Integration Project previously described, PG&E requests authorization to perform a HAN-based EV Pilot to demonstrate and analyze the technical capability for providing two-way communication to the EV Supply Equipment over the AMI network using the HAN gateway.

³³⁹ PGE-01 at 3-20.

³⁴⁰ *Id.* at 3-21.

³⁴¹ *Id.* at 3-22.

Additionally, PG&E proposes to study an EV Supply Equipment's response to load control signals; requirements for a scalable system; customer behavior, etc. in regard to Plug-In EV charging; and the benefits of EVs to the utility and customers.³⁴² PG&E contends that this pilot is another step toward the development of a commercially-viable technology based on a collaborative effort between the Utilities, customers, automakers, and third party EV Supply Equipment providers.³⁴³

7.11.2. SCE's Proposed Pilots

SCE requests authorization and funding to perform two pilots: 1) Smart Charging Plug-In EV Pilot, and 2) Workplace Charging Pilot. In R.09-08-009, SCE proposed including these two pilots as part of the 2012-2014 DR budget Application. The Commission responded by requesting the Utilities to "consider Alternative-Fueled Vehicle Tariffs, Infrastructure and policies to support California's Greenhouse Gas Emissions Reductions Goals"³⁴⁴ including the impact of EVs on California's grid and action needed.

SCE proposes a Smart Charging Plug-In EV Pilot to better understand the related issues and impact of Plug-In EV charging with DR. SCE explains that the pilot will test the related charging equipment, its ability to provide DR, as well as customer behavior. While testing and evaluating both EV Supply Equipment and Plug-In EVs in a controlled environment, SCE proposes to investigate the compatibility of the communication between smart meters and or utility Wide

³⁴² *Id.* at 5-11.

³⁴³ PG&E also contends that the EV Pilot builds upon lessons learned in a Plug-In EV DR Pilot performed during the 2009-2011 DR budget cycle.

³⁴⁴ SCE-03 at 103.

Area Networks or WANs. SCE anticipates deploying smart charging equipment at both controlled and non-controlled locations to determine the most appropriate technology needed for success. SCE will use the information garnered from this pilot to refine the Plug-In EV Smart Charging Program design as well as its related processes and systems. SCE argues that this pilot is different from other utility pilots on Plug-In EVs in that no other pilot involves residential, public and fleet charging scenarios.³⁴⁵ SCE requests \$600,000 to establish the Plug-In EV Smart Charging Pilot.

As suggested by the Commission, SCE proposes a Workplace Charging Pilot to analyze the impacts of Plug-In EV workplace charging on California's power system. SCE explains that its objective is to ascertain how to make Plug-In EV charging more convenient and accessible for both customers and suppliers. SCE plans to deploy up to 233 Plug-In EV charging stations at SCE facility parking lots. SCE will collect and analyze data from these charging stations in order to analyze load impacts on electric circuits and determine the effectiveness of various pilot DR strategies.³⁴⁶ Serving as a proxy for larger workplace charging models, SCE anticipates this pilot to provide information that will enable SCE to advise and assist in developing future charging strategies. As justification for this pilot, SCE contends that no other workplace charging pilots include options such as flat rates, interruptible options and various Time of Use scenarios.³⁴⁷ SCE requests a budget of \$1.2 million to perform this pilot.

³⁴⁶ *Id.* at 110.

³⁴⁷ SCE-01 at 113.

7.11.3. SDG&E's Proposed Pilots

SDG&E requests authorization to conduct two pilots during the 2012-2014 DR budget cycle: Locational DR (LDR) Pilot and New Construction DR (NCDR) Pilot. SDG&E proposes budgets of \$433,000 and \$1.1 million, respectively, for these two pilots over the three-year cycle.

Despite only having one local capacity area, SDG&E seeks authority to embark on the LDR pilot, anticipating that it will assist in determining whether LDR at the circuit level can provide adequate load drop to justify a full fledge program. SDG&E contends that an LDR program targeting strained circuits could be a cost effective alternative to immediate system upgrades. Leveraging existing energy efficiency, DR enabling technology and PLS programs, SDG&E proposes to use marketing efforts coupled with premium, locational incentives to create load impacts. SDG&E asserts that the LDR, in collaboration with the direct install energy efficiency program, will reduce energy consumption and power demand.³⁴⁸

Integrated into its existing new construction energy efficiency programs, SDG&E intends the NCDR pilot to be an enabling technology deployment pilot for the new construction market. SDG&E proposes to offer financial incentives and design assistance to gain participation in the pilot. SDG&E alleges that the enabling technologies installed during the course of the pilot will not only lead to load reduction but will provide customers with dynamic pricing information.³⁴⁹ SDG&E notes that installation during construction is preferable to retrofits, and

³⁴⁸ SGE-05 at GMK-53.

³⁴⁹ *Id.* at GMK-54.

asserts that the NCDR pilot “is uniquely positioned to investigate and affect DR opportunities during building construction.”³⁵⁰ Focusing on design assistance, workforce education and training, and marketing support, SDG&E intends the NCDR pilot to provide education and outreach to new audiences. SDG&E plans to use the NCDR pilot to target five building types: multifamily, single family, grocery, office building, and small retail/mixed use. SDG&E requests \$1.1 million to perform this pilot over the three-year budget cycle.

7.11.4. Discussion

No party provided substantive comments on the proposed pilots.

The Utilities submitted minimal information regarding the proposed pilots. Although we find the concept of each pilot valuable, the Utilities did not provide adequate details or justification to allow us to authorize the budgets as requested. However, we do not want to lose an opportunity to gain knowledge from the results of these pilots, given that we agree that the concepts are valuable. As such, we implement a framework for the consideration of these and future pilots within the DR portfolio and require the Utilities to provide pilot plans for each pilot. The framework is similar to established guidance for the submission, implementation and evaluation of Energy Efficiency pilot projects in D.09-09-047.

The purpose of a pilot is to test a new concept or program design that is intended to address a specific area of concern or gap in existing DR programs. Pilots can also be launched to advance a new DR policy or operational requirement. Pilots should be limited in scope and duration so that the results

³⁵⁰ *Ibid.*

are available in a specified timeframe and limited in budget so that unsuccessful programs have a limited impact on the overall portfolio. Results of pilots should be shared widely amongst all utilities and with stakeholders impacted by the pilot. Pilot results should provide a plan and timeframe to transition the pilot program, if determined successful, into utility-wide and hopefully statewide use.

We make a distinction between demonstration projects and pilots.

Demonstration pilots are intended to explore a new concept or technology capability, and the costs, schedule, expected performance or outcomes may be unknown or uncertain. Pilots test a new concept or program design intended to address a specific area of concern, but can advance a new DR policy or operational requirement.

Pilots may also expand upon already completed demonstration projects but are designed to validate or evaluate assumptions or expected performance or outcomes of new concept or technology or program design in a limited field deployment, with the intention of using the results and experience to develop a program suitable for general deployment. A pilot may be the pre-deployment phase or the initial phase of a yet to come general deployment of a program, but could also lead to no program if results prove the pilot to be unsuccessful.

Demonstration projects are designed to examine new ideas and should have flexibility in budgeting to account for unexpected conditions. Pre-deployment pilots, in contrast, have already been tested on a limited basis and thus have a foundation for forecasting budgets and schedules with a reasonable confidence level.

For the pilots requested in this Application and all pilots requested in future DR applications, each utility should provide a proposed Pilot Plan. Each Pilot Plan should contain the following elements:

1. New and innovative program design, concepts or technology that have not yet been tested or employed;
2. A specific statement of the concern, gap, or problem that the pilot seeks to address and the likelihood that the issue can be addressed cost-effectively through utility programs;
3. Whether and how the pilot will address a DR goal or strategy;
4. Specific objectives and goals for the pilot;
5. A clear budget and timeframe to complete the pilot and obtain results within a portfolio cycle. Pilots that are continuations of pilots from previous portfolios should clearly state how the continuation differs from the previous phase;
6. Information on relevant standards or metrics or a plan to develop a standard against which the pilot outcomes can be measured;
7. Where appropriate, propose methodologies to test the cost-effectiveness of the pilot;
8. A proposed EM&V plan; and
9. A concrete strategy to identify and disseminate best practices and lessons learned from the pilot to all California utilities and to transfer those practices to resource programs, as well as a schedule and plan to expand the pilot to utility and hopefully statewide usage. Pilot results shall be reported at the public DRMEC spring or fall meeting on load impact or process evaluation results.

