**Rail Safety Division  
Rail Crossings Safety**

**Resolution SX-169  
June 11, 2026**

**R E S O L U T I O N**

Resolution SX-169. Peninsula Corridor Joint Powers Board Installation of Vertical Delineators Between Rail Tracks at 27 At-Grade Highway-Rail Crossings.

**PROPOSED OUTCOME:**

- Approves the Peninsula Corridor Joint Powers Board (Caltrain) request to install vertical delineators between rail tracks at 27 at-grade highway-rail crossings (crossings) in the Cities of South San Francisco, San Bruno, Millbrae, Burlingame, San Mateo, Redwood City, Atherton, Menlo Park, Mountain View, and San Jose, Counties of San Mateo and Santa Clara.

**SAFETY CONSIDERATIONS:**

- Approval of the resolution will allow Caltrain to install vertical delineators between rail tracks at 27 crossings to deter vehicle intrusions into Caltrain right-of-way and enhance public and railroad workers' safety.

**ESTIMATED COST:**

- There are no costs associated with this resolution.

---

**SUMMARY**

This Resolution approves Caltrain's request to install vertical delineators between rail tracks at 27 crossings to deter vehicle intrusions into Caltrain's right-of-way and enhance public and railroad workers' safety.

**BACKGROUND**

By letter dated January 29, 2026, and pursuant to Section 16.2 of California Public Utilities Commission (Commission/CPUC) General Order (GO) 26-D, Caltrain requests authority to deviate from Section 3.2 of Commission GO 26-D, which requires a minimum horizontal clearance of 8 feet 6 inches from the centerline of track to all structures and obstructions above the top of the rail.

Caltrain proposes to install vertical delineators between rail tracks at 6 feet 6 inches from the track centerline at 27 crossings to deter vehicle intrusions into Caltrain’s right-of-way and enhance public and railroad workers’ safety.

Previously, Commission Resolution SX-166 authorized Caltrain to install vertical delineators between rail tracks at 14 other Caltrain alignment crossings.

Caltrain and Union Pacific Railroad operate approximately 92 passenger and four freight trains respectively per day along the Peninsula Corridor. Since 2020, Caltrain has removed over 230 intruded vehicles from its right-of-way at the crossings. To mitigate the vehicle turns into its right-of-way, Caltrain is implementing multiple safety measures, including partnerships with navigation companies and installing enhanced signage, pavement markings, and raised pavement markers.

Caltrain proposes to install California Manual on Uniform Traffic Control Devices (CA MUTCD) - compliant vertical delineators between rail tracks at 6 feet 6 inches from track centerline at 27 crossings identified in Table 1.

**Table 1: Crossings Subject to GO 26-D Exemption Request**

No.	CPUC No.	DOT No.	Crossing Name	County	City

27	105E-47.51	755099Y	Virginia Street	Santa Clara	San Jose

**DISCUSSION**

Commission GO 26-D Sections 3.1 and 3.2 state:

- 3.1 Minimum side clearances from center line of tangent standard gauge railroad and street railroad tracks, which are used or proposed to be used for transporting freight cars, except as hereinafter prescribed, shall be as shown below.

<i>Description</i>	<i>Minimum Side Clearance</i>
--------------------	-------------------------------

- 3.2 All structures and obstructions above the top of the rail except those hereinafter specifically mentioned..... 8' 6"

Caltrain has documented persistent vehicle intrusions at its crossings and cites safety data showing that over 230 vehicles have turned onto its tracks and were removed since 2020.

Caltrain requests this exemption to mitigate right-of-way vehicle turns and proposes to install CA MUTCD-compliant vertical delineators between rail tracks positioned at 6 feet 6 inches from the track centerline at the selected crossings. The Caltrain corridor generally consists of two tracks spaced between 13 and 15 feet apart, measured from track center line to center line. Accordingly, vertical delineators placed between the rail tracks would not be in compliance with the Commission GO 26-D minimum side track clearance requirement.

Caltrain’s request confirms that:

1. The delineators will not infringe on the dynamic envelope of freight or passenger rail vehicles.
2. A minimum horizontal clearance of 18 to 36 inches from any part of a railcar will be maintained.
3. The reduced clearance will only apply to delineators placed between tracks.
4. Caltrain already has operating rules that prohibit employees from riding or walking along the sides of rail vehicles on mainline tracks, minimizing any risk to railroad workers.

Commission’s Rail Safety Division (RSD) has reviewed Caltrain’s request for exemption from Commission GO 26-D, Section 3.2, and recommends that the exemption be granted

for Caltrain to install vertical delineators between rail tracks to be measured a minimum of 6 feet 6 inches from track centerlines.

### COMMENTS

Public Utilities Code section 311(g)(1) provides that this Resolution must be served on all parties and subject to at least 30 days public review. Any comments are due within 20 days of the date of its mailing and publication on the Commission's website and in accordance with any instructions accompanying the notice. Section 311(g)(2) provides that this 30-day review period and 20-day comment period may be reduced or waived upon the stipulation of all parties in the proceeding.

The 30-day review and 20-day comment period for the draft of this resolution was neither waived nor reduced. Accordingly, this draft resolution was mailed to parties for comments and will be placed on the Commission's agenda no earlier than 30 days from today.

\_\_\_comments were received.

### FINDINGS AND CONCLUSIONS

1. Caltrain requests authority to deviate from the requirements of Commission GO 26-D Section 3.2 to install vertical delineators between rail tracks at the crossings identified in Table 1 in the Cities of South San Francisco, San Bruno, Millbrae, Burlingame, San Mateo, Redwood City, Atherton, Menlo Park, Mountain View, and San Jose, Counties of San Mateo and Santa Clara.
2. Commission GO 26-D Section 3.2 requires 8 feet 6 inches track centerline clearance for any structures or obstructions above the top of rail.
3. Commission Resolution SX-166 authorized vertical delineators installation between rail tracks at 14 Caltrain alignment crossings based on Caltrain Commission GO 26 exemption request.
4. RSD has reviewed Caltrain's request for exemption from Commission GO 26-D, Section 3.2 and finds that the request is a practical and reasonable approach to mitigate vehicle intrusions to Caltrain's right-of-way and increase public and railroad workers' safety.
5. RSD recommends that this resolution be adopted.

**THEREFORE, IT IS ORDERED THAT:**

1. The request of the Peninsula Corridor Joint Powers Board to install California Manual on Uniform Traffic Control Devices compliant vertical delineators between rail tracks at the 27 at-grade highway-rail crossings identified in Table 1, located in the Cities of South San Francisco, San Bruno, Millbrae, Burlingame, San Mateo, Redwood City, Atherton, Menlo Park, Mountain View, and San Jose is approved.
2. The Peninsula Corridor Joint Powers Board shall obtain California Public Utilities Commission authorization to install delineators using the California Public Utilities Commission General Order 88-B process.
3. The Peninsula Corridor Joint Powers Board shall provide written notification to all workers regarding close clearances in affected areas during delineators installation.
4. This Resolution is effective today.

I certify that the foregoing resolution was duly introduced, passed, and adopted at a conference of the Public Utilities Commission of the State of California held on June 11, 2026; the following Commissioners voting favorably thereon:

Commissioner Signature blocks to be added  
upon adoption of the resolution