We direct each utility to submit a Tier 2 Advice Letter that includes a Pilot Plan as described above for all DR pilots no later than six months before the start of the pilot or 60 days after the issuance of this decision, whichever is earlier. All future DR applications should include a Pilot Plan for every DR pilot.

We authorize the following budgets for DR pilots, contingent upon the submittal and approval by Commission Staff of the required Pilot Plan: \$7.96 million for PG&E, \$1.8 million for SCE, and 1.5 million for SDG&E.

8. Forward Looking Issues

8.1. Integration with California Energy Policies

We end this decision where we began, with a discussion of California energy policies and the integration of DR programs with these policies. California is witnessing the evolution of its electrical grid as technological improvements change the fundamental nature of how electricity is generated, transmitted, distributed and used. Simultaneously, the Commission has been working with the CEC and other entities to create improved and integrated energy efficiency and DR programs to decrease California's energy usage. However, the single largest change affecting the grid is the increased use of renewable generation technologies, which is now required by law to reach 33 percent by 2020. A majority of this renewable generation is intermittent in that the amount of energy is dependent on unpredictable weather conditions.

This evolution presents new opportunities for DR, as well as new challenges. Large amounts of intermittent generation create operational complexities for the grid operator. DR and energy storage should be available for ramp up and ramp down, compensation for over-generation, and balance of the system. Existing DR products may need to be reconfigured and new products developed to meet CAISO market requirements.

PG&E asserts that its DR programs promote the key objectives of California's energy goals, including initiatives such as the Energy Action Plan II and the Strategic Plan.³⁵¹ CAISO contends that the Utilities' 2012-2014 DR proposals may not be broad enough to address the impacts of the 33 percent

³⁵¹ PG&E Opening Brief at 53-54.

renewables requirement.³⁵² The Utilities have made efforts to meet these goals, but the current efforts may not be sufficient, either in terms of timing or breadth. While no one has determined the exact nature of the challenges that the grid will face, various scenarios can be and are being developed which describe the potential challenges the grid is likely to face. It is critical to determine how we will meet these challenges.

8.2. Integration with CAISO Markets

We review the DR applications to address how DR integrates with the CAISO Market.³⁵³ The integration of retail DR programs with California's wholesale electricity markets has been an on-going effort by the Commission, the CAISO and the Utilities for several years. Generally, the Utilities have complied with earlier Commission directives to integrate their programs with CAISO wholesale market products, but are careful to lay out several caveats with respect to timing, costs and feasibility.

PG&E proposes a phased approach for most of its DR programs, but cautions that it intends to request funding for most of the costs of integration after it is fully informed of market requirements and can make a judgment on what is cost-effective for ratepayers. PG&E will make a consolidated funding request at the conclusion of R.07-01-041, Phase 4, Part 2.³⁵⁴

Like PG&E, SCE states³⁵⁵ that full implementation and integration of DR programs with CAISO's wholesale market products is dependent on the final set

³⁵² Tr. Vol. 4 at 523-524.

³⁵³ Scoping Memo at 8.

³⁵⁴ PGE-01 at 7-6 and 7-7.

³⁵⁵ SCE-01 at 7.

of policies and rules under development in the Commission's direct participation proceeding.³⁵⁶ SCE cautions that it may request additional DR funding depending upon the rules adopted for direct participation.³⁵⁷ SCE currently anticipates over \$15 million is necessary to implement the systems and programs for PDR and RDRR.

SDG&E makes only brief mention of its intention to integrate its programs with wholesale markets in this Application. SDG&E's budget for wholesale market integration appears to be limited to a portion of the IT costs.

CLECA points out that the Commission previously concluded that we must weigh the benefits of the changes we make with the costs of the changes.³⁵⁸ PG&E agrees with CLECA that policies to promote the integration of DR with CAISO must be justified with reasonable levels of feasibility and cost-effectiveness.³⁵⁹

SDG&E and SCE claim to be moving toward CAISO market integration. However, SDG&E recommends a bifurcated approach in that only some utility-provided DR programs be bid into CAISO markets³⁶⁰ while SCE recommends full integration.³⁶¹ CAISO points out the potential cost of wholesale market

³⁵⁶ R.07-01-041, Phase 4.

³⁵⁷ SCE-01 at 122.

³⁵⁸ CLECA Opening Brief at 18.

³⁵⁹ *Id.* at 55.

³⁶⁰ SGE Opening Brief at 20.

³⁶¹ SCE Opening Brief at 72.

integration that the Utilities will pass on to ratepayers if the Commission continues to rely on the utility-centric model for DR.³⁶²

While the Utilities' cautious approach toward integration is disconcerting, a slow, deliberative approach could provide the Commission with the time to consider the costs of continuing down the utility-centric path. PG&E raises the specter of additional costs it will seek in order to continue its role as a DR provider and integrate all of its programs with the CAISO market. CAISO raises a valid point that IT costs in particular tend to be larger than expected. CAISO strongly advocates the Commission to move toward a market-based model that could avoid huge ratepayer-subsidized DR infrastructure.

The point of disagreement is whether the current model for contracts should be allowed to continue where the Utilities would bid the resources into the CAISO market or should the Utilities procure these resources similar to the way they procure other Resource Adequacy resources where third party aggregators directly bid the resources into the CAISO market. The fundamental differences between the current and procurement models are 1) whether the Utilities or the third party aggregators bid the resources into the CAISO market and 2) whether the contracts are integrated into the CAISO market.

CAISO believes that the procurement model shifts the risk of potentially expensive market integration IT costs from the ratepayer to the aggregators. CAISO argues that "the aggregator's IT costs are not transferred to rate base and to all ratepayers as are the [Utilities' costs]."³⁶³ Further, DACC/AREM contends

³⁶² ISO-01 at 10-13.

³⁶³ CAISO Reply Brief at 12.

that the current model gives the Utilities' DR providers an advantage over non-utility DR providers because the Utilities recover all related costs from the ratepayers. We share CAISO and the DACC/AReM's concerns about the cost to ratepayers..

With both models, DR resources reduce the Resource Adequacy requirements. However, the DR procurement model builds these resources directly into the Resource Adequacy portfolio. CAISO continues to emphasize a market preference for DR resources that qualify for resource adequacy because of reliability and economic efficiency.³⁶⁴ CAISO maintains that the Utilities should solicit DR resources the way they solicit generation resources. CAISO does not support third party aggregators delivering DR resources to the CAISO system that are not integrated with the wholesale market.³⁶⁵

SCE and SDG&E question whether the Commission should continue the current model for the AMP contracts under CAISO's new wholesale market for DR. SDG&E cancelled its AMP contract in early 2011, contending that "the unique attributes of SDG&E's service territory inhibits the success of Aggregator Managed Programs."³⁶⁶ SDG&E expresses concern regarding the reshuffling of customers between SDG&E's DR programs and the AMP contract; thus providing no incremental benefits to SDG&E's customers.³⁶⁷

For the reasons discussed above, and consistent with our policy vision on integration into and direct participation of DR resources in the CAISO market,

³⁶⁴ CAISO Reply Brief at 7-10.

³⁶⁵ CAISO witness' testimony, Transcript Vol. 4,493, lines 7 to 20.

³⁶⁶ SDG&E Reply Brief at 15.

³⁶⁷ SGE-01, Chapter II, MFG-9 to MFG-10.

we adopt the DR procurement model as proposed by the CAISO. The specifics of the DR procurement model will be further developed in the current DR Rulemaking proceeding, R.07-01-041, or its successor. We expect the Utilities to hold competitive solicitations for new PDR contracts as a part of their Resource Adequacy portfolio, once we have finalized the direct participation rules and implemented new Resource Adequacy rules for wholesale DR resources. We require the Utilities to work closely with CAISO, Commission Staff, and the Procurement Review Groups when developing the RFP requirements to meet future system needs, e.g., integration of renewable resources.

8.3. DR Market Competition

Competition in the emerging market for DR services has become a controversial issue. Historically, DR programs were interruptible programs targeted to large commercial and industrial customers and air conditioner cycling programs for residential customers. Today, we also have price-responsive programs and dynamic rates. In addition to new programs, we also have new players. The DR providers or aggregators, non-utility Load Serving Entities such as Energy Service Providers, and Community Choice Aggregators have created or intend to create DR products and services similar to those offered by the Utilities and want the opportunity to participate in California's DR marketplace.

Past Commission decisions support a model that places the Utilities at the center of DR programs and services. The Commission has allowed third party DR providers to play a role in the DR market through limited term contracts with utilities. In addition, Energy Service Providers currently offer a variety of

services to Direct Access customers that go beyond the sale of electricity to include DR products and services.³⁶⁸ Arguments are being proposed that, if adopted, would signal a departure from current Commission policy regarding DR programs and the role of the Commission itself. The changing nature of the electrical grid, which we previously discussed, has generated additional requirements that call into question whether a utility-centric model for DR programs and services can meet current and future needs. This in turn would impact the roles of the DR providers, Load Serving Entities, and the Utilities as well as the future needs of the California electricity grid.

In their opening testimony, DACC/AReM promote the idea that DR programs are, in large part, competitive services and, as such, the Utilities should not be allowed to offer rate regulated DR services when those same services can be provided through competitive markets.³⁶⁹ Furthermore DACC /AReM state that the Commission should facilitate a transition to broader competition in the DR markets beginning with the determinations made in this proceeding.³⁷⁰

CAISO suggests giving the Utilities a supporting rather than a central role in California's market. CAISO recommends that the Commission consider transitioning DR resources from a utility-delivered resource to a competitively-procured resource.³⁷¹ CAISO's testimony indicates that the Commission should direct the Utilities to use competitive procurement to solicit DR designed to

³⁶⁸ DAC-01 at 6.

³⁶⁹ *Id.* at 8.

³⁷⁰ *Id.* at 2.

³⁷¹ ISO-01 at 11.

satisfy long-term procurement and resource adequacy requirements from aggregators.

The Commission is currently developing market rules to govern the activity of DR providers in California. Furthermore, details regarding the federal directives for market integration are emerging on an ongoing basis. The uncertainty places the Commission in the position of not having enough information at this time to make a decision on how best to proceed.

8.4. Next Steps

We review issues intersecting the DR programs and activities with CAISO market integration including DR market competition. However, we note that policies addressing these activities may be revised or further developed either in this proceeding or in the associated rulemaking on DR (R.07-01-041).³⁷²

Dismantling of the utility-centric model, as suggested by some parties in this proceeding, requires thought and deliberation beyond the time provided in the current proceeding. Furthermore, the issues go beyond the three-year cycle of a DR Application and are more appropriately addressed in the DR rulemaking. The Commission must determine the future goals and policy objectives for DR before addressing these issues. At this time, however, the most prudent path forward is to continue to gather information to develop a better record before making lasting changes to the current structure. We will address these issues in the DR rulemaking proceeding, R.07-01-041 or its successor.

We note that the DRMEC has embarked upon a study to determine how current DR programs respond to challenges posed by intermittent generation.

³⁷² Scoping Memo at 8.

This study will be a first step in gathering additional information to determine the future course of DR.

9. Approved Budgets and Authorized Expenses

We approve the following budgets for the Utilities' 2012-2014 DR programs:

2012-2014 Demand Response Program Budgets - PG&E

Funding Categories	Total Authorized for 2009-2011	Total Requested for 2012-2014	Total Authorized for 2012-2014	Change	% change
<u>Category 1 - Reliability Programs</u>					
Base Interruptible Program	\$800,000	\$666,349	\$666,349	\$0	0%
Optional Binding Mandatory Curtailment/Scheduled Load Reduction	\$138,000	\$413,532	\$413,532	\$0	0%

We reiterate the direction we provided to the Utilities in D.09-08-027 regarding the process for requesting changes or adjustments to the DR programs and budgets we approve in this decision. Changes such as requests for new DR programs, increases in the total budget for a DR program area, or changes to policies specifically adopted in this decision should be made through an Application or a Petition for Modification. We authorize the Utilities to request non-controversial changes to program tariffs and implementation procedures via a Tier 2 Advice Letter. If uncertain whether a particular change is appropriate for review through the Advice Letter process, we encourage the Utilities to consult with Commission Staff before submitting an Advice Letter.

10. Cost Recovery

The majority of the Utilities' requests for cost recovery were non-controversial and generally continue the cost recovery approach adopted for earlier demand response program budget cycles. The following discussion

presents the utility cost recovery requests, party positions and the Commission adopted positions for cost recovery during the 2012-2014 budget cycle.

10.1. Utility Proposals

10.1.1. PG&E's Proposal

PG&E requests authorization to recover up to \$234.3 million in expense and capital costs for the 2012 - 2014 DR program cycle. PG&E proposes to continue recovering its authorized DR revenue requirements from all customers through distribution rates included in the Distribution Revenue Adjustment Mechanism (DRAM) account.

PG&E requests the following:³⁷³

1. To include the forecasted costs and associated revenue for 2012-2014 in its DR application be deemed reasonable and not subject to after-the-fact reasonableness review.
2. To include the revenue requirements in the Annual Electric True-Up (AET) process and recover in rates in the same manner as other distribution costs. Moreover, revenue requirements would be subjected to the current Commission methodology for revenue allocation and rate design.
3. To eliminate the Air Conditioning Expense Balancing Account (ACEBA) and merge the costs from ACEBA into the Demand Response Expenditures Balancing Account (DREBA) beginning January 1, 2012.
4. Eliminate the Demand Response Revenue Balancing Account (DRRBA) and shift the expenses currently recorded there into the Distribution Revenue Adjustment Mechanism (DRAM) account. The DRAM is a primary GRC recovery account.

³⁷³ PG&E-1 at 11-1, 11-2, 11-11.

5. Recover authorized capital revenue requirements in the DRAM account.
6. Record any revenues resulting from bidding PG&E's DR programs into the CAISO Market into the DRAM. Revenues recorded in the DRAM would reduce DR revenue requirements as part of the AET filing process.
7. PG&E's shareholders assume responsibility for incentive payments paid for incremental MWs beyond the emergency-triggered MWs settlement cap. PG&E would revise the DREBA to track and reconcile these as potential overpayments to authorized expenses.
8. Allow a bridge funding mechanism to continue operating PG&E's currently authorized DR programs at the level of the 2011 authorized revenue requirement.

10.1.2. SCE

SCE requests authorization to recover up to \$229.037 million in program funding for the 2012 - 2014 Demand Response program cycle.³⁷⁴ The DR program budget would be reflected in rates in equal amounts of \$76.3 million in each of the years 2012 through 2014. SCE is not proposing any change in its currently approved DR ratemaking and plans to utilize existing balancing accounts.

D.09-08-027 authorized SCE funding for DR contracts through 2012. SCE assumes that no new funding would be requested by SCE or authorized by the Commission in response to a request by a third party for DR capacity contracts after 2012. As a result of this expectation, SCE would recover \$4.5 million less

³⁷⁴ SCE-05 at 46.

from customers.³⁷⁵ SCE will adjust its revenue requirement in the 2013 Energy Resource Recovery Account (ERRA) filing.

10.1.3. SDG&E

SDG&E currently records all program costs associated with its existing DR programs and its current DRP bilateral contracts in its Advanced Metering and Demand Response Memorandum Account (AMDRMA). SDG&E plans to continue using the AMDRMA account along with SDG&E's Rewards and Penalties Balancing Account (RPBA). Balances are transferred to the RPBA on an annual basis for amortization in SDG&E's electric distribution rates over 12 months consistent with SDG&E's adopted tariffs.

SDG&E requests that authorized DR program costs related to DR Operation and Maintenance (O&M) expenses, capital related costs (ie. depreciation, return and taxes), customer capacity incentive payments, and all other costs, not recovered through SDG&E's GRC be recorded in AMDRMA.

SDG&E proposes that the costs related to IT upgrades to allow applicable DR programs to participate in locational dispatch and other CAISO MRTU initiatives be recovered through its Market Redesign and Technology Upgrade Memorandum Account (MRTUMA). According to SDG&E, the purpose of MRTUMA is to record the incremental O&M and capital-related costs associated with implementing the CAISO's MRTU initiative.

10.2. Party Positions

DACC and AReM argue that because DR is functionally treated by the Commission, FERC, and CAISO as resources equivalent to generation, DR's

³⁷⁵ *Ibid.*

associated expenses should be recovered through the generation revenue requirement with the sponsoring load serving entity retaining any resource adequacy or other benefits afforded by the program. Furthermore, DACC and AReM maintain that Direct Access and Community Choice Aggregator customers should not be required to pay the costs of DR programs in which they are not allowed to participate. To the extent all retail customers are required to pay the costs of utility DR programs, DACC and AReM argue that any associated benefits must be distributed equitably to all such customers. Currently, such benefits are confined to resource adequacy capacity credits, but may possibly expand in the future to environmental attributes such as potential greenhouse gas reductions credits.³⁷⁶

CLECA contends that since Direct Access and Community Choice Aggregator customers can participate in virtually all utility DR programs, they should pay for their share of the costs of these programs.

10.3. Discussion

PG&E requests the Commission to determine that forecasted costs and associated revenue for 2012-2014 be considered reasonable and therefore not subject to after-the-fact reasonableness review. We will not prejudge the deliberative process of the ERRRA proceeding. PG&E's request is denied without prejudice. PG&E's requests to have revenue requirements included in the AET process and to recover authorized capital revenue requirements in the DRAM account are granted. PG&E's request to eliminate the ACEBA account and transfer costs formerly tracked in ACEBA into the DREBA account is approved.

³⁷⁶ DAC-01 at 3.

PG&E requests the Commission to eliminate the DRRBA account and shift the costs to the DRAM account. The DRAM is a primary GRC recovery account with many accounts where DR costs may be difficult for Commission Staff and parties to locate. The DREBA account already tracks DR expenses and has sub-accounts that accommodate both one-way and two-way balancing treatment. PG&E is directed to eliminate the DRRBA account but transfer costs recorded there into the DRAM account.

PG&E requests to record into the DRAM any revenues resulting from bidding PG&E's DR programs into CAISO and for shareholders to assume responsibility for incentive payments paid for incremental MWs beyond the emergency-triggered MWs settlement cap are approved. PG&E's request for a DR bridge funding decision is denied without prejudice.

SDG&E and SCE propose few changes to their currently approved DR ratemaking and plan to utilize existing balancing accounts. SDG&E proposes that the cost related to IT upgrades to allow applicable DR programs to participate in locational dispatch and CAISO MRTU initiatives be recovered through its MRTUMA. SDG&E's and SCE's cost recovery mechanism as described above are approved.

CLECA focuses on the complexity of the cost allocation process and suggests that any attempt to parse out DR program cost as generation or distribution must be informed by the fact that all customers benefit from DR programs and all customers must pay for their share of these costs.³⁷⁷ In its opening testimony, CLECA states that the Commission's current process of cost

³⁷⁷ CLE-01 at 49.

recovery is to include the allocation of DR costs in a GRC phase 2 proceeding or rate design window proceeding and to recover almost all costs associated with DR, as opposed to dynamic pricing, through distribution rates, which are charged to all utility delivery customers.

Although Direct Access and Community Choice Aggregator customers receive their energy from a non-utility provider, that energy is delivered across the utility distribution system. If DR programs provide distribution benefit, DA and CCA customers participate in that benefit. Without further study, the Commission finds nothing in the record to substantiate DACC and AReM's assertions. Moreover, until the Commission makes a final determination about the future structure of the DR market, changing the current cost recovery and rate design process for DR is not ripe for discussion. Normally, in order for the Commission to consider DACC and AReM's proposal to restructure rates, we would require additional data and fact finding studies that are best handled in rate design. However, we agree that these issues should be considered in a consistent manner across all three utilities and thus are best handled in one proceeding. We think that the most appropriate forum would be the R.07-01-041 or its successor to establish overall rules and then those rules can be applied in the Utilities' respective rate design applications.

We now turn our attention to the matter of cost recovery for expenses incurred since January 1, 2012. As discussed above, on December 28, 2011 an Assigned Commissioner's Ruling (ACR) authorized the Utilities to continue to DR expenditures and to continue operating the current DR programs until we issued a Decision approving the 2012-2014 Applications. The ACR also directed the Utilities to continue to record all related expenses as previously directed by the Commission. Since January 1, 2012, the Utilities have continued to fund their

DR programs at their previously authorized levels and recorded those expenses in the previously authorized accounts. These expenditures are reasonable.

11. Guidance for DR Reporting and 2015-2017 Applications

The Utilities' DR applications for the 2015-2017 program cycle shall be filed no later than January 31, 2014. We have noted several discrepancies in the applications for the 2012-2014 budget cycle which led to difficulties during the review process. We find that improved monthly reporting will assist the Commission in developing better guidance for the Utilities in preparation for the filing of future applications. We direct the Utilities to meet with Commission Staff no later than 45 days following the issuance of this decision, to develop an improved monthly reporting document. In preparation for the filing of those applications, we require the Utilities to meet with Commission Staff no later than March 30, 2013 to discuss the 2015-2017 DR program and budget applications. Commission Staff will provide a guidance document to the Utilities and stakeholders no later than September 1, 2013 to assist the Utilities in developing improved and thorough 2015-2017 DR program and budget applications.

12. Comments on Proposed Decision

The alternate proposed decision of Commissioner Mark J. Ferron mailed to the parties in accordance with Section 311 of the Public Utilities Code and comments are allowed under Rule 14.3 of the Commission's Rules of Practice and Procedure. Comments were filed by PG&E, SDG&E, SCE, CAISO, CLECA, DRA, DR Aggregators, DACC/AReM, NAPP, CALMAC, ECS, and CESA on April 9, 2012 and reply comments were filed on April 16, 2012 by PG&E, SDG&E, SCE, CAISO, CLECA, DRA, DR Aggregators, DACC/AReM, NAPP, and CESA. In response to comments on the alternate proposed decision, several errors in the

budget tables and authorized funding were corrected. Furthermore, additional clarifying language on soliciting competitive solicitations for Aggregator Managed Program contracts was added. Some minor clarifications to the discussion on dual participation rules were also made.

13. Categorization and Assignment of Proceeding

This proceeding is categorized as ratesetting. Michael R. Peevey is the assigned Commissioner and Kelly A. Hymes is the assigned ALJ in this proceeding. ALJ Hymes is the Presiding Officer.

Findings of Fact

1. A lack of budget transparency led to obstacles in the 2012-2014 demand response application review process.
2. Too much budget flexibility endangers budget transparency.
3. The Utilities provide no new information or justification in their applications for us to change our current policy on budget flexibility.
4. The Commission remains committed to the Energy Action Plan's loading order whereby energy efficiency and demand response are the preferred means of meeting California's energy needs.
5. PG&E's use of the LOLP model is consistent with the Protocols authorization of an alternate model in addition to the default E3 model.
6. PG&E provides insufficient evidence that the LOLP model is more accurate than the default E3 model for the purposes of this proceeding.
7. The Protocols consider the LOLP model to be proprietary.
8. SCE failed to include ME&O costs and misallocated EM&V costs in its cost-effectiveness analysis.
9. The Cost-Effectiveness Protocols do not dictate how the Commission should use the results of the cost-effectiveness tests to approve DR programs.

10. The Cost-Effectiveness Protocols allow us to be flexible in our approach to analyzing cost-effectiveness for DR programs.

11. The TRC, PAC, and RIM tests each provide a valuable perspective in determining the cost-effectiveness of a demand response program.

12. We deem programs with a TRC result of 1.0 to be cost-effective, but allow for an error band of 10 percent. Thus programs with a TRC of at least 0.9 are cost-effective for the purposes of this proceeding only.

13. There are deficiencies in the Cost-Effectiveness Protocols.

14. Each of the Utilities has a different approach to allocating the cost of supporting activities to the DR programs.

15. The Utilities did not comply with the Cost-Effectiveness Protocol requirement to provide qualitative analysis of optional costs and benefits.

16. The Dual Participation Rules promoted customer participation.

17. The Utilities' experience with dual participation event overlap is mixed.

18. Dual participation helps provide more expansive and flexible DR resources that will support future system needs, and the current dual participation rules achieve these goals without the necessity of any changes at this time.

19. While it is the Commission's goal for the Utilities to ultimately rely on the CAISO's procurement model to solicit PDR contracts in the future, the record in this proceeding is insufficient to allow the model to be implemented at this time.

20. In PDR and RDRR product rules, CAISO prohibits dual participation of one resource bidding into both products or within the two products.

21. An accurate customer baseline is important in order to properly compensate customers for their actions.

22. The 20 percent cap for both the day-ahead and the day-of adjustment for the 10-in-10 baseline may understate load reduction and underpay customers for their actions.

23. The 40 percent cap for both the day-ahead and the day-of adjustment for the 10-in-10 baseline provides a fair balance for all customers as an interim solution.

24. There is insufficient information to determine the extent of participation by DR providers in the CAISO markets.

25. The current third party Aggregator Managed Program contracts are not cost-effective.

26. It is uncertain when and to what extent third party DR providers will be able to participate in the CAISO's markets.

27. It is prudent to maintain the presence of third party aggregators as California transitions to direct participation of demand response in wholesale energy markets.

28. There is not sufficient time for PG&E and the third party aggregators to renegotiate the current Aggregator Managed Programs contracts so that they are cost-effective in 2012.

29. The Utilities will have an opportunity to request funding for DR statewide marketing in a to-be filed application focusing on demand side management resources, including Demand Response, Energy Efficiency, and Distributed Generation, for the 2013-2014 time period.

30. The Utilities' ME&O funding requests do not convey an adequate effort toward the Commission's policy of coordinating, reducing or eliminating ME&O budget requests in this application.

31. The Utilities provide inadequate information in their applications to fully explain and justify DR System activities and the associated funding requests.

32. Costs incurred from the DR Systems budget are spread across each DR program.

33. The Commission has ordered PG&E to meet reporting requirements tied to its marketing budgets for CPP outreach, and SCE has requested a marketing budget for outreach.

34. SCE's two \$500,000 DR Systems requests for "unanticipated activities" are unreasonable and unjustifiable.

35. PG&E's Capacity Bidding Program (day-of), PG&E's Demand Bidding Program, SCE's Summer Discount Program non-residential enhanced, and SCE's Summer Discount Program residential programs are "cost-effective."

36. PG&E only provided an estimated cost-effectiveness analysis of its Demand Bidding Program.

37. SCE's compliance procedures for its Base Interruptible Program are adequate to ensure customer compliance with this program.

38. The Schedule Load Reduction Program is legislatively-mandated.

39. PG&E's SmartAC non-residential and SCE's Capacity Bidding Program are "not cost-effective."

40. When decreasing the overall program budget by \$5,640,759, along with the required \$3.7 million ME&O budget decrease, PG&E's residential and non-residential (with existing customers) Smart AC programs are cost-effective.

41. There are other options aside from the PG&E's SmartAC non residential program available to non-residential customers who want to participate in DR programs, such as the Capacity Bidding Program, the Demand Bidding Program and dynamic rates.

42. Peak Choice, with or without Demand Bidding Program, is not cost-effective.

43. SDG&E incorrectly performed the cost-effectiveness calculation for its Peak Time Rebate program.

44. The Utilities' proposal to divide Automated Demand Response incentive payments into an initial 60 percent payment upon project completion and a 40 percent payment a year later predicated on the customer performance demonstration is consistent with the recommendation to address customer load shed underperformance.

45. California benefits from investing in research and development that will encourage the adoption of cost-effective demand response programs.

46. The Utilities' Permanent Load Shifting proposals are cost-effective when viewed under the Program Administrator Cost test.

47. PG&E's DR-HAN Integration project is incremental to the basic HAN functionality funded in D.09-03-026 and consistent with Commission direction in that decision.

48. PG&E's requested Lab Work proposal is duplicative of work previously approved by the Commission.

49. A State Action Doctrine defense to an antitrust action exists where: (a) the challenged conduct is a result of directions clearly articulated and affirmatively expressed as state policy; and (b) there is continued active supervision of the Utilities activities in this regard.

50. Implementation of required statewide demand response activities as called for in this decision require the Utilities to work collaboratively.

51. The Utilities have not effectively used existing budgets to achieve Commission objectives to integrate demand side management programs.

52. SCE's Integrated Demand Side Management programs have performed successfully with less than their authorized budgets.

53. The Utilities' pilot proposals do not contain detail or justification to authorize the requested budgets.

54. Improved monthly reporting will assist the Commission to develop better guidance for the Utilities in preparation for the filing of future applications.

Conclusions of Law

1. The Commission should only consider the E3 model results when reviewing PG&E's cost-effectiveness analyses in this proceeding.

2. Solely for the purposes of this proceeding, the Commission should primarily consider "cost-effective," using Total Resource Cost tests. It is reasonable to look at Program Administrator Cost test and Ratepayer Indifference Measure for additional context.

3. Solely for the purposes of this proceeding, it is reasonable to use a 10 percent error band given the relatively new nature of the cost-effectiveness protocols.

4. Solely for the purposes of this proceeding, the Commission should consider "cost-effective", those programs where Total Resource Cost test results are at least 0.9.

5. Solely for the purposes of this proceeding, the Commission should consider "possibly cost-effective", those programs where Total Resource Cost test results are between 0.5 and 0.9.

6. Solely for the purposes of this proceeding, the Commission should consider "not cost-effective," those programs where the Total Resource Cost tests fall below 0.5.

7. The Commission should hold workshops following the approval of these applications to address the deficiencies in the Protocols.

8. The Commission should revise the 20 percent cap on the baseline to a 40 percent cap on an interim basis for both the day-ahead and day-of options of the Capacity Bidding Program while the Commission continues to study the issue.

9. The Commission should deny SDG&E's proposed Critical Peak Pricing premium as an alternative to dual participation rules because it is dependent on its proposed changes to the current dual participation rules, which the Commission denies in this Decision.

10. The Commission should extend the Aggregator Managed program (AMP) contracts under their current terms for 2012. The Commission should not extend the Aggregator Managed Program contracts for 2013-2014 without sufficient revisions to make the contracts cost-effective.

11. The Commission should allow PG&E to maintain at least the existing level of Megawatts under Aggregator Managed Programs (AMP) contracts for 2013 and 2014, as long as those contracts are shown to be cost-effective as discussed in this Decision. The Commission should grant PG&E's request for a Request For Proposal for new AMP contracts.

12. SCE should preserve the current level of Aggregator Managed Programs resources during 2013 and 2014 while California is transitioning its Demand Response programs to direct participation.

13. PG&E and SCE should be encouraged to procure additional third party cost-effective MWs of DR through competitive solicitations, above minimum current levels.

14. The Commission should deny all DR statewide marketing funding requests for 2013 and 2014 in this proceeding.

15. The Commission should deny requests for marketing Reliability programs, especially those which have few, if any, customers.

16. The Commission should decrease the marketing funds for Local DR ME&O.

17. The Utilities should focus residential and small commercial marketing efforts on motivating them to use the My Account tool as well as other available online resources.

18. The Commission should decrease the budgets in the DR Systems Support budget category to improve the cost-effectiveness of the DR programs associated with the costs in this category.

19. It is reasonable to deny approval of and funding for all options of PG&E's PeakChoice program beginning in 2013.

20. It is reasonable to consider issues regarding the use of backup use generation in the Demand Response Rulemaking (R.) 07-01-014, or a successor proceeding.

21. It is reasonable to maintain the current dual participation rules at this time.

O R D E R

IT IS ORDERED that:

1. The Division of Ratepayer Advocates' motion to file under seal the confidential Attachment A of its opening briefs is granted.

2. All assigned Commissioner and Administrative Law Judge Rulings in this proceeding, including those noticed by electronic mail, are hereby memorialized. All motions not previously ruled upon or addressed in this decision are denied.

3. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities) shall organize their demand response programs within the following ten categories: 1) Reliability-based Programs; 2) Price Responsive Programs; 3) Demand Response Provider/Aggregator-Managed Programs; 4) Enabling and Emerging Technologies; 5) Pilots; 6) Evaluation, Measurement, & Verification Activities; 7) Marketing, Education and Outreach Activities; 8) Demand Response Systems Support; 9) Integrated Programs and Activities; and 10) Special Projects.

4. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company:

- May not shift funds between categories with two exceptions as stated in Ordering Paragraphs 4 and 5;
- May continue to shift up to 50 percent of a Demand Response program's funds to another program within the same budget category, with proper monthly reporting;
- Shall not shift funds within the "Pilots" or "Special Projects" categories without submitting a Tier 2 Advice Letter filing;
- May shift funds for pilots in the Enabling or Emerging Technologies category;
- Shall continue to submit a Tier 2 Advice Letter to eliminate a Demand Response program;
- Shall not eliminate a program through multiple fund shifting events or for any other reason without prior authorization from the Commission; and
- Shall submit a Tier 2 Advice Letter before shifting more than 50 percent of a program's funds to a different program within the same budget category.

5. San Diego Gas and Electric Company's (SDG&E) may shift funds for customer incentives approved in this decision between categories. SDG&E shall file a Tier 2 Advice Letter for the Commission approval of fund shifting of customer incentives between categories.

6. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (Utilities) may shift funds in Category 4, Enabling and Emerging Technologies into Permanent Load Shifting fund. The Utilities shall file a Tier 2 Advice Letter for Commission approval of shifting funds into Permanent Load Shifting fund.

7. Commission Staff shall hold one or more workshops after the issuance of this decision to address all deficiencies of the 2010 Cost-Effectiveness Protocols.

8. San Diego Gas & Electric Company's proposed Critical Peak Pricing Premium as an alternative to dual participation is denied.

9. The changes to the dual participation rules, as requested by Pacific Gas and Electric Company, Southern California Edison Company and San Diego Gas & Electric Company, are denied without prejudice. The dual participation rules shall be re-examined in the Demand Response Rulemaking 07-01-041 or its successor proceeding.

10. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company shall submit, within 30 days, a Tier 1 Advice Letter revising, on an interim basis, the current settlement baseline for the Capacity Bidding Program day-ahead and day-of options to an individual 10-in-10 baseline with an optional 40 percent cap day-of adjustment.

11. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities) shall provide, as part of the Load Impact Annual Filing on June 1, 2012 and again on April 1, 2013 and

April 1, 2014, an analysis that compares their baseline settlement result using both individual and aggregated baseline with cap percentage adjustments of 20, 30, 40, 50 and no cap for the months of July, August, and September of the prior year. The Utilities shall compare the annual baseline settlement results with the Measurement and Evaluation results for the same year. The comparison analysis must include service accounts for which the adjusted energy baseline option was selected in that nomination month as well as a second set of service accounts, assuming all service accounts select day-of adjustment.

12. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities) shall address the baseline comparison analysis as part of the annual Load Impact workshops. Prior to the workshops, the Utilities shall solicit parties' input on improving the baseline comparison studies and parties' input on alternate accepted baseline methodologies.

13. Forty-five days following each annual load impact workshop, Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company shall submit a joint Tier 2 Advice Letter addressing whether there is a need to change the current baseline along with a proposed baseline comparison study for the following year.

14. The four contract amendments proposed by Pacific Gas and Electric Company (PG&E) under its current Aggregated Managed Programs are approved. PG&E is authorized to extend the Aggregator Managed Programs contract in their current form through December 31, 2012. .

15. Pacific Gas and Electric Company (PG&E) shall renegotiate its current Aggregator Managed Programs contracts or conduct a competitive solicitation for, at minimum, an equal quantity to 180 MW of demand response resources to

be provided by third parties during 2013-2014. The Total Resource Cost tests for the renegotiated or new Aggregator managed Programs contracts shall attain at least a 0.9. Within 90 days from the issuance of this decision, PG&E shall submit a Tier 2 Advice Letter that includes the renegotiated cost-effective contracts, along with a revised cost-effectiveness analysis that provides the results of the three cost-effectiveness tests. We authorize PG&E to extend the cost-effective renegotiated contracts effective 2013 through 2014. PG&E shall file an application for the Commission's approval of any new Aggregator Managed Programs contracts that are not a part of PG&E's application in this proceeding no later than September 7, 2012.

16. Southern California Edison Company (SCE) shall renegotiate the terms of its current Aggregator Managed Programs contracts or conduct a competitive solicitation for, at minimum, an equal quantity to 280 MW of demand response resources to be provided by third parties during the 2013 and 2014 program years. The Total Resource Cost tests for the renegotiated or new Aggregator Managed Programs contract shall attain at least a 0.9. Within 90 days of issuance of this decision, SCE shall file an application for the renegotiated cost-effective contracts, along with a cost-effectiveness analysis that provides the results of the three cost-effectiveness tests. If SCE chooses to conduct a competitive solicitation for new contracts, it shall submit an application of any new Aggregator Managed Programs contracts and cost recovery no later than September 7, 2012.

17. Subsequent to the establishment of direct participation rules and the new rules for the California Independent Systems Operator's (CAISO) wholesale Demand Response products, we will address the details related to policy issues with procurement of wholesale Demand Response resources, as part of Rulemaking 07-01-041, or its successor. Pacific Gas and Electric Company,

San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities) shall work with CAISO, Commission Staff and the Procurement Review Groups to develop the Request for Proposal requirements to meet future system needs, e.g., integration of renewable resources. The Utilities shall also work with the Procurement Review Groups to ensure that procurement strategies are consistent with the Loading Order.

18. The total Demand Response budgets approved for each utility are as follows: Pacific Gas and Electric Company: \$191,886,588; San Diego Gas & Electric Company: \$65,806,526; and Southern California Edison Company: \$196,338,052.

19. One year (2012) of funding for the Demand Response Statewide Marketing, Education and Outreach program in this proceeding is authorized for Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company to be used for an emergency alert campaign. The total statewide marketing budget shall be no more than \$10,000,000.

20. During the 2012 program evaluation of Marketing, Education and Outreach activities, the Demand Response Measurement and Evaluation Committee shall review the marketing costs per enrolled customer and determine the range of appropriate costs for AC cycling programs.

21. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company shall consolidate all marketing funding into two categories: Marketing, Education, and Outreach (ME&O) and Integrated Demand Side Management ME&O.

22. San Diego Gas & Electric Company and Southern California Edison Company shall re-categorize the individual Demand Response program

marketing requests into the Local Marketing, Education, and Outreach (ME&O) subcategory of the ME&O category.

23. Southern California Edison Company shall work with Commission Staff to determine reporting requirements for its Time of Use and Critical Peak Pricing marketing and outreach for small non-residential customers.

24. For Pacific Gas and Electric Company, Southern California Edison Company, San Diego Gas & Electric Company (jointly, the Utilities), the first Monthly Demand Response Report following the issuance of this Decision shall include a section on marketing expenditures, which the Utilities shall develop in collaboration with Commission Staff. Furthermore, the Marketing Plan shall comply with the following policies:

- a. Programs that have few to no customers enrolled, such as the Scheduled Load Reduction and Optional Binding Mandatory Curtailment Programs, shall have no marketing funds.
- b. Marketing plans shall focus on price-responsive programs and permanent load shifting activities.
- c. Marketing efforts for residential and small commercial customers must include encouraging customers to enroll in "My Account."
- d. We encourage marketing for Peak Time Rebate to be conducted either online or through highly targeted campaigns only.
- e. Marketing the concepts of dynamic rates should be included in the Statewide Marketing Education and Outreach Application. Statewide marketing efforts must be coordinated with local marketing campaigns.
- f. Targeted statewide efforts should consider marketing and outreach in languages used by customers and tailored to serve the cultural, socio-economic, geographic, age, disability, residential-type, business size and type, and other diversity of customers, with a well-tailored focus on those customers most affected by electrical supply transmission, distribution, usage, conservation, resource constraint or urgent issues.

25. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company shall serve to the Executive Director, the Commissioners, and this proceeding's service list by July 2, 2012, a report which details their plans to reach the diversity of Californians that are most likely to be affected by any emerging energy issues in Summer 2012.

26. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities) shall either decrease the overall budget requested or increase the relative benefits for each program approved in this decision to make their programs cost-effective.

27. Southern California Edison Company's overall Demand Response System Support budget is decreased by \$1 million.

28. Southern California Edison Company's Agricultural Pumping Interruptible Program is approved. We authorize a budget of \$930,023 for this program.

29. Southern California Edison Company's Base Interruptible Program during 2012-2014 is approved. A budget of \$2,407,226 is authorized for 2012-2014.

30. San Diego Gas & Electric Company's (SDG&E) Base Interruptible Program is approved as follows. SDG&E shall remove the local marketing budget of \$165,000 from the proposed budget for its Base Interruptible Program. SDG&E shall eliminate its Base Interruptible Program-Option B to conform the program to the California Independent System Operators Reliability Demand Response Product.

31. The summer month premium for San Diego Gas & Electric Company's Base Interruptible program is approved.

32. A budget of \$4,104,000 is authorized for San Diego Gas & Electric Company's Base Interruptible Program during 2012-2014.

33. Pacific Gas and Electric Company's (PG&E) Base Interruptible Program is approved. PG&E shall improve the cost-effectiveness of this program by a) increasing the number of call hours from 120 to 180 hours annually and, b) decreasing the Local Demand Response Marketing, Education and Outreach budget allocated to this program by \$140,704. These changes shall go into effect for 2013 and 2014.

34. Pacific Gas and Electric Company and San Diego Gas & Electric Company shall implement the pre-enrollment qualification process and retesting for non-compliant participants in the Base Interruptible Program.

35. Budgets for the Optional Binding Mandatory Curtailment Program from Pacific Gas and Electric Company and Southern California Edison, for Rotating Outages from Southern California Edison are approved. Marketing, education, and outreach funds for these programs are denied.

36. San Diego Gas & Electric Company shall terminate its Optional Binding Mandatory Curtailment Program.

37. Southern California Edison Company's Save Power Day Program is approved as requested. We authorize budgets as requested for this program but with the required decreases in the Marketing, Education, and Outreach and Demand Response Systems budgets.

38. Pacific Gas and Electric Company shall not enroll new customers in its non-residential SmartAC program.

39. Pacific Gas and Electric Company (PG&E) shall migrate its PeakChoice customers to other Demand Response programs by December 31, 2012. PG&E shall terminate all options of its PeakChoice program by December 31, 2012 and adapt the information technology system developed for PeakChoice to PG&E's other demand response programs.

40. Pacific Gas and Electric Company shall submit a Tier 2 Advice Letter no later than 90 days after the issuance of this decision describing its PeakChoice transition plan.

41. We authorize a budget of \$1.75 million for Pacific Gas and Electric Company to operate the PeakChoice program.

42. San Diego Gas & Electric Company (SDG&E) Peak Time Rebate program is approved. SDG&E shall recalculate its cost-effectiveness analysis of its Peak Time Rebate program to include the customer incentives in the analysis and submit the results in a Tier 2 Advice Letter 60 days following the issuance of this decision.

43. We approve Southern California Edison Company's (SCE) Capacity Bidding Program and authorize a budget of \$661,287 for this Program. SCE's DR Systems budget is decreased by \$1.7 million to reflect the majority of the \$1.9 million portion of that budget which is allocated to the Capacity Bidding Program. SCE shall perform an in-depth analysis of its Capacity Bidding Program to (1) propose details of how the full-year program would work; (2) analyze the differences between Pacific Gas and Electric Company, San Diego Gas & Electric Company and SCE's Capacity Bidding Program; and (3) provide a plan for improving the Capacity Bidding Program cost-effectiveness to 0.75 in 2013 and to 0.9 in 2014. SCE shall submit this analysis in a Tier 2 Advice Letter no later than 120 days following the issuance of this decision.

44. Pacific Gas and Electric Company's (PG&E) Capacity Bidding Program is approved with a total budget of \$11,563,485. The authorization of the funding for PG&E's Capacity Bidding Program is contingent upon a revised cost-effective result. PG&E shall submit a Tier 2 Advice Letter within 60 days from the issuance of this decision indicating which steps (decrease budget or improve

benefits) it will take to make this program cost-effective and/or adjust the budget accordingly.

45. Pacific Gas and Electric Company's (PG&E) SmartAC residential program is approved. PG&E shall decrease the budget for SmartAC to \$19,353,335. The non-residential option of SmartAC shall operate with its existing customers only.

46. San Diego Gas & Electric Company's (SDG&E) Capacity Bidding Program is approved with a total program budget of \$11,789,000. The authorization of the funding for SDG&E's Capacity Bidding Program is contingent upon a cost-effective result. SDG&E shall submit a Tier 2 Advice Letter within 60 days indicating which steps (decrease budget or improve benefits) it will take to make this program cost-effective and and/or adjust the budget accordingly.

47. Southern California Edison Company's (SCE) Summer Discount Plan is approved with a total budget of \$64,391,768. The authorization of the funding for SCE's Summer Discount Plan is contingent upon a revised cost-effective result. SCE shall submit a Tier 2 Advice Letter within 60 days from the issuance of this decision indicating which step (either decreasing the budget or improving program benefits) it will take to make this program cost-effective and/or adjusting the budget accordingly..

48. Southern California Edison Company's Demand Bidding Program is approved with a total budget of \$1,483,686. The authorization of the funding for SCE's Demand Bidding Program is contingent upon a revised cost-effective result. SCE shall submit a Tier 2 Advice Letter within 60 days from the issuance of this decision indicating which steps (decrease budget or improve benefits) it will take to make this program cost-effective and/or adjust the budget accordingly.

49. Southern California Edison Company's Ancillary Services Tariff Program non-residential is denied without prejudice.

50. Pacific Gas and Electric Company's (PG&E) Demand Bidding Program is approved. PG&E shall perform an updated cost-effectiveness analysis and submit it along with a recalculated budget in a Tier 2 Advice Letter no more than 60 days from the issuance of this decision. If the results indicate less than cost-effective, PG&E shall further revise its Demand Bidding Program budget. We authorize PG&E a budget of \$3.216 million for its 2012-2014 Demand Bidding Program, contingent upon the receipt of the results of the resubmitted cost-effectiveness analysis.

51. All Marketing, Education and Outreach funding for the Capacity Bidding Programs is denied.

52. The Marketing, Education and Outreach (ME&O) budget in Southern California Edison Company's (SCE) Save Power Day program is recategorized to the Local Demand Response ME&O Category. The ME&O budget for this program is decreased by 50 percent. SCE's Save Power Day program is approved. A program budget of \$4,707,515 is authorized for the Save Power Day program for 2012-2014.

53. Pacific Gas and Electric Company may enroll net energy metering customers in SmartAC, the Capacity Bidding Program and the Aggregator Managed Program.

54. Southern California Edison Company's request for funding for marketing and administration for its Critical Peak Pricing programs is approved at \$7,490,868 (\$5,500 for marketing and \$1,900,868 for administration) for the program focused on customers with usage less than 200 kW and \$2,648,539

(\$275,000 for marketing and \$2,373,539 for administration) for the program focused on customers with usage of at least 200kW.

55. Southern California Edison Company's (SCE) request for funding for its Real Time Pricing to support increased Marketing, Education & Outreach efforts and administration is approved at a budget of \$1,105,429 (\$480,000 for marketing and \$625,429 for administration).

56. Southern California Edison Company's (SCE) request for funding for its Circuit Savers to support increased Marketing, Education & Outreach is approved at a budget of \$1,000,000.

57. Southern California Edison Company's request for DR ME&O is approved at a budget of \$1,000,000.

58. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities') Automated Demand Response (ADR) programs are approved with the requested modifications and direct the Utilities to fund ADR technologies that interoperate using generally accepted industry open standards or protocols. During 2012, we allow an exception to the 60-40 split for all customers to maintain equitable treatment with the federal ADR grant program. The Utilities shall develop a statewide program with common program rules and incentive levels and submit a Tier 2 Advice Letter with a proposal no later than October 31, 2013.

59. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities') Emerging Technology projects are approved as requested. The 2012-2014 Emerging Technology budgets are authorized as requested. The Utilities shall provide semi-annual reports regarding their Emerging Technology projects by March 31 and September 30 of each year.

60. Permanent Load Shifting proposals for Pacific Gas and Electric Company (PG&E), San Diego Gas & Electric Company (SDG&E), and Southern California Edison Company (SCE) are approved as follows: PG&E \$15,000,000; SDG&E \$3,000,000; and SCE \$14,000,000.

61. The request for proposals and funding for the Permanent Load Shifting emerging technology programs are denied.

62. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities) shall work collaboratively to develop and propose a standardized, statewide Permanent Load Shifting program as described in this decision. The Utilities shall jointly submit the proposal as described in this decision to Commission Staff within 90 days following the issuance of this decision.

63. Commission Staff shall seek feedback from interested parties and facilitate a consensus process for Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company (the Utilities) to finalize their Permanent Load Shifting (PLS) statewide program design and rules. Within 30 days of notification from Commission Staff, the Utilities shall submit the final proposal, including budget details and revised cost-effectiveness analysis, of the statewide PLS program with a Tier 2 Advice Letter to the Commission.

64. Pacific Gas and Electric Company's request for its Home Area Network (HAN) Integration project including the \$3 million for the evaluation project is approved. A total budget of \$20.02 million is authorized for the HAN project.

65. Pacific Gas and Electric Company shall submit a Tier 2 Advice Letter for its Home Area Network Integration project with clear descriptions for the pilot portion of the project, including a detailed schedule for the IT work and pilot

execution, in order to release the \$20.2 million allocated for this item. The descriptions shall follow the guidelines for "Pilots." This Advice Letter shall be submitted no later than September 30, 2012.

66. San Diego Gas & Electric Company's Small Customer Technology Deployment program is approved with the following changes: (1) limit participation in this program to Peak Time Rebate customers only; (2) combine the two programs, (3) within 60 days of the issuance of this decision submit a Tier 2 Advice Letter that includes an updated cost-effectiveness analysis of the combined programs, and (4) 30 days after the completion of the Residential Automated Control Technology Pilot, submit a Tier 2 Advice Letter with updated details of the Small Customer Technology Deployment program informed by the results of this pilot. Commission Staff shall review the Advice Letter as a condition for release of the authorized budget for this program.

67. We authorize the Demand Response Measurement and Evaluation Committee (DRMEC) to continue to perform evaluations of statewide and individual utility Demand Response activities. We direct the DRMEC to continue to report its findings at annual public workshops.

68. The Demand Response Measurement and Evaluation Committee shall ensure that Evaluation, Measurement & Verification activities are jointly planned and implemented to achieve the core objectives as adopted in D.09-09-047: 1) Load Impact Evaluations; 2) Process Evaluations; 3) Demand Response Potential, Market Assessment and Technology Studies; 4) Policy and Planning Support; and 5) Financial and Management Audits.

69. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company shall conduct statewide impact evaluations when possible.

70. The Demand Response Measurement and Evaluation Committee (DRMEC) shall submit a detailed process evaluation plan, as described in this decision, that lists all Demand Response programs to be evaluated during 2012-2014 along with an explanation of the necessity of each evaluation. The DRMEC shall submit the process evaluation plan no later than 45 days following the issuance of this decision.

71. Evaluation, Measurement and Verification budgets are authorized as follows: \$15,721,000 for Pacific Gas and Electric Company, \$7,604,147 for Southern California Edison Company, and \$5,715,000 for San Diego Gas & Electric Company.

72. The Executive Director may hire and manage one or more contractors to perform tasks as described in this decision for the purpose of performing studies that advance the goals of the Commission's Demand Response activities. The Executive Director may spend up to \$1 million during each of the three fiscal years beginning July 1, 2012 to be paid for by Pacific Gas and Electric Company (PG&E), Southern California Edison Company (SCE), and San Diego Gas & Electric Company (SDG&E) through their Evaluation, Measurement and Validation budgets. Any unspent funds, up to the annual \$1 million, may be carried over to subsequent fiscal years. PG&E and SCE shall each be responsible for 40 percent of the costs and SDG&E shall be responsible for the remaining 20 percent of the costs.

73. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company shall work collaboratively to implement Demand Response statewide activities as ordered in this decision.

74. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company may request funding for post-2012

Integrated Demand Side Management activities in their request for 2013-2014 Energy Efficiency funding.

75. Pacific Gas and Electric Company's (PG&E) Integrated Demand Side Management (IDSM) budget for 2012 is authorized. PG&E's request for 2013 IDSM funding is denied without prejudice.

76. Southern California Edison Company's (SCE) 2012 Energy Leaders Partnership Program is approved. A budget of \$868,031 for the Energy Leaders Partnership Program is authorized. A budget of \$3.184 million is authorized for SCE's other requested Integrated Demand Side Management (IDSM) activities for 2012. We deny SCE's request for IDSM funding for 2013.

77. San Diego Gas & Electric Company's Technical Assistance Integrated Demand Side Management program is approved as requested.

78. San Diego Gas & Electric Company's request for the Microgrid project is denied.

79. A budget of \$4,305,359 is authorized for San Diego Gas & Electric Company's Integrated Demand Side Management programs for 2012; funding for 2013 is denied without prejudice.

80. Pacific Gas and Electric Company, San Diego Gas & Electric Company, and Southern California Edison Company shall submit a Tier 2 Advice Letter that includes a Proposed Pilot Plan for each of the pilots proposed in this application. All future Demand Response applications shall include a Pilot plan for every Demand Response Pilot proposed. The Advice Letter shall be submitted no later than six months before the anticipated start date of the pilot or 60 days after the issuance of this decision. Each Pilot Plan shall contain the following elements:

- A problem statement;

- How the pilot will address a DR goal or strategy;
- Specific objectives and goals for the pilot;
- A clear budget and timeframe;
- Relevant standards or metrics;
- Methodologies to test the cost-effectiveness of the pilot;
- An Evaluation, Measurement and Verification plan; and
- A strategy to identify and disseminate best practices and lessons learned.

81. The following budgets for Demand Response pilots are authorized, contingent upon the submittal and approval by Commission Staff of the required Pilot Plan: \$7.96 million for Pacific Gas and Electric Company, \$1.8 million for Southern California Edison Company, and \$1.5 million for San Diego Gas & Electric Company.

82. Pacific Gas and Electric Company, Southern California Edison Company, and San Diego Gas & Electric Company (the Utilities) shall implement the modifications to policies and program rules affecting existing Demand Response programs and activities adopted in this decision by May 1, 2012 or upon Energy Division approval of the Advice Letter implementing the change. For those programmatic changes not associated with another Advice Letter, each utility shall submit a Tier 1 compliance Advice Letter within 45 days of the issuance of this decision updating its tariffs to be consistent with the requirements of this decision and specifying the date on which those changes will take place.

83. For all compliance submissions ordered in this Decision which require cost-effectiveness analyses, Commission Staff shall provide further guidance to the parties on the format to be used for the cost-effectiveness analyses.

Commission Staff shall provide that guidance within 20 days of the issuance of this decision.

84. Pacific Gas and Electric Company, Southern California Edison Company, and San Diego Gas & Electric Company shall meet with the Commission Staff no later than 45 days following the issuance of this decision to develop an improved monthly Demand Response Program Reporting document.

85. Pacific Gas and Electric Company, Southern California Edison Company, and San Diego Gas & Electric Company (the Utilities) shall file 2015-2017 Demand Response Applications no later than January 31, 2014. In preparation for the filing of future applications, the Utilities shall meet with Commission Staff no later than March 30, 2013 to discuss the 2015-2017 DR Program and Budget applications. Commission Staff shall provide a guidance document to the Utilities and other stakeholders no later than September 1, 2013 to assist the Utilities in developing improved and thorough 2015-2017 DR Program and Budget applications.

86. Pacific Gas and Electric Company, Southern California Edison Company, and San Diego Gas & Electric Company shall file, no later than August 3, 2012, a statewide marketing application to consider demand side resources, including Energy Efficiency, Demand Response, Distributed Generation. The application shall be for all marketing activities in the 2013-2014 time frame.

87. Unless otherwise specified, Pacific Gas and Electric Company, Southern California Edison Company, and San Diego Gas & Electric Company may file a Tier 2 advice letter, within 45 days of the issuance of this decision, showing how a program's benefits will be increased in lieu of decreasing a budget to make a "possibly cost-effective" program "cost effective" as defined in this decision.

88. Commission Staff shall have the authority to defer changes to “possible cost-effective” programs until the 2013 and 2014 program years, as appropriate.

89. For the period beginning January 1, 2012 through the issuance of this Decision, Pacific Gas and Electric Company, Southern California Edison Company and San Diego Gas & Electric Company have authority to: (a) operate their demand response programs at funding levels set in Decision (D.)09-08-027 and D.08-02-009, as modified by subsequent decisions; and (b) continue to record all expenses in the accounts where such expenses have been authorized by those decisions.

90. Application (A.) 11-03-001, A.11-03-002, and A.11-03-003 are closed.

This order is effective today.

Dated April 19, 2012, at San Francisco, California.

MICHAEL R. PEEVEY
